Kioxia Holdings

285A.T | Valuation update | 6 November 2026

Q4 2027 price ceiling: JPY 27,143.75

Prior same-quarter ceiling: JPY 36,461.75 | Revision: -25.56%

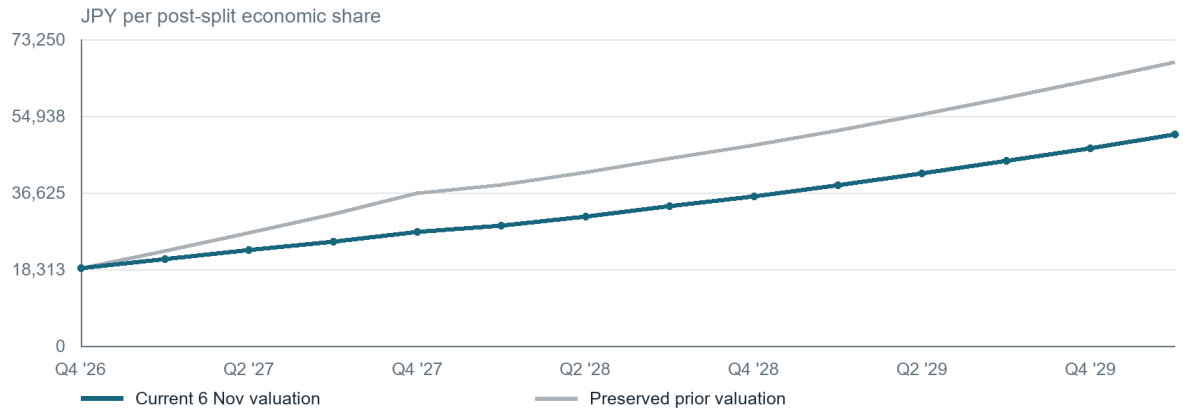

The owner-approved update changes the prospective operating-profit multiple ramp. Operating forecasts, scenario probabilities, cash and capital-return paths, valuation shares, listing conventions, FX inputs and Base scores retain their published values.

The current section dated 6 November 2026 governs all Q4 2026 and later valuation schedules and price ceilings in this report. Published Q3 2026 and earlier forecasts retain their original vintage.

Approved quarterly multiple ramp

Quarter	Prior multiple	Current multiple
Q4 2026	3x	3x
Q1 2027	3.375x	3.0875x
Q2 2027	3.75x	3.175x
Q3 2027	4.125x	3.2625x
Q4 2027	4.5x	3.35x

The 3.35x terminal multiple begins in Q4 2027 and continues across later published valuation windows.

All published quarterly ceilings

JPY per post-split economic share | Calendar quarters | Same listing and share basis

Quarter	Current multiple	Current ceiling	Prior ceiling	Revision
Q3 2026*	4x	31,241.59	31,241.59	Preserved
Q4 2026	3x	18,583.12	18,583.12	+0.00%
Q1 2027	3.0875x	20,746.01	22,677.82	-8.52%
Q2 2027	3.175x	22,869.00	27,010.62	-15.33%
Q3 2027	3.2625x	24,913.58	31,499.93	-20.91%

Q4 2029	3.35x	47,265.02	63,490.33	-25.56%
Q1 2030	3.35x	50,491.56	67,824.48	-25.56%

* Historical display retains its original assumptions and as-then rolling ceiling.

Complete rolling four-quarter windows are published through Q1 2030. Q2-Q4 2030 target cells retain their existing unavailable/blank status.

Method and listing basis

Forward-four-quarter operating-profit multiple; retained native company-specific shares/units

Each of four joint outcomes retains its own F4Q non-GAAP operating profit in JPY billions, mean opening/closing economic shares in millions on the post-three-for-one split basis, and cash/share guards. Conditional prices are calculated within each outcome before probability weighting; the native 1,000 conversion is retained.

Source financial/model authority: Current saved financial graph, preserved original report and verified library master 1fe33e04ea4d. Numerical contract SHA-256: 90b269e81092479f.

Conditional Kioxia ceilings

JPY per post-split economic share | Current 6 November valuation

Outcome probabilities remain 30% persistent AI tightness, 40% orderly enterprise growth, 25% pricing normalization and 5% demand/execution setback. Each conditional price retains its own operating profit, economic shares and cash guards.

Quarter	Tightness 30%	Orderly 40%	Normalize 25%	Setback 5%
Q4 2026	20,082.88	18,534.08	17,589.04	14,947.18
Q1 2027	22,881.22	20,730.93	19,286.01	15,355.31
Q2 2027	26,001.43	23,010.26	20,533.33	14,622.56
Q3 2027	29,260.87	25,219.37	21,448.37	13,709.67
Q4 2027	32,924.47	27,597.44	22,358.67	12,755.21
Q1 2028	35,826.75	29,191.70	22,684.09	11,407.01
Q2 2028	39,578.33	31,347.40	23,767.03	11,035.29
Q3 2028	43,469.14	33,680.12	25,180.85	10,989.10
Q4 2028	47,134.37	36,077.37	26,622.13	11,083.85
Q1 2029	50,955.34	38,617.42	28,151.00	11,180.97
Q2 2029	55,436.13	41,337.02	29,634.33	11,700.24
Q3 2029	60,323.78	44,254.01	31,289.98	12,270.45
Q4 2029	65,135.20	47,114.54	32,957.14	12,787.21
Q1 2030	70,302.31	50,141.48	34,711.97	13,325.66

The headline ceiling is the weighted sum of these conditional prices. Weighted operating profit divided by weighted shares is a separate diagnostic. The original state-specific dividend, buyback, funding and share paths remain in effect.

Preserved prior report

Analysis as of 2026-11-01

The complete prior earnings report follows, with analysis dated 2026-11-01. Its future price tables and figures retain their original valuation vintage. The current section supplies the updated Q4 2026 and later valuation outputs.

Reading the preserved pages

Earnings, guidance, company-source evidence, operating assumptions, risks, monitoring items and source exhibits remain complete. Every preserved page carries a dated banner identifying the prior valuation vintage.

The current quarter table above preserves published history and provides the revised future targets. Ordinary dividends and other cash returns retain the existing separate treatment.

KIOXIA HOLDINGS

AI demand, pricing and cash returns

Research update | 1 November 2026 | Tokyo 285A.T

Current assessment

Active horizon	Price ceiling	Reference close	Price upside
Q4 2027	JPY 36,461.75	JPY 13,470.00	170.7%

The Q4 2027 price ceiling is JPY 36,461.75, a -31.3% revision from the prior same-quarter JPY 53,058.87. The forecast is reanchored to December-quarter guidance of JPY 2,500 billion revenue and JPY 2,000 billion non-GAAP operating profit. Weighted Q4 2027 forward four-quarter OP is JPY 12,968.259831 billion, compared with the prior JPY 18,462.724481 billion. The selected 4.5x multiple is unchanged and already incorporates the earlier reduction once. Case-specific cash and share paths determine the probability-weighted price. Protected Base and analytical score both remain 78.

The October 30 close of JPY 13,470 is already on the current three-for-one split basis. It precedes the 18:45 JST earnings briefing. The independently retained execution-price anchor is JPY 20,353.333333; the buyback schedule has its own price path. Nomura closing quote, 30 October 2026; Monex historical quote, 30 October 2026.

Joint operating outcomes

Outcome	Weight	Q4 2027 conditional ceiling
Persistent AI tightness	30%	JPY 44,226.90
Orderly enterprise growth	40%	JPY 37,071.19
2028 pricing normalization	25%	JPY 30,034.04
Demand and execution setback	5%	JPY 17,133.87

Ordinary cash dividends are separate income. The upside shown above measures price appreciation to the modeled price ceiling. Every positive-weight state passes the frozen model's cash and share guards.

The earnings reset and the investment case

Kioxia supplies the flash-memory and SSD layer that stores and serves growing AI workloads. Enterprise SSDs support inference, KV-cache storage and high-capacity data repositories. Smartphones and PCs remain significant end markets, with their own affordability and replacement-cycle pressures. The current forecast combines those forces in four coherent outcomes.

The September quarter delivered JPY 2,480.0 billion revenue and JPY 1,988.3 billion non-GAAP operating profit. Enterprise demand, higher realized pricing and low-teens sequential bit growth all contributed. Revenue for SSD and storage reached JPY 1,616.0 billion; data-center and enterprise customers represented a mid-60% share of that category. Smart devices contributed JPY 788.9 billion. Issuer Q2 prepared script, 30 October 2026, p. 8-11.

The December-quarter guide is JPY 2,500 billion revenue and JPY 2,000 billion operating profit at JPY 157 per USD. It includes a shift of some enterprise shipments into fiscal Q4, which is calendar Q1 2027. The company expects a stronger volume catch-up then. Issuer Q2 prepared script, 30 October 2026, p. 14; Issuer Q2 edited Q&A, 30 October 2026, p. 1.

The valuation still assumes exceptional earnings. Its main uncertainty is the duration and transmission of tight NAND supply into realized company pricing, followed by the cash needed for taxes, capacity, working capital and contingent claims. The model traces each of those uses within the same operating state.

Reported quarter and next-quarter guide

Metric	Sep 2026 actual	Dec 2026 guide
Revenue, JPY bn	2,480.000	2,500.000
Non-GAAP OP, JPY bn	1,988.300	2,000.000
Non-GAAP net income, JPY bn	1,348.600	1,365.000
Non-GAAP basic EPS, JPY/share	833.94	854.24
JPY per USD	161	157
Quarterly bit growth	Low-teens QoQ	Approximately flat
Blended USD ASP growth	Mid-20% QoQ	Moderate increase

Sources: Issuer IFRS release, 30 October 2026, p. 7, 12; Issuer Q2 prepared script, 30 October 2026, p. 9, 14; Issuer Q2 edited Q&A, 30 October 2026, p. 1. Source documents report rounded non-GAAP amounts. The exact IFRS and source workbook values remain in the source register.

Product position, TAM and customer allocation

BiCS8 production mix exceeded 50% at June end and is progressing toward more than 80% by March 2027. Kioxia and Sandisk share development and investment through their longstanding manufacturing JV. Existing Y7 and K2 space is utilized before phased K3 expansion; planned K3 operations begin in issuer FY2029. These features support scale and node migration while preserving exposure to manufacturing execution and capacity cycles. Issuer Q1 prepared script, 31 July 2026, p. 6, 10; Issuer Q2 prepared script, 30 October 2026, p. 6, 10.

The addressable demand includes enterprise SSDs, client SSDs, mobile and other smart devices, and retail flash. The issuer expects high-teens market bit growth in CY2026 and low-20% growth in CY2027, with its shipment growth aligned to the market. Its data-center outlook reflects growing agentic AI and high-capacity QLC adoption. PC demand faces higher BOM costs; lower-priced smartphones are moderating. Issuer Q2 prepared script, 30 October 2026, p. 5.

Enterprise product economics require customer qualification, firmware and controller capability, performance, energy efficiency, reliability and manufacturing cost. Competition from Samsung, SK hynix/Solidigm, Micron, Sandisk and Chinese NAND supply influences pricing and customer choices. The conditional price and cost paths below reflect that competitive exposure. The Sandisk JV also remains a source of co-investment and contractual revenue.

Industry and manufacturing context: Issuer annual securities report, English; Issuer Q2 prepared script, 30 October 2026, p. 5-6.

CY2027 capacity is largely allocated, and well over 50% of CY2028 GB volume is committed under multi-year LTAs. Management is discussing longer horizons with customers. Public materials leave customer-specific volume allocation, price floors, prepayments and contractual protections undisclosed. LTAs support demand visibility; the modeled realized prices retain their own uncertainty. Issuer Q2 edited Q&A, 30 October 2026, p. 1; Issuer Investor Day Q&A, 2 June 2026, p. 1.

I allocate actual SSD and storage revenue of JPY 1,616 billion as 65% enterprise and 35% client, using the issuer's mid-60% and mid-30% revenue descriptions. Initial physical-bit shares of 30% enterprise, 25% client, 40% smart devices and 5% retail, together with core manufacturing-cost shares of 48%, 22%, 28% and 2%, are low-confidence allocation proxies. JV revenue of JPY 68.6 billion contains JPY 5.2 billion contract compensation and JPY 63.4 billion pass-through cost. Enterprise revenue includes AI, QLC and nearline-storage use cases within the existing product allocation. Realized product ASP already incorporates mix. The 30%/40% QLC bit-share outlook for 2027/2028 supplies secondary-call context.

The QLC bit-mix outlook of approximately 30% in CY2027 and 40% in CY2028 appears in the full English call reproduction. The official edited Q&A confirms LC9 mass production, customer qualification and enterprise/hyperscale expansion. Quartr English call reproduction, 30 October 2026; Issuer Q2 edited Q&A, 30 October 2026, p. 1.

Fiscal calendar, share basis and retained history

One event, two fiscal naming conventions

Convention	Meaning
Issuer Japanese year	2027 fiscal year ending March 31, 2027
Issuer English year	FY2026
Latest quarter	July-September 2026: fiscal Q2 / calendar Q3
Current guide	October-December 2026: fiscal Q3 / calendar Q4
Catch-up quarter	January-March 2027: fiscal Q4 / calendar Q1
Vendor call label	Q2 FY2027

The common stock split three-for-one on October 1, 2026. July-issued Q1 EPS used the pre-split basis; the October presentation restates comparable EPS. Q1 non-GAAP EPS of JPY 1,621.81 becomes JPY 540.60 in the Q2 comparison. The declared JPY 90 interim dividend uses the pre-split September record date and equals JPY 30 per current share. Issuer stock-split notice, 31 July 2026; Issuer Q2 prepared script, 30 October 2026, p. 9, 17.

Published Q3 2026 remains a historical forecast vintage with its original 4x valuation and JPY 31,241.590968726287 target. The October 30 reported actuals are shown in a separate source reconciliation. Old share anchors and the complete earlier MD, PDF, model and workbook before copies remain preserved.

Retained vintage and current actual

Item	Value and convention
Published Q3 2026 price ceiling	JPY 31,241.590968726287; original 4x window
Prior Q4 2027 price ceiling	JPY 53,058.86752120253; same-horizon predecessor
Current Q4 2027 price ceiling	JPY 36,461.74782118800; probability-weighted conditional prices
Reported calendar Q3 2026 revenue	JPY 2,480.0 bn
Reported calendar Q3 2026 non-GAAP OP	JPY 1,988.3 bn

How the joint cases produce revenue and OP

I assign 30% to persistent AI tightness, 40% to orderly enterprise growth, 25% to pricing normalization beginning in 2028, and 5% to a joint demand and execution setback. The final two paths retain a combined 30% normalization/downturn marginal. Each joint path includes its own PC unit softness, consumer wallet pressure, QLC mix, pricing transmission, production costs and capital allocation. The prior PC impairment has been incorporated into these joint outcomes, so it is applied once.

The physical-bit index is 1.0 in calendar Q3 2026. Q2 is 1 / 1.13 and Q1 is Q2 / 1.03. Those numerical inputs are explicit midpoint proxies for the reported low-teens and low-single-digit sequential growth descriptions. Q4 remains at 1.0 to follow guidance. For each case, the 2027 annual company total grows the four-quarter 2026 denominator by the selected annual rate. Catch-up is allocated to Q1 2027; the remaining company quarters rise linearly. Later company annual totals follow the selected growth and quarter weights of 0.97 / 0.99 / 1.01 / 1.03. Annual consumer application amounts use their own growth selections and the same quarter weights. Enterprise receives the remaining company bits in each quarter. All applications reconcile to total company capacity. Absolute application GB remains undisclosed.

I model 2027 client, smart-device and retail GB growth of -2% / +2% / 0% in persistent tightness; -3% / 0% / -2% in orderly growth; -6% / -2% / -3% in normalization; and -10% / -5% / -5% in disruption. Their probability-weighted rates are -3.8%, -0.15% and -1.8%. These explicit company allocations follow the issuer outlook for declining PC NAND demand and broadly unchanged smartphone NAND demand through CY2027. Later-year rates allow a bounded content recovery. Enterprise receives the positive remaining bits inside every existing company shipment path, implying stronger enterprise growth and reflecting the disclosed demand and allocation priority. The issuer's Smart Devices category includes tablets, TVs, other consumer electronics and automotive applications alongside phones. In the primary 30% initial enterprise-bit allocation, probability-weighted enterprise GB grows 75.25% in 2027. This is a strong allocation assumption within unchanged company capacity. The initial application GB shares remain low-confidence proxies.

Application demand source: Issuer Q2 prepared script, 30 October 2026, p. 5.

Product revenue follows allocated physical bits, the modeled realized USD price proxy and FX. Core manufacturing cost follows allocated bits and the selected cost-per-bit improvement. JV revenue and cost scale with total bits; contract compensation remains JPY 5.2 billion each quarter. COGS and SG&A receive R&D in the current 38.7 / 57.7 proportion. Calendar Q4 manufacturing cost of JPY 398.55 billion, total R&D of JPY 51.45 billion, SG&A excluding R&D of JPY 48.5 billion and other opex of JPY 1.5 billion reconcile to JPY 500 billion total cost and JPY 2,000 billion operating profit. Q1 2027 R&D of JPY 51.45 billion completes the issuer fiscal-year total of JPY 200 billion. Later fiscal-year R&D grows 10% and is spread equally by quarter. SG&A grows 8% annually with 20% variable revenue transmission. COGS R&D is allocated across core products using manufacturing-cost shares; the JV receives no R&D allocation.

The budgeted product paths capture volume, mix and pricing together. Inference and high-capacity storage benefits are included in enterprise revenue. Product GP allocations are analytical because the company reports a consolidated financial result and broad application categories. Consolidated non-GAAP OP remains the valuation metric.

The December guide embeds the currency headwind. Both Japanese and English prepared scripts assign JPY 55 billion to operating profit, while the Q&A describes that amount within its revenue-guidance explanation. Quarterly sensitivity is JPY 15 billion revenue and JPY 14 billion OP for a one-yen movement, based on the guided sales volume. Issuer Q2 prepared script, 30 October 2026, p. 14; Issuer Q2 edited Q&A, 30 October 2026, p. 1.

Selected annual physical-bit growth

Case	2027	2028	2029	2030	Q1 2027 catch-up
Persistent AI tightness	24%	22%	20%	18%	15%
Orderly enterprise growth	22%	20%	17%	15%	10%
2028 pricing normalization	20%	15%	14%	12%	8%
Demand and execution setback	12%	-5%	5%	8%	0%

Selected cost, capacity and cash timing

Case	Cost/bit annual	Post-budget capex JPY bn	Grants	First modeled buyback
Persistent AI tightness	-8%	1,000	10%	Q2 2027
Orderly enterprise growth	-8%	800	7%	Q2 2027
2028 pricing normalization	-6%	700	5%	Q4 2027
Demand and execution setback	-3%	400	0%	Q4 2028

Cash conversion, taxes, funding and returns

The tax-accrual proxy is 31.2342569%, calibrated to issuer Q4 profit before tax of JPY 1,985 billion and net income of JPY 1,365 billion. Opening tax payable of JPY 974.689 billion is reserved. In calendar Q2 and Q4, modeled tax payment equals opening tax payable plus 50% of current accrual. Q1 and Q3 pay 25% of current accrual. Every payment is capped at opening payable plus the current accrual. This analytical seasonal schedule incorporates the disclosed second-half tax requirement. Exact settlement dates remain undisclosed.

NWC is calibrated to 53.1037903% of revenue using September receivables plus inventory less payables of JPY 1,316.974 billion. Each change is deducted once. Quarterly D&A starts at JPY 77.461 billion and grows 8% annually independently of ASP. Forecast cash interest is JPY 7.575 billion per quarter, normalizing first-half cash payments of JPY 15.150 billion across two quarters; latest Q2 interest paid was JPY 9.311 billion. Quarterly lease principal uses JPY 8.006 billion. Current debt of JPY 60.678 billion is repaid evenly over four quarters, while the JPY 543.231 billion remainder stays outstanding pending dated maturity evidence. The terminated revolver supplies no modeled funding. Core FCF is CFO less net capex. Strategic asset investments retain their separate classification. Actual Q2 net capex is JPY 84.578 billion gross less JPY 9.250 billion grants and JPY 0.112 billion disposal proceeds, giving JPY 75.216 billion.

Reported cash, tax, NWC and debt anchors: Issuer IFRS release, 30 October 2026, p. 11-12, 18; Issuer annual securities report, English. The prospective payment schedules and normalizations above are model selections.

Current fiscal-year gross capex of JPY 470 billion combines actual first-half spending of JPY 136.980 billion with JPY 165 billion and JPY 168.020 billion in calendar Q4 2026 and Q1 2027. The modeled second half is about JPY 333 billion; the issuer described approximately JPY 330 billion. The model allocates JPY 470 billion to each of FY2026, FY2027 and FY2028, totaling JPY 1,410 billion. That allocation is consistent with the earlier issuer annual average of JPY 470 billion. The newest Q&A confirms a broadly unchanged three-year plan. K3 begins in issuer FY2029, starting April 2029. After the budgeted period, annual gross capex is JPY 1,000 / 800 / 700 / 400 billion in the four cases. Grant fractions of 10% / 7% / 5% / 0% are conditional funding assumptions. Partner allocation of the combined JPY 5 trillion investment through 2032 and exact grant eligibility/timing remain open.

Capacity and capex source context: Issuer Q2 prepared script, 30 October 2026, p. 6, 12; Issuer Q2 edited Q&A, 30 October 2026, p. 1; Issuer JV investment disclosure, September 2026.

Issuer core FCF equals CFO less net capex. The September quarter generated JPY 1,438.0 billion on the rounded presentation basis, with JPY 1,513.2 billion CFO and JPY 75.2 billion net capex. Strategic asset investing has a separate place in the total investing statement. Issuer Q2 prepared script, 30 October 2026, p. 12, 26.

Shareholder returns, reserves and payment timing

The new official policy allocates 100% of medium- to long-term excess funds to shareholder returns after growth, strategic commitments and financial soundness. It combines progressive dividends with flexible buybacks. Kioxia's former modeled 50% positive-FCF payout and 41%/59% dividend/buyback mix are replaced in the current forecast. The completed August JPY 800 billion buyback and 48.4005 million post-split shares are already reflected in September cash and net shares. Additional buybacks are temporarily on hold; the earliest modeled resumption in calendar Q2 2027 is an assumption.

Each path reserves the greater of quarterly revenue and book debt plus leases, outstanding tax payable, the next two quarters' gross capex and JPY 200 billion for strategic contingencies. R&D and human-capital operating cash costs have already passed through operations. Positive cash above the reserve becomes eligible excess. On the selected Q2/Q4 payment quarters, 100% / 85% / 65% / 40% is executed in the four cases, while pending eligible excess carries forward. Those fractions represent timing of medium-term implementation. Buybacks use existing excess cash and receive no debt funding.

Declared cash dividends of JPY 47.937166020 billion are paid in December 2026. JPY 90 per pre-split share equals JPY 30 per current post-split share. The model assumes a JPY 30 year-end dividend paid in June 2027 and 10% annual DPS growth, paid each June and December thereafter. Future DPS is an analytical selection; the official year-end amount remains undetermined. Ordinary dividends are shown separately from the price ceiling and price upside.

The return policy and the modeled execution calendar are explicit. The issuer prioritizes growth investment and financial soundness, has initiated progressive dividends, and is assessing further buybacks alongside strategic investment and material second-half taxes. Issuer capital-return policy, 30 October 2026; Issuer Q2 edited Q&A, 30 October 2026, p. 2; Issuer Q2 prepared script, 30 October 2026, p. 16-18.

Economic claims and valuation derivation

September legal net shares of 1,597.905534 million are combined with a conditional 8.011308 million remaining options, 3.5645427 million maximum legacy stock awards and 0.251916 million maximum July all-stock awards. The economic anchor is 1,609.7333007 million. The option proxy assumes all first-half new shares were exercises and assumes no forfeitures; the November 6 detailed filing is expected to clarify balances. Existing stock claims enter once before vesting. Legacy cash-equivalent units of 4.3566633 million settle in calendar Q2 2028 at the independent execution-price path. Their March liability of JPY 2.663 billion is excluded from an additional charge. July awards are assumed entirely stock-settled. Future grants add 0.3 million equity claims per quarter and cash-equivalent units at the 55%/45% proportion, settling 12 quarters later. The separate 1% annual dilution sensitivity measures further uncertainty. Buybacks earn 90% economic retirement credit after two quarters; legal net shares and economic claims retain their own ledgers.

For each state and quarter, price equals four-quarter non-GAAP operating profit multiplied by the owner-selected multiple and 1,000, divided by the average of opening and closing economic shares in millions. The expected price is the sum of each state's price multiplied by its probability. Weighted operating profit and weighted shares are additional diagnostics with their own definitions. Every supported state must pass cash and share guards. Multiples of 3.0x, 3.375x, 3.75x, 4.125x and 4.5x from Q4 2026 through Q4 2027, followed by 4.5x, already include the October 28 owner reduction. The published Q3 2026 target of JPY 31,241.590968726287 and its original 4x window remain unchanged.

Legal-share and remuneration disclosures: Issuer IFRS release, 30 October 2026, p. 2; Issuer annual securities report, English; Issuer remuneration revision, 15 May 2026; Issuer remuneration correction, 12 June 2026; Issuer legacy grant correction, 2 July 2026; Issuer July stock awards, 31 July 2026. Completed buyback: Issuer repurchase completion, August 2026.

Opening economic claim bridge

Component	Million post-split claims
September legal net shares	1,597.9055340
Conditional remaining options	8.0113080
Legacy maximum stock awards	3.5645427
July all-stock maximum awards	0.2519160
Opening economic claims	1,609.7333007

The quarterly tables retain both legal net shares and economic claims. Stock vesting moves claims into legal shares; the claims have already entered the economic count. Economic retirement credit follows its selected two-quarter lag and 90% credit. Cash-equivalent award settlements appear as cash uses on their modeled dates.

For the active horizon, weighted four-quarter OP is JPY 12,968.25983148434 billion and weighted valuation shares are 1,601.50948200072 million. Each state has its own numerator and denominator. The final JPY 36,461.74782118800 is the weighted sum of the four state prices.

From Q4 2027 onward, the selected multiple is 4.5x. The October 28 owner reduction has already been applied once. Current earnings and cash modeling retain that schedule.

Portfolio view and bounded sensitivities

The analytical score is 47 out of 60, rounded to 78 out of 100; the protected Excel Base remains 78. Components are Core 17/20, Cycle 8/10, TAM 10/10, Catalysts 5/5, Macro 8/10, Alpha 5/5 and a risk deduction of 6 points. Advanced-node positioning, customer LTAs and clearer returns support the positive components. Peak margins, consumer pressure, tax and execution timing, FX, cash allocation and long-term pricing/capacity uncertainty retain material risk deductions.

Score components

Component	Points
Core	17
Cycle	8
Tam	10
Catalysts	5
Macro	8
Alpha	5
Risks	-6
Total	47 / 60 = 78 / 100 rounded
Protected Base	78

Active-horizon sensitivities

Selection	Q4 2027 price ceiling	Change from active
Buyback execution price +25%	JPY 36,413.53	-0.13%
Buyback execution price -25%	JPY 36,542.48	0.22%
Annual dilution of 1%	JPY 36,053.39	-1.12%
No future buyback retirement credit	JPY 36,222.32	-0.66%

These are the frozen model's selected sensitivities. Execution price affects how many shares are purchased; retirement credit and future dilution affect the economic denominator. Operating demand, realized pricing and cost assumptions retain their conditional-state structure.

Initial application-GB allocation sensitivity

The starting 30% enterprise physical-bit share is the primary allocation. Absolute application GB and starting product price per GB are undisclosed. This separate diagnostic measures the effect of that allocation uncertainty while preserving the primary four-case forecast.

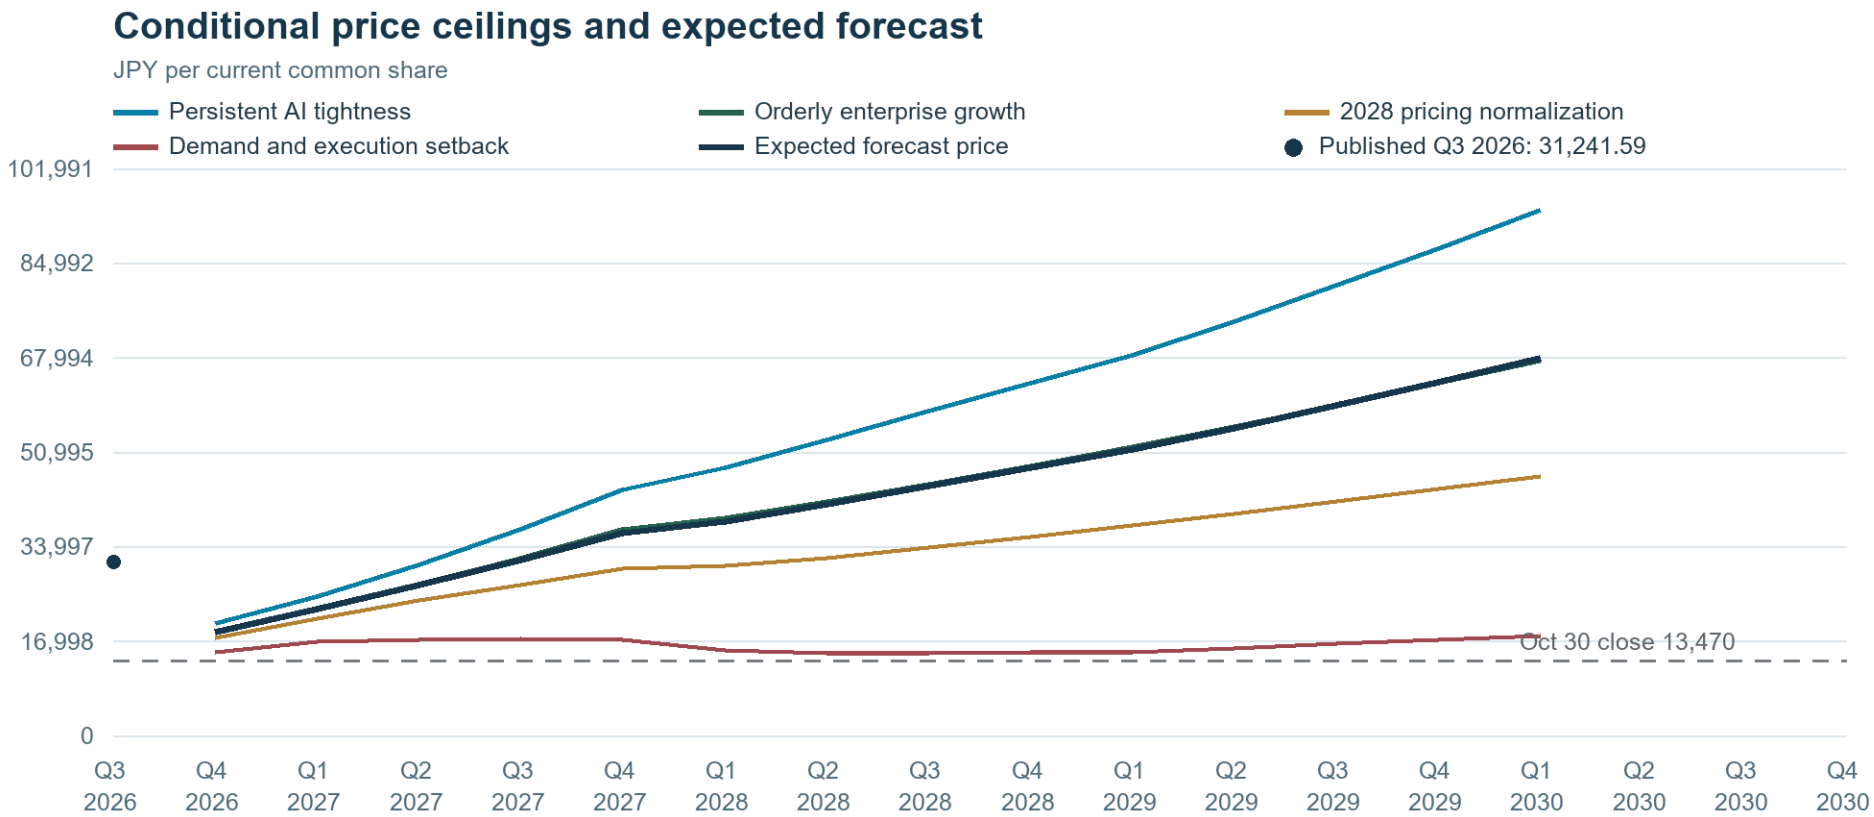

Four starting enterprise-bit allocations

Initial enterprise GB share	Q4 2027 expected price	Change from primary
20%	JPY 43,321.9842	18.81%
30% (primary)	JPY 36,461.7478	0.00%
40%	JPY 33,050.0322	-9.36%
50%	JPY 31,020.6478	-14.92%

For each diagnostic point, the remaining initial bits are split among client, smart devices and retail in the same 25:40:5 proportions. Observed application revenue and manufacturing-cost allocations remain fixed. The inferred starting price per GB and cost per GB consequently renormalize. Company total-bit paths, consumer annual rates, probabilities, price-growth vectors, cash and return laws, and the current guide calibration remain fixed.

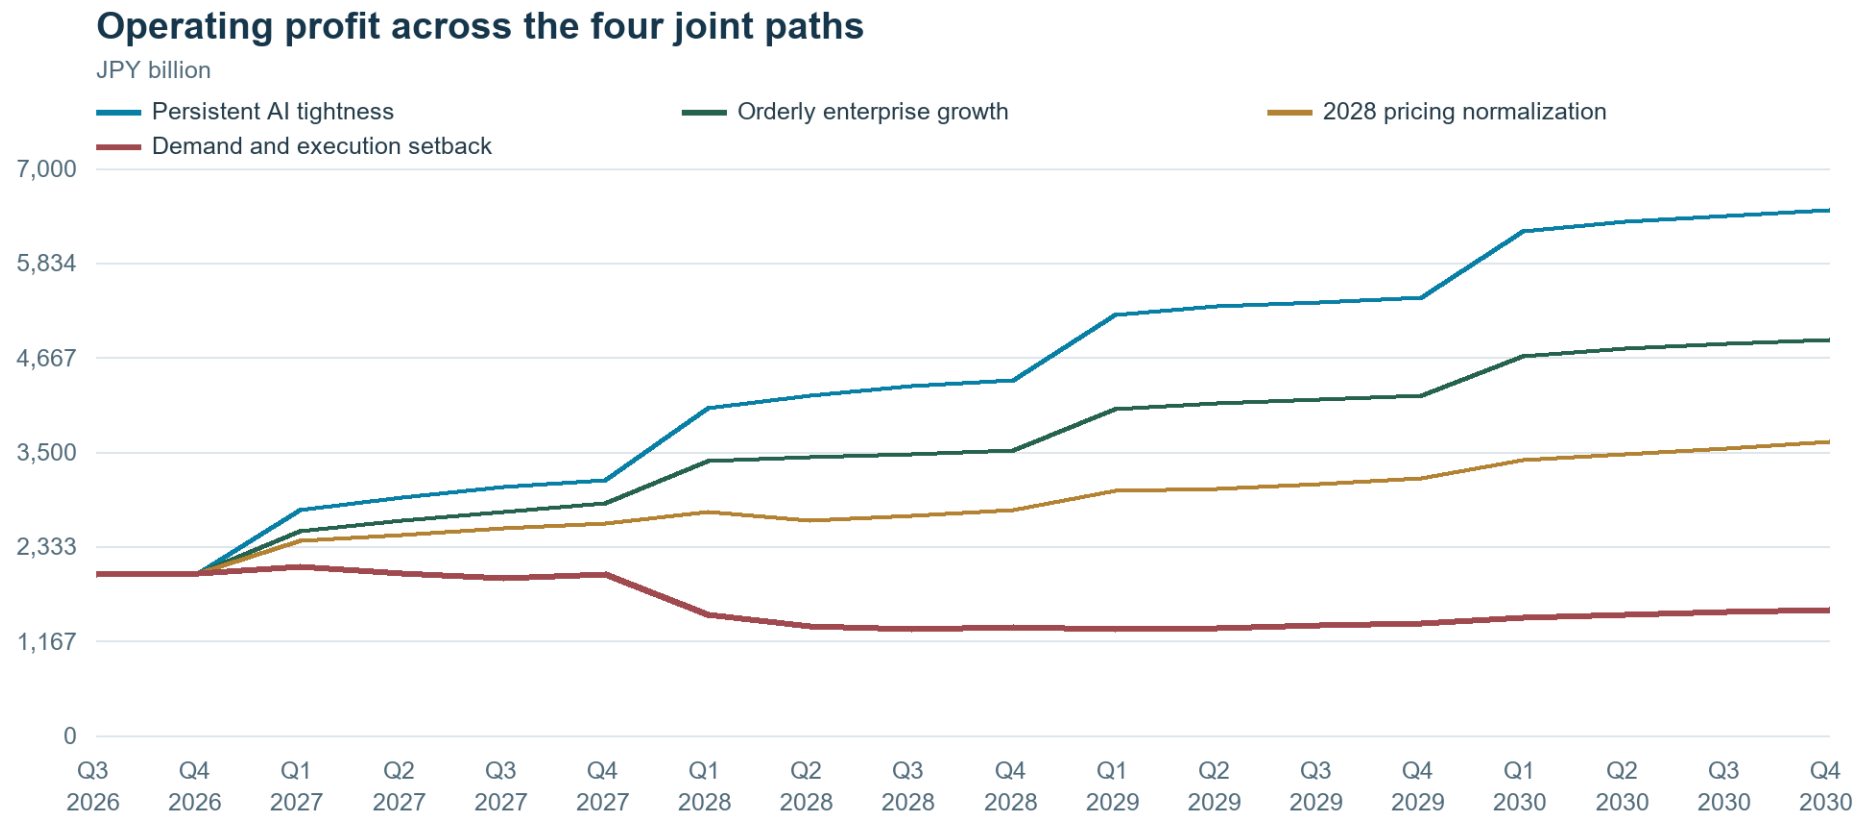

The primary allocation implies 75.25% probability-weighted enterprise GB growth in 2027. Lower starting enterprise GB produces a higher inferred starting enterprise price per GB and a higher conditional value from the residual enterprise growth. The four-row diagnostic isolates this initial-mix uncertainty; complete diagnostic paths remain in the separate source model. No additional financial parameters are selected here.

Forecast price and cash paths

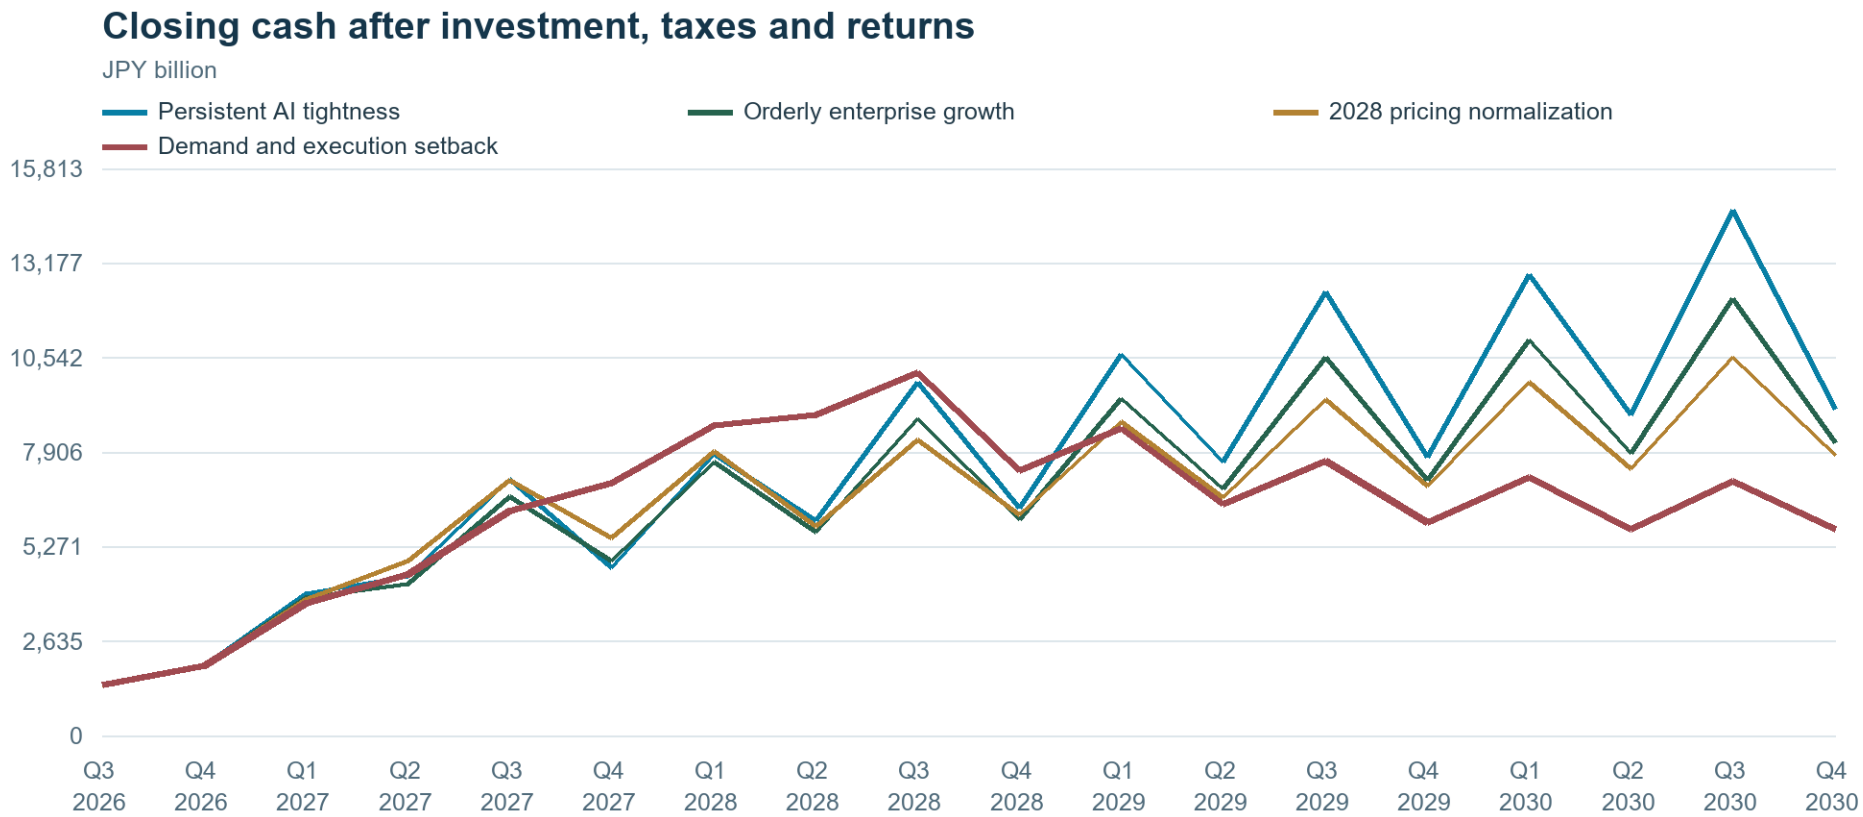

Source: research model, 1 November 2026, historical_published_Q3_2026.target. Forecast curves begin in Q4 2026 and use complete four-quarter windows. The separate Q3 2026 marker preserves the published ceiling and its original vintage.

Conditional operating paths

Source: research model, 1 November 2026. All four cases share the latest reported quarter and the current issuer-guidance anchor.

Conditional cash paths

Source: research model, 1 November 2026. Cash remains subject to each state's reserve, tax, funding and return rules.

Consumer application growth and enterprise allocation

Annual client, smart-device and retail GB growth is selected explicitly. Each annual amount is allocated using quarter weights of 0.97 / 0.99 / 1.01 / 1.03. Enterprise equals the company total less those three applications in every quarter. The complete case tables below show the resulting physical-bit amounts.

forecast precision	Presentation Non-GAAP anchors rounded to JPY0.1bn. Cash, debt, tax and legal shares use statement precision. Product other is rounded-residual75.1, includingJV68.6 and retail6.5.

These are the selected model controls. Units follow the control labels and the report cash/share conventions. The accompanying research model retains complete numeric precision.

Issuer numeric evidence | September results

September quarter: issuer-reported financial evidence

JPY billion. Four numeric observations cropped from issuer slide 8; labels and layout are original.

Revenue	Adjusted non-GAAP GP	Non-GAAP operating profit	Core free cash flow
2,480.0 Bn Yen	2,091.9 Bn Yen	1,988.3 Bn Yen	1,438.0 Bn Yen

Core free cash flow is operating cash flow less net capex. Adjusted GP excludes R&D under the issuer presentation convention.

Cropped issuer numeric evidence with original labels. Issuer Q2 presentation, 30 October 2026, p. 8

Issuer numeric evidence | December guidance

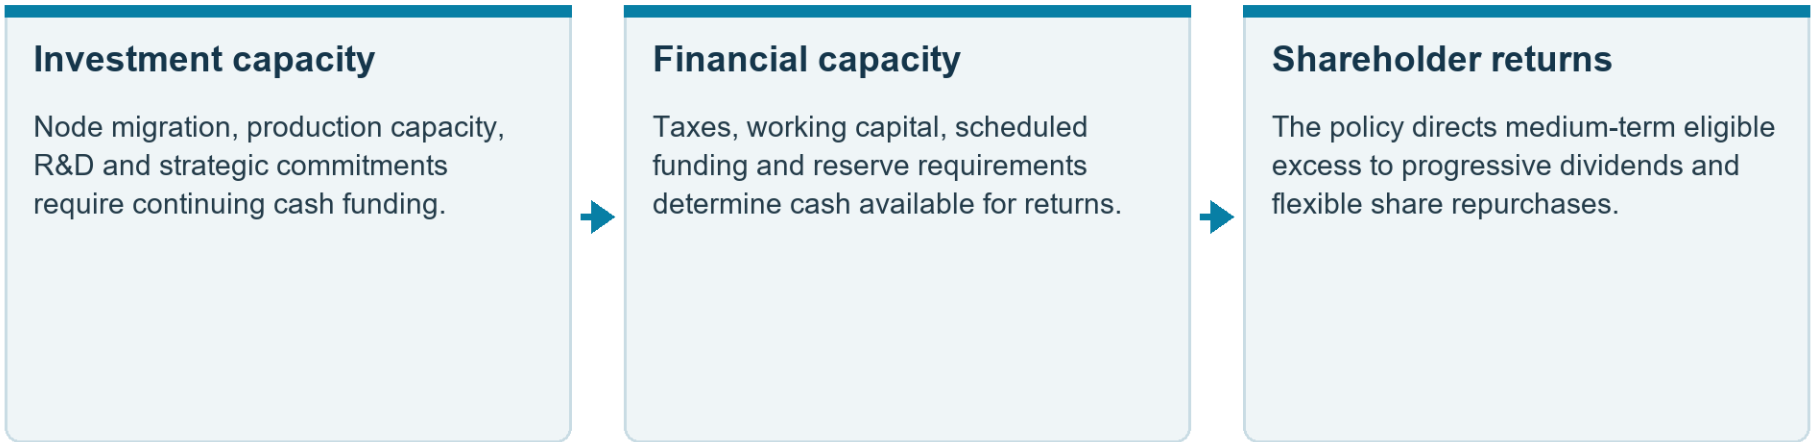

(Bn Yen)	FY2026 Q2 Results	FY2026 Q3 Guidance	FY2026 QoQ
Revenue	**2,480.0**	**2,500.0**	**+1%**
Non-GAAP Operating Profit	**1,988.3** Margin 80.2%	**2,000.0** Margin 80%	**+1%**

Non-GAAP Net Income[1]	**1,348.6** Margin 54.4%	**1,365.0** Margin 55%	**+1%**
Non-GAAP Earnings Per Share (Yen) [2]	**833.94**	854.24	+2%
Exchange Rate (Yen) USD / JPY	161	157	FX Sensitivity[3] (quarterly) - Revenue: 15.0 Bn Yen - Operating Profit: 14.0 Bn Yen

Cropped issuer guidance table. EPS is basic and uses the current post-split share basis. Source amounts are rounded. Issuer Q2 presentation, 30 October 2026, p. 14

Capital allocation | original explanatory diagram

Capital allocation: the issuer framework and modeled obligations

Original explanatory diagram, informed by issuer slides 16-17 and the October edited Q&A.

The forecast expresses these obligations through each conditional cash ledger, reserve floor and execution calendar.

Original explanatory diagram based on issuer policy and the model cash ledger. Issuer Q2 presentation, 30 October 2026, p. 16; Issuer Q2 edited Q&A, 30 October 2026, p. 2

Returns and split basis | original timeline

Capital-return timeline and share basis

Original diagram. Company actions and analytical payment assumptions are labeled at their respective dates.

Issuer actions in 2026

August: JPY 800 billion buyback completed. October: approximately JPY 48 billion interim dividend announced; JPY 90 per pre-split share equals JPY 30 per current share.

Share basis

The October 1 three-for-one split is already reflected in current-share prices and claims. Completed buybacks are included in September cash and net shares.

Modeled ordinary dividends

December 2026: JPY 47.937166020 billion cash. June 2027: JPY 30 per share assumed. Subsequent DPS grows 10% annually in the forecast.

Modeled additional buybacks

Each case uses its approved first execution quarter and eligible-cash fraction. The complete cash and share tables show the resulting repurchases and retirement lag.

Original timeline. Announced company actions and forecast assumptions are identified in the diagram. Issuer Q2 presentation, 30 October 2026, p. 17; Issuer capital-return policy, 30 October 2026

Demand to cash and value | original analytical diagram

Demand and allocation flow into conditional value

Original analytical diagram, informed by issuer market outlook and summary evidence on slides 5 and 18.

Company capacity

Each joint case defines total annual bits and the current guidance anchor. The industry demand outlook informs those selections.

→

Application allocation

Client, smart-device and retail GB use explicit annual rates. Enterprise receives the remaining capacity in every quarter.

→

Operating economics

Physical bits, realized prices and FX determine revenue. Production costs and opex determine consolidated OP.

Conditional cash uses and economic claims -> four-quarter OP valuation -> probability-weighted price

Original analytical diagram. Demand context from the issuer and allocation/cash mechanics from the research model. Issuer Q2 presentation, 30 October 2026, p. 5, 18

Sources, disclosure limits and monitoring

Both complete secondary management-call reproductions are preserved and have been read. Issuer prepared scripts and edited Q&A summaries are complete for both quarters. The Q1 primary replay covers about 34 minutes 45.5 seconds of prepared remarks. Full primary Q&A audio remains unverified; a Q2 primary replay was not found. Translation, speaker and capex-currency ambiguities remain visible in the source register. The bilingual prepared scripts explicitly assign the JPY 55 billion FX effect to operating profit; the edited Q&A frames the amount within the revenue-guidance discussion. Remaining options/awards, the September SBC liability and dated debt maturities await detailed disclosure. Absolute application GB volumes, contract price floors, customer-by-customer allocation and grant timing remain undisclosed.

Financial calculations have independent checks and saved linked-workbook recalculation checks. Microsoft Office is unavailable, and native Excel recalculation remains unverified. The legacy historical rolling diagnostic retains its original formula and saved vintage, with separate checks preserving historical outputs. Unaffected portfolio entries retain their native data, features and prior validation status.

The next detailed filing is expected on November 6. The priority source updates are remaining options and awards, September cash-settled SBC liabilities, dated debt maturities, exact customer volume/price terms, government-grant eligibility and execution of additional returns. New evidence can change the corresponding model inputs and probabilities under the standing framework.

Operating observations for the next review

1. December quarter: compare revenue and non-GAAP OP with the JPY 2,500 billion / JPY 2,000 billion guide at JPY 157 per USD, including its volume and currency bridge.

2. January-March 2027: examine the enterprise shipment catch-up described by management against the selected quarterly bit paths.

3. Calendar 2027 company bits: compare the low-20% growth outlook with the forecast and its disclosed proxy application mix. Starting application GB shares remain undisclosed.

4. Product economics: follow realized USD ASP, manufacturing cost per bit and mix against the selected price and cost paths.

5. Cash allocation: track current fiscal-year gross capex of JPY 470 billion, tax settlements, reserve needs and execution of the official dividend and buyback policy.

6. November 6 detail: review remaining options and awards, cash-settled liabilities and debt maturities as the detailed filing becomes available. These observations guide the next economic review.
