

ALRIB - Ribier SA

Full company artifact | Framework 6.0.2 | Research and model date: 27 September 2026

Latest earnings: H1 2026, released 24 September 2026. Calendar fiscal year. Amounts are EUR millions unless stated; values per share are EUR.

Status: NOT HELD / watchlist (portfolio holding flag blank). **Classification:** emerging, qualification-dependent equipment bottleneck. Proven MBE supplier; ROSIE production adoption remains conditional.

Analytical Base: 35/60 = 58/100. **Protected Excel Base:** 62/100. These are separate measures. The portfolio override is retained.

Active Q3 2027 forward operating ceiling: EUR 8.72/share, pricing Q3 2027-Q2 2028. Q1 2028 ceiling: EUR 9.92/share. Existing company convention: **20x forward operating profit**, divided by 21.253024 million issued shares as a conservative proxy. It is not an after-tax P/E or an enterprise-value valuation with a debt adjustment.

Header snapshot: saved workbook price EUR 9.65 (quote date unavailable; not refreshed in this earnings pass); issued shares 21.253024M, confirmed as of 31 August 2026 [RIB-5]; implied market capitalization at that saved price EUR 205.09M. Do not treat this as a current live quote.

Source: retained conditional operating model. All plotted quarters are forecasts.

1. Thesis and the latest earnings conclusion

Ribier sells molecular-beam-epitaxy systems, components, upgrades and support. Its established installed base funds a possible expansion into 300mm functional-oxide deposition through ROSIE. The investment case depends on customers moving from materials evaluation to repeatable production processes, followed by accepted equipment sales and service demand. It does not depend on Ribier owning every deposition route or supplying every laser.

H1 earnings support a modestly profitable existing business and progress toward ROSIE industrialization. They do not establish a new high-volume production order book. Financing lowers the immediate funding hurdle, while inventory, development expenditure and export licensing remain important constraints. The single operating case below retains its explicit, conditional tool-sales assumptions. No additional optionality is added to the ceiling for financing, expressions of interest or an unnamed customer.

The latest actuals replace the sales-only H1 anchor. Forward forecasts remain estimates from Q3 2026 onward. They are deliberately separate from actual H1 figures; no unpublished Q1/Q2 operating-profit split is invented.

2. Business, competitive position and TAM expansion

Core MBE systems serve research and compound-semiconductor production. Services/accessories monetize the installed base through spares, upgrades and support; upgrades can be lumpy, so the entire line is not contracted recurring revenue. Management reports more than 800 installed machines and 120 employees [RIB-3, RIB-4].

ROSIE deposits BTO/STO functional oxides on 300mm silicon for potential electro-optic and quantum uses. ROSIE II adds a dual-chamber cluster configuration. Neither the current oxide product nor photonics demand establishes that Riber directly grows every III-V laser on silicon. MBE and MOCVD serve different process needs; laser demand alone cannot be translated into Riber equipment orders.

Veeco and imec have disclosed a competing 300mm-compatible BTO process and delivered an MBE cluster. This is direct evidence against exclusivity [RIB-7]. DCA and alternative deposition routes remain competitive checks from the original technical research. Customer requirements for film performance, throughput, yield, uniformity, reliability and cost determine the winning process. A laboratory result is not yet a production share award.

Framework demand context and the equipment conversion gate

Framework 6.0.2 DB1 uses the September 2026 Goldman Sachs optical-module estimates reported by the user's prioritized source Serenity: USD 67.7B / 131.4B / 148.5B for CY2026 / 2027 / 2028. Those are module-market forecasts, not Riber revenue, BTO equipment TAM or confirmed wafer starts. DB12's WFE estimates are likewise contextual; they cannot be added to optical-module spending or applied as Riber's growth rate.

The usable company bridge is: compatible customer processes -> required wafer capacity -> productive wafers per tool -> Riber-qualified orders -> delivery and recognition -> equipment revenue; service revenue is modeled separately. Customer wafer volumes, commercial throughput and market share remain unverified. Consequently the model uses an explicit tool-unit/ASP proxy, constrained by disclosed orders and milestones, rather than a fabricated percentage of the optical TAM. Forecast confidence is LOW.

Ford principle: three demand phases

1. **Existing demand:** core MBE plus the installed base support present systems, spares and upgrade sales. The reported order book anchors near-term feasibility.
2. **Cost/performance expansion:** a productive ROSIE II process could broaden BTO/STO adoption in optical modulation and quantum devices. Lower integration cost may create demand beyond existing research tools; qualification, capacity and customer economics must be demonstrated.
3. **New applications:** management's broader 300mm and hybrid-deposition roadmap could reach additional photonic and compound-semiconductor applications. No incremental revenue is added for these adjacencies without product scope, customers and recognition timing. There is no assumed Microsoft or named hyperscaler order.

3. H1 actuals, guidance and accounting quality

The full French interim report is the controlling source for exact numbers. It is unaudited and was not subject to a limited review. The accounts were approved on 22 September 2026 [RIB-1]. The following amounts come from its consolidated statements and notes; reported subtotals can differ by EUR 0.001M through rounding.

Metric	H1 2026 actual	H1 2025 actual
Revenue	12.748	10.704
Systems revenue	7.696	7.729
Services/accessories	5.052	2.975
Gross profit	5.079	3.870
Gross margin	39.84%	36.15%
Operating expenses	4.972	4.521
Operating profit	0.107	(0.651)
Operating margin	0.84%	(6.08%)
Net income, group share	0.205	(0.809)
Basic / diluted EPS, EUR	0.01 / 0.01	(0.04) / (0.04)
Weighted diluted shares, M	20.991926	20.940836

Sources: RIB-1 pp.10, 18 and 28. H1 opex equals gross profit less operating profit; H1 2025 rounded expense lines leave a EUR 0.001M difference. Revenue grew 19.10%, with services up 69.82% using exact reported figures. Headline materials state +71%; the exact product-note amounts control this table. No consensus beat/miss claim is made.

Earnings quality and cash requirements

Gross R&D spend was 2.077, while 1.300 of development spending was capitalized and 0.847 of development amortization was charged. Reported net R&D expense was 1.478. Capitalization less amortization provides a 0.453 timing benefit relative to expensing current development spend; this does not imply an accounting irregularity. Note 7.4 reconciles the expense: $2.077 - 0.146 - 1.300 + 0.847 = 1.478$, using that note's research-credit figure of 0.146. The tax note separately cites total CIR/CII of 0.246; do not apply both as an extra earnings benefit. [RIB-1 pp.26, 29]

Operating cash flow was **(3.933)**, including a **(4.717)** working-capital effect. Cash spending on intangible and tangible assets was $1.305 + 0.126 = \mathbf{1.431}$, including capitalized development. CFO less this capex was **(5.364)**. This cash measure is separate from operating profit. Net inventory increased to 26.998 from 16.929; management associates the build with planned system shipments and ROSIE II inputs. Customer advances were 10.718, down from 13.352. Advances are liabilities already supporting orders, not incremental sales. [RIB-1 pp.8-9, 13-14, 21, 25]

Cash before overdrafts was 5.164; debt excluding leases, including the 0.055 overdraft, was 6.409. Therefore **net debt excluding leases is positive 1.245**, equivalent to net cash of negative 1.245. The cash-flow statement closes at 5.109 after overdrafts; do not subtract the overdraft again. Lease liabilities sum to 0.366 on the balance sheet (the lease note rounds its total to 0.365).

The 6.000 of financing was raised in June: 3.000 from Bpifrance and 3.000 from bank partners, with repayment deferrals of 12-36 months and maturities in 2032-2034. It is already in the June balance sheet, not an additional September cash inflow. Bank repayments of 1.035 explain the main debt-bridge difference. Funding supports industrialization but does not remove the need to convert inventory and collect customers. [RIB-1 p.23]

Cash reconciliation: 7.475 opening cash - 3.933 operating - 1.531 investing + 3.078 financing + 0.020 FX = **5.109** closing cash net of overdrafts. Equity reconciliation: 27.299 opening equity + 0.205 net income + 0.030 other comprehensive income + 0.240 treasury-share transactions - 2.102 distribution = **25.672**. Both gaps omitted from the email can therefore be resolved. [RIB-1 pp.12-13]

Latest outlook and order coverage

Management expects FY2026 revenue broadly comparable with FY2025, **subject to obtaining an export licence**. EUR 40.3M is the historical comparison anchor, not a precise new point guide. The model produces **40.248M**: 12.748 actual H1 + 27.500 modeled H2. This is consistent with the qualitative outlook, conditional on the licence and delivery/recognition assumptions. Management gives no corresponding operating-profit guide. The next scheduled revenue release is 3 February 2027 [RIB-6].

The June order book was 26.8: systems 16.5 across four systems, including one ROSIE, and services/accessories 10.3. More than 8 of blocked orders are excluded. That blocked-order figure was already disclosed in July; it is not new September demand or booked revenue. The July European production-tool order is for 2027 delivery and is outside the June book [RIB-3, RIB-9].

Modeled H2 systems revenue of 20.0 exceeds the entire June systems book by at least 3.5, even if every booked system recognizes this year. This is a visible additional-order requirement; the July order for 2027 cannot fill that gap. The model remains conditional rather than representing the full H2 sales bridge as secured backlog.

4. ROSIE milestones and evidence status

Item	Current evidence	Model treatment
US ROSIE 1	Shipped July 2026; customer unnamed	One Q3 unit at assumed EUR 4M. Recognition remains modeled; shipment alone does not prove final acceptance.
NQCP BTO/STO samples	Target Q4 2026	Qualification catalyst; sample reservations are not tool orders.
ROSIE II first cluster	Procurement secured, construction underway; assembly targeted by end-2026	Could support internal wafer production or an industrial buyer; no automatic sale of the first cluster.
2027-28 qualification/commercialization	Management development roadmap	Two modeled ROSIE sales in H2 2027 require customer conversion; no named production award assumed.
19 expressions of interest	Management interest map	Not 19 orders, not customer capacity or revenue.

Sources: RIB-3 pp.22-25; RIB-6. The September presentation includes a Q&A session, so an assertion that no Q&A exists is unwarranted. No full Q&A transcript or recording was retrieved. The two latest earnings presentations (September and April), the full interim report and the earnings release form this update's management record. This is an explicit transcript coverage gap, not claimed completion of a two-call review.

5. Model construction and confidence

Vector	Derivation and anchor	Confidence
Core systems	Actual H1 combined systems 7.696; future core units x modeled ASP; June systems book 16.5 includes ROSIE	HIGH actual; LOW future units, ASP and product GM
ROSIE	Shipment and qualification milestones; assumed EUR 4M per accepted sale	HIGH shipment evidence; LOW future recognition, units and economics
Services/accessories	Actual H1 5.052; June book 10.3; annual forecast explicitly stated below	HIGH actual/book; LOW timing, mix and margins
Opex	FY2025 rounded GP 15.6 less OP 5.1; fixed plus revenue-variable expense model	MEDIUM historical calibration; LOW future cost mix
Shares	21.253024M issued as of Aug31; H1 diluted average 20.991926M, no dilutive instruments reported	HIGH reported counts; issued count retained as forward proxy
Valuation	20x forward operating profit, current quarter plus next three	Sanctioned assumption; not company guidance

Tool units, prices and services

Year	Core units	Core ASP	ROSIE units / ASP	Service revenue	Total revenue
2027	10	3.0	2 / 4.0	12.0	50.0
2028	12	3.1	3 / 4.0	14.0	63.2
2029	14	3.2	4 / 4.0	16.0	76.8
2030	16	3.3	5 / 4.0	18.0	90.8

These are analyst assumptions, not management guidance or verified factory capacity. The 2027 core-unit case of ten units is comparable in scale with twelve total systems delivered in 2025, including nine production machines; it does not establish matching mix, ASP or ROSIE capacity [RIB-4 p.10]. Later volumes require production resources and customer acceptance. Core tools by quarter are 2/2/2/4 in 2027, 2/3/3/4 in 2028, 2/3/4/5 in 2029 and 3/3/4/6 in 2030; ROSIE counts follow the revenue table at EUR 4M each.

H2 2026 uses core systems 16.0, ROSIE 4.0 and services 7.5. H1 plus H2 service revenue is 12.552; the 2027 service assumption of 12.0 allows normalization of upgrade timing. The 2026 spike is not automatically compounded indefinitely. Services bookings and conversion are an explicit upside-review trigger. No decline is asserted as company guidance.

Gross margins are unreported product estimates: core/ROSIE/services are 35%/38%/48% in Q3 2026 and 36%/38%/48% in Q4. Annual 2027-30 assumptions are 36%/40%/50%, 37%/41%/51%, 38%/42%/52%, and 39%/43%/52%, respectively.

Quarterly GP is the sum of each product's revenue x margin. FY2025 rounded opex is 15.6 - 5.1 = 10.5. Its fixed component is 10.5 - 8% x 40.3 = 7.276. Quarterly opex = 7.276 x 1.12^(year - 2025) / 4 + 8% x quarterly revenue. OP = GP - opex. This is reported-accounting-style operating profit, including the net R&D expense convention; capitalized development is not deducted twice.

The implied H1 2026 cost allowance using actual revenue is 5.094, versus actual opex 4.972, a 0.122 difference. The forecast cost schedule is retained because ROSIE industrialization and gross R&D needs remain material; a single seasonal half does not justify reducing future costs. Product margins are likewise not mechanically lifted to match consolidated H1 mix. This calibration check is not a forecast of cash burn.

Quarterly product revenue

Quarter	Core MBE	ROSIE	Services	Total
Q3 2026	4.00	4.00	2.50	10.50
Q4 2026	12.00	0.00	5.00	17.00
Q1 2027	6.00	0.00	3.00	9.00
Q2 2027	6.00	0.00	3.00	9.00
Q3 2027	6.00	4.00	3.00	13.00
Q4 2027	12.00	4.00	3.00	19.00
Q1 2028	6.20	0.00	3.50	9.70
Q2 2028	9.30	4.00	3.50	16.80
Q3 2028	9.30	4.00	3.50	16.80
Q4 2028	12.40	4.00	3.50	19.90
Q1 2029	6.40	4.00	4.00	14.40
Q2 2029	9.60	4.00	4.00	17.60
Q3 2029	12.80	4.00	4.00	20.80
Q4 2029	16.00	4.00	4.00	24.00
Q1 2030	9.90	4.00	4.50	18.40
Q2 2030	9.90	4.00	4.50	18.40
Q3 2030	13.20	4.00	4.50	21.70
Q4 2030	19.80	8.00	4.50	32.30

Quarterly operating model

All rows are Model / LOW confidence. Actual H1 is reported separately above. The 2026 inflection is conditional H2 delivery; 2027 depends on core tool conversion and H2 ROSIE sales; later years require additional tools and operating scale.

Quarter	Status	Revenue	Gross profit	Opex	OP	OP margin
Q3 2026	Model	10.50	4.12	2.88	1.24	11.8%
Q4 2026	Model	17.00	6.72	3.40	3.32	19.5%
Q1 2027	Model	9.00	3.66	3.00	0.66	7.3%
Q2 2027	Model	9.00	3.66	3.00	0.66	7.3%
Q3 2027	Model	13.00	5.26	3.32	1.94	14.9%
Q4 2027	Model	19.00	7.42	3.80	3.62	19.0%
Q1 2028	Model	9.70	4.08	3.33	0.75	7.7%

Quarter	Status	Revenue	Gross profit	Opex	OP	OP margin
Q2 2028	Model	16.80	6.87	3.90	2.97	17.7%
Q3 2028	Model	16.80	6.87	3.90	2.97	17.7%
Q4 2028	Model	19.90	8.01	4.15	3.87	19.4%
Q1 2029	Model	14.40	6.19	4.01	2.18	15.1%
Q2 2029	Model	17.60	7.41	4.27	3.14	17.8%
Q3 2029	Model	20.80	8.62	4.53	4.10	19.7%
Q4 2029	Model	24.00	9.84	4.78	5.06	21.1%
Q1 2030	Model	18.40	7.92	4.68	3.24	17.6%
Q2 2030	Model	18.40	7.92	4.68	3.24	17.6%
Q3 2030	Model	21.70	9.21	4.94	4.27	19.7%
Q4 2030	Model	32.30	13.50	5.79	7.71	23.9%

Annual reconciliation

Year	Basis	Revenue	OP	OP margin
2026	Actual H1 + Model H2	40.248	4.672	11.6%
2027	Model	50.000	6.873	13.7%
2028	Model	63.200	10.546	16.7%
2029	Model	76.800	14.471	18.8%
2030	Model	90.800	18.465	20.3%

6. Quarterly forward operating ceilings

For every row: **ceiling = sum of the stated four quarters of OP x 20 / 21.253024M shares**. No Base-score probability is embedded in revenue or OP. Excel applies its existing Base weighting separately. No net-debt deduction or tax conversion is inserted into this inherited operating-ceiling convention. An earnings P/E valuation would require an explicit after-tax earnings bridge and is not interchangeable with this table.

The issued-share proxy is more conservative than H1's weighted diluted average and August net voting rights. It includes treasury shares that could be reissued; it does not claim to forecast future dilution. There were no outstanding dilutive instruments reported at H1 [RIB-1 p.18]. A capital raise or award issuance would require quarter-specific denominator changes.

Ceiling quarter	Exact OP window	F4Q OP	Multiple	Shares M	EUR/share
Q3 2026	Q3 2026 to Q2 2027	5.8819	20x	21.253024	5.54
Q4 2026	Q4 2026 to Q3 2027	6.5775	20x	21.253024	6.19
Q1 2027	Q1 2027 to Q4 2027	6.8730	20x	21.253024	6.47
Q2 2027	Q2 2027 to Q1 2028	6.9622	20x	21.253024	6.55
Q3 2027	Q3 2027 to Q2 2028	9.2704	20x	21.253024	8.72
Q4 2027	Q4 2027 to Q3 2028	10.2986	20x	21.253024	9.69
Q1 2028	Q1 2028 to Q4 2028	10.5457	20x	21.253024	9.92
Q2 2028	Q2 2028 to Q1 2029	11.9761	20x	21.253024	11.27
Q3 2028	Q3 2028 to Q2 2029	12.1474	20x	21.253024	11.43
Q4 2028	Q4 2028 to Q3 2029	13.2787	20x	21.253024	12.50
Q1 2029	Q1 2029 to Q4 2029	14.4711	20x	21.253024	13.62
Q2 2029	Q2 2029 to Q1 2030	15.5366	20x	21.253024	14.62
Q3 2029	Q3 2029 to Q2 2030	15.6421	20x	21.253024	14.72
Q4 2029	Q4 2029 to Q3 2030	15.8107	20x	21.253024	14.88
Q1 2030	Q1 2030 to Q4 2030	18.4652	20x	21.253024	17.38

Example, Q3 2027: $(1.9382464 + 3.6182464 + 0.747435968 + 2.966435968) \times 20 / 21.253024 = \mathbf{8.7238077}$. Q1 2028 prices all four 2028 quarters: $10.545743872 \times 20 / 21.253024 = \mathbf{9.9239938}$. H1 2026 is outside these forward windows. The final three operating quarters have no ceiling because no complete four-quarter window exists.

The material ceiling rise in Q3 2027 occurs as Q2 2028's modeled ROSIE sale enters the four-quarter window. This is a forecast inflection, not evidence that an order has already been received. The next 12-16 months are the primary decision horizon; 2029-30 are low-confidence extension assumptions.

Holding Q1 2028 operating assumptions fixed, 5% more shares gives EUR 9.45 and 10% more gives EUR 9.02. These are denominator sensitivities, not alternative operating cases or an issuance forecast.

7. Analytical score and risk deductions

Category	Points / maximum	Evidence
Core thesis	12 / 20	Established MBE capability; ROSIE qualification and competitive production economics remain open.
Cycle	6 / 10	H1 OP positive; service strength offsets lumpy equipment and licence restrictions.
TAM expansion	7 / 10	BTO/STO can open new uses; no direct conversion of optical TAM into equipment revenue.
Catalysts	4 / 5	July shipment, financed ROSIE II, Q4 samples and subsequent industrial qualification.
Macro	8 / 10	AI photonics, quantum research and regional semiconductor investment.
Alpha	3 / 5	Process, order timing, accounting and share-denominator distinctions.
Risks	-5	Five distinct risk classes below.
Total	35 / 60	58/100 analytical score after nearest-integer conversion. Excel Base 62 remains protected.

Risk class	Deduction	Current exposure
Export licence	-1	Blocked orders and an explicit licence condition on FY2026 sales.
Process competition / substitution	-1	Veeco/imec and other routes challenge an exclusive supplier thesis.
Customer and order concentration	-1	Four systems in June book; system timing can dominate a quarter.
Qualification / acceptance	-1	Shipment, samples, interest and production acceptance are different stages.
Scale and cash funding	-1	Working capital and capitalized R&D absorb cash; borrowing adds obligations.

8. Cross-book implications

AIXTRON and Veeco are paired process/throughput watches; equipment choice determines how much optical demand reaches Riber. Silvers, Coherent and Lumentum provide laser-demand context, but their shortages do not establish an MBE-only route or a Riber purchase order. Soitec and silicon-photonics foundries provide substrate and process-adoption context, with different revenue capture and qualifications. No other company model is changed by this ALRIB earnings pass.

9. Dated triggers and counter-tests

- Q4 2026 samples:** verify delivery and customer process results. Counter: samples slip or device integration fails. Samples alone do not add tool revenue.
- By end-2026 ROSIE II assembly:** confirm operating machine, throughput, yield and intended use. Counter: the first cluster remains internal or qualification extends; do not book it as an external sale.
- FY2026 export licence and recognition:** obtain order/delivery evidence before upgrading the licence-dependent case. Counter: licence denied or acceptance pushed beyond year-end; revise the affected quarter's systems revenue rather than applying a hidden probability haircut.
- 3 February 2027 scheduled FY revenue release:** reconcile the 40.248 model and the 3.5 minimum systems coverage gap with actual recognized sales. Counter: confirmed backlog does not cover the modeled shipment profile.

5. **2027 ROSIE order conversion:** signed, technically scoped orders with customer acceptance milestones strengthen the two-unit case; repeat production orders support a further volume review. Counter: interest remains evaluation only. Do not count an internal wafer-service deployment and an external sale of the same tool twice.

6. **Every financial report:** track inventory, advances, collections, gross R&D, capitalization/amortization and financing needs. Counter: cash consumption persists after scheduled deliveries or a raise increases diluted shares.

7. **Services conversion:** evaluate whether the 10.3 June book produces repeat spend or a one-time upgrade wave. Counter: later service demand normalizes. A larger backlog alone is not a perpetual growth rate.

Evidence changes can justify a future analytical rescore and model revision. Excel Base changes still require the user's explicit instruction. No automatic trade is authorized by these research triggers.

10. Sources, limitations and current snapshot

RIB-4 | 2026-04-08 | [FY2025 management presentation](#). Preceding earnings presentation: installed base and FY2025 tool deliveries. Not a call transcript.

RIB-5 | 2026-09-21 | [August 2026 share and voting-rights disclosure](#). At Aug31: 21.253024M issued shares; 21.024031M net voting rights. Issued-share valuation proxy retained.

RIB-6 | 2026-09-24 | [H1 2026 earnings release](#). Conditional FY2026 outlook, July shipment and ROSIE financing; next revenue release February 3, 2027.

RIB-7 | 2026-01-27 | [Veeco / imec 300mm BTO process](#). Competing MBE cluster and process; no Riber exclusivity assumption.

RIB-8 | 2026-09-27 | [Model provenance and framework](#). ALRIB_Riber_DeepDive_v5_0_15.md; FRAMEWORK_v6.0.2_CONSOLIDATED.md. Retained sanctioned 20x forward OP and 21.253024M issued-share proxy. Historical models archived; current full PDF/MD synchronized.

RIB-9 | 22 July 2026 | [H1 activity release](#). Establishes which order, export and sample statements predate September.

Framework context is from the local **FRAMEWORK_v6.0.2_CONSOLIDATED.md** and its DB1 source register, including the [Serenity September 8 optical update](#). The full underlying Goldman Sachs note was not independently inspected for this company update.

Remaining gaps: no complete earnings Q&A transcript retrieved; no disclosed future product margins, commercial ROSIE throughput, unit ASPs, future accepted order schedule or fully diluted quarterly forecast. The full report resolves Muse's cash-flow, capex, share-count and equity gaps. Exact interim actuals control where headline rounding or growth percentages differ. Forecasts retain LOW-confidence labels.

Current model snapshot: G:/My Drive/1amInvesting/Artifacts/v3_2_master_portfolio.xlsx, ALRIB_Q_Model, paired with ALRIB_Riber_DeepDive_v5_0_15.md and .pdf; Framework 6.0.2; 27 September 2026. The historical filename is retained; the framework version is the one stated in this header. Prior artifacts and the before/after log are kept separately under versions/ALRIB_2026-09-27.
