Macronix | 2337.TW

Full investment review | November 4, 2026 | Framework 8.0

The current Q4 2027 operating-profit ceiling is TWD 213.05 per share. It prices Q4 2027 through Q3 2028 at the retained 6.75 times multiple and 2,019.785 million economic diluted shares.

Q3 earnings show strong specialty-memory pricing and cash generation. The revised forecast removes inventory recovery, charges profit-linked compensation, phases capital investment into usable capacity and preserves a normalization scenario.

The analytical score remains 45/60, or 75/100. The protected Excel Base remains 75. Financial amounts are TWD millions and share counts are millions unless stated otherwise. Historical forecasts retain their published information vintage.

Source: selected Macronix model. Conditional branches are valued before probability weighting.

1. Investment thesis

Macronix manufactures specialty nonvolatile memory. Its NOR, NAND/eMMC, ROM and foundry businesses serve different applications and have separate volume, price and cost assumptions. Qualification, reliability and stable supply can support customer retention and pricing when available capacity is scarce.

Data-center control memory and communications applications support demand for high-density devices. The financial case depends on realized prices, usable equipment, customer acceptance and continuing cost discipline. Competitor capacity and customer substitution limit the duration of extraordinary margins.

The current model uses three complete operating and cash outcomes. Each outcome carries its own price, output, equipment timing, compensation, tax and cash path. Probability weights apply once to those complete outcomes.

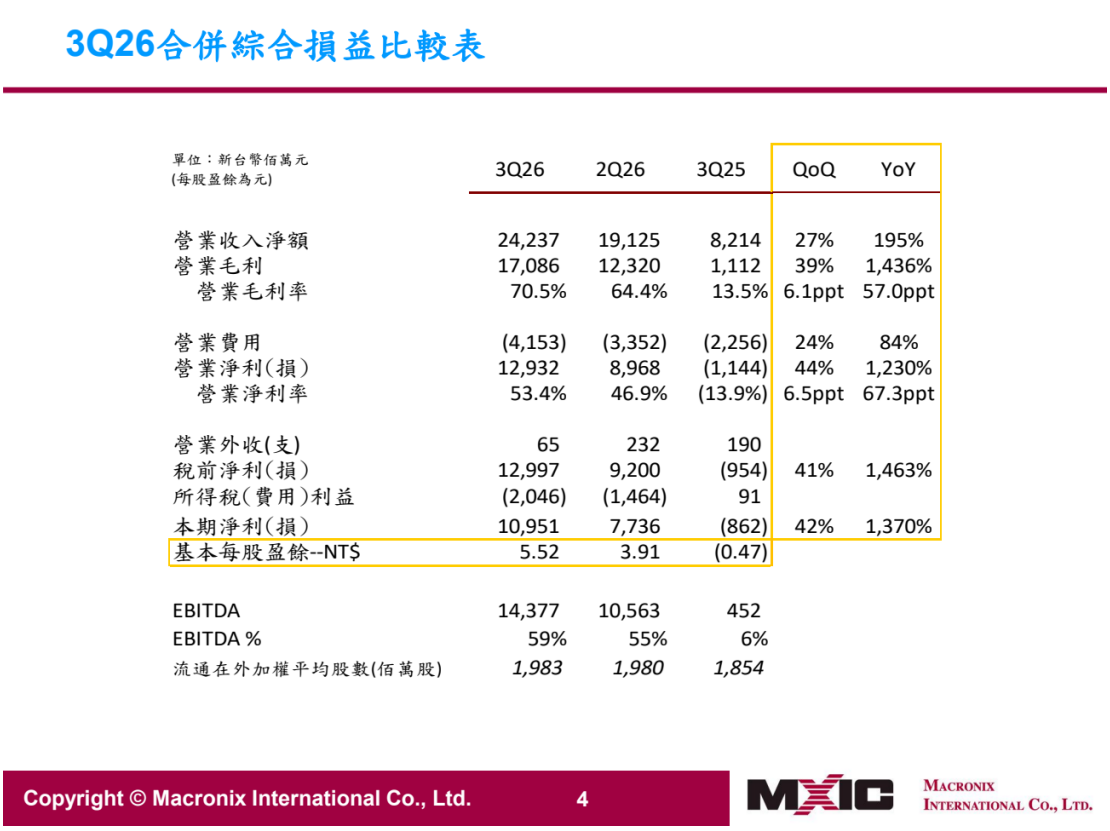

2. Current quarter: reported earnings

For the quarter ended September 30, 2026, revenue was 24,237.272, gross profit 17,085.612 and operating profit 12,932.421. Reported gross margin was 70.5% and operating margin 53.4%. [S1, S2]

Inventory recovery of 752.233 is identified in the full financial notes. Removing this credit gives normalized gross profit 16,333.379 and normalized operating profit 12,180.188. Reported and normalized numbers remain separately visible.

Reported parent net income was 10,944.709. The consolidated net-income figure was 10,950.880, with 6.171 attributable to noncontrolling interests.

Metric	Reported Q3	Excluding inventory recovery
Revenue	24,237.3	24,237.3
Gross profit	17,085.6	16,333.4
Operating expenses	4,153.2	4,153.2
Operating profit	12,932.4	12,180.2

Issuer Q3 2026 presentation, PDF page 3. Original Mandarin exhibit; amounts and indices retain the source scope.

3. Management commentary and source completeness

The October 27 issuer presentation describes strong high-density NOR demand from data centers and severe SLC NAND/eMMC supply constraints. NOR revenue rose 21% sequentially and NAND 39%; their quantity indices and application mixes provide checks on price-led growth. [S2]

The latest two complete Mandarin presentation decks and relevant full Q3/Q2 accounting notes were read. The issuer Q3 webcast requires personal registration. Complete original audio and verbatim Q&A were unavailable during this review. The Q2 replay was not audio-audited. Secondary AI transcripts and a public question summary served as low-confidence leads.

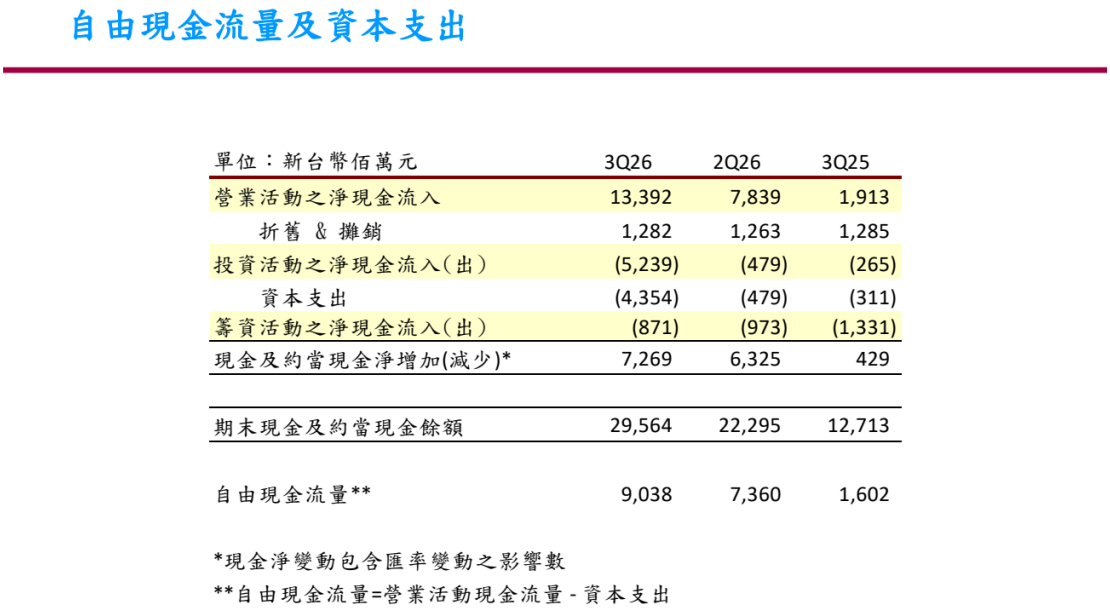

The forward quarterly product path is an analyst forecast. The reviewed issuer deck does not supply the selected quarterly revenues or product gross margins. The model preserves these distinctions throughout.

4. Actual cash and capital spending

Q3 operating cash flow was 13,391.722. Economic capital spending was 4,353.636, leaving free cash flow 9,038.086. That capital figure includes cash paid for equipment, equipment prepayments and software. [S1, S2]

The cash-flow statement alone labels cash purchases of property and equipment differently from the presentation's economic capital-spending measure. The reconciliation below preserves both definitions and prevents an equipment prepayment from being capitalized twice.

Q3 cash measure	TWD million
Cash property/equipment	1,963.6
Equipment prepayments	2,359.3
Software	30.7
Economic capital spending	4,353.6
Operating cash flow	13,391.7
FCF after economic capex	9,038.1

Issuer Q3 presentation, PDF page 11. The full notes reconcile the presentation's capital-spending scope.

5. Analytical score

Each category is reviewed against current company evidence. The total is 45/60, equivalent to 75/100. Protected Excel Base 75 remains the portfolio input. Stronger financial forecasts do not automatically change the analytical score.

Category	Points	Maximum
Core thesis	16	20
Cycle stage	9	10
TAM expansion	8	10
Catalysts	5	5
Macro	8	10
Alpha	3	5
Risks	-4	0
Total	45	60

5. Thesis and cycle

Core thesis: Qualified high-density NOR and specialty NAND/eMMC support retention through reliability, controller compatibility and customer qualification. Q3 NAND revenue rose 39% sequentially and NOR 21%; the issuer identifies severe SLC/eMMC supply scarcity. These advantages support a specialty-memory bottleneck. Competing memory makers and replacement architectures leave customer alternatives, so the monopoly and sole-source tests remain incomplete.

Review next: Qualification losses or sustained share loss, Scarcity relief and peer capacity additions.

Cycle stage: The reported Q3 revenue 24,237.272 M and operating profit 12,932.421 M extend the recovery. Removing 752.233 M inventory recovery leaves operating profit 12,180.188 M. NOR density shipments eased while realized revenue rose; the current cycle therefore depends materially on price and mix. The joint model retains a 25% normalization/delayed-capacity branch and avoids treating 70.5% reported gross margin as a permanent floor.

Review next: NOR/NAND realized prices and bit growth, Recovery-adjusted margin and inventories.

5. Market opportunity and catalysts

TAM expansion: Data-center high-density NOR, communications NAND, automotive eMMC and industrial/medical/aerospace applications expand content per system. The issuer places NOR computer-related applications at 47% of its Q3 NOR mix and NAND communications at 52%. Density indices and application shares describe demand exposure; they do not establish sole-source awards or justify assigning the entire AI-memory market. The model keeps NOR, NAND, ROM and foundry revenue distinct and limits incremental output through installed/project capacity.

Review next: High-density shipments and application mix, Qualified 3D NAND/eMMC migration.

Catalysts: The next 6-18 months contain identifiable operating tests: Q4 price realization, 2027 equipment deliveries and commissioning, NAND/eMMC qualification and customer adoption. Q3 economic capital expenditure 4,353.636 M and equipment prepayments 2,359.254 M establish money committed to the expansion; the forecast explicitly phases deployment and includes a two-quarter delay stress. Full points reflect the dated, measurable sequence. The source gaps on exact tools and individual customer acceptance remain in the execution deduction.

Review next: Quarterly capex, prepaid-tool conversion and installed assets, 2027 qualification and output milestones.

5. Structural setting, information and risk

Macro: Supply reallocation toward advanced memory, limited specialty capacity and higher control-memory content support the industry backdrop. The issuer reports scarce SLC/eMMC supply and data-center demand affecting supply available to other applications. Specialty prices remain sensitive to customer inventories, affordability, new supplier output and the broader cycle. These constraints support two points below the maximum.

Review next: Specialty capacity and inventory normalization, End-customer capital spending and price elasticity.

Alpha: Mandarin issuer statements and full accounting notes resolve a material 752.233 M inventory-recovery amount,4,353.636 M Q3 economic capex, profit-linked employee/director compensation and the converted-note/diluted-share bridge. These improve the current analytical reconstruction. Public earnings materials are broadly accessible, and complete issuer audio/Q&A remains unavailable in the preserved source packet, limiting the information advantage.

Review next: Complete original management Q&A when available, Divergence between public price/mix indicators and consensus assumptions.

Risks: Four explicit one-point risk classes are deducted. Competition/cycle covers price normalization and substitution; execution covers tool installation, yield, qualification and commissioning; customer concentration covers application/customer dependence and lost design slots; balance-sheet/capital covers the large expansion commitment, working-capital absorption and potential future financing/dilution. Governance receives no additional deduction on the reviewed evidence. The price risk and execution risk are represented together in one 25% adverse joint branch, preventing duplicate outcome probability.

Review next: Quarterly cash, debt and commitments, Customer qualification and supply response.

6. Probability and overlap

Reference execution carries 55%, extended tightness 20%, and normalization with a two-quarter commissioning delay 25%. These are joint company outcomes. They encompass pricing, volume, product mix and factory execution together.

Current demand references include data centers, communications, automotive and industrial/medical/aerospace uses. They inform the product paths and do not create additional revenue layers. The same capacity budget constrains all NAND outcomes.

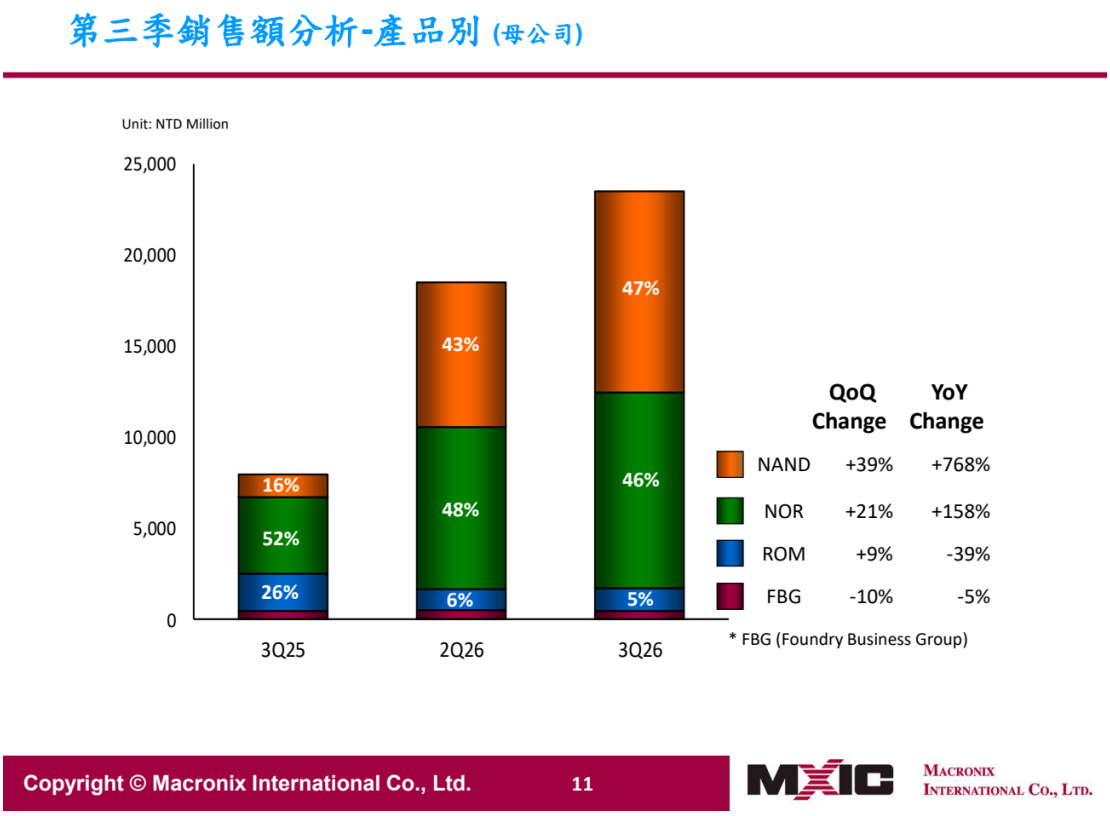

The 20% extended-tightness case assumes stronger and longer price realization. The 25% adverse case combines weaker pricing, slower output and later qualification. No second probability haircut is applied to the weighted target.

Outcome	Probability	Active ceiling TWD
reference	55%	215.22
extended tightness	20%	305.94
normalization and delay	25%	133.98

7. Product mix and revenue boundaries

Flash revenue is allocated between NOR and NAND using the issuer parent-company mix as an explicit proxy for consolidated allocation. ROM, foundry and other revenue retain their reported business boundaries.

Exact product-level factory costs, unit selling prices and absolute NAND wafer capacity remain undisclosed. The price and output indices start at the reported Q3 revenue allocation and are modeled independently.

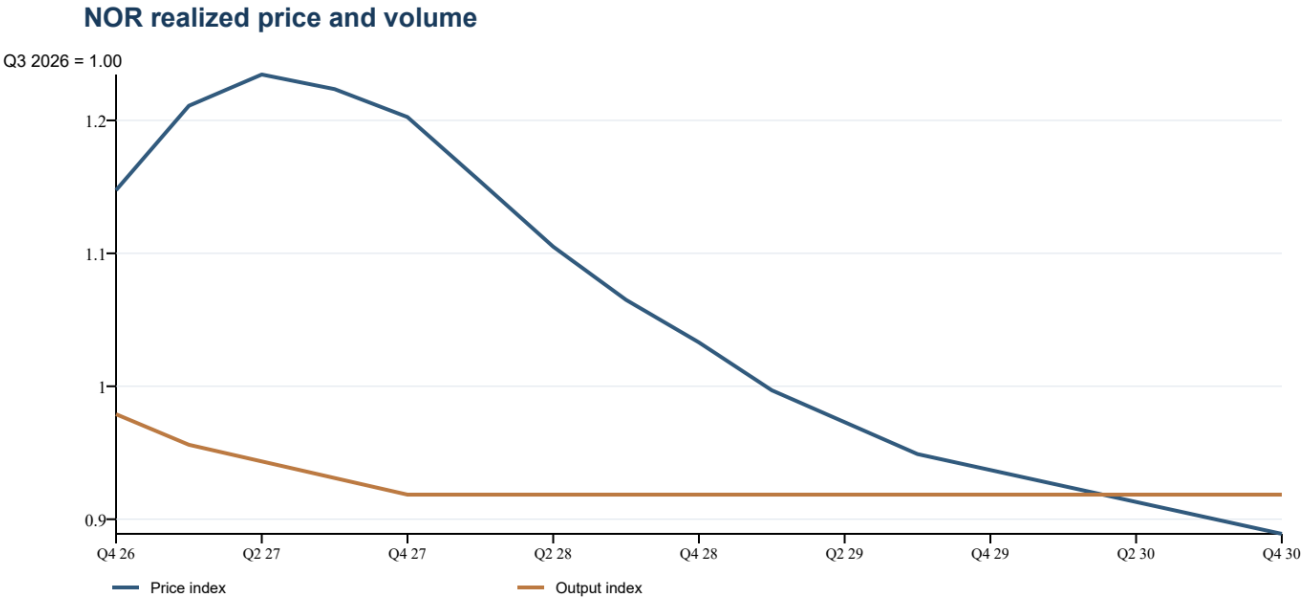

Issuer Q3 presentation, PDF page 12. Parent-company percentages are rounded and require a scope qualification when applied to consolidated revenue.

8. NOR: density and price realization

The NOR model begins at 11,146.226 of Q3 revenue. The reference output index gradually declines from 0.98 in Q4 2026 to 0.93 by Q4 2027. The reference price index rises to 1.25 before easing to 1.23 in Q4 2027, then normalizes.

Q3 high-density and data-center shipment indices moderated even as NOR revenue increased. This favors a price-and-mix explanation for current revenue growth. The model therefore avoids adding another unrestricted quantity premium.

Probability-weighted indices from complete joint outcomes. Q3 2026 equals 1.00.

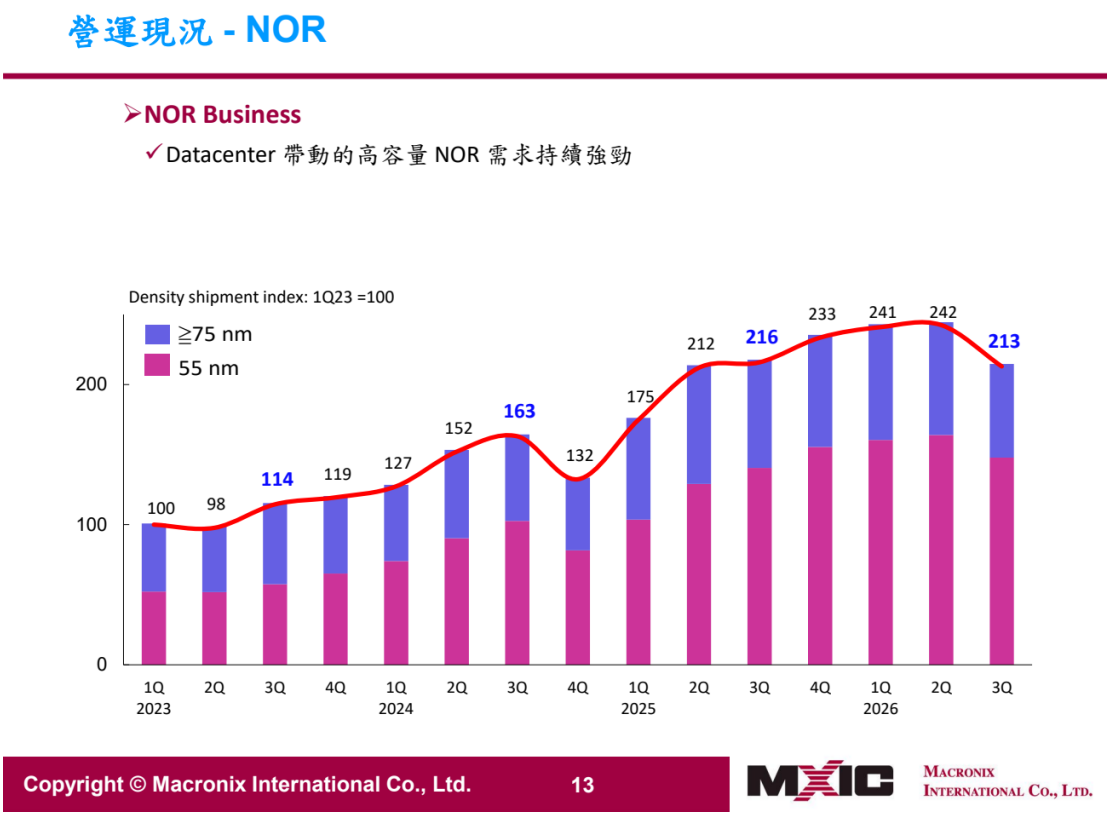

Figure values | 8. NOR: density and price realization

Exact values supporting the preceding model chart. Units: Q3 2026 = 1.00. Display values are rounded to four decimals; the linked model retains full precision.

Quarter	Price index	Output index
Q4 2026	1.1475	0.9790
Q1 2027	1.2110	0.9560
Q2 2027	1.2345	0.9435
Q3 2027	1.2235	0.9310
Q4 2027	1.2025	0.9185
Q1 2028	1.1540	0.9185
Q2 2028	1.1050	0.9185
Q3 2028	1.0650	0.9185
Q4 2028	1.0330	0.9185
Q1 2029	0.9970	0.9185
Q2 2029	0.9730	0.9185
Q3 2029	0.9490	0.9185
Q4 2029	0.9370	0.9185
Q1 2030	0.9250	0.9185
Q2 2030	0.9130	0.9185
Q3 2030	0.9010	0.9185
Q4 2030	0.8890	0.9185

8. NOR density shipments

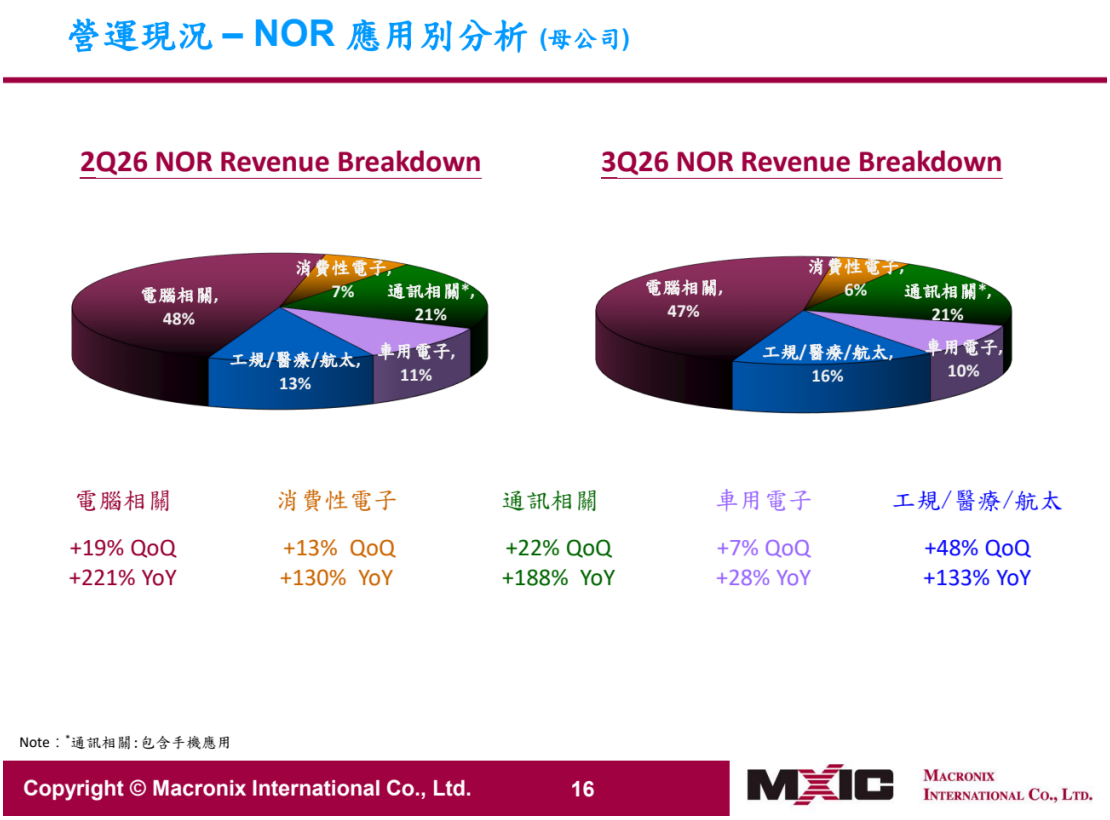

The source density-shipment index measures a product quantity/mix reference. Revenue includes realized price and mix as well. Both measures inform the bounded model.

Issuer Q3 2026 presentation, PDF page 14. Original Mandarin exhibit; amounts and indices retain the source scope.

8. NOR source checks

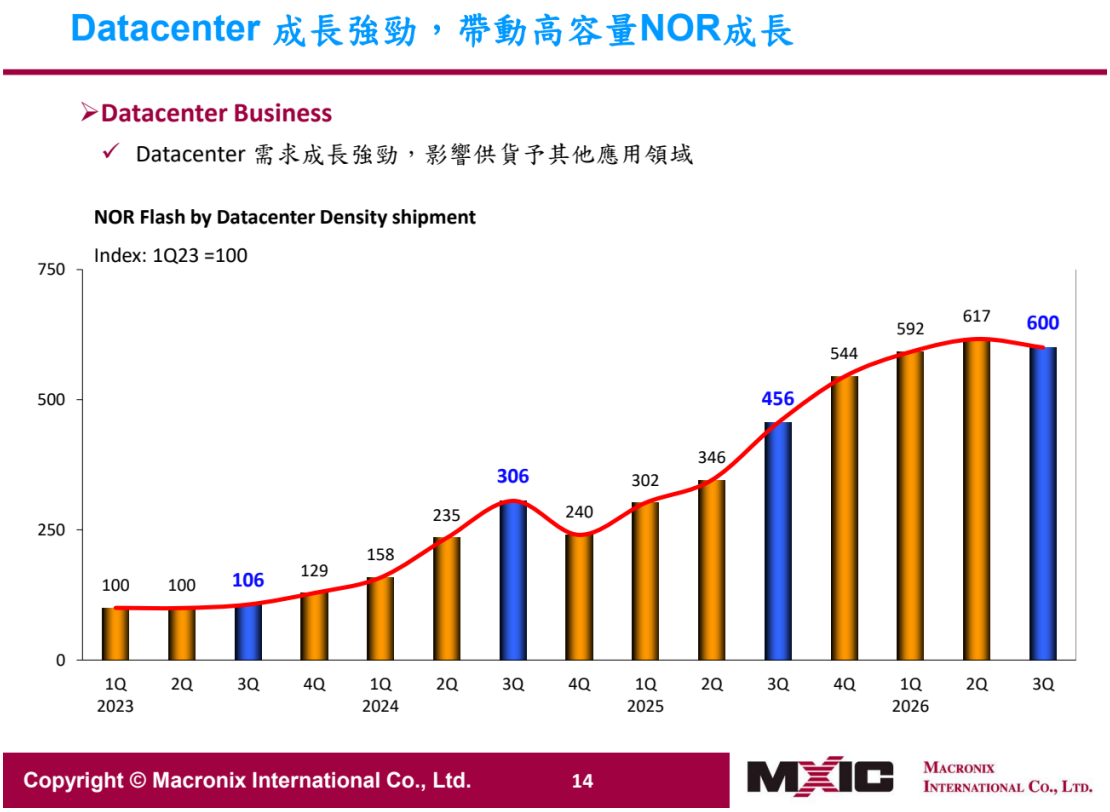

Data-center applications account for 47% of Q3 NOR revenue in the issuer's parent-company presentation. Automotive represents 10%; industrial, medical and aerospace 16%. The analysis keeps these within one NOR revenue pool.

Issuer Q3 presentation, PDF page 17. Application amounts retain their parent-company scope.

8. Data-center NOR demand

The issuer describes strong data-center demand affecting supply to other applications. The model retains this business within the existing NOR revenue line.

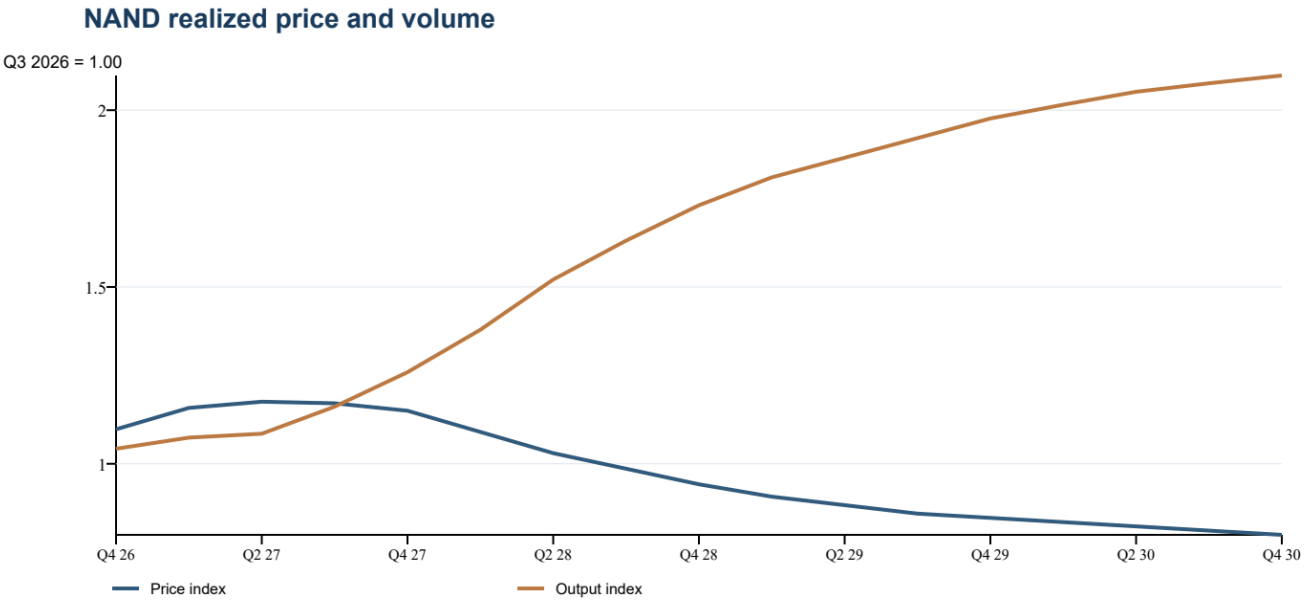

Issuer Q3 2026 presentation, PDF page 15. Original Mandarin exhibit; amounts and indices retain the source scope.

9. NAND and eMMC

The Q3 NAND revenue anchor is 11,388.535. Both specialty demand and price realization contribute to current growth. The reference price index reaches 1.18 in 2027 and subsequently eases. Output increases only as usable equipment and qualification make the capacity available.

NAND and eMMC remain one financial vector to avoid overlapping module and memory sales. New 3D NAND and eMMC capability supports possible growth but does not establish a separate sales contract.

Probability-weighted NAND price and accepted-output indices. Product-level values are analyst estimates.

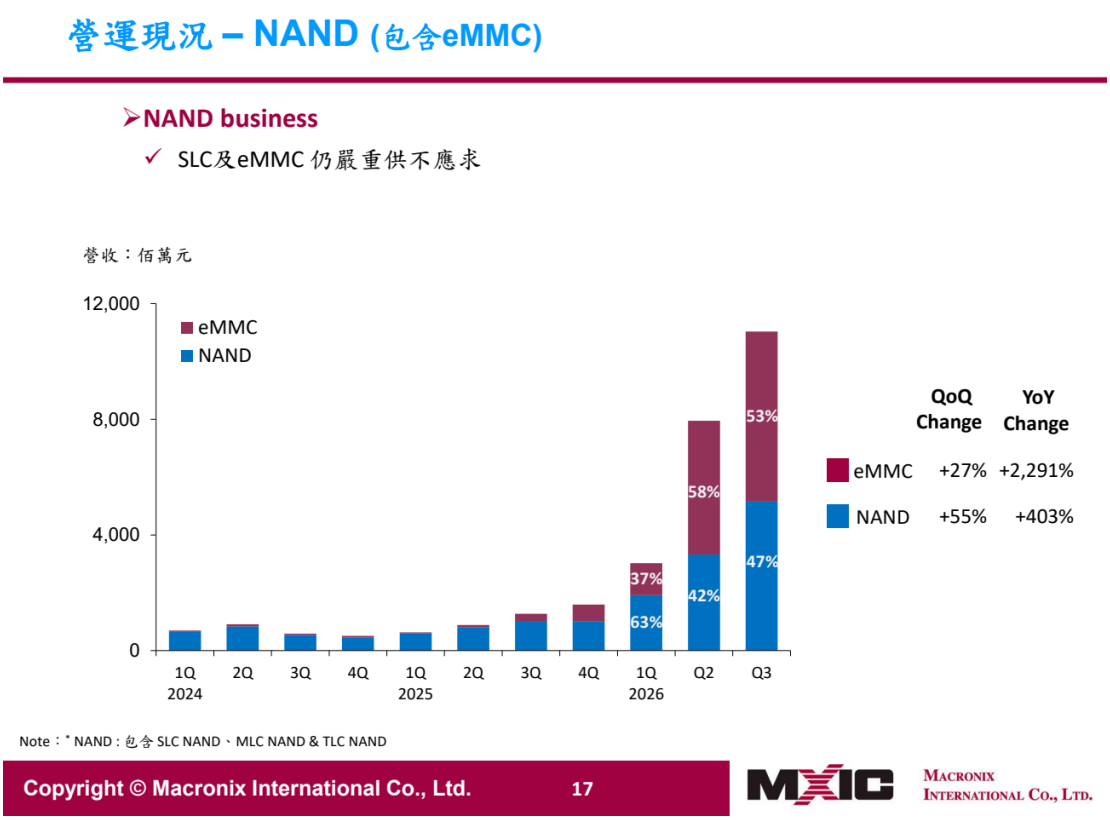

Figure values | 9. NAND and eMMC

Exact values supporting the preceding model chart. Units: Q3 2026 = 1.00. Display values are rounded to four decimals; the linked model retains full precision.

Quarter	Price index	Output index
Q4 2026	1.0975	1.0425
Q1 2027	1.1580	1.0740
Q2 2027	1.1755	1.0850
Q3 2027	1.1710	1.1615

Q2 2030	0.8230	2.0520
Q3 2030	0.8110	2.0760
Q4 2030	0.7990	2.0980

9. NAND source checks

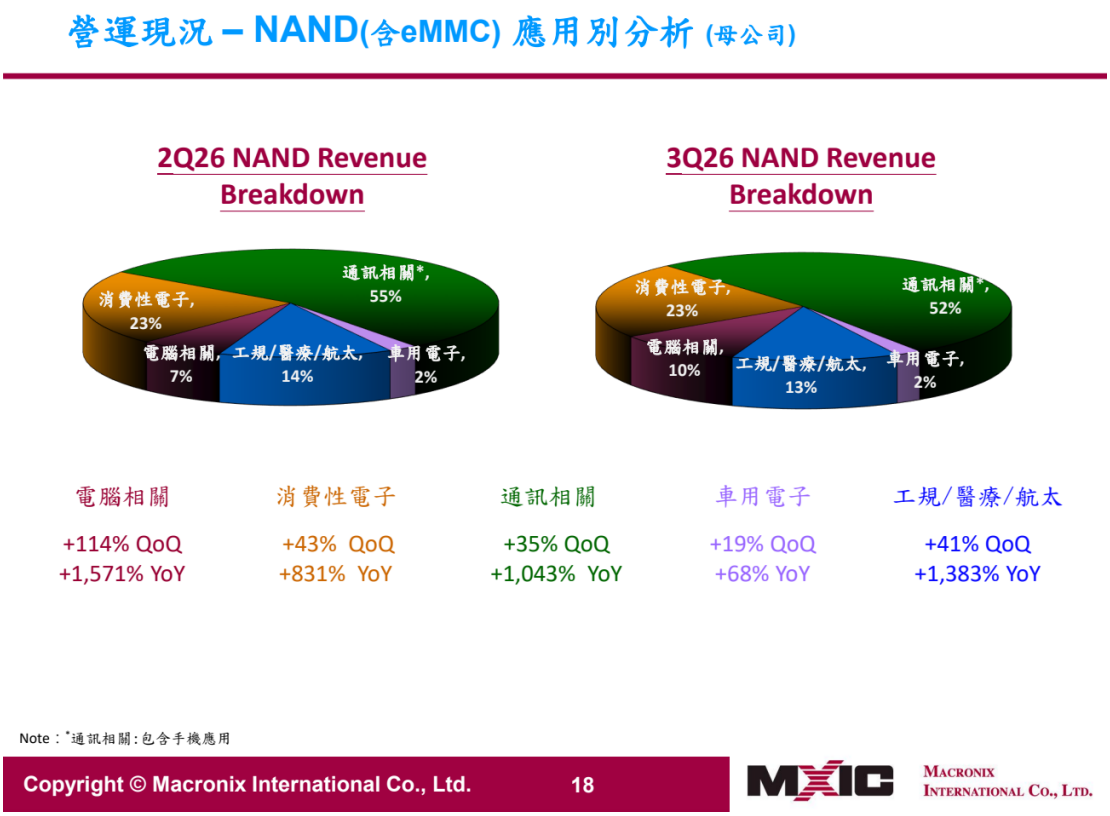

The issuer reports continued severe supply scarcity in SLC and eMMC. Communications account for 52% of Q3 NAND revenue in the parent presentation; computer-related 10%, automotive 2%, and industrial/medical/aerospace 13%.

Issuer Q3 presentation, PDF page 18. The graph shows NAND and eMMC in their reported grouping.

9. NAND application mix

The mix of communications, computing, automotive and industrial demand matters for qualification and capacity allocation. The chart provides parent-company application context.

Issuer Q3 2026 presentation, PDF page 19. Original Mandarin exhibit; amounts and indices retain the source scope.

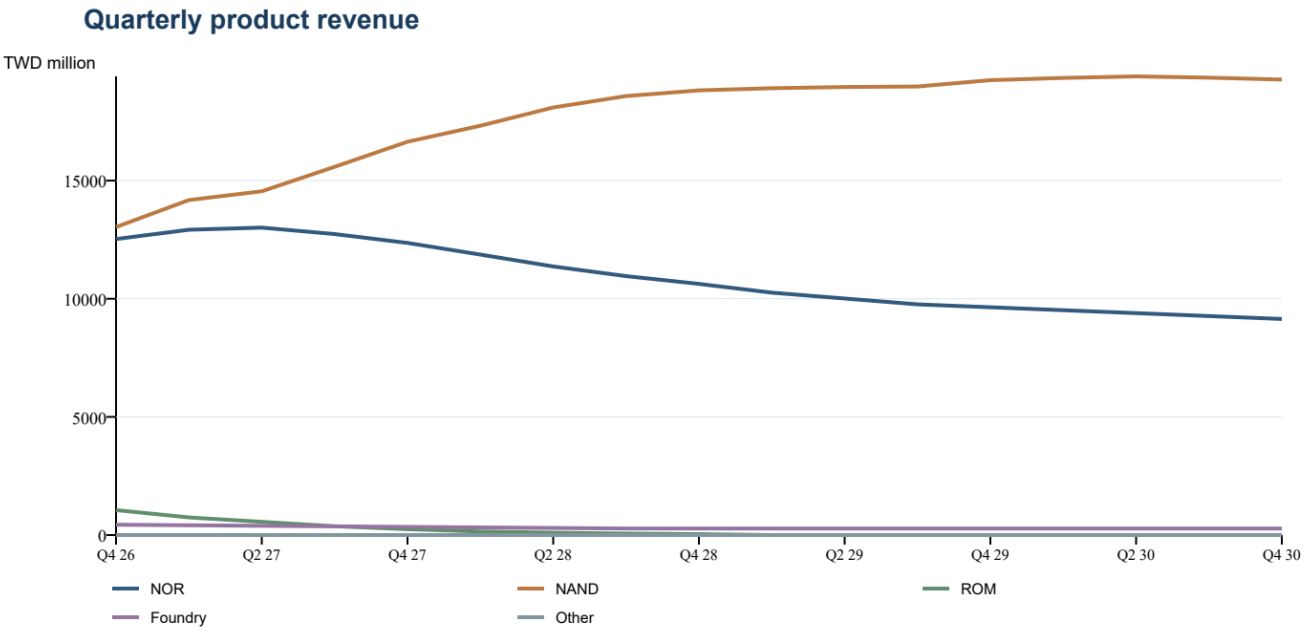

10. ROM, foundry and other

The selected model lets ROM revenue decline to zero from 2029 as legacy cartridge demand contracts. This is an analyst outcome, with no terminal value assigned to unannounced design wins. Foundry revenue also tapers before stabilizing. The very small other category remains explicit.

The operating model retains the cost of installed equipment, fixed support and compensation. Revenue falling to zero does not automatically erase all factory costs.

11. Complete product revenue path

Quarter	NOR	NAND/eMMC	ROM	Foundry	Total
Q4 2026	12,526.7	13,034.2	1,055.9	436.9	27,054.0
Q1 2027	12,920.3	14,176.9	745.3	413.9	28,256.8
Q2 2027	13,009.7	14,546.6	559.0	390.9	28,506.6
Q3 2027	12,737.6	15,583.2	372.7	367.9	29,061.7

12. Cash manufacturing costs

The Q3 normalized product gross-margin allocation uses 68% for NOR,40% for ROM and 22% for foundry. NAND margin is solved to reproduce consolidated normalized gross profit after the other allocations. These product allocations are low-confidence analytical proxies.

Actual depreciation, amortization and profit-linked incentives are first removed from the calibration pools. Future noncash asset costs and incentives are then explicitly added once. The remaining manufacturing pool is 65% variable and 35% fixed. Seventy percent of variable input cost is classified internal and 30% external.

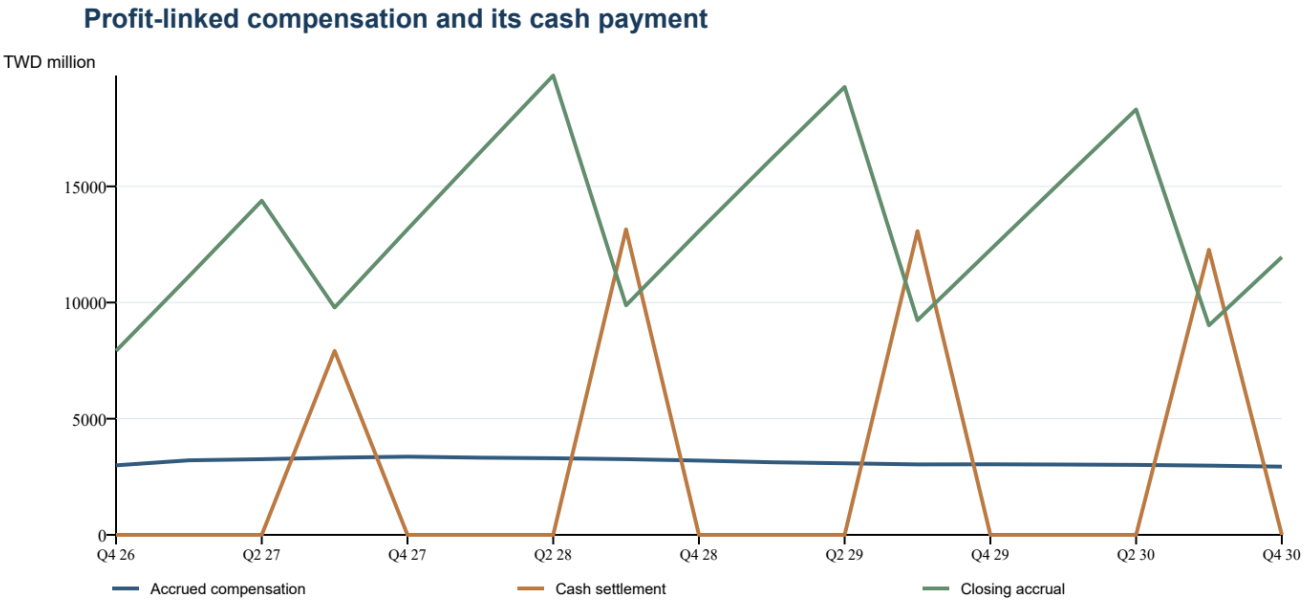

Internal NOR cost per indexed output declines 2% annually; NAND declines 4%. External unit costs rise 2% annually. Existing fixed manufacturing cost grows 3% annually. These are selected model assumptions, with capacity and no-price sensitivities shown later.

13. Profit-linked employee and director costs

Q3 employee incentives were 2,326.070 and director incentives 310.143, for a combined 2,636.213. Those expenses already sit inside reported costs. The source allows employee compensation at 15% and directors at 2% of the applicable positive annual earnings base.

The forward model uses 17% of positive consolidated profit before these incentives as a transparent approximation. The actual statutory calculation uses the parent annual-profit basis and board decisions. The approximation can differ from the eventual expense and settlement.

The model allocates incentives between cost of sales and operating expenses using the reported employee-cost mix. It then settles the accrued amount in cash in the following calendar year's third quarter. Actual awards may use shares; the existing IAS33 share convention remains separately visible.

Expense accrual and cash settlement occur in different quarters. Both are included once.

Figure values | 13. Profit-linked employee and director costs

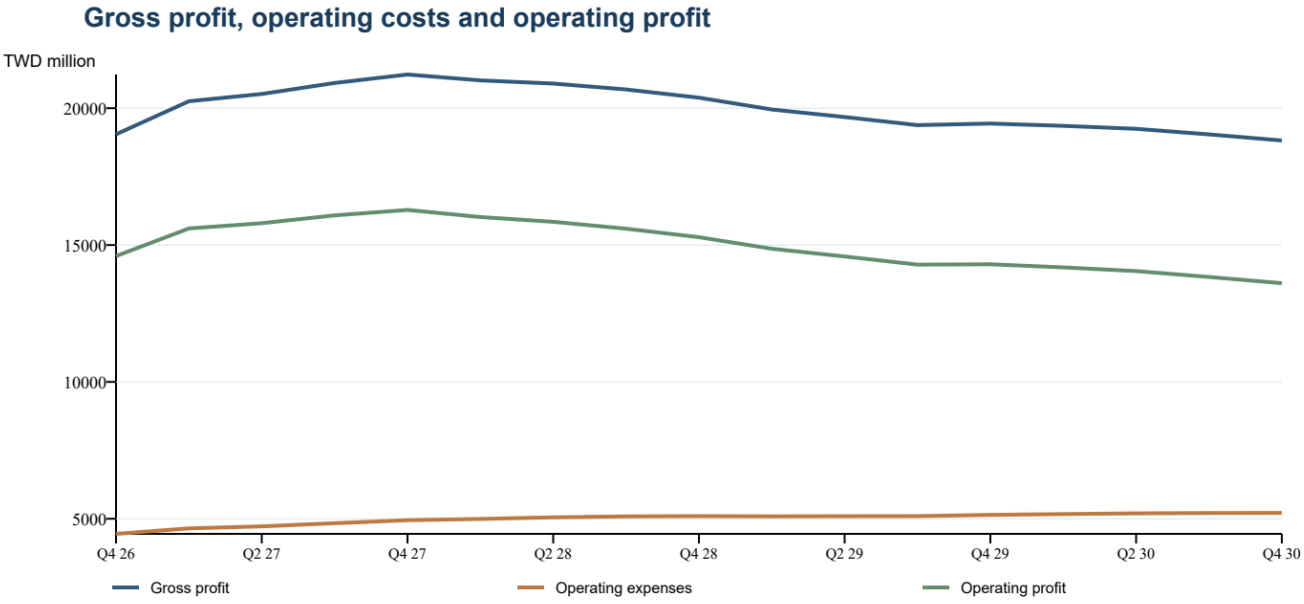

Exact values supporting the preceding model chart. Units: TWD million. Display values are rounded to four decimals; the linked model retains full precision.

Quarter	Accrued compensation	Cash settlement	Closing accrual

14. Operating expenses and commercial support

The nonbonus, non-depreciation operating-expense pool starts at 2,389.813 per quarter. Eighty percent grows 6% annually, and 20% scales with sales. Incremental NAND revenue above the Q3 anchor carries 2% additional commercial support expense.

New usable capital adds quarterly factory cash support equal to 0.25% of ready project capital. These costs cover the selected model’s operations and support burden. Product-specific headcount, maintenance contracts and yields remain unavailable.

Weighted company totals equal weighted financial amounts; displayed company margins use profit divided by revenue.

Figure values | 14. Operating expenses and commercial support

Exact values supporting the preceding model chart. Units: TWD million. Display values are rounded to four decimals; the linked model retains full precision.

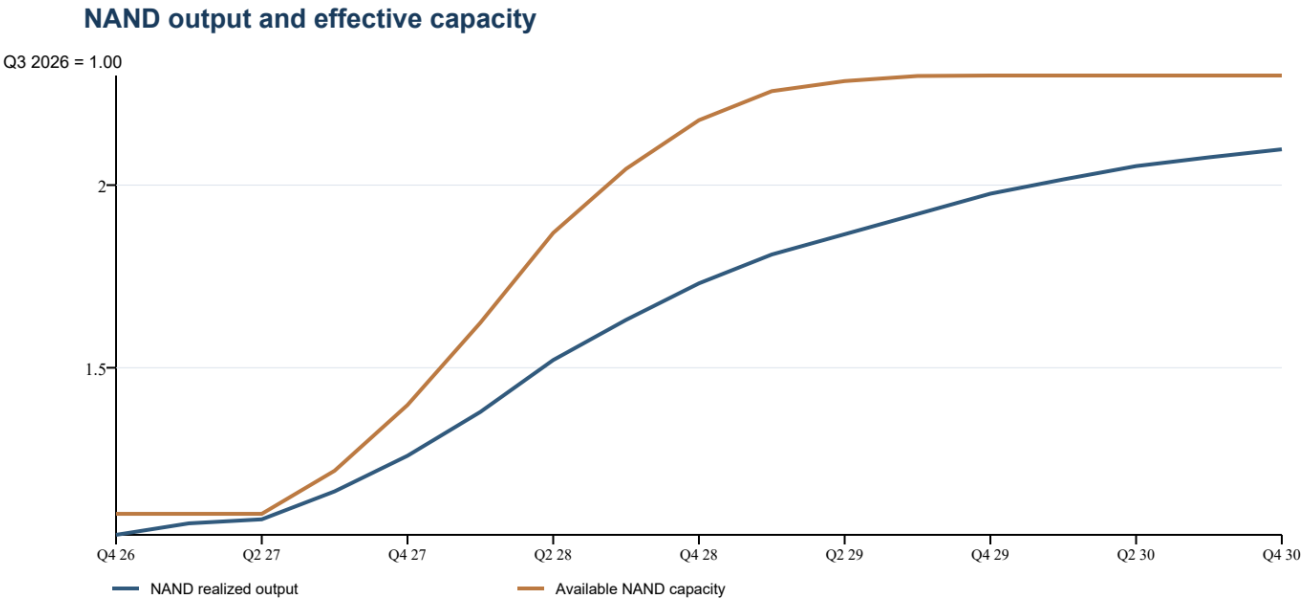

Quarter	Gross profit	Operating expenses	Operating profit

Q3 2030	19,042.4894	5,209.4316	13,833.0578
Q4 2030	18,820.0427	5,214.1214	13,605.9213

15. Capacity, equipment and qualification

The remaining modeled project cash budget is 32,748.845, derived from 37,800 total investment less 5,051.155 already spent. The spending sequence covers Q4 2026 through Q2 2028. It is a staged forecast constrained by the disclosed expansion program.

Opening construction in progress is 7,067.825 and equipment prepayments 2,359.254. Both enter usable capital over four selected commissioning cohorts. New equipment has a two-quarter readiness lag and new factory investment a three-quarter lag; shipments follow usable capacity by one quarter.

NAND output is capped at 1.10 plus 1.20 times the fraction of eligible expansion capital ready for shipment. This effective-bit capacity proxy combines process and density effects. It creates no additional density premium. The normalization case delays commissioning by two quarters.

The complete state-specific output is capped before probability weighting. The average chart summarizes those separate paths.

Figure values | 15. Capacity, equipment and qualification

Exact values supporting the preceding model chart. Units: Q3 2026 = 1.00. Display values are rounded to four decimals; the linked model retains full precision.

Quarter	NAND realized output	Available NAND capacity
Q4 2026	1.0425	1.1000
Q1 2027	1.0740	1.1000
Q2 2027	1.0850	1.1000

Q3 2030	2.0760	2.3000
Q4 2030	2.0980	2.3000

16. Cash investment and existing obligations

Equipment is 90% of future project additions and factory infrastructure 10%. The model pays the opening 1,723.988 equipment payable in Q4 2026 without creating a second asset. Equipment prepayments become assets when delivered without a second cash charge.

After the main program, maintenance investment is 2.5% of revenue, with 3% of maintenance assigned to software. The opening capital budgets and equipment obligations are kept separate from ordinary trade working capital.

Quarter	Project cash	Maintenance cash	Total capex	Prepaid delivery
Q4 2026	5,000.0	0.0	5,000.0	0.0
Q1 2027	6,000.0	0.0	6,000.0	0.0

Q2 2030	0.0	727.0	727.0	0.0
Q3 2030	0.0	722.5	722.5	0.0
Q4 2030	0.0	717.4	717.4	0.0

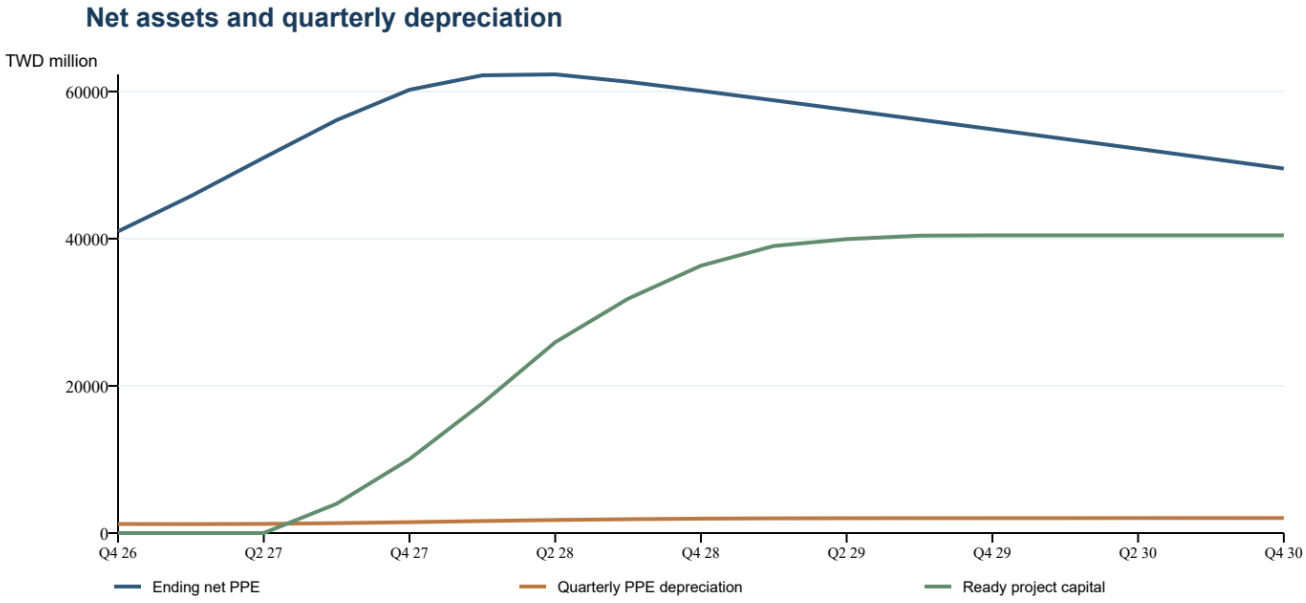

17. Finite depreciation and asset rollforward

Opening PPE is 38,928.449, including land 903.164 and construction in progress 7,067.825. Opening depreciable net assets are 30,957.460. Legacy quarterly depreciation starts at 1,238.426 and declines with the selected 4% annual retirement profile, subject to the finite remaining asset balance.

New equipment depreciates over 11 years and factory assets over 35 years. First and last quarters use half-quarter depreciation. The model allocates 83.105% of depreciation to cost of sales, with the remaining portion in operating expenses.

Opening software is 63.189 with 7.721 quarterly amortization capped by the remaining balance. New software uses a 12-quarter life. Capitalized interest is included in the affected asset and subsequently depreciated.

Quarter	PPE depreciation	ROU depreciation	Software amort.	Ending PPE
Q4 2026	1,225.9	35.7	7.7	40,992.8
Q1 2027	1,213.4	35.7	7.7	45,792.3
Q2 2027	1,245.0	35.7	7.7	51,001.2
Q3 2027	1,342.5	35.7	7.7	56,111.3
Q4 2027	1,477.3	35.7	7.7	60,232.9
Q1 2028	1,634.7	35.7	7.7	62,196.2
Q2 2028	1,773.4	35.7	7.7	62,326.4
Q3 2028	1,878.1	35.7	8.7	61,320.2
Q4 2028	1,956.0	35.7	4.2	60,085.8
Q1 2029	1,996.0	35.7	4.6	58,803.8
Q2 2029	2,013.1	35.7	6.5	57,500.0
Q3 2029	2,021.7	35.7	8.3	56,182.1
Q4 2029	2,025.7	35.7	10.1	54,863.7
Q1 2030	2,029.6	35.7	11.9	53,540.6
Q2 2030	2,033.7	35.7	13.8	52,212.1
Q3 2030	2,037.8	35.7	15.6	50,875.2
Q4 2030	2,041.9	35.7	17.4	49,529.2

Finite asset costs drive product costs and operating profit. Cash investment and noncash depreciation have separate timing.

Figure values | 17. Finite depreciation and asset rollforward

Q4 2030	28,695.7	18,820.0	5,214.1	13,605.9	47.4%

19. Shares and capital structure

The source Q3 IAS33 diluted weighted-average count is 2,019.785 million. It consists of 1,982.906 basic weighted-average shares,1.398 weighted convertible-share effect and 35.481 hypothetical employee-share effect. The source's second-quarter diluted count was 1,996.986 million.

All outstanding convertible notes had converted by September 16. The model therefore reanchors the existing IAS33 convention once and adds no future conversion shares from those same notes. Current and future shares remain 2,019.785 through 2028; the existing 1% annual net growth applies from 2029.

The end-period bridge is 1,981.8566 registered issued shares plus 4.4043 pending registration less 1.957 treasury shares, or 1,984.3039 million outstanding. Adding the 35.481 IAS33 employee effect closely reproduces the selected 2,019.785 million. The actual future award form may differ.

Share measure	Millions
Q3 basic weighted average	1,982.906
Weighted convertible effect	1.398
Hypothetical employee effect	35.481
Selected IAS33 denominator	2,019.785
Prior Q3 historical forecast denominator	1,996.986
Forecast denominator 2029	2,039.98285
Forecast denominator 2030	2,060.3826785

20. Tax and recurring net income

Forward book and cash taxes use 20% of positive selected taxable profit, with no assumed future NOL benefit. Taxes are computed within each state before weighting. Newly accrued cash taxes settle one quarter later, and the opening 2,871.267 payable settles in Q2 2027.

Quarterly net income includes recurring modeled bank and lease interest and interest income. No inventory-recovery credit is included in future gross profit. The cash-interest rate is 1.5%; original bank debt costs 2.25% and new credit 2.45%.

The operating-profit valuation is unaffected directly by cash taxes or financing income. Financing can still alter profit-linked incentive expense, and future asset costs affect operating profit. These channels are visible in the sensitivities.

Quarter	Pretax	Book tax	Net income	Cash tax paid	Tax payable
Q4 2026	14,608.2	2,921.6	11,686.6	0.0	2,921.6

Q4 2030	14,336.1	2,867.2	11,468.9	2,909.8	2,867.2

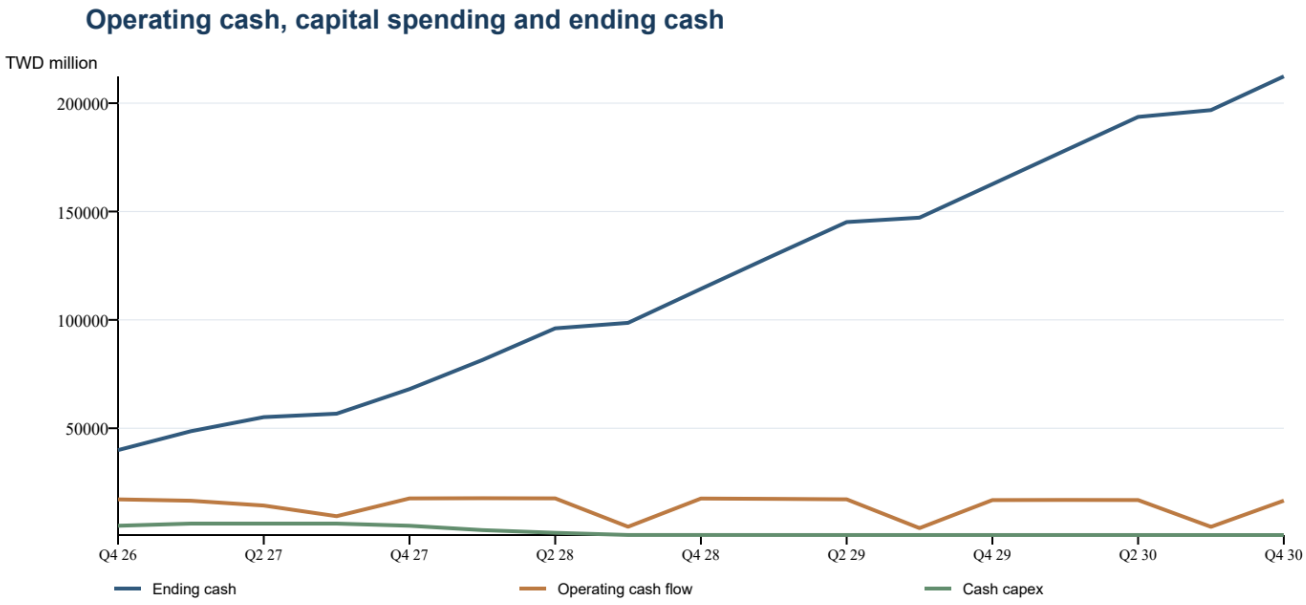

21. Working capital and cash generation

Opening trade receivables total 14,184.166 including related parties. Inventory is 11,537.302 and trade payables 4,814.208. The model scales receivables with revenue and inventory/payables with normalized product cost. Operating prepayments, other accruals and contract/refund liabilities retain their source ratios.

Compensation and tax accruals are modeled separately from ordinary working capital. Their cash settlement changes CFO in the actual payment quarter. This preserves the difference between current profit and cash receipts.

Cash flow adds back finite depreciation and amortization, then deducts cash taxes, changes in ordinary working capital, cash incentive settlement and lease principal. Free cash flow deducts project and maintenance cash capex.

Quarter	CFO	Cash capex	FCF	Working-capital use	Ending cash
Q4 2026	17,175.9	5,000.0	12,175.9	1,679.4	39,911.1

Q2 2030	193,654.9909	16,857.6332	726.9626
Q3 2030	196,793.0393	4,507.9190	722.5072
Q4 2030	212,357.5982	16,582.8674	717.3913

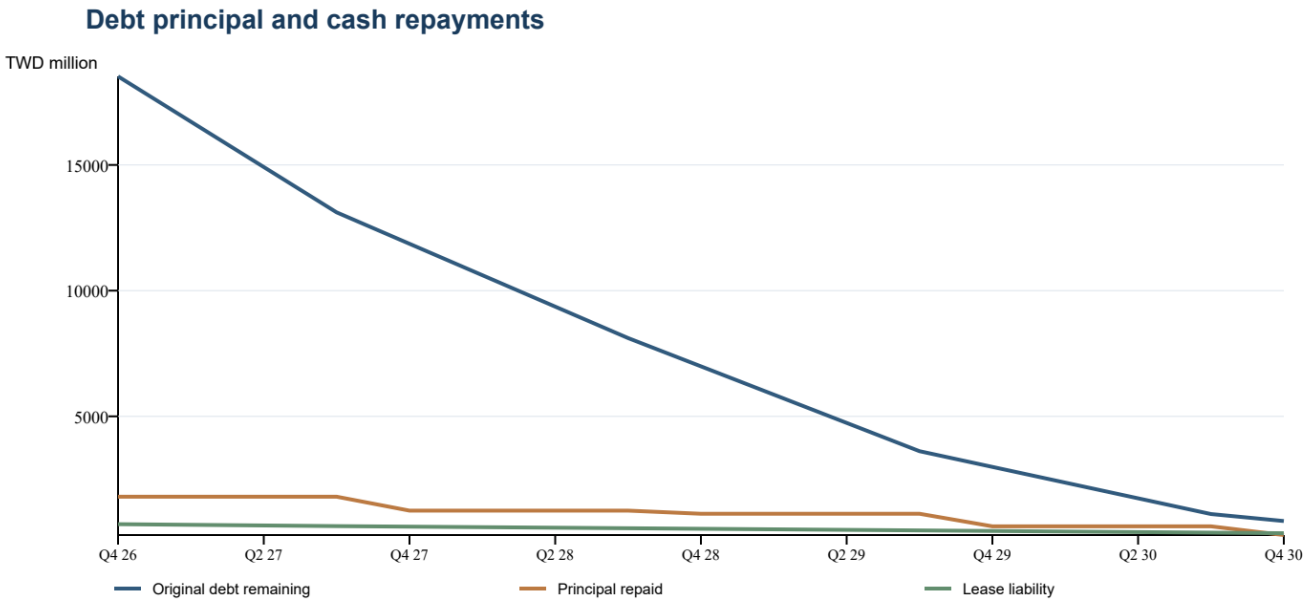

22. Debt, leases and liquidity

Opening bank principal is 20,325.745. Scheduled repayments reduce it over the forecast. The annual maturity buckets are spread across quarters as a selected timing proxy. Opening lease liability 735.962 has its own interest and principal schedule.

The 22,000 credit facility is reduced by 3,168.940 of existing letters of credit, leaving 18,831.060 modeled availability. New credit is drawn only to restore the 5,000 cash floor. The selected base states and zero-new-credit sensitivity require no draw.

Opening cash is 29,563.540. The minimum forecast quarter-end cash across the selected states is 39,477.211. This minimum excludes the earlier opening balance. No base funding gap is recorded.

Quarter	Original debt	Debt repaid	Lease principal	New credit	Funding gap
Q4 2026	18,522.7	1,803.0	25.4	0.0	0.0
Q1 2027	16,719.7	1,803.0	25.6	0.0	0.0
Q2 2027	14,916.7	1,803.0	25.7	0.0	0.0

23. Shareholder returns

The selected future dividend and repurchase assumptions are zero because the reviewed source packet establishes no approved future payout. The company retains cash for investment and obligations.

A separate 25%-of-positive-annual-net-income cash dividend sensitivity tests financial flexibility. It does not change the base payout assumption. The cash model assumes incentives settle in cash while the valuation denominator preserves the sanctioned diluted-share proxy.

24. Valuation method and historical continuity

The retained owner schedule applies 4.5 times forward operating profit in Q4 2026, 5.25 in Q1 2027, 6.0 in Q2 2027 and 6.75 from Q3 2027 onward. The October owner multiple reduction is already included and is applied once.

Each ceiling uses current-plus-next-three-quarter recurring operating profit divided by the target quarter's selected diluted shares. No net-cash addition, enterprise-value bridge or EPS handoff is introduced.

Q3 2026 and earlier forecasts keep their original published quantities and conventions. The Q3 2026 historical ceiling remains 156.0767476587 with its 1,996.986 million denominator and original rolling window. Current reported Q3 earnings appear only in the separate actuals section.

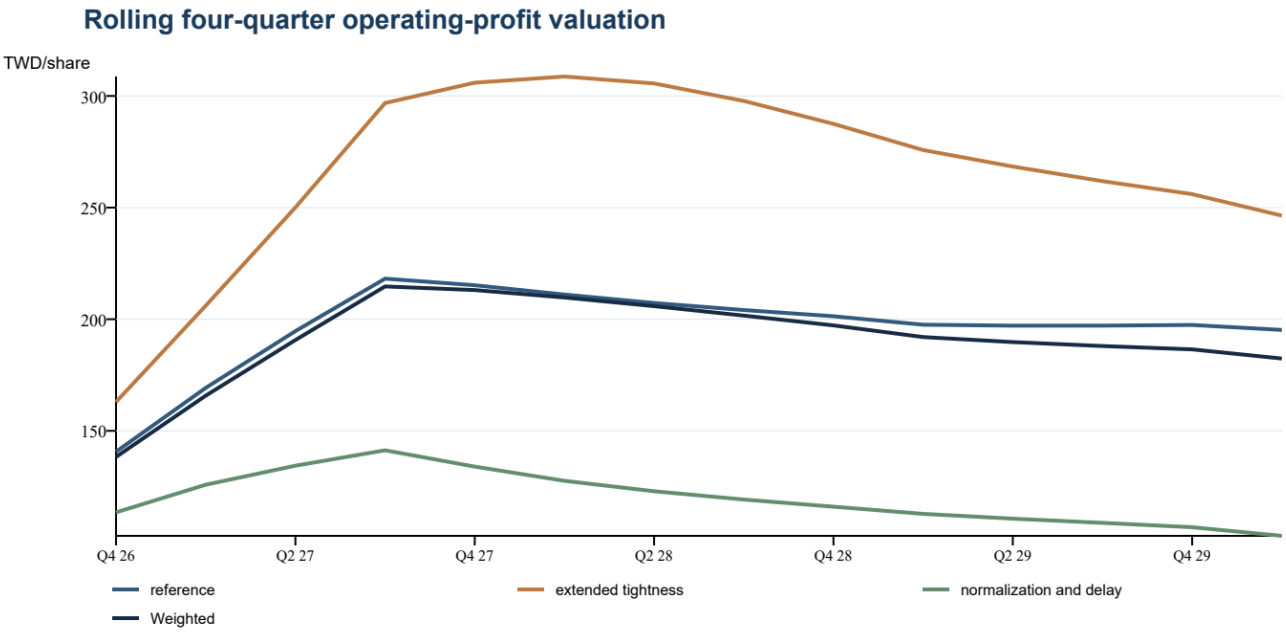

Ceiling quarter	Exact window	F4 OP	Multiple	Shares M	Ceiling TWD
Q4 2026	Q4 2026 to Q3 2027	62,083.8	4.50	2,019.785	138.32
Q1 2027	Q1 2027 to Q4 2027	63,769.9	5.25	2,019.785	165.76
Q2 2027	Q2 2027 to Q1 2028	64,187.6	6.00	2,019.785	190.68
Q3 2027	Q3 2027 to Q2 2028	64,238.4	6.75	2,019.785	214.68

25. Active ceiling

The Q4 2027 through Q3 2028 operating-profit window totals 63,751.807. Multiplying by 6.75 and dividing by 2,019.785 million shares gives TWD 213.054703 per share.

The current calculation combines the selected product-price and volume paths, normalized accounting, cash-linked incentives, finite depreciation and the current IAS33 denominator.

Conditional outcome	Probability	F4 OP	Ceiling TWD
reference	55%	64,399.7	215.22
extended tightness	20%	91,546.8	305.94
normalization and delay	25%	40,090.4	133.98
Weighted	100%	63,751.8	213.05

The selected current ceiling uses 6.75 times operating profit. The conditional paths preserve their own complete cash and operating outcomes.

Figure values | 25. Active ceiling

Q4 2029	197.4255	256.0232	106.8310	186.4964
Q1 2030	195.2055	246.3972	102.9688	182.3847

26. Calendar-year trajectory

Annual totals below sum the available calendar quarters. The 2026 row includes Q4 only. Quarterly exit annualizations have a different time basis and are kept out of these totals.

Year	Revenue	Gross profit	Operating profit	Net income	FCF
2026 Q4 only	27,054.0	19,045.4	14,597.0	11,686.6	12,175.9
2027	115,424.9	82,924.0	63,769.9	51,368.9	34,897.1
2028	119,155.7	82,982.7	62,755.6	51,069.2	51,205.4
2029	116,877.4	78,448.7	58,029.0	47,936.1	52,429.8
2030	115,810.8	76,463.0	55,671.4	46,690.7	51,960.8

27. Sensitivities and financial limits

Removing forecast price increases lowers the active ceiling to 178.54. Holding capacity at the existing level lowers it to 172.62. These tests show the contribution required from the selected price and manufacturing paths.

A two-quarter additional commissioning delay gives 200.89; 20% more project cash capex gives 212.11; raising the incentive rate to 20% gives 205.25. Zero new credit leaves the selected outcome unchanged.

The cash-tax and dividend sensitivities can modestly increase the OP-based ceiling because reduced interest income lowers the modeled profit-linked incentive charge. Their lower cash balances remain visible. This mechanical interaction does not turn taxes or dividends into operating revenue.

Sensitivity	Active ceiling	Minimum forecast cash	Max gap
No price increase	178.54	38,903.0	0.0
No new credit	213.05	39,477.2	0.0
Commissioning +2 quarters	200.89	39,477.2	0.0
Project capex +20%	212.11	38,477.2	0.0
Incentive rate 20%	205.25	39,307.2	0.0
No new capacity	172.62	39,477.2	0.0
Cash tax 25%	213.08	39,477.2	0.0
Cash dividend 25%	213.08	39,477.2	0.0

28. Conditional path: reference

55%: price strength and visible investment support a staged NAND expansion; no new NOR capacity and price normalization from 2028.

Probability 55%. The table reports the complete unweighted company outcome.

Quarter	Revenue	OP	FCF	End cash	Ceiling
Q4 2026	27,208.7	14,710.0	12,205.9	39,941.0	140.64

29. Risks and falsification

Competition and cycle: new supply, weaker customer restocking or price resistance can shorten the favorable pricing period. The selected price normalization path and no-price sensitivity quantify this risk.

Execution: commissioning, qualified yields and equipment delivery determine usable capacity. Increased installed equipment can add depreciation before it generates accepted output.

Customer and application concentration: a lost platform or major customer qualification can affect several quarters. The model does not assume every announced application becomes an incremental contract.

Balance sheet and capital: large investment commitments, tax/incentive settlements and working-capital changes can absorb cash. The full cash model and zero-credit test track the risk.

Governance and source completeness: board compensation and payout decisions may differ from the selected approximation. Complete original management Q&A remains unavailable; future evidence can revise these assumptions.

30. Monitoring milestones

Compare monthly revenue with both realized price and output indicators. Track NOR density shipments, NAND/eMMC mix, normalized gross profit and inventory recoveries separately.

Reconcile capital prepayments, equipment payables, commissioning and new depreciation each quarter. Higher reported PPE alone does not establish usable capacity.

Check the actual employee/director provision and subsequent settlement against the 17% modeling proxy. Reconcile future shares to IAS33 notes and completed conversions before revising denominators.

Use the next complete issuer presentation and financial statements to assess the three joint paths. Unexpected cash conversion, customer substitution or a delay in accepted output would warrant a changed forecast.

31. Sources and unresolved details

S1: Macronix Q3 2026 consolidated financial statements, all 53 pages preserved; detailed accounting notes read for inventory, PPE, prepayments, payables, compensation, taxes, leases, debt and shares. S2: October 27 Q3 Mandarin investor presentation, all 20 pages. S3: Q2 2026 financial statements and 19-page Mandarin investor presentation. S4: 2025 annual financial statements.

The original source PDFs and financial website records are retained with content hashes. The issuer’s expired TLS certificate required a bounded certificate-validation exception to download public files. No personal information was submitted.

Complete Q3 original audio and verbatim Q&A were unavailable behind registration. The Q2 replay was not audio-audited. Absolute product capacity, customer allocations and product-specific factory costs remain undisclosed. Secondary transcript leads were cross-checked against primary notes; the inventory recovery amount follows the primary financial note.

No additional selected Macronix DOT packet was identified in this owner batch. The prior artifact’s source lineage remains preserved.
