Rocket Lab current investment research

Nasdaq RKLB. Research and model date 3 November 2026. Framework 8.0. Covered watchlist.

Rocket Lab combines dedicated launch, qualified spacecraft components and government satellite programs. Neutron and the proposed Iridium acquisition expand the business into larger launches and recurring communications services. Manufacturing qualification, acquisition funding and the cost of maintaining a satellite network determine how much of that opportunity reaches shareholders.

Market snapshot: 2 November regular-session close$52.07. June economic outstanding 639.132 M plus approximately 29.3 M September offering shares gives an approximate 668.432 M units and$34.805 B equity-value reference. Other post-June vesting remains outside this dated outstanding-share approximation. The valuation separately includes economic dilution.

Dated closing-price source

Selected active case

Measure	Value	Interpretation
Q4 2027 ceiling	$16.16	Nine coherent per-share outcomes weighted once
Analytical and initial workbook Base	63	38/60 points; automatic framework screenFail
F4Q external revenue	2,509.003	Q4 2027 throughQ3 2028
F4Q recurring book net income	-142.998	Includes SBC, finite amortization and book tax
F4Q conventional FCF	-77.360	Operating cash flow less cash PP&E
Valuation methods	6 x revenue then 20 x diluted EPS	Each branch changes when its own F4Q FCF and recurring net income are positive

The selected case carries substantial development spending and purchase-accounting charges. Branches reach recurring profitability at different times. The earnings handoff can reduce the calculated ceiling sharply while operating results improve. Cash constraints and debt maturities produce zero equity recovery in the specified default paths.

Business economics and competitive position

Supercycle: defense sensing, hypersonic testing, constellation deployment and replacement. Stage: established small launch and components, scaling spacecraft programs, developing medium launch.

Economic activities

Business	Customer value	Constraint and model transmission
Electron and HASTE	Dedicated orbit, timing and suborbital test trajectories	Launch slots, vehicle production, payload readiness and range availability determine executed missions. Electron revenue is recognized at launch; HASTE can recognize progress before flight.
Space Systems	Qualified components and turnkey spacecraft	Program awards become labor, material, working capital and delivery schedules. Internal components are eliminated from consolidated sales.
Neutron	Larger payload and reusable-launch opportunity	Tank and stage qualification, engine reliability, launch authorization and first-flight results govern cadence, inventory, capex and R&D.
Conditional Iridium	L-band safety, IoT, aviation, maritime and PNT services	Closing approvals, devices, spectrum permissions, retained debt and fleet replacement govern revenue and cash.

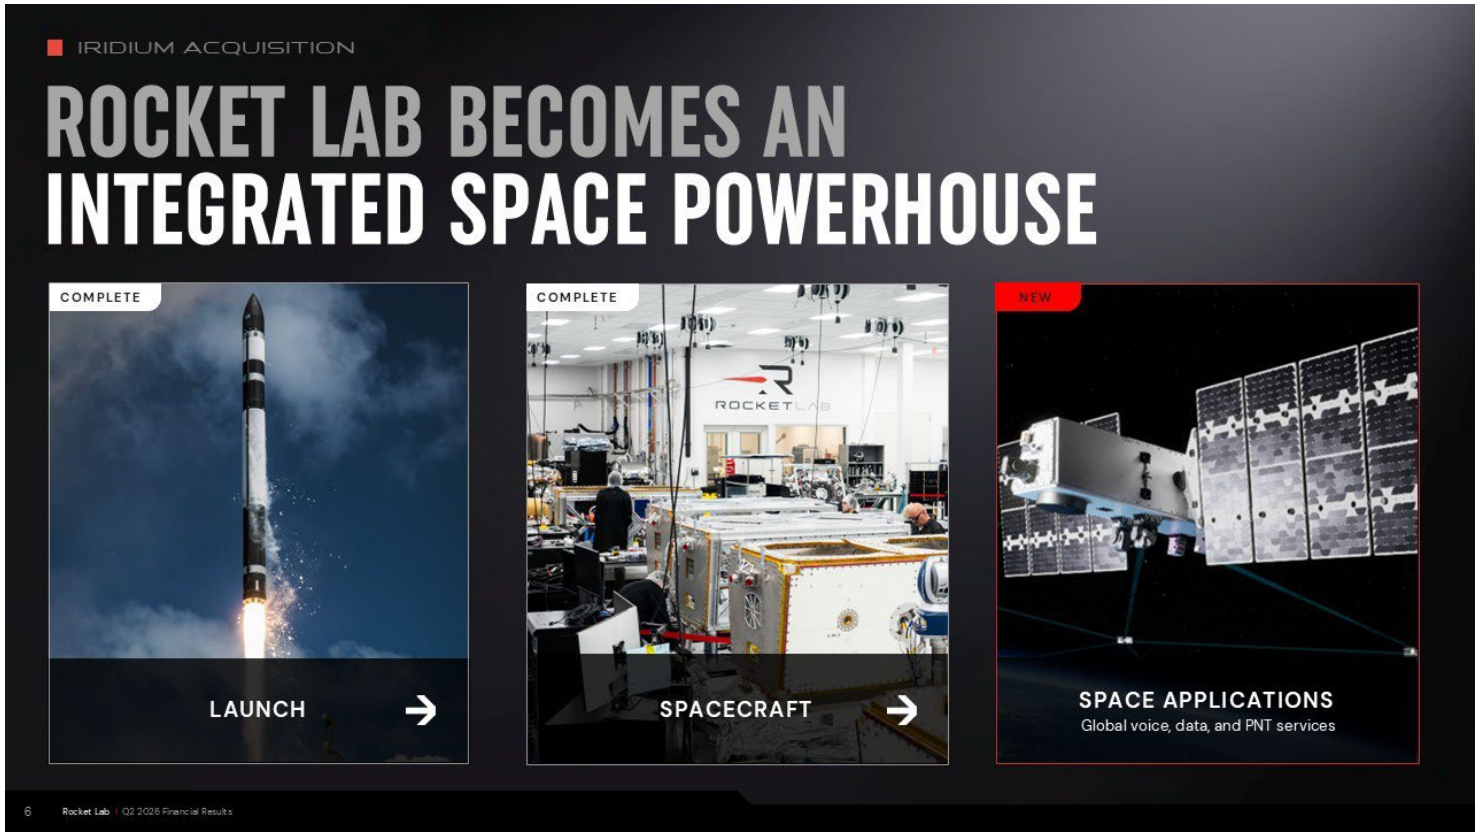

Electron serves customers that value specific orbit and schedule control. SpaceX rideshare pricing constrains commodity small-launch economics. Spacecraft and component qualifications support differentiated supply, while other primes and merchant suppliers compete across the same programs.

The most attractive market layers are qualified merchant content and recurring services that can earn across several customers. Government prime awards, a larger launch vehicle and internal constellation manufacturing each carry separate procurement, development and funding obligations.

Integrated launch spacecraft and applications

Original issuer Q2 2026 investor presentation. Source page 6; vintage 10 August 2026.

The August issuer presentation illustrates the intended end-to-end business. Iridium remains a conditional acquisition. Own components and own launches consume resources within consolidated contracts and services.

Issuer slide 6, Q22026. Full source image and original qualifications preserved.

Issuer quarterly materials

Market expansion and company capture

Market estimates establish opportunity scope. The company model follows external contracts, production and service adoption.

Space market layers

Market	Framework 2025 /2030 estimate	Selected company capture and overlap
Launch	$10 B /$25-35 B	Electron/HASTE executed missions and Neutron external paid launches. Internal constellation launches consume capacity and cash.
Satellite manufacturing	$15 B /$40-60 B	Named government and GEO cohorts plus bounded future awards, capped by manufacturing throughput.
Ground	$5 B /$15-25 B	Existing supported equipment and engineering/services business; no broad percentage-of-TAM overlay.
Data and services	$8 B /$30-50 B	Iridium conditional consolidation includes existing management projections and named service adoption.
Issuer combined opportunity	$100 B+ broad estimate	June 29 deck attributes Novaspace. A precise market-year/application allocation is unavailable.

The same government spending can appear in a program budget, a prime contract, component revenue and a launch agreement. The selected model tracks named external scopes and eliminates internal transfers. NTN, PNT and Aireon growth already present in the acquired-company projection receive no second automatic uplift.

Europe and orbital-compute opportunities have small, separately costed probability-weighted tags inside merchant growth. Their early engineering and capital needs can exceed initial gross contribution. Future orders and qualification provide the evidence needed to expand those tags.

Latest reported results and management guidance

RKLB latest reported quarter isJune 2026. September-quarter results are scheduled 9 November 2026. USD millions.

Reported results

Period	Revenue	Gross profit	GM	R&D	SG&A	OP	Net income
2025	601.799	207.181	34.4%	270.716	165.303	-228.838	-198.209
2026 Q1	200.348	76.493	38.2%	80.513	51.949	-55.969	-45.022
2026 Q2	234.066	84.576	36.1%	82.429	59.661	-57.514	-49.258

August guidance forSeptember quarter

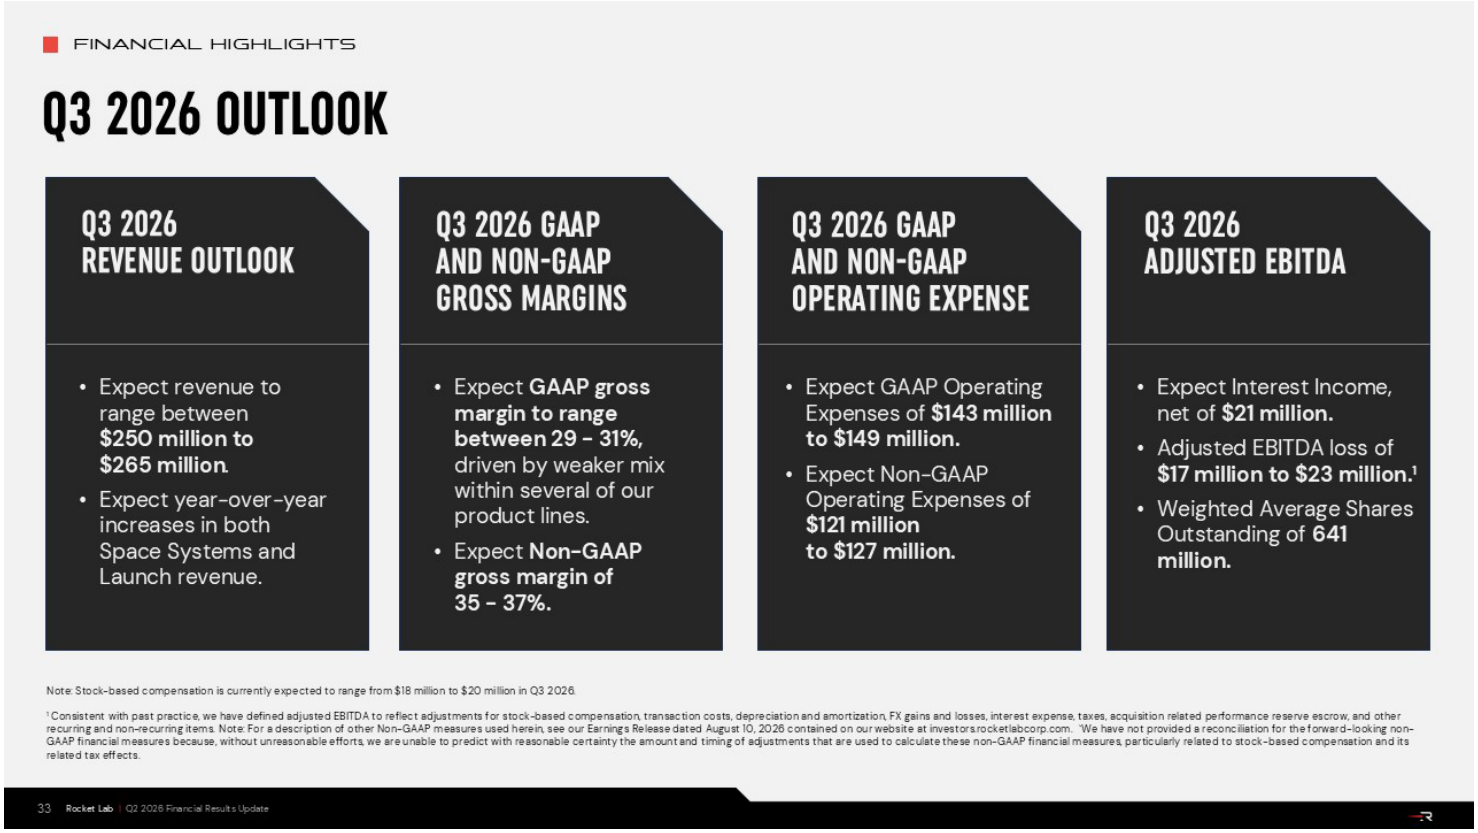

Measure	Management guidance	Selected reconstruction
Revenue	250-265	257.5
GAAP gross margin	29-31%	30.0%
GAAP operating expenses	143-149	147.828825
Net interest income	Approximately 21	21
Adjusted EBITDA loss	17-23	Within disclosed range
Weighted-average shares including preferred	641; beforeSeptember offering	Separate issued/reserved/financing share roll

Q3 2026 is a guide-based current reconstruction used to bridge cash and assets. New historical Excel displays remain blank. Q4 2026 and later financial forecasts are live. Reported GAAP gross margins are available above; a complete future consolidated GAAP cost-of-revenue allocation is unavailable. Approved equipment and service cash-cost ratios provide partial detail; the functional allocation of all recurring costs, SBC, depreciation and amortization remains incomplete. The forecast retains total operating costs, operating profit and operating margin.

Primary September-quarter guidance

Original issuer Q2 2026 investor presentation. Source page 33; vintage 10 August 2026.

The official August slide identifiesQ3 2026. It controls a conflicting quarter label in the secondary transcript. The subsequent September equity financing changes economic dilution from the guidance-date share count.

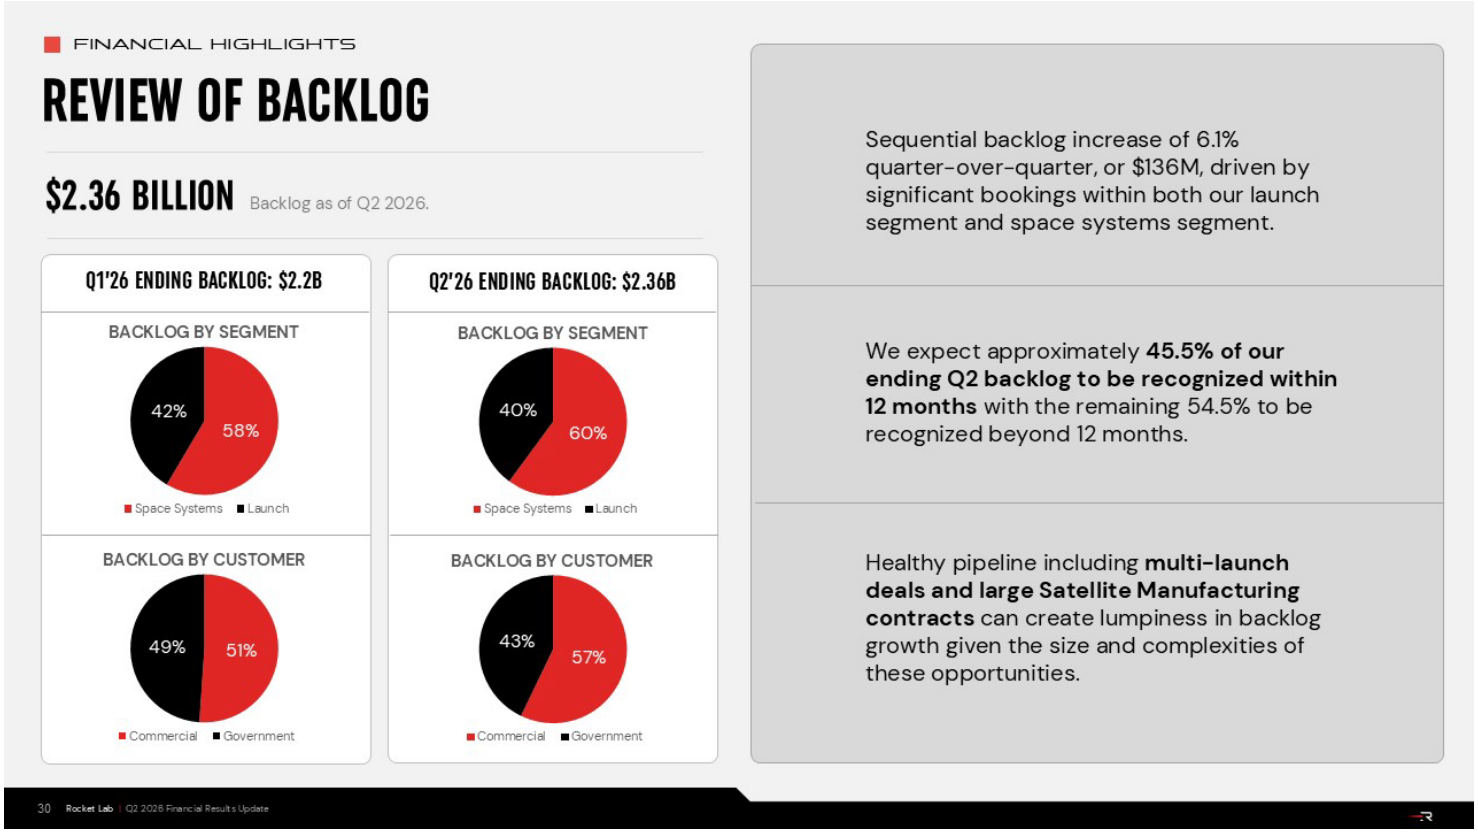

Issuer slide 33, Q22026. Full source image and original qualifications preserved.

Issuer quarterly materials

Backlog and recognition timing

Original issuer Q2 2026 investor presentation. Source page 30; vintage 10 August 2026.

June backlog was approximately$2.36 B, split 40% launch and 60% Space Systems, with 45.5% expected within 12 months. Subsequent booking headlines partly overlap this balance. Named programs and recognition schedules control the forecast.

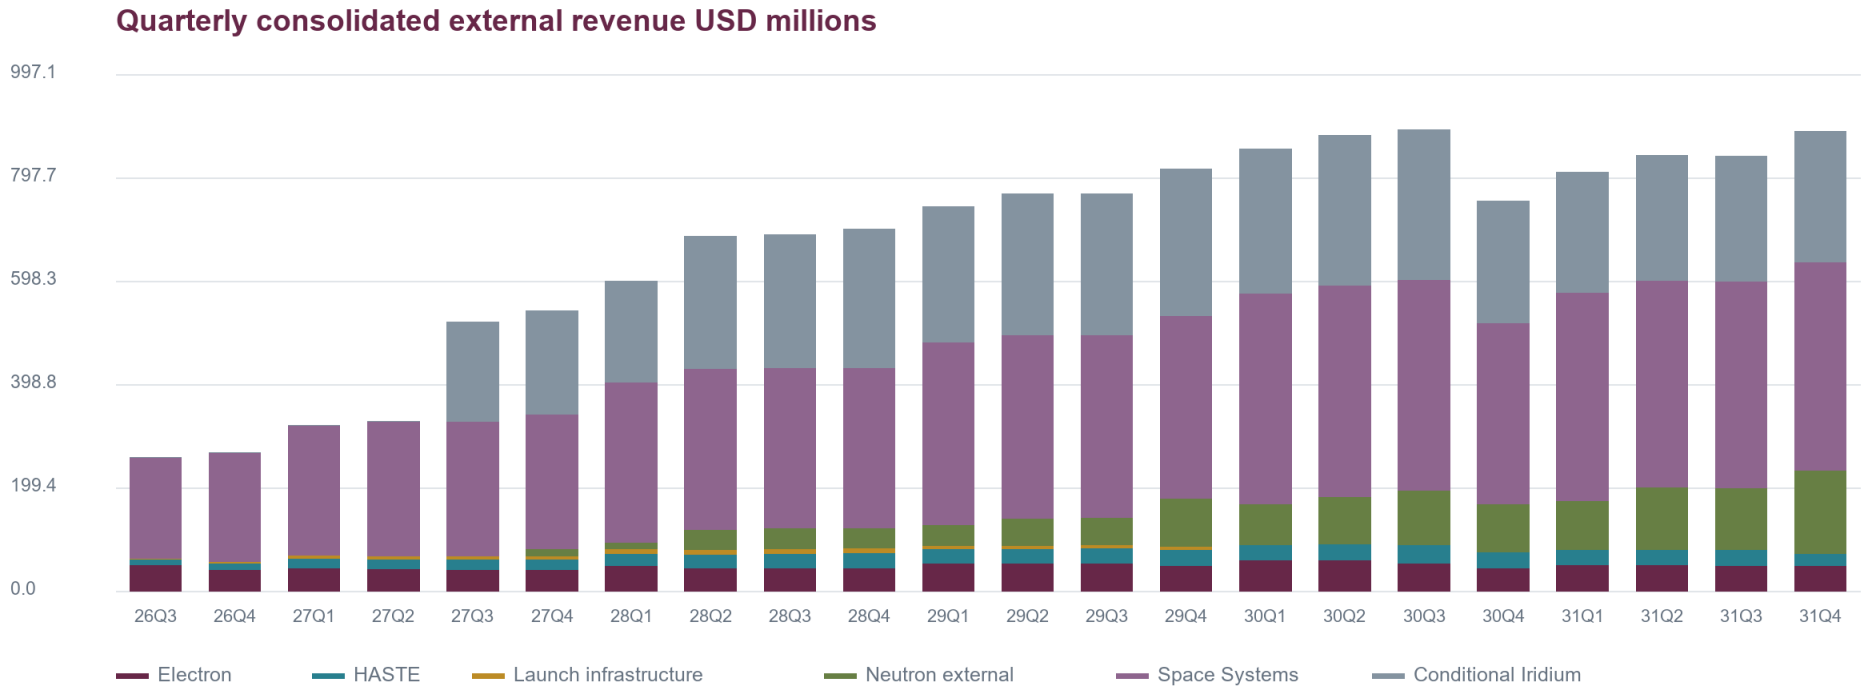

Issuer slide 30, Q22026. Full source image and original qualifications preserved.

Issuer quarterly materials

Quarterly external revenue and mix

FigureF01. All bars are Model. Q3 2026 is an unpublished reconstruction. Later quarters depend on production, award timing and merger closing.

Named external streams reconcile to total revenue. Defaulted branches have zero continuing operations.

Space Systems and conditional Iridium consolidation drive much of the modeled scale. Launch counts transmit through delivery and progress-recognition schedules. Revenue from internal spacecraft content and own launches is eliminated. The numerical table follows on the next page.

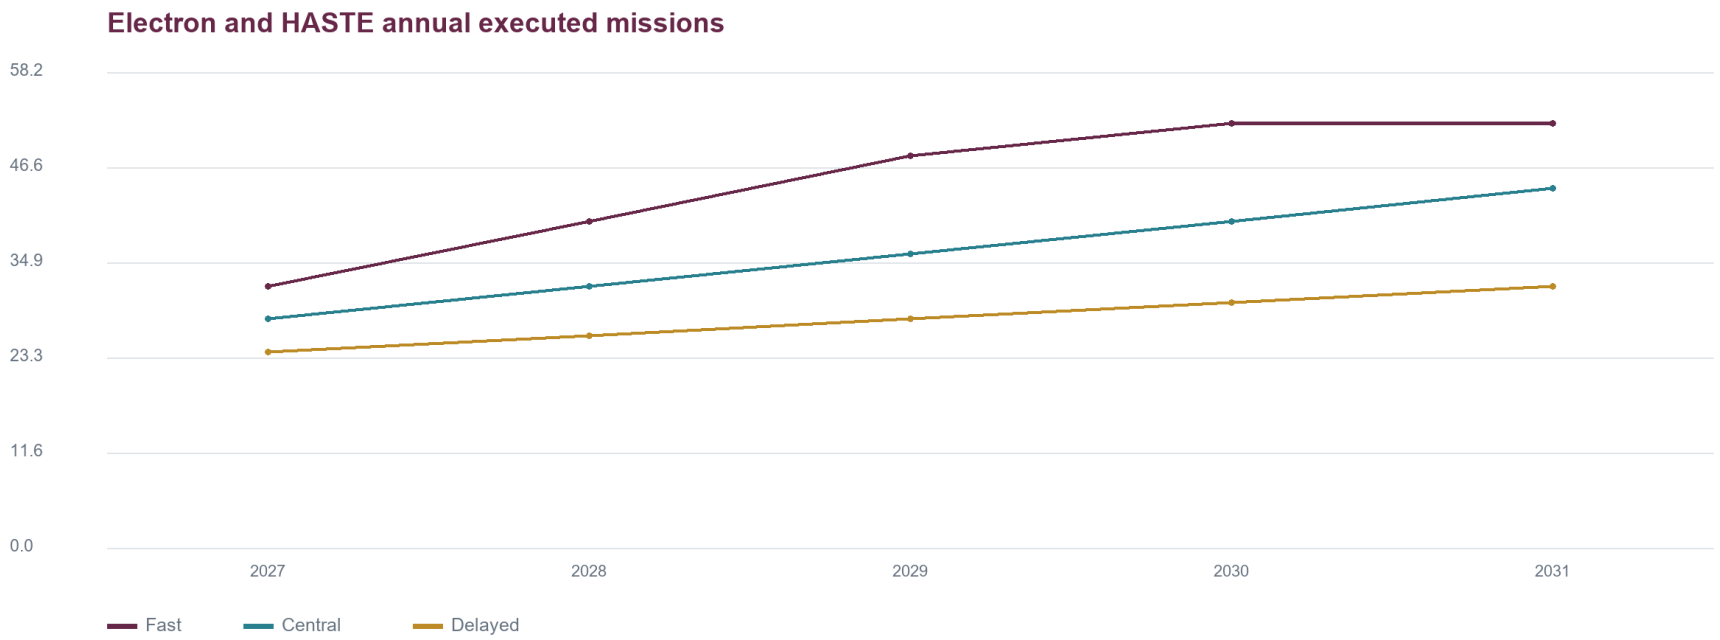

Figure F01 numerical revenue table

USD millions. Each line is a probability-weighted continuing-operation outcome. The fixed nine-branch weights sum to 100%.

Quarter	Electron	HASTE	Infra	Neutron	Space Systems	Iridium	Total

Launch production and delivery capacity

FigureF02. Annual 2027-2031 conditional operating paths. The issuer describes 52 vehicles per year of Electron/HASTE factory design capacity.

Operating marginal probabilities are 25% fast,50% central and 25% delayed. Announced design capacity requires labor, payloads, equipment and range readiness.

FigureF02 numerical values

Year	Fast	Central	Delayed	Factory design reference
2027	32	28	24	52/year
2028	40	32	26	52/year
2029	48	36	28	52/year
2030	52	40	30	52/year
2031	52	44	32	52/year

Fixed named cohorts and known remaining contracts are booked before generic demand. The generic opening fleet commitments are 42/45/48 units across the selected operating paths. The physical flight counter includes HASTE; recognized revenue follows each contract scope.

Hypersonic test contract evidence

Original issuer Q1 2026 investor presentation. Source page 9; vintage 7 May 2026.

The$190 M MACH-TB award covers 20 test flights. Its$9.5 M arithmetic average is specific to that award. The model keeps earlier completed-flight progress recognition separately identified where the exact award assignment remains unpublished.

Issuer slide 9, Q12026. Full source image and original qualifications preserved.

Issuer quarterly materials

US Space Force launch scope

Original issuer Q2 2026 investor presentation. Source page 17; vintage 10 August 2026.

The$266 M RSLP scope includes 12 launches, up to 6 options, infrastructure and continuing operations. The model separates these scopes and uses 6/3/0 optional flights across fast/central/delayed paths. The contract total cannot serve as a clean 18-flight launch price.

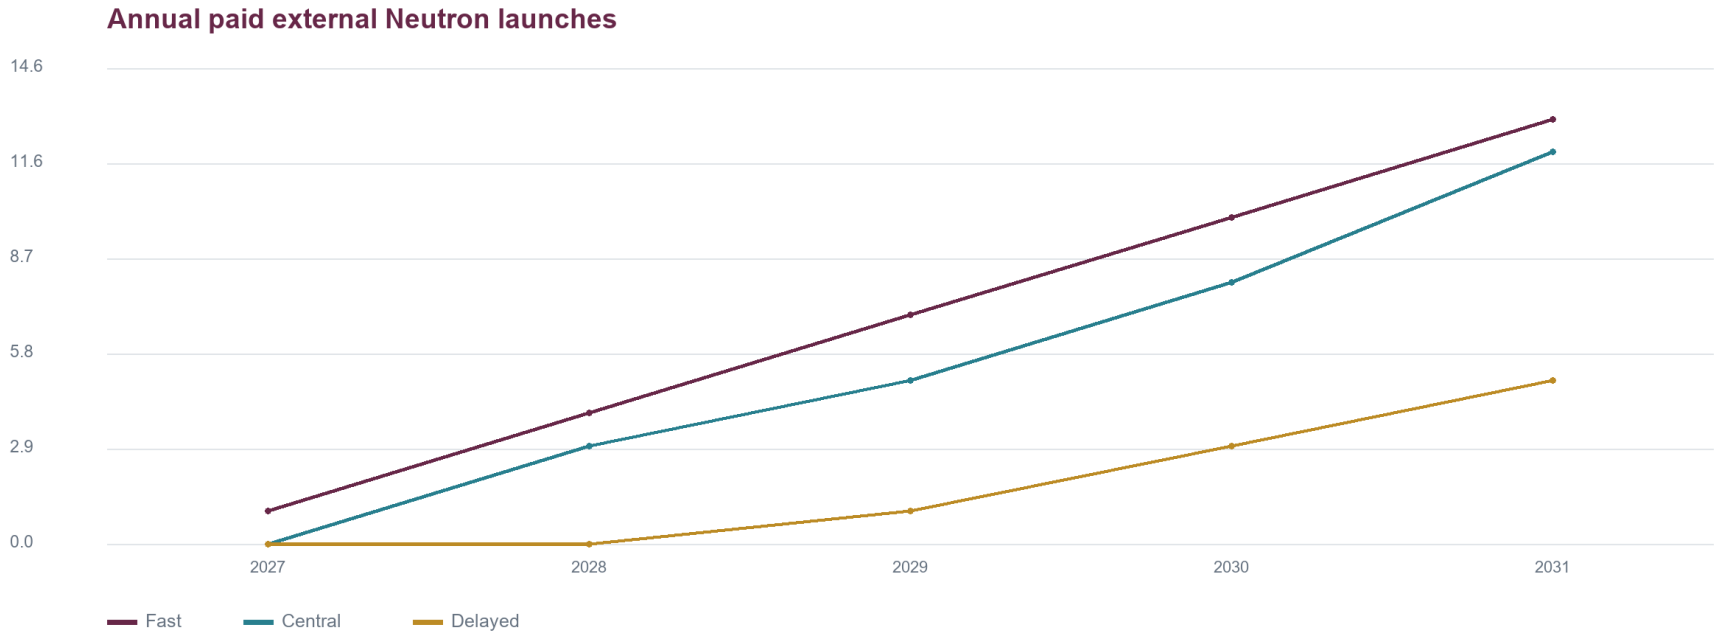

Issuer slide 17, Q22026. Full source image and original qualifications preserved.

Issuer quarterly materials

Neutron qualification and external paid cadence

FigureF03. The October 14 issuer update shifted first-flight expectations into 2027 after composite-process rework. Qualification gates determine the modeled schedule.

The selected paths carry different test/requalification dates, production costs and development spending. Own network flights are excluded from external revenue.

FigureF03 numerical values

Year	Fast paid	Central paid	Delayed paid
2027	1	0	0
2028	4	3	0
2029	7	5	1
2030	10	8	3
2031	13	12	5

Fast qualification is modeled inQ2 2027 and central qualification inQ4 2027. The delayed path has a failedQ3 2028 qualification and successfulQ2 2029 requalification. These are conditional schedules. First paid-flight timing follows the explicit quarterly input vector.

External Neutron launch demand

Original issuer Q2 2026 investor presentation. Source page 26; vintage 10 August 2026.

The August slide describes external commercial and defense demand. The selected model recognizes paid missions within its quarterly cadence and keeps bundled contract launches inside the original external contract scope.

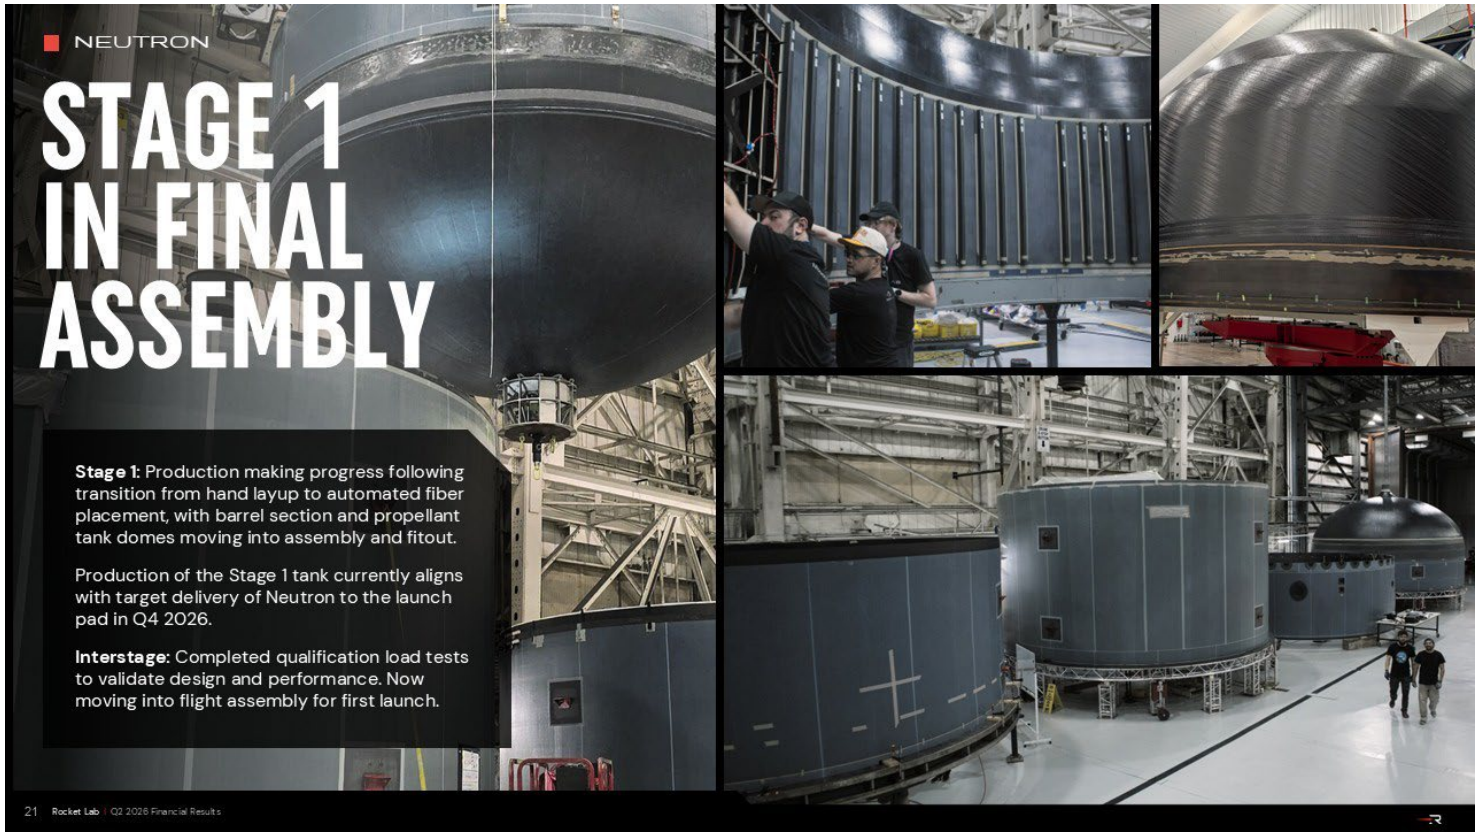

Issuer slide 26, Q22026. Full source image and original qualifications preserved.

Issuer quarterly materials

Stage one manufacturing evidence

Original issuer Q2 2026 investor presentation. Source page 21; vintage 10 August 2026.

This is the 10 August 2026 manufacturing status. The later 14 October update governs current timing. Integrated tank qualification, stage testing, engine reliability, pad readiness and launch authorization remain the economic gates.

Issuer slide 21, Q22026. Full source image and original qualifications preserved.

Issuer quarterly materials

Engine testing and qualification

Original issuer Q2 2026 investor presentation. Source page 24; vintage 10 August 2026.

Issuer engine-test progress supports technical development. Test counts alone do not establish flight readiness, successful reuse, a production unit cost or an economically achieved launch cadence.

Issuer slide 24, Q22026. Full source image and original qualifications preserved.

Issuer quarterly materials

Spacecraft programs and manufacturing throughput

Named scopes, firm/options and future pipeline are modeled separately. The remaining program balances and individual production costs include disclosed source gaps.

Principal external program cohorts

Program	Disclosed scope	Model treatment
SDA T2	489 base+26 incentives/options;18 satellites	Separate build/operations/options. Original launch delivery targetJuly 2027; service obligations extend later. ExactJune remaining dollars are reconstructed.
SDA T3	Filed 806 base+10 options;18 satellites	Final delivery forlaunch 2029. Source government announcement 805 has a different amount vintage. Options 10/5/0 by operating path.
SB-AMTI	397 total potential, build+launch+operate	Realized scopes 397/297.75/198.5; one 52.5 launch allocation remains within external contract value and physical Neutron count. Satellite/option quantities are undisclosed.
GEO	Three satellites across awards>160	160 is a floor proxy. May 21 award 90 and remaining reconstructed cohort are tracked distinctly.
Future government pipeline	Unawarded conditional company orders	Annual 2027 awards 800/500/250 fast/central/delayed, with later ramps. Manufacturing capacity, recognition queues, WIP and collection timing constrain realized sales.

Hardware, operations and GEO cash contribution margins have separate subtype queues. They precede separately retained SBC, gross depreciation and finite-intangible amortization. Existing fixed awards keep their budgets; the baseline uses fixed Electron/HASTE flight prices. A separate diagnostic applies escalation to newly booked orders.

SB AMTI build launch and operate contract

Original issuer Q2 2026 investor presentation. Source page 10; vintage 10 August 2026.

The issuer states that the potential$397 M contract includes options. The illustration does not establish a satellite count. The selected model recognizes the external build/launch/operate scope once and funds its associated manufacturing, launch and service work.

Issuer slide 10, Q22026. Full source image and original qualifications preserved.

Issuer quarterly materials

Merchant components and emerging applications

Qualified components can sell into third-party systems as well as the company spacecraft business. External/internal mix and utilization are incompletely disclosed.

Opportunity and capture conditions

Vector	Evidence	Model consequence
Solar and IMM Apex	Issuer product claim 31.5% BOL efficiency,40% lower cell mass	Qualification and paid orders determine external merchant growth. No automatic market-share overlay.
Gauss propulsion	Issuer describes 200+unit production line	The rate period is undisclosed. The model retains capacity uncertainty and eliminates internal propulsion sales.
Mynaric optical terminals	German footprint and integration intoRocket Lab	Loss normalization and external production yield remain conditional. Separate cash margins and working capital are retained.
Europe defense demand	Sovereign manufacturing and procurement opportunity	30% economic probability on a bounded tag within existing merchant growth, with direct costs, opex and capex.
Orbital compute power/components	Merchant product capability and management discussion	20% economic probability on a bounded tag within merchant growth. No duplicated Kepler launch or service revenue.

The Europe and orbital-compute tags each have conditional revenue of 10/25/50 in 2028/2029/2030. Planned expected revenue tags are 3/7.5/15 and 2/5/10 respectively. Shared capacity and delivery deferrals determine recognized revenue. Direct costs, engineering and assets are funded separately. More distant new tagged revenue is zero pending further evidence.

European manufacturing footprint

Original issuer Q2 2026 investor presentation. Source page 13; vintage 10 August 2026.

The August issuer presentation describes a German footprint and sovereign-space ambitions. Further program capture remains conditional. The selected Europe tag funds qualification, engineering and assets within merchant growth.

Issuer slide 13, Q22026. Full source image and original qualifications preserved.

Issuer quarterly materials

Gauss propulsion production line

Original issuer Q1 2026 investor presentation. Source page 14; vintage 7 May 2026.

The original slide states a 200+unit line. An annual or quarterly throughput denominator is unavailable. Internal program usage consumes capacity, and the company forecast eliminates internal sales.

Issuer slide 14, Q12026. Full source image and original qualifications preserved.

Issuer quarterly materials

Iridium acquisition and capital requirements

The model uses three merger paths and consolidates Iridium only after the selected branch closes.

Transaction and accounting

Item	Selected treatment
Shareholder approval	24 September 2026. Regulatory and other closing conditions remain.
Merger timing probabilities	75% timely 2027,20% delayed 2028,5% failed. The 2028 paths require voluntary continuation beyond the 28 December 2027 legal end date.
Cash and common consideration	$27 cash per modeled closing Iridium common share plus contractual employee-award cash;0.4 Rocket Lab shares at the fixed reference below$67.50. Cash consideration and transaction fees are separate.
Retained debt and funding	Inherited debt remains a consolidated obligation. The terminated bridge facility supplies no new cash. September equity proceeds, later share issuance and debt maturity are explicit.
Purchase accounting	Finite acquired intangibles and recurring depreciation remain. Spectrum and goodwill retain their selected indefinite/nonamortized treatment. Conditional tax valuation releases are one-off diagnostics.
Integration	Selected 20 PP&E spend, phased integration expenses and gradual cash synergies are separately funded. Own supplier revenue is eliminated.

The 95% eventual-close probability is a subjective analytical selection supported by shareholder approval, financing and the ordinary filing process. Remaining agency review, conditions and public comments preserve timing and termination risk. Full FCC objection/comment text remains incomplete in the retained record.

Conditional communications service expansion

Original issuer Q2 2026 investor presentation. Source page 5; vintage 10 August 2026.

The proposed acquisition adds spectrum, network operations and recurring customer applications after closing. Regulatory conditions, consideration, retained debt and replacement investment remain explicit model obligations.

Issuer slide 5, Q22026. Full source image and original qualifications preserved.

Issuer quarterly materials

Iridium operating reference and replacement spending

Latest Iridium reported financial period isSeptember 2026. USD millions unless noted.

Latest reported operating context

Measure	Q3 2026	Interpretation
Revenue	245.733	Services 187.498;equipment 19.045;engineering/support 39.190
Operating profit	31.618	Includes reported operating costs andD&A
Net income excluding acquisition gain	3.028	GAAP net 106.896 includes 103.868 after-tax acquisition gain
OEBITDA	135.621	Different accounting scope from recurring diluted EPS
Nine-month OCF /cash capex	281.706 /79.238	Conventional FCF202.468
Cash /total face debt	97.853 /2,159.458	Includes Aireon-related debt and seller obligations

Certified safety and low-bandwidth IoT applications provide a differentiated franchise. NTN adoption depends on compatible devices, territory permissions, actual subscribers and realized ARPU. The reference management forecast already includes NTN/PNT/Aireon growth. The model selects no additional general growth premium.

The 2031 network capital budget is 650, including 180 external supplier hardware and selected own Neutron launch costs. This is an analyst funding scenario for future fleet work. Exact replacement-unit specifications, committed orders and suppliers remain unpublished. A separately funded internal-hardware diagnostic eliminates internal supplier revenue and margin.

Nine coherent operating and merger outcomes

The joint distribution captures shared execution pressure. The same 100% weighting applies once to final branch per-share outcomes.

Joint probabilities and financial transitions

Merger	Operating	Probability	EPS handoff	Cash default
timely	fast	20%	2027 Q4	None modeled
timely	central	40%	2028 Q3	None modeled
timely	delayed	15%	Beyond model	2030 Q3
delayed	fast	4%	2028 Q1	None modeled
delayed	central	9%	2028 Q3	None modeled
delayed	delayed	7%	Beyond model	2030 Q3
failed	fast	1%	2028 Q1	None modeled
failed	central	1%	2028 Q3	None modeled
failed	delayed	3%	Beyond model	None modeled

Neutron operating marginals are 25% fast,50% central and 25% delayed. Merger marginals are 75% timely,20% delayed and 5% failed. The joint weights 20/40/15/4/9/7/1/1/3 preserve these totals. The downside cases share development delays, lower utilization and funding pressure. Base 63 sizes the framework ranking input; the joint scenario weights own the financial expectation.

The refinancing scenario requires positive trailing four-quarter operating cash flow, positive adjusted EBITDA, net debt/adjusted EBITDA of 4 x or less, and recurring operating profit/cash interest of at least 2 x. Adjusted EBITDA includes operating lease book expense and excludes gross depreciation, finite amortization and SBC. These are selected financing-eligibility proxies; actual lender terms remain uncertain. Actual lease cash, conventional FCF and debt principal are displayed separately.

Recurring operating profit and cash costs

FigureF04. All values are Model. Operating profit retains gross depreciation, finite amortization, SBC and selected recurring transaction/integration costs.

Functional forecast gross-margin allocation is incomplete. This chart shows the fully costed consolidated operating-profit build.

Operating lease book expense replaces the embedded cash payment inside recurring costs, with the cash difference reconciled in OCF. Gross depreciation includes a separately rolled finance-lease ROU carve. Book costs and actual cash payments remain traceable separately. FigureF04 inputs follow.

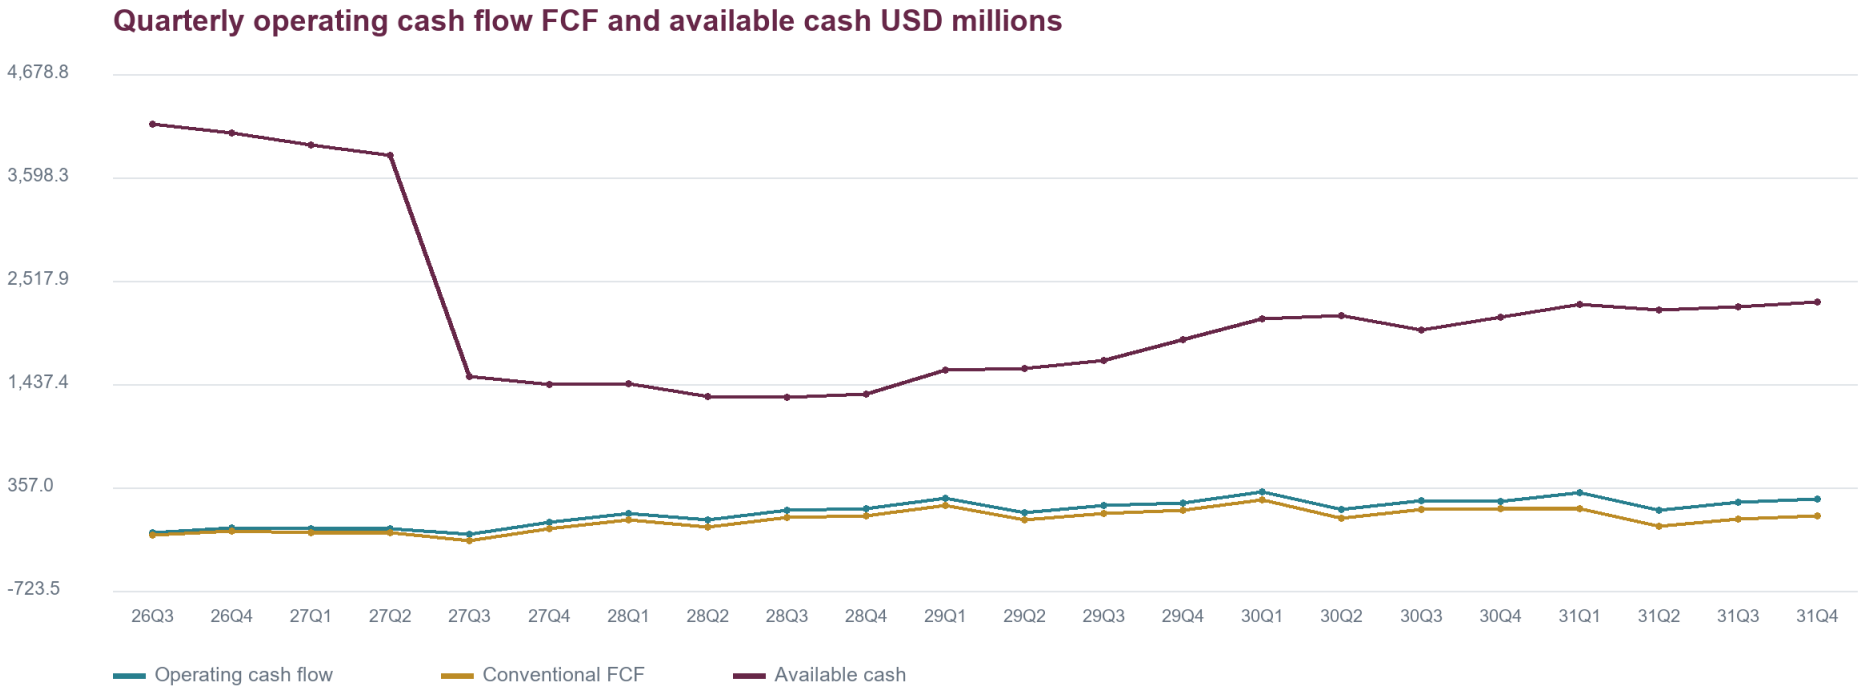

Figure F04 quarterly profit construction

USD millions. Weighted continuing operations. Parent and conditional acquired-company costs share one consolidated build.

Quarter	Revenue	Cost preDA/SBC	Gross dep	Finite amort	SBC	OP	OP margin
2026 Q3	257.500	286.476	11.000	11.602	19.000	-70.579	-27.4%

Conventional free cash flow and liquidity

FigureF05. FCF equals OCF less cashPP&E. Acquisition cash, debt principal, lease finance principal and equity financing sit outside this conventional measure.

All series use selected probability-weighted actual continuing-operation fields. Defaulted branches contribute zero available going-concern cash. Shadow obligations remain in the branch appendix.

Each branch tests its own operating cash, commitments and maturities before expected values are aggregated. A four-quarter no-extra-raise lookahead determines conditional equity rescue. Future cash from a rescue cannot enter the probe that decides whether the rescue is needed. FigureF05 values follow.

Figure F05 cash generation and funding table

USD millions. Acquisition and rescue columns are separate from OCF and FCF.

Quarter	BookNI	OCF	Cash capex	FCF	Acq cash	Rescue gross	Cash available

Book tax applies 24% to positive recurring pretax plus the selected foreign floor. Cash tax separately tracks NOLs, an 80% usage limit and specific book/cash adjustments. Acquisition valuation releases, bridge write-offs and contingent-consideration remeasurement are identified separately. Recurring finite purchase amortization and SBC stay in EPS.

Operating leases and finance lease obligations

Aggregate schedules preserve the disclosed opening source balances. Interim current portions, maturity allocation and asset lives remain explicitly estimated.

Opening RKLB lease pools atJune 2026

Pool	Noncurrent source	Current estimate	Total estimate	ROU source
Operating	104.378	14.956428	119.334428	113.690
Finance	14.468	0.336121	14.804121	12.349

Operating cash rent is carved from the existing cash budget and reconciled against the finite single book-expense pool. Finance ROU depreciation is carved from existing gross depreciation. Finance cash interest enters OCF and paid principal enters CFF. Unpaid accrued interest carries separately, and delayed payment never produces a negative financing-principal receipt.

The selected aggregate RKLB operating book expense is approximately 14.177 annual, based on a 42-quarter remaining maturity proxy. Finance ROU life is a low-confidence 15.9-year proxy. June current lease splits are unpublished. Diagnostic bounds cover operating book expense 14.158-22.3535 annual, rates, payment timing and finance ROU depreciation 0.501-3.084 annual.

Iridium FY2025 current operating liability 4.069 differs from 2.647220 of modeled next-four-quarter net liability reduction by 1.421780. The selectedSeptember current 2.225388 is a reconstructed classification proxy. The 30.402 opening liability and 27.147 ROU asset are rolled separately. A source 5.7 annual total lease cost is split into finite long-term expense and matched short-term/variable cash expense.

Quarterly parent operating lease roll

One finite parent pool shared by all operating paths. USD millions. These conditional obligations remain visible separately after modeled default.

Economic dilution and share conventions

FigureF06. Selected economic shares include participating preferred, reserves and paired cash/share settlements. Loss-period GAAP diluted EPS can exclude economically relevant dilution.

Three displayed paths use timely merger closing. Delayed/failure branches have separate cash and share rolls. Lines stop after default; remaining shadow share diagnostics appear in the appendix. The vertical share axis starts above zero.

June common 598.180438 plus participating preferred 40.951250 equals 639.131688 economic outstanding. Issued common already includes treasury backing preferred. September approximate 29.3 Moffering shares, existing awards/reserves, future grants, employee withholding, forward shares/cash, merger shares and conversion are handled once in their respective schedules. FigureF06 data follow.

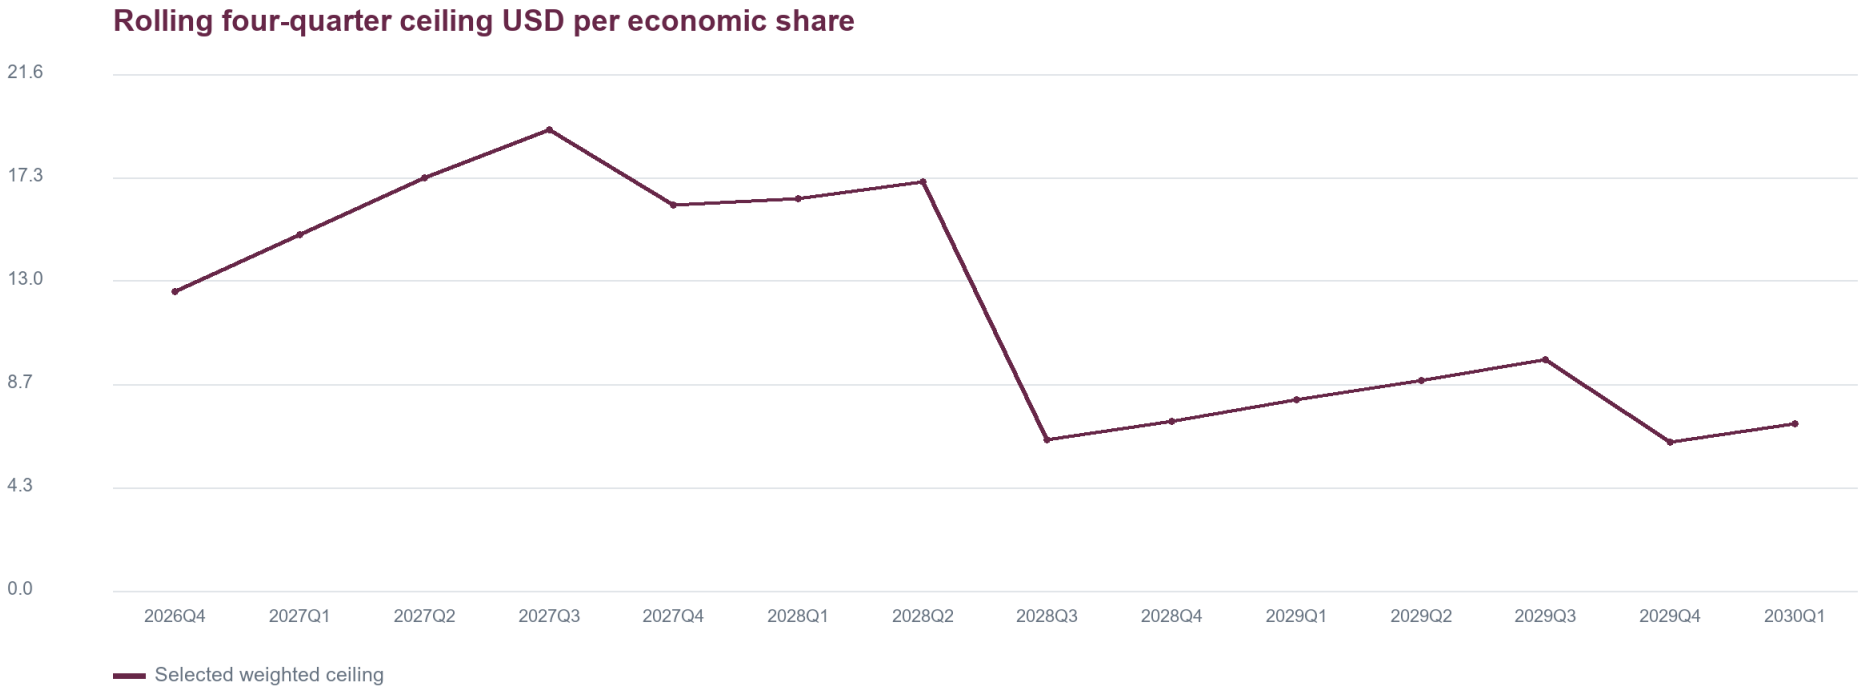

Figure F06 conditional share table

Millions of economic diluted units. Timely closing paths. Unavailable after modeled default is shown as a gap.

Quarterly intrinsic ceiling path

FigureF07. Each branch uses its quarter and next three quarters. The active framework horizon isQ4 2027.

The intrinsic ceiling combines nine conditional per-share outcomes. It changes method separately in each branch and carries zero equity recovery when the specified default falls within or before the valued window.

A branch uses 6 xconsolidated external forward sales until its first F4Q window with both positive conventional FCF and positive recurring book net income. It then uses 20 xforward diluted EPS. Sales value is 6 xF4Q revenue divided by economic shares at the ceiling quarter. Earnings value is 20 xthe sum of each forward quarter recurring net income divided by that quarter economic diluted shares.

Figure F07 exact window and valuation table

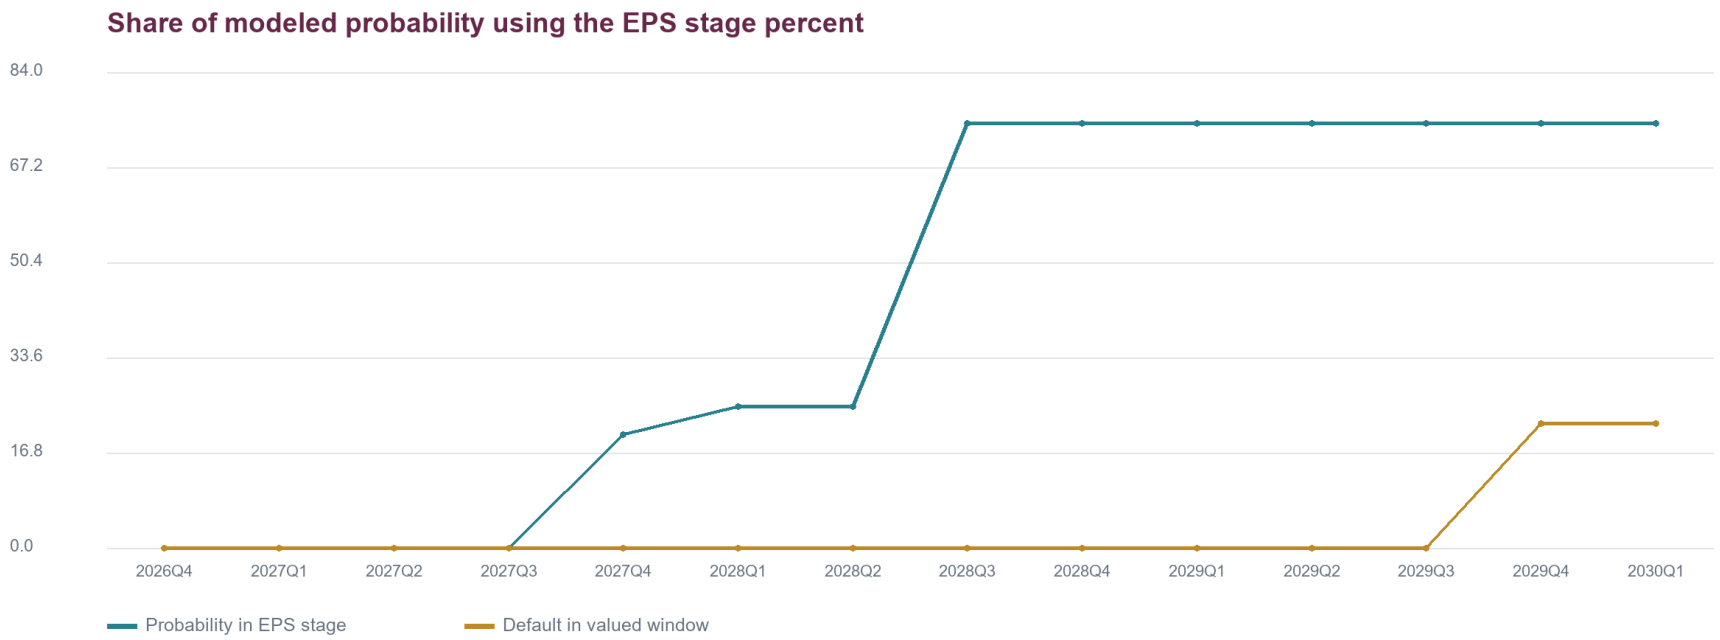

USD millions and shares millions except per-share ceiling. F4Q revenue, net income, FCF and share reference are raw weighted branch diagnostics and retain unfunded shadow windows. The ceiling separately assigns zero to branches defaulting within or before its valued window.

Ceiling q	F4Q window	Revenue	BookNI	FCF	Shares ref	EPS stage	Ceiling
2026 Q4	2026 Q4 to 2027 Q3	1,432.070	-217.487	-534.421	685.964	0.0%	$12.5261

Positive weighted FCF alone cannot trigger a branch handoff. The branch must also have positive recurring net income. Mixed methods can coexist in the same quarter. The weighted revenue divided by weighted shares is an incomplete substitute for the selected branch calculation.

Profitability handoff and model discontinuities

FigureF08. The owner-selected revenue and earnings multiples apply at their specified profitability boundary.

Each branch uses strict positive F4Q FCF and recurring net income. The original both-positive trigger is retained. No floor, maximum-of-methods rule or smoothing is selected.

Analytical score and specific risk deductions

Scoring was selected before valuation outputs. Covered watchlist status follows the direct company research request.

Framework score

Category	Points	Maximum	Reason
Core Thesis	13	20	Electron/HASTE flight heritage and qualified solar, optics, reaction wheels and propulsion support credible customer choice and supply control. Merchant supply creates value across multiple prime contractors. Current evidence establishes differentiated capability; a sole required supplier across the whole economic chain remains unproven.
Cycle Stage	8	10	Reported Q2 revenue 234.066 m and June backlog 2.36 bn accompany active defense spacecraft programs, greater HASTE demand and 20 new Synspective launches for 2028-2031. Q2+subsequent booking headlines overlap June backlog and named programs. Neutron remains in qualification.
TAM Expansion	9	10	Launch, merchant spacecraft components, LEO/GEO/deep-space platforms and conditional recurring safety/IoT/PNT/aviation services expand usable markets. Consolidated forecasts must eliminate internal components and internal launch revenue. Government program ceilings and the merger deck's 100 bn+ market estimate establish broad opportunity scope; company capture requires specific awards, capacity and customer adoption.
Catalysts	4	5	Stage 1 forward-dome cure/inspection and integrated hydrostatic/cryo qualification targetQ1 2027. A first-flight date follows these gates; current targetyear 2027. Iridium closing expectationmid 2027 and 2027 spacecraft/HASTE milestones fall within the framework horizon. The pending gates limit timing precision.
Macro	8	10	Defense sensing, hypersonic testing, sovereign launch access and constellation replenishment provide multiple structural demand vectors. Procurement appropriations, export approvals, civil-space program changes and launch supply responses affect realized spending and capture.
Alpha	1	5	The central catalysts, merger, launch delay and procurement awards are published in English issuer materials and widely accessible filings. Cross-checking options, accounting allocation and time zones improves precision. This review has no demonstrated local-language or uniquely inaccessible source advantage.

Specific risk deductions

Each risk class carries one explicit point deduction.

Deductions

Risk class	Points	Specific exposure
Competition	-1	SpaceX rideshare pricing and reusable capacity, Blue Origin supply recovery, competing spacecraft primes and vertically integrated constellation operators can constrain pricing and external merchant content.
Execution	-1	Neutron's composite tank/dome manufacturing and integrated test gates carry rework, failure and cadence risk; flight reuse and unit costs remain unproved.
Concentration	-1	2025 top-five customers represent 49% of revenue and 77% of backlog. Large government fixed-price cohorts expose cash timing and schedule concentration.
Balance sheet and integration	-1	Conditional Iridium cash/stock consideration, retained debt, acquisition amortization and constellation reinvestment compete with ongoing Neutron cash needs. Current cash balances and completed equity financing remain in the financial bridge.
Regulatory and procurement	-1	Launch licensing, safety approvals, export permissions, national-service approvals and appropriations govern execution; fixed-price programs retain cost-overrun exposure.

43 points before five risk deductions gives 38/60=63.333%, rounded toBase 63. The automatic framework band isFail. This score expresses differentiated competitive supply and major execution/funding conditions. The financial model separately carries its selected joint outcome probabilities.

Rule 16 b probabilities and economic overlap

Every material breadcrumb has a numerical outcome, company cost/cash bridge and overlap disposition. Named conditional options share the operating-path distribution.

Hypothesis records

Opportunity or control	Economic probability	Overlap and valuation treatment
European defense through the German footprint	30.0%	The tag sits inside merchant growth and shares Space Systems capacity. Its control removes the tagged revenue, direct cost, engineering, corporate support, PP&E and depreciation once. Working capital, tax, lease cash, financing, shares and the handoff then recalculate. Capacity substitution can make the contribution negative in a particular window.
Merchant power and components for orbital compute	20.0%	The expected tag is already inside merchant growth. Its control removes the associated revenue, direct costs, operating spending and PP&E, including depreciation runoff. Shared capacity, working capital, tax and funding recalculate. Internal supplier sales are eliminated.
Optional HASTE missions in the USSF package	75.0%	Optional flights already consume the selected HASTE cadence and cohort budget. The no-option control removes their incremental bookings, revenue, direct costs and cash transmission. It preserves the fixed firm scope and recomputes capacity substitution, collections, tax and funding.
Tranche 3 options above the filed base	75.0%	The option amount sits inside the named Tranche 3 cohort. Its control removes only that option scope and associated direct costs, working capital and cash. Shared manufacturing capacity, book and cash tax, financing and the valuation handoff recalculate.

Rule 16 b overlap controls

Each record retains the source condition, economic probability and full company cost bridge.

Hypothesis records

Opportunity or control	Economic probability	Overlap and valuation treatment
Tranche 2 incentives and options above the base	75.0%	The no-increment control removes only the selected incentive and option amount, its costs and cash consequences. It retains the base program and recomputes manufacturing substitution, working capital, tax, financing, dilution and the earnings handoff.
Combined correlated option realization	Joint control	The combined control removes the selected options and their fully costed cash consequences once. Shared capacity, financing, shares and the handoff recalculate. Its valuation effect is a separate comparison and cannot be added to the standalone option effects.
Combined Europe and orbital compute tags	Joint control	The model removes both tags from the same merchant reference, then recomputes capacity allocation, working capital, tax, lease cash, financing, economic shares and the profitability handoff.
NTN Direct PNT and Aireon adoption	60.0%	The selected contribution beyond the acquired reference is zero. Future evidence must identify incremental capture and reconcile it to the existing service forecast, costs, investment and network capacity before an additional contribution is selected.

The option paths contain 75% probability of some exercise and 25% of full exercise. Expected optional RSLP flights are 3; expectedT3 options are 5; expectedT2 incentives/options are 13. These already sit inside the coherent paths. An additional generic probability haircut would count the same risk twice.

Breadcrumb 1 European defense through the German footprint

Selected analytical assumptions and source conditions. Dollar amounts in USD millions unless stated.

I assign a 30% probability to the bounded additional European capture opportunity. The German production footprint and management discussion support a qualification route. New award amounts and timing remain analytical assumptions.

Conditional revenue is $10 million, $25 million and $50 million in 2028, 2029 and 2030. The planned expected tags are $3 million, $7.5 million and $15 million. Conditional direct cash cost is 70% of revenue. Conditional operating spending is $3 million, $4 million and $5 million, and PP&E spending is $5 million each year. The model selects zero new tagged orders after 2030 and retains asset runoff.

The sources identify no complete new spacecraft award for this tag. Early Mynaric integration losses, supply-chain work and qualification needs remain. Defense budgets require procurement and customer acceptance before revenue can be recognized.

The tag sits inside merchant growth and shares Space Systems capacity. Its control removes the tagged revenue, direct cost, engineering, corporate support, PP&E and depreciation once. Working capital, tax, lease cash, financing, shares and the handoff then recalculate. Capacity substitution can make the contribution negative in a particular window.

2028 Q2	17.128	17.137	-0.008828	0.000	-1.387	-5.468	0.000
2028 Q3	6.307	6.339	-0.031270	0.000	-1.590	-6.368	0.000
2028 Q4	7.096	7.132	-0.035301	0.000	-1.811	-7.294	0.000
2029 Q1	8.000	8.041	-0.040362	0.000	-2.075	-8.208	0.000
2029 Q2	8.810	8.857	-0.046366	0.000	-2.374	-9.395	0.000
2029 Q3	9.675	9.728	-0.052935	0.000	-2.702	-10.794	0.000
2029 Q4	6.229	6.289	-0.060019	0.000	-3.063	-12.243	0.000
2030 Q1	6.978	7.046	-0.067277	0.000	-3.399	-13.622	0.000

Overlapping standalone and combined controls are comparisons. Their valuation effects cannot be added to reconstruct the active target. A negative contribution can reflect development cash needs, capacity substitution or a different profitability handoff.

Breadcrumb 2 Merchant power and components for orbital compute

Selected analytical assumptions and source conditions. Dollar amounts in USD millions unless stated.

I assign a 20% probability to the bounded orbital-compute component opportunity. Existing solar and spacecraft component products provide a route to customer qualification. The selected order amounts and delivery schedule are analytical assumptions.

Conditional revenue is $10 million, $25 million and $50 million in 2028, 2029 and 2030. Planned expected tags are $2 million, $5 million and $10 million. Conditional direct cash cost is 65% of revenue, operating spending is $3 million, $5 million and $6 million, and PP&E spending is $5 million, $7 million and $10 million. The 20% probability applies once to those quantities.

The retained evidence supplies no committed order amount for these components. Power performance, thermal constraints, launch economics and customer qualification govern adoption. A Kepler launch contract supplies a separate launch revenue scope.

The expected tag is already inside merchant growth. Its control removes the associated revenue, direct costs, operating spending and PP&E, including depreciation runoff. Shared capacity, working capital, tax and funding recalculate. Internal supplier sales are eliminated.

2030 Q1	6.978	7.022	-0.043063	0.000	-2.166	-9.730	0.000

Overlapping standalone and combined controls are comparisons. Their valuation effects cannot be added to reconstruct the active target. A negative contribution can reflect development cash needs, capacity substitution or a different profitability handoff.

Breadcrumb 3 Optional HASTE missions in the USSF package

Selected analytical assumptions and source conditions. Dollar amounts in USD millions unless stated.

The joint operating paths give a 75% probability of some option exercise and a 25% probability of full exercise. The issued award establishes the option scope. Exercise still depends on procurement, launch readiness and the customer schedule.

Fast, central and delayed paths carry six, three and zero optional flights. The probability-weighted expectation is three flights. A selected $9.5 million flight-price proxy gives $57 million, $28.5 million and zero conditional flight revenue before its recognition schedule. Infrastructure and operations remain within separately allocated contract budgets.

The source discloses the total package and up to six options, with no clean split of launch, infrastructure and continuing operations. Appropriations, the new launch location and range readiness can affect exercise and timing.

Optional flights already consume the selected HASTE cadence and cohort budget. The no-option control removes their incremental bookings, revenue, direct costs and cash transmission. It preserves the fixed firm scope and recomputes capacity substitution, collections, tax and funding.

Overlapping standalone and combined controls are comparisons. Their valuation effects cannot be added to reconstruct the active target. A negative contribution can reflect development cash needs, capacity substitution or a different profitability handoff.

Breadcrumb 4 Tranche 3 options above the filed base

Selected analytical assumptions and source conditions. Dollar amounts in USD millions unless stated.

The same joint operating paths give a 75% probability of some option realization and a 25% probability of full realization. These outcomes share execution conditions with the other government programs.

Conditional option revenue is $10 million, $5 million and zero across fast, central and delayed paths. The probability-weighted amount is $5 million. The filed $806 million base remains a separate scope, with delivery, cost and cash schedules retained.

A filed potential option value requires exercise and performance. Government procurement, competing primes, manufacturing yield and the delivery schedule affect realized economics.

The option amount sits inside the named Tranche 3 cohort. Its control removes only that option scope and associated direct costs, working capital and cash. Shared manufacturing capacity, book and cash tax, financing and the valuation handoff recalculate.

2030 Q1	6.978	6.980	-0.001413	0.000	-0.054	-0.779	0.000

Overlapping standalone and combined controls are comparisons. Their valuation effects cannot be added to reconstruct the active target. A negative contribution can reflect development cash needs, capacity substitution or a different profitability handoff.

Breadcrumb 5 Tranche 2 incentives and options above the base

Selected analytical assumptions and source conditions. Dollar amounts in USD millions unless stated.

The joint distribution gives a 75% probability of some incentive or option realization and a 25% probability of the full selected amount. The operating paths represent correlated delivery and performance conditions.

Conditional incentive and option amounts are $26 million, $13 million and zero. Their probability-weighted amount is $13 million. The $489 million base remains separate. The selected build, operations and option schedules preserve the contract scope.

Performance incentives and options depend on their contractual conditions. Source disclosure does not provide every delivery, remaining-balance and service-period allocation at June 2026.

The no-increment control removes only the selected incentive and option amount, its costs and cash consequences. It retains the base program and recomputes manufacturing substitution, working capital, tax, financing, dilution and the earnings handoff.

2030 Q1	6.978	6.983	-0.004040	0.000	-0.153	-0.219	0.000

Overlapping standalone and combined controls are comparisons. Their valuation effects cannot be added to reconstruct the active target. A negative contribution can reflect development cash needs, capacity substitution or a different profitability handoff.

Breadcrumb 6 Combined correlated option realization

Selected analytical assumptions and source conditions. Dollar amounts in USD millions unless stated.

This is a joint control across the three option scopes. It uses the existing 25%, 50% and 25% operating marginals, with no additional probability multiplier.

The control jointly removes RSLP optional flights and the selected Tranche 3 and Tranche 2 option or incentive amounts. Each original firm contract scope remains.

Procurement, manufacturing and launch execution affect several programs together. Treating the scopes as independent opportunities would misstate their correlation and shared resource needs.

The combined control removes the selected options and their fully costed cash consequences once. Shared capacity, financing, shares and the handoff recalculate. Its valuation effect is a separate comparison and cannot be added to the standalone option effects.

2030 Q1	6.978	6.912	+0.066869	8.313	2.524	12.803	0.000

Overlapping standalone and combined controls are comparisons. Their valuation effects cannot be added to reconstruct the active target. A negative contribution can reflect development cash needs, capacity substitution or a different profitability handoff.

Breadcrumb 7 Combined Europe and orbital compute tags

Selected analytical assumptions and source conditions. Dollar amounts in USD millions unless stated.

This joint control uses the selected 30% European capture probability and 20% orbital-compute capture probability already embedded in the planned input tags. It introduces no new joint-outcome uplift.

The control jointly removes the two expected merchant revenue tags and their selected direct costs, operating spending, PP&E and depreciation. Their individual conditional amounts remain as described in the preceding records.

Both opportunities use common manufacturing resources and face qualification and order-conversion uncertainty. Their combined value can differ from the sum of isolated comparisons.

The model removes both tags from the same merchant reference, then recomputes capacity allocation, working capital, tax, lease cash, financing, economic shares and the profitability handoff.

2030 Q1	6.978	7.089	-0.110655	0.000	-5.581	-23.355	0.000

Overlapping standalone and combined controls are comparisons. Their valuation effects cannot be added to reconstruct the active target. A negative contribution can reflect development cash needs, capacity substitution or a different profitability handoff.

Breadcrumb 8 NTN Direct PNT and Aireon adoption

Selected analytical assumptions and source conditions. Dollar amounts in USD millions unless stated.

I retain a 60% economic adoption hypothesis for the described service opportunities. The acquired-company reference already includes expected NTN, PNT and Aireon growth. The overlap adjustment is 100%, leaving zero additional selected valuation contribution.

The retained service reference supplies the active company growth path. No separate incremental subscriber, ARPU or revenue amount is selected for a second uplift.

Compatible devices, service permissions, customer use and actual subscription economics govern adoption. Announced demonstrations and integration work provide incomplete evidence about future paying customers.

The selected contribution beyond the acquired reference is zero. Future evidence must identify incremental capture and reconcile it to the existing service forecast, costs, investment and network capacity before an additional contribution is selected.

joint earlier high bookcost	16.082	-0.082718	0.0%
joint later lower bookcost	16.170	+0.004708	0.0%

The financial model retains every quarter and branch for each diagnostic. Higher lease expense can postpone an earnings handoff and increase the ceiling under the selected method boundary. This reflects the fixed revenue-to-EPS transition and cannot be interpreted as an operating improvement.

Risks triggers and falsification

The next 12-16 months receive the greatest analytical weight. More distant estimates depend on unawarded programs, production and refinancing.

Evidence that changes the case

Gate	Required evidence	Forecast response
9 November 2026 results	Q3 financials, source share count, fullQ&A and cash bridge	Replace the current reconstruction prospectively; preserve existing historical displays. Reconcile new bookings and acceptance timing.
Q1 2027 tank/stage qualification	Completed integrated qualification and published path toflight	Revise launch timing, R&D, inventory, capex and cash runway together.
First Neutron flight and recovery	Successful flight, customer acceptance and measured reuse/refurbishment	Reassess paid cadence, unit cost and cash conversion.
Merger clearances and legal dates	Agency orders, complete comments, conditions and a legally supported closing date	Update coherent ownership, consideration, fees, debt and forecast timing.
Spacecraft program execution	Hardware yield, qualified labor, cost-to-complete, delivery and collections	Reconcile remaining contract budgets, WIP, operating margins and working-capital cash.
NTN/PNT commercial adoption	Compatible-device shipments, actual subscribers/ARPU and service approvals	Adjust acquired reference growth after removing overlap.
Funding and debt maturities	Cash balance, covenant eligibility, lender commitments and equity terms	Recalculate each branch funding/shares/default and earnings handoff.

Large fixed-price contracts and concentrated customers can move revenue, costs and cash across quarters. A failed test can consume already funded inventory while requiring additional development spending. Debt repayment and constellation reinvestment can remain material after operating FCF improves.

Cross book positioning

Business comparisons identify exposure and shared constraints. This page carries no peer target or stock-price overlay.

Related research exposures

Company	Principal exposure	Relevant distinction
AST SpaceMobile	Direct-to-device satellite service buildout	Telecom commercial agreements, satellite manufacturing, launches, spectrum and cash/dilution determine its service ramp.
Planet Labs	Earth-observation imagery and data services	Calibration, imagery delivery and customer monetization determine capture. RKLB can supply launch/hardware into broader observation demand.
Nebius	AI infrastructure and cloud capacity	Power, GPUs, contracts and cash funding drive a separate deployment market. Orbital-compute interest alone supplies no RKLB order amount.
Rocket Lab	Launch, merchant components, spacecraft and conditional communications	External customer revenue spans several layers. Integration eliminates internal supplier sales and creates substantial manufacturing and funding obligations.

Qualified solar, propulsion, optics and reaction-wheel content can sell across several constellation operators. Prime spacecraft awards and a medium-launch vehicle introduce their own competitive and capital risks. The score and financial scenarios retain those differences.

Source coverage and material limitations

Original files, complete retained transcripts and source images are preserved with dates and hashes in the companion model.

Management event coverage

Event	Date	Retained material and specific gap
Q2 2026 earnings	2026-08-10	Full prepared remarks and Q&A through operator close, 955 extracted lines including navigation. Provider URL recovered; >90 MiB capture cap prevented retained file; audio not independently listened.
Q1 2026 earnings	2026-05-07	Full prepared remarks and Q&A through operator close, 1056 extracted lines including navigation. Provider URL recovered; >90 MiB capture cap prevented retained file; audio not independently listened.
Iridium acquisition management presentation	2026-06-29	Full three-speaker presentation, 170 lines including navigation; no Q&A session in retained presentation. Full provider audio retained, 10537734 B; not independently listened.
Neutron development update	2026-10-14	Full seven-minute update text; no Q&A session in retained event. Primary video metadata/description confirms 2027 firstlaunch; captions returned non-JSON/empty response, audio not independently listened. Secondary transcription contains errors. Issuer eventdate and SEC8-K controlannouncementdate.

The two newest earnings calls cover full prepared remarks andQ&A. Their audio has not been independently listened to. Original issuer slides obtained throughQuartr cross-check secondary transcript errors. TheOctober 14 Neutron update has issuer/SEC confirmation, a secondary full transcription and incomplete caption/audio verification.

The linked workbook calculates the selected external-procurement case. Three internal-manufacturing alternatives are separately recalculated source-model scenarios with their own assets, resource requirements and readiness assumptions. Their saved comparison values retain the source-model date and calculation identity.

September-quarter Rocket Lab financial statements remain unreported at the data cutoff. Remaining program balances, options, future award capture, labor productivity, Neutron cost/reuse, lease current splits and some timing are bounded analyst inputs. Contract-specific future lease schedules and the full regulatory comment record remain incomplete.

Primary sources and management material 1

Event dates and publication dates retain their separate meanings.

Rocket Lab Q2 2026 full management call and Q&A

Event: 2026-08-10. Publication: Event date displayed 2026-08-10; transcript upload timestamp unavailable. Quartr transcript distributed byStockAnalysis; official issuer slides andfinancials cross-check its facts

Rocket Lab Q2 Form 10-Q

Event: Reporting period ended 2026-06-30; Mynaric acquisition closed 2026-04-14. Publication: 2026-08-10. SEC issuer filing

IMM Apex solar-cell introduction

Event: 2026-09-08. Publication: 2026-09-08. Issuer product announcement

USSF RSLP Kodiak HASTE award

Event: 2026-07-27. Publication: 2026-07-27. Issuer announcement; source release date controls correctedcapture

SDA Tranche 3 TrackingLayer awards

Event: 2025-12-19. Publication: 2025-12-19. Government award source

SDA Tranche 2 Beta variant award

Event: Award signed 2023-12-21; public announcement 2024-01-08. Publication: 2024-01-08. Government award source

Primary sources and management material 2

Event dates and publication dates retain their separate meanings.

Rocket Lab 2025 Form 10-K

Event: Reporting year ended 2025-12-31. Publication: 2026-02-26. SEC issuer filing; filedT2/T3 base andoption scope

Iridium/DTIoT/Toyota NTNvoice demonstration

Event: 2026-09-10. Publication: 2026-09-10. Issuer partnership/product demonstration

AltairALT1350/ALT1550 integration

Event: 2026-10-14. Publication: 2026-10-14. Issuer chipset integration announcement

IridiumQ3 financialresults

Event: Reporting period ended 2026-09-30. Publication: 2026-10-20. Issuer earningsrelease

IridiumQ3 Form 10-Q

Event: Reporting period ended 2026-09-30. Publication: 2026-10-20. SEC issuer filing; Aireonconsolidation,financialcosts,debt

Selected launch unit economics

USD millions; shares millions; calendar periods

Selected assumptions A01

Input	Fast	Central	Delayed
Electron ASP	8.5	8.5	8.5
HASTE ASP	9.5	9.5	9.5
Electron 2027 variable cash cost	3.4	3.6	4
HASTE2027 variable cash cost	5	5.5	6.2
E/H factory support per quarter	4	4	4.5
Annual variable-cost change	-1%	0%	2%
Neutron external ASP	52.5	52.5	52.5
Neutron support/q after qualification	6	7	8

Unit costs/support and Neutron ASP are analytical selections. HASTE price uses the separate 190/20 MACH award. Baseline E/H prices stay 8.5/9.5;0-2% new-order escalation is a separate diagnostic.

Source: Selected company model with source-conditioned analytical budgets and scenario assumptions.

Source: Active company-model formulas for capacity,cohorts,assets and funding.

Space Systems cash contribution margins

USD millions; shares millions; calendar periods

Selected assumptions A02

Scope	Fast	Central	Delayed
Government hardware	42%	40%	34%
Government operations	45%	45%	35%
GEO	40%	40%	32%
Legacy merchant	49%	46%	41%
Motiv	40%	40%	30%

Analytical cash margins before separately retained SBC, gross depreciation, finite amortization and corporate costs. Hardware/operations/GEO use separate capacity queues and cost WIP.

Source: Selected company model with source-conditioned analytical budgets and scenario assumptions.

Mynaric and corporate operating assumptions

USD millions; shares millions; calendar periods

Selected assumptions A03

Input / period	Fast	Central	Delayed
2026 Q3	-10%	-15%	-25%
2026 Q4	0%	-5%	-15%
2027	10%	5%	-5%
2028	20%	15%	5%
2029 onward	25%	20%	10%
Non-Neutron cash R&D reference	26	26	26
Annual R&D growth	12%	8%	5%
Cash SG&A reference	43	43	43
Annual SG&A growth	12%	10%	8%

Mynaric integration margins and future spending growth are analytical inputs. The operator uses 26 and 43 as 2026 reference budgets and applies annual growth from 2027. Q3 reconstruction uses 25 non-Neutron R&D,47 Neutron R&D and 41 SG&A before the lease book/cash carve.

Source: Selected company model with source-conditioned analytical budgets and scenario assumptions.

Source: Active company-model formulas for capacity,cohorts,assets and funding.

Annual physical cadence

Physical missions per calendar year

Selected assumptions A04

Year	Path	Electron	HASTE	Neutron paid	Neutron own
2,027	fast	22	10	1	0
2,027	central	20	8	0	0
2,027	delayed	17	7	0	0
2,028	fast	26	14	4	0
2,028	central	21	11	3	0
2,028	delayed	18	8	0	0
2,029	fast	31	17	7	0
2,029	central	24	12	5	0
2,029	delayed	19	9	1	0
2,030	fast	34	18	10	0
2,030	central	26	14	8	0
2,030	delayed	20	10	3	0
2,031	fast	34	18	13	2
2,031	central	28	16	12	1

Conditional mission counts. E/H stays within the stated 52/year factory design reference. Staff, payload, equipment and range readiness govern delivered capacity. Own launches use cash and vehicles within network capex.

Source: Selected company model with source-conditioned analytical budgets and scenario assumptions.

Annual physical cadence continued

Physical missions per calendar year

Selected assumptions A04

Year	Path	Electron	HASTE	Neutron paid	Neutron own
2,031	delayed	22	10	5	0

Conditional mission counts. E/H stays within the stated 52/year factory design reference. Staff, payload, equipment and range readiness govern delivered capacity. Own launches use cash and vehicles within network capex.

Source: Selected accounting,asset,share and cash conventions using disclosed source anchors.

Neutron paid vehicle cash-cost sequence

USD millions; shares millions; calendar periods

Selected assumptions A06

Paid vehicle number	Fast	Central	Delayed
1	55	58	68
2	50	53	62
3	45	48	58
4	42	45	55
5	40	43	52
6	38	42	49
7	37	40	47
8	36	39	45
9	35	38	43
10	34	37	42
11	33	36	42
12	32	35	42
13	31	35	42
14	30	35	42

Analytical cost by successive paid vehicle; last selected cost persists. Cash manufacture is 50% at t-2 quarters and 50% at t-1. Source achieved costs/reuse remain undisclosed.

Own-network vehicles use final selected unit cash cost:fast 30,central 35,delayed 42,capitalized within the 650 network budget. Test-vehicle cost remains in R&D.

Source: Selected company model with source-conditioned analytical budgets and scenario assumptions.

Qualification and manufacturing timing

USD millions; shares millions; calendar periods

Selected assumptions A07

Path	Selected test gates	Own 2031 Q1/Q2/Q3/Q4	Commercial manufacture
fast	2027 Q2: successful qualification	0/0/1/1	50% t-2;50% t-1; inventory releases at paid flight
central	2027 Q4: successful qualification	0/0/0/1	50% t-2;50% t-1; inventory releases at paid flight
delayed	2028 Q3: failed qualification; redevelopment continues; 2029 Q2: successful requalification	0/0/0/0	50% t-2;50% t-1; inventory releases at paid flight

Conditional qualification, failure and requalification schedules retain their development budgets. No additional reuse credit is selected.

Opening commercial WIP25 offsets first manufacture. Existing CIP commissions at successful qualification. New Neutron PP&E commissions at max(purchase+2 quarters,qualification). Terminal inventory retains the last known production run rate.

Merchant and future award assumptions

USD millions; shares millions; calendar periods

Selected assumptions A09

Year	Path	Merchant growth	Mynaric	Motiv	New government award budget
2,027	fast	30%	85	24	800
2,027	central	20%	70	20	500
2,027	delayed	8%	60	16	250
2,028	fast	25%	115	30	1,000
2,028	central	18%	90	24	650
2,028	delayed	5%	65	18	350
2,029	fast	22%	145	36	1,200
2,029	central	15%	110	28	800
2,029	delayed	5%	70	20	450
2,030	fast	18%	175	42	1,400
2,030	central	12%	130	32	1,000
2,030	delayed	5%	80	22	550
2,031	fast	15%	205	48	1,500
2,031	central	10%	150	36	1,100

These annual planning series were used to select the operative quarterly revenue vectors. The frozen model reads separately selected analytical merchant,Mynaric,Motiv and government quarterly recognition inputs. Annual award budgets govern eligible advance cash; they do not automatically rebuild recognition. Future awards remain unawarded analytical scenarios.

Source: Selected company model with source-conditioned analytical budgets and scenario assumptions.

Merchant and future award assumptions continued

USD millions; shares millions; calendar periods

Selected assumptions A09

Year	Path	Merchant growth	Mynaric	Motiv	New government award budget
2,031	delayed	5%	90	24	650

These annual planning series were used to select the operative quarterly revenue vectors. The frozen model reads separately selected analytical merchant,Mynaric,Motiv and government quarterly recognition inputs. Annual award budgets govern eligible advance cash; they do not automatically rebuild recognition. Future awards remain unawarded analytical scenarios.

Quarterly vectors,budgets,remaining contract scope and cash-advance eligibility must stay coherent. A whole-cohort diagnostic updates all related values through the existing counterfactual adapter. Inconsistent edits require a failed coherence check. Merchant opening 383.14125 and growth percentages are input-selection context.

Source: Selected company model with source-conditioned analytical budgets and scenario assumptions.

Named base-cohort recognition

USD millions; shares millions; calendar periods

Selected assumptions A10

Cohort	2026 H2	2027	2028	2029	2030	2031
T2	88.02 / 0	44.01 / 6.985714	0 / 13.971429	0 / 13.971429	0 / 13.971429	0 / 0
T3	38.285 / 0	306.28 / 0	306.28 / 0	76.57 / 2.51875	0 / 10.075	0 / 10.075
GEO	16 / 0	64 / 0	64 / 0	16 / 0	0 / 0	0 / 0
SB-AMTI fast	32.7275 / 0	130.91 / 0	130.91 / 0	32.7275 / 0	0 / 4.30625	0 / 4.30625
SB-AMTI central	23.29875 / 0	93.195 / 0	93.195 / 0	23.29875 / 0	0 / 3.065625	0 / 3.065625
SB-AMTI delayed	6.935 / 0	27.74 / 0	41.61 / 0	48.545 / 0	13.87 / 0	0 / 1.825

Each cell is hardware / operations revenue. June remaining dollars and service allocations are reconstructed. T2 base 489 plus 26 options; T3 base 806 plus 10 options; GEO160 is a floor. SB-AMTI397/297.75/198.5 includes one 52.5 launch subtracted from its spacecraft scope. The operative quarter-by-quarter hardware/service vectors are selected analytical inputs; the annual values here aggregate those exact vectors.

T2 build/service 90/10;T3 95/5;SB-AMTI5% operations on spacecraft balance. T2 options 26/13/0 recognize equally 2027 Q2-Q4. T3 options 10/5/0 spread 2028-2031. Source remaining balances and optional deliverables remain incomplete.

Source: Selected company model with source-conditioned analytical budgets and scenario assumptions.

Cohorts, recognition and advance eligibility

USD millions; shares millions; calendar periods

Selected assumptions A11

Input	Selected treatment	Source / assumption
Future government	January 1 awards;95% hardware,10/40/40/10 annual hardware curve;5% later operations	Analytical contract recognition
Opening E/H backlog	100 equivalent units minus 20 Syn,20 MACH,12 RSLP firm,6/3/0 options =42/45/48 generic	100+headline vehicle/option mix incomplete
Synspective	5/year 2028-2031 inside Electron physical counts	Source 20 flights; scheduling proxy
HASTE progress	25% previous quarter;50% flight quarter;25% next	Analytical incurred-cost progress proxy
RSLP	12 firm,6/3/0 option flights at 9.5;95/95/75 infrastructure scope	266 max full scope; optional flights already in cadence
RSLP infrastructure	Fast/central revenue 5/25/40/25;delayed 5/15/30/25 in 2026/27/28/29;cash cost 55%	Infrastructure PP&E stays inside core budget
Government advances	Fast 20% / central 15% / delayed 10%;90% cash current quarter,10% next	Selected new eligible award budgets; source-driven timing and coherence checks
Merchant/new E/H advances	5% merchant;15% new launch bookings at two-quarter lead	Existing backlog earns no repeated advance
GEO source timing	Zero additional advance for May 21 award	June liability already includes earlier awards

Named contract caps and source timing govern advance eligibility. Detailed remaining balances and flight attribution remain analytical estimates. Curves and annual planning budgets document input selection. The live financial stages consume the selected quarterly vectors and cash budgets separately; recognition is not automatically rebuilt from an isolated annual-budget edit.

Source: Selected company model with source-conditioned analytical budgets and scenario assumptions.

Parent working-capital parameters

Days or eligible-order fractions

Selected assumptions A12

Input	Fast	Central	Delayed
AR days	40	45	60
Contract asset days	55	65	85
Other inventory days	145	165	190
AP days	50	45	35
Government advance	20%	15%	10%

Days apply to recognized quarter flow using 91-day denominator. Contract assets use Space Systems over-time ratio 132.857/189.480 plus HASTE progress and remain separate from AR. Other inventory excludes commercial Neutron WIP.

Source: Selected company model with source-conditioned analytical budgets and scenario assumptions.

Source: Selected accounting,asset,share and cash conventions using disclosed source anchors.

Other operating cash conversion

USD millions; shares millions; calendar periods

Selected assumptions A13

Pool	Selected treatment
Customer financing	Opening 32.150; new 2% Space Systems sales;12-quarter collections from following quarter
Grant receivable	Opening 19.756 recovered over 4 quarters
Other prepaid	Opening 78.153 normalizes over 8 quarters; new 1% sales prepaid amortizes 8 quarters
Parent trade AP	Opening 63.220 after merger carve; non-Neutron cash COGS xAP days/91
Parent accruals	Opening 54.663 includes employee 29.118;4-quarter convergence to 10% current-quarter core cash COGS+R&D+SG&A; coupon accrual separately carved
Merger opening payables	29.953 cash paid once 2026 Q3 outside continuing core NWC
Advance release	min(opening advance balance,30% quarter external sales)
Q3 bridge writeoff	12.6 noncash GAAP charge and OCF reversal; excluded recurring EPS
Conventional FCF	OCF less cash PP&E. Acquisition cash, finance-lease/debt principal and financing remain separate full-cash items

Book profit, operating cash and funding retain separate reconciliations.

Source: Selected accounting,asset,share and cash conventions using disclosed source anchors.

Source: Selected company model with source-conditioned analytical budgets and scenario assumptions.

Source: Active company-model formulas for capacity,cohorts,assets and funding.

Taxes and NOLs

USD millions; shares millions; calendar periods

Selected assumptions A14

Input	Selected baseline	Evidence / uncertainty
Book tax	24% positive recurring pretax plus 1/q foreign floor	Analytical effective rate; zero book loss benefit
Opening parent NOL	840.916 source 2025 +94.280 H1 proxy =935.196	Tax losses differ from GAAP net income
Merger availability	25% haircut once at closing	Section 382/jurisdiction proxy
NOL usage	80% maximum of positive cash-taxable income	Separate opening/usage/loss-generation roll
Cash-taxable base	Pretax plus nondeductible PPA amortization/transaction expense; lease book/cash and finance interest timing reconcile	Negative cash-taxable base adds to NOL
Cash tax	24% remaining positive taxable base plus 1/q	Preclose IRDM additional NOL pool zero
Conditional tax release	313.719 at closing as separate GAAP diagnostic	No recurring NI/cash/handoff effect
Finance lease deduction	Actual paid interest, with unpaid interest carry	Accrued-minus-paid adjustment in OCF/cash tax

Future tax availability requires company filings. Branch handoff uses recurring book NI and conventional FCF from the same branch.

Source: Selected company model with source-conditioned analytical budgets and scenario assumptions.

Source: Selected accounting,asset,share and cash conventions using disclosed source anchors.

Source: Selected interest-first finance-lease cash and accrual reconciliation.

Debt, interest and maturity cash

USD millions; shares millions; calendar periods

Selected assumptions A15

Obligation	Amount	Rate / amortization	Maturity / treatment
Parent convertible	13.366	4.25%; semiannual cash; quarterly accrual	2027 Q4 conversion;2.607745 shares already reserved
Parent other borrowing	1.716	5% analytical rate	Retained unresolved source balance
IRDM main term	1,774.721	SOFR3.75% +2.25% preclose/+2.75% postclose;4.5625/q principal	2030 Q3; conditional refinance
IRDM revolver	50	SOFR+2.50%;0.375% undrawn fee on remaining 100 capacity	2028 Q3 repayment
Aireon term	151.375	SOFR+6.25%;5.46875/q principal	2028 Q4 final;10/91 quarter terminal interest
Aireon seller	183.362	172.789 CFF principal;10.573 OCF interest	2027 Q3 once; remaining 7.988 discount accretes Q426/Q127/Q227
Liquid cash yield	3% annual	Opening cash plus actual quarter-start new funding	Q3 anchors net interest 21
Expiring rate cap	1,000 notional	SOFR1.436% cap;0.31% premium; Q426 two-thirds quarter	No subsequent cap benefit

Contract face amounts use source anchors. SOFR, cash yield and future refinancing are analytical inputs. Preclose IRDM cash/debt remain separate until control.

Source: Selected company model with source-conditioned analytical budgets and scenario assumptions.

Source: Published accounting disclosures and selected asset,earnout and network-funding assumptions.

Source: Selected accounting,asset,share and cash conventions using disclosed source anchors.

Funding and default laws

USD millions; shares millions; calendar periods

Selected assumptions A16

Law	Selected treatment
Rescue trigger	Quarter-start current+3-quarter cloned cash path contains no hypothetical additional rescue; minimum target 300
Rescue need	Restore 300 plus next-quarter PP&E and positive NWC need; cover immediate closing shortfall; remaining gross cap limits funding
Refinance eligibility	Trailing 4 Q OCF>0; adjusted-profit proxy>0; net debt/proxy<=4; recurring OP/cash interest>=2
Refinance terms	2030 Q3 eligible main-term balance; SOFR+4%;2% fee;5-year extension
Covenant profit basis	Revenue less operating cost including operating lease book expense; excludes gross depreciation, finite amortization and SBC
Closing liquidity	Quarter-start parent cash+acquired cash+permitted funding cover consideration. Later forward cash is unavailable at an earlier close
Default and recovery	Unfunded required payment triggers immediate default; zero selected equity recovery. Actual operations stop after default quarter; shadow obligations remain
Valuation	6 x external F4Q revenue; sticky 20 x quarterly recurring diluted EPS sum after both F4Q FCF and NI>0. Default within/before window yields zero

Refinance/equity availability and zero equity recovery are analytical scenarios. Every actual and cloned funding path uses the same selected law.

Equity rescue and financial settlements

USD millions; shares millions; calendar periods

Selected assumptions A17

Path	Gross cap	Discount	Fee	Capped-call reference
fast	1,500	15%	3%	52.07
central	1,000	20%	4%	26.035
delayed	500	30%	5%	6

Frozen financing/award reference 52.07; new shares=gross/[reference x(1-discount)]; cash=gross x(1-fee). These are dated calculation inputs.

2028 Q2 forward:474 cash and 7.4512 shares. Capped call:strike 5.1255,cap 8.04,max 201.9;50% settlement 2028 Q4 and 50%2029 Q1.

Source: Selected company model with source-conditioned analytical budgets and scenario assumptions.

Merger ownership and integration

USD millions; shares millions; calendar periods

Selected assumptions A18

Path	Close	Transaction expense 2026-2031	Integration cash sequence after close	Annual synergy sequence
timely	2027 Q3	20 / 179.283 / 0 / 0 / 0 / 0	8 / 8 / 6 / 6 / 4 / 4 / 2 / 2	0 / 10 / 20 / 30 / 30
delayed	2028 Q2	20 / 40 / 169.283 / 0 / 0 / 0	8 / 8 / 6 / 6 / 4 / 4 / 2 / 2	0 / 10 / 20 / 30 / 30
failed	No close	20 / 40 / 20 / 0 / 0 / 0	8 / 8 / 6 / 6 / 4 / 4 / 2 / 2	0 / 10 / 20 / 30 / 30

Merger marginals 75% timely/20% delayed/5% failed combine with 25/50/25 operating marginals through 9 weights 20/40/15/4/9/7/1/1/3. Delayed closing requires voluntary continuation beyond the legal end date. Integration,asset spending and synergy sequences apply only after closing. The failed-merger path realizes zero integration spending,acquisition capex and synergy despite retaining the unused postclose source sequence.

Acquired-company annual operating reference

USD millions; shares millions; calendar periods

Selected assumptions A23

Year	External revenue	OEBITDA	Cash PP&E	Quarter weights
2,027	1,039	577	115	24/25/25/26%
2,028	1,099	633	120	24/25/25/26%
2,029	1,167	687	125	24/25/25/26%
2,030	1,242	748	135	24/25/25/26%
2,031	1,323	814	650	24/25/25/26%

Dated management reference with latest September actual/source cash bridge. Fast/central use 100% revenue/OEBITDA; delayed 92%/85%. Consolidate only after branch closing.

Q426 revenue 259.267,OEBITDA133.379,capex 27.4. Existing reference contains NTN/PNT/Aireon growth; additional selected uplift zero after 100% overlap.

Source: Selected company model with source-conditioned analytical budgets and scenario assumptions.

Acquired-company cost and cash transmission

USD millions; shares millions; calendar periods

Selected assumptions A24

Input	Selected treatment
Operating cash cost and allocation scope	Active cost=external revenue minus OEBITDA,with operating-lease book substitution. Equipment ratio 11.609/19.045 drives NWC. Service/network ratio 60.666/226.688 is planning context; complete future functional COGS/R&D/SG&A allocation remains unavailable
Working capital	AR45 days; equipment inventory 150 days/AP45 days; contract assets 16% quarter sales; deferred 24%; prepaid sales-scaled
Lease accrual carve	Remove current proxy 2.225388 from 83.129 opening operating accrual; remaining accrual scales with original cash-cost base
Preclose cash	Start 97.853 Sep 30; own OCF minus capex,dividend,withholding,principal. Transfer cash/debt once at control
Distributions	Preclose 0.16/share/q dividend; zero buyback. Postclose subsidiary dividends eliminate; zero selected parent payout
2031 network	650 total includes 180 external-vendor hardware plus selected own Neutron cash costs
Resource boundaries	Own launches consume physical capacity and network PP&E cash. Vendor hardware uses vendor capacity; zero internal sales/margin
Investment uncertainty	No disclosed detailed fleet count,specification,committed vendor or delivery schedule.650 is an analytical funding budget
Aireon	Already consolidated external revenue; hosting/power/data intercompany flows eliminate

The reference carries recurring costs,debt,amortization,network investment and dilution inside each branch.
