Modine Manufacturing Company (NYSE: MOD)

1. Header and dated investment snapshot

Calculated Q4 2027 ceiling: USD 281.58 per common share. Analytical Base 72 / Excel Base 72. As of November 5, 2026; latest earnings reviewed November 4. The active valuation window runs through Q3 2028.

The October 7 Q4 2027 ceiling of USD 338.34 per share becomes USD 281.58, a 16.78% decrease, under the unchanged 20 times operating-profit method. The lower selected profit outlook drives the decline; lower financial claims and fewer diluted shares partly offset it.

Framework 8.0. Modine Manufacturing Company, NYSE: MOD. Coverage only; no position is recorded in the current portfolio. Classification: temporal cooling-supply bottleneck. Rating: Watchlist. The analytical and Excel Base are both 72, based on 43 points out of 60 selected before valuation.

Review date: November 5, 2026. The dated reference is the November 4 regular-session close of USD 98.56 and 53.196918 million common shares reported outstanding as of October 30. Together they imply an indicative equity capitalization of about USD 5.24 billion using different source dates. This ordinary-share snapshot is separate from the forecast diluted claims. The active horizon and calculated ceiling are supplied by the validated model.

Primary sources: S1, S2, S15.

2. Pre-analysis and business classification

Modine supplies cooling equipment, components and application engineering that must work inside a customer's physical facility. Its strongest current opportunity lies in converting data-center orders into accepted equipment while supply chains and manufacturing expand. The useful pre-analysis question is how much customer spending reaches Modine's invoices after product selection, delivery timing and internal eliminations.

Customer qualification, repeat designs and manufacturing execution can extend a temporary supplier advantage. Alternative vendors, warmer-water designs, customer capital budgets and improving component availability limit its duration and size.

Primary sources: S3, S4, S13.

3. Business and cooling architecture

Heat moves through linked stages: collection at the server, transport in air or liquid, transfer through the facility loop, and rejection outdoors. Airedale's portfolio spans chillers, air handlers, fan walls, computer-room air handlers, coolant distribution equipment, controls, commissioning and service. Each installation chooses a particular combination.

Direct-to-chip cooling changes indoor equipment requirements while preserving a facility heat-rejection task. Coolant temperature, climate, approach temperatures and uptime requirements affect free-cooling hours and mechanical-cooling demand. Integrated loop designs can reduce separate equipment counts. The market model follows purchased products at each stage.

Primary sources: S13, S14.

Financial amounts: USD millions; shares: millions. Product counts and unit prices are labeled locally.

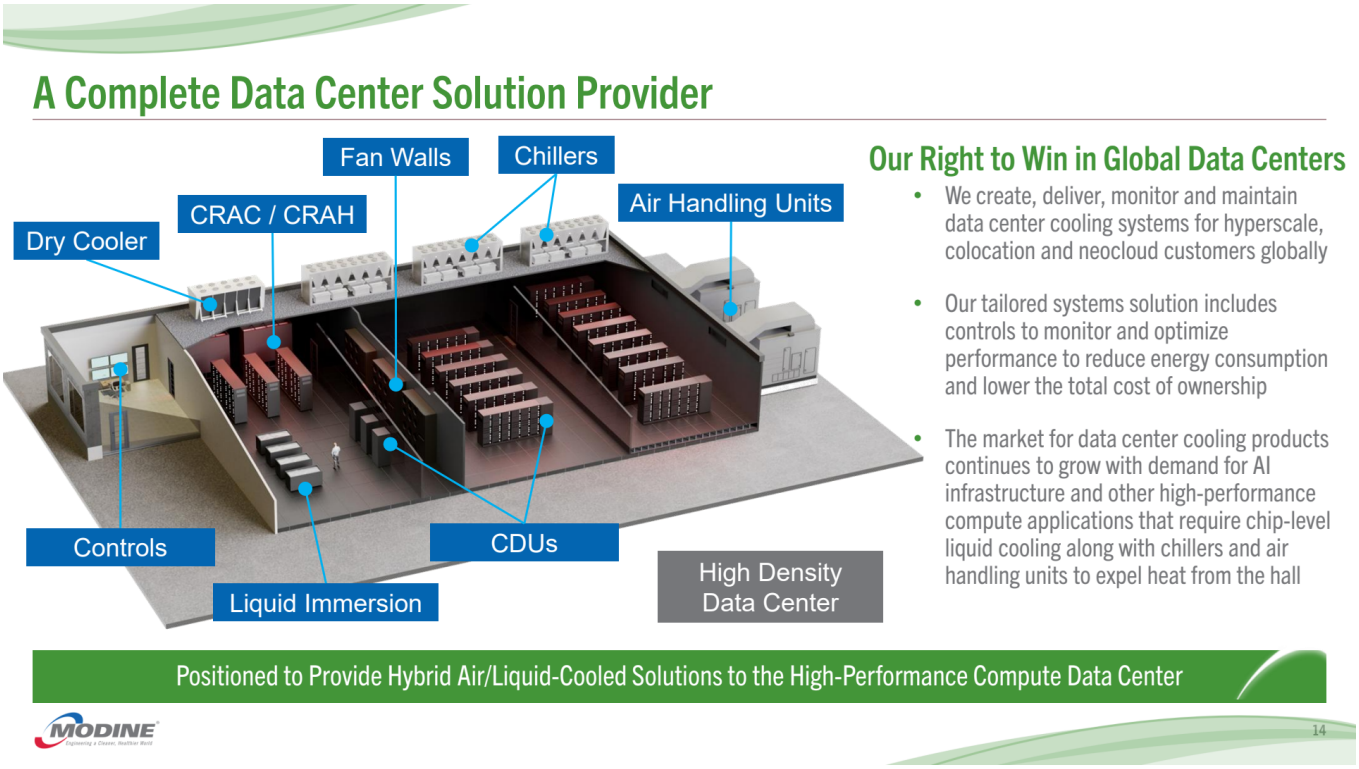

Figure 1. Airedale's May 2026 portfolio illustration maps indoor heat collection, liquid transfer, outdoor heat rejection and controls. Customer designs select among these architectures and products.

5. Source exhibit

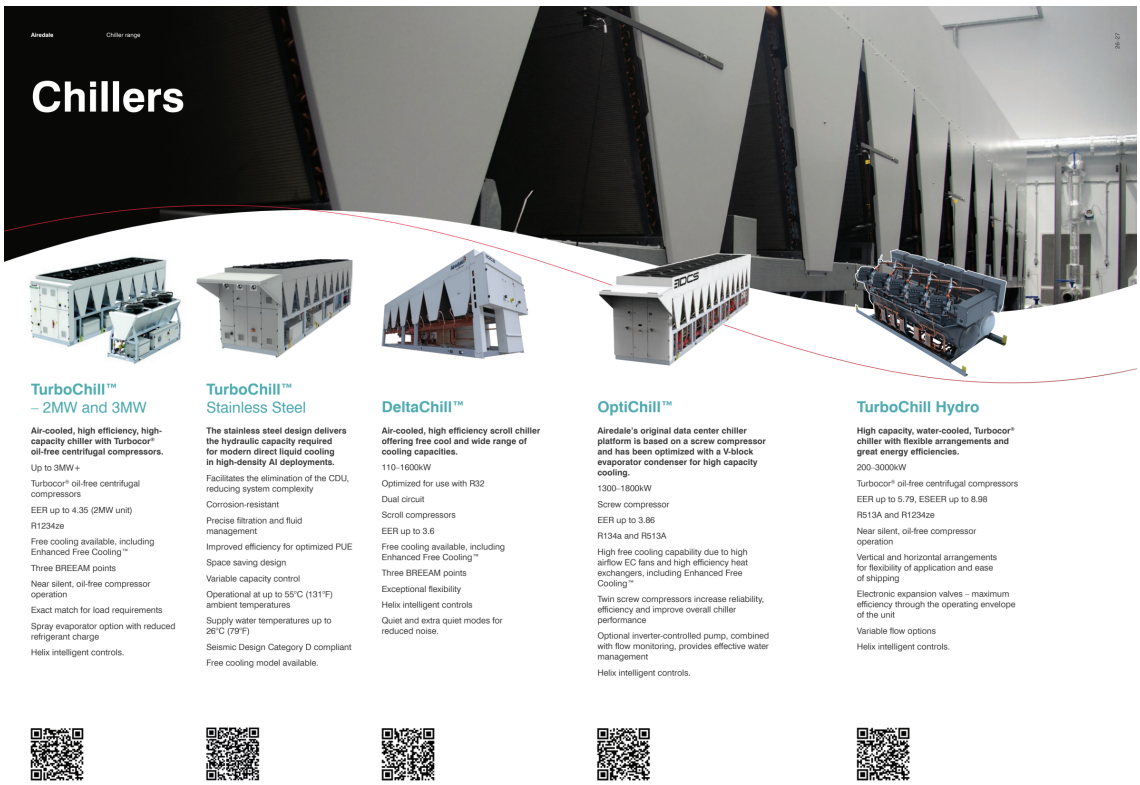

Figure 2. Airedale's February 2026 chiller brochure presents its product range and stated rating conditions. Equipment capacity, temperature and efficiency claims retain their individual test boundaries.

Financial amounts: USD millions; shares: millions. Product counts and unit prices are labeled locally.

6. Source exhibit

Figure 3. Airedale's February 2026 liquid-cooling brochure presents CDU, in-row and other products. The forecast models company invoices and capacity by product; heat-transfer ratings describe the equipment.

7. Product composition and revenue taxonomy

The August presentation gives the dated fiscal 2026 Data Centers sales mix as 45% chillers, 22% air handling, 18% indoor products and 15% aftersales and other. Commercial HVAC's fiscal 2026 mix is 22% heating, 12% commercial chillers and ventilation, 39% coils, 21% coolers and power/process applications, and 6% coatings.

These proportions calibrate the starting ledger. Future mix, unit prices and unit costs are explicit analytical assumptions. Intersegment coils and services stay within their product pools, with matched consolidation entries, so total-company revenue follows external customers.

Primary sources: S5, S1.

Financial amounts: USD millions; shares: millions. Product counts and unit prices are labeled locally.

Figure 4. August 2026 issuer presentation: final fiscal 2026 Data Centers sales mix is 45% chillers,22% AHU,18% indoor and 15% aftersales and other. Future quarterly mixes are model assumptions.

9. Source exhibit

Figure 5. August 2026 issuer presentation: fiscal 2026 Commercial HVAC sales mix is 22% heating,12% commercial chillers and ventilation,39% coils,21% coolers and power/process, and 6% coatings.

Financial amounts: USD millions; shares: millions. Product counts and unit prices are labeled locally.

10. Framework score and risk deductions

The score is Core Thesis 16/20, Cycle Stage 8/10, TAM Expansion 7/10, Catalysts 4/5, Macro 9/10 and Alpha 3/5, less four risk points. The total 43/60 rounds to 72%. Orders, application expertise and manufacturing expansion support the positive categories. External coils remain part of the same cooling chain.

The four deductions cover manufacturing/component/acceptance execution; customer concentration and timing; competition, pricing and architecture substitution; and working capital, commitments and post-separation balance uncertainty. Each has a distinct counter. The calculated target plays no role in the score.

Primary sources: S1, S2, S3.

11. Framework score selected before valuation

The risk score deducts one point for each of four distinct classes.

Units: Integer score points; Base percent.

Category	Score	Maximum
Core Thesis	16	20
Cycle Stage	8	10
TAM Expansion	7	10
Catalysts	4	5
Macro	9	10
Alpha	3	5
Risks	-4	0
Total	43	60
Analytical / Excel Base	72	72

12. TAM and incremental company opportunity

Higher computing heat density creates demand for cooling capability. Captured invoices depend on architecture, equipment content, customer sourcing share, selling prices and the pace at which buildings become ready for acceptance. The same heat passes through consecutive cooling stages, so their thermal ratings cannot be added as independent demand.

External coils offer another route into this spending through direct-to-chip radiator heat exchangers. Incremental revenue must exclude internal evaporators already contained in Modine's systems. Controls and service strengthen customer relationships; the reviewed sources leave a separate software recurring-revenue valuation unsupported.

Primary sources: S3, S5, S13.

13. Source exhibit

Figure 6. Airedale's CyrusOne case study places the illustrated equipment within a 54 MW campus and lists 64 CRAHs and 12 chillers. The published project scope does not establish a universal equipment-per-MW ratio.

14. Competition and cross-portfolio context

Competition includes integrated thermal-system suppliers, specialist chiller and air-handling vendors, component manufacturers, and alternative customer-selected loop designs. Delivery reliability, energy efficiency, water use, footprint and service coverage matter alongside equipment cost. Qualification creates switching friction while permitting multisourcing.

Cross-portfolio monitoring includes MSFT, AMZN and GOOGL capital-spending plans and NVDA and AMD server/accelerator thermal architectures. These are sector demand and engineering reference points. Buyer identities for the Modine programs discussed here are undisclosed; no contract is attributed to those companies. Power availability, construction schedules and compute deployment delays can change cooling dates. Historical peer lists provide no new candidate recommendation in this review.

Primary sources: S4, S13, S14.

15. Source exhibit

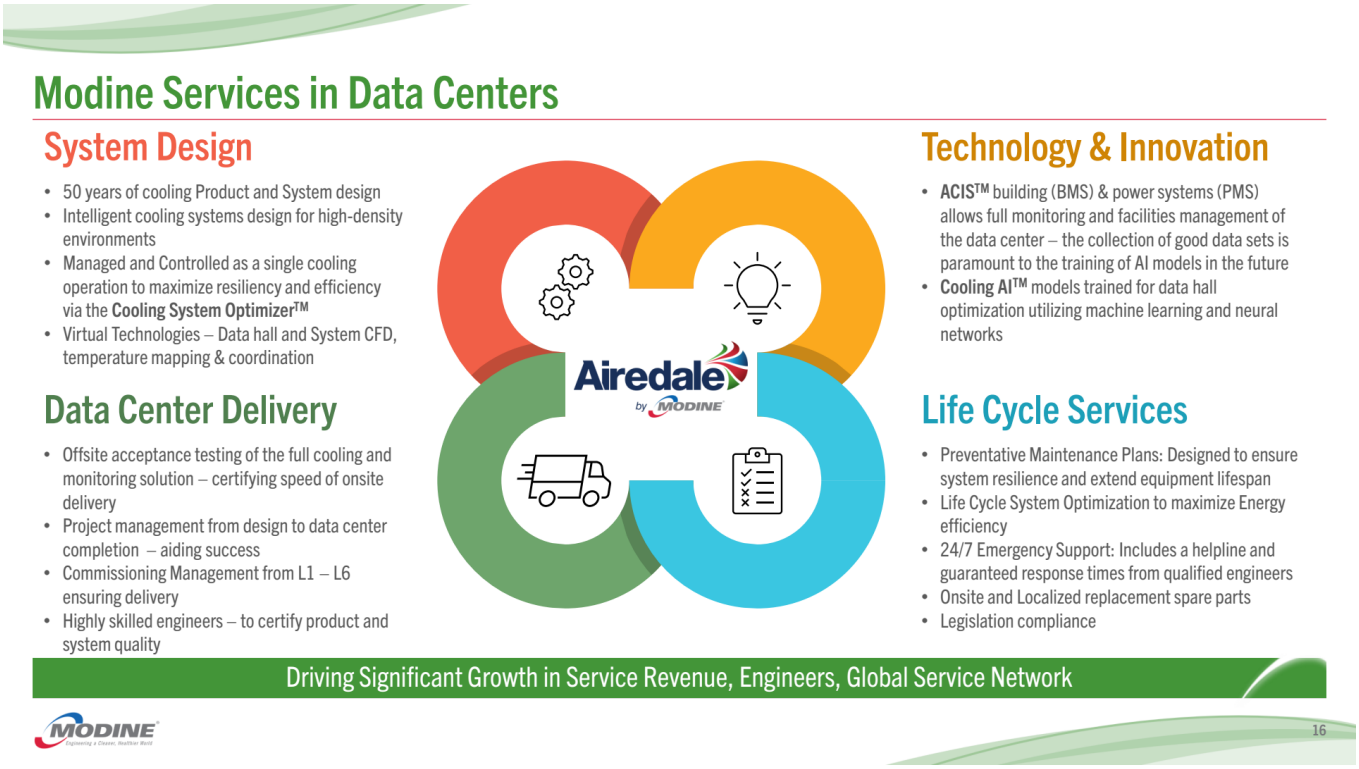

Figure 7. Modine's May 2026 service diagram covers design, testing, commissioning, controls and lifecycle support. Standalone software recurring revenue and service margins are undisclosed in this exhibit.

16. Latest source results

The September quarter includes Performance Technologies. Reported revenue was USD 994.4 million, operating profit USD 97.8 million, net income attributable to Modine USD 30.0 million and diluted EPS USD 0.56. Adjusted EBITDA was USD 136.2 million under the company's reconciliation.

The first six months generated operating cash flow of negative USD 57.1 million and cash capital expenditure of USD 88.5 million, producing reported free cash flow of negative USD 145.6 million. Growth, inventory purchases, collections, supplier payments and taxes must be read together. The October 1 separation changes the forward reporting perimeter.

Primary sources: S1, S2.

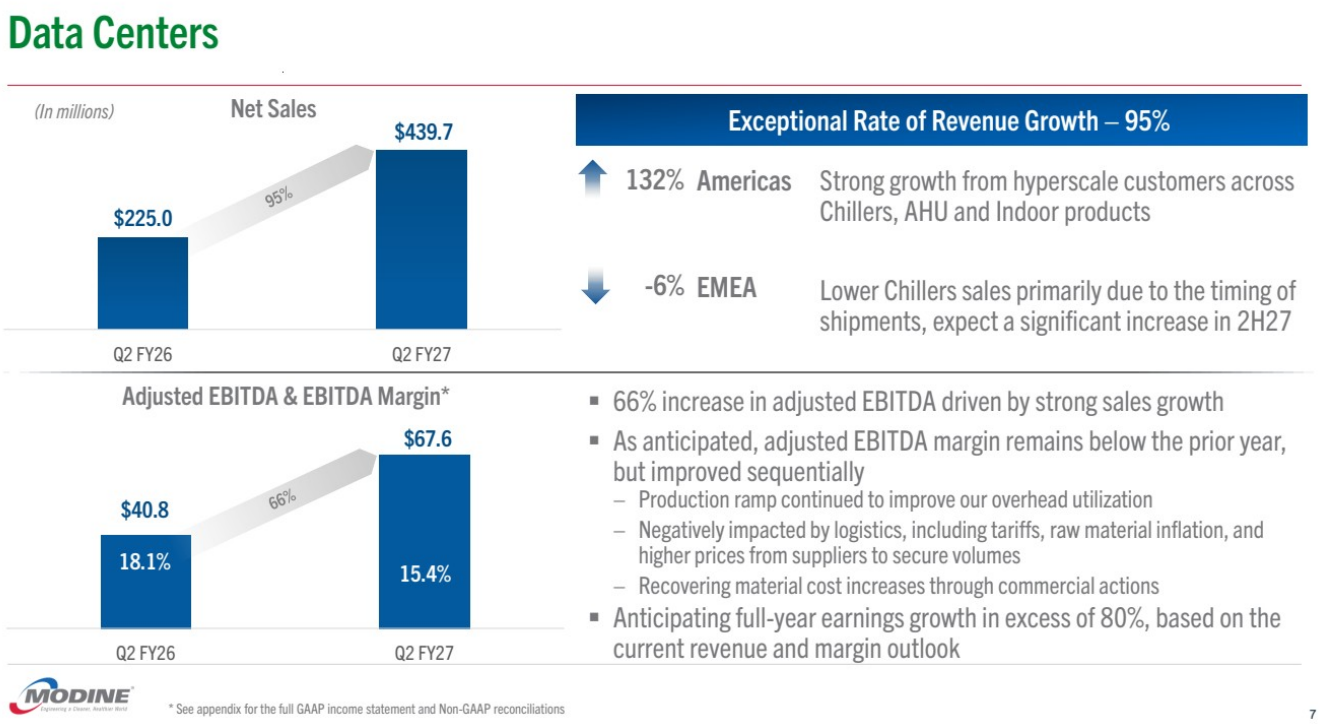

Figure 8. November 4, 2026 reported Data Centers results. Segment sales of USD 439.7 million include USD 2.4 million of internal sales; adjusted EBITDA is USD 67.6 million. The source separately reports GAAP operating profit.

Financial amounts: USD millions; shares: millions. Product counts and unit prices are labeled locally.

19. Source exhibit

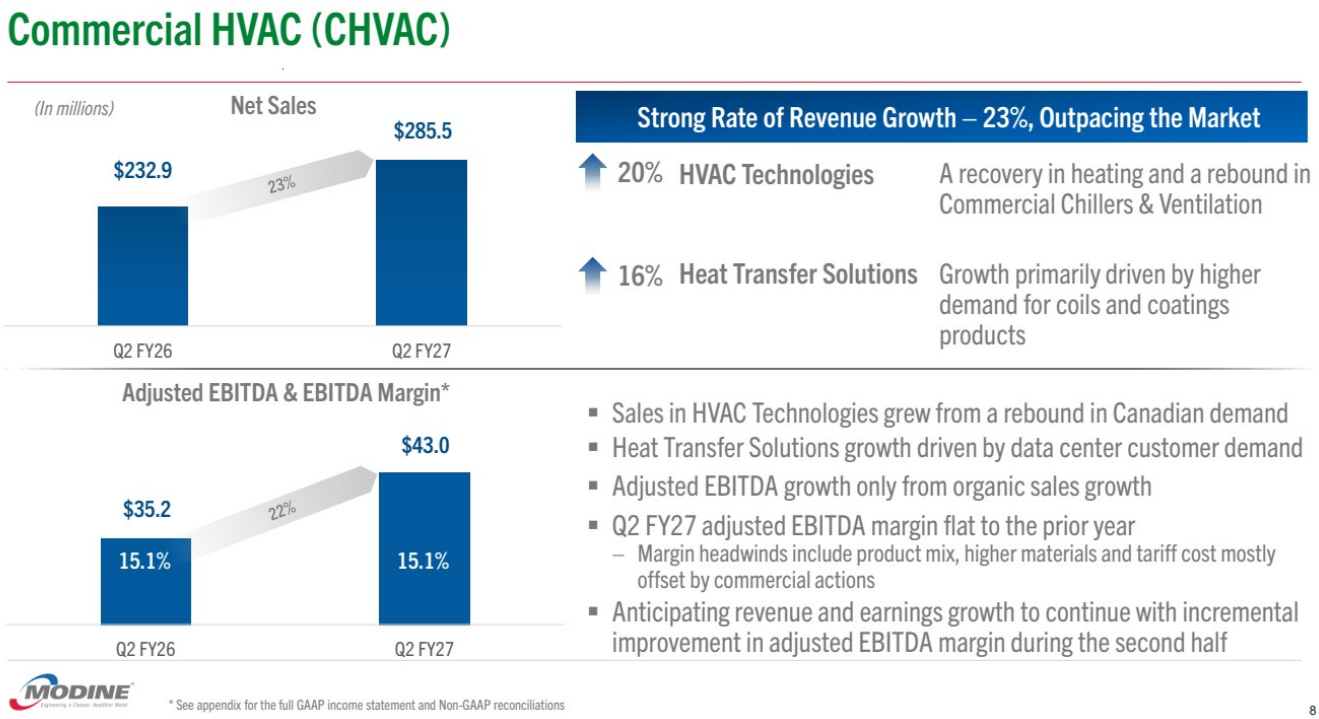

Figure 9. November 4, 2026 reported Commercial HVAC results. Segment sales of USD 285.5 million include USD 16.1 million internally; adjusted EBITDA is USD 43.0 million.

20. Continuing-business accounting bridge

The continuing bridge starts with consolidated operating profit of USD 97.8 million, subtracts USD 32.1 million from Performance Technologies and subtracts USD 2.8 million of retained corporate burden. This produces the USD 62.9 million continuing operating-profit reference. Adding USD 14.1 million of depreciation/amortization, USD 14.1 million of disposition costs and USD 1.4 million of restructuring reconciles to USD 92.5 million of continuing adjusted EBITDA.

The USD 2.8 million is a retained cost. Gross segment revenue and cost require separate elimination entries, including the current USD 0.6 million consolidation timing difference. The October 7 June-quarter pro forma retains its earlier period and allocation conventions.

Primary sources: S1, S2, S7.

Figure 12. October 7, 2026 pro forma statement for the year ended March 31. Continuing revenue is USD 2,055.4 million and operating profit is USD 230.7 million. The source places the historical pension termination charge below operating profit.

25. Management guidance and fiscal/calendar mapping

Management's fiscal 2027 continuing guidance is revenue of USD 3.1-3.2 billion and adjusted EBITDA of USD 470-500 million. Data Centers sales are expected to grow 80-90%, with Commercial HVAC up 10-15%. Other ranges are interest USD 26-30 million, tax provision USD 95-105 million and depreciation/amortization USD 56-61 million.

The fiscal third-quarter Data Centers margin guide implies a 100-200 basis-point improvement from 15.4%; the fourth-quarter goal is 20% or higher. Fiscal 2027 ends in March 2027. The cash guide of free cash flow USD 0-25 million and capex USD 150-200 million includes Performance Technologies in the first half.

The selected probability-weighted fiscal 2027 path produces revenue of USD 3,004.395 million and adjusted EBITDA of USD 439.850 million. These fall below the respective guidance lower bounds by USD 95.605 million and USD 30.150 million. The financial model preserves those shortfalls.

Primary sources: S1, S2, S3.

Financial amounts: USD millions; shares: millions. Product counts and unit prices are labeled locally.

26. Fiscal 2027 source guidance and selected model

Revenue and EBITDA combine the source continuing first half with forecast H2. The cash first half includes the reported Performance Technologies perimeter.

Units: USD millions.

Metric	Source low	Source high	Selected model	Gap to low
Continuing revenue	3,100.000	3,200.000	3,004.395	-95.605
Continuing adjusted EBITDA	470.000	500.000	439.850	-30.150
FCF: source H1 plus model H2	0.000	25.000	-114.209	-114.209

27. Source exhibit

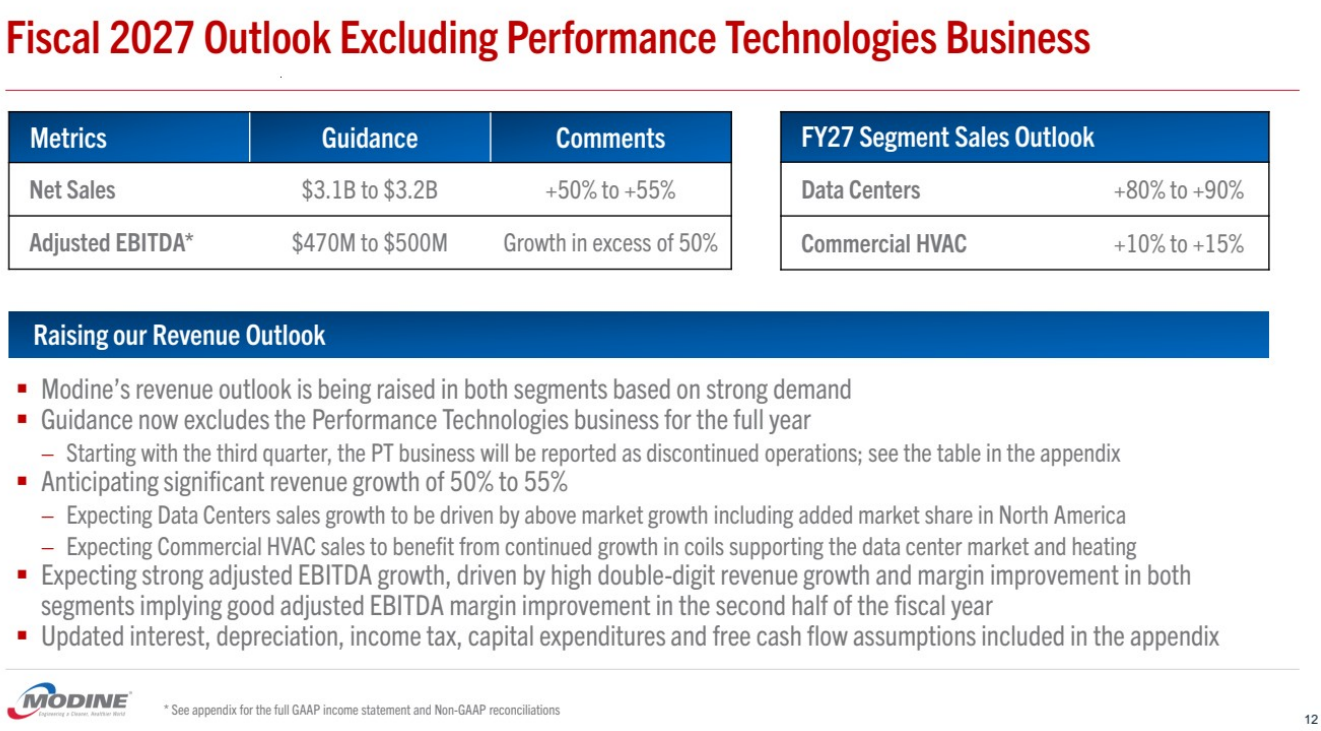

Figure 13. November 4, 2026 full-year continuing-business outlook: revenue USD 3.1-3.2 billion and adjusted EBITDA USD 470-500 million. The forward cash-flow scope is explained separately in the issuer's appendix.

Financial amounts: USD millions; shares: millions. Product counts and unit prices are labeled locally.

28. Source exhibit

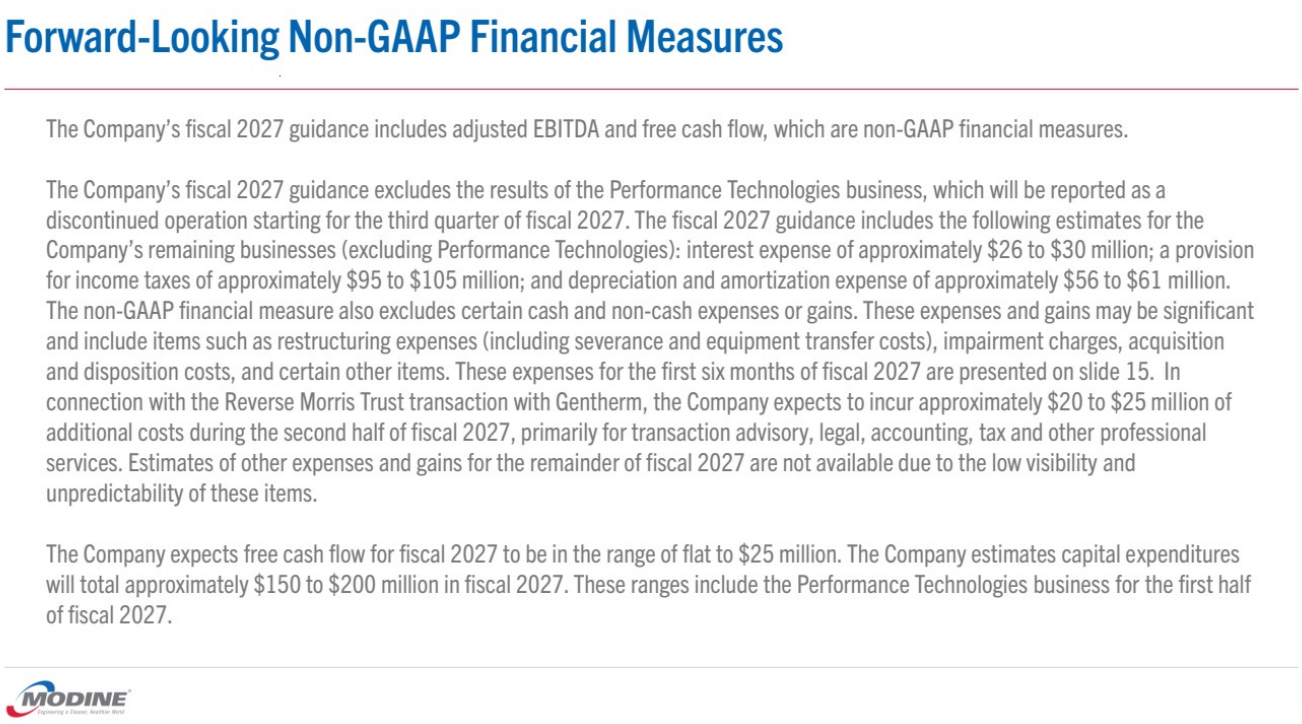

Figure 14. November 4, 2026 guidance definitions. Revenue and EBITDA exclude PT throughout the fiscal year, while the capital-expenditure and free-cash-flow ranges include PT in the first half. Additional transaction expense and remaining source limitations are disclosed.

29. Existing cooling agreement and customer concentration

The large capacity agreement covers more than USD 4 billion of Airedale data-center cooling products over calendar 2027-2029. The prior call discussed it in relation to chiller capacity, while the public product description is broader. The selected ledger allocates 80% to chillers and the balance to other data-center products, with 50-100% chiller allocation as a scope sensitivity.

The program stays within total Data Centers demand. Reserved capacity, orders, completed equipment, acceptance and recognized revenue are distinct milestones. A calendar-year invoice allocation and the original advance move together when delivery is delayed.

Primary sources: S3, S6, S14.

30. Existing agreement invoices and advance credits

Units: USD millions unless labeled.

Calendar quarter	LTA invoices	LTA credits	LTA advance remaining
Q4 2026	0.000	0.000	165.000
Q1 2027	135.316	5.582	159.418
Q2 2027	189.496	7.817	151.602

Q3 2030	0.000	0.000	4.202
Q4 2030	0.000	0.000	4.202

31. New custom AHU program

Management disclosed a custom air-handling award exceeding USD 400 million through calendar 2027. The modeled program occupies part of the air-handling demand already in the Data Centers ledger. Public materials leave its complete unit count, acceptance schedule, detailed cancellation terms and unit economics undisclosed.

The analysis tests the award against qualified air-handling capacity and broader customer construction timing. Recognition at modeled customer acceptance is an analytical convention for this program. The issuer also reports over-time contracts and associated contract assets; their detailed allocation to this award is undisclosed. The same facility may buy other Modine products, so overlap is resolved within the product allocation.

Primary sources: S2, S3.

32. Source exhibit

Figure 15. November 4, 2026 Data Centers update: record orders, the custom AHU program, new production facilities and the twenty-line chiller goal. The current active-line count and the future qualification schedule have separate dates.

33. Chiller lines and qualified throughput

The November 4 call described 13 active chiller lines and a goal of 20 by fiscal year-end. A separate calendar-year phrase creates timing ambiguity. The model uses a September 2026 source-quarter historical-average proxy of 10 productive lines to calibrate throughput; 13 is an early-November installed-line observation.

The selected ramp adds three lines and then four, with 50%, 80% and 100% qualification across their first three quarters. Each tranche depends on its paid capital. Line-equivalent capacity is an analytical constraint. Public sources leave absolute qualified output, shifts, yield and unit pricing undisclosed.

Primary sources: S2, S3, S6.

Financial amounts: USD millions; shares: millions. Product counts and unit prices are labeled locally.

34. Source exhibit

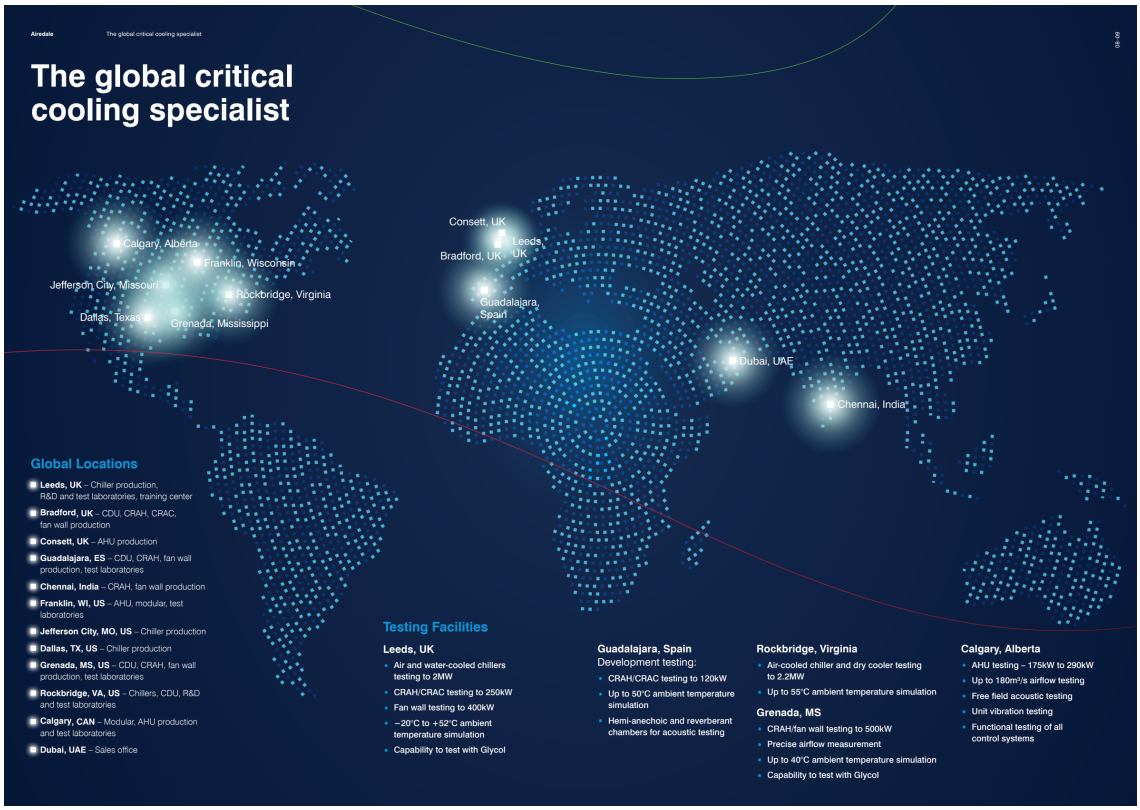

Figure 16. Airedale's February 2026 manufacturing and testing footprint. The listed sites and equipment-specific test ratings provide capability evidence; the forecast uses separately stated qualified-output assumptions.

35. Source exhibit

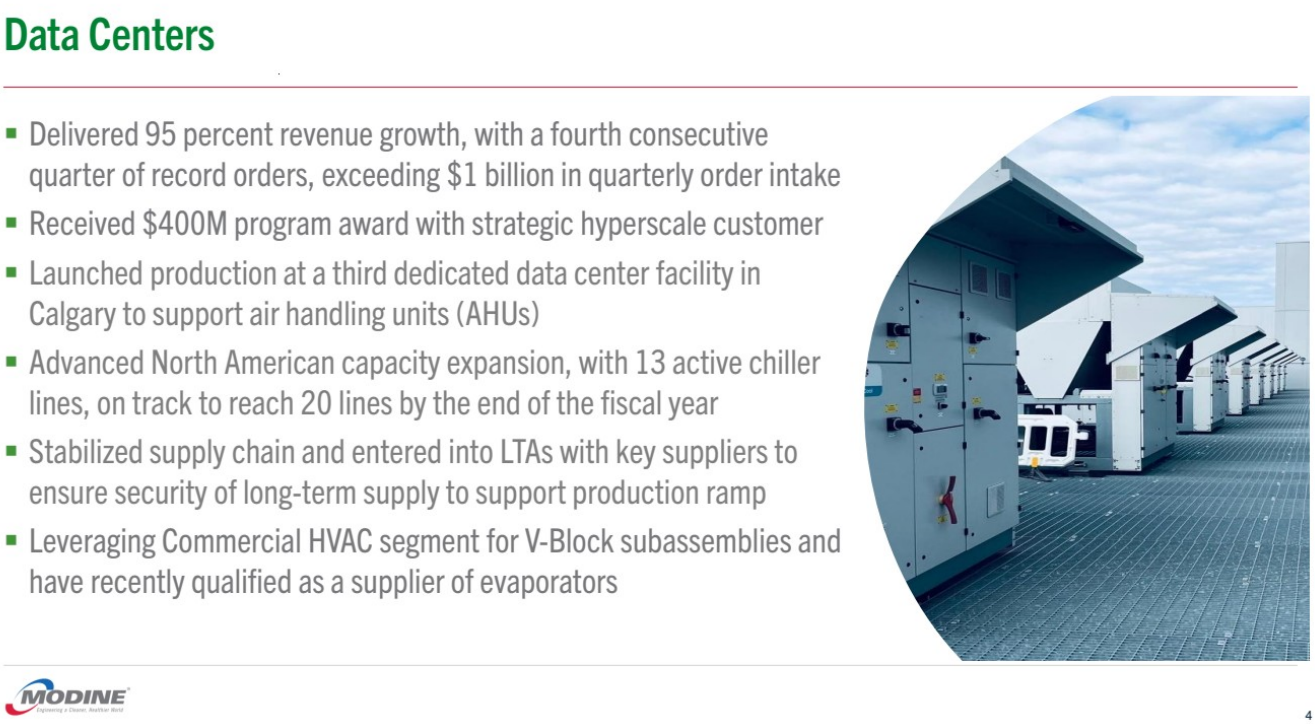

Figure 17. November 4, 2026 Data Centers update: record orders, the custom AHU program, new production facilities and the twenty-line chiller goal. The current active-line count and the future qualification schedule have separate dates.

Financial amounts: USD millions; shares: millions. Product counts and unit prices are labeled locally.

36. AHU and indoor manufacturing

Calgary's third dedicated data-center facility is entering production, and Franklin air-handling throughput is expanding. These facilities support different flows from the chiller ramp. The model keeps air-handling and indoor-product capacity separate and applies shared customer timing and qualification conditions.

Output beyond the dated footprint requires paid, qualified growth capital. Selling-price sensitivities preserve physical capacity. Public sources leave bundle-level air-handling output undisclosed; proportional capital-tranche allocation therefore remains a proxy that preserves the selected full-funded reference.

Primary sources: S2, S3, S5.

37. Components, logistics and material-price recovery

Management described a 375 basis-point material-cost headwind in the September quarter and at least 250 basis points of recovery from agreed customer pricing. Supplier actions include a fan agreement, a second fan supplier's twelve-month blanket purchase order and an evaporator agreement. A compressor agreement remained under discussion.

The selected model uses one invoice-price and variable-cost path for recovery. Fixed labor, supplier costs and qualification effects remain separate. The disclosed recovery is a margin diagnostic; a second standalone 250 basis points would count the same commercial action again.

Primary sources: S2, S3.

38. Source exhibit

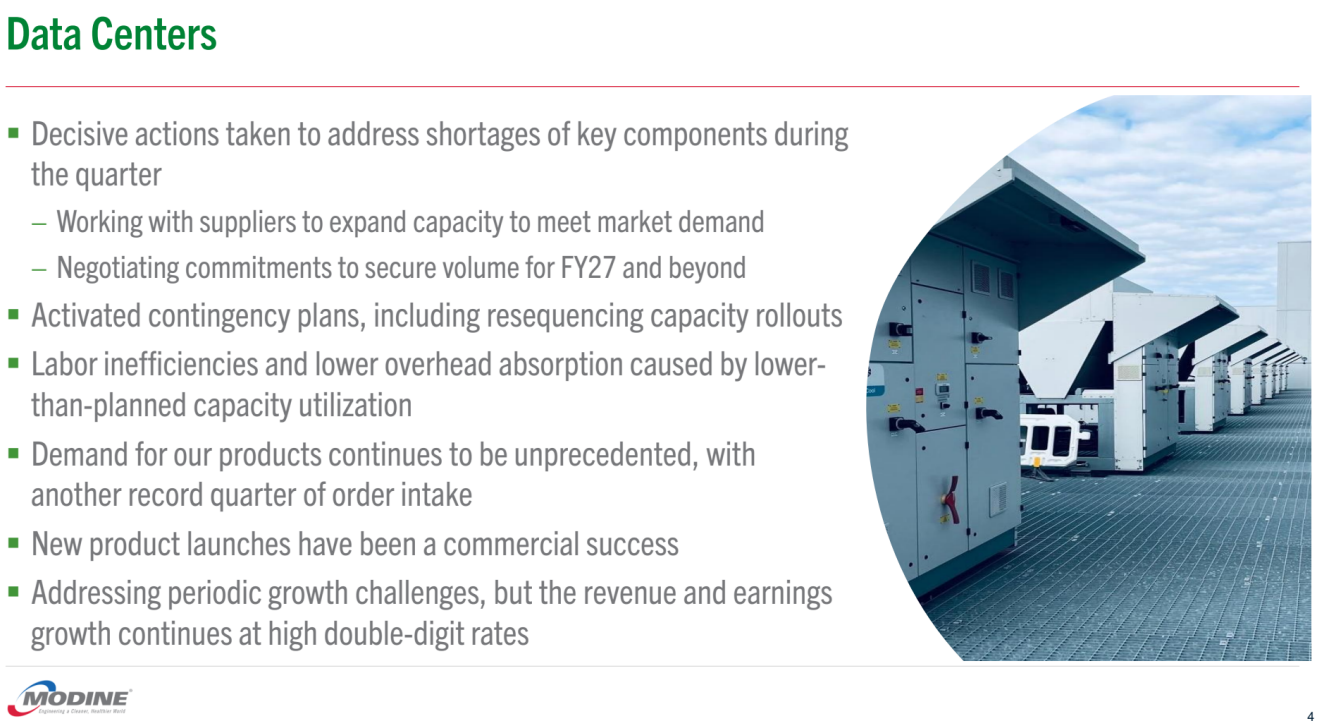

Figure 18. The July 2026 earnings presentation describes component shortages, factory resequencing and underused labor during the expansion. The November call supplies the current update on supplier agreements and delivery performance.

39. External coils and internal supply

Commercial HVAC supplies internal evaporators and subassemblies to Modine's Data Centers business. External demand includes radiator heat exchangers for direct-to-chip liquid cooling. The model gives that external opportunity a separate conditional payoff and preserves internal flows at matched carrying cost.

Financial amounts: USD millions; shares: millions. Product counts and unit prices are labeled locally.

Coil success is linked to execution: selected conditional probabilities are 70%, 50% and 20% across timely, lagged and strained states. Dedicated paid capacity and application support are included. The ledger removes reference overlap before recognizing incremental external sales; internal transfers are eliminated on consolidation.

Primary sources: S3, S5.

40. Incremental coils and application costs

Units: Revenue and support: USD millions; internal coils: physical units.

Calendar quarter	New coil revenue	Included application support	Internal coils
Q4 2026	0.000	0.000	6,557.310
Q1 2027	0.000	0.000	6,277.517

Q3 2027	8.561	0.171	7,281.712
Q4 2027	8.864	0.177	7,202.025
Q1 2028	8.864	0.177	7,203.833
Q2 2028	13.064	0.261	8,090.007
Q3 2028	14.572	0.291	7,754.667
Q4 2028	14.774	0.295	7,677.004
Q1 2029	14.774	0.295	7,681.584
Q2 2029	18.974	0.379	8,896.169
Q3 2029	20.481	0.410	8,310.929
Q4 2029	20.683	0.414	8,171.040
Q1 2030	20.683	0.414	8,177.115
Q2 2030	22.783	0.456	9,467.301
Q3 2030	23.537	0.471	8,820.404
Q4 2030	23.638	0.473	8,666.222

41. Source exhibit

Figure 19. November 4, 2026 Commercial HVAC update: external coil demand, potential direct-to-chip business and internal evaporator supply. Internal transfers are eliminated from consolidated revenue.

42. Orders, residual demand and timing

Management reported a fourth consecutive record order quarter, with Data Centers order intake above USD 1 billion. Conversion depends on components, line qualification, construction readiness and acceptance.

Selected execution states carry 60%, 30% and 10% probabilities. Original-cost funded order/WIP can accumulate before acceptance. A 75% reusable and 25% specific-cost impairment proxy governs lost-order resolution. Reusable stock remains in FIFO until compatible demand consumes it. Full variable-cost prefunding is a conservative timing convention; it does not establish that every conversion step is already completed or paid.

Primary sources: S2, S3, S6.

43. Rule 16b conditional evidence ledger

Each material signal is assessed through covered revenue, delivery conditions, probability, cost and counter-trigger. Customer programs, external coils, execution timing, price recovery, capital qualification and financing have explicit overlap dispositions. Their effects must trace to product and financial ledgers.

The contribution schedule uses paired validated outcomes and identifies period, reference scope and conditional payoff. Joint timing retains dependence across products. A delivery delay creates no additional growth event; a capacity agreement becomes revenue through accepted invoices.

Primary sources: S2, S3, S6.

44. Paired contributions: revenue

Coils: switch off new external-coil success within matching execution, buyback and financing routes. Net company deltas retain internal supply and qualified-capacity effects.

Execution: replace lagged or strained operations with matching timely operations, preserving each actual coil and buyback outcome. This captures the joint timing, retention and price-execution drag with actual conditional coil incidence.

Buybacks: switch the election off within each matching route. Cash and share effects are separate; operating effects remain those of the saved model.

Units: USD millions; probabilities as labeled.

Period / signal	Probability %	Reference company revenue	Conditional increment	Weighted increment
FY2027 forecast H2; historical H1 unchanged / coils	59.000	1,701.395	0.000	0.000

CY2030	Custom AHU award inside reference	0.000	0.000	0.000

47. Signal evidence and monitoring

Units: Qualitative source scope; numeric effects are in the paired ledger.

Signal	Source and date	Overlap disposition	Counter
coils	November 4 full issuer call; 2026-11-04	New external-coil payoff occupies only its incremental scope; internal supplies and existing coil baseline are retained.	External customer qualification, awarded units, compatible capacity and actual invoice conversion.
execution	November 4 and July 30 full issuer calls; 2026-11-04 / 2026-07-30	Joint production/price/acceptance timing, with observed coil-success incidence preserved; no extra independent probability.	Components, qualified lines, on-time delivery, accepted units, margin recovery and customer readiness.
buyback	November 4 full issuer Q&A and current 10Q authorization table; 2026-11-04	Financing/share effect only; cash gates may prevent execution of an elected branch.	Board decision, actual repurchases, remaining authorization and funded cash above the selected target.

48. Product shipments and cost model

The operating ledger uses product-level nominal reference demand, frozen reference selling prices and independently editable dollar unit costs. Accepted units are limited by paid, qualified capacity. Revenue follows accepted units and invoice prices; fixed manufacturing costs remain visible during slower conversion.

Product tables distinguish original carrying cost from replacement cost, internal units from external customers, and order/WIP from accepted shipments. A selling-price sensitivity leaves factory capacity and the cost of existing inventory unchanged.

Primary sources: S1, S5.

49. External revenue composition

Units: USD millions unless labeled.

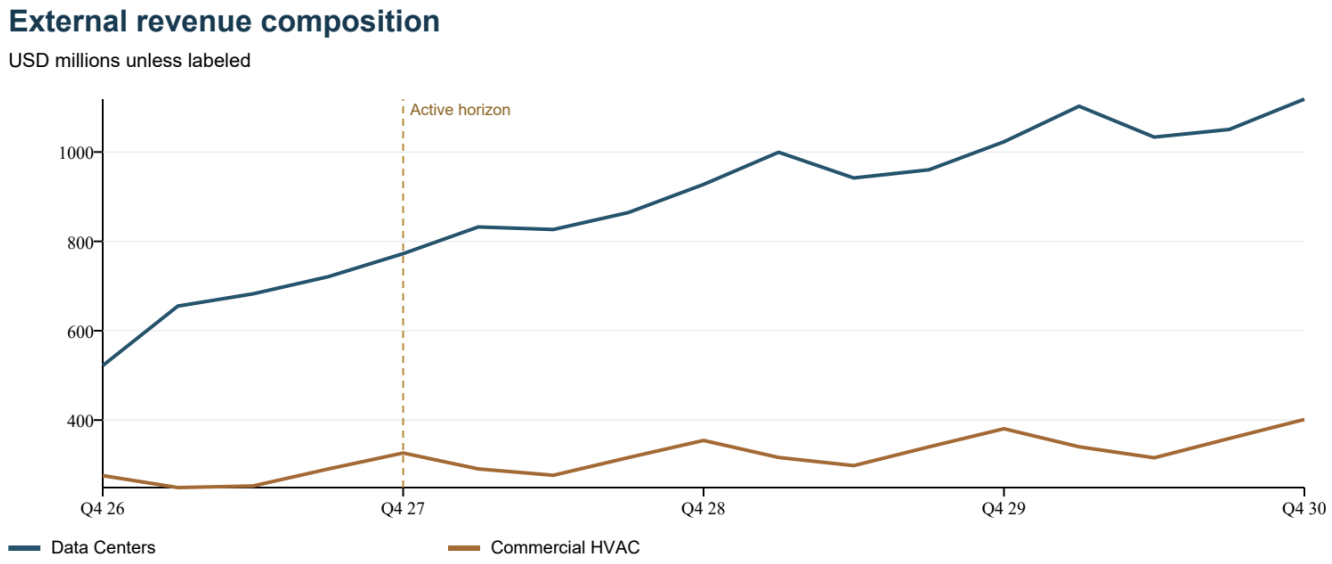

Figure 20. External revenue composition. Calendar dates, values and units appear in the accompanying table.

Calendar quarter	Data Centers	Commercial HVAC
Q4 2026	521.795	275.641

Financial amounts: USD millions; shares: millions. Product counts and unit prices are labeled locally.

56. HVAC / coils shipments, capacity and pricing

Realized invoice price equals weighted revenue divided by weighted accepted units. Replacement cost is the unit-weighted selected replacement-cost assumption. Original carrying costs determine delivered COGS.

Units: Physical units, USD per unit and USD millions as labeled; unavailable capacity means no separate product cap is modeled.

59. Current operating-cost reconciliation

The source bridge preserves continuing revenue, cost of sales and operating profit before deriving cash costs. Ordinary stock compensation, employer payroll, depreciation, leases and restructuring retain separate lines. Reference allowances are removed when the corresponding modeled expense is inserted.

The functional depreciation split assigns the selected operating-segment manufacturing share to cost of sales and corporate depreciation to operating expense. The lease calculation replaces its identified reference component once; the remaining source-allocation residual stays in ordinary costs. Consolidation timing is shown separately from commercial price or productivity improvements.

Primary sources: S1, S2.

60. Gross profit and operating profit

Units: USD millions unless labeled.

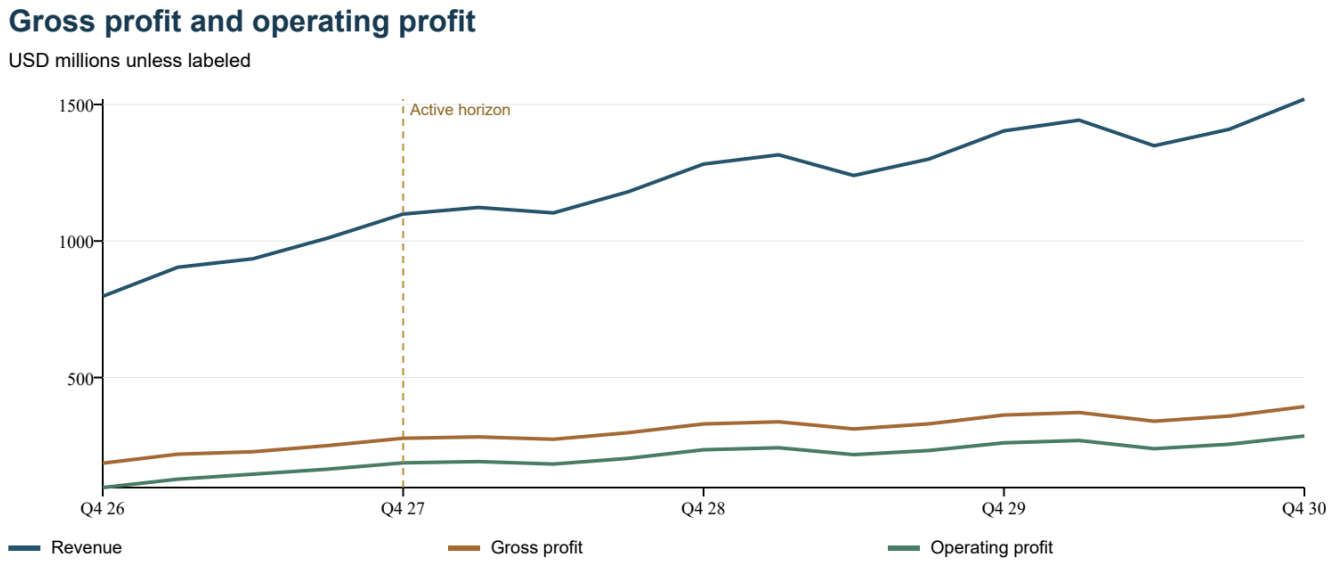

Figure 21. Gross profit and operating profit. Calendar dates, values and units appear in the accompanying table.

15

Figure 23. November 4, 2026 reconciliation of reported earnings to adjusted EBITDA and EPS. The source lists depreciation, restructuring, disposition costs and tax adjustments explicitly; ordinary compensation remains in the analytical operating model.

Financial amounts: USD millions; shares: millions. Product counts and unit prices are labeled locally.

68. Capital spending and finite assets

Capital spending supports maintenance, initial capacity tranches, coils and later growth. The model tags these uses and limits additional capacity by actual funding. Cash expenditure, commissioning and depreciation have separate schedules.

Opening construction in progress belongs to the existing asset base. Its commissioning starts depreciation without a second cash purchase. Later cohorts have finite lives and qualification lags. An unpaid management capital plan measures delayed investment and capacity. Contractual default requires evidence of an incurred obligation.

Primary sources: S1, S2, S3.

Financial amounts: USD millions; shares: millions. Product counts and unit prices are labeled locally.

69. Capital funding and finite asset base

Units: USD millions unless labeled.

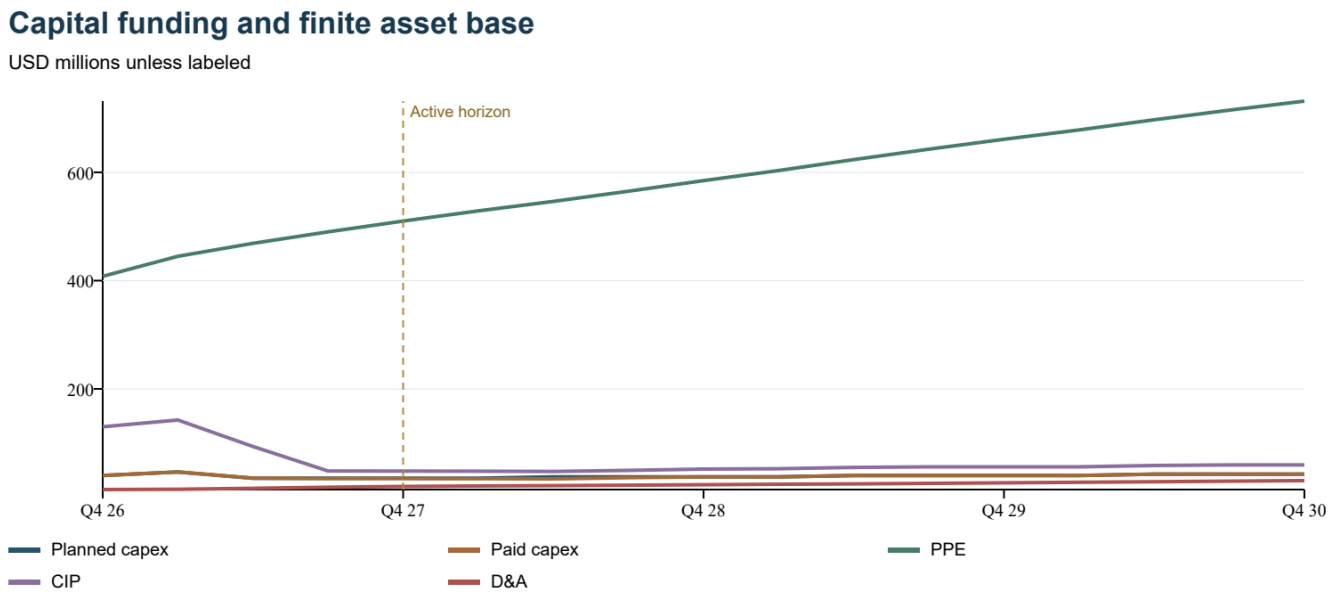

Figure 24. Capital funding and finite asset base. Calendar dates, values and units appear in the accompanying table.

71. Corporate costs and separation spending

The call identified roughly USD 10-15 million of temporary stranded corporate costs for fiscal 2027, including about USD 7-8 million in the second half, and separately described additional transaction costs. Operational absorption occurs through the forecast expense base as the retained business grows.

Transition services establish service and reimbursement arrangements. Exact future net receipts, costs and settlement dates remain partly undisclosed. Known separation spending, ordinary corporate payroll, transition-service assumptions and contingent closing adjustments remain distinct.

Primary sources: S1, S3, S11.

72. Retained opening balance sheet

The October opening balance sheet is reconstructed from September consolidated balances, dated Performance Technologies information and explicit allocations. The separation produced a USD 155.991275 million distribution and an additional cash transfer, followed by the disclosed USD 198.6 million revolver repayment. The separate USD 250 million SpinCo debt transferred to Gentherm.

The full retained closing ledger and final working-capital adjustment remain unpublished. The June pro forma provides earlier allocation context. Provisional retained cash, working capital, leases, pension and taxes therefore carry separate source dates and sensitivities.

Primary sources: S1, S7, S8, S9, S10.

73. Selected opening reconstruction

The selected October allocation uses dated source balances and explicit assumptions. A complete retained closing balance sheet is unpublished.

Units: USD millions.

Figure 25. October 7, 2026 unaudited pro forma balance sheet for June 30. The retained illustration shows cash of USD 54.1 million and the transaction debt repayment. The current model separately reconstructs the later October opening position from newer source balances and explicit allocation assumptions.

75. Working capital and inventory

Inventory rose from USD 506.1 million in March to USD 697.5 million in September; the cash-flow inventory movement used USD 194.5 million. Management linked the build to the ramp and described substantial common content. Selected retained opening inventory remains about USD 511.4 million, with an estimated USD 140.3 million finite anticipatory pool and a separate recurring buffer.

Recurring days use the buffer and frozen cash-cost denominator. Ramp lots enter compatible production at original FIFO cost, creating no initial cash or equity gain. Customer terms typically do not exceed 90 days; the point-in-time receivables-days proxy carries ramp-timing uncertainty.

The opening-stock classification is financially material. In the zero-ramp-pool sensitivity, the entire opening balance remains in the recurring-buffer convention. A strained path first becomes unfunded in Q2 2027, and the peak unpaid-obligation proxy reaches USD 87.1025 million. The selected pool remains a low-confidence allocation assumption with this explicit downside.

Primary sources: S1, S3.

Financial amounts: USD millions; shares: millions. Product counts and unit prices are labeled locally.

76. Original-cost inventory components

Units: USD millions unless labeled.

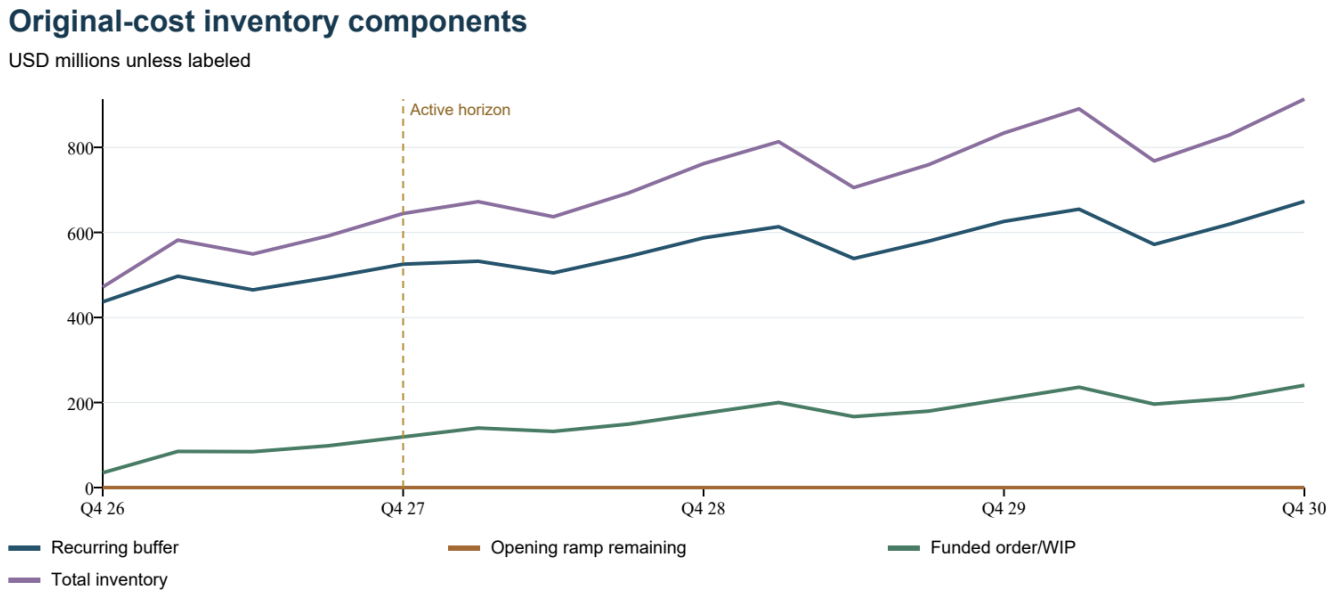

Figure 26. Original-cost inventory components. Calendar dates, values and units appear in the accompanying table.

79. Source exhibit

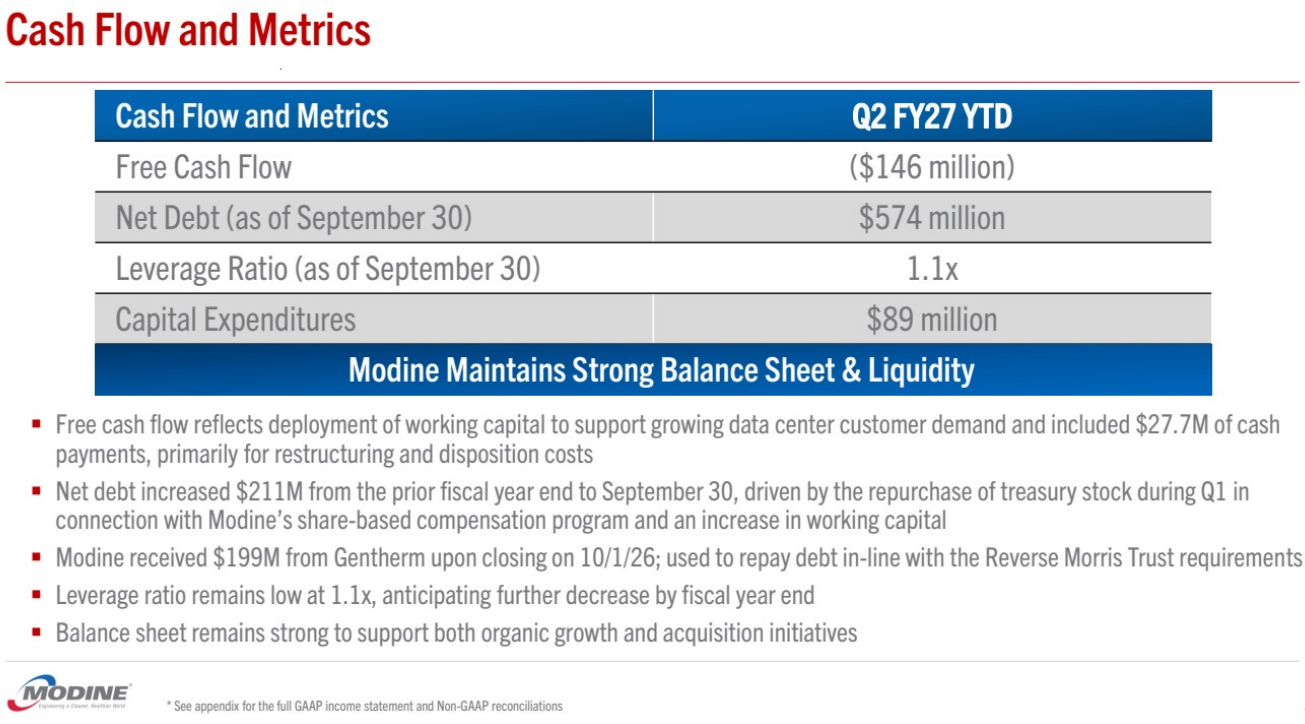

Figure 27. November 4, 2026 cash summary. The negative first-half free cash flow and September net debt include Performance Technologies before the October separation. Closing receipts were used to repay debt.

Financial amounts: USD millions; shares: millions. Product counts and unit prices are labeled locally.

80. Customer advances and cash collections

The strategic customer's USD 165 million advance was already received. The ledger credits 4.125% of eligible actual agreement invoices against the remaining balance. Other opening contract liabilities of USD 44.4 million have a separate finite release schedule.

Credits reduce billable receipts and receivables. They create no second revenue or new funding at release. Related tax assets are consumed with matched usable offsets. Contract assets include unbilled work and reimbursable tooling, but the reviewed notes leave dated billing and cash recovery undisclosed.

Primary sources: S1, S3, S10.

82. Debt and financing constraints

Both the revolver and term loan mature July 10, 2030. The July 2025 refinancing extended facilities previously due October 2027, and the December 2025 amendment expanded revolving capacity from USD 400 million to USD 550 million. Extension provisions require lender participation and leave nonextending claims payable. The reported loan covenants use defined net leverage capped at 3.5 times and interest coverage of at least 3 times. The model applies a stricter eligibility proxy of 3 times gross leverage and 4 times coverage; it does not assert a lender-certified covenant calculation.

Maturity-deficient strained outcomes use selected 90% bank refinancing and 10% capped equity. Bank terms assume USD 450 million face capacity, 7% coupon, 1.5% fee and five years. Equity is limited to USD 500 million gross and 8 million shares, with 5% costs and a fixed discounted price proxy. Proceeds cover dated obligations and a USD 75 million liquidity target. Unavailable capital remains a separate stress. The validated baseline briefly reaches USD 67.901 million in Q1 2028, a USD 7.099 million shortfall to the analyst liquidity target, and returns above the target in Q2 2028. All baseline incurred obligations are paid.

Primary sources: S1, S4, S12.

83. Bank debt and other financial claims

Units: USD millions unless labeled.

85. July 10, 2030 maturity settlement by conditional route

Closing cash is the July 10 dated balance after selected capital funding, old principal, nine days of old-bank interest and commitment fees, and fee-net financing. It excludes presumed pre-close operating receipts. The new loan accrues interest for 83 days in Q3 2030.

Units: USD millions; the event occurs in Q3 2030.

State	Old principal	Old cash cost	New loan face	Equity gross	Closing cash

Financial amounts: USD millions; shares: millions. Product counts and unit prices are labeled locally.

86. Replacement debt, issuance costs and equity proceeds

Issuance costs reduce debt carrying value. The selected new bank loan has a 7% coupon, five-year term and annual principal amortization of 5% of original face. The first 1.25% installment is due December 31, 2030; the remaining balance is due July 10, 2035. Future financing is conditional.

Units: USD millions; new equity shares in millions.

87. Pension and operating leases

The selected USD 12.3 million pension claim is a conservative opening proxy anchored to a dated total and retained-plan obligations. The USD 5.7 million alternative combines different source dates. Neither establishes an actual October actuarial settlement.

Operating leases have finite liability, right-of-use asset, cash and expense schedules. Their retained allocation is uncertain. The modeled lease component replaces the corresponding embedded cost once; the allocation residual remains in ordinary cost. Pension service, interest and benefits follow separate operating, financing-cost and cash lines.

Primary sources: S1, S4, S8.

88. Pension and lease cost conversion

90. Existing employee awards

The retained opening unrecognized award cost is modeled at USD 38.3 million after the Performance Technologies allocation. That grant-date cost survives movements in the current stock quotation. Virtual units and remaining vesting schedules are estimated because final award rosters and adjustment factors are unpublished.

The opening cost already incorporates its reported forfeiture estimate, so another haircut is omitted. Employee withholding, employer payroll taxes, service expense and shares follow separate dates. Options have finite terms. The baseline assumes zero exercise cash, and the completed sensitivity roster contains no dedicated option-exercise case.

Primary sources: S1, S4, S8.

102. New awards, authority and share denominator

Future grant budgets become finite cohorts using the selected reference price and service schedule. Performance awards carry a separate legal maximum reserve. Awards that exceed available plan capacity become ordinary cash compensation over the matching service period, preserving labor cost.

The filing reports 80 million common shares authorized and 57.6 million issued including treasury. Financing capacity uses gross issued shares plus reserved awards and options. Repurchases and withholding do not replenish authorization in the conservative convention. Full financing shares enter legal and end-window claims at issuance; weighted-average EPS shares serve a separate calculation.

Primary sources: S1, S4, S8.

103. Legal issuance authority and shareholder returns

Units: Shares: millions; buyback cash: USD millions.

105. Book tax and cash tax

Book tax, current tax expense, payable settlement and cash tax remain separate. The September report includes legal-restructuring expense and earlier award benefits whose scope and timing cannot be repeated mechanically. Permanent nondeductible compensation is distinguished from temporary vesting differences.

The selected convention gives one permitted deduction to eligible vest value and tracks its finite deferred-tax asset. Cash-retention wages and employer payroll remain ordinary deductions. Advance-related offsets reduce the matching asset once, subject to usable current tax. The sources provide no general near-term prepaid-tax recovery schedule.

Primary sources: S1, S4, S10.

106. Book tax and cash tax

Units: USD millions unless labeled.

108. Quarterly financial statements

The quarterly statements combine the same product, cost, asset, award, tax and funding ledgers. Revenue, gross profit, operating profit, net income, operating cash flow and free cash flow retain their accounting definitions. Margins use ratios of aggregated amounts.

The cash bridge separates purchases from delivered original-cost stock, credits from new customer cash, capex from depreciation, and debt proceeds from revenue. Each balance has an opening amount, identified movements and a closing amount. Infeasible cases retain their unpaid obligations.

Primary sources: S1, S2.

109. Temporary cash-target shortfall

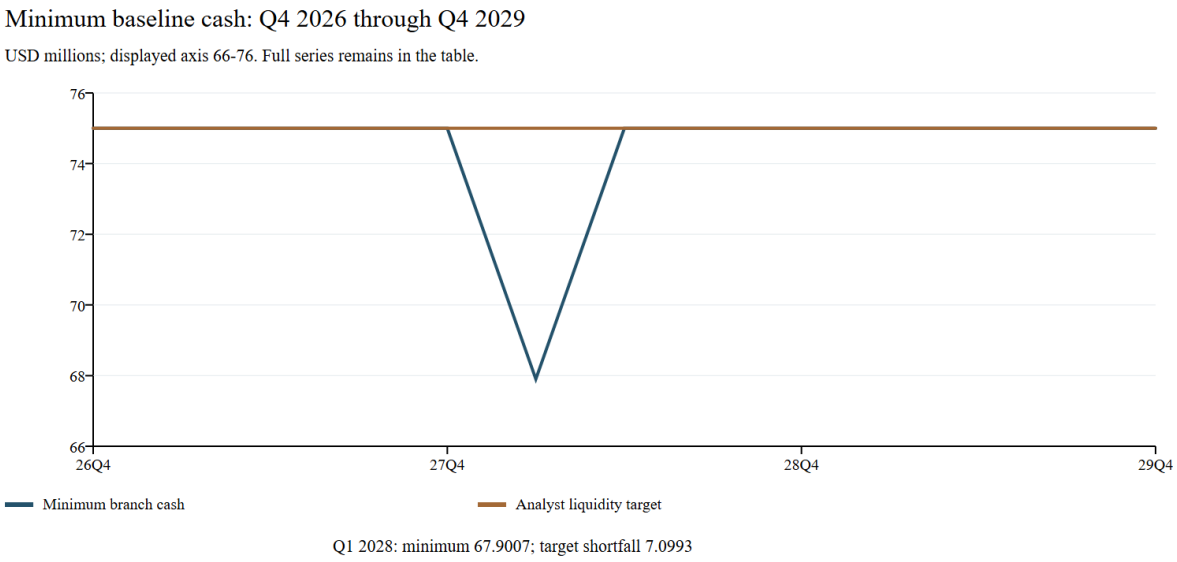

Figure 30. Focused cash window of USD 66-76 million through Q4 2029. The complete 17-quarter cash values remain in the cash-flow table. The strained no-coils baseline reaches USD 67.901 million in Q1 2028 and returns above the USD 75 million analyst target in Q2 2028.

110. Closing balance sheet control

Units: USD millions unless labeled.

Figure 33. November 4, 2026 net-debt and free-cash-flow reconciliation. September carrying debt of USD 724.3 million and cash of USD 150.6 million precede the October repayment; six-month free cash flow is negative USD 145.6 million.

115. Joint outcomes and funding feasibility

Execution, coil success and discretionary buybacks share the selected dependence structure. The financing fork applies when dated maturity creates a funding need. Equivalent financing routes without a need can be combined for display while preserving probability mass. The buyback election has 35% probability and 65% nonelection, with actual purchases still limited by authority and cash tests. External-coil success probabilities of70%,50% and 20% are conditional on the 60% timely,30% lagged and 10% strained execution states. The 90% bank and 10% equity fork applies only to actual maturity funding needs.

Lender eligibility uses completed trailing results and pro forma debt. The conservative screen adds the annual new coupon to trailing interest; actual expense uses dated balances. Every case is checked against its face, fee, share and liquidity constraints. Unavailable capital carries its shortfall in a separate stress. The USD 75 million liquidity target is an analyst assumption; it is separate from contractual covenants.

The approved baseline reaches minimum cash of USD 67.9007 million in calendar Q1 2028 in the strained cases without successful external coils. This is USD 7.0993 million below the liquidity target. Strained cases with coils reach USD 70.0620 million. Dated obligations remain paid in this baseline; the reserve undershoot and funding failures in separate stresses are reported distinctly.

Primary sources: S3, S12.

Financial amounts: USD millions; shares: millions. Product counts and unit prices are labeled locally.

116. Conditional routes and overlap

Units: Probabilities; conditional events share their parent execution state.

Scope	Probability and condition
Execution	Timely 60%; lagged 30%; strained 10%.
Coils within execution	Success 70% / 50% / 20% in timely / lagged / strained; aggregate 59%.
Buyback election	35% elected; 65% nonelected, followed by actual cash and authority limits.
Maturity funding	90% bank / 10% equity only where dated obligations require new capital.
Display consolidation	24 latent routes reduce to 16 distinct baseline outcomes. All latent routes remain live in stresses.

117. Joint outcomes and funding status

Units: Cash/debt: USD millions; shares: millions; probabilities: percent.

Outcome	Probability %	Final cash	Final debt	Final diluted shares
T-C0-B0-P	11.700	1,507.737	0.131	53.912

S-C1-B1-E	0.070	458.199	0.131	60.103

118. Valuation and rolling four-quarter derivation

The preserved valuation uses 20 times current-plus-next-three-quarter fully expensed GAAP-style operating profit, subtracts selected gross financial debt and pension at the end of that window, and divides by end-window diluted common. Cash has no separate add-on. Transaction cash and the related debt repayment already enter the opening financial bridge; there is no additional distribution-value add-on.

Each outcome is valued using its own profit, claims and shares before weighting. The tables retain full precision and rolling dates. Historical calendar Q3 2026 and earlier forecasts keep their original information vintage outside the refreshed current-period calculation.

Primary sources: S1.

119. Calculated rolling ceilings

Units: Operating profit/claims: USD millions; diluted shares: millions; ceiling: USD per share.

Calendar quarter	Window end	F4 OP	End debt	End pension	End diluted shares	Ceiling USD/share
Q4 2026	Q3 2027	535.366	375.529	11.936	53.473	192.993

120. Dated active-horizon comparison

The October 7 figures retain their original vintage. Current aggregate OP, claims and shares are weighted diagnostics. The selected ceiling weights each complete conditional per-share result; dividing the weighted inputs produces USD 281.542849 and is a separate diagnostic. The method remains 20 times fully expensed operating profit.

Units: OP and claims: USD millions; shares: millions; ceiling: USD per common share; change: percent.

Measure	October 7 published	November 5 selected
F4 operating profit	954.067	766.991
End-window financial claims	404.950	265.098
End-window diluted shares	55.200	53.543
Ceiling USD/share	338.340	281.579
Change percent		-16.776

121. Active Q4 2027 state-by-state derivation

Each row computes (20 × F4 OP - end debt - end pension) ÷ end diluted shares. Probability weighting is applied to the resulting per-share amounts. The approved weighted result is USD 281.579176012278 per share.

Units: OP/debt/pension: USD millions; shares: millions; ceiling: USD per common share.

State	Probability %	F4 OP	End debt	Pension	End shares	Ceiling

123. Rolling valuation profile

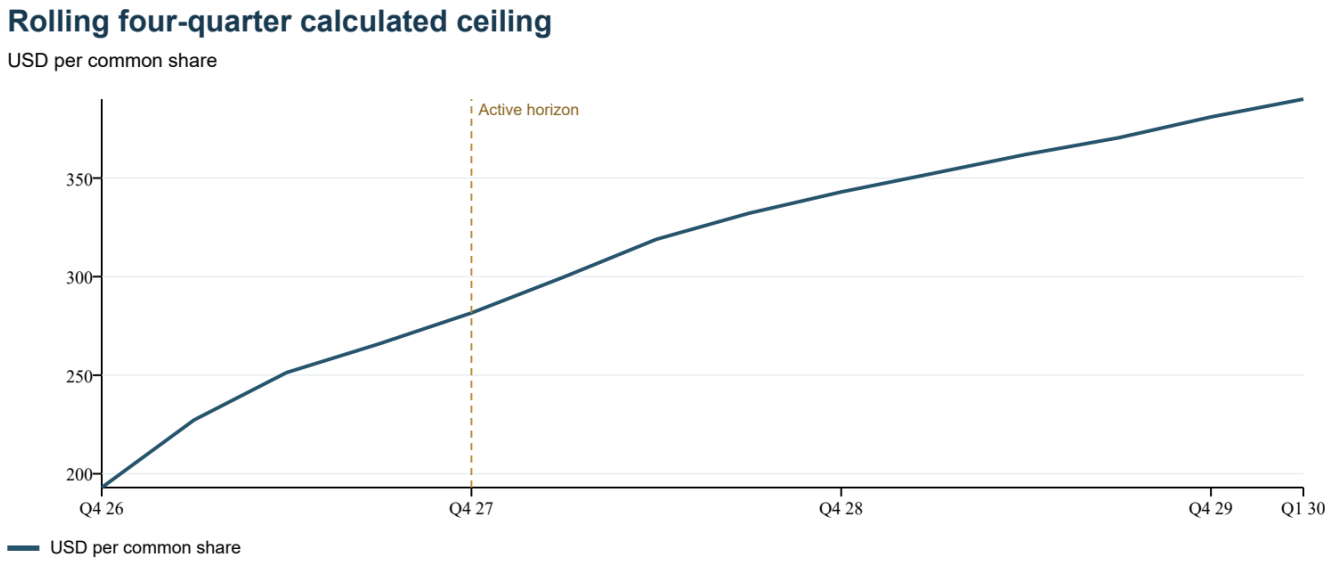

Figure 34. Fourteen complete calendar-quarter windows. The last three quarters lack a complete forward window and retain blank ceilings.

Financial amounts: USD millions; shares: millions. Product counts and unit prices are labeled locally.

124. Incomplete forward windows

Units: Blank ceiling: fewer than four forecast quarters; no terminal extrapolation.

Calendar quarter	Ceiling
Q2 2030	
Q3 2030	
Q4 2030	

125. Sensitivities and source-guide comparison

Sensitivity results are reported only for cases actually run through the validated model. Relevant questions include acceptance, prices and costs, physical capacity, retained balances, stock classification, credit timing, awards, taxes and finite refinancing.

Management comparisons retain fiscal-year and continuing-business scopes. The cash guide includes the disposed business in its first half. Any modeled revenue, margin or cash shortfall is shown with its operating bridge. Parameters are selected from economics and evidence, with the guide comparison providing a diagnostic.

The approved baseline combines reported first-half free cash flow of negative USD 145.6 million with modeled second-half free cash flow of positive USD 31.3914 million. The resulting fiscal 2027 total is negative USD 114.2086 million, below the company's USD 0-25 million guide. The comparison retains the disposed business in the reported first half and the continuing business in the modeled second half.

All 54 financial cases were independently reconstructed. Six cases contain actual funding failures: unavailable maturity capital, supplier costs 5% higher with prices fixed, slower collections with heavier capital spending, capital spending multiplied by 20, no separate opening ramp-stock pool, and a 60 million common-share authorization cap. These cases are excluded from funded valuation conclusions.

The supplier-cost case first fails in Q1 2028 and reaches peak unpaid obligations of USD 118.8337 million. Unavailable maturity capital and the lower common-share cap first fail at the Q3 2030 maturity. The half-price equity case has positive cash and no unpaid obligations despite a USD 60.2771 million dated liquidity-target gap. The stress tables show first failure, target gaps and peak unpaid amounts separately.

Primary sources: S1, S2, S3.

126. Funding outcomes and earliest failure

The funding-failure selector is negative quarter-end cash or negative dated closing cash. The peak can occur later.

Units: USD millions; first failure scans all 24 latent routes.

Case	First negative quarter-end cash or unpaid closing	Peak unpaid obligations	Classification
Selected baseline	None	0.000	Obligations funded; target gap
Chiller relative unit cost -10%	None	0.000	Obligations funded; target gap
Chiller relative unit cost +10%	None	0.000	Obligations funded; target gap
HVAC coil relative unit cost -10%	None	0.000	Obligations funded; target gap
HVAC coil relative unit cost +10%	None	0.000	Obligations funded; target gap
September source average: 12 chiller lines	None	0.000	Obligations funded; target gap

Case	First negative quarter-end cash or unpaid closing	Peak unpaid obligations	Classification
LTA chiller allocation 50%	None	0.000	Obligations funded; target gap
Growth capital intensity 15%	None	0.000	Obligations funded; target gap
No qualified DC growth beyond existing footprint	None	0.000	Obligations funded; target gap
New-coil variable cost 82% of revenue	None	0.000	Obligations funded; target gap
Material recovery eligibility 100%	None	0.000	Obligations funded; target gap

Specific-stock impairment: 30%	66.397	8.603	8.235	112.525

Financial amounts: USD millions; shares: millions. Product counts and unit prices are labeled locally.

128. Risks and monitoring counters

Manufacturing counters include qualified lines, component availability, accepted units, aged order/WIP and on-time delivery. Customer counters include invoice conversion, agreement concentration, acceptance delays and cancellation exposure. Pricing and architecture counters include actual recovery, component cost and equipment content per facility.

Financial counters include inventory compatibility, collections, supplier payments, funded capital, separation adjustments and dated debt coverage. Four score deductions cover these distinct classes. Strong orders improve demand visibility while leaving working-capital timing and customer concentration material.

Primary sources: S1, S3, S12.

129. Source completeness and limitations

Sources include the newest two complete management calls and Q&A, current release and presentation, all current 10-Q pages, relevant annual business/risk/accounting notes, and separation, employee, tax and service agreements. Supported official credit excerpts verify maturity and extension terms; failed direct downloads remain recorded.

Key gaps are the final retained balance sheet, award-transfer roster, lease/pension allocations, unit prices and cancellation clauses, factory output, and service/tax settlement dates. Call audio was not replayed. Original exhibits retain dates. The November 13 meeting and November 18 investor event were future events at the source cutoff.

Primary sources: S1, S2, S3, S4, S6, S7, S8, S9, S10, S11, S12.

130. Primary source register

Units: Dates identify original evidence; source receipts retain exact bytes.
