MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

MediaTek: custom computing, paid capacity and recurring profit

MediaTek combines smartphone and connected-device platforms with a growing custom AI accelerator business. It earns value through chip design, high-speed interfaces, packaging integration and supply-chain execution. Customer architecture, foundry capacity, substrates and qualification determine the volume that becomes recognized revenue.

The selected Q4 2027 ceiling is TWD 4,753.61 per share. It values Q4 2027 through Q3 2028 parent economic operating profit at 20x and uses the starting-quarter diluted-share proxy. The eight operating states produce a weighted four-quarter profit of TWD 396.34 billion.

Analytical score and protected Excel Base are both 77. The forecast assumes successful capacity deployment while retaining explicit pricing, timing, cost and financing uncertainty.

Current measure	Selected value
Active quarter	Q4 2027
Four-quarter parent economic OP	396.34
Diluted claim, millions	1,667.534252
Operating-profit multiple	20x
Ceiling, TWD/share	4,753.61
Analytical / protected Base	77 / 77

TWD billions except per-share amounts, percentages and share counts in millions.

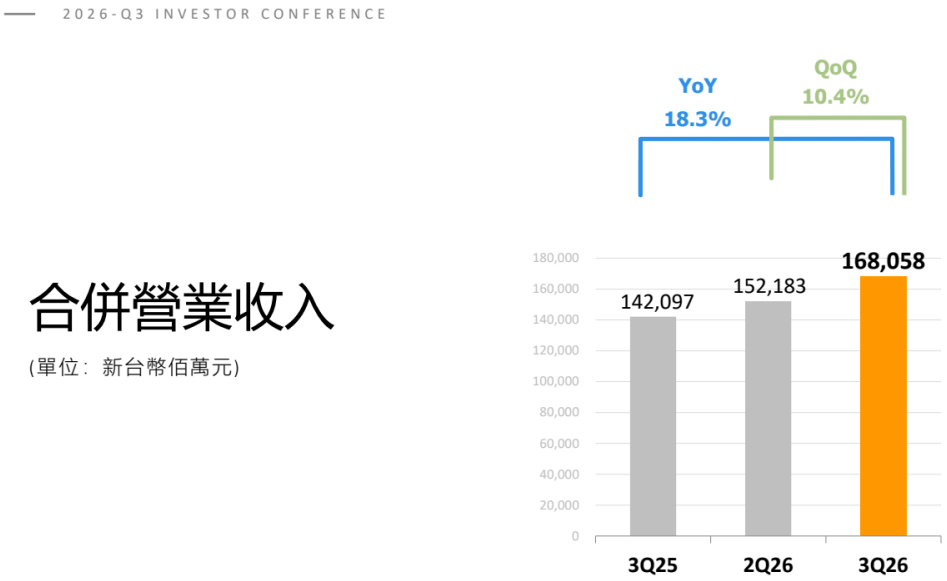

MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

Earnings, dates and the reporting boundary

The latest issuer results and full management call are dated October 30, 2026. The prior complete call is dated July 31, 2026. Calendar Q3 ended September 30. Both issuer-hosted transcripts contain prepared remarks and the complete question-and-answer session; the replay audio was not independently audited.

The Q3 release and four-page statements provide current consolidated figures. The latest detailed financial notes retrieved are the reviewed first-half statements. Where Q3 detail is unavailable, this report identifies the dated balance or explicit rollforward assumption.

The previously published Q3 2026 forecast retains its original values and four-quarter ceiling. Current results provide a separate operating and cash anchor for forecasts beginning in Q4 2026.

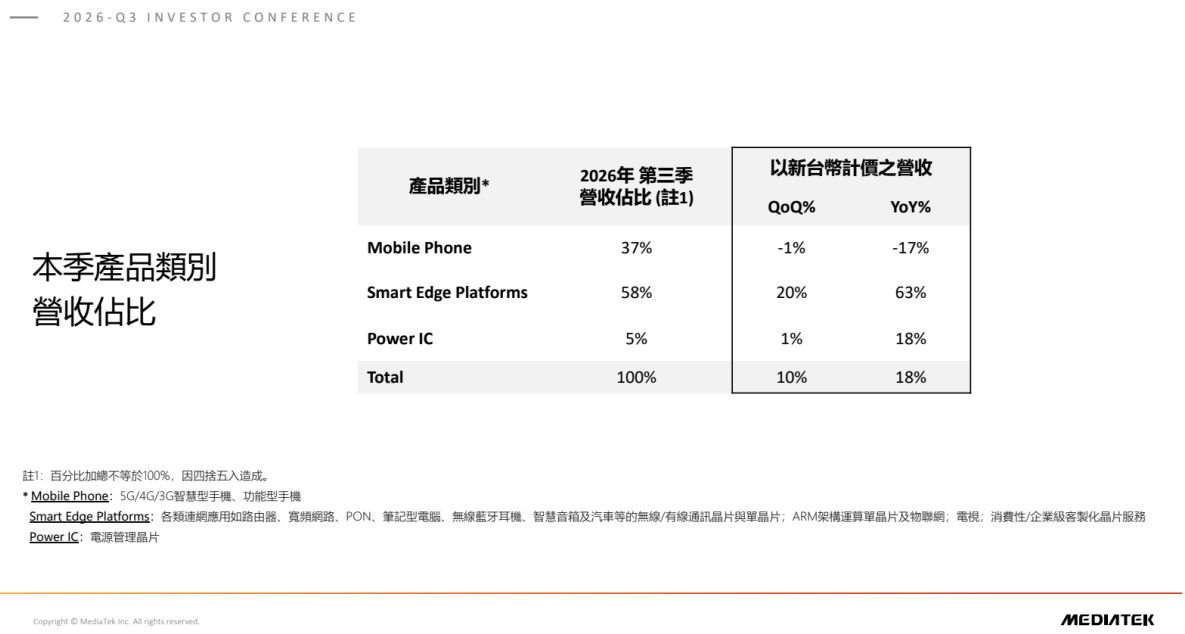

Q3 2026 reported consolidated revenue.

MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

Latest results and the product mix

Q3 revenue was TWD 168.058 billion, gross profit 77.848 billion and operating profit 27.102 billion. R&D was 42.237 billion, selling expense 4.874 billion and administration 3.635 billion. Total opex was 50.746 billion.

Mobile phones represented a rounded 37% of revenue, Smart Edge 58% and Power IC 5%. Smart Edge growth reflects new connectivity, computing and automotive programs. The Mandarin release describes higher DRAM prices in TV chips, while the English call describes higher DRAM content. The total reported revenue is used once; no separate DRAM profit increment is added.

Q3 2026 reported product revenue mix and growth.

Q3 2026 actual	Amount
Revenue	168.058
Gross profit	77.848
Operating expenses	50.746
Operating profit	27.102
Parent net income	27.882
Cash	269.058
Inventory	153.531

TWD billions except per-share amounts, percentages and share counts in millions.

MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

Current-quarter guidance and the first accelerator ramp

Management guided Q4 revenue to TWD 210.1-221.8 billion at TWD 31.7 per US dollar, gross margin to 45% plus or minus 1.5 percentage points and opex to 26% plus or minus two points. The selected midpoint is 215.95 billion revenue, 97.1775 billion gross profit, 56.147 billion opex and 41.0305 billion consolidated operating profit.

The first custom accelerator began initial shipments in September. Management expects US$2.5 billion of Q4 revenue from the program. At the selected exchange rate this contributes TWD 79.25 billion. The remaining 136.7 billion comprises mobile, Smart Edge and Power IC. These allocations are analyst estimates reconciled to the consolidated guidance.

Q4 2026 management revenue, gross-margin and operating-expense guidance.

Q4 selected calibration	Value
Revenue	215.950
Gross margin	45.0%
Opex / revenue	26.0%
Consolidated OP	41.0305
ASIC revenue	79.250

TWD billions except per-share amounts, percentages and share counts in millions.

MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

Management evidence from the newest two calls

The July call increased the 2027 accelerator market-share target to 15%-20% of an US$80 billion serviceable market and explicitly excluded HBM from that market. The October call targeted the high end, approximately US$16 billion of 2027 revenue, supported by the available supply plan.

Management continues to target first-quarter 2028 volume production for the second accelerator. Several dies have taped out; packaging yield and substrate availability remain central execution work. A second customer is confirmed with initial revenue expected in 2028, while its amount, economics and identity remain undisclosed.

The CFO expects consolidated operating margin above 20% in 2027 and describes continued improvement with scale. No numeric product operating margin or 2028 revenue range was provided. This forecast supplies explicit revenue and cost assumptions around those boundaries.

MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

Technology, competition and customer value

Large custom accelerators require advanced process design, high-speed SerDes, package integration and coordination across the supplier network. MediaTek works with its principal foundry partner and a US integrated-device manufacturer for packaging. Yield improvement and interoperability determine usable capacity.

448G SerDes, 3.5D packaging, optical connectivity and NVLink Fusion support broader system integration. The customer gains time to deployment when more components are prevalidated. These capabilities remain embedded in the product revenue and cost model.

Broadcom, other custom-chip suppliers and customer-owned design compete for the same budgets. Product performance, power, total ownership cost and delivery determine retention. Undisclosed rack projects and technology demonstrations have no separate additive revenue line.

MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

The retained conditional revenue opportunity

The inherited broker scenario estimates US$20.25 billion of 2027 custom-chip revenue and US$52.5 billion in 2028. Its revenue boundary and delivery assumptions remain uncertain. A 30% probability is retained for comparable revenue scope and execution.

The reference 2027 program revenue is now US$16 billion. The conditional gap is therefore US$4.25 billion. The 2028 reference remains US$27.5 billion, with a US$25 billion conditional gap. The same absolute US$25 billion opportunity is carried through 2029-30 as an explicit extrapolation.

The newly confirmed second customer lies within this total custom-chip opportunity. Adding another separately sized customer, HBM, rack or SerDes revenue stream would overlap this forecast. Higher revenue also incurs manufacturing and commercial support costs.

Exhibit 3: Our bottom-up AI Infrastructure Capex build implies $1.3tn/$2tn in annual AI infrastructure spending on compute/networking in 2027/28

Analyst conditional outcomes. Management explicitly guides approximately US$16 billion for 2027; later numerical amounts are model estimates.

MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

Program mapping and evidence overlap

The inherited program map supports an identifiable custom-chip opportunity. It is corroborating evidence for the same economic pool. Customer codenames, exact unit ASPs and future sourcing shares shown in external material are not treated as additional issuer-confirmed revenue.

The probability ledger retains company-specific timing and cost consequences. New public milestones can improve confidence while product economics and available capacity continue to limit conversion.

Inherited owner-supplied program map, retained as dated source evidence. The forecast does not add a second program-map revenue pool.

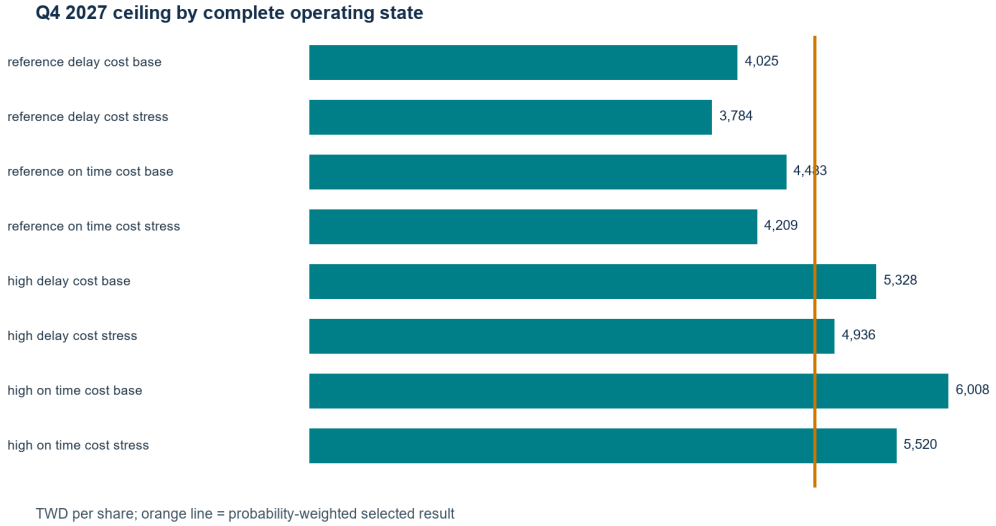

MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

Eight complete operating states

The model combines a 70% reference revenue scope and 30% larger comparable-scope outcome, an 80% timely execution outcome and 20% delayed outcome, and a 75% normal-cost outcome and 25% cost-stress outcome. The product of these conditional probabilities produces eight weights totaling 100%.

The timing downside reduces 2027 custom-chip output by 10%. In 2028 it delays half the first-half growth above the 2027 base into Q1 2029. The cost downside reduces accelerator gross margin by two percentage points and adds commercial costs equal to 1% of accelerator revenue.

Every state starts from the same Q4 consolidated guide. Each then carries its own assets, working capital, taxes, dividends and cash. These are model judgments, and correlation or larger disruptions can produce outcomes beyond the selected bounds.

Each state includes revenue, costs, assets, cash, financing and its full diluted claim. The orange line is the probability-weighted result.

State	Weight	Q4 2027 ceiling
reference delay cost base	10.5%	4,025.11
reference delay cost stress	3.5%	3,784.47
reference on time cost base	42.0%	4,482.91
reference on time cost stress	14.0%	4,208.60
high delay cost base	4.5%	5,328.24
high delay cost stress	1.5%	4,936.22
high on time cost base	18.0%	6,008.26
high on time cost stress	6.0%	5,519.80

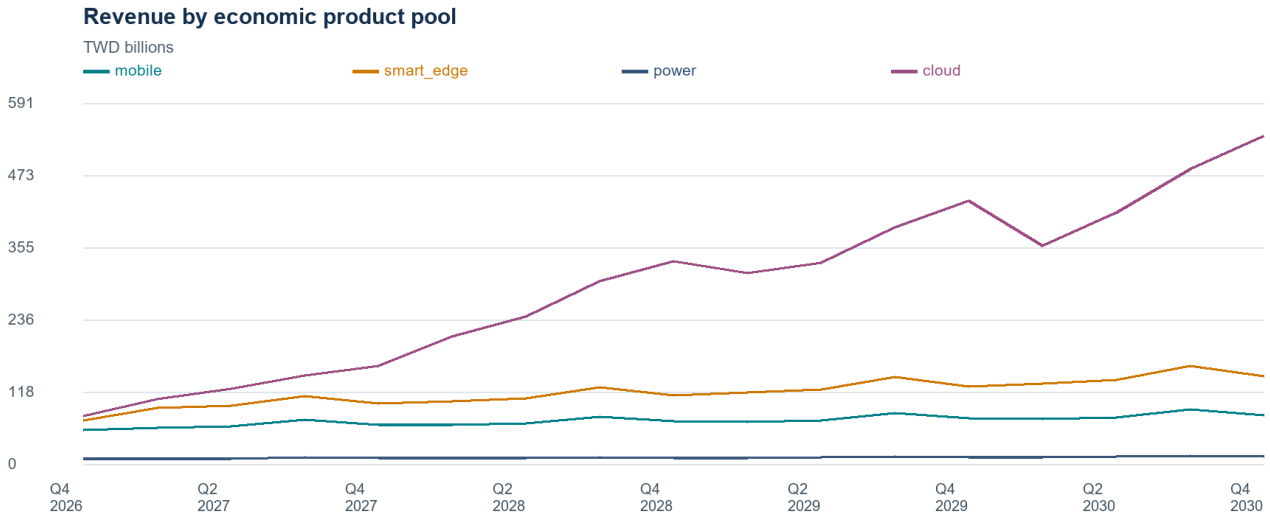

Weights are analyst judgments. Ceilings are TWD/share.

MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

Revenue vectors and recognition

Mobile, Smart Edge, Power IC and custom accelerator revenue are kept separate. Consumer volumes and product mix determine the first three pools. Custom-chip revenue combines the program scope, delivery schedule and selected exchange rate.

Gross margins of 48% for mobile, 40% for Power IC and 42% for accelerators are analyst assumptions. Smart Edge is calibrated to 46.6004% to reconcile the Q4 consolidated gross margin. Production depreciation changes are then charged explicitly. This calibration does not constitute segment-margin disclosure.

Selected model. Financial amounts in TWD billions; forecast inputs and conditional outcomes are described in the accompanying text.

Quarter	Mobile	Smart Edge	Power IC	ASIC	Total
Q4 2026	56.00	71.70	9.00	79.25	215.95

TWD billions except per-share amounts, percentages and share counts in millions.

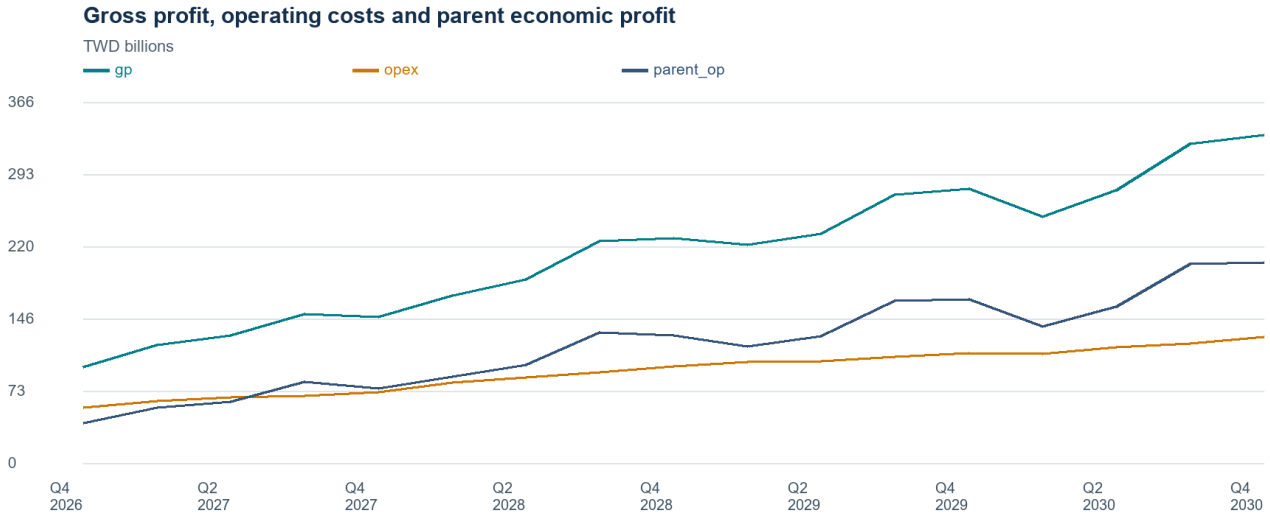

MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

Manufacturing expense and operating investment

Manufacturing costs include the product gross-margin assumptions, explicit changes in production depreciation and the adverse-cost state. Opex includes cash R&D and commercial costs, stock compensation and the remaining depreciation and amortization.

The annual cash-opex budgets are TWD 223, 250, 280 and 313 billion for 2027-30. The larger custom-chip case adds cash support equal to 20% of revenue above the reference path. R&D receives an 84% allocation of cash opex. Ordinary employee compensation remains in operating expense.

Higher intellectual-property spending and capital investment create finite amortization and depreciation charges as assets enter service. The model pays both the cash investment and the later operating charge at their respective times.

Selected model. Financial amounts in TWD billions; forecast inputs and conditional outcomes are described in the accompanying text.

Quarter	GP	Cash opex	SBC	Opex D&A	OP	Parent OP
Q4 2026	97.18	49.15	0.78	6.22	41.03	40.73

TWD billions except per-share amounts, percentages and share counts in millions.

MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

Ownership and the parent profit claim

The sanctioned method deducts the existing minority-income proxy directly from consolidated OP: TWD 0.3 billion per quarter through 2027, 0.35 billion in 2028, 0.4 billion in 2029 and 0.5 billion in 2030.

This approximate economic allocation was calibrated to reported noncontrolling net income. It is preserved without an automatic pretax gross-up. Q3 actual noncontrolling net income was TWD 0.316 billion. The parent operating-profit measure remains distinct from reported parent net income.

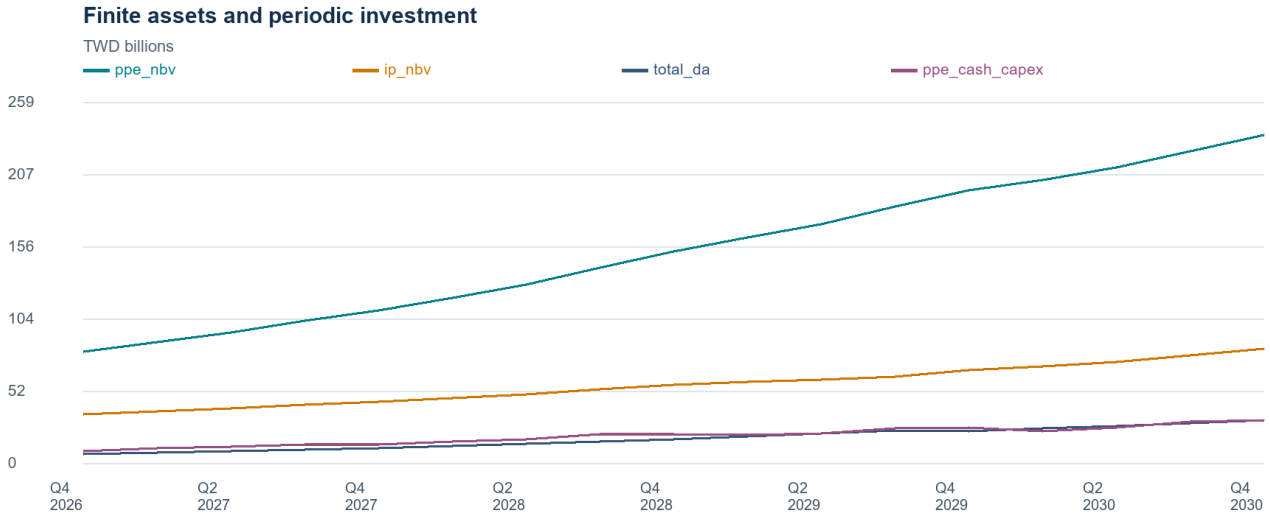

MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

Finite assets, intellectual property and leases

Opening PPE is TWD 74.841 billion. Land of 9.998332 billion and construction in progress of 6.677860 billion use the latest detailed first-half disclosures as dated proxies. The remaining existing depreciable balance has a capped quarterly charge. The CIP proxy is commissioned over two quarters.

New PPE cash investment equals 4% of revenue, allocated 80% to four-year equipment and 20% to twenty-year buildings with a one-quarter in-service lag. New intellectual property equals 2% of revenue and amortizes over twelve quarters. Opening finite intangibles exclude the 68.117719 billion goodwill balance.

The opening 23.136595 billion IP-related payable is paid over eight quarters. This settlement does not create another asset. The ROU model uses the dated first-half balance, explicit depreciation, new leases and separately modeled lease principal and interest.

Selected model. Financial amounts in TWD billions; forecast inputs and conditional outcomes are described in the accompanying text.

Quarter	PPE balance	Finite IP	D&A	PPE cash	IP cash
Q4 2026	80.27	35.19	6.38	8.64	7.21

TWD billions except per-share amounts, percentages and share counts in millions.

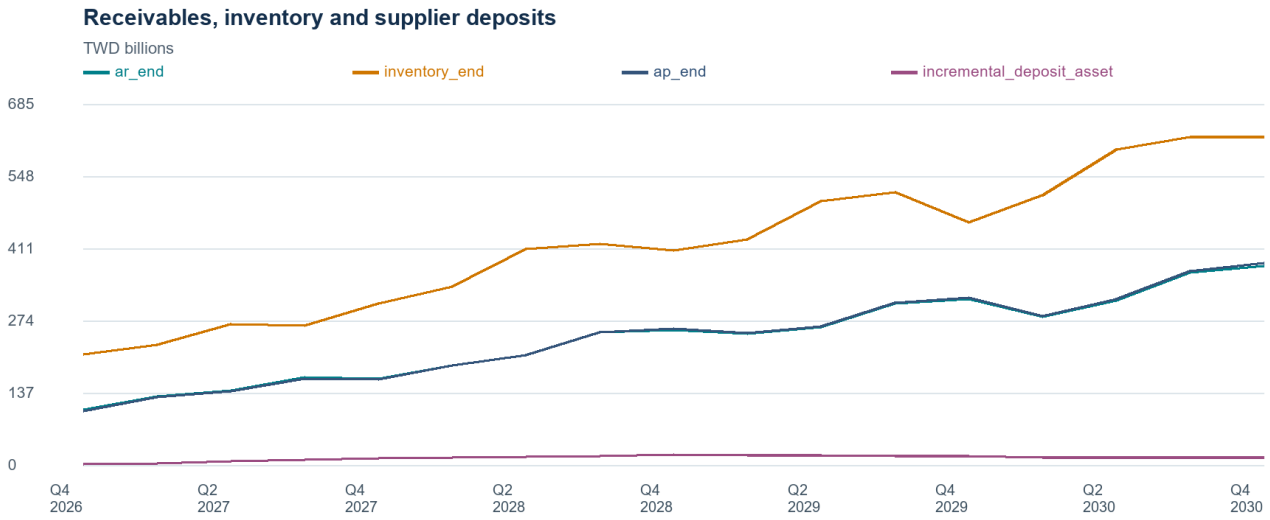

MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

Working capital and supplier capacity commitments

Q3 receivables were TWD 80.296 billion, inventory 153.531 billion and trade payables 79.53 billion. Inventory rose sharply ahead of the accelerator ramp. The reported 127-day inventory metric uses average balances; the forecast separately models ending inventory required for future production.

Receivables use 45 days of current revenue, inventory 130 days of next-quarter manufacturing cost and payables 80 days of current manufacturing cost. Other incremental working capital equals 2% of revenue growth from the Q3 anchor.

Additional supplier deposits equal 5% of positive year-on-year manufacturing-cost growth and release over eight quarters. The existing deposit cash outflow is already reflected in opening cash. Missing Q3 deposit balances and individual contract terms limit the precision of this schedule.

Selected model. Financial amounts in TWD billions; forecast inputs and conditional outcomes are described in the accompanying text.

Quarter	Receivables	Inventory	Payables	New deposits	Deposit releases
Q4 2026	105.63	209.92	103.28	1.43	0.00
Q1 2027	131.25	228.54	129.18	2.92	0.18
Q2 2027	142.55	267.40	140.64	3.58	0.54

MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

The completed convertible bond

The parent company completed US$3.9 billion of zero-coupon convertible bonds in September. The exchange-filed circular specifies a September 8, 2031 maturity, initial TWD 4,513.75 conversion price and fixed TWD 31.643 per US dollar conversion rate. Conversion rights begin December 9, 2026.

The full principal represents 27.340393 million potential common shares before future conversion-price adjustments. NVIDIA subscribed US$3.5 billion on the same offering terms. The October call also identifies Alphabet participation without specifying its allocation.

The principal is currency-linked: redemption translates the US-dollar face through the fixed Taiwan-dollar rate and the then-prevailing dollar rate. The model carries a TWD 123.4077 billion principal reserve. A 2.5% effective book yield estimates the initial liability discount and later noncash accretion; the actual Q3 accounting split is unavailable in the retrieved short-form statements.

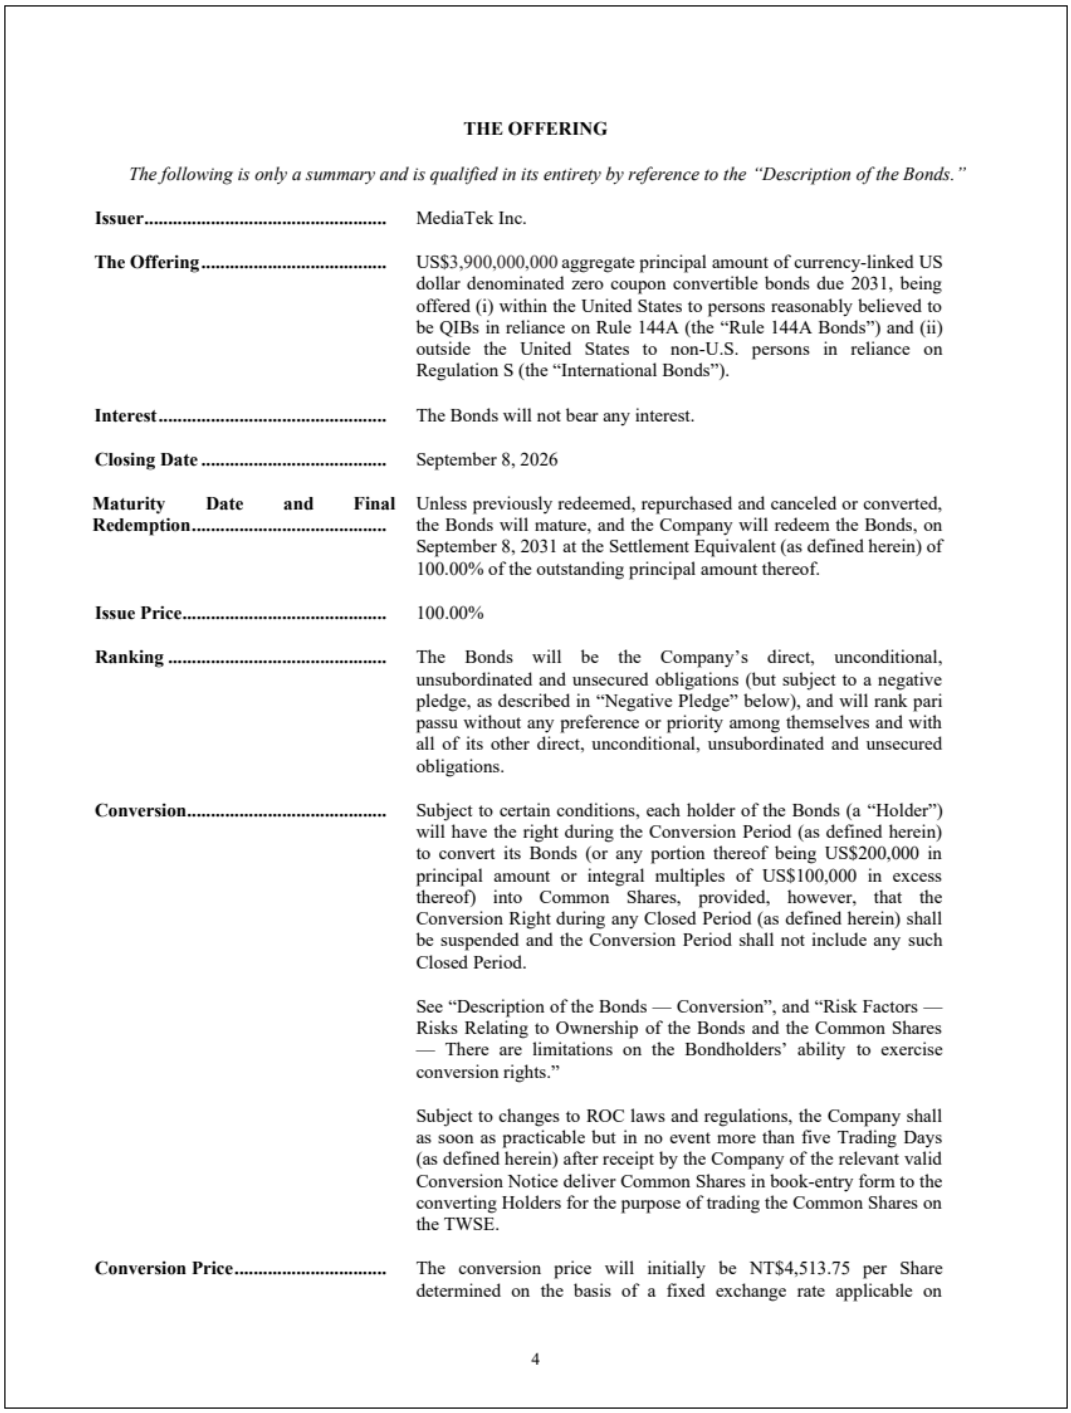

Bond condition	Source / selected value
Issuer	MediaTek Inc. parent
Principal	US$3.9 billion
Coupon	0%
Maturity	September 8, 2031
Initial conversion price	TWD4,513.75
Fixed conversion FX	31.643 TWD/USD

Original bond term summary

The exchange-filed source summary retains the original principal, coupon, maturity and conversion wording. The preceding analysis identifies the model conventions used for the financial forecast.

THE OFFERING

The following is only a summary and is qualified in its entirety by reference to the "Description of the Bonds."

Issuer	MediaTek Inc.
The Offering	US$3,900,000,000 aggregate principal amount of currency-linked US dollar denominated zero coupon convertible bonds due 2031, being offered (i) within the United States to persons reasonably believed to be QIBs in reliance on Rule 144A (the "Rule 144A Bonds") and (ii) outside the United States to non-U.S. persons in reliance on Regulation S (the "International Bonds").
Interest	The Bonds will not bear any interest.
Closing Date	September 8, 2026
Maturity Date and Final Redemption	Unless previously redeemed, repurchased and canceled or converted, the Bonds will mature, and the Company will redeem the Bonds, on September 8, 2031 at the Settlement Equivalent (as defined herein) of 100.00% of the outstanding principal amount thereof.
Issue Price	100.00%
Ranking	The Bonds will be the Company's direct, unconditional, unsubordinated and unsecured obligations (but subject to a negative pledge, as described in "Negative Pledge" below), and will rank pari passu without any preference or priority among themselves and with all of its other direct, unconditional, unsubordinated and unsecured obligations.
Conversion	Subject to certain conditions, each holder of the Bonds (a "Holder") will have the right during the Conversion Period (as defined herein) to convert its Bonds (or any portion thereof being US$200,000 in principal amount or integral multiples of US$100,000 in excess thereof) into Common Shares, provided, however, that the Conversion Right during any Closed Period (as defined herein) shall be suspended and the Conversion Period shall not include any such Closed Period. See "Description of the Bonds — Conversion", and "Risk Factors — Risks Relating to Ownership of the Bonds and the Common Shares — There are limitations on the Bondholders' ability to exercise conversion rights." Subject to changes to ROC laws and regulations, the Company shall as soon as practicable but in no event more than five Trading Days (as defined herein) after receipt by the Company of the relevant valid Conversion Notice deliver Common Shares in book-entry form to the converting Holders for the purpose of trading the Common Shares on the TWSE.
Conversion Price	The conversion price will initially be NT$4,513.75 per Share determined on the basis of a fixed exchange rate applicable on

Exchange-filed offering summary: issuer, bond principal, coupon, maturity and conversion terms. Exact source text is preserved.

MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

Dilution, repayment and the denominator

The ordinary and award proxy begins at 1,630 million shares in Q3 2026 and grows 0.5% annually. It predates the completed convertible issue. The new 27.340393 million economic claim is added once from Q4 2026.

The latest precise issuer capital figure retrieved is 1,604.952613 million issued shares at August 31. The first-half reported weighted basic and diluted counts were 1,592.690268 and 1,595.922559 million. These source counts have different dates and definitions from the forward economic proxy.

The base cash case conservatively keeps the bond outstanding and builds a full maturity reserve through Q4 2030. Economic dilution remains in the valuation denominator. A separate diagnostic assumes conversion in Q1 2028 and removes the outstanding debt and reserve; it does not add the shares a second time.

Quarter	Ordinary / award proxy	Bond claim	Total diluted claim
Q4 2026	1,632.033691	27.340393	1,659.374084

Shares in millions. Values are a forecast capitalization convention, with the bond claim counted once.

MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

Recurring book tax and cash tax

The forecast applies a normalized 16% tax rate to positive recurring pretax income. Interest on cash, modeled debt interest, lease interest and convertible discount accretion are included below OP. It selects no deferred-tax release or NOL cash benefit.

Cash tax follows the preceding quarter normalized charge. The initial payment proxy is TWD 6.223214 billion, derived from Q3 actual cash tax. The current-quarter unpaid normalized charge remains an explicit tax-payable proxy. This models timing while preserving the recurring tax cost.

Q3 reported tax was 5.374 billion. Detailed current tax balances, convertible effective yield and first-half temporary differences do not fully explain the later cash schedule; those are disclosed model limitations.

Quarter	Pretax	Book tax	Cash tax	Common NI	Bond accretion
Q4 2026	42.43	6.79	6.22	35.34	0.68
Q1 2027	57.72	9.24	6.79	48.18	0.68

MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

Cash funding and capital returns

Opening cash is TWD 269.058 billion and includes the completed bond proceeds. Short-term debt of 41.95 billion is repaid over the first four forecast quarters. Cash earns 2%; the model includes 1 billion of other recurring investment income per quarter. It selects no new market financing.

The issuer targets ordinary dividends at 80%-85% of annual net income. The model uses 82.5% with the stated half-year payment cadence. The declared 2026 first-half dividend of TWD24.5 per share, totaling 39.320597 billion, is paid in January 2027.

Future discretionary dividends are limited by available cash after a 60 billion liquidity floor, a growing full-principal bond reserve and next-quarter planned production and capital needs. A deferred discretionary policy amount creates no declared liability. This restriction keeps all eight operating states funded.

Selected model. Financial amounts in TWD billions; forecast inputs and conditional outcomes are described in the accompanying text.

Quarter	CFO	PPE cash	IP cash	Cash dividend	Cash balance	Bond reserve
Q4 2026	-14.89	8.64	7.21	0.00	225.88	7.26

Eight-state cash and funding limits

The minimum cash balance across the eight selected states is TWD 80.31 billion and the modeled unfunded need is zero. The reserve rule adjusts discretionary distributions before the cash is used for the coming production cycle.

The strong-growth state can require substantial inventory before customer collections. Slower qualification can delay revenue while fixed R&D and commissioned assets remain paid. The conditional opportunity therefore carries a funding and margin burden alongside additional sales.

State	Weight	Minimum cash	Final cash	Deferred discretionary dividends
reference delay cost base	10.5%	144.31	344.08	0.00
reference delay cost stress	3.5%	123.82	318.43	33.05

MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

Fourteen complete valuation windows

Every ceiling uses parent economic operating profit in the named quarter and the next three quarters, multiplied by20 and divided by starting-quarter diluted shares. The TWD-billion numerator is converted using a factor of 1,000 for a TWD-per-share result.

The final three operating quarters support preceding complete windows. Their standalone ceilings remain blank because the current forecast does not include the next three quarters.

Selected model. Financial amounts in TWD billions; forecast inputs and conditional outcomes are described in the accompanying text.

Bounded sensitivities

Each diagnostic reruns one selected control through the same financial model. It does not receive an additional probability weight. Revenue scope, timing, gross margin, inventory funding and the diluted claim affect different parts of the forecast.

The conversion diagnostic changes cash and liability treatment while preserving the already-counted economic claim. The zero-bond-share case is a denominator diagnostic. It describes the impact of the claim and does not remove the actual financing obligation.

Diagnostic	Q4 2027 ceiling	Minimum cash	Unfunded need

MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

Milestones and falsification

Q4 accelerator deliveries must reconcile to the US$2.5 billion outlook, consolidated revenue and cash collection. Inventory must convert into accepted shipments without a persistent rise in customer receivables or unproductive supplier deposits.

The 2027 program requires approximately US$16 billion of recognized revenue at a profitable cost structure. The second-generation program requires qualified packaging and on-time first-quarter 2028 volume production. The second customer requires an identifiable commercial scope before it supports a separate economic claim.

Falling realized margin, repeated schedule slips, replacement by competing silicon or material cash funding needs would reduce the selected outcomes. A demonstrated broader revenue boundary, stronger capacity or better paid economics could support a higher conditional result.

MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

Historical Q3 2026 forecast snapshot

The published Q3 2026 forecast remains revenue170.0 billion, consolidated OP25.5 billion and parent economic OP25.2 billion. Its original four-quarter parent OP185.558940 billion and 1,630 million shares produced a TWD2,276.796813 ceiling.

This immutable record describes the information and modeling available at its publication. The Q3 actual results elsewhere in this report anchor the new cash and operating analysis. Current forecasts begin with Q4 2026.

Preserved Q3 forecast	Value
Revenue	170.000000
Consolidated OP	25.500000
Parent economic OP	25.200000
Original F4 parent OP	185.558940
Original shares, M	1630.000000
Original ceiling	2276.796813

TWD billions except per-share amounts, percentages and share counts in millions.

MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

Source coverage and precise limitations

The October30 and July31 issuer-hosted full transcripts were read through all Q&A. Mandarin slides, releases and current statements provide the reported numbers. The SGX offering circular provides the parent bond terms. The first-half reviewed notes supply detailed accounting and asset anchors.

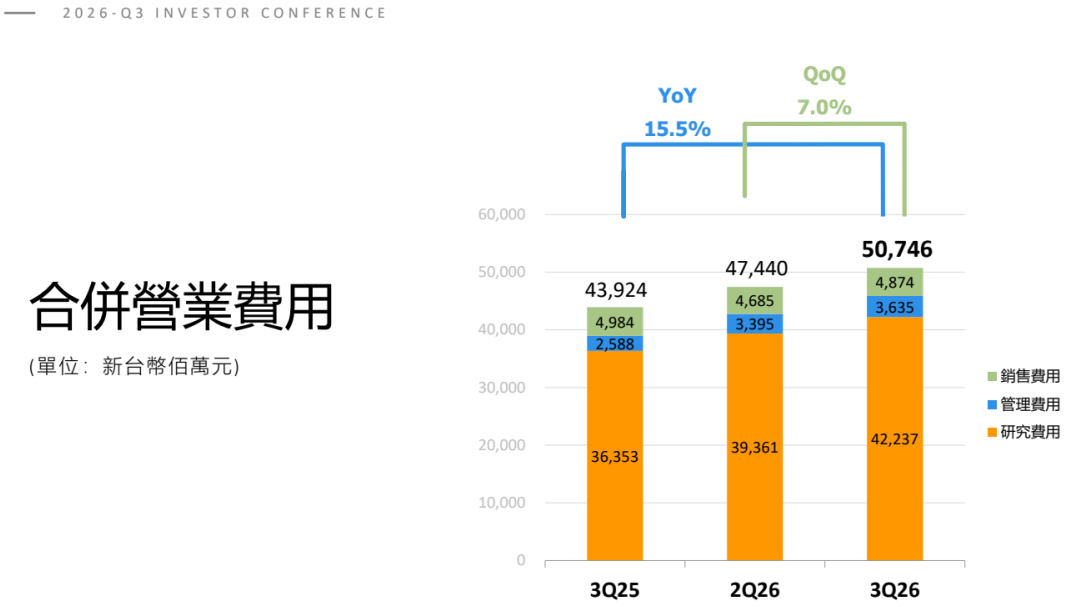

The full reviewed Q3 footnote report was not located in the retrieved issuer and indexed exchange sources. The available Q3 report is a four-page statement set. Current bond liability/equity accounting, exact IP payable and supplier-deposit balances, product cost splits and individual asset commissioning remain uncertain.

All forecast inputs are explicitly classified in the model. Source images preserve their dates and original units. The two inherited broker figures remain private research evidence. Future targets and conditional outcomes are analyst estimates.

MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

Reported operating investment

The issuer reports R&D as the largest operating-expense category. Current TIFRS operating profit includes employee compensation and normal depreciation and amortization. The forecast retains these costs while making later spending explicit.

MEDIATEK 2454.TW | 4 NOVEMBER 2026 | FRAMEWORK 8.0

Balance-sheet resources and commitments

Current cash and financial resources support the working-capital ramp. Equity investments are excluded from the routine operating cash funding schedule. The base model uses cash on hand, scheduled debt repayment and a full future convertible-principal reserve.

Operating and cash state: high on time cost stress

This state carries 6.0% probability. Every financial amount below follows its selected revenue, timing and cost assumptions. The diluted share convention is common across the states; liquidity and discretionary dividends differ.

Quarter	Revenue	Parent OP	CFO	FCF	IP cash	Dividend	End cash
Q4 2026	215.95	40.73	-35.01	-43.65	7.21	0.00	205.75
