

ENS - EnerSys | Full Deep Dive

September 21, 2026 | Framework 6.0.2 | NOT HELD | STRUCTURAL - qualified energy storage and service; TEMPORAL credit support | Watchlist

Analytical Base: 42/60 (70%). Valuation: 20x forward four-quarter adjusted operating profit under the FY2027 definition.

Snapshot: USD 178.12 per share on September 18, 2026 close; 36.065 million shares, implying USD 6,423.94 million equity value. Source [ENS-7]. Price is a dated header snapshot, not a valuation input in the body.

Active horizon Q3 2027 ceiling: USD 375.85/share. Q1 2028: USD 398.26/share.

All financial model amounts are USD millions, shares in millions, unless stated. Fiscal year ends March; calendar Q3 2026 maps to fiscal Q2 2027. The quarter ended July 5 is assigned to calendar Q2 for portfolio comparability. Calendar annual totals are not company fiscal-year guidance.

1. Thesis, bottleneck and expanded TAM

EnerSys supplies batteries, power systems and service for infrastructure, mobility and defense. In Framework 6.0 this fits electricity reliability and energy security. Data centers require power continuity; defense systems require dependable portable energy. Qualification, installed relationships and service coverage support recurring replacement demand, but batteries are not a single-source AI bottleneck.

The mix is important. Network & Infrastructure Solutions (NIS) captures communications, data centers and industrial power; Industrial Mobility Solutions (IMS) includes material handling and transportation; Precision Power Solutions (PPS) targets aerospace and defense. The May 2026 segment realignment replaces older segment labels. Model comparisons must not confuse a transferred business with organic growth. [ENS-1, ENS-6]

Ordinary product economics, manufacturing credits and one-time tariff recoveries have different durability. The model keeps Section 45X outside sales and does not repeat the \$30.9M tariff refund. The business must improve profits before credits to withstand their eventual phase-down. [ENS-1]

The FY2026 annual report names East Penn, Stryten/Exide, Fiamm, Saft, Hoppecke, New Power, C&D, Vertiv, OmniOn, Yuasa, Amphenol, Delta and Chinese suppliers. Chemistry, service, certification and total operating cost all matter. Lithium migration can create new offerings while replacing existing lead-acid revenue; it cannot be assumed to add the full lithium market without cannibalization. [ENS-8]

TAM expansion and S-curve

Phase	Economic exposure	Model treatment
Phase 1 - current, 100% relevance	Company-estimated serviceable market above \$26B	Existing qualified applications and replacement demand
Phase 2 - 2027-2030, 50% conceptual weight	Lithium data-center systems, warehouse storage and defense electrification	Faster mix growth inside segment revenue, not separate duplicate TAM
Phase 3 - around 2030 and later, 20% conceptual weight	New U.S. specialized lithium cell capacity	No standalone plant sales or extra option premium until qualification/utilization evidence

The June investor deck estimates NIS SAM above \$15B, IMS above \$8.3B and PPS above \$3.1B; these sum to approximately \$26.4B and are company estimates, not independently measured future sales. The long-term framework targets 3-5% end-market growth plus 1-3% incremental growth and 50-100bp annual adjusted operating-margin improvement excluding credits. This model stays near the upper end of that growth envelope initially, then moderates. [ENS-4]

2. Latest evidence and financial anchor

Latest fiscal Q1 2027 actuals and fiscal Q2 outlook anchor the model. Fiscal Q2 revenue guidance is \$955-995M, credit benefit \$42-47M, and adjusted EPS \$3.15-3.25. Segment Q1 sales were NIS \$428.3M, IMS \$406.8M and PPS \$100.5M. [ENS-1]

Two-call review: May 21 emphasized manufacturing cost actions, softer material handling and customer commissioning for new products. August 13 confirmed stronger data-center orders but a measured revenue cadence, with DataSafe Noir becoming meaningful in fiscal 2028. Order growth does not become same-quarter revenue. [ENS-2, ENS-3]

The revised July plant scope is approximately 1GWh for specialized applications, not the superseded broad commercial project. Estimated cost is \$650M with about \$150M DOE support; construction is planned in H1 fiscal 2028, with full production roughly three years later. The old capacity/timing case is excluded. [ENS-6]

Period	Status	Revenue	Gross profit	Operating profit	Source
Calendar Q1 2026 / FY26 Q4	Actual GAAP	988.00	290.90	123.70	ENS-5
Calendar Q2 2026 / FY27 Q1	Actual GAAP	935.60	313.40	151.40	ENS-1

Latest reported adjusted OP is \$178.8M. Removing the \$30.9M tariff refund gives a recurring comparison of \$147.9M, including manufacturing credits. FY2027 adjusted metrics now exclude all SBC; the prior quarter originally used a different definition. Forecasts follow the newer basis and ordinary depreciation remains an expense. Segment gross margins are analytical allocations, because segment operating earnings rather than gross profit are disclosed. [ENS-1, ENS-2]

Calendar Q3 revenue is \$975M, exactly the fiscal Q2 guide midpoint. A 37.2M diluted-share assumption, \$44.5M credit midpoint, 22.5% tax on non-credit earnings and \$10.6M below-OP expense imply \$151.28M OP at the \$3.20 EPS midpoint. This is an analyst bridge to the EPS guide, not published OP guidance. The model uses the exact formula $(3.20 \times 37.2 - 44.5) / 0.775 + 10.6 + 44.5$. No repeated tariff refund is included.

Balance sheet and capital allocation

Cash of \$530.7M and credit-defined net debt of \$521.5M provide a reasonable starting position; plant spending must still compete with distributions and buybacks. Fiscal 2027 capex guidance is about \$70M, preceding the larger construction period. The roughly \$500M company-funded plant investment is a multi-year cash obligation; it is not deducted from OP as immediate expense and is not ignored in risk assessment. [ENS-1, ENS-6]

3. Base score and evidence ledger

Category	Score	Evidence
Core Thesis	15	Qualification, service footprint and U.S. supply positioning; competitive chemistries
Cycle Stage	8	Infrastructure/defense growth and mobility recovery potential
TAM Expansion	8	New storage formats and defense demand expand wallet share
Catalysts	4	FY2028 lithium offering and delivery of cost actions
Macro	8	Power reliability and defense priorities; industrial cyclicity
Alpha	3	Separation of underlying earnings, credits and tariff refunds
Risks	-4	Policy, execution, industrial demand, capital allocation
Total	42/60 = 70%	Watchlist

42/60 = 70, Watchlist. The diversified energy platform earns structural credit, while subsidy exposure and an immature new-product ramp limit conviction.

4. Quarterly operating model

Three reporting-segment revenue vectors are modeled separately, with credits shown as a gross-profit adjustment rather than product sales. R&D and SG&A are forecast explicitly. The total expense ratio is calibrated to near-term EPS and then normalized gradually. Segment gross-margin allocations and expense splits are Plan B assumptions; they are not reported segment gross margins.

Revenue vector	Driver and source	Confidence
Network and Infrastructure Solutions	ENS-1 segment actuals; ENS-2/4 data-center, communications and service ramps	MEDIUM near term; LOW out-years
Industrial Mobility Solutions	ENS-1/2: weak forklifts, improving transportation; recovery model	MEDIUM direction; LOW timing
Precision Power Solutions	ENS-1/2/4: qualified defense applications and mix	MEDIUM direction; LOW out-years

Revenue = prior qualified business x demand/realized-mix growth, with new products embedded in segment totals. Unit and ASP disclosures are insufficient to build a common battery-unit model across chemistries; no invented GWh-to-revenue ASP is used. The calendar 2027 NIS total assumes data-center and communications demand plus a modest Noir contribution after qualification. IMS assumes a recovery, not a permanent acceleration in forklift orders. PPS grows faster as defense mix rises. No unannounced acquisition is included. Growth rates imply capacity and service staffing must expand, but the new lithium factory is not required to meet all modeled 2027-2029 sales.

Physical and commercial drivers

Calendar year	NIS	IMS	PPS	Credits outside sales	New plant standalone sales
2027	1,980	1,800	470	180	0
2028	2,160	1,910	525	185	0
2029	2,320	2,010	585	190	0
2030	2,500	2,110	650	120	0

Vector revenue, gross margin and gross profit

For each row: vector gross profit = vector revenue x its own gross margin. The following tables expose the inputs; they are analyst model assumptions unless explicitly identified as reported or guided.

Network and Infrastructure Solutions

Quarter	Revenue	Gross margin	Gross profit
Q3 2026	455.00	27.00%	122.85

Gross-profit adjustment outside product revenue

45X model: \$180M in calendar 2027, \$185M in 2028, \$190M in 2029, then \$120M in 2030. The June deck gives \$140-190M annual value through 2029 and \$40-120M during 2030-2032; the later annual allocation is an analyst estimate within those bounds. No additional lithium-factory credit pool is added before production. Forecast product gross margins exclude these credits. [ENS-4]

Quarter	Additional GP
Q3 2026	44.50
Q4 2026	45.00
Q1 2027	45.00
Q2 2027	45.00

Quarter	Additional GP
Q3 2027	45.00
Q4 2027	45.00
Q1 2028	46.25
Q2 2028	46.25
Q3 2028	46.25
Q4 2028	46.25
Q1 2029	47.50
Q2 2029	47.50
Q3 2029	47.50
Q4 2029	47.50
Q1 2030	30.00
Q2 2030	30.00
Q3 2030	30.00
Q4 2030	30.00

Annual trajectory cross-check

The calendar-bucket sums below are a capacity and demand cross-check; quarterly windows remain the live valuation method. Years beyond the latest guidance are model extensions, not company guidance.

Year	Revenue	Operating profit	OP margin
2027	4,250.00	657.95	15.48%
2028	4,595.00	736.79	16.03%
2029	4,915.00	807.88	16.44%
2030	5,260.00	821.96	15.63%

Calendar 2026 sales implied by actual Q1/Q2 plus the modeled H2 are \$3,928.6M. Revenue grows to \$4,250M in 2027 and \$5,260M in 2030, approximately 7.6% annually over that interval. This is near the high end of the company's aggregate 4-8% long-term growth framework; execution must justify it. The 2030 credit step-down is deliberate. A 10% NIS revenue shortfall in 2027 costs about \$55M GP before expense flex, while elimination of \$180M annual credits affects OP dollar-for-dollar.

5. Forward four-quarter ceiling and derivations

20x forward-four-quarter adjusted operating profit under the FY2027 definition is the portfolio owner-selected multiple as of September 21, 2026, held constant across the model. This is the framework operating-profit convention, not an observed market P/E. A one-turn change changes each ceiling by 5%. The FY2027 adjusted definition excludes SBC. Retaining roughly \$8M quarterly SBC would lower forward OP by about \$32M; an accounting exclusion is not organic margin improvement.

The framework convention applies the operating-profit multiple directly to diluted equity shares. It is neither a net-income P/E nor an enterprise-value bridge. No separate net-cash addition, tax conversion, probability haircut or price-dependent ranking enters this ceiling. Any probability-weighted revenue is already included once in its operating vector.

Ceiling quarter	Exact earnings window	Forward-4Q OP	Multiple	Diluted shares	Ceiling/share
Q3 2026	Q3 2026 to Q2 2027	628.91	20x	37.200	338.12
Q4 2026	Q4 2026 to Q3 2027	642.12	20x	37.150	345.69
Q1 2027	Q1 2027 to Q4 2027	657.95	20x	37.100	354.69
Q2 2027	Q2 2027 to Q1 2028	677.66	20x	37.075	365.56
Q3 2027	Q3 2027 to Q2 2028	696.26	20x	37.050	375.85
Q4 2027	Q4 2027 to Q3 2028	715.97	20x	37.025	386.75
Q1 2028	Q1 2028 to Q4 2028	736.79	20x	37.000	398.26
Q2 2028	Q2 2028 to Q1 2029	754.56	20x	36.975	408.15
Q3 2028	Q3 2028 to Q2 2029	771.35	20x	36.950	417.51
Q4 2028	Q4 2028 to Q3 2029	789.12	20x	36.925	427.42
Q1 2029	Q1 2029 to Q4 2029	807.88	20x	36.900	437.88
Q2 2029	Q2 2029 to Q1 2030	811.40	20x	36.875	440.08
Q3 2029	Q3 2029 to Q2 2030	813.66	20x	36.850	441.61
Q4 2029	Q4 2029 to Q3 2030	817.18	20x	36.825	443.82
Q1 2030	Q1 2030 to Q4 2030	821.96	20x	36.800	446.72

Complete derivation for every ceiling quarter

Q3 2026: OP window Q3 2026 to Q2 2027: $(151.28 + 155.82 + 164.49 + 157.32) \times 20 / 37.200 = \text{USD } 338.12$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q4 2026: OP window Q4 2026 to Q3 2027: $(155.82 + 164.49 + 157.32 + 164.49) \times 20 / 37.150 = \text{USD } 345.69$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q1 2027: OP window Q1 2027 to Q4 2027: $(164.49 + 157.32 + 164.49 + 171.66) \times 20 / 37.100 = \text{USD } 354.69$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q2 2027: OP window Q2 2027 to Q1 2028: $(157.32 + 164.49 + 171.66 + 184.20) \times 20 / 37.075 = \text{USD } 365.56$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q3 2027: OP window Q3 2027 to Q2 2028: $(164.49 + 171.66 + 184.20 + 175.92) \times 20 / 37.050 = \text{USD } 375.85$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q4 2027: OP window Q4 2027 to Q3 2028: $(171.66 + 184.20 + 175.92 + 184.20) \times 20 / 37.025 = \text{USD } 386.75$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q1 2028: OP window Q1 2028 to Q4 2028: $(184.20 + 175.92 + 184.20 + 192.47) \times 20 / 37.000 = \text{USD } 398.26$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q2 2028: OP window Q2 2028 to Q1 2029: $(175.92 + 184.20 + 192.47 + 201.97) \times 20 / 36.975 = \text{USD } 408.15$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q3 2028: OP window Q3 2028 to Q2 2029: $(184.20 + 192.47 + 201.97 + 192.70) \times 20 / 36.950 = \text{USD } 417.51$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q4 2028: OP window Q4 2028 to Q3 2029: $(192.47 + 201.97 + 192.70 + 201.97) \times 20 / 36.925 = \text{USD } 427.42$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q1 2029: OP window Q1 2029 to Q4 2029: $(201.97 + 192.70 + 201.97 + 211.24) \times 20 / 36.900 = \text{USD } 437.88$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q2 2029: OP window Q2 2029 to Q1 2030: $(192.70 + 201.97 + 211.24 + 205.49) \times 20 / 36.875 = \text{USD } 440.08$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q3 2029: OP window Q3 2029 to Q2 2030: $(201.97 + 211.24 + 205.49 + 194.96) \times 20 / 36.850 = \text{USD } 441.61$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q4 2029: OP window Q4 2029 to Q3 2030: $(211.24 + 205.49 + 194.96 + 205.49) \times 20 / 36.825 = \text{USD } 443.82$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q1 2030: OP window Q1 2030 to Q4 2030: $(205.49 + 194.96 + 205.49 + 216.02) \times 20 / 36.800 = \text{USD } 446.72$ per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

The final three operating quarters support earlier four-quarter windows and have no standalone ceiling. Arithmetic uses unrounded inputs; displayed components are rounded for readability.

Forecast diluted shares begin at 37.2M, above the August 7 basic 36.065M count. Modest net repurchases reduce shares to 36.725M by the final operating quarter. This does not presume the entire authorization is spent; large plant cash requirements can limit repurchases. If shares instead remain at 37.2M, later per-share ceilings are modestly lower. [ENS-6]

Mechanical share sensitivity

Q1 2028 denominator	Ceiling/share
Current model	398.26
5% more shares	379.30
10% more shares	362.06

6. Cross-book relationships and monitoring

FSLR addresses generation; EnerSys primarily addresses storage, continuity and energy management. Their revenue pools differ, but both have material U.S. manufacturing-credit sensitivity. Correlated policy exposure should be visible across the portfolio.

Data-center spending also benefits electrical equipment suppliers and power-service providers. EnerSys does not capture all UPS or grid capex, and service or supplier relationships are not assumed without a disclosed contract.

OSS and EnerSys have different defense products but shared program-budget and qualification risks. More drones do not automatically prove either company wins every platform.

7. Scored risks and re-rate tests

Risk class	Score	Failure channel
Policy and credit durability	-1	45X eligibility or phase-out changes impair contribution; monitor separately from product margin
Qualification and execution	-1	Noir certification, service delivery or factory schedule slips delay modeled mix improvement
Industrial and competitive cycle	-1	Forklift recovery disappoints or chemistry competition reduces realized pricing
Capital allocation and cash	-1	Plant spend, working capital, debt and distributions compete; buyback/dilution assumptions fail

Dated triggers and counters

Checkpoint	Positive evidence	Counter / model action
Calendar Q3 2026 / FY27 Q2	Sales and EPS track the latest guidance; product margin stays firm	Strip out discrete credits/refunds before interpreting margin improvement
Fiscal 2028 / calendar 2027-2028	Noir production adoption and material handling recovery	Qualification or customer timing slips: defer NIS/IMS sales separately
H1 fiscal 2028 construction checkpoint	Permits, grant conditions and construction milestones confirmed	Do not assign factory revenue merely because financing support is announced
Calendar 2029-2030	Core profitability replaces declining credits	Credit taper with insufficient underlying growth: lower ceiling trajectory

Reported actuals, revised factory scope and segment definitions are high-confidence. Near-term guidance is medium-confidence until delivered. Long-term revenue/margin allocations are analyst assumptions with low confidence.

Manufacturing credits support earnings but are not evidence of a permanent moat; the model includes their decline and excludes a second tariff windfall.
