META PLATFORMS

November 2026
Financial and owner-source review

Current research: 6 November 2026 | Framework 8.0 | USD per legacy economic unit

Q4 2027 ceiling $787.71 | Analytical Base 76.67 | Excel Base 80

The current forecast appears first. The complete 21 October analysis follows in a dated historical appendix. Earlier forecasts and their original information vintage remain visible.

USD millions; legacy economic units in millions. Prices in USD per legacy economic unit.

The current decision and the change in the ceiling

The current Q4 2027 calculated ceiling is $787.71 per legacy economic unit, down 1.52% from the $799.87 published in the 21 October model. The active valuation window runs from Q4 2027 through Q3 2028. It contains $100.827 billion of probability-weighted consolidated GAAP operating profit, valued at 20x over 2,560 million starting-quarter legacy units. Analytical Base remains 46/60, or 76.67; the protected Excel Base remains 80.

The new owner-supplied letter strengthens the bounded faster-growth case and describes a much larger capital requirement. The review links those receipts to paid infrastructure, depreciation, cash operating costs and actual financing terms. September construction in progress is refreshed to $89.499 billion. A separate conditional youth-settlement obligation gains explicit recognition and cash timing. These costs lower the active ceiling even while the later faster-case revenue endpoint improves.

The financing update distinguishes the preferred offering that closed on 29 October, the entered common forward with future settlement cash, planned Class C ATM capacity and a further residual equity condition. The model maintains a $10 billion reserve on every selected cash path under those funding assumptions. Across the 72 paths, expected lifetime residual common-equity proceeds are $8.202 billion; the most demanding path requires $66.956 billion net.

The retained portfolio market reference is $592.10. Its market date remains unverified in the saved quote evidence, so this report makes no fresh closing-price claim. Research inputs and forecasts are selected as of 6 November 2026. The full 21 October report and its original exhibits follow in a dated historical appendix.

Current valuation and preserved controls

OP USD millions; target USD per legacy economic unit

Horizon	F4Q GAAP OP	Multiple	Start units M	Ceiling
Q4 2027	100,827.02	20	2,560.00	787.71

Window Q4 2027 through Q3 2028. Price uses probability-weighted OP divided by probability-weighted starting legacy economic units. Analytical Base 46/60 = 76.6667; protected Excel Base 80.

The business, its customers and the earnings bottleneck

Meta connects a very large consumer audience with advertisers, merchants and businesses. Facebook, Instagram, WhatsApp and Messenger provide distribution; recommendation systems and advertiser tools influence the usefulness of that distribution. More engagement can create more eligible impressions, while better matching can improve advertiser conversion and auction demand. Sustained receipts depend on both user attention and measurable commercial returns.

The strongest existing earnings channel is advertising across Family of Apps. Business messaging and agents can extend that commercial network. Muse creates an additional route through paid tiers, commerce and payments, with early adoption still dominated by free use. Reality Labs adds hardware and possible future services while consuming substantial research and product-development resources.

The investment bottleneck is the return earned on the next generation of paid AI assets. Training, serving, memory, networks, data centers and application support must produce enough useful activity and commercial receipts to cover cash costs, depreciation and new ownership claims. Capital availability and accounting recognition affect how much of that progress reaches each legacy economic unit.

Products, customers and the captured economic wallet

Business relationships; source and model scope

Channel	Company receipts	Costs and constraints
Advertising and recommendations	Advertiser auctions across Facebook and Instagram	Audience attention, conversion, privacy, competition, model training and serving
Messaging and business agents	Business interactions, commerce and paid services	Integration permissions, sales, support and overlap with core forecasts
Muse personal agents	Conditional paid tiers, commerce take and payments	Free users, inference, memory/tool costs and application support
Reality Labs and glasses	Hardware and potential software/services	Hardware economics, R&D and continuing segment losses

Each channel reaches operating profit through receipts and its paid cost base. Consolidated projections already include core AI and business-agent benefits.

Sources: [S1], [S2], [S3], [S7], [S10].

Replacement demand, new uses and the addressable wallet

Better recommendations and advertising tools can improve returns inside a large existing market. New agent interfaces may help businesses sell, support customers and complete transactions. The addressable expansion comes from more useful commercial interactions, qualified paid conversion and a take on eligible transactions. User counts and gross transaction volume need their own receipt conversion before they enter Meta revenue.

Several prospective markets share the same infrastructure and distribution. Personal agents, business agents, messaging commerce and external compute therefore require overlap adjustment. The current model already includes AI-assisted ad growth and a paid Muse cohort. The new owner letter contributes one joint growth-and-capital scenario, with incremental receipts measured above the same existing faster case.

Advertising remains exposed to consumer activity, business budgets, competing attention and regulatory access. Future agent monetization also faces competing platforms, customer permissions and inference economics. These constraints keep the revenue opportunity linked to a bounded costed forecast.

Sources: [S2], [S3], [S7], [S10].

September results and the reported segment bridge

For Q3 2026, Meta reported $64.601 billion of revenue and $12.988 billion of GAAP operating profit. Cost of revenue was $13.369 billion, giving $51.232 billion of gross profit. R&D, marketing/sales and G&A were $20.054 billion, $3.333 billion and $14.857 billion. These reported costs include ordinary stock compensation and the $9.890 billion youth-settlement charge.

Advertising contributed $63.061 billion, other Family of Apps $1.097 billion and Reality Labs $443 million. Family of Apps earned $17.117 billion of operating profit; Reality Labs lost $4.129 billion. Product-specific future margin assumptions cannot be read directly from those two reported segment totals.

The issuer also illustrated operating profit of $22.878 billion excluding the youth charge. That comparison helps explain the ordinary operating run rate. The selected valuation retains consolidated GAAP operating profit and records each new analytical legal-recognition assumption explicitly. Q3 net income was $9.860 billion after $3.141 billion of tax expense.

Average daily active people were 3.64 billion. Ad impressions rose 10% year over year and average price per ad rose 14%. Reported revenue rose 26%. The inherited core forecast already captures the recent advertising acceleration; the owner letter receives no additional near-term overlay for the same facts.

September 2026 reported consolidated results

Non-GAAP Financial Measures

To supplement our condensed consolidated financial statements, which are prepared and presented in accordance with generally accepted accounting principles in the United States (GAAP), we use the following non-GAAP financial measures: revenue excluding foreign exchange effect, advertising revenue excluding foreign exchange effect, and free cash flow. The presentation of these financial measures is not intended to be considered in isolation or as a substitute for, or superior to, financial information prepared and presented in accordance with GAAP. Investors are cautioned that there are material limitations associated with the use of non-GAAP financial measures as an analytical tool. In addition, these measures may be different from non-GAAP financial measures used by other companies, limiting their usefulness for comparison purposes. We compensate for these limitations by providing specific information regarding the GAAP amounts excluded from these non-GAAP financial measures.

We believe these non-GAAP financial measures provide investors with useful supplemental information about the financial performance of our business, enable comparison of financial results between periods where certain items may vary independent of business performance, and allow for greater transparency with respect to key metrics used by management in operating our business.

Our non-GAAP financial measures are adjusted for the following items:

Foreign exchange effect on revenue. To calculate revenue on a constant currency basis, we translate current period revenue using the prior year's monthly exchange rates for our settlement or billing currencies other than the U.S. dollar, which we believe is a useful metric that facilitates comparison to our historical performance.

Purchases of property and equipment; Principal payments on finance leases. We subtract both purchases of property and equipment, and principal payments on finance leases in our calculation of free cash flow because we believe that these two items collectively represent the amount of property and equipment we need to procure to support our business, regardless of whether we procure such property or equipment with a finance lease. We believe that this methodology can provide useful supplemental information to help investors better understand underlying trends in our business. Free cash flow is not intended to represent our residual cash flow available for discretionary expenditures.

For more information on our non-GAAP financial measures and a reconciliation of GAAP to non-GAAP measures, see the "Reconciliation of GAAP to Non-GAAP Results" table in this press release.

Sources: [S1], [S2], [S4], [S10].

The December outlook and calendar-quarter allocation

Management guided Q4 2026 revenue to $73-76 billion and full-year total costs to $175-179 billion. The cost range includes the Q3 youth charge. Subtracting nine-month actual costs of $127.077 billion gives an ordinary Q4 cost range of $47.923-51.923 billion. The revenue and cost midpoints imply $24.577 billion of ordinary Q4 operating profit.

The model places a separate probability-weighted New Mexico privacy principal charge of $11.250 billion in Q4 2026. This analytical recognition assumption brings selected Q4 operating profit to $13.327 billion. The court judgment supplies the principal and interest terms; its issuer accounting quarter and treatment within guidance remain unresolved.

Full-year capex guidance is $135-145 billion including finance-lease principal. Reality Labs is expected to lose $18-19 billion in 2026 and around $15 billion in 2027. Meta supplied no numerical consolidated 2027 revenue, total-cost or capex guide in the verified call. The 2027-2030 company forecasts below are explicit analytical assumptions.

December ordinary guidance provides the near-term anchor. Future operating costs retain the existing quarter-seasonality weights, and each forward valuation uses a current calendar quarter plus the next three quarters. Fiscal, calendar, stock and flow definitions remain separate throughout the tables.

Management outlook and explicit arithmetic

USD millions; 2026 outlook unless specified

Item	Low / input	High / derived	Definition
Q4 2026 revenue	73000	76000	Issuer range; selected midpoint 74500
FY2026 total costs	175000	179000	Includes Q3 youth charge
Nine-month actual costs	127077	Blank	Reported actual subtraction base
Derived Q4 ordinary costs	47923	51923	FY range less nine-month actuals
Derived ordinary Q4 OP midpoint	24577	Blank	74500 minus 49923
Separate analytical NM expense	11250	Blank	Probability-weighted Q4 recognition proxy
Selected Q4 GAAP OP	13327	Blank	Ordinary midpoint less analytical NM
FY2026 capex incl lease principal	135000	145000	Issuer range
FY2026 Reality Labs loss	18000	19000	Issuer range
2027 Reality Labs loss around	15000	Blank	Management approximate discussion

Meta provides no numerical consolidated 2027 revenue, total-expense or capex guide in the verified call. Q4 derived ordinary OP and the separate New Mexico recognition date are analytical calculations.

- Family daily active people (DAP) – DAP was 3.64 billion on average for September 2026, an increase of 3% year-over-year.
- Ad impressions – Ad impressions delivered across our Family of Apps increased by 10% year-over-year.
- Average price per ad – Average price per ad increased by 14% year-over-year.
- Revenue – Revenue was $64.60 billion, an increase of 26% year-over-year on both a reported and constant currency basis.
- Costs and expenses – Total costs and expenses were $51.61 billion, an increase of 68% year-over-year. This includes the litigation charge as discussed above.
- Capital expenditures – Capital expenditures, including principal payments on finance leases, were $34.91 billion.
- Capital return program – Dividend and dividend equivalent payments were $1.36 billion.
- Cash, cash equivalents, and marketable securities – Cash, cash equivalents, and marketable securities were $82.45 billion as of September 30, 2026.
- Cash flow – Cash flow from operating activities was $32.79 billion, and free cash flow was negative $2.12 billion.(1)
- Headcount – Headcount was 66,775 as of September 30, 2026, a decrease of 15% year-over-year.

---

CFO Outlook Commentary

We expect fourth quarter 2026 total revenue to be in the range of $73-76 billion. Our guidance assumes foreign currency is an approximately 1% headwind to year-over-year total revenue growth, based on current exchange rates.

We are raising our expense outlook to incorporate the $9.9 billion charge related to legal proceedings recognized in the third quarter. We now expect full year 2026 total expenses to be in the range of $175-179 billion.

Excluding the third quarter legal charge, we continue to expect 2026 operating income to be above 2025 operating income.

At a segment level, we now expect Reality Labs losses to decline compared to 2025 to a range of $18-19 billion.

We anticipate 2026 capital expenditures, including principal payments on finance leases, to be in the range of $135-

Meta Q3 2026 issuer release, 21 October 2026, physical page 2. Reported audience/ad metrics, capex/cash definitions and the first part of management outlook remain in the original pixels.

145 billion, narrowed from our prior outlook of $130-145 billion.

Absent any changes to our tax landscape, we expect our fourth quarter 2026 tax rate to be between 15-17%.

Additionally, we continue to monitor active legal and regulatory matters that could significantly impact our business and financial results. For example, we continue to see scrutiny on youth-related issues in several markets and have a number of youth-related trials scheduled in the coming months in the U.S.

Looking beyond 2026, we are still developing our budget and capacity plans for next year, but we expect to continue investing aggressively to support both our core business and emerging AI initiatives. Our current capacity and what is scheduled to come online gives us the flexibility to allocate resources across model training, core business growth, and the development and support of new products.

Our AI investments are already delivering substantial incremental advertising revenue through stronger engagement, better recommendations, and more efficient monetization. Building on this progress, our MSL investments are creating the technology and infrastructure needed to unlock significant new revenue opportunities and strengthen capabilities across the business. While these investments will take longer to generate returns than those in our core business, the breadth of monetization opportunities and internal efficiencies gives us confidence in their long-term potential.

Looking ahead, although we are not providing a full-year 2027 revenue outlook, the benefits our AI investments are delivering to the core business, combined with emerging opportunities from model advances and product launches, position us to sustain strong overall revenue growth throughout 2027.

Separately, we remain focused on improving Reality Labs profitability and expect losses to narrow next year to around $15 billion as we reallocate investment toward other priority areas, primarily AI.

Establishment of New Class C Common Stock

The Board of Directors has approved the establishment of a new class of publicly listed, non-voting Class C common stock, with an effective date in January 2027.

The approval by Meta's Board follows the unanimous recommendation of a Special Committee of disinterested and independent directors, which was established by the Board to evaluate the company's capital structure. The Special Committee and the Board determined that creating this new class of stock is advisable, fair, and in the best interests of Meta and its shareholders for a number of reasons, including:

- Creating a New Class of Shares for Capital Raising, Employee Compensation, Potential Acquisitions, and Other General Corporate Purposes – The scale of investment required to compete, sustain growth, expand infrastructure, and pursue new strategic initiatives amidst the AI transformation taking place in the industry is significant. The Special Committee determined this new class of common stock will provide Meta the ability to finance its growth and help the company remain a leader among fierce competition both domestic and international.

- Continuing to Maximize Long-Term Value for All Shareholders – Since Meta's formation, its management team has prioritized long-term goals and value creation, and its stock price has increased by more than 1,700% since its IPO. By contrast, over the same period, the S&P 500 has increased approximately 495%. The Special Committee wants Meta to continue innovating with an emphasis on long-term growth, which the creation of

What the newest two management calls establish

The source record includes the full 29 July Q2 issuer transcript, including Q&A and closing, and the recovered 20-page official Q3 transcript for the 21 October call. The earlier full returned Q3 text remains in the historical source record. Full audio verification remains incomplete.

The Q2 call established the advertising improvements, business-messaging opportunity, infrastructure build and early agent economics already present in the reference. The Q3 call adds the current actuals, stronger December revenue outlook, continuing paid AI investment and additional Muse usage evidence. The review carries the difference in the revenue run rate over the existing reference and funds the associated assets and costs.

More than 10 million Muse setups in the US and Canada over six weeks, with about one-quarter daily use, supports distribution and engagement. Paid conversion, persistent active use and realized receipts remain distinct tests. Management discussion of several-hundred-dollar ARPU concerned existing Family of Apps users using Muse. Trials and Meta One subscriptions require their own paid-cohort interpretation.

Prospective compute-efficiency gains can lower the cost of supplying a given capability. The model applies efficiency to the eligible unit-service component while retaining application support, other cash costs and paid-asset depreciation. Better quality and heavier usage can absorb some of the savings. Full 2027 budget and capacity detail remains an important next disclosure.

Latest two complete management calls

Exact dates and evidence scope

Call	Verified source scope	Forecast consequence
29 July 2026, Q2	Full 21-page issuer transcript reused with Q&A and closing	Existing recommendations, messaging and AI investment already enter the reference
21 October 2026, Q3	New official issuer transcript recovered; prepared remarks/Q&A	Retain reported Q3/Q4 guide, cost complete infrastructure, distinguish setups from paid conversion
Q3 filing and financing recovery	Full saved Q3 10-Q and specified October 26/29 offering/contract texts	Refresh September CIP, conditional AG amount, actual preferred close and future forward cash

Prior reports retain their original source-completeness statements. This review uses expanded verified transcript coverage. Full audio verification remains incomplete.

Sources: [S2], [S3], [S4], [S10].

The owner letter: new information and overlap

The new owner-supplied Ackman letter is dated 2 November and uses 30 September consensus estimates. Its material META claims include an AI-driven growth opportunity, broader agent distribution, a faster terminal revenue path, substantial capex and the announced financing plan. The report treats its related claims as one correlated evidence group.

Reported Q3 growth, improved recommendations and existing Muse/business-agent opportunities overlap the current company model. They add zero separate near-term receipts. The letter changes the probability of the faster joint business case from 20% to 25%, with the continuing case moving from 60% to 55%; the slower case remains 20%.

The faster case retains existing 2027 revenue of $320.431 billion. The refreshed later endpoints are $394.000 billion in 2028 and $481.850 billion in 2029. Their increments are measured against the same original faster state. The model uses 55% incremental cash cost and full paid-capital depreciation, with selected faster-case capex of $199 billion in 2027 and $216 billion in 2028.

The source describes 5-10 percentage points of potential annual growth upside and 15-35% terminal revenue upside. Its capex narrative and table contain an internal ratio mismatch: the narrative refers to 50-65%, while the explicit annual table gives 55/65/60/50. The model preserves that source limitation and uses explicit selected annual amounts. The letter's external valuation opinions supply no change to the owner multiple.

New owner-source claims and overlap decisions

Source interpretation and model overlap

Owner-source claim	Selection	Financial treatment
AI advertising and 26% Q3 revenue growth	Already covered by actuals and core reference	Zero extra near-term revenue overlay
Muse, business agents and broad distribution	Same joint adoption/cost cases	No second enterprise or compute revenue pool
Faster growth and paid capital	Fast case probability 25%; later endpoint refreshed	2027 incremental fast revenue 0; later incremental cash costs 55% plus full DA
About 98 bn headline equity financing	Separate preferred, forward and ATM dates	12.5 bnface preferred; entered forward; conditional 60 bn ATM capacity
18-22x forward EPS/source targets	Source valuation opinion	Owner 20x GAAP OP method retained

The 2 November owner-supplied letter uses 30 September consensus estimates. One correlated source group changes the joint growth/capital case.

Sources: [S7], [S10].

Numerical Rule 16b probabilities and joint outcomes

The selected business probabilities are 20% slower adoption/cost progress, 55% continued advertising and efficiency, and 25% faster commercial adoption. Receipts, serving costs, development costs and paid capital move together within each business state. The existing ad-run-rate and Muse overlap adjustments remain in force.

A separate New Mexico privacy branch uses 25% reversal, 50% reduction to $10 billion and 25% affirmation of the $25 billion principal. The youth-settlement contingent amount has a 25% trigger probability. Conditional on trigger, the selected dates are Q2 2027 at 25%, Q1 2028 at 50% and Q4 2028 at 25%.

ATM availability carries 60% weight. The preferred base offering and entered common-forward agreements are established events, while settlement cash, carry, conversion pricing and future conditional equity access follow their own forecast laws. The residual equity condition is a required source of cash on specified paths, with a gross lifetime cap and explicit fees.

These dimensions create 72 joint paths: three business states, three New Mexico outcomes, four youth-trigger/timing outcomes and two ATM-availability outcomes. The selected weights multiply across the explicit dimensions. Unmodeled correlation between business performance, financing availability and legal outcomes remains a material limitation.

Numerical probabilities and bounded outcomes

Numerical analytical assumptions; USD millions where numeric

Event / outcome	Weight	Bounded selected treatment
Slower / continuing / faster business	20% /55% /25%	Joint growth, cash cost and paid capital paths
NM reversed / reduced / affirmed	25% /50% /25%	Principal 0 /10000 /25000; cash principal x 1.3 in Q4 2028 proxy
AG contingent obligation triggers	25%	Conditional nominal 5300; 75% no trigger
AG timing given trigger	25% /50% /25%	Q2 2027 /Q1 2028 /Q4 2028
Closed preferred	100%	Base offering closed 29 October; net proceeds 12453.375 after 5 expense proxy
Entered common forward	100% agreement; future settlement	40 m legacy units; Q4 2027 cash proxy 24886.83325; no initial cash
Planned ATM availability	60%	Draw for cash need, earliest Q1 2027, 60000 gross capacity/1% fee
Residual equity condition	Conditional funding requirement	75000 gross capacity/2% fee, independent 600 price with 5% annual growth

Joint probabilities multiply the selected business, legal, trigger/timing and ATM dimensions. Correlation outside this explicit product structure remains a forecast limitation.

Joint business operating assumptions

Fractions/multiples; cash USD millions

State	Weight	Ad run-rate carry	Muse users scale	Efficiency cap	Extra 2027 cash cost

continued ads and efficiency	0.55	1	1	10	0
faster commercial adoption	0.25	1.50	1.50	10	0

Ad carry applies to the 6.428571% Q4 run-rate difference over the existing reference. It does not reapply total reported growth. Efficiency affects only the 60% eligible cash-service component.

Sources: [S4], [S5], [S6], [S7], [S8], [S10], [S11].

Bounded faster-case receipts and paid capacity

The faster-case revision adds no 2027 receipts beyond the existing $320.431 billion path. Additional cash capex of $39 billion is nevertheless paid in that year. By 2028, cumulative extra paid capital is $65 billion, while the new annual revenue endpoint is $10.565 billion above the prior faster state. The 2029 increment reaches $23.976 billion.

As a coarse economic check, the source midpoints imply $45 billion of capital per GW and $17.5 billion of annual receipts per GW. The selected 2029 revenue increment is about 1.37 revenue-equivalent GW, compared with about 1.44 paid-capex-equivalent GW. These arithmetic equivalents do not establish physical available capacity, utilization, customer awards or a construction calendar.

The new faster receipts retain a 55% incremental cash-cost allowance. Their 45% pre-depreciation operating contribution is reduced by the paid-asset cohort DA already created by the larger capital budget. Ordinary stock compensation, existing AI R&D and the Muse service/support costs remain in the company cost structure.

The letter's explicit revenue window ends before the model horizon. For 2030, the model carries half of the 2029 relative uplift over the original faster endpoint. The resulting conditional revenue is $556.656 billion. Full relative carry is displayed separately as a sensitivity.

Bounded faster-case growth and paid capacity equivalents

USD millions; GW equivalents

Year	Old fast revenue	New fast revenue	Increment	Cumul extra capex	Receipt-equiv GW	Paid-capex-equiv GW
2027	320,430.96	320,430.96	0.00	39000	0.00	0.87
2028	383,435.43	394,000.00	10,564.57	65000	0.60	1.44
2029	457,873.75	481,850.00	23,976.25	65000	1.37	1.44
2030	542,453.75	556,656.36	14,202.61	65000	0.81	1.44

GW equivalents use source midpoint 45000 capex/GW and 17500 annual receipts/GW. These coarse equivalents are analytical checks. Physical awarded/available GW, utilization and customer orders are unmeasured. 2030 carries half the 2029 relative revenue uplift.

Sources: [S7], [S10].

Muse: receipts, inference, support and economic overlap

The inherited annual receipt proxy is $52.20 per active user. Paid tiers use 94% free, 5% at $20 per month and 1% at $100 per month, with 80% net realization on paid tiers. This produces $19.20 of annual subscription receipts per average active user. Eligible commerce contributes $30 and payments $3 under the selected volume and take assumptions.

These inputs are analytical unit economics. Setups, trials, weekly shopping activity and the total volume of transactions provide different information from paid subscriptions or Meta receipts. The core path reaches 70 million average active users in Q4 2027 and 220 million in Q4 2028. Slower and faster cases scale that path to 30% and 150%.

The cash-service base is $97.590691 per user per year after removing the separately funded hardware-depreciation component from the old service proxy. Sixty percent benefits from the efficiency path; forty percent remains unchanged. Application support adds $5 per user each year. The slower case caps eligible efficiency at 2x; the continuing and faster cases cap it at 10x.

Only half of gross Muse receipts and cash service/support cost is incremental to the core reference. Hardware depreciation overlaps fully with the company paid-asset cohort DA. Muse capital allocation remains inside the total company capital budget. Each receipt, cash cost and depreciation item therefore enters the owning company forecast once.

Muse annual unit economics

USD per annual active user except overlap fractions

Component	Selected numerical bridge	Annual receipts / cost
Paid tiers	(5% x 20 x 12 +1% x 100 x 12) x 80% net realization	19.20
Commerce	6000 GMV x 25% eligible x 2% take	30
Payments	6000 volume x 0.0005	3
Gross receipts per active-user proxy	Sum of paid/commerce/payment receipts	52.20
Cash-service base	102.1884 less 25.2874/5.5 hardware DA	97.59
Application support	Paid per active user each year	5
Revenue and cash-cost overlap	50% each with core reference	0.50
Hardware DA overlap	100% with company paid-asset cohort DA	1

94% free/5% standard/1% premium are inherited conditional proxies. Gross merchandise value stays in its own economic scope. Quarter cash cost applies 97.5906909 x(40%+60%/efficiency)+5, times users/4 and 50% incremental share.

Sources: [S2], [S3], [S9], [S10].

The full Muse adoption and operating path

The following current-quarter and future-quarter path probability-weights the three business cases. It shows average users, incremental receipts, incremental cash service/support expense, operating contribution and capital allocation. Q4 2026 retains Muse inside ordinary company guidance and introduces no separate incremental receipt or cost overlay.

The cohort becomes more useful as adoption and eligible cost efficiency improve, but its incremental operating contribution remains modest relative to the consolidated advertising business. Serving, application support and the free-user mix matter alongside user growth. Paid conversion, realized take and actual unit cost are the evidence needed to raise those assumptions.

The model ends with a 2030 continuing-case user path of 600 million average active users, with conditional slower/faster scales applied consistently. A billion-user distribution aspiration establishes a possible route to reach; sustained paid receipts and full cost coverage determine its economic value.

Weighted Muse receipt and support-cost path

USD millions; users millions

Quarter	Avg users M	Net receipts	Net cash service	Net OP	Capex allocation
Q4 2026	4.92	0.00	0.00	0.00	0.00
Q1 2027	9.85	64.27	90.27	-26.00	62.27
Q2 2027	19.70	128.54	146.68	-18.14	124.54
Q3 2027	39.40	257.09	264.35	-7.26	249.08
Q4 2027	68.95	449.90	442.30	7.60	373.62
Q1 2028	98.50	642.71	631.86	10.85	373.62
Q2 2028	137.90	899.80	884.60	15.20	498.16
Q3 2028	177.30	1,156.88	1,137.34	19.54	498.16
Q4 2028	216.70	1,413.97	1,390.09	23.88	498.16
Q1 2029	246.25	1,606.78	1,579.65	27.14	373.62
Q2 2029	295.50	1,928.14	1,895.57	32.56	622.70
Q3 2029	344.75	2,249.49	2,211.50	37.99	622.70
Q4 2029	394.00	2,570.85	2,527.43	43.42	622.70
Q1 2030	443.25	2,892.21	2,843.36	48.84	622.70
Q2 2030	492.50	3,213.56	3,159.29	54.27	622.70
Q3 2030	541.75	3,534.92	3,475.22	59.70	622.70
Q4 2030	591.00	3,856.28	3,791.15	65.13	622.70

Probability weighted over the three business states. Muse capital allocation is already inside company capex; hardware DA is already inside company DA. Q4 2026 includes Muse inside ordinary guidance and adds no separate receipt/cost overlay.

Sources: [S2], [S3], [S9], [S10].

September CIP, commissioning and the depreciation bill

The recovered September filing reports net property and equipment of $253.222 billion and construction in progress of $89.499 billion. The previous model used June CIP of $80.345 billion as a dated composition proxy. Updating CIP increases the assets exposed to future activation and depreciation under the existing readiness assumptions.

CIP is already part of net PPE. The model activates 50%, 35% and 15% of opening CIP across 2027, 2028 and 2029, with half-year DA on newly activated assets in the first year. Opening in-service DA runs off 5% annually. The points for physical mix, readiness and remaining lives are analytical assumptions.

New paid capital uses a 75% server/network mix at 5.5 years and a 25% building mix at 27.5 years. These points draw on the verified source useful-life ranges; the company has not supplied this future asset mix. New cohort recognition is 35% in year zero, 85% in year one and 100% thereafter. The operating forecast expenses the full DA from each new asset cohort.

Cash capex already includes finance-lease principal. Future annual lease principal is $4 billion, while new noncash finance ROU additions are modeled at $6 billion. The source set does not resolve a complete current finance-lease liability roll. The model exposes the incremental new lease-claim path and keeps the opening balance gap visible.

Paid asset, readiness and useful-life controls

USD millions unless fraction or years specified

Input	Selected value	Source / assumption
September net PPE	253222	Issuer fact
September CIP	89499	Issuer fact; replaces June 80345 proxy
Opening quarterly consolidated DA	7154	Issuer cash-flow DA
Opening DA runoff per year	.05	Analytical runoff
Opening CIP activation 2027/28/29	50% /35% /15%	Analytical readiness
CIP first-year DA fraction	.50	Analytical commissioning
Servers/network fraction and life	75%; 5.5 years	Mix proxy; source useful-life range 5-5.5 years
Buildings fraction and life	25%; 27.5 years	Mix proxy; source range 25-30 years
Q4 cash PPE	53212	54176 capex less 964 lease principal
Q4 commissioned next-year fraction	.80	Analytical readiness
Future annual lease principal	4000	Already inside paid-capex budgets
Future annual new noncash finance ROU	6000	Separate asset/claim additions proxy
New cohort DA recognition	35% /85% /100%	Year 0/year 1/year 2 onward

CIP is part of opening PPE and gains depreciation after activation. PPE-equivalent rolls are diagnostic asset accounting, with incomplete retirements/amortization detail. Future finance-lease additions/principal remain explicit proxies.

Every paid-asset cohort and the complete DA roll

The base capital case uses $160 billion of annual paid capex in 2027, $190 billion in 2028, $210 billion in 2029 and $220 billion in 2030. The faster case pays $199 billion and $216 billion in the first two years, then the same $210 billion and $220 billion annual budgets. Future paid cash PPE subtracts the finance-lease principal already included in each budget.

The tables retain opening-pool DA, the Q4 2026 paid cohort, activated opening CIP and every new annual paid/noncash asset cohort. The faster capital case creates its own higher DA before the business outcomes are weighted. A higher revenue endpoint therefore carries the corresponding capital and recognition cost.

PPE-equivalent closing balances provide an accounting consistency diagnostic. They retain opening net assets, cash additions, new finance ROU assets and model DA. They do not establish a complete future GAAP balance sheet: exact retirements, amortization composition, disposal effects and future lease measurements remain unresolved.

Annual paid-asset depreciation: base capital case

USD millions

Year	Opening pool DA	Q4 cohort DA	CIP DA	New cohorts DA	Total DA	PPE equiv close
2027	27,185.20	6,191.94	3,254.51	8,247.27	44,878.92	415,555.08
2028	25,825.94	6,191.94	8,787.17	29,803.64	70,608.69	536,946.38
2029	24,534.64	6,191.94	12,041.68	58,094.55	100,862.81	648,083.57
2030	23,307.91	6,191.94	13,018.04	89,003.64	131,521.53	738,562.04

All paid cohorts and opening CIP are counted once. Quarter DA uses the existing seasonal cost weights.

Every new capital cohort: base capital case

USD millions; recognition fraction

Valuation year	Cohort year	Cash PPE	Noncash ROU	Recognition fraction	Annual DA
2027	2027	156000	6000	0.35	8,247.27
2028	2027	156000	6000	0.85	20,029.09
2028	2028	186000	6000	0.35	9,774.55
2029	2027	156000	6000	1	23,563.64
2029	2028	186000	6000	0.85	23,738.18
2029	2029	206000	6000	0.35	10,792.73

Ordinary operating costs and the full forecast

The ordinary cash-cost anchor starts with the $177 billion 2026 expense midpoint, removes the already reported $9.890 billion youth charge and separates modeled DA and stock compensation. The remaining annual cash-cost base is $111.048 billion. It grows 15%, 18%, 15% and 14% across 2027-2030.

Additional AI cash R&D is $7 billion, $10 billion, $11 billion and $12 billion by year. Ordinary stock compensation of $30 billion, $32 billion, $34 billion and $36 billion remains expensed. Demand-related cash cost, state-specific extra costs, Muse service/support and paid-cohort DA complete the operating structure.

Future COGS uses a 20.7% revenue proxy, with the remaining full operating cost shown as opex. This allocation supports a complete company GP/opex/OP bridge. The source has not separately disclosed future product GP or opex for advertising, messaging and agents. Those product allocations remain a limitation of a consolidated forecast.

All 17 current/future financial quarters follow. Q4 2026 is anchored to the current guide and explicit analytical privacy recognition. Contingent youth expense enters the expected company OP at its modeled trigger dates. The earlier published Q3 values retain their exact original accounting and forecast vintage in the appendix.

All 17 financial quarters are shown. Total operating costs include ordinary SBC, modeled company asset depreciation and selected analytical legal expense. The functional allocation between cost of revenue and operating expenses remains a proxy; source-supported future product and segment margin splits are unavailable.

Sources: [S1], [S2], [S4], [S9], [S10].

The three complete conditional operating paths

Each business table shows revenue, cost of revenue, opex, operating profit, DA and stock compensation through Q4 2030. The paths share the ordinary company-cost structure and differ in ad-run-rate carry, Muse adoption, efficiency, demand cost and selected faster-case capital/receipts.

These operating-state rows retain the expected New Mexico principal charge in Q4 2026 and precede the new contingent youth expense. The 72 joint paths substitute the individual privacy outcome and add any youth expense at its trigger date. This preserves a single source of each legal cost while showing the complete business economics.

The slower case retains 2x eligible service efficiency and additional cash cost. The continuing case reaches the inherited commercial path. The faster case receives the incremental later source endpoint and its paid-capital schedule. Higher company sales alone do not determine the final per-unit result; costs, recognition and financing claims move through the remaining schedules.

Operating path: slower adoption cost progress

The youth settlement: accrued expense and future conditions

The Q3 GAAP accounts include a $9.890 billion youth-settlement charge. The recovered filing distinguishes a $13.290 billion unconditional nominal payment scope and an additional $5.300 billion contingent nominal amount. Their maximum is $18.590 billion. Nominal commitments, booked measurement and cash timing have different definitions.

The additional obligation depends on both specified industry protections/oversight and matched profit-qualified payments. Those conditions were unsatisfied at 30 September. The selected trigger probability is 25%. Conditional dates are Q2 2027 at 25%, Q1 2028 at 50% and Q4 2028 at 25%.

The model expenses the $5.300 billion nominal conditional amount at the assumed trigger as a conservative measurement proxy. Exact future GAAP measurement and source accounting timing remain unresolved. The active forward window includes half of triggered timing outcomes, producing an expected $662.5 million operating-profit charge within that window.

Cash uses a ten-year equal-installment proxy for the unconditional $13.290 billion, beginning in 2027, plus a separate ten-year contingent schedule after any trigger. These are timing assumptions. The old full $18.590 billion cash maximum is replaced by the two components once, and the historical Q3 charge remains intact.

Youth-settlement nominal commitments and trigger timing

USD millions; probabilities and dates explicit

Item	Amount / weight	Treatment
Reported Q3 GAAP expense	9890	Historical actual; no recurring annual repeat
Unconditional nominal payments	13290	Ten-year equal installment proxy from 2027
Conditional nominal payments	5300	Unaccrued at 30 September; two conditions
Maximum nominal scope	18590	13290+5300; no extra maximum overlay
Probability of conditional trigger	.25	Company/legal scenario judgment
Early conditional timing	25% of triggers	Q2 2027
Central conditional timing	50% of triggers	Q1 2028
Late conditional timing	25% of triggers	Q4 2028

Both industry protection/oversight and matched profit-qualified-payment conditions must hold. Exact accounting measurement and dates remain unresolved; 5300 nominal expense at trigger is a conservative measurement proxy.

The separate New Mexico privacy judgment

The actual privacy judgment in case D-101-CV-2021-00132 was filed on 21 October 2026. It orders a reduced $25 billion penalty and 15% annual interest until paid, with injunctive relief reserved for further briefing. The unreduced statutory calculation and the reduced award describe successive scopes of the same judgment.

This privacy matter has its own source and legal history. The September filing's other New Mexico youth-case references and the multistate youth settlement remain distinct matters. The model maintains separate youth and privacy recognition, probability and payment schedules.

Privacy principal outcomes are $0 at 25%, $10 billion at 50% and $25 billion at 25%. Their expected principal is $11.250 billion. The model places the principal expense in Q4 2026 and cash settlement in Q4 2028, with two years of simple interest producing cash equal to 1.3x principal. Expected cash is $14.625 billion.

The court source does not resolve an appeal stay, bond, payment deadline, compounding convention or issuer recognition/classification. The assumed appeal reduction and dates therefore carry low confidence. The remaining 30% interest cash budget is exposed separately; its future book-accrual date remains unallocated.

Separate New Mexico privacy judgment outcomes

USD millions; independent of youth settlement

Outcome	Probability	Conditional principal	Cash at x 1.3	Charge proxy	Payment proxy
reversed	0.25	0	0.00	Q4 2026	Q4 2028
reduced on appeal	0.50	10000	13,000.00	Q4 2026	Q4 2028
affirmed	0.25	25000	32,500.00	Q4 2026	Q4 2028

Court order D-101-CV-2021-00132 specifies a 25,000 reduced award and 15% annual interest until paid. Appeal probabilities, a reduced-on-appeal outcome, two-year simple interest, recognition and payment dates are analytical assumptions. The court reserved the injunction question.

P.A., 21 F.4th 1288, 1314 (11th Cir. 2021) (civil penalty of $1,179,000 against alleged harm of $755.54 not excessive where defendant engaged in 214 instances of fraud, and fine was lower than the potential statutory maximum).

18. The extraordinary number of willful violations found by the jury, the duration and repetition of the conduct, the breadth of subjects on which violations occurred, the involvement of senior Facebook leadership, the size of the New Mexico audiences reached, and the clearly intentional and systematic nature of Facebook's repeated misstatements established in the trial record support the highest level of penalty allowed by the New Mexico Unfair Practices Act - $5,000 per violation found by the jury.

19. Facebook received notice of the claims against it and a full opportunity to defend against liability, willfulness, and the number of violations during a thirteen-day jury trial. As the Court observed following the verdict, Facebook "had all the incentive that was required to defend this case vigorously" and "did defend vigorously."

IT IS THEREFORE ORDERED, ADJUDGED AND DECREED as follows:

1. The State is awarded and shall recover a civil penalty against Meta in the amount of $219,498,600,000.00, which penalty is reduced to the amount of $25,000,000,000.00.

2. Interest on the penalty shall accrue at the rate of fifteen percent (15%) per annum until paid in full.

3. The Court will reserve on injunctive relief pending further briefing in this matter.

Francis J. Mathew
District Court Judge

xc: Counsel, e-served

Book profit, cash tax and the legal-interest gap

Consolidated OP includes ordinary stock compensation, paid-cohort DA and selected legal-recognition proxies. The note-coupon expense proxy is deducted below OP to reach PBT. Tax is 16% of positive PBT before the analytical privacy/youth penalties, with the selected note-coupon deduction and no penalty tax benefit.

The resulting PBT, net-income and common-earnings diagnostics are before an unallocated future privacy-interest book-accrual item. The cash path pays principal times 1.3 in Q4 2028. The full source accounting convention remains a gap, so these diagnostics carry that qualification explicitly.

Actual nine-month cash income tax was $2.926 billion; Q3 book tax was $3.141 billion. Their period, deferred-tax and payment definitions differ. The forward 16% proxy provides a coherent cash budget without asserting an exact tax return, deferred-tax schedule or payment calendar.

Preferred dividends are distributions after net income and remain outside operating profit. They are deducted to display common earnings and paid in the full cash waterfall. The owner's 20x GAAP OP valuation method continues to use its approved operating-profit numerator.

NM principal and two-year interest are paid together under the Q4 2028 timing proxy. The unconditional AG nominal budget is 13,290 and the contingent nominal budget is 5,300; each uses its own ten-year installment proxy. The reported Q3 charge of 9,890 retains its historical vintage.

Sources: [S1], [S4], [S5], [S8], [S10].

The financing plan and the actual cash dates

The financing headline of approximately $97.5 billion combines $12.5 billion of preferred face, about $25 billion of common-forward gross base amount and $60 billion of planned ATM capacity. The source chronology establishes different cash and ownership events for each instrument.

The preferred base offering closed on 29 October 2026. Final contractual proceeds before issuer expenses are $12.458375 billion. The entered common forward supplies no initial issuer cash and has a final settlement deadline of 19 November 2027. The Class C ATM remains planned capacity, with no executed manager agreement established by the recovered sources.

Only the closed preferred supplies Q4 2026 cash in the selected model. Forward physical settlement cash enters in Q4 2027 under the chosen timing proxy. Need-driven ATM issuance can begin in Q1 2027 on the availability branch. Additional residual common equity is a bounded funding condition after those sources.

Issuer expenses, floating carry, actual draws and conversion prices affect cash and new ownership units. The model links these mechanics to each business/legal cash path and maintains the source dates throughout the forecast.

Financing instruments and cash dates

USD millions; face/capacity definitions vary by instrument

Instrument	Headline / face	Verified status	Selected cash treatment
Mandatory convertible preferred	12500	Closed 29 October 2026	12458.375 contract proceeds less 5 expense proxy in Q4 2026
Common forward	24,916.75	40 m legacy-unit base agreements entered	No initial cash; net 24886.83325 physical settlement Q4 2027 proxy
Class C ATM	60000	Planned capacity; agreement absent	60% availability; need-driven draws from Q1 2027; 1% fee
Residual common equity	75000	Forecast financing condition	Need after other cash; 2% fee, 600 legacy price/5% growth

The headline 97.5 bn gross financing plan combines 12.5 bn preferred, about 25 bn forward and 60 bn planned ATM. Each instrument has its own cash date and ownership claims.

Meta Announces Pricing of Offering of Depositary Shares Representing Series A Mandatory Convertible Preferred Stock and Offering of Class A Common Stock in Connection with Forward Sale Agreements

MENLO PARK, Calif., Oct. 26, 2026 /PRNewswire/ -- Meta Platforms, Inc. (Nasdaq: META) ("Meta" or the "Company") announced today the pricing of its previously announced concurrent separate underwritten public offerings of (i) 250,000,000 series A depositary shares ("Depositary Shares"), each representing a 1/20th interest in a share of newly issued 6.50% Series A Mandatory Convertible Preferred Stock, par value $0.000006 per share ("Preferred Stock"), at a public offering price of $50 per Depositary Share (the "Depositary Shares Offering") and (ii) $25.0 billion of shares of Class A common stock, par value $0.000006 per share ("Class A Common Stock") offered in connection with the forward sale agreements described below, at a public offering price of $625.00 per share (the "Common Stock Offering" and, together with the Depositary Shares Offering, the "Offerings"). The Common Stock Offering was upsized to $25.0 billion from the previously announced offering size of $22.5 billion.

Meta has granted to the underwriters of the Depositary Shares Offering a 30-day option to purchase up to an additional 37,500,000 Depositary Shares at the public offering price less the applicable underwriting discount, solely to cover over-allotments, if any. The net proceeds from the Depositary Shares Offering will be approximately $12.5 billion (or approximately $14.3 billion if the underwriters exercise in full their over-allotment option to purchase additional Depositary Shares) after deducting the applicable underwriting discount and estimated offering expenses payable by Meta. Meta intends to use the net proceeds from the Depositary Shares Offering for general corporate purposes.

Holders of the Depositary Shares will be entitled to a proportional fractional interest in the rights and preferences of the Preferred Stock, including conversion, dividend, liquidation and voting rights, subject to the provisions of a deposit agreement. The Preferred Stock will accumulate dividends (which may be paid initially in cash or, subject to certain limitations, in shares of Class A Common Stock or in any combination of cash and Class A Common Stock) at a rate per annum equal to 6.50% on the liquidation preference thereof, which is $1,000 per share, payable when, as and if declared by Meta's board of directors (or an authorized committee thereof), on February 15, May 15, August 15 and November 15 of each year, beginning on February 15, 2027 and ending on, and including, August 15, 2029. Unless earlier converted, each outstanding share of Preferred Stock will automatically convert for settlement on or

Closed preferred: net cash, coupons and mandatory conversion

The base offering comprises 250 million depositary shares representing 12.5 million full preferred shares. Each full preferred has a $1,000 liquidation preference. The $41.625 million underwriting discount reduces $12.5 billion gross to $12.458375 billion contractual proceeds before issuer expenses.

A $5 million issuer-expense proxy reduces selected opening-quarter net proceeds to $12.453375 billion. The source does not quantify that expense amount. Underwriter-option exercise is unverified in the retrieved terms; the model retains the base issued amount.

The preferred pays a 6.5% cumulative dividend. The modeled first payment is $239.23625 million in Q1 2027, followed by regular quarterly cash of $203.125 million through the Q3 2029 conversion quarter. The source expected mandatory-conversion date is 15 August 2029.

Initial conversion bands of 1.362-1.6 are adjusted for the Class C structure and relative-price condition. The model bounds the conversion using the selected C/A price ratio and independent execution-price path, converts physical common shares to legacy economic units and adds those units once. Preferred face is a separate preference until conversion; the model carries no cash face-redemption payment.

Preferred proceeds, distributions and conversion

USD millions except per-share terms and fractions

Control	Value	Definition
Depositary shares, millions	250	Each represents 1/20 preferred share
Full preferred shares, millions	12.50	Base offering only
Face per preferred share	1000	Liquidation preference
Gross face/proceeds	12500	Base offering
Underwriting discount	41.62	Exact contractual amount
Contract proceeds before issuer expenses	12,458.38	Final source terms
Issuer expense proxy	5	Source amount unspecified
Modeled net cash	12,453.38	Q4 2026
Annual dividend rate	.065	Cumulative
First modeled cash dividend	239.24	Q1 2027; first payment 15 February
Regular quarterly cash dividend	203.12	Through Q3 2029 conversion quarter
Initial min/max conversion shares	1.362 /1.6	Class C adjustment applied at conversion
Conversion date / modeled quarter	15 August 2029 /Q3 2029	Expected mandatory conversion

Class C price ratio and conversion bands determine new legacy units at conversion. Preferred face remains a separate preference until conversion; no cash face redemption is modeled. Underwriter option exercises remain unverified.

Sources: [S5], [S6], [S10].

Entered common forward: settlement proceeds and the remaining election gap

The two base counterparties together cover 40 million legacy units at an initial forward price of $622.91875. The Class C adjustment creates equal original A and C price legs. The original C leg receives the contractual 0.9980 physical-price multiplier.

The modeled cash bridge is 40 million units times $622.91875 times (0.5+0.5x 0.9980), giving $24.89183325 billion before issuer expenses. A separate $5 million expense proxy gives $24.88683325 billion net. Actual floating carry and redacted price reductions remain unknown.

The deadline of 19 November 2027 maps to late Q4 in the selected model. Starting-quarter valuation units first include the 40 million new legacy units in Q1 2028. The earlier-settlement sensitivity moves the event to Q3 2027, bringing the additional units into the active Q4 denominator.

The proceeds-recovery sensitivity applies a neutral factor of 1 to the entire issuer-proceeds basket. A 0.95 stress reduces the basket proceeds before expenses and raises the linked funding requirement.

The actual optional Class-C-in-lieu election applies to elected former-A components, applies 0.9980 there and subtracts a nonnegative dollar A/C settlement-VWAP difference. This contractual election is unmodeled. The selected projection assumes no election, substituted delivery or settlement VWAP spread. Its legal source limitation remains separate from the generic funding sensitivity.

Common-forward physical cash bridge

USD millions except units/prices/factors

Component	Selected amount	Scope
Base legacy units, millions	40	Two 20 m legacy-unit counterparties
Initial forward price	622.92	Original per legacy unit price
Gross original base contract cash	24,916.75	Before split-factor haircut/expenses
Original A leg fraction	.50	Price fraction following Class C split
Original C leg fraction	.50	Price fraction following Class C split
Mandatory original C factor	.9980	Physical-price multiplier
Initial factor-adjusted physical cash	24,891.83	40 x 622.91875 x(.5+.5x.998)
Issuer expense proxy	5	Unquantified source expense
Selected settlement net cash	24,886.83	Q4 2027 deadline proxy
Initial issuer cash	0	Borrowed shares supply initial offering
Generic whole-basket recovery factor	1	Neutral base; 0.95 generic proceeds stress

Settlement by 19 November 2027 maps to late Q4; starting-quarter units first rise in Q1 2028. Floating carry, redacted reductions and optional Class-C-in-lieu election remain unresolved. Generic recovery sensitivity does not implement the contractual election.

The A+C legacy economic unit and new outside issuance

The selected owner convention starts with 2,560 million legacy economic units. A pro-rata Class C distribution changes the physical share count and class structure; one legacy unit then represents its A+C economic basket. Relative A and C prices and rights retain their own source assumptions.

For new Class C issuance, the model uses C/A=0.95. A legacy-basket execution price of $600 gives C price of 600x 0.95/1.95. New physical C shares divided by two become new legacy economic units. This normalization preserves the model's per-unit comparison through the proposed class structure.

The independent execution price grows 5% annually and remains separate from the calculated target. Forward, ATM, preferred conversion and residual-equity issuance each add their own units at the actual modeled date. The starting-quarter unit denominator changes in the quarter after late settlement or conversion.

Ordinary net issuance remains zero in the sanctioned central convention. The cash budget still pays stock-award settlement tax and ordinary SBC remains expensed. A separate sensitivity annualizes the actual nine-month 26 million net-share issuance, showing its effect on the future denominator and cash distributions. The model assumes no automatic repurchase. Detailed gross employee issuance and any funding for offsets remain uncertain.

New ATM Class C shares are normalized at two physical shares per legacy economic unit. Forward, preferred and residual equity use their stated legacy-unit conventions. Late settlement or conversion first affects the following quarter's starting denominator.

Sources: [S2], [S4], [S5], [S6], [S10], [S13].

ATM and residual common equity: a complete funding condition

Each path first pays operating and investment cash uses, debt principal, legal payments and distributions. It then uses the modeled preferred or forward proceeds on their own dates. If cash is below the $10 billion reserve and ATM capacity is available, the model issues just enough gross Class C equity to cover the need, subject to the $60 billion lifetime cap and 1% fee.

ATM availability receives 60% probability because the issuer announced the plan and the selected capital needs are substantial. Its manager agreement, pace and actual price remain unannounced. The source letter's capital-raising discussion does not establish additional executed funding.

Remaining needs are met by the conditional residual common-equity mechanism, with a $75 billion gross lifetime cap, 2% fee and the independent legacy-basket price path. This access is required for the funded projection. New units raise subsequent common dividends and reduce future per-unit values where they enter the starting denominator.

Expected lifetime residual net proceeds are $8.202 billion. The most demanding selected path needs $66.956 billion net, inside the $73.5 billion net maximum of the assumed gross cap. With residual funding unavailable, the largest reserve gap is $66.821 billion and minimum cash is negative $56.821 billion. That variant quantifies the unresolved cash need.

Cash reserve and conditional equity access

USD millions except prices/fractions

Control	Selected input	Financial condition
Liquidity reserve	10000	Analyst cash floor on each path
ATM availability probability	.60	Agreement/manager/timing uncommitted
ATM gross lifetime capacity	60000	1% fee; earliest Q1 2027
Residual equity gross lifetime capacity	75000	2% fee; additional access required
Independent legacy execution price	600	5% annual growth; separate from calculated target
Class C /Class A price ratio	.95	Point assumption with relative-price stresses
Ordinary net issuance per quarter	0	Separate annualized actual issuance stress
New finance ROU annual assets	6000	Noncash asset and claim proxy
Annual finance-lease principal	4000	Already inside paid capex

Net cash need equals max(0, reserve minus cash before new funding). Gross issuance is the amount required to deliver that net cash after fees, subject to each instrument's gross lifetime capacity. New shares and future common dividends follow modeled gross issuance.

Sources: [S4], [S5], [S6], [S7], [S10].

The full operating-profit-to-cash and capital bridge

Operating cash flow adds back analytical legal charges, DA and SBC to OP, then deducts the recognized note coupon, cash-tax proxy and 5% of incremental receipts for working capital. Each penalty cash payment enters the later separate waterfall. This keeps the recognition quarter and payment quarter in their own economic scopes.

Gross note coupon begins at $4.4 billion annually and declines with note principal. The selected 70% recognized / 30% capitalized split deducts the recognized portion outside the fixed capex budget. The capitalized portion stays inside paid capital. Exact future capitalization and cash-payment timing remain unresolved.

Paid capex includes finance-lease principal and Muse capital allocation. New noncash finance ROU assets enter paid-asset DA and the partial claim roll. The cash-flow table shows CFO, full paid capital and FCF for every quarter before the separate financing/distribution uses.

September unrestricted cash plus securities of $82.449 billion supplies opening liquidity. Restricted cash of $13.132 billion remains excluded. Source commitments and uncommenced leases remain risks to future capital and operating needs, with no second blanket cash charge added over the already costed company plan.

Operating profit and noncash addbacks

Meta Q3 2026 issuer release, physical page 8. Original cash flows and cash reconciliation; finance-lease principal is separate from PPE cash purchases.

Sources: [S1], [S4], [S10], [S12].

Cash distributions, financial claims and new funding

The complete quarterly cash waterfall begins with prior cash, operating cash and paid capital. Separate uses are stock-award tax withholding, common dividends, preferred dividends, youth cash, privacy cash and note principal. These uses are itemized before the matching instrument proceeds and conditional common-equity draws are added.

Stock-award cash is $4.064 billion per quarter. The initial common dividend budget is $1.361 billion per quarter and scales with beginning legacy units. Dated note maturities of $2.750 billion, $1.500 billion, $1.000 billion and $5.000 billion across 2027-2030 are placed in Q1 as a conservative timing proxy.

Debt face falls from $84 billion to $73.750 billion after those principal payments. Carrying discounts and issuance costs stay separate from face claims. Preferred preference persists until conversion. The new finance-lease claim table captures only incremental modeled additions less principal since Q4 2026, with the opening finance-lease liability still unresolved.

The owner's 20x GAAP OP target retains its sanctioned treatment of debt and cash, while all cash servicing and new ownership claims appear in the funding diagnostics. There is no further standalone debt/cash adjustment in that price formula.

Every separate financing/distribution cash use

Note face excludes carrying discounts. New lease claim is a partial roll from Q4 2026, with opening lease balances unresolved. No separate debt/cash adjustment enters the owner 20x GAAP OP target.

Sources: [S4], [S5], [S6], [S10].

All 72 joint funding outcomes

The following three panels include every selected joint path, 24 per business state. Labels combine the privacy outcome, youth-trigger timing and ATM availability. Joint weights include the business probability and sum to 100% across all 72 rows.

Each panel reports minimum modeled cash, lifetime net ATM proceeds, lifetime residual net equity and end-2030 legacy units. The full 17-quarter cash and ownership roll for each path remains in the linked technical model. The residual mechanism preserves the $10 billion reserve under the central selected access condition.

Funding is tested on individual paths before probabilities are combined. The worst-state capital requirement can be much larger than the expected cash need. A favorable weighted cash balance therefore carries no assurance that every legal/business state can be funded on the assumed terms.

All 24 funding states: slower adoption cost progress

All quarterly ceilings and exact valuation-window derivations

Each current published ceiling equals 20 times the next four quarterly consolidated GAAP OP values divided by that window's starting legacy economic units. The active Q4 2027 window uses $100,827.022983 million of OP and 2,560 million units, giving $787.711117. The method, headline multiple, currency and starting-unit convention are preserved.

The 14 complete windows run from Q4 2026 through Q1 2030. Financial inputs continue through Q4 2030, allowing the final complete forward window to close. Q2-Q4 2030 target outputs remain genuine blanks because four forward quarters are unavailable. Their multiple controls remain 20.

The original Q3 2026 as-then ceiling remains $562.7872903270168 with its original rolling-window vintage and formulas. Earlier published forecasts, the October 21 forward views and source exhibits are retained in the dated historical section. Current reconstructions and new forward displays have separate identities.

The owner aggregation uses probability-weighted OP and probability-weighted starting units. Later state-dependent funding causes different ownership denominators across paths, so the mean of state-specific ratios has a separate diagnostic. Its small differences remain visible; the owner method governs the published target.

Table component sums are rounded for reading. Exact unrounded selected values and units determine the calculated result in the linked model and main portfolio.

Every current and future quarterly valuation

OP USD millions; target USD per legacy economic unit

Quarter	Window through	F4Q GAAP OP	Multiple	Start units M	Ceiling
Q4 2026	Q3 2027	83,704.71	20	2,560.00	653.94
Q1 2027	Q4 2027	99,062.06	20	2,560.00	773.92
Q2 2027	Q1 2028	98,954.23	20	2,560.00	773.08

Q1 2030	28,140.39 + 30,475.02 + 33,163.93 + 37,348.10	2,648.95	20	974.93

Displayed component sums are rounded. Exact selected unrounded values determine each target. The owner calculation is 20 times mean operating profit divided by mean starting legacy economic units.

Owner aggregation and state-ratio diagnostic

USD per legacy economic unit

Quarter	Owner target	Mean state-ratio	Difference
Q4 2026	653.94	653.94	0.00
Q1 2027	773.92	773.92	0.00
Q2 2027	773.08	773.08	0.00
Q3 2027	780.77	780.77	0.00
Q4 2027	787.71	787.71	0.00
Q1 2028	781.46	781.46	0.00
Q2 2028	804.30	804.30	0.00
Q3 2028	822.98	822.91	-0.07
Q4 2028	844.23	844.08	-0.14
Q1 2029	867.64	867.42	-0.22
Q2 2029	891.27	891.12	-0.16
Q3 2029	918.25	918.16	-0.09
Q4 2029	941.86	941.82	-0.04
Q1 2030	974.93	974.93	0.00

The inherited owner convention uses mean operating profit divided by mean starting legacy economic units. Funding creates different future unit counts by path, so the separate mean-of-state-ratios calculation provides a diagnostic.

Sources: [S9], [S10].

Annual cross-checks and complete-model sensitivities

Calendar-year revenue, OP, DA, CFO and capex sum the four quarterly flows. Year-end cash is the final quarterly cash stock. These annual totals are cross-checks on the detailed company forecast. Management's verified guidance horizon remains shorter.

The diagnostic cases vary the source growth endpoint, CIP composition, youth trigger/date, ATM availability, residual access, execution price, relative class prices, forward settlement, ordinary issuance, future growth carry, coupon tax treatment and forward-cash recovery/carry. Each case retains the complete cash and ownership model.

The active target is $793.50 with the old June CIP proxy and $792.89 with zero contingent youth trigger. Restoring the old business endpoints and weights yields $788.90 under the remaining current inputs. These are separate current-model sensitivities and do not form an additive attribution bridge to the October forecast.

If the forward settles in Q3 2027, the active starting denominator includes 40 million more legacy units and the ceiling is $775.59. Annualizing the actual ordinary net issuance gives an active ceiling of $777.19 and a Q1 2030 ceiling of $935.03. Financing timing and actual shares can therefore affect per-unit outcomes well before the broad revenue opportunity has matured.

The generic 95% forward-proceeds recovery case shows funding downside with the operating forecast unchanged. A separate positive net-carry diagnostic tests a genuine proceeds change. Actual optional Class-C-in-lieu election economics remain outside both illustrations pending the missing election and settlement-VWAP inputs.

Calendar-year operating and cash cross-check

USD millions

Year	Revenue	GAAP OP	DA	CFO	Paid capex	Year-end cash
2027	311,074.62	99,062.06	45,375.29	155,674.34	169,750.00	54,463.02
2028	373,421.65	101,590.11	72,145.06	186,962.66	196,500.00	17,356.68
2029	447,101.83	113,651.47	103,084.63	229,107.81	210,000.00	18,403.45
2030	524,412.62	129,127.43	133,885.16	275,000.07	220,000.00	45,484.27

Annual flows sum four calendar quarters. Year-end cash is a stock. Calendar 2027-2030 company totals are model forecasts.

Bounded complete-model sensitivities

Target USD per legacy unit; cash USD millions

Case	Q4 2027 ceiling	Q1 2030 ceiling	Min state cash	Total residual net	Max reserve gap
Current selected	787.71	974.93	10,000.00	8,202.06	0.00
Old business endpoint and weights	788.90	984.51	10,000.00	3,494.36	0
Faster business 100%	817.03	996.65	10,000.00	20,206.71	0.00
Retain June CIP proxy	793.50	984.82	10,000.00	8,333.55	0.00
AG trigger 0%	792.89	975.04	10,000.00	8,112.47	0
AG trigger 100%	772.18	974.61	10,000.00	8,470.81	0.00
All triggers Q1 2028	782.54	974.93	10,000.00	8,202.05	0
ATM available 0%	787.71	975.03	10,000.00	19,889.92	0.00
ATM available 100%	787.71	974.86	10,000.00	410.14	0
Residual equity unavailable	787.71	979.50	-56,821.43	0.00	66,821.43
Independent execution 400	787.71	968.71	10,000.00	8,213.28	0.00
Independent execution 800	787.71	978.18	10,000.00	8,196.42	0.00
C / A ratio 1.00	787.71	975.28	10,000.00	8,201.89	0.00
C / A ratio 0.80	787.71	973.64	10,000.00	8,202.68	0.00
Forward settles Q3 2027	775.59	974.92	10,000.00	8,210.21	0.00
26 m 9 M net issuance annualized	777.19	935.03	10,000.00	8,320.81	0.00
Faster 2030 relative uplift full carry	787.71	986.99	10,000.00	8,202.06	0.00
Note coupon tax deduction 0	787.71	974.25	10,000.00	8,749.64	0.00
Total forward proceeds recovery 95%	787.71	974.32	10,000.00	8,679.30	0.00
Independent forward net carry+5 pp	787.71	975.62	10,000.00	7,663.54	0.00

Each row changes its named controls from the current selection. Total residual net cash is probability weighted through Q4 2030. The 95% recovery case reduces total forward proceeds through the generic whole-basket control; the optional Class-C-in-lieu election remains unmodeled. Price arithmetic for negative-cash or unfunded-residual cases is conditional on resolving the displayed financing gap. These cases retain their separate assumptions and dates.

Sources: [S4], [S5], [S6], [S7], [S10].

Analytical score and protected Excel Base

The framework score remains 46 points out of 60, or 76.67 out of 100. Core thesis 18/20 reflects distribution and advertiser economics; cycle 8/10 and TAM 9/10 reflect expansion with early agent conversion. Catalysts 5/5, macro 8/10 and alpha 3/5 retain the source-supported opportunity and timing tests.

Five risk points capture legal/regulatory severity and injunction uncertainty, financing/dilution, compute/product monetization and execution, and advertising competition/macroeconomics. These transmission routes remain distinct even when a single event affects several reported lines.

The protected Excel Base remains 80 under the owner convention. The current financial update changes target calculations and improves source/claim visibility while retaining that manual score. Analytical Base and Excel Base remain explicitly labeled throughout the local report and model.

Framework score arithmetic

Framework points

Category	Points	Maximum	Evidence / constraint
Core thesis	18	20	Ads distribution, cash earnings and recommendation improvements remain strong. AI capacity and regulated platform access have significant costs.
Cycle stage	8	10	Core ads remain in expansion; new personal agents are early commercial adoption with compute constraints.
TAM expansion	9	10	Agent commerce, messaging and enterprise expand addressable receipts, with paid conversion and permissioned integrations still conditional.
Catalysts	5	5	Q3 results and Q4 guidance are available. The January 2027 capital structure and the next capital-budget and capacity disclosures are forecast tests.
Macro	8	10	AI engagement/ad productivity supports growth; infrastructure financing and advertising cyclicality constrain returns.
Alpha	3	5	Muse user activity reaches receipts through paid conversion and cost per user. Ordinary GAAP earnings, legal cash payments and new distribution units have separate numerical bridges.
Risks	-5	0	Five risk points cover legal and regulatory loss severity and injunction uncertainty; financing and dilution; compute and product monetization execution; and advertising competition and macro cyclicality. The separate 25 B New Mexico privacy judgment bears 15% annual interest. Its legal exposure remains separate from the AG youth settlement.
Total	46	60	Analytical Base 76.6667; protected Excel Base 80

Risk deductions stay within the framework cap. Legal, financing, execution and ad-cycle risks remain distinct transmission routes.

Sources: [S2], [S4], [S7], [S8], [S10].

Cross-company connections and the next tests

Meta's AI spending connects accelerator suppliers, memory and optical components, server integration, networking, electrical equipment, cooling and data-center development. Availability, useful compute per dollar and the construction schedule influence deployment. Larger supplier receipts can coexist with rising costs for Meta, so the company's value capture requires its own monetization and funding bridge.

The main operational tests are advertiser returns, useful impressions, sustained engagement, paid Muse conversion, net receipts per active user and actual serving/support expense. The paid-capital tests are in-service dates, asset mix, useful lives, utilization and the disclosed 2027 budget. A favorable usage signal matters most when the incremental receipt/cost relationship is measured.

The legal tests are appeal and injunction orders, a verified payment/stay/bond calendar, issuer accounting measurement and the two youth-trigger conditions. The financing tests are executed ATM terms, actual issuance prices and pace, forward settlement/carry, preferred conversion and the availability/cost of further equity capital.

Faster monetization with lower paid cost can lift the ceiling. Delayed construction, weak conversion, expensive funding, larger new claims or worse legal timing can lower per-unit returns. Those effects are quantified through the model's owning controls and separate financial paths.

Sources: [S2], [S4], [S5], [S6], [S7], [S8], [S10].

Sources, completeness and remaining modeling gaps

The current review recovers the official 20-page Q3 issuer transcript and the saved Q3 10-Q, in addition to the previously verified 21-page Q2 call and Q3 issuer release. Specified October pricing, closing, common-forward, preferred and launch filings provide the instrument terms. The Goldman forward source has a scoped primary-web read with a local-original save gap. Full audio verification remains incomplete.

The entire original 31-page owner letter remains preserved, with prior complete-read evidence reused and META material pages mapped into the current source ledger. Its 2 November date and 30 September consensus vintage remain explicit. Licensed original letter pages stay in the private source record; the current report uses issuer/court source images and original model charts.

Source gaps remain in future physical asset readiness/mix, actual agent paid conversion and take, exact financing expenses, forward carry/reductions, option exercise, the optional Class-C-in-lieu election, future ATM terms, residual equity access, precise youth obligation measurement/timing and privacy accounting, payment, stay and interest convention.

The selected cash model also retains forecast proxies for taxes, working capital, ordinary net issuance, lease additions/principal, interest capitalization and the timing of dated note maturities. PBT and net-income diagnostics expose the unallocated privacy-interest book-accrual item. The full opening finance-lease liability remains unresolved.

The linked model preserves the exact original technical sheet and historical formulas alongside current company operations, cash, ownership and valuations. The main portfolio contains one visible Master Portfolio sheet. Exact source hashes, full-precision financial inputs, 14 complete forward windows, 17 financial quarters and all 72 joint cash paths remain available for review.

Model conventions and verification

The linked technical workbook retains the complete original Meta model and historical formulas. This report preserves the original source images. Its current sheets expose editable business, capital, legal and financing controls, all 72 joint cash paths, legacy economic units and quarterly valuations. The main portfolio has one visible Master Portfolio sheet.

The saved files were recalculated with the bundled ArtifactTool engine. Independent arithmetic and saved-file checks cover the selected company forecasts, cash conditions, historical source content and current targets. Perturbation and restoration checks bind these exact saved workbook bytes. Microsoft Excel Desktop execution remains unverified.

Open the editable technical workbook.

Historical appendix | 21 October 2026

The following 28 original pages preserve the complete 21 October 2026 analysis, source images and forecasts. Current-quarter and future estimates appear in the 6 November review above. Published earlier-quarter forecasts keep their original information vintage.

Meta: advertising strength meets the full cost of AI

Meta combines an enormous consumer audience with advertiser demand, recommendation systems and commercial messaging. Better recommendations can increase engagement, useful ad impressions and advertiser returns across an existing distribution network. This creates a credible route to earnings growth. Personal agents and commerce add potential receipts, but they also require expensive computing capacity, support and product development.

The Q4 2027 ceiling changes from USD 960 to USD 800 per legacy economic share unit, a decline of about 17%. The active window remains Q4 2027 through Q3 2028. The sanctioned method remains 20x forward-four-quarter consolidated GAAP operating profit divided by 2,560 million legacy units. Analytical Base moves from 80 to 77 rounded; protected Excel Base remains 80.

Advertising evidence improves, while the rebuilt forecast now explicitly costs data centers entering service, continuing cash operating expenses and compensation. The separate New Mexico judgment adds legal and financing risk. The forecast reduction is an ASTRA analytical cost and risk revision. Meta has supplied no numerical 2027 total revenue, expense or capex guidance. These targets are conditional estimates, not management profit guidance.

Control	Treatment
Profit definition	Consolidated GAAP OP, including ordinary stock compensation and legal expenses when recognized.
Share comparison	2,560M legacy economic units. After the proposed distribution, one old Class A unit corresponds to an A plus C pair.
Valuation	20x the sum of four consecutive quarterly OP values, divided by the starting legacy-unit denominator.
Price context	Existing spreadsheet quotes are dated or undated historical inputs. No fresh price-dependent return claim is made.
Funding limit	Point valuation retains the owner share convention; the cash path requires uncommitted funding in several scenarios. Financing sensitivities are shown.

The economic bottleneck and the alpha

Meta already reaches consumers at scale. Its next constraint is converting more capable AI into receipts faster than the full cost of the infrastructure and applications needed to serve them. The strongest near-term channel is better advertising inside an established auction and distribution network. The more speculative channel is permissioned agent commerce, subscriptions and business services. Users, activity, gross merchandise value and Meta revenue have different economic meanings.

Vector	Company receipts	Cost and competitive constraint
Advertising and recommendations	More useful impressions, conversion and pricing across Facebook and Instagram.	Competing attention, advertiser budgets, privacy restrictions, training and serving costs.
Messaging and business agents	Business interactions, commerce and paid business services.	Customer integration, distribution permissions, sales and support. Included in the core forecast unless separately identified.
Muse personal agents	Conditional paid subscriptions, commerce take and payment receipts.	Most early users may be free; inference, memory, tools, application support and training remain paid.
Reality Labs and glasses	Hardware and eventual software/services.	Hardware is priced for small profit and the segment remains loss-making. No automatic high-margin agent revenue pool.

The potentially underappreciated value is Meta's ability to introduce useful AI into an existing commercial network. The potentially underappreciated cost is depreciation as paid infrastructure becomes operational, plus cash demands before revenue matures. The model tests both. Larger compute budgets alone do not establish excess returns. Sustainable monetization, useful intelligence per dollar and capital discipline determine whether the new assets earn enough.

META / 21 OCTOBER 2026 / FULL FRAMEWORK 8.0 EARNINGS REVIEW

September results and December outlook

September 2026, USD million	Reported actual	Old model
Revenue	64,601	62,500
Cost of revenue	13,369	12,938
Gross profit, arithmetic	51,232	49,562
Total costs	51,613	40,625
Consolidated GAAP OP	12,988	21,875

Revenue was USD 64,601M. Advertising contributed USD 63,061M, other Family of Apps USD 1,097M and Reality Labs USD 443M. Family of Apps OP was USD 17,117M and Reality Labs lost USD 4,129M. R&D was USD 20,054M, marketing/sales USD 3,333M and G&A USD 14,857M. These operating costs include the USD 9,890M youth-settlement charge. Ordinary SBC remains fully expensed.

Reported GAAP OP is USD 12,988M and net income USD 9,860M. The issuer's illustration excluding the youth charge gives OP of USD 22,878M. That illustration helps interpret operating performance, but the sanctioned valuation retains GAAP OP. September operating cash flow was USD 32,786M; cash PPE purchases were USD 33,942M and finance-lease principal USD 964M, giving company capex of USD 34,906M and free cash flow of negative USD 2,120M.

Company outlook or derived arithmetic	December / FY2026
Q4 revenue	USD 73,000-76,000M; midpoint USD 74,500M.
FY2026 total costs	USD 175,000-179,000M, including the Q3 youth charge.
Q4 total costs derived from nine-month actuals	USD 47,923-51,923M; midpoint USD 49,923M.
Q4 ordinary OP midpoint, arithmetic	USD 24,577M before our separate analytical New Mexico charge.
FY2026 capex including lease principal	USD 135,000-145,000M.
Reality Labs	FY2026 loss USD 18,000-19,000M; around USD 15,000M in 2027.
2027 consolidated quantitative guide	Not supplied; management expects fuller budget and capacity discussion on the Q4 call.

The Q4 cost range is full-year guidance less nine-month reported costs of USD 127,077M. It is arithmetic on rounded guidance, not an explicit company OP guide. Our separate probability-weighted New Mexico principal charge of USD 11,250M is placed analytically in Q4 2026 beyond this ordinary midpoint, taking modeled Q4 GAAP OP to USD 13,327M. The company has not confirmed that recognition quarter or that treatment in its guidance.

- Family daily active people (DAP) – DAP was 3.64 billion on average for September 2026, an increase of 3% year-over-year.
- Ad impressions – Ad impressions delivered across our Family of Apps increased by 10% year-over-year.
- Average price per ad – Average price per ad increased by 14% year-over-year.
- Revenue – Revenue was $64.60 billion, an increase of 26% year-over-year on both a reported and constant currency basis.
- Costs and expenses – Total costs and expenses were $51.61 billion, an increase of 68% year-over-year. This includes the litigation charge as discussed above.
- Capital expenditures – Capital expenditures, including principal payments on finance leases, were $34.91 billion.
- Capital return program – Dividend and dividend equivalent payments were $1.36 billion.
- Cash, cash equivalents, and marketable securities – Cash, cash equivalents, and marketable securities were $82.45 billion as of September 30, 2026.
- Cash flow – Cash flow from operating activities was $32.79 billion, and free cash flow was negative $2.12 billion.(1)
- Headcount – Headcount was 66,775 as of September 30, 2026, a decrease of 15% year-over-year.

---

CFO Outlook Commentary

We expect fourth quarter 2026 total revenue to be in the range of $73-76 billion. Our guidance assumes foreign currency is an approximately 1% headwind to year-over-year total revenue growth, based on current exchange rates.

We are raising our expense outlook to incorporate the $9.9 billion charge related to legal proceedings recognized in the third quarter. We now expect full year 2026 total expenses to be in the range of $175-179 billion.

Excluding the third quarter legal charge, we continue to expect 2026 operating income to be above 2025 operating income.

At a segment level, we now expect Reality Labs losses to decline compared to 2025 to a range of $18-19 billion.

We anticipate 2026 capital expenditures, including principal payments on finance leases, to be in the range of $135-

Meta issuer release, 21 October 2026, physical page 2. Original financial and outlook disclosure. Source decimals and reported definitions are retained in the original pixels.

The newest two management calls

Call	Evidence and change	Model consequence
29 July 2026, Q2	Established recommendation improvements, business messaging, infrastructure plans and early personal-agent economics. Full 21-page issuer transcript was read previously; exact original hash verified.	The inherited core reference already contains substantial AI-driven ad growth. Remove the old Muse overlay before replacing it.
21 October 2026, Q3	Stronger revenue outlook, continuing AI investment, early Muse usage and prospective compute efficiency. Full returned Quartr prepared remarks and Q&A read through closing.	Carry only the new revenue run-rate difference over the common reference, with state-specific cash costs, compensation and paid-asset depreciation.
Usage versus commercial conversion	More than 10M Muse setups in the US/Canada over six weeks; about 25% daily use. Shopping and purchase statistics describe activity.	These are not paid subscriptions or recognized Meta agent revenue. Future users, conversion, pricing and take remain explicit proxies.
Corrected ARPU interpretation	Management's several-hundred-dollar ARPU discussion concerned existing FoA users using Muse. Meta One includes subscriptions and trials.	Do not assign that ARPU to Muse or count trials as paying users.
Efficiency and resources	Prospective greater-than-10x compute efficiency; resources shift from Reality Labs toward AI.	Efficiency applies to selected unit compute costs; product quality can consume savings. The full RL loss reduction is not an extra free profit increment.

The current complete returned call is a redistribution text, not an issuer-hosted transcript PDF or an independently listened audio record. Current issuer slides, full Q3 10-Q and full capital-action filings were unavailable in the captured packet. Known omissions remain recorded rather than inferred from an inaccessible source. The issuer release, full current returned call and prior full issuer transcript provide substantive coverage of the two newest management calls.

META / 21 OCTOBER 2026 / FULL FRAMEWORK 8.0 EARNINGS REVIEW

Muse: receipts, compute, support and overlap

The conditional cohort uses an annual revenue proxy of USD 52 per active user rounded. This is built from paid tiers, eligible commerce and payment receipts. It is an ASTRA sensitivity structure, not disclosed current Muse ARPU. Core average active users reach 70M in Q4 2027 and 220M in Q4 2028. Slower and faster states scale that path to 30% and 150% respectively. The old probability overlay is removed completely before these outcomes are applied.

Annual unit bridge	Explicit analytical assumption
Paid tiers	94% free, 5% at USD 20 per month and 1% at USD 100 per month; 80% net receipts after leakage. Annual contribution rounds to USD 19.

Annual unit bridge	Explicit analytical assumption
Commerce	USD 6,000 gross merchandise value per user, 25% eligible and 2% take; USD 30 annual receipts. GMV is not Meta revenue.
Payments	5 basis points on the same USD 6,000 volume; USD 3 annual receipts.
Cash serving cost before efficiency	USD 98 per user rounded after removing separately modeled hardware depreciation from the old cost proxy.
Efficiency exposure	60% of cash serving costs benefits from the state efficiency path; 40% remains unchanged.
Application support	USD 5 per user annually, additional to serving costs.
Revenue and cost overlap	Only 50% of gross Muse receipts and cash service costs are incremental to the core forecast.
Hardware and capex	Hardware depreciation overlaps 100% with the company asset-cohort DA. Muse capital is allocated inside the total capex budget.

Quarter	Avg active users M	Net receipts	Net cash service cost	Net OP	Capex allocation
Q3 2026	0	0	0	0	0
Q4 2026	5	0	0	0	0
Q1 2027	10	63	88	-25	61
Q2 2027	19	125	143	-18	121
Q3 2027	38	251	258	-7	243
Q4 2027	67	438	431	7	364
Q1 2028	96	626	616	10	364
Q2 2028	134	877	863	14	486
Q3 2028	173	1,128	1,109	18	486
Q4 2028	211	1,378	1,356	22	486
Q1 2029	240	1,566	1,541	25	364
Q2 2029	288	1,879	1,849	30	607
Q3 2029	336	2,192	2,157	35	607
Q4 2029	384	2,506	2,465	41	607
Q1 2030	432	2,819	2,773	46	607
Q2 2030	480	3,132	3,081	51	607
Q3 2030	528	3,445	3,389	56	607
Q4 2030	576	3,758	3,698	61	607

Net receipts equal active users times annual revenue divided by four, then the non-overlapping fraction. Net cash service cost equals active users times annual cash serving cost after the selective efficiency factor plus support, divided by four and multiplied by the non-overlapping fraction. Muse net OP is the difference; company-wide depreciation already covers its hardware. Q4 2026 remains inside consolidated guidance, with no separately added Muse receipts or profit. This avoids a second hardware cost and a second compute revenue pool.

Data centers entering service: full paid-asset cost

At September end, reported net PPE was USD 253,222M. June construction in progress of USD 80,345M is used only as a dated proxy for the September composition. It already sits inside total assets. Activating it starts depreciation; it does not create another asset purchase. The actual September CIP mix and readiness schedule remain unknown.

Cohort driver	Root-selected treatment
Opening DA	Annualize current quarterly DA of USD 7,154M to USD 28,616M; run off the existing in-service pool by 5% annually.
Opening CIP activation	50% in 2027, 35% in 2028 and 15% in 2029; half-year DA in each activation year.
Asset mix and useful lives	75% server/network at 66 months; 25% buildings at 330 months. Life points lie within verified source policies; mix is an ASTRA assumption.
Q4 2026 cash PPE	USD 53,212M; 80% commissioned in the following year.
Future capex including lease principal	USD 160,000 / 190,000 / 210,000 / 220,000M in 2027 / 2028 / 2029 / 2030. These are ASTRA scenarios, not company guidance.
Future lease proxies	USD 4,000M annual lease principal inside capex; USD 6,000M annual noncash finance ROU additions create depreciation but no immediate cash purchase.
New-cohort DA timing	35% of full annual DA in the first year, 85% in the second and 100% from the third.

Full-year asset DA rate equals the sum of each asset weight divided by its useful life. Opening-pool DA, activated opening CIP, the Q4 2026 cohort and every new annual cash/ROU cohort are calculated separately. Future quarterly DA uses the old quarterly cost seasonality, an allocation proxy rather than a claimed monthly commissioning schedule. Reported DA includes amortization, so the PPE-equivalent roll-forward is a diagnostic rather than a complete GAAP balance sheet.

Year	Opening pool DA	Q4 cohort DA	Opening CIP DA	New cohorts DA	Total DA
2027	27,185	6,192	2,922	8,247	44,546
2028	25,826	6,192	7,888	29,804	69,710
2029	24,535	6,192	10,810	58,095	99,631
2030	23,308	6,192	11,687	89,004	130,190

DA year	Capex cohort	Cash PPE	Noncash ROU	DA recognition	Annual DA
2027	2027	156,000	6,000	35%	8,247
2028	2027	156,000	6,000	85%	20,029
2028	2028	186,000	6,000	35%	9,775
2029	2027	156,000	6,000	100%	23,564
2029	2028	186,000	6,000	85%	23,738
2029	2029	206,000	6,000	35%	10,793
2030	2027	156,000	6,000	100%	23,564
2030	2028	186,000	6,000	100%	27,927
2030	2029	206,000	6,000	85%	26,211
2030	2030	216,000	6,000	35%	11,302

Year	Other cash cost	Additional AI R&D	SBC	DA	Total before state / Muse effects
2027	127,705	7,000	30,000	44,546	209,251
2028	150,692	10,000	32,000	69,710	262,402
2029	173,296	11,000	34,000	99,631	317,927
2030	197,557	12,000	36,000	130,190	375,747

The 2026 ordinary cost anchor is the USD 177,000M full-year midpoint less the USD 9,890M youth charge. Removing annual DA of USD 27,509M and SBC of USD 28,553M leaves USD 111,048M of other cash cost. That cash base grows 15%, 18%, 15% and 14% annually, plus the explicit AI R&D line above. Stock compensation stays fully expensed in OP. Annual cost is allocated by exact old reference-quarter cost weights. The demand-related cash-cost elasticity is 55%; it does not remove fixed spending.

Our non-marketable equity investments accounted for using the measurement alternative are recorded at fair value on a non-recurring basis. When an impairment loss or upward adjustment from observable price changes of qualified transactions occur, the respective non-marketable equity investment would be classified within Level 3 of the fair value hierarchy because the valuation methods include a combination of the observable transaction price at the transaction date and other unobservable inputs including volatility, rights, and obligations of the securities we hold. For the years ended December 31, 2025 and 2024, changes in the fair value recorded for our non-marketable equity securities were not material. For additional information, see Note 5 — Non-Marketable Equity Investments.

Variable Interest Entities

At the inception of each arrangement, we determine whether an entity in which we have made an investment or in which we have other variable interests is considered a variable interest entity (VIE). Significant judgment is required to identify the activities that most significantly affect the VIE's economic performance, based on its purpose and design. We assess whether we have both the power to direct those activities and the obligation to absorb the majority of the VIE's losses or benefits. We evaluate whether we are the primary beneficiary of the VIE, in which case we would consolidate the entity.

As of December 31, 2025, we are not the primary beneficiary of the VIEs related to our investments, and therefore the VIEs are not consolidated. These investments are accounted for as equity method investments included within non-marketable equity investments on our consolidated balance sheet. We continually monitor our involvement with the VIEs and will consolidate them if we become the primary beneficiary in the future. For additional information, see Note 5 — Non-Marketable Equity Investments.

Accounts Receivable and Allowances

Accounts receivable are recorded and carried at the original invoiced amount less an allowance for any potential uncollectible amounts. We make estimates of expected credit and collectibility trends for the allowance for credit losses and allowance for unbilled receivables based upon our assessment of various factors, including historical experience, the age of the accounts receivable balances, credit quality of our customers, current economic conditions, reasonable and supportable forecasts of future economic conditions, and other factors that may affect our ability to collect from customers. Expected credit losses are recorded as general and administrative expenses on our consolidated statements of income. As of December 31, 2025 and 2024, the allowance for credit losses on accounts receivable were not material.

Property and Equipment

Property and equipment, including finance leases, are depreciated and stated at cost less accumulated depreciation. Depreciation is computed using the straight-line method over the estimated useful lives of the assets or the remaining lease term, whichever is shorter.

The estimated useful lives of property and equipment and amortization periods of finance lease right-of-use (ROU) assets as of December 31, 2025 are described below:

Property and Equipment	Useful Life/ Amortization period
Servers and network assets	Five to 5.5 years
Buildings	25 to 30 years
Equipment and other	One to 25 years
Finance lease right-of-use assets	Five to 20 years
Leasehold improvements	Lesser of estimated useful life or remaining lease term

We evaluate at least annually the recoverability of property and equipment for possible impairment whenever events or circumstances indicate that the carrying amount of such assets may not be recoverable. If such review indicates that the carrying amount of property and equipment assets is not recoverable, and the asset's fair value is less than the carrying amount, an impairment loss is recognized in income from operations.

The useful lives of our property and equipment are management's estimates when the assets are initially recognized and are routinely reviewed for the remaining estimated useful lives. Our estimate of useful lives represents the best estimate

Meta FY2025 annual report distribution, physical page 100. Original useful-life policies. It is dated annual-report evidence; future asset mix and activation are ASTRA estimates.

Rule16b: business outcomes and legal outcomes

Mutually exclusive business state	Weight	New ad-runrate carry	Muse user scale	Efficiency ceiling
slower adoption cost progress	20%	50%	30%	2x
continued ads and efficiency	60%	100%	100%	10x
faster commercial adoption	20%	150%	150%	10x

The business states sum to 100%. Their endpoints are root estimates, not probabilities announced by Meta. The new Q4 midpoint of USD 74,500M versus the old USD 70,000M produces a 643-basis-point run-rate difference. Each state carries only its selected fraction of that difference into inherited reference revenue. It does not add total year-on-year growth again. The slow state also pays USD 2,000M extra cash cost in 2027 and USD 1,000M annually later.

Reviewed signal	Conditional probability	Separate extra receipts / OP	Overlap treatment
Enterprise agents	50%	Zero	Core business-agent and Muse cases already contain the opportunity.
External compute sales	40%	Zero	No separate net capacity/customer wallet after internal opportunity cost.
Glasses	60%	Zero	Reality Labs costs and existing core receipts retained.
Reality Labs reallocation	80%	Zero	Consolidated cash cost pays for AI redeployment.
Compute efficiency headline	60%	Zero	Selective serving efficiency modeled once; no blanket company cost cut.

Separate New Mexico outcome	Probability	Principal	Cash with assumed two-year simple interest
reversed	25%	0	0
reduced on appeal	50%	10,000	13,000
affirmed	25%	25,000	32,500

The court order itself is verified fact: USD 25,000M plus 15% annual interest until paid. The 25% reversal / 50% reduced-to-USD-10,000M / 25% affirmed outcomes are LOW-confidence ASTRA assumptions. They produce expected principal of USD 11,250M and an illustrative payment of USD 14,625M after two years of simple interest. Neither appeal outcome, payment date, accounting recognition, stay nor compounding is established by those assumptions. Three business states cross three legal states for nine funding paths before weighting.

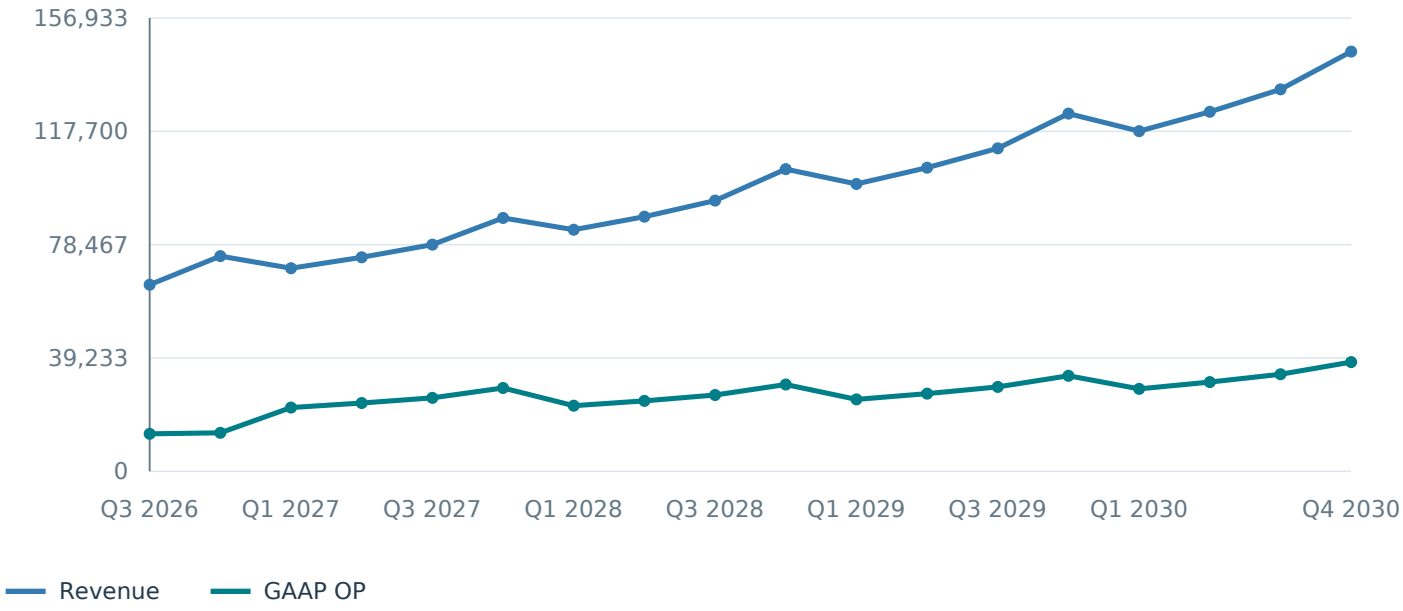

Quarterly model: every receipt, cost and profit

USD millions. Q3 2026 is reported GAAP. Q4 revenue and ordinary cost use the issuer midpoint arithmetic, with the separate analytical New Mexico charge clearly added. Later quarters are probability-weighted ASTRA estimates. Forecast COGS at 2,070 basis points of receipts is an analytical consolidated allocation; no separate segment gross margin was reported. Opex equals total costs less COGS, including ordinary SBC, DA and applicable analytical legal expense.

Quarter	Revenue	COGS	Gross profit	Opex	GAAP OP
Q3 2026	64,601	13,369	51,232	38,244	12,988
Q4 2026	74,500	15,422	59,078	45,752	13,327
Q1 2027	70,305	14,553	55,752	33,678	22,075
Q2 2027	74,093	15,337	58,756	35,109	23,647
Q3 2027	78,476	16,244	62,231	36,796	25,435
Q4 2027	87,710	18,156	69,554	40,698	28,856
Q1 2028	83,641	17,314	66,327	43,607	22,720
Q2 2028	88,148	18,247	69,902	45,510	24,392
Q3 2028	93,720	19,400	74,320	47,904	26,416
Q4 2028	104,614	21,655	82,959	52,909	30,049
Q1 2029	99,480	20,592	78,888	53,979	24,908
Q2 2029	105,115	21,759	83,356	56,464	26,892
Q3 2029	111,814	23,145	88,668	59,445	29,223
Q4 2029	123,834	25,634	98,200	65,119	33,081
Q1 2030	117,762	24,377	93,385	64,838	28,547

The other operating-cost column is total cost less DA and SBC. It includes legal accruals where applicable and should not be read as an exact cash payment column. The New Mexico charge is separately identified inside it, not added to total costs a second time. Display rounding can create USD 1M differences; saved formulas retain full precision.

All fifteen forward valuation derivations

For each starting quarter, add the next four quarterly consolidated GAAP operating-profit figures, including the starting quarter. Multiply that sum by 20 and divide by 2,560M legacy economic units. The Q4 2027 row therefore uses Q4 2027 and Q1, Q2 and Q3 2028. No EBITDA substitution, tax multiple conversion, net-cash premium or new multiple increase enters the method.

Start	OP term 1	OP term 2	OP term 3	OP term 4	F4Q OP	20x / 2,560M

10% additional share dilution with unchanged OP	727
20% forward OP shortfall with unchanged multiple	640

The Class C charter amendment is scheduled to take effect on 19 January 2027. The intended pro-rata distribution gives one C share for each existing A or B share, with record and payment dates still to be

announced. That distribution alone raises no cash and gives no outsider additional economic ownership. One retained legacy Class A economic unit would correspond to an A plus C pair after distribution. The USD 800 rounded target is for that comparable unit, not a stand-alone future Class A quote. Doubling a raw share count while holding the economic claim fixed would halve the per-new-share arithmetic; relative A/C trading values are not assumed equal.

Alternative legal timing stress	Reduction in active target USD
Full USD 25B principal first recognized inside the active profit window	195
Expected USD 11B principal first recognized inside the active profit window	88

The timing stresses place the first legal expense recognition inside the active profit window instead of Q4 2026. They are alternative accounting-timing cases, not another charge on top of the current model. Final recognition and classification remain unknown. They illustrate why apparently remote legal cash can also affect an OP-based valuation if expense timing moves.

Legal exposure, cash conversion and financing

Two separate legal matters require separate treatment. The youth settlement produced the actual USD 9,890M Q3 charge. Its nominal maximum is USD 18,590M, with conditions and approximately ten annual installments; accrual, nominal commitment and payment timing differ. The model uses a conservative equal USD 1,859M annual cash proxy from 2027, without repeating the Q3 expense each year. Exact contractual cash dates and conditional reductions remain unverified.

The separate New Mexico privacy judgment was filed 21 October 2026 in case D-101-CV-2021-00132. The court reduced the statutory assessment to USD 25,000M and ordered 15% annual interest until paid. The larger original statutory calculation and the reduced award are not additive. The injunction remains reserved. The actual court document does not establish our assumed Q4 2026 accounting charge, Q4 2028 payment, appeal reduction or a financing solution.

P.A., 21 F.4th 1288, 1314 (11th Cir. 2021) (civil penalty of $1,179,000 against alleged harm of $755.54 not excessive where defendant engaged in 214 instances of fraud, and fine was lower than the potential statutory maximum).

18. The extraordinary number of willful violations found by the jury, the duration and repetition of the conduct, the breadth of subjects on which violations occurred, the involvement of senior Facebook leadership, the size of the New Mexico audiences reached, and the clearly intentional and systematic nature of Facebook's repeated misstatements established in the trial record support the highest level of penalty allowed by the New Mexico Unfair Practices Act - $5,000 per violation found by the jury.

19. Facebook received notice of the claims against it and a full opportunity to defend against liability, willfulness, and the number of violations during a thirteen-day jury trial. As the Court observed following the verdict, Facebook "had all the incentive that was required to defend this case vigorously" and "did defend vigorously."

IT IS THEREFORE ORDERED, ADJUDGED AND DECREED as follows:

1. The State is awarded and shall recover a civil penalty against Meta in the amount of $219,498,600,000.00, which penalty is reduced to the amount of $25,000,000,000.00.

2. Interest on the penalty shall accrue at the rate of fifteen percent (15%) per annum until paid in full.

3. The Court will reserve on injunctive relief pending further briefing in this matter.

Francis J. Mathew
District Court Judge

xc: Counsel, e-served

New Mexico court judgment, filed 21 October 2026, physical page 20. Original USD 25 billion penalty and 15% annual interest language. Court facts are distinct from ASTRA appeal and cash-timing assumptions.

Opening unrestricted cash and marketable securities total USD 82,449M; restricted cash of USD 13,132M is excluded. Cash operations add back DA, SBC and the noncash analytical legal charge once, subtract the tax and incremental working-capital proxies, and pay the uncapitalized coupon portion. Capex already includes

finance-lease principal and Muse capital allocation. Award settlement tax, dividends, dated debt principal and legal cash are then paid separately.

Cash assumption	Explicit proxy or source boundary
Tax and working capital	16% tax on operating profit before the analytical NM charge; 5% of incremental receipts as NWC cash use. No assumed penalty tax shield.
Debt	Dated June note principal USD 84,000M. Annual maturities USD 2,750 / 1,500 / 1,000 / 5,000M in 2027-2030, conservatively in Q1, not asserted exact dates.
Coupons	USD 4,400M annual opening gross coupon proxy, declining with notes. 70% paid outside the fixed capex budget; 30% already inside it. Exact future capitalization split is unknown.
Separate cash returns	Award-settlement tax USD 4,064M and dividends USD 1,361M per quarter; no automatic buybacks.
Commitments	Cloud/hardware commitments and uncommenced leases are source risks. Costs/capex already pay for the operating plan; the whole commitment total is not added again.
Liquidity reserve	USD 10,000M. No automatic new equity or debt proceeds. Negative cash is an unfunded requirement, not available cash.

Required external capital is calculated on each joint business/legal path before weighting: the greater of zero and the USD 10,000M reserve minus unfunded cash. The cumulative peak retains the largest funding gap reached to date, even if cash later improves. A mean cash number cannot substitute for these nonlinear path requirements. Financing access, pricing, covenants and dilution remain unresolved.

A reduction of 100 basis points equals 1%. Whole basis points keep small dilution effects visible when a rounded percentage factor would otherwise read 100%. Exact units and target factors remain in the financial model.

These are uncommitted funding sensitivities, not an announced financing or a probability-weighted share issuance in the point target. The point target remains conditional on the sanctioned fixed owner unit basis and access to capital. New debt coupons or outside shares could lower shareholder returns. The 0% and 100% outside-capex coupon cases test extra cash cost at a fixed capex budget, rather than pretending a pure accounting reclassification creates value.

The following complete business-state cash paths retain the expected legal payment. All figures are USD millions. To reconstruct a joint legal path, replace the expected Q4 2028 legal cash with the selected legal outcome and carry the cash difference forward. Each path uses the same reserve test before probability weighting. No financing proceeds or repayment of hypothetical new funding enters these unfunded paths.

Segment Results

We report our financial results for our two reportable segments: Family of Apps (FoA) and Reality Labs (RL). FoA includes Facebook, Instagram, Messenger, WhatsApp, and other services. RL includes our virtual and augmented reality related consumer hardware, software, and content.

The following table sets forth our segment information of revenue and income (loss) from operations:

Segment Information
(In millions)
(Unaudited)

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2026	2025	2026	2025
Revenue:				
Advertising	$ 63,061	$ 50,082	$ 177,449	$ 138,037
Other revenue	1,097	690	2,987	1,784
Family of Apps	64,158	50,772	180,436	139,821
Reality Labs	443	470	1,276	1,252
Total revenue	$ 64,601	$ 51,242	$ 181,712	$ 141,073
Income (loss) from operations:				
Family of Apps	$ 17,117	$ 24,967	$ 67,410	$ 71,702
Reality Labs	(4,129)	(4,432)	(12,775)	(13,171)
Total income from operations	$ 12,988	$ 20,535	$ 54,635	$ 58,531

Reconciliation of GAAP to Non-GAAP Results
(In millions, except percentages)
(Unaudited)

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2026	2025	2026	2025
GAAP revenue	$ 64,601	$ 51,242	$ 181,712	$ 141,073
Foreign exchange effect on 2026 revenue using 2025 rates	113		(2,320)	
Revenue excluding foreign exchange effect	$ 64,714		$ 179,392	
GAAP revenue year-over-year change %	26 %		29 %	
Revenue excluding foreign exchange effect year-over-year change %	26 %		27 %	
GAAP advertising revenue	$ 63,061	$ 50,082	$ 177,449	$ 138,037
Foreign exchange effect on 2026 advertising revenue using 2025 rates	96		(2,342)	
Advertising revenue excluding foreign exchange effect	$ 63,157		$ 175,107	
GAAP advertising revenue year-over-year change %	26 %		29 %	
Advertising revenue excluding foreign exchange effect year-over-year change %	26 %		27 %	
Net cash provided by operating activities	$ 32,786	$ 29,999	$ 96,873	$ 79,586
Purchases of property and equipment	(33,942)	(18,829)	(83,055)	(48,308)
Principal payments on finance leases	(964)	(545)	(2,769)	(1,770)
Free cash flow	$ (2,120)	$ 10,625	$ 11,049	$ 29,508

Meta issuer Q3 release, physical page 9. Original cash-flow information. Definitions and accounting cash lines are retained; the model separates future cash proxies from this reported statement.

Analytical score and protected spreadsheet Base

Category	Points	Maximum	Reason
Core thesis	18	20	Ads distribution, cash earnings and recommendation improvements remain strong. AI capacity and regulated platform access have significant costs.
Cycle stage	8	10	Core ads remain in expansion; new personal agents are early commercial adoption with compute constraints.
TAM expansion	9	10	Agent commerce, messaging and enterprise expand addressable receipts, with paid conversion and permissioned integrations still conditional.
Catalysts	5	5	Q3 results and Q4 guidance delivered. January charter effectiveness and the Q4 budget/capacity outlook are the next tests.
Macro	8	10	AI engagement/ad productivity supports growth; infrastructure financing and advertising cyclicality constrain returns.
Alpha	3	5	Separates Muse user activity from receipts and costs, and separates ordinary GAAP profit, legal cash and distribution units.
Risks	-5	0	Five risk points within the cap: legal/regulatory loss and injunction uncertainty; financing/dilution; compute monetization and execution; ad competition and macro cyclicality. The separate USD 25B privacy judgment with 15% annual interest increases severity.

The raw score is 46 out of 60, or 77 out of 100 rounded. Legal severity, financing, execution and competition are distinct risk classes within the framework cap. Analytical Base previously 80 falls to 77 rounded. Protected Excel Base stays 80. Former JSON metadata showing 99 was stale; reconciling the file to the actual protected master value is not an owner Base change.

Risks, falsification and the next tests

Risk	Evidence that would change the case	Next test
Return on AI assets	Compute utilization and paid receipts fail to cover depreciation, serving and development costs.	Full 2027 expense/capex plan, activation schedules and monetization cohorts.
Legal and access	Appeal, injunction, interest or recognition is materially worse than the assumed outcomes.	Docket orders, verified stay/bond terms, issuer accounting disclosure and payment dates.
Funding and dilution	Capital needed before cash recovery exceeds financing capacity or costly securities are issued.	Actual debt/equity terms and updated cash/maturity detail.
Ads competition and macro	Advertiser returns, useful impressions or pricing weaken despite added compute.	Matched volume/price/conversion measures and core margins.
Agent monetization	Setups do not become retained active users or cash receipts; better intelligence consumes savings.	Paid conversion, net ARPU, qualified commerce take and actual serving/support costs.

The next critical information is management's full-year 2027 cost/capacity outlook, the detailed current filing, agent revenue and unit-cost evidence, the Class C record/payment mechanics and the New Mexico appeal/accounting sequence. The model can rise if Meta monetizes efficiently with lower paid cost or loses legal risk. Strong ad growth combined with rapidly rising paid capital can also produce lower shareholder returns than a revenue-only extrapolation suggests.

Sources, completeness and reproducibility

A04_SEC_submissions	https://data.sec.gov/submissions/CIK0001326801.json	62e4c2487cea4e2e3f63c7b0531897ade3d791be6bc7b9dd662ac70430a554d9

Current issuer release: full 10 pages read, with important financial and guidance pages visually checked. The complete 59,168-character current call text and the prior 21-page issuer call were read. The exact older source bytes are preserved. Current issuer transcript PDF, slides, full Q3 10-Q and complete capital-action filings remain unavailable. Transport completion does not prove those missing sources exist in the packet.

The dated June SEC filing supplies PPE/CIP, debt, commitments and policy context through saved official text responses; direct raw HTML returned 403 and is not mislabeled as a downloaded full filing. The FY2025 annual-report useful-life notes were read and verified on the original pages, not the entire 139-page annual report. The actual 20-page New Mexico court judgment was read through OCR and selected original pixels. Secondary appeal commentary remains secondary. The source addendum preserves exact originals, hashes, dates and scope.

Unknowns remain explicit: current exact CIP, future asset mix and useful lives, activation dates, future lease additions, exact annual coupon capitalization, current detailed debt maturity schedule, paid Muse conversion and take, legal recognition/payment/stay/interest convention and actual new financing terms. Numerical probabilities and the paid operating model are ASTRA analysis. No inaccessible exhibit is used to invent revenue or a missing transcript.

The full JSON retains exact probabilities, full-precision calculations, all 18 quarterly outcomes, 15 valuation chains, three business cash paths and nine joint funding paths. Report, linked spreadsheet and affected master are validated separately before publication. Microsoft Office is unavailable; native Excel and unsupported unrelated legacy behavior remain unverified. Recoverable prior artifacts and source originals remain preserved under the historical original filename.
