Q4 2027 model ceiling: TWD 872.68

Analytical Base 41/60 = 68 | Business growth and mix improvement; no positive modeled upside at the dated price

Owner authorized October 11, 2026: 20x fully expensed forward-four-quarter operating profit attributable to common shareholders, less matched end-window net financial claims, divided by end-window diluted common shares. No annual terminal stage or discretionary discount remains. The TWD 20bn operating liquidity reserve is excluded from the cash offset. Funding balances are held fixed in workbook operating sensitivities; adopted operating revisions require a funding rebuild.

Coverage initiated at the owner's request. No holding was established by this research. Existing portfolio Base overrides remain protected.

All operating values are in TWD million and shares in millions unless stated otherwise. Forecasts are analytical assumptions; issuer guidance and actual results are identified separately.

Retained dated market snapshot: TWD 1,270.00 per share (2026-10-08 regular close); 1,640.390 million common shares (October11 TWSE registered capital; June30 last known treasury); estimated equity capitalization TWD 2,083,294.9 million. Registered shares less last reported treasury. June-to-September converted but possibly unregistered shares are reconciled separately; up to2.3663m additional economic common shares atSeptember3. Fully converted model denominator avoids counting those conversions twice. This dated common-share snapshot is separate from forecast diluted shares.

Growth or re-rating: no positive modeled upside at the dated 2026-10-08 regular Taiwan close,13:30 Asia/Taipei price of TWD 1,270.00, so the Upside Driver split is unavailable.

Decision in the model

Active horizon	Earnings window	F4Q OP	Multiple	Diluted shares	Ceiling
Q4 2027	Q4 2027 through Q3 2028	74,175.7	20x	1,654.815	872.68

The ceiling is a model valuation, not a guaranteed trading price or a literal net-income P/E. Probability-weighted operating inputs enter once. The existing funding function then calculates one adopted cash, tax, working-capital and debt path from those weighted operations. The valuation uses its matched end-window claims and shares; it does not weight a joint-state equity-floor mixture.

Economic scope and matching claims

Consolidated sales less all manufacturing depreciation, R&D, administration, employee profit sharing and stock compensation; 2% minority OP allocation is an explicit proxy. Investment fair-value gains are excluded. Financial customer deposits, capacity guarantees, pensions, debt, leases and excess cash are reconciled separately.. Owner authorized October 11, 2026: 20x fully expensed forward-four-quarter operating profit attributable to common shareholders, less matched end-window net financial claims, divided by end-window diluted common shares. No annual terminal stage or discretionary discount remains. The TWD 20bn operating liquidity reserve is excluded from the cash offset. Funding balances are held fixed in workbook operating sensitivities; adopted operating revisions require a funding rebuild.

Financial claims and diluted shares follow the company-specific schedule below. Debt, preferred and minority claims are counted once. All financial model tables use TWD million unless a different unit is stated.

Thesis

Research refreshed October 12, 2026; pricing and its dependent funding were updated. The latest reviewed issuer financial materials remain the July and February presentations. Taiwan Stock Exchange 3037; all financial amounts below are TWD million unless stated. This is existing-coverage research, not evidence that the owner holds the shares. The retained dated reference close is TWD 1,270 on October 8; it is not a live quote. October 9 was not a Taiwan trading session in the exchange's dated profile.

Decision and valuation status

The owner approved 20x fully expensed forward-four-quarter operating profit on October 11, 2026. The Q4 2027 ceiling is TWD 872.68, or 0.69x the dated TWD 1,270 close, about 31% below that dated price. This is a valuation conclusion, not a forecast of a realized trading loss.

Unimicron benefits from larger accelerator packages, more routing layers and higher-end substrate mix. Those demanding growth and margin assumptions still do not imply positive investment upside at the dated market price. The owner's Upside Driver is unavailable when the forward target is below price; business growth alone does not change that arithmetic.

The approved20x method capitalizes fully expensed common-attributed operating profit, reserves TWD 20bn required operating cash, and deducts TWD 1.443bn separate pension/capacity-guarantee claims. The current price evidence changes operating inputs and dependent funding; the method, valuation quarter, share schedule and Base68 remain fixed. Legacy annual-method comparisons remain in the recoverable research archive.

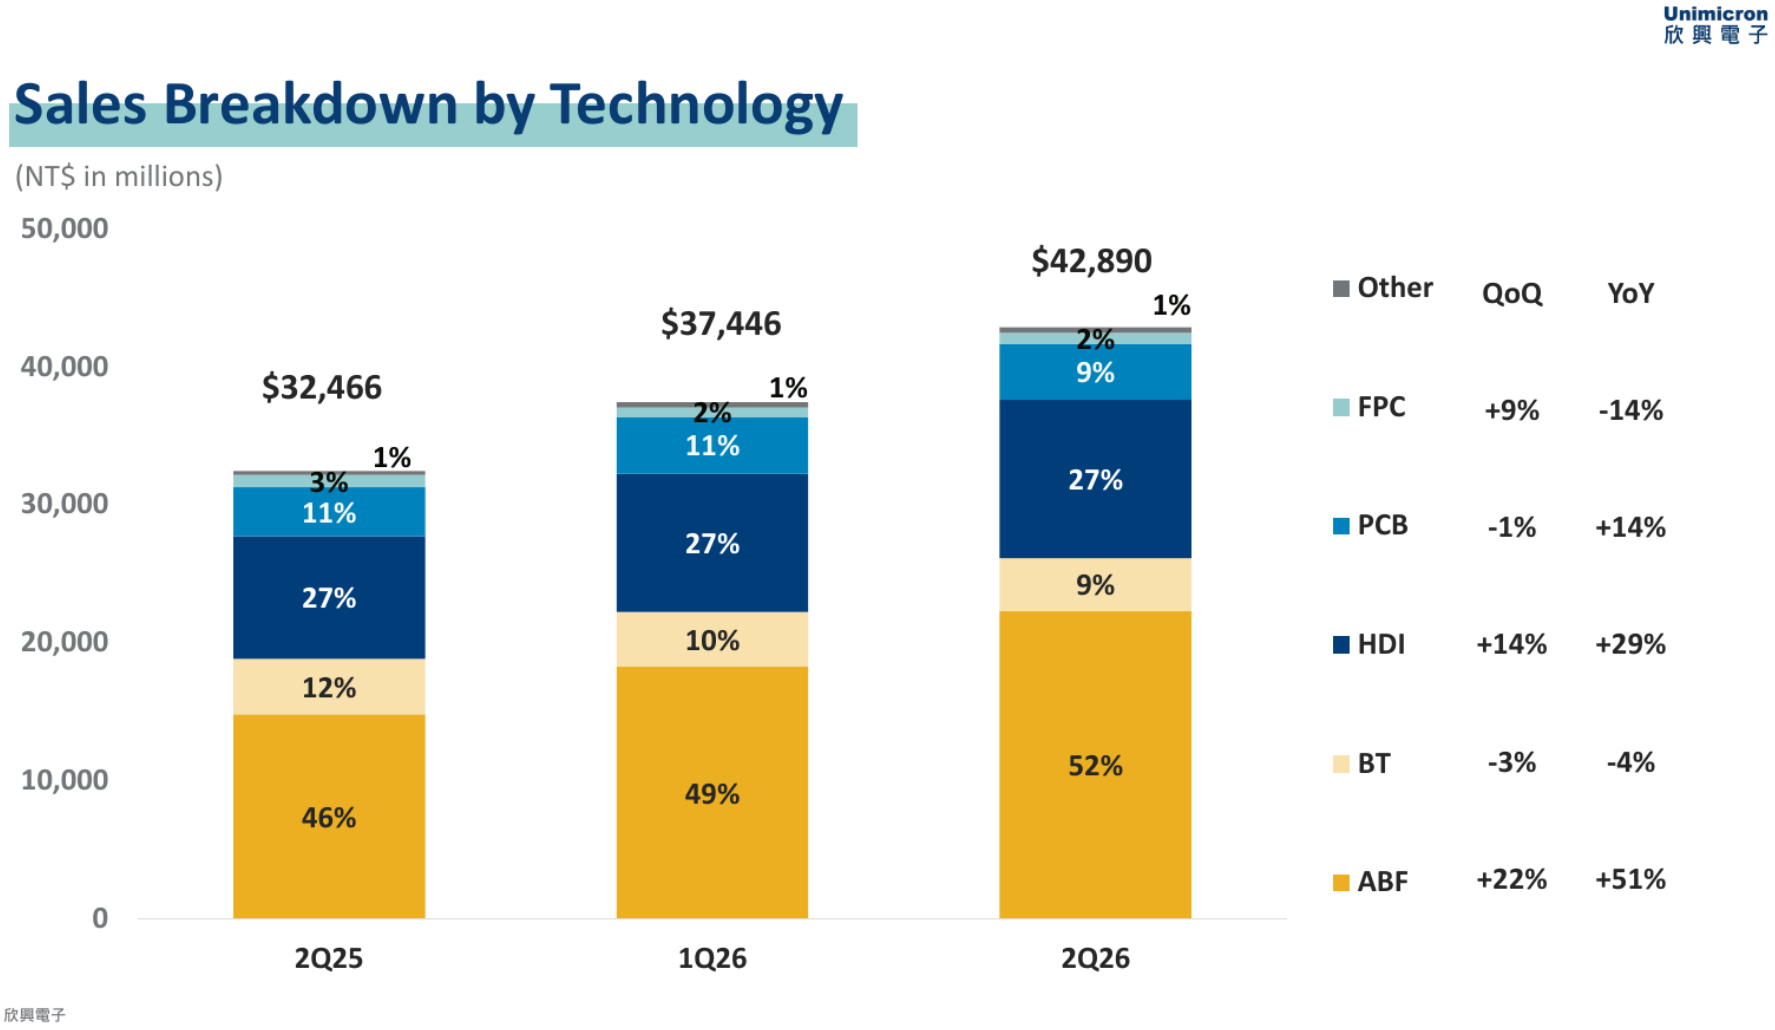

The invoice and the engineering bottleneck

Unimicron sells ABF and BT IC substrates, HDI boards, other printed circuit boards, flexible circuits and related services. It does not sell the entire accelerator, HBM stack or data-center rack. Revenue is recognized on its own delivered boards and substrates. GPU or ASIC spending is context for demand, not a multiplier applied directly to Unimicron's sales.

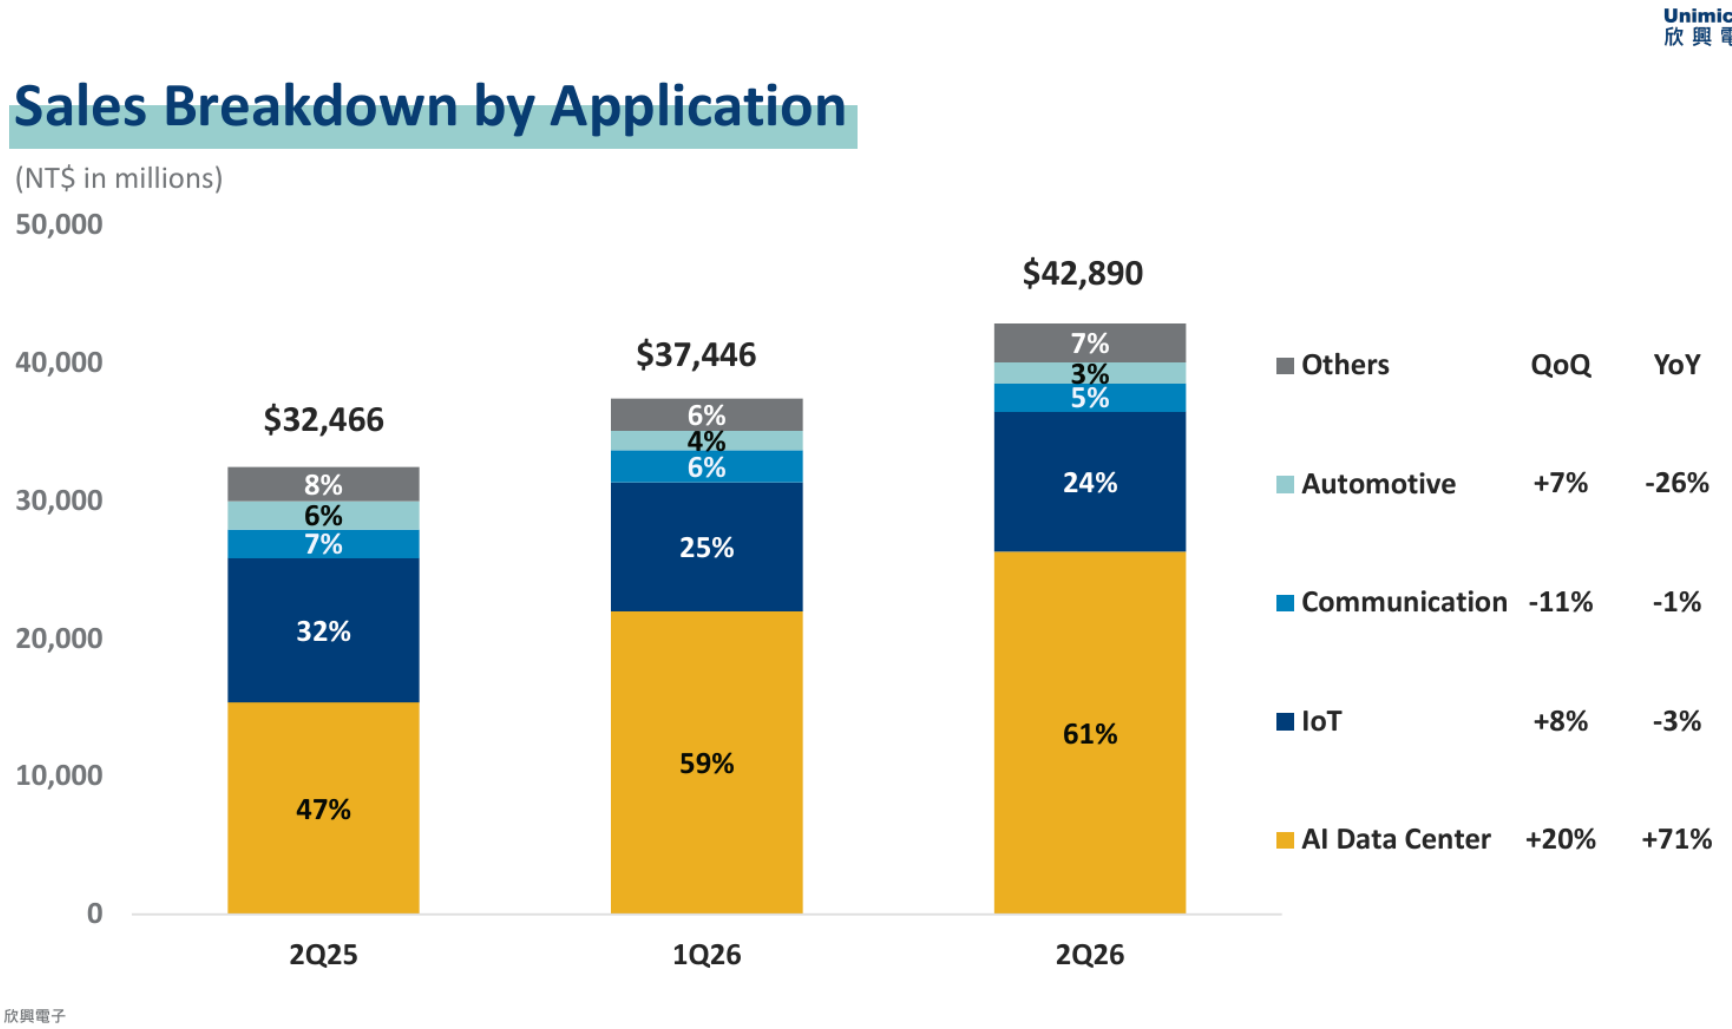

More chiplets, routing density, package area and layers increase processing burden. Fine lines, warpage control, via reliability, lamination and inspection can restrict usable output even while factories add floor space. A larger package consumes more panel area and can reduce good units per panel. Extra process steps and yield loss are correlated supply constraints, not separate additive demand shocks.

The June deck attributes 52% of sales to ABF, 9% to BT and 27% to HDI, with the rest principally PCB and flexible circuits. Application reporting identifies AI data centers at 61% of sales, versus 47% a year earlier. Product and application views overlap: one cannot add the 61% application share to the 52% ABF share.

Customer qualification and manufacturing experience matter, but this is not a monopoly. Ibiden, Shinko, Nan Ya PCB, AT&S and Samsung Electro-Mechanics compete for different products and customers. Their capacity responses, qualification progress and pricing matter to Unimicron's future return on capital. No competitor's nominal capacity is treated as immediately qualified substitute supply.

Unimicron issuer report, page encoded in image filename | Technology sales mix; ABF and BT are products, not additional pools to add to application totals.

Unimicron issuer report, page encoded in image filename | AI data-center application mix overlaps the product mix; do not add the two charts.

Actual results and earnings quality

FY2025 revenue was TWD 131.24bn, not the approximately TWD 110bn quoted in the legacy artifact. Reported operating profit was TWD 6.67bn. Q2 2026 revenue reached TWD 42.89bn, gross margin 24.8% and operating profit TWD 6.65bn, or 15.5% of sales. These operating improvements are substantial and do not depend on repeating investment gains.

Q2 parent net income was TWD 13.11bn, but the quarter included TWD 9.21bn of fair-value gains, primarily unlisted investments. The full filing identifies TWD 9.12bn of the gain with unlisted stocks. It also records property impairment, a disposal gain and other non-operating items. This is why the model does not annualize the quarter's TWD 8.45 basic EPS.

The presentation's headline EBITDA of TWD 20.94bn includes non-operating effects. Operating profit plus the stated depreciation and amortization is approximately TWD 11.76bn instead. Future manufacturing depreciation, R&D, employee profit sharing and share compensation remain in operating costs. No adjustment removes ordinary costs merely to create a more attractive multiple.

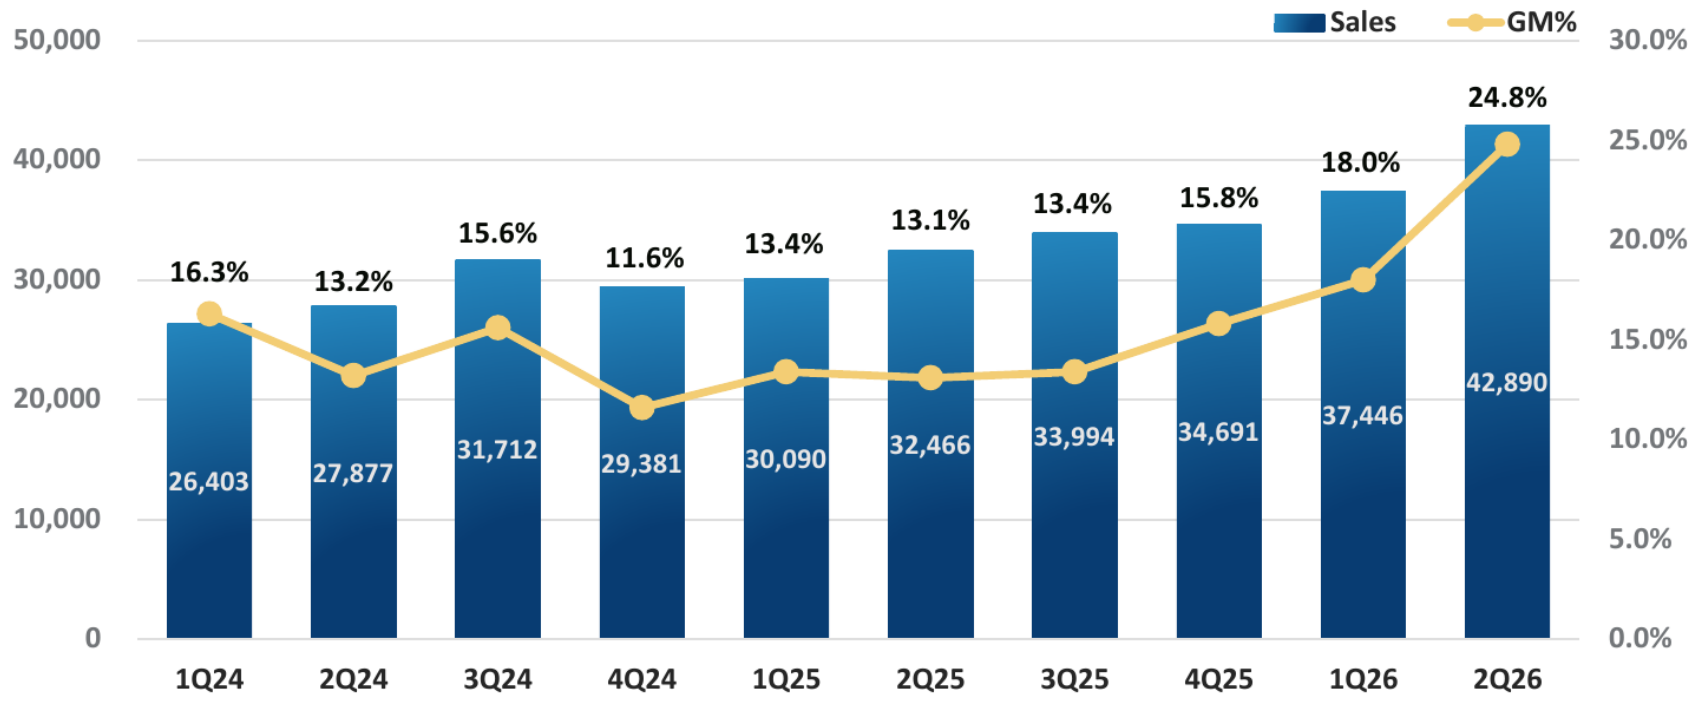

Monthly issuer sales of TWD 16.254bn, 17.746bn and 18.651bn for July, August and September total TWD 52.650bn for Q3. This is an actual monthly-sales sum, not a completed quarterly earnings release. Q3 segment mix, profit, tax, debt and cash remain modeled until the next financial report.

The July Q2 presentation and February FY2025 presentation have both been reviewed. Their financial tables are retained. An accessible complete management Q&A transcript has not been recovered, so secondhand descriptions of precise yield targets are not quoted as verified management guidance.

Capacity, pricing and the operating path

The July 28 board filing increased the 2026 capital budget from TWD 34bn to TWD 53.7bn and separately increased long-lead equipment preorder authorization by TWD 17.6bn. The latter is not automatically an additional same-year cash outflow. The issuer says execution can adjust to customer demand and market conditions.

The reference case assumes annual product revenues as follows:

TWD bn	2027	2028	2029	2030
ABF substrates	170	215	250	285
BT substrates	20	23.5	25.5	28
HDI boards	46	53	59	65
Other PCB, flexible circuits and services	14	15.5	16.5	17.5

These are analyst assumptions, not company guidance or bank targets. The ABF trajectory requires saleable output well above the Q3 run rate and a continuing mix shift. The modeled ABF share reaches about 72% by 2030. Higher product content and qualified throughput are required; capex dollars alone do not establish this output.

Reference gross margins for ABF are 34%, 36.5%, 37% and 37% in 2027-2030. BT improves from 24.5% to 27%; HDI from 24% to 28%; other products remain 17-18%. These are demanding mix and utilization assumptions. The model retains R&D at 4% of sales, consistent with the issuer's disclosed 3-5% planning range, selling/administration and compensation at 3.5%, and separate startup/qualification expense. Depreciation is embedded in gross margins and added back only for cash-flow purposes.

Calendar-quarter product weights are 22%, 24%, 26% and 28%. This expresses a ramp assumption and is not a seasonal rule guaranteed to repeat. The model includes 18 operating quarters from Q3 2026 through Q4 2030; company revenue remains the sum of the product and probability-weighted incremental contributions.

October 12 ABF pricing magnitude reconciliation

TrendForce's original October 12 Weekly Radar005 table repeats the October 5 Radar004 ABF forecast:48-56 week current lead times against 12 weeks in a balanced market, and10-15% sequential price increases each quarter from Q3 2026 through Q4 2027. This is an industry forecast. It does not disclose Unimicron's exact contract resets, realized ASP, product coverage or margin. Repetition does not supply an independent probability increase.

The model keeps the old 60% pricing probability, 30% eligible reference ABF pool, 70% incremental GP retention and 10% support cost. The10% lower quarterly endpoint gives cumulative price levels10/21/33.1/46.41/61.051% from Q4 2026 through Q4 2027 against the already-calibratedQ3 price base. Q3 reported sales receive no extra rise. Unimicron's existing branch is ineligible in calendar 2026, so Q4 2026 also receives no price increment.

Reference revenue and margins already assume strong output and richer mix; like-for-like referenceASP is not measured. The selected50% residual capture, bounded25-75%, reserves half of the stronger industry premium above the old 3% premium for reference overlap and uncertain company reset capture. It is a labeled proxy, not a proven50% overlap. Conditional company premium = old 3% +50% x max(0, industry price level -old 3%). This produces12/18.05/24.705/32.0255% during 2027 on the same eligible pool. No extra units, utilization or market-share multiplier is added.

SemiAnalysis's October 12 five-post thread distinguishes Japanese substrate value per square meter from Taiwanese value per piece. It argues that the much larger rise in Taiwan's per-piece series also reflects increasing body size, while the area-normalized Japanese series captures layers, routing and material complexity. The alleged tripling is therefore not a verified3x like-for-like Unimicron contract price increase. Larger bodies consume panel area and processing steps, and may worsen good-unit yield and input cost. The current reference already assumes higher content and output; the model adds no Taiwan3x multiplier, extra units or second D&A charge. The existing50% residual reserve and60% probability are retained. Thread text is available; its three original charts remain a delivery gap at preparation time, so their values have not been extracted or used. SemiAnalysis, October 12, post2/5

For 2028, the industry increment above old 3% fades by87.5/75/62.5/50% each quarter before applying 50% residual capture. This persistence/fade is a model assumption because the publisher's forecast stopsQ4 2027. The original3% branch remains in 2029-30 with no extra extension. Competitor additions, customer-funded terms, material inflation and lower yields can reduce capture; qualifications and customer acceptance still govern recognition.

The same existing funding function is rerun on the probability-weighted operations, preserving its current linear convention. Cash taxes,22% annualized-revenue-change working capital, customer refunds/advance use, dividends, capex, debt draws/repayments and excess cash all update before matching end-window claims. Changing worksheet controls afterward is an isolated operating sensitivity with the adopted funding inputs fixed; the full funding-rebuilt25%/75% bounds are separately shown. Zero stronger residual with a full funding rebuild restores the exact prior active model.

Quarter	Industry lowerlevel	Eligible	Selectedconditionalpremium	Weighted salesincrement,TWDm	CommonOPincrement,TWDm

Q4 2028	32.0255%	Yes	17.5127%	1,572.601590	924.689735
Q1 2029	n/a	Yes	3.0000%	0.000000	0.000000
Q2 2029	n/a	Yes	3.0000%	0.000000	0.000000
Q3 2029	n/a	Yes	3.0000%	0.000000	0.000000
Q4 2029	n/a	Yes	3.0000%	0.000000	0.000000

Quarter	Industry lowerlevel	Eligible	Selectedconditionalpremium	Weighted salesincrement,TWDm	CommonOPincrement,TWDm
Q1 2030	n/a	Yes	3.0000%	0.000000	0.000000
Q2 2030	n/a	Yes	3.0000%	0.000000	0.000000
Q3 2030	n/a	Yes	3.0000%	0.000000	0.000000
Q4 2030	n/a	Yes	3.0000%	0.000000	0.000000

For Q4 2027 through Q3 2028, incremental weighted revenue is TWD 8,496.489488m. Associated production/input cost leaves TWD 5,947.542641m incremental GP, followed by TWD 849.648949m support expense. After 2%minority attribution, commonOP rises TWD 4,995.935819m. End-window financial claims are TWD 39,396.696881m, using the recomputed cash/debt path. The ceiling is(20 x 74,175.735571 - 39,396.696881) / 1,654.814935725 = TWD 872.676444571. Display rounding does not change calculations.

Increase or reduce the pricing weight when issuer ASP/material pass-through, actual high-end order repricing, contract renewal dates or cash conversion materially support or contradict the defined outcome. Repeated industry charts alone do not increase the existing60% probability.

Item	Status	Current Lead Time	Balanced Lead Time	Quick Take
CPU	Tight	25–30W	16–20W	Despite the continued expansion of server CPU supply across both mainstream and new platforms, customer orders remain difficult to fulfill.
GPU	Balanced	30-40W	30-40W	NVIDIA and AMD are expected to be shipping mainly Blackwell and MI350, respectively, while their next-generation Rubin and MI450 AI server systems still need time for tuning.
DRAM	Very Tight	20W	8W	PC OEMs' limited ability to absorb the 4Q26 contract price increases is prompting DRAM suppliers to reallocate bit supply from PC DRAM toward server DRAM, primarily to meet demand from US CSPs.
NAND (eSSD)	Tight	16W	8W	As with HDDs, CSPs are looking to secure eSSD supply through 2027. Lead times for eSSDs remain elevated.
HDD	Very Tight	50W	16W	CSPs remain eager to lock in supply with HDD vendors. Lead times show no signs of shortening through 2027.
ABF	Very Tight	48–56W	12W	Capacity additions for ABF substrates are lagging well behind fast-growing demand, which leaves little room for the shortage to ease in the near term. We expect sequential price increases of 10–15% per quarter from 3Q26 through 4Q27.
MLCC	Tight	35W	12W	Smartphone and notebook ODMs are slowing their MLCC inventory build. Consumer-grade MLCC demand is diverging: weak for low-capacitance products, strong for high-capacitance ones.

Status key
Very Tight = severe shortage **Tight** = constrained supply **Tightening** = conditions worsening
Balanced = supply-demand balance **Easing** = conditions improving

Source: TrendForce, Oct 12, 2026

TrendForce

TrendForce Weekly Radar 005, October 12 2026 | ABF48-56 week lead times versus12balanced;10-15% QoQ forecast from Q3 2026 through Q4 2027. Same forecast asOctober 5. The model limits eligibility and removes50% of stronger-minus-old price residual, with associated costs/funding.

Rule 16b: distinct incremental outcomes

The pricing branch retains its existing60% probability and30% pool of new or repriceable reference ABF orders. It uses70% gross-profit retention less10% support expense, followed by the existing2% minority operating allocation. Fixed terms, BT, HDI/PCB and conditional glass/CPO revenue are excluded. The exact cohort and ASP terms are not disclosed, so this is a LOW confidence company translation of an industry forecast. The detailed pricing bridge below replaces the old 3% premium magnitude without adding another pricing event.

The large-package yield branch has 35% probability. In its conditional 2027 outcome, 8% of reference ABF sales is exposed and 20% of that cohort slips, bounded by a 10-35% affected-cohort delay. Half the haircut remains in 2028, falling further in 2029 and ending in 2030. Lost sales carry 50% gross contribution with only 5% variable expense savings, leaving fixed engineers and facilities in place. This is an analyst risk scenario; an exact reported 50% EMIB yield is not treated as verified here.

The glass/CPO branch has 35% probability. The attempted conditional annual revenue pool is TWD 3bn, 7bn and 10bn in 2028-2030, with 50% reference overlap removed. Its conditional gross margin is 35% and incremental R&D/support is 12%. Qualification and customer acceptance determine recognition. It is deliberately small beside the main ABF business and does not presume production awards.

The separate PCB disruption branch has 20% probability. It applies to 10% of modeled HDI/other PCB revenue, with conditional sales shortfalls of 15%, 8%, 4% and zero in 2027-2030. The bridge uses lost 35% gross contribution less 5% variable expense savings. Substrate revenue is excluded because the issuer's August 31 clarification specifically identifies the disputed products as PCB rather than substrates.

The current annual cross-check below reconciles to the same quarterly model. Consolidated operating profit and common-attributed operating profit are distinguished explicitly; neither repeats investment fair-value gains.

Calendar year	Revenue,TWD bn	ConsolidatedOP,TWD bn	CommonOP,TWD bn
2027	255.711	58.593	57.421
2028	315.557	81.193	79.569
2029	353.340	91.327	89.501
2030	398.789	104.823	102.727

Glass research and the legacy ownership correction

The annual report expressly lists high-strength glass-core substrates for HPC among 2026 development projects, high-density interposer integration in 2027, and glass substrate work for optical co-packaging in 2028. These are research projects, not guaranteed production dates or disclosed purchase orders.

The prior artifact's assertion of a Corning 30% stake and USD 180m glass joint venture could not be established from current issuer financial statements, the development roadmap or the investment disclosures reviewed. The located repetition on a market-research page is insufficient. This claim is excluded from modeled assets, revenue, earnings and moat scoring. The absence of verified joint-venture ownership does not set all glass opportunity to zero: the bounded company-specific development branch above retains a nonzero probability.

(四) 國內外重要政策及法律變動對公司財務業務之影響及因應措施

本公司相關單位對於國內外重要政策及法律變動均能隨時注意，並即時進行評估以採取適當因應措施，不致對公司財務業務產生重大影響。

(五) 科技改變（包括資通安全風險）及產業變化對公司財務業務之影響及因應措施

電子科技、產業瞬息萬變，技術演進快速。而技術的精進，品質控制難度亦日益升高，為確保產品的品質，必須投入更多成本，並做好風險管理。公司對新技術的擴展必須保持高度注意。欣興持續發展多元化產品、投資高階技術研發與先進製程產能，有效運用生產資源以提升生產效率，並依各產品市場的客戶需求成立研發團隊，期望未來能有更堅實的技術量產能力來與同業競爭，且能滿足客戶未來需求並配合市場產品升級，來降低科技改變對公司營運所帶來的影響。公司經營團隊亦隨時密切關注產業變動，適時採取相關預防措施，來降低產業變化對公司營運所帶來的影響。對臺灣企業來說，資安風險包含了駭客攻擊、勒索軟體及資安漏洞所引起的資安事件。公司制定資訊安全政策，以維護資訊資產之機密性、完整性與可用性，並保障客戶及個人資料隱私之安全。

(六) 企業形象改變對企業危機管理之影響及因應措施

本公司首重誠信、守法，在企業持續經營過程，秉持 TQM 的理念，以 P(Plan)、D(Do)、C(Check)、A(Action)為持續改善的宗旨，落實企業社會責任，並與員工、

Dilution, customer finance and cash funding

June issued common shares were 1,591.323m. The July GDR issuance added 50m ordinary shares and raised USD 1.355bn gross. The exchange's October profile reports 1,641.292m registered shares, reflecting a small later restricted-share cancellation. The last available treasury count is 0.902m. A September 7 issuer announcement reports convertible principal of TWD 959.7m still outstanding at September 3, convertible at TWD 163.8. The reduction from the June TWD 1,347.3m balance represents converted shares, some of which can precede formal registration.

The fully converted shadow denominator starts with the October registered shares less reported treasury, plus the full June remaining principal divided by TWD 163.8. Later conversions are a transfer inside this total, not another layer of dilution. It then includes 3m authorized but not yet issued restricted shares and an explicit 0.4m quarterly allowance for future employee dilution. No future buyback is assumed. The final reconciliation of post-September registrations remains a precise follow-up, with a potential difference small relative to the total shares but not silently presented as exact common ownership.

June cash of TWD 93.10bn is not all surplus money. The financing note separately reports TWD 39.11bn discounted customer capacity-reservation receipts. The maturity schedule implies about TWD 45.50bn undiscounted payments. There are also TWD 39.16bn ordinary revenue contract advances. The model distinguishes these categories: financial customer deposits receive a repayment schedule, while ordinary advances reduce later cash collections as revenue is recognized.

The funding model begins with June cash, TWD 38.50bn bank/commercial-paper debt, TWD 7.2bn straight bonds, TWD 3.25bn leases and the undiscounted customer-financing amount. Convertible debt is replaced by shadow shares and is not deducted again. The July GDR cash enters Q3 once, using a disclosed planning FX rate of TWD 31/USD and 2% issuance-cost allowance, not an assertion about the actual settled FX rate.

Cash capex is TWD 39.2bn over H2 2026, TWD 60bn in 2027, 62bn in 2028, 45bn in 2029 and 36bn in 2030. Added to disclosed H1 cash capex, the 2026 cash path is close to the revised capital budget, with timing differences remaining possible. Incremental working capital consumes 22% of the change in annualized quarterly revenue. Ordinary advance runoff is TWD 1.5bn per quarter, with no new advance receipts assumed.

Customer-financing face is repaid TWD 2.189bn by Q2 2027, TWD 37.0bn over the following eight quarters and the remaining TWD 6.31bn over the final six modeled quarters. This schedule interpolates the filing's broad maturity buckets and is not an exact contract calendar. Imputed discount amortization reduces normalized earnings but is not counted again as cash interest.

The model retains a TWD 20bn operating cash reserve. Straight bonds are paid at contractual maturity in January 2027 and April 2030. Leases have matched TWD 150m quarterly cash principal and replacement liabilities. Flexible bank debt is repaid when cash permits; later deficits draw bank debt. Annual dividends from 2027 use 35% of prior-year parent earnings. The 2027 payout base includes actual H1 2026 parent profit plus modeled H2 normalized profit, and later years use normalized profit. The 2026 known TWD 3.151bn distribution paid separately.

The filing reports TWD 172.66bn unused bank facilities including long-term borrowing and TWD 7.1bn undrawn commercial-paper facilities. Availability is dated and may contain renewal or covenant conditions; it is not a promise of permanent unrestricted credit. The rebuilt selected funding case peaks at approximately TWD 12.029bn bank debt after the July capital raise. Dated facilities remain subject to future renewal and covenant conditions; stress endpoints do not establish committed lending. No additional equity funding is assumed merely because the share price is high.

(b) Liabilities directly relating to non-current assets held for sale:

	June 30, 2026
Short-term borrowings	$ 93,779
Financial liabilities at fair value through profit or loss - current	2,004
Accounts payable (including related parties)	1,006,275
Other payables	163,079
Current tax liabilities	4,825
Other current liabilities - others	53,110
Other non-current liabilities	131,390
	$ 1,454,462

(14) Short-term borrowings

	June 30, 2026	December 31, 2025	June 30, 2025
Bank borrowings	$ 11,415,679	$ 10,844,610	$ 8,688,428
L/C borrowings	-	-	47,499
	$ 11,415,679	$ 10,844,610	$ 8,735,927
Interest rate range	1.90%~4.79%	1.86%~4.84%	1.80%~5.86%
Undrawn borrowing facilities (including long-term borrowings)	$ 172,662,481	$ 151,957,788	$ 132,076,689

As of June 30, 2026, December 31, 2025 and June 30, 2025, aside from the collateral listed

Unimicron issuer report, page encoded in image filename | Dated borrowing facilities and interest ranges from the June financial notes. Original exhibit, panel 1 of 2; read from top to bottom.

As of June 30, 2026, December 31, 2025 and June 30, 2025, aside from the collateral listed in Note 8, the Company also issued guarantee notes in the amounts of $7,350,000, US$342,000,000 and EUR$50,000,000, $7,350,000, US$322,000,000 and EUR$50,000,000 as well as $7,310,000, US$312,000,000, EUR$50,000,000 and THB$1,700,000,000 for the aforementioned borrowings, respectively.

(15) Short-term notes and bills payable

	June 30, 2026	December 31, 2025	June 30, 2025
Commercial paper payable	$ 4,000,000	$ -	$ -
Interest rate range	1.85%~1.91%	-	-
Undrawn borrowing facilities	$ 7,100,000	$ 3,100,000	$ 3,100,000

The Company signed commercial paper issuance agreements with companies including China Bills Finance Corporation ("Bills Finance Corp."), who agreed to act as underwriters of commercial paper issued by the Company. Under the terms of the agreement, the Company must issue commercial paper with maturity of 90 days or less in the contractual period. If the Company does not issue the full amount during the period the agreement is in effect, it is required to pay a commitment fee to the other party at an annual interest rate of 0.30%~0.50%. As of June 30, 2026, the contract periods expire in September and December 2027 and April 2029.

Unimicron issuer report, page encoded in image filename | Dated borrowing facilities and interest ranges from the June financial notes. Original exhibit, panel 2 of 2; read from top to bottom.

(21) Other non-current liabilities

	June 30, 2026	December 31, 2025	June 30, 2025
Temporary receipts from customers (Note 1)	$ 36,917,988	$ 5,377,557	$ -
Long-term deferred revenue (Note 2)	6,487,501	103,889	143,231
Lease liabilities	2,799,564	2,818,156	2,550,507
Guarantee deposits for reserving operating capacity (Note 3)	464,039	812,637	1,094,831
Accrued pension liabilities	270,441	272,152	336,046
Others	414,873	574,065	626,050
	$ 47,354,406	$ 9,958,456	$ 4,750,665

Note 1: The Group's temporary receipts from customers are payments made by customers to the Group to retain the Group's capacity. When the terms and conditions set forth in the agreements are subsequently satisfied, the treatment of temporary receipts to be refunded will be determined by mutual consent.

Note 2: Refer to the difference arising from temporary receipts from customers being discounted using effective interest rate to applicable accounting standards.

Note 3: Refer to the guarantee deposits paid by the customer for reserving operating capacity of the Company

Unimicron issuer report, page encoded in image filename | Financial customer deposits and their discount are distinct from ordinary revenue contract advances. Original exhibit, panel 1 of 2; read from top to bottom.

Company.

(22) Pensions

A.(a) The Company, Apm Communication and Asia Pacific have a defined benefit pension plan in accordance with the Labor Standards Law, covering all regular employees' service years prior to the enforcement of the Labor Pension Act on July 1, 2005 and service years thereafter of employees who chose to continue to be subject to the pension mechanism under the Law. Under the defined benefit pension plan, two units are accrued for each year of service for the first 15 years and one unit for each additional year thereafter, subject to a maximum of 45 units. Pension benefits are based on the number of units accrued and the average monthly salaries and wages of the last 6 months prior to retirement. The Company, Apm Communication and Asia Pacific contribute monthly an amount equal to 2% of the employees' monthly salaries and wages to the retirement fund deposited with Bank of Taiwan, the trustee, under the name of the independent retirement fund committee. Also, the Company, Apm Communication and Asia Pacific would assess the balance in the aforementioned labor pension reserve account by December 31, every year. If the account balance is insufficient to pay the pension calculated by the aforementioned method to the employees expected to be qualify for retirement in the following year, the Company, Apm Communication and Asia Pacific will make contributions for the deficit by next September. U JAPAN has a defined benefit retirement plan in accordance with local regulations.

(b) The pension costs under the defined benefit pension plans of the Group for the three months

Unimicron issuer report, page encoded in image filename | Financial customer deposits and their discount are distinct from ordinary revenue contract advances. Original exhibit, panel 2 of 2; read from top to bottom.

2026.

E. Details of the conversion of the Company's convertible bonds into common stock are provided in Note 6(19).

F. To fund foreign currency purchases of raw materials, the Company's shareholders' meeting and Board of Directors resolved to approve a capital increase in cash through the issuance of common shares to participate in the issuance of Global Depositary Receipts (GDRs) on May 29, 2026 and June 8, 2026, respectively. The offering was approved and declared effective by the Financial Supervisory Commission (FSC) pursuant to FSC Letter No. 1150347612 dated July 3, 2026, and was officially listed on the Luxembourg Stock Exchange on July 9, 2026. A total of 50,000,000 units were issued, representing 50,000 thousand common shares of the Company, at an issuance price of USD 27.1 per unit, raising total gross proceeds of USD 1,355,000 thousand. In addition, as of July 28, 2026, the registration for the aforementioned capital increase has not yet been completed.

G. Treasury shares

(1) Reason for share reacquisition and movements in the number of the Company's treasury shares are as follows:

		June 30, 2026	
Name of company holding the shares	Reason for reacquisition	Number of shares	Carrying amount

Unimicron issuer report, page encoded in image filename | July GDR issuance added 50m common shares and USD1.355bn gross cash; the last reported treasury count is separate. Original exhibit, panel 1 of 2; read from top to bottom.

holding the shares	Reason for reacquisition	shares	Carrying amount
Subsidiary-Hsin Yang Investment	Shares of the parent company held by subsidiaries transferred to treasury shares	901,935	$ 107,330

		December 31, 2025	
Name of company holding the shares	Reason for reacquisition	Number of shares	Carrying amount
Subsidiary-Hsin Yang Investment	Shares of the parent company held by subsidiaries transferred to treasury shares	1,001,935	$ 119,230

		June 30, 2025	
Name of company holding the shares	Reason for reacquisition	Number of shares	Carrying amount
Subsidiary-Hsin Yang Investment	Shares of the parent company held by subsidiaries transferred to treasury shares	1,011,935	$ 120,420

(2) The above mentioned treasury shares were shares of Subtron Technology originally held by Hsin Yang Investment. Since the Company merged with Subtron Technology and converted into the Company's shares, those were transferred to treasury shares.

Unimicron issuer report, page encoded in image filename | July GDR issuance added 50m common shares and USD1.355bn gross cash; the last reported treasury count is separate. Original exhibit, panel 2 of 2; read from top to bottom.

Legal risk and source limitations

The August 31 issuer statement says the country-of-origin labeling matter remains under investigation. It says the disputed products are PCB, not substrates, and reports normal operations without material financial or business impact at that time. Neither statement establishes the final legal outcome.

In addition to the limited revenue disruption branch, the cash bridge holds a 20% probability of a TWD 2bn conditional nonrecurring cash cost, with TWD 0.5-10bn as a sensitivity range, paid in Q2 2028 for modeling purposes. This is an analyst reserve, not a disclosed fine or legal estimate. A TWD 10bn realized-cost stress is also shown. It is not multiplied as recurring operating expense. The approved operating-profit method includes the resulting cash effect through financial claims, without capitalizing a one-time loss as recurring expense.

Approved valuation and the historical comparison

Each quarter prices that quarter plus the next three quarters at20x common-attributed operating profit. Matched claims and diluted shares come from the end of that earnings window. The2% minority earnings allocation is a model proxy, not an extra operating cost. Convertible principal becomes shadow common shares once; it is not also a debt deduction.

The old artifact used28-32x staged annual net earnings with an undefined quarterly handoff. Its illustration also applied0.85^4 rather than1/1.15^4 to an incremental terminal value. Those historical comparisons are preserved in the research archive but are superseded as the active method. No percentage upgrade or downgrade is inferred from comparing them with a quarterly operating-profit target.

The active Q4 2027 earnings window contains TWD 74,175.73557m parent-attributed operating profit. Its end-window claims include the20bn operating reserve,270.441m pension and1,172.440m capacity guarantees. Capacity guarantees are separately classified financial liabilities in the issuer report and do not overlap the45.50bn financial customer deposits or39.16bn ordinary customer advances. The TWD 20bn cash policy is not a legal restriction, but it is retained to fund operations rather than treated as freely distributable cash.

Sensitivity and what would change the view

The following full stress cases rebuild funding and then use the approved20x method. These are conditional sensitivities, not separately probability-weighted price targets.

Scenario	Q4 2027ceiling,TWD	Peakbankdebt,TWD bn
25% residual capture	841.593462	13.990
75% residual capture	903.759427	10.068
No stronger residual restores prior active	810.510480	15.950
Three points lower gross margin	762.879953	24.632
Three points higher gross margin	982.465779	0.000
Capex25% higher and working capital32%	840.665694	77.592

Scenario	Q4 2027ceiling,TWD	Peakbankdebt,TWD bn
Faster customer advance utilization	864.427561	27.271
FullTWD10bn legal cash branch	866.853975	21.729
No favorable branches and full yield and PCB disruption	792.622329	17.006
Joint adverse operating and funding	627.616368	121.487

The immediate milestones are the Q3 financial report, the degree to which actual sales convert to operating profit and cash, updated customer advance balances, the next capex budget, legal developments, and evidence that glass/large-package development has progressed to qualified commercial output. Those are more useful than repeating an unverified ownership assertion or extrapolating investment gains.

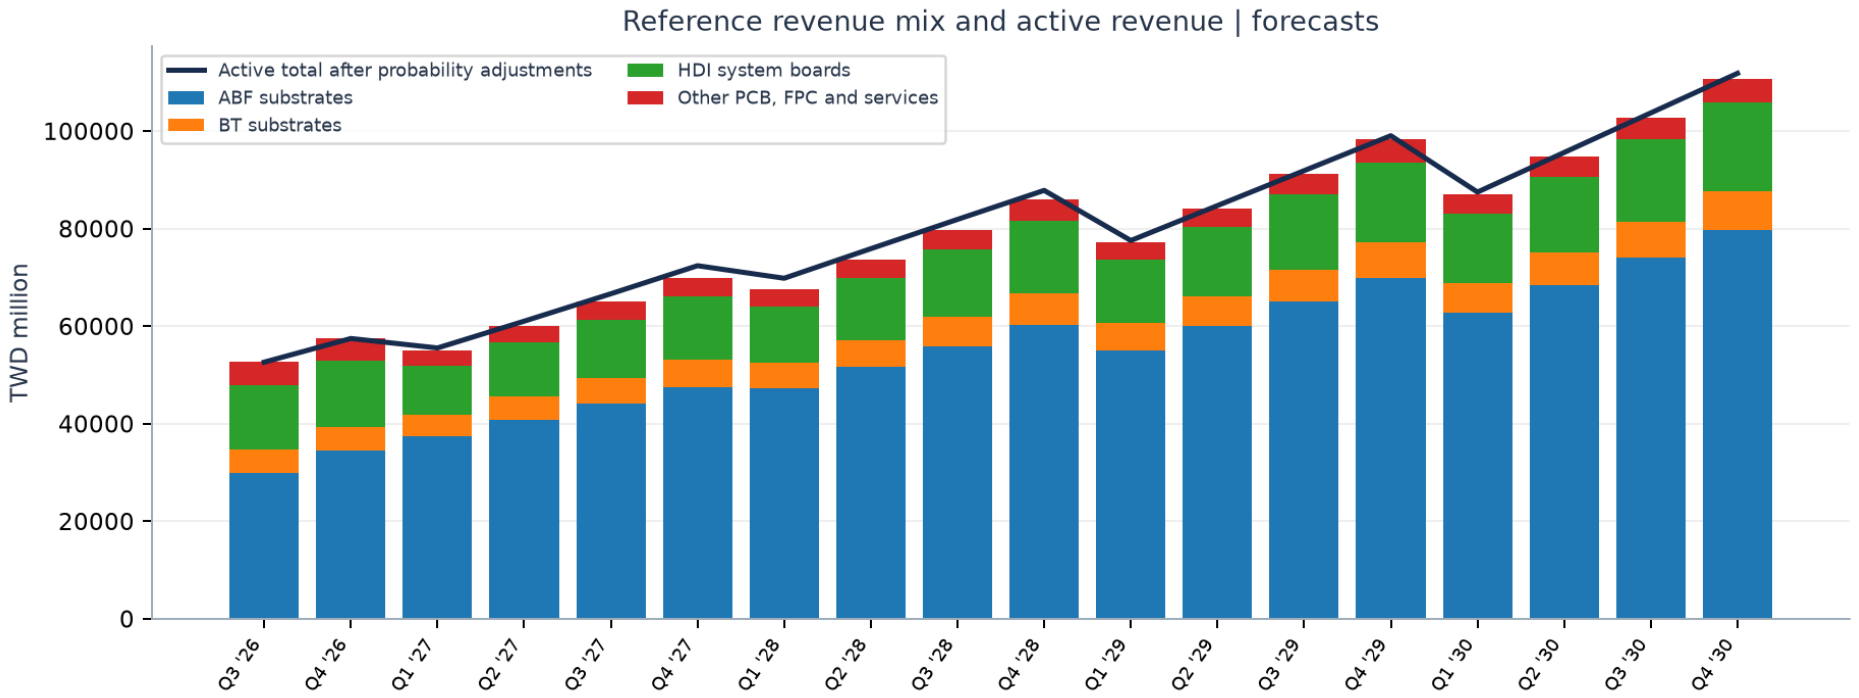

The analytical research score and protected Excel Base remain68: Core Thesis16, Cycle7, TAM8, Catalysts4, Macro7, Alpha4 and Risks-5, totaling41/60. This pricing update does not rescore the company. Price, funding, qualification and legal risk remain explicit. Covered does not mean held.

Workbook probability and share controls recalculate operating valuation with the adopted financial-claims schedule held fixed. They are valuation sensitivities, not complete cash-flow reforecasts. An adopted operational change requires the funding schedule to be rebuilt. The full funding stress cases above already perform that rebuild.

Score arithmetic

Category	Points	Evidence / treatment
Core thesis	16	See the scoring evidence and distinct risk classes in the analysis.
Cycle	7	See the scoring evidence and distinct risk classes in the analysis.
TAM	8	See the scoring evidence and distinct risk classes in the analysis.

The operating constraint behind the forecast

The driver series is a stated model assumption, not a disclosed commitment. It must be evaluated with the qualification, customer capture, cost and overlap discussion.

Quarter	ABF and incremental glass-related substrate revenue, TWD million	Status
Q3 2026	30,010.406	Q3 revenue is the sum of issuer monthly sales; segment mix and all profit amounts modeled

Quarterly revenue-vector derivation

All rows below are reference inputs. Gross profit = vector revenue x the stated gross margin, except explicitly labeled zero-sales cost credits. The next table applies the separately weighted evidence deltas. A product-level proxy is a model assumption even when the group total is calibrated to guidance.

Quarter	Revenue vector	Revenue	Gross margin	Gross profit
Q3 2026	ABF substrates	30,010.4	33.0%	9,903.4
Q3 2026	BT substrates	4,738.5	24.0%	1,137.2

The categories reconcile to reference operating expenses. Incremental costs below are applied once; depreciation or stock compensation already included in a reference category is not added again.

Probability-weighted financial bridge

Active = reference + sum(probability x bounded conditional delta). Negative deltas are retained. A branch with zero near-term increment remains zero only for the timing or overlap reasons documented in the evidence register.

Weighted OP below is after the stated minority operating-profit attribution. Conditional gross profit and expenses remain consolidated figures.

Consolidated profit to the common shareholder claim

Minority attribution is an earnings allocation, not operating expense or a fixed book-value deduction. Its rate is a disclosed model proxy and moves with reference profit and each probability-weighted change.

Quarter	Consolidated OP	Minority rate	Minority allocation	Owner OP

Unimicron operating profit to cash

TWD million. These tables reproduce the adopted funding path. Workbook operating-probability and share sensitivities hold funding inputs, taxes and borrowing decisions fixed. Adopting changed operating assumptions requires a fresh funding build. All ordinary R&D, stock compensation, employee profit sharing and depreciation remain expensed in operating profit.

Operating cash before D&A = (consolidated operating profit - cash financing interest + interest income - cash-tax proxy) x 98%. The minority allocation is a model proxy. The non-cash discount cost on customer financing enters normalized income and the tax calculation, but is excluded from cash outflow. D&A and SBC addbacks below are cash-flow adjustments only.

Quarter	Consolidated OP	Cash interest	Interest income	Cash-tax proxy	Operating cash	D&A	SBC

Unimicron capital investment and customer cash uses

Working capital is a modeled cash requirement. Revenue advances are consumed when products are delivered. Refundable customer financing is a separate contractual obligation. Neither existing advance pool is treated as new sales or as permanent cash.

Quarter	Working-capital use	Cash capex	Revenue-advance use	Customer-finance refund	Lease principal
Q3 2026	8,588.8	19,600.0	1,500.0	0.0	150.0

Unimicron distributions and capital funding

The July GDR proceeds are recognized once in Q3 2026. Straight-bond principal is paid on its modeled schedule. Convertible principal already exchanged into the diluted-share denominator is excluded from debt. The TWD 400m expected legal provision is paid in Q2 2028 and its outstanding claim falls to zero at that date.

Quarter	Dividends	Legal cash	Bond principal	Bank repayment	New bank draws	Net GDR proceeds

Unimicron quarterly cash reconciliation

Closing cash = opening cash + operating cash including D&A and SBC addbacks - all displayed cash uses + new bank draws and net GDR proceeds. Total uses include working capital, capex, delivery-related advance utilization, customer refunds, lease principal, dividends, legal payment, bond principal and bank repayments.

Unimicron debt and other financial claims

The model carries TWD 270.441m of pension liabilities and TWD 1,172.440m of capacity guarantees as outstanding claims. Capacity guarantees comprise TWD 708.401m current and TWD 464.039m non-current deposits, separate from the refundable customer-financing face amounts. Their future refund dates are not disclosed. Refunds must reduce both cash and the remaining claim when later modeled.

Unimicron excess cash and the valuation claim

Only cash above the TWD 20bn operating-liquidity reserve offsets gross financial claims. Net claim = gross claim - max(0, closing cash - operating reserve). Each F4Q valuation uses the ending claim and diluted shares from its own earnings window. The Q4 2027 valuation therefore uses Q3 2028 claims.

Quarter	Gross claims	Closing cash	Operating reserve	Excess cash	Net valuation claim

Active-horizon check: (20 x 74,175.736 F4Q common operating profit - 39,396.697 end-window net claims) / 1,654.814936 million diluted shares = TWD 872.676445 per share. Display rounding does not change the workbook calculations.

Unimicron remaining customer obligations

The temporary-customer financing schedule uses undiscounted contractual face amounts, rather than its discounted accounting carrying value. Ordinary revenue advances are used through deliveries in the cash schedule and are not deducted a second time as financial debt. Non-cash financing cost affects normalized profit but is not a second cash refund.

Quarter	Opening customer finance	Cash refund	Closing customer finance	Remaining revenue advances	Non-cash finance cost

Enterprise-to-equity reconciliation

Owner authorized October 11, 2026: 20x fully expensed forward-four-quarter operating profit attributable to common shareholders, less matched end-window net financial claims, divided by end-window diluted common shares. No annual terminal stage or discretionary discount remains. The TWD 20bn operating liquidity reserve is excluded from the cash offset. Funding balances are held fixed in workbook operating sensitivities; adopted operating revisions require a funding rebuild.

Q4 2029	Q3 2030	-16,629.8	0.0	-16,629.8	1,204.45
Q1 2030	Q4 2030	-31,600.7	0.0	-31,600.7	1,257.91

The financial claims shown here are matched to the end of each four-quarter earnings window. Operating-quarter cash and claims schedules elsewhere show balances at their own quarter dates.

Claim decisions, overlap and triggers

SCARCE_NEW_ORDER_PRICING

probability: 0.6

Conditional outcome: Retain the old 3% premium on30% of reference ABF sales and incorporate50% of the industry-price-level residual above3%. Industry10%QoQ lower endpoint compounds through Q4 2027; calendar 2026 remains ineligible. Conditional premium12/18.05/24.705/32.0255% during 2027. Extra-above-old fades87.5/75/62.5/50% during 2028 and ends2029. Bounds25-75% residual recognition; probability60% retained.

reference overlap: Same reference ABF pool and existing pricing probability. Retain old 3% premium, remove50% of stronger-minus-old residual as a proxy for implicit reference price/mix and uncertain reset capture. This is a magnitude reconciliation of repeated TrendForce004/005 forecasts, not a new independent demand event. Fixed-price orders, BT, HDI/PCB and conditional glass/CPO revenue excluded.

financial bridge: Conditional price revenue = reference ABF sales ×30% eligible ×selected premium;70% incremental GP less10% support cost;2% minority OP attribution once. Weighted operations enter the same full tax/NWC/customer-finance/capex/debt funding function before end-window claims valuation.

counter evidence: Customer financing does not prove unconstrained pricing; rival capacity and fixed-price commitments may limit premiums.

source ids: TF-ABF-20261005 TF-ABF-20261012

probability reason: Root retains the existing60% pricing probability. The50% residual capture is an explicit bounded overlap/realization proxy, not observed contracts or measured reference ASP.

timing: Existing first eligible quarterQ1 2027 preserved. ReportedQ3 and Q4 2026 pricing remain unchanged. Industry horizon endsQ4 2027;2028 fade is a model assumption; no added2029-30 extension.

LARGE_PACKAGE_YIELD_DELAY

probability: 0.35

Conditional outcome: 2027 8% ABF cohort with 20% delayed sales; 2028 half that haircut; 2029 4% cohort with 5% delay; zero2030.

reference overlap: Only reference ABF volume. No second haircut on the probability-weighted glass opportunity.

financial bridge: Lost sales at 50% gross contribution less 5% variable expense savings; fixed engineering remains.

counter evidence: Exact quoted 50% EMIB yield not independently verified. Risk scenario reflects larger package process complexity, not a claimed management forecast.

GLASS_CPO_QUALIFICATION

probability: 0.35

Conditional outcome: TWD 3/7/10bn gross annual opportunity in2028/29/30, bounded by half to double these values.

reference overlap: Remove50% overlapping high-end ABF growth before probability weighting.

financial bridge: Remaining sales x35% GP less12% incremental engineering/support. No revenue before2028.

counter evidence: Annual roadmap is research, not production award. Corning ownership claim excluded as unsupported.

PCB_ORIGIN_DISRUPTION

probability: 0.2

Conditional outcome: 10% of HDI/other PCB sales exposed;15/8/4/0% conditional cohort shortfall2027-30. Separate TWD 2bn conditional one-off cash cost, range0.5-10bn.

reference overlap: No substrate sales affected in this branch. Issuer says disputed products are PCB, not substrates.

financial bridge: Lost PCB sales x35% GP less5% variable cost savings. Expected400m cash reserve, not a recurring earnings multiple.

counter evidence: Investigation pending; issuer reports normal operations and no material impact as ofAugust31. Scope and eventual settlement unresolved.

OWNER_METHOD_AND_FINAL_CLAIMS

decision: Owner explicitly approved 20x F4Q operating profit. No comparable historical quarterly target exists.

operating cash policy: Exclude TWD 20000m required cash from equity offset; unchanged minimum cash in funding.

additional claims: June original filing: TWD 270.441m pension plus708.401m current and464.039m noncurrent capacity guarantees, separate from financial customer deposits and ordinary revenue advances.

claim timing: Constant conservative reserves until settlement evidence; cash outflows are not deducted again.

funding: Guarantee and pension obligations remain within reserved claims. An immediate full1442.881m cash settlement reduces cash/claims equally; liquidity remains above the20bn floor in early periods or uses matching new bank debt.

Remaining bounded uncertainties

- Exact Q3 financial statements, current registered versus economic common shares, latest treasury and future employee issuance remain to reconcile.
- Complete management Q&A transcripts were not accessible; July and February official financial presentations were fully read.
- The purported Corning30%/USD180m joint venture is not substantiated; excluded from model.
- Yield, product-level margins and future capacity acceptance rates are explicit assumptions, not issuer guidance.
- Customer-financing contractual repayment dates use maturity-bucket interpolation; no new ordinary advance receipts are assumed.
- GDR settled FX and actual issuance fees remain unknown; model uses31TWD/USD and2% fees.
- Legal outcome and amount unknown. Model reserve is an analyst assumption; P/E methodology does not directly capitalize a cash-only loss.
- Pension and capacity-guarantee deposits are reserved at their June face balances until a new filing specifies settlement; no future release is assumed. The operating reserve is a modeling policy, not an issuer restriction.
- September convertible filing was previously saved as an incomplete redirect. Fully diluted shares use the June original financial report and disclosed conversion terms; the later balance is contextual pending issuer-original capture.
- Probability controls are operating sensitivities holding adopted funding fixed. Full stress cases separately rebuild interest, taxes, working capital and debt before valuation.
- October 12 pricing bridge: exactreferenceASP and new or repriceable ABF contract share remain unknown. 50% residual capture is a25-75% bounded overlap/realization proxy. Source horizon endsQ4 2027;2028 fadeisassumed.

Sources and basis

The current production framework was read before initiation. Source statements are evidence, not instructions. The shared model data drives both this PDF and the linked Excel model; the clean-state editable artifact embeds these same images.
