

2409.TW - AUO Corporation | Full Deep Dive

September 21, 2026 | Framework 6.0.2 | NOT HELD | TEMPORAL - display recovery; STRUCTURAL - mobility and optical integration | Fail

Analytical Base: 35/60 (58%). Valuation: 20x forward four-quarter IFRS-style operating profit.

Snapshot: TWD 30.35 per share on September 18, 2026 TWSE close; 7,547.000 million shares, implying TWD 229,051.45 million equity value. Source [AUO-7]. Price is a dated header snapshot, not a valuation input in the body.

Active horizon Q3 2027 ceiling: TWD 27.16/share. Q1 2028: TWD 34.08/share.

All financial model amounts are TWD millions, shares in millions, unless stated. Calendar quarters. TWSE 2409 is AUO; all forecast quarters are calendar periods. Header market value uses the latest reported weighted-average share count as an approximation.

1. Thesis, bottleneck and expanded TAM

AUO is transitioning from commodity display panels toward automotive systems, vertical applications and new optoelectronic products. Its manufacturing, mass-transfer and packaging capabilities create optionality, but the existing display business still determines whether consolidated operating profit is sustainable.

The AI connection is specific: short-reach Micro LED optical links and glass-core substrate development. AUO integrates modules rather than selling the same InP CW laser content as Siverts. Established automotive and industrial display solutions provide a nearer revenue base than the new optical program. [AUO-4]

The operating case requires a gradual reduction in display losses plus growth in mobility and vertical solutions. Demonstrations and engineering engagements are not purchase orders. This model assigns only small development revenue in 2027 and later production contributions, with probability weighting applied once.

AUO competes with BOE, CSOT, HKC and Tianma in LCD supply and with LG Display and Samsung Display in higher-end display technologies; Innolux, HannStar, Sharp and JDI are additional relevant participants. Manufacturing scale and customer qualification matter, but pricing remains cyclical. In optical links, competing architectures include copper, VCSEL-based solutions and silicon-photonics laser systems; technical feasibility alone does not establish market share. [AUO-8]

TAM expansion and S-curve

Phase	Economic exposure	Model treatment
Phase 1 - current, 100% relevance	Display, mobility and vertical solutions	Reported revenue base; cyclical display profitability
Phase 2 - 2027-2028, 50% conceptual weight	Automotive system content, medical/industrial solutions	Gradual mix shift and operating leverage
Phase 3 - 2028-2030, 20% conceptual weight	Micro LED optical links and glass substrates	Separate probability-weighted emerging revenue vector

Use sellable application content rather than all AI data-center spending. The Goldman optical-module market forecast is not an AUO revenue entitlement: different link distances, architectures and vendors compete for that spending. Existing mobility growth is modeled near management's double-digit ambition; vertical growth follows an annualized reported base, with a consolidation adjustment for the planned energy carve-out. [AUO-5]

2. Latest evidence and financial anchor

Q2 revenue was TWD70,891M, gross profit 9,248M and operating profit 218M; Q1 operating loss was 636M. Profit attributable to owners of 1,343M in Q2 includes below-operating-line effects and is not annualized as operating earnings. ADLINK entered consolidation in mid-2025, so reported year-over-year comparisons are not purely organic. [AUO-1]

April management discussion targeted 11-12% operating expense intensity and described a planned energy-business separation, leaving a 33% equity-method interest. Automotive orders and Mexico expansion support later growth. Optical commercialization was discussed over a two-to-three-year period. [AUO-5]

The July call described optical-link sampling with undisclosed partners, glass-substrate work still requiring development, and automotive Micro LED shipments expected from 2028. It also described customer inventory adjustment in notebooks. These are distinct timing paths, not a single immediate AI ramp. [AUO-6]

August revenue was 23,102M, following July 20,370M; eight-month revenue was 183,394M. These later monthly figures supersede an unqualified extrapolation of the July outlook. The model requires September revenue of 23,528M to reach Q3 sales of 67,000M. [AUO-3]

Period	Status	Revenue	Gross profit	Operating profit	Source
Q1 2026	Reported IFRS	69,031.00	8,183.00	-636.00	AUO-1 / AUO-2
Q2 2026	Reported IFRS	70,891.00	9,248.00	218.00	AUO-1 / AUO-2

Q2 gross profit 9,248 less operating expenses 9,030 equals operating profit 218. Q2 revenue mix was approximately 29% mobility, 19% vertical, 48% display and 4% other. The model combines display and other; it does not label rounded mix-derived values as exact segment disclosures. July presentation allocations are the latest basis; earlier pillar margins are not spliced into that basis. Forecast functional R&D/SG&A and segment gross margins are analyst allocations calibrated to total operating expenses. [AUO-2]

The July Q3 outlook was roughly flat mobility, modest growth in vertical solutions and softer display demand. [AUO-2] The monthly-data-calibrated model uses Q3 revenue 67,000 and Q4 65,000; it therefore assumes a larger display/other decline than a simple seasonal rebound. There is no numerical consolidated full-year earnings guide. Q3 and Q4 OP are model outcomes, not management commitments.

Balance sheet and capital allocation

At June end, cash was 53,792M and short/long borrowings totaled 100,618M, giving net borrowings 46,826M before lease and other adjustments. Inventory was 40,787M, with 58 inventory days. Q2 operating cash flow was 3,993M and capex 2,719M; asset-disposal cash was separate. Large depreciation remains in operating profit. Property disposals are not recurring product earnings. [AUO-2]

3. Base score and evidence ledger

Category	Score	Evidence
Core Thesis	12	Manufacturing and integration capability; legacy display economics remain difficult
Cycle Stage	6	Near operating break-even with consumer inventory adjustment
TAM Expansion	8	Mobility content, optical links and glass-substrate optionality
Catalysts	4	Sampling, system launches and Mexico expansion
Macro	7	AI and vehicle electronics demand versus memory-cost pressure on devices
Alpha	3	Optionality is meaningful but commercial scale is unproven
Risks	-5	Display cycle, qualification, balance sheet, consolidation, competition
Total	35/60 = 58%	Fail

4. Quarterly operating model

Four vectors separate established businesses from new optical/glass programs. R&D and SG&A are consolidated allocations; ordinary depreciation remains inside gross profit and expenses. Emerging product revenue is removed from the established-business envelope before being shown separately. No sale-of-property gain, equity-method income or cash balance is capitalized as operating profit.

Revenue vector	Driver and source	Confidence
Display and other	AUO-2 mix; latest monthly revenue	MEDIUM near-term; LOW beyond 2027
Mobility solutions	AUO-2 base and AUO-5 growth ambition	MEDIUM direction; LOW precise timing
Vertical solutions, adjusted perimeter	AUO-2 base; AUO-5 carve-out; analyst growth	LOW perimeter and quarterly allocation
Emerging optical links / glass	AUO-4 / AUO-5 / AUO-6 development stage	LOW; probability-weighted scenario

Display/other 2027 sales of 125,000M are below the Q2 annualized mix-derived base of about 147,453M. Subsequent growth is only 1-2% yearly, with no panel ASP boom. Mobility starts at 88,000M in 2027, about 7% above the Q2 annualized base, then grows 10% yearly. Vertical starts from the Q2 annualized 53,877M base: approximately 17% underlying growth less a 3,500M annualized energy/consolidation allowance yields 59,500M. That allowance is an analyst proxy because the exact deconsolidated revenue is not supplied here; it must be replaced when reported. Emerging revenue assumes potential 200/2,000/6,000/12,000M in 2027-2030, multiplied once by 50%, giving 100/1,000/3,000/6,000M. The 2027 amount is sampling/engineering; meaningful product ramps start in 2028. These are commercial-value proxies, not disclosed module volumes or ASPs. Stable TWD is assumed; no second FX growth factor is added.

Physical and commercial drivers

Year	Display / other	Mobility	Vertical adjusted	Emerging weighted
2027	125000	88000	59500	100
2028	128000	96800	67500	1000
2029	130000	106480	76500	3000
2030	132000	117128	86500	6000

Vector revenue, gross margin and gross profit

For each row: vector gross profit = vector revenue x its own gross margin. The following tables expose the inputs; they are analyst model assumptions unless explicitly identified as reported or guided.

Display and other

Quarter	Revenue	Gross margin	Gross profit
Q3 2026	32,500.00	7.00%	2,275.00
Q4 2026	31,500.00	7.00%	2,205.00

Annual trajectory cross-check

The calendar-bucket sums below are a capacity and demand cross-check; quarterly windows remain the live valuation method. Years beyond the latest guidance are model extensions, not company guidance.

Year	Revenue	Operating profit	OP margin
2027	272,600.00	7,738.00	2.84%
2028	293,300.00	12,859.60	4.38%
2029	315,980.00	19,047.52	6.03%
2030	341,628.00	26,143.38	7.65%

The model gradually shifts mix away from commodity panels. Gross margins rise with product mix and factory absorption; they are not management margin targets. The expense ratio reaches 12% in 2027 and 11.5% by 2030, broadly consistent with the direction of expense discipline. If emerging revenue is zero, remove its own gross profit and any avoidable incremental cost; do not erase established auto/vertical revenue. Each TWD1B of lost operating profit changes the ceiling by about TWD2.650/share at the selected multiple and denominator.

5. Forward four-quarter ceiling and derivations

Revenue (blue), operating profit (orange) - TWD M

Forward-four-quarter ceiling - TWD/share

20x forward-four-quarter IFRS-style operating profit is the portfolio owner-selected multiple as of September 21, 2026, held constant across the model. This is the framework operating-profit convention, not an observed market P/E. A one-turn change changes each ceiling by 5%. The direct-OP framework convention does not deduct net debt; that limitation is economically material for this capital-intensive business.

The framework convention applies the operating-profit multiple directly to diluted equity shares. It is neither a net-income P/E nor an enterprise-value bridge. No separate net-cash addition, tax conversion, probability haircut or price-dependent ranking enters this ceiling. Any probability-weighted revenue is already included once in its operating vector.

Ceiling quarter	Exact earnings window	Forward-4Q OP	Multiple	Diluted shares	Ceiling/share
Q3 2026	Q3 2026 to Q2 2027	3,980.62	20x	7,547.000	10.55
Q4 2026	Q4 2026 to Q3 2027	5,832.31	20x	7,547.000	15.46

Q1 2030	Q1 2030 to Q4 2030	26,143.38	20x	7,547.000	69.28

Complete derivation for every ceiling quarter

Q3 2026: OP window Q3 2026 to Q2 2027: $(121.50 + 67.50 + 1,857.12 + 1,934.50) \times 20 / 7,547.000 = \text{TWD } 10.55$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q4 2026: OP window Q4 2026 to Q3 2027: $(67.50 + 1,857.12 + 1,934.50 + 1,973.19) \times 20 / 7,547.000 = \text{TWD } 15.46$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q1 2027: OP window Q1 2027 to Q4 2027: $(1,857.12 + 1,934.50 + 1,973.19 + 1,973.19) \times 20 / 7,547.000 = \text{TWD } 20.51$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q2 2027: OP window Q2 2027 to Q1 2028: $(1,934.50 + 1,973.19 + 1,973.19 + 3,086.30) \times 20 / 7,547.000 = \text{TWD } 23.76$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q3 2027: OP window Q3 2027 to Q2 2028: $(1,973.19 + 1,973.19 + 3,086.30 + 3,214.90) \times 20 / 7,547.000 = \text{TWD } 27.16$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q4 2027: OP window Q4 2027 to Q3 2028: $(1,973.19 + 3,086.30 + 3,214.90 + 3,279.20) \times 20 / 7,547.000 = \text{TWD } 30.62$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q1 2028: OP window Q1 2028 to Q4 2028: $(3,086.30 + 3,214.90 + 3,279.20 + 3,279.20) \times 20 / 7,547.000 = \text{TWD } 34.08$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q2 2028: OP window Q2 2028 to Q1 2029: $(3,214.90 + 3,279.20 + 3,279.20 + 4,571.40) \times 20 / 7,547.000 = \text{TWD } 38.01$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q3 2028: OP window Q3 2028 to Q2 2029: $(3,279.20 + 3,279.20 + 4,571.40 + 4,761.88) \times 20 / 7,547.000 = \text{TWD } 42.11$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q4 2028: OP window Q4 2028 to Q3 2029: $(3,279.20 + 4,571.40 + 4,761.88 + 4,857.12) \times 20 / 7,547.000 = \text{TWD } 46.30$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q1 2029: OP window Q1 2029 to Q4 2029: $(4,571.40 + 4,761.88 + 4,857.12 + 4,857.12) \times 20 / 7,547.000 = \text{TWD } 50.48$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q2 2029: OP window Q2 2029 to Q1 2030: $(4,761.88 + 4,857.12 + 4,857.12 + 6,274.41) \times 20 / 7,547.000 = \text{TWD } 54.99$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q3 2029: OP window Q3 2029 to Q2 2030: $(4,857.12 + 4,857.12 + 6,274.41 + 6,535.84) \times 20 / 7,547.000 = \text{TWD } 59.69$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q4 2029: OP window Q4 2029 to Q3 2030: $(4,857.12 + 6,274.41 + 6,535.84 + 6,666.56) \times 20 / 7,547.000 = \text{TWD } 64.49$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q1 2030: OP window Q1 2030 to Q4 2030: $(6,274.41 + 6,535.84 + 6,666.56 + 6,666.56) \times 20 / 7,547.000 = \text{TWD } 69.28$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

The final three operating quarters support earlier four-quarter windows and have no standalone ceiling. Arithmetic uses unrounded inputs; displayed components are rounded for readability.

7,547M shares are held flat using the latest weighted-average basic count as a diluted-share proxy. No speculative buyback or conversion is assumed. Additional dilution is shown mechanically below. Consolidated operating profit also includes noncontrolling interests, so the framework convention can overstate common-share economics relative to an attributable-profit approach.

Mechanical share sensitivity

Q1 2028 denominator	Ceiling/share
Current model	34.08
5% more shares	32.46
10% more shares	30.98

6. Cross-book relationships and monitoring

Higher DRAM/NAND pricing can benefit memory holdings while raising AUO customer device costs. The portfolio exposures therefore have different near-term cycle effects.

Sivers and optical-module producers address different portions of the optical ecosystem. AUO Micro LED short-reach links could compete with some architectures, so a blanket positive laser-content assumption would be inappropriate.

Nynomic and semiconductor testing names participate in manufacturing complexity. No purchase relationship with AUO is assumed without disclosure.

7. Scored risks and re-rate tests

Risk class	Score	Failure channel
Display cycle	-1	Weak unit demand or pricing overwhelms solution growth
Qualification and adoption	-1	Optical/glass demonstrations fail to become profitable production
Balance sheet and minorities	-1	Debt, capital intensity and noncontrolling interests weaken common-share economics
Perimeter and execution	-1	Energy deconsolidation, ADLINK mix and factory changes distort comparisons
Competition and architecture	-1	Alternative optics or larger display competitors compress margin

Dated triggers and counters

Checkpoint	Positive evidence	Counter / model action
October 2026 Q3 report	Revenue and OP validate the monthly-data bridge	Reset Q4 and cost absorption if demand is weaker
2027 mobility and energy reporting	Auto growth and clean continuing-business comparisons	Replace the energy-revenue proxy with reported perimeter
2028 optical and automotive commercialization	Qualified customers, purchase orders and shipment revenue	Keep new-vector revenue small if only demonstrations remain
2029-2030 margin delivery	Stable profits and manageable capex across the new mix	Revisit the gross-margin trajectory if scale remains loss-making

The latest two earnings discussions, Mandarin Q2 transcript and company financial presentations were reviewed. Automated transcript spellings may be imperfect; exact financial anchors come from issuer documents. Segment GP, optical revenue, energy perimeter and diluted shares contain clearly identified proxies. The model intentionally leaves room for a low analytical score even where the technology option is attractive.

8. Sources and snapshot

- **AUO-1** - July 30, 2026. Chinese Q2 financial results. Reported consolidated financial anchors.
- **AUO-2** - July 30 and April 30, 2026. Q2 investor presentation; Q1 comparison. Downloaded, visually reviewed financial, mix and outlook slides; Q1 deck also reviewed.
- **AUO-3** - September 9, 2026. August monthly revenue. Issuer monthly sales, English body.
- **AUO-4** - August 31, 2026. SEMICON optical and glass technologies. Short-reach Micro LED links and glass-substrate development.
- **AUO-5** - April 30, 2026. Q1 management call transcript. Issuer remarks, growth and expense direction, energy carve-out.
- **AUO-6** - July 30, 2026. Q2 Mandarin management call transcript. Issuer remarks on sampling, technology timing and inventory.
- **AUO-7** - September 18, 2026. TWSE closing-price history. Header snapshot only.
- **AUO-8** - 2026 publication. 2025 annual report. Competition and industry structure.

Model snapshot: September 21, 2026. 2409.TW. Framework 6.0.2. Base 35/60 (58%). Eighteen modeled operating quarters and fifteen complete forward-four-quarter ceilings. Current full PDF and synchronized Markdown: G:/My Drive/1amInvesting/Artifacts/2409TW_AUO_DeepDive.pdf and .md. The companion company worksheet uses this same model and links the ceiling path to the master portfolio.
