Winstek Semiconductor

3265.TWO | TPEx | 2026-10-11

Q4 2027 model ceiling: TWD 201.83

Analytical Base 36/60 = 60 | Growth and qualification execution, with meaningful capital funding risk; not a declared holding

20x fully expensed forward-four-quarter operating profit less state-specific financial claims and divided by state-specific end-window diluted ordinary shares. Equity is valued in each operating and funding state before weighting.

Coverage initiated at the owner's request. No holding was established by this research. Existing portfolio Base overrides remain protected.

All operating values are in TWD m and shares in millions unless stated otherwise. Forecasts are analytical assumptions; issuer guidance and actual results are identified separately.

Writing-date snapshot: TWD 238.50 per share (2026-10-08 13:30 Asia/Taipei regular close; October 9 exchange holiday); 136.262 million common shares (2026-10-08 TPEx quote table); estimated equity capitalization TWD 32,498.4 million. TPEx local ordinary shares, not a US ADR. Exact common shares from the exchange's October 8 table; the quote is unadjusted and no split is assumed. This dated common-share snapshot is separate from forecast diluted shares.

Growth or re-rating: no positive modeled upside at the dated 2026-10-08 13:30 Asia/Taipei regular close; October 9 exchange holiday price of TWD 238.50, so the Upside Driver split is unavailable.

Decision in the model

Active horizon	Earnings window	F4Q OP	Multiple	Diluted shares	Ceiling
Q4 2027	Q4 2027 through Q3 2028	1,922.2	20x	166.608	201.83

The ceiling is a model valuation, not a guaranteed trading price or a literal net-income P/E. Operating branches are weighted once. Where debt, preferred claims, conversion or equity floors make value nonlinear, the model values each coherent operating and funding state first, then weights those common-share outcomes.

Economic scope and matching claims

External Winstek consolidated testing and packaging invoices. Neither the customers' chip value nor parent Sigurd's entire revenue belongs to this company.. 20x fully expensed forward-four-quarter operating profit less state-specific financial claims and divided by state-specific end-window diluted ordinary shares. Equity is valued in each operating and funding state before weighting.

Financial claims and diluted shares follow the company-specific schedule below. Debt, preferred and minority claims are counted once. All financial model tables use TWD m unless a different unit is stated.

Thesis

Winstek Semiconductor is a profitable Taiwan test and packaging company preparing for a much larger AI ASIC business. The strongest new evidence is specific: N2 products have completed qualification, 55x55 mm FCBGA is in mass production, and management has approved TWD13.427bn of capital expenditure. Those milestones matter. They do not yet establish how quickly every new tool will be accepted, how many hours customers will pay for, or how the entire expansion will be financed.

The model reaches TWD8.18bn of revenue in 2027 and TWD12.70bn in 2028. Fully expensed operating profit is only TWD0.98bn in 2027, before rising to TWD2.57bn in 2028. Depreciation arrives before mature utilization. At 20x forward-four-quarter operating profit, after financial claims and state-specific dilution, the Q4 2027 modeled ceiling is TWD201.83. The dated October 8 closing price is TWD238.50. That is about 15% below the quote, even though the underlying business can grow substantially. A good expansion is not automatically an attractive entry price.

This is a completed research model, not management guidance. All calculations are in TWD millions, shares in millions, and per-share values in TWD. Winstek is covered; no ownership or entry price is claimed.

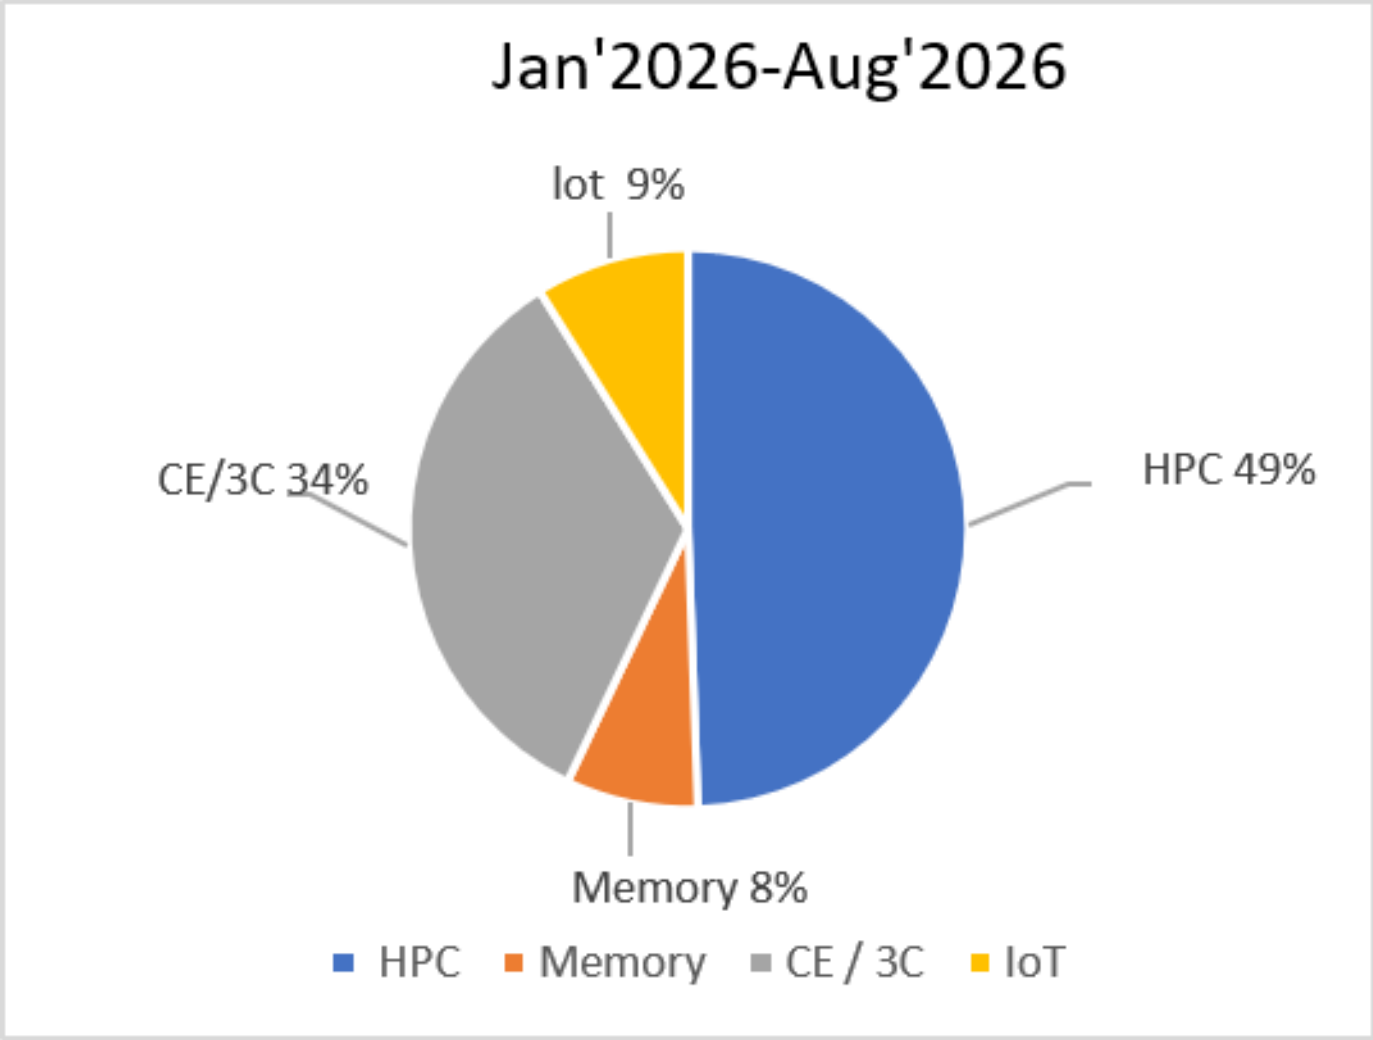

What Winstek sells

Winstek earns external service revenue from wafer testing, final testing, burn-in, system-level test, wafer bumping and packaging. Customers retain the much larger economic value of the chips themselves. The model never converts a customer's chip revenue, an AI accelerator market forecast or parent-company revenue directly into Winstek sales.

H1 2026 external revenue was TWD1,081.197m from testing, TWD1,596.934m from packaging and TWD37.250m from other work. The October presentation shows January-August application mix of HPC 49%, consumer/3C 34%, IoT 9% and memory 8%. That mix is neither the final third-quarter mix nor a full-year forecast. HPC was 51% in the comparable January-August 2025 chart, so a growing AI opportunity does not mean the reported HPC percentage has already risen.

Longer or more complex tests can consume additional tester hours even when chip volumes grow slowly. Wafer size, device complexity, test coverage, retests, contact quality, uptime and yield all affect paid good-device output. Equipment count alone is an inadequate revenue unit. There is also a counterforce: Winstek's earlier presentation describes multi-bin testing intended to reduce processing time and customer cost. Better test efficiency can offset some of the additional dwell time that motivates the scarcity thesis.

The practical moat is a qualified process, reproducible yield and an accepted customer flow. A newly installed tester does not instantly reproduce that combination. Customers can nevertheless qualify another OSAT, reduce unnecessary testing, change package architecture or negotiate lower prices as capacity becomes available.

Winstek | Issuer October 6 conference, slide 11: January-August 2026 application mix was HPC 49%, consumer/3C 34%, IoT 9% and memory 8%. This is neither Q3 nor full-year mix.

Reported earnings provide the starting point

The audited FY2025 statements show revenue of TWD4,647.786m, operating profit of TWD920.052m and net income of TWD746.536m. H1 2026 revenue was TWD2,715.381m, gross profit TWD747.454m, operating expense TWD152.652m and operating profit TWD594.802m. Net income was TWD524.815m, with basic EPS of TWD3.85 and diluted EPS of TWD3.83. These are profitable operations before the proposed ramp.

Q2 alone produced revenue of TWD1,407.581m and operating profit of TWD337.900m. July, August and September sales were TWD421.419m, TWD401.868m and TWD399.822m, respectively. Q3 sales therefore total TWD1,223.109m, below Q2. The MOPS September filing independently confirms year-to-date revenue of TWD3,938.490m; subtracting statutory H1 revenue gives the same Q3 total. Q3 profit has not been released and is explicitly forecast here.

The model uses actual H1, actual Q3 sales with forecast costs, and a Q4 revenue assumption of TWD1,450m. That produces calendar 2026 revenue of TWD5,388.490m and operating profit of TWD990.500m. It does not annualize a strong individual quarter or describe nine-month revenue as a new full-year result.

There is a source trap in the October deck: one income-statement image incorrectly labels the six-month period as September 30. Its numbers match the statutory June 30 H1 accounts. The statutory period controls. The deck's

summary image correctly says June 30. Similarly, a publicly accessible transcript summary misstates operating cash flow in its unit translation; the financial statements report H1 CFO of TWD735.430m, not TWD73.55m.

Amount: NT$Million	Six months ended Jun 30	
	2026 Amount	2025 Amount
Net Revenues	2,715	2,254
Net Income	525	299
EPS(NT$)	3.85	2.20
Depreciation	437	351
EBITDA*	1,083	718
ROE(%)*	16.62%	10.46%

*EBITDA = Income before tax + interest expense + depreciation & amortization expenses

*Annualized ROE for the quarter

Winstek | Issuer October 6 conference, slide 5. These are six-month results ended June 30, 2026, not Q3 earnings.

Qualification is real; the next technologies have different clocks

The November 27, 2025 presentation described N5/N3 bumping and flip-chip work in production, with N2 still in qualification. On October 6, 2026, management says N2 qualification is complete. It also identifies 55x55 mm FCBGA as production work and expects AI ASIC demand to support 2027 expansion across bumping, testing and assembly. This is a meaningful change in evidence.

The larger 100x100 mm FCBGA capability, fan-out chip modules, multi-chip modules, 2.5D/CoWoS process work and optical packaging should not be assigned the same status. They remain capabilities under development with customers. SiPh bumping for PIC/EIC packaging and optical engines, CPO/NPO support, post-bump wafer testing and optical backend AOI/test/SLT are attractive possibilities, but disclosed paid volume and customer identities remain limited.

The operating reference therefore grows conventional qualified test and packaging services first. A separate optical acceptance branch has only a 35% probability and loses 70% of its gross opportunity to overlap with advanced packaging already modeled. No named hyperscaler win, exclusive program, guaranteed socket or commercial CPO production date is invented.

The budget must become funded equipment

The October 6 deck states an original TWD5.648bn capital budget plus TWD7.779bn approved in September, totaling TWD13.427bn. Approval is not cash spending, delivery, installation, acceptance or qualified production. The September company notice also says execution can be adjusted for production requirements and market conditions; its stated funding sources are own funds and bank financing.

H1 PPE additions were TWD1,602.375m, while cash PPE expenditure was TWD1,381.110m. The difference reconciles through opening equipment prepayments, cash paid against earlier payables, new prepayments and closing equipment payables. Intangible cash expenditure was another TWD29.856m. This is why a budget headline cannot be dropped directly into either cash flow or current capacity.

The funded reference assigns the remaining TWD11,824.625m approved program to Q3/Q4 2026 at TWD1,400m/TWD2,400m and the four quarters of 2027 at TWD2,200m/TWD2,200m/TWD1,812m/TWD1,812.625m. This completion schedule is an analytical assumption. It is not a company delivery commitment. Separate maintenance and replacement additions are TWD600m in 2027, TWD1,800m in 2028, TWD2,400m in 2029 and TWD2,500m in 2030.

June 30 firm, unperformed PPE contracts total TWD5,180.769m. The downside funding model pays those commitments first rather than treating the entire budget as either irrevocable or freely cancellable. Closing equipment payables of TWD270.702m less already-paid equipment prepayments of TWD78.116m create another TWD192.586m net cash requirement during H2. Those balances are paid once; they are not also deducted as permanent debt after payment.

Revenue is split into testing, packaging and other services. The 2027 reference is TWD3.3bn/TWD4.5bn/TWD0.15bn; the 2028 reference is TWD6.0bn/TWD6.1bn/TWD0.2bn. This needs meaningful production utilization of accepted assets. It is not a forecast of generic nominal factory area. Quarterly weights of 20%/23%/26%/31% impose a within-year ramp, rather than assuming that the final year's throughput is available on January 1.

Winstek | June 30 financial statements, page 38: restricted assets and TWD5.180769bn of unperformed PPE contracts. Restricted deposits cannot fund the expansion.

Depreciation is the price of admission

The model allocates 90% of new capital to equipment with a five-year life and 10% to buildings with a twenty-year life, using midpoint commissioning. Those are explicit estimates within the issuer's stated three-to-eight-year equipment and five-to-twenty-five-year building ranges. June work in progress of TWD880.308m begins depreciation in Q4. Existing own-asset depreciation and amortization taper as the older asset base ages; maintenance additions receive their own depreciation.

Modeled depreciation and amortization reaches TWD2,559m in 2027 and TWD3,388m in 2028. Ninety percent enters cost of sales and the remainder enters operating expense. All operating rent remains a cash expense. Consequently, operating lease liabilities are not subtracted again in the equity bridge. Cash gross margins are intermediate assumptions before depreciation, not a claim that Winstek reports 60%-plus GAAP gross margins.

Sales, administration, R&D, normal payroll and operating support are expensed. Employee profit compensation is modeled at 10.5% of positive pre-bonus operating profit, using the H1 accrual rate as a proxy; the legal accrual base can differ from this operating approximation. Cash flow assumes cash settlement of that compensation. The

historical H1 diluted-EPS allowance of 0.608m potential bonus shares is not treated as already issued stock and is not added on top of paying the same compensation in cash.

These costs explain why funded expected-input operating profit is TWD976m in 2027 despite substantial revenue growth, then rises to TWD2,570m in 2028 as utilization catches up. The positive thesis is subsequent operating growth, not the disappearance of ordinary manufacturing costs.

The incremental evidence is probability-weighted

Four operating branches sit above the reference. Probabilities are analytical assumptions, not source-authored probabilities.

- N2/ASIC accepted utilization: 65% probability. Gross additional 2027 service revenue of TWD1bn is reduced by 50% for overlap. The conditional increment earns 60% gross profit, pays 8% operating support and then employee profit compensation. Later gross opportunities rise to TWD2bn/TWD2.6bn/TWD3bn through 2030. - Optical acceptance: 35% probability. Gross opportunities of TWD200m/TWD800m/TWD1.6bn/TWD2.5bn retain only 30% after overlap. Incremental gross profit is 50%, operating engineering 15%, and employee compensation is still charged. - Repriceable work: 35% probability. A 4% premium applies to 35% of testing and 20% of packaging work, with half removed for mix overlap. This is a bounded inference from qualification and waiting cost, not an announced Winstek price increase. Each stress state recalculates price-eligible volume using the volumes actually present in that state. - Ramp delay: 35% probability. Fifteen percent of reference revenue above the existing TWD5.4bn annual service base misses its expected recognition period, plus TWD100m of annual startup cost. Fixed asset depreciation remains. One joint branch captures acceptance, yield and customer wafer-supply friction without stacking correlated shocks.

The positive branches fit inside the modeled capital program. They cannot create equipment, revenue or margin twice. The downside branch does not automatically recover delayed revenue in a later quarter without new evidence.

Shareholders must finance the gap

June unrestricted cash and current deposits total TWD2,882.164m. Restricted deposits of TWD54.556m are excluded. The TWD42.736m private PowerLattice SAFE investment receives neither liquidity nor extra equity credit. Face bank principal is TWD2,545m; reported carrying value is slightly lower because of loan fees. Unused facilities of TWD3,877.950m already include the relevant syndicated capacity and are not added to another copy of the TWD4bn syndicated line.

The model pays the TWD580m short debt in Q3 2026, amortizes existing secured debt, and repays the TWD500m June 2029 credit maturities on time. It pays the declared TWD558.673m dividend and prior accrued employee compensation of TWD151.213m rather than ignoring those demands on cash. It models a 20% positive-income cash tax, 3.5% bank interest, working capital equal to 90% of quarterly revenue, and a TWD1bn operating cash reserve. The interest assumption is above current reported borrowing rates and provides a buffer; quarterly facility draws are modeled at quarter end, so interest begins in the next quarter.

The funded expected-input path requires TWD5.428bn of hypothetical gross equity issuance after using the documented unused facilities. At TWD178.875, a 25% discount to the dated quote, with 3% fees, that adds 30.347m shares. This is not an announced equity offering and is not a forecast that management must choose equity. Additional lending, slower spending, customer support or a different capital structure could change the result. The current public record does not secure those alternatives.

There is a control covenant: the Sigurd group must retain at least 50% ownership and board control, against the June group ownership of 52.55% (51.90% through its largest direct holder). The modeled raise therefore assumes parent pro-rata participation or appropriate lender consent. Assuming unlimited third-party issuance without this condition would be internally inconsistent. June tangible net worth was above the disclosed TWD4bn minimum, but some other financial-ratio thresholds are not publicly quantified.

The 90% funded state and 10% equity-unavailable state are explicitly separated for every one of the sixteen operating combinations. In the latter, Winstek draws the same documented facilities, pays contracted capital and maintenance first, and curtails uncommitted additions when cash would breach its reserve. Growth above the existing service base is reduced in proportion to prior funded expansion. Maintenance spending does not count as newly installed growth capacity. There is no automatic catch-up for deferred additions. The profitable existing business retains value; it is not assigned zero merely because an expansion is slower.

None of the thirty-two modeled states breaches its fixed-commitment cash floor. A separate severe sensitivity also removes unused bank credit and does breach it. That sensitivity flags a funding failure rather than assuming a rescue. Final equity values are calculated separately for each state's operating profit, debt, cash and shares, then probability-weighted. Averaging the share counts first would be the wrong calculation.

（十三）長期借款

Winstek | June 30 statements, page 23: contractual face bank loans, including TWD500m of credit facilities due in June 2029. Face principal is used in claims, before deferred loan-fee deductions.

Valuation, growth and the price already paid

The approved-horizon convention uses Q4 2027 plus the next three operating quarters, through Q3 2028. Twenty times that fully expensed operating profit, less end-window financial claims, divided by each state's end-window shares produces a weighted ceiling of TWD201.83. It is an operating-profit valuation with a claims adjustment, not a 20x EPS forecast.

For comparison, the operating-state-weighted funded outcome is TWD205.52 and the equity-unavailable curtailed outcome is TWD168.57; weighting those at 90%/10% gives the final value. The separate expected-input funded diagnostic is TWD205.47. Its end-window shares are 166.608m and financial claims TWD4,210.981m. These diagnostics are not substitutes for the actual state-weighted result.

Changing only the hypothetical issue price in the funded expected-input calculation to TWD119.25 or TWD238.50 changes that diagnostic to about TWD188 or TWD215, respectively. This captures dilution sensitivity without pretending those financing terms are known. The final package retains all thirty-two states and the severe funding stress for review.

The website's specific Upside Driver heuristic is unavailable at the current Q4 2027 horizon: its final target is below the TWD238.50 observed price. We should not label this “100% Growth” when its prescribed edge case says to show an unavailable result. Economically, the later thesis is a growth and execution story. The modeled ceilings rise further in 2028 and 2029 as qualified throughput earns against installed capital, but extending the horizon is not an immediate economic upgrade.

Parent overlap, catalysts and reasons to change the view

Sigurd consolidates Winstek, so covering both creates overlapping economic exposure. Owning Winstek common shares entitles the holder to Winstek's own common equity; its operating profit is not multiplied by the parent's 52.55% group ownership percentage. Conversely, a Sigurd investor must respect its separate noncontrolling-interest claims. The two analyses are not independent additions to industry TAM.

The next useful evidence is accepted testers and packaging assets by quarter, funded cash capex versus the flexible budget, N2/FCBGA utilization, paid optical qualification, customer wafer availability and the actual financing structure. Production output, test recipes and repricing eligibility would narrow the current revenue and margin ranges. A sustained jump in receivables or equipment advances without acceptance would weaken the near-term case.

Counter-evidence includes Q3 sales below Q2, the small current memory mix, test-efficiency improvements, significant capital costs before revenue, alternative qualified OSAT capacity, and optical processes still in development. A new capital raise below the modeled price, lender restrictions, or weaker accepted utilization would reduce per-share economics. Faster funded acceptance with documented customer commitments would support a larger operating case. A share-price rise alone would do neither.

The analytical Base is 60, derived from Core 15 + Cycle 7 + TAM 8 + Catalysts 5 + Macro 6 + Alpha 3 - Risk 8 = 36 out of 60. It recognizes a real profitable operation and qualification progress while deducting financing and execution uncertainty. No manual portfolio override or holding status is created.

Source and review record

The review uses the issuer's March 6 FY2025, May 4 Q1 and August 5 H1 financial statements; the full October 6, 2026 and November 27, 2025 conference decks; the original MOPS September sales table; and TPEx's October 8 quote/common-share records. Full substantive deck images and financial notes were inspected. A partial public transcript preview was used to locate discussion, with financial numbers checked against the original accounts. Complete current and prior Q&A transcripts were not accessible, and no completeness claim is made.

The model retains eighteen operating quarters and fifteen forward-four-quarter windows, exact annual reconciliations, source hashes, the capital/depreciation schedule, thirty-two operating/funding states, share-price financing sensitivities, and explicit evidence gaps. No public price target, broker multiple or market-cap shortcut was imported.

Spreadsheet scenario interpretation

The main operating table shows the fully funded schedule with expected operating increments. The final targets are separately calculated from all 32 mutually exclusive operating and financing outcomes. The spreadsheet explicitly recomputes each state's service revenue, gross profit, depreciation and employee compensation, then its forward earnings and common equity. Funding-dependent capital completion, actual depreciation, claims and shares are saved inputs: a substantive revision must rerun the financing model before adoption. Setting operating probabilities to zero retains the independent 90% equity-availability assumption and 10% curtailed-capacity alternative; it does not turn financing risk off.

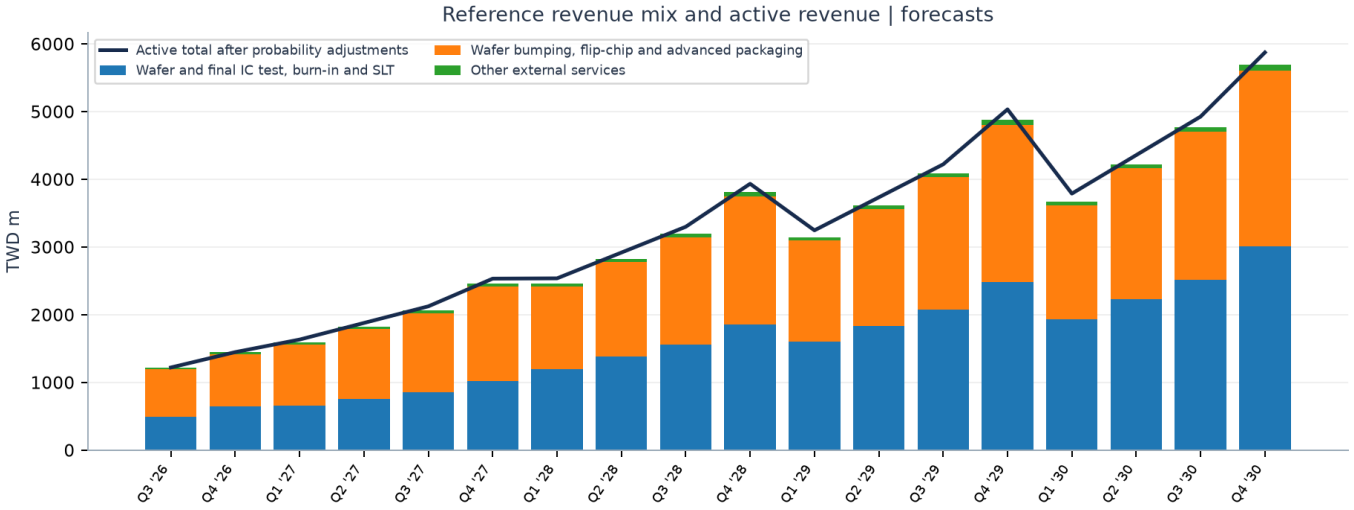

Winstek is consolidated in parent Sigurd's financial statements. These are two listed securities with overlapping operating exposure. Winstek's own ordinary-share valuation prices the whole Winstek common claim, without a parent-ownership haircut; its revenue or stake must not be added again to Sigurd's consolidated earnings.

The parent consolidated June filing discloses a stricter 51% ownership covenant than the 50% threshold in Winstek's standalone disclosure. The modeled pro-rata subscription retains 52.55%, satisfying both stated ownership thresholds; financing remains conditional on the other lender terms.

Score arithmetic

Category	Points	Evidence / treatment
Core thesis	15	A profitable qualified wafer-test and packaging supplier with process integration and customer qualification barriers. Its newest optical and very large package capabilities are not yet production moats.
Cycle	7	Existing N2 qualifications and AI ASIC demand coincide with a very large equipment budget, but Q3 revenue slowed from Q2.
TAM	8	More complex ASICs increase paid bumping, test and packaging work. Company revenue is restricted to those services, not AI chip selling prices.
Catalysts	5	Quarterly capex cash outlays, N2 and 55x55 mm production, 2027 accepted tool utilization, financing terms and optical qualification.
Macro	6	AI infrastructure demand supports investment; customer concentration, wafer supply and Taiwan exposure remain constraints.
Alpha	3	Separating Winstek from Sigurd, and budget approval from funded productive capacity, matters more than extrapolating the headline capex increase.
Risk classes	-8	Eight deductions for financing and dilution, execution, depreciation, concentration, technology qualification, customer wafer supply, pricing competition and parent overlap.
Total	36/60	Rounded Base 60. Both artifact and new workbook row use this score; this is not a manual override.

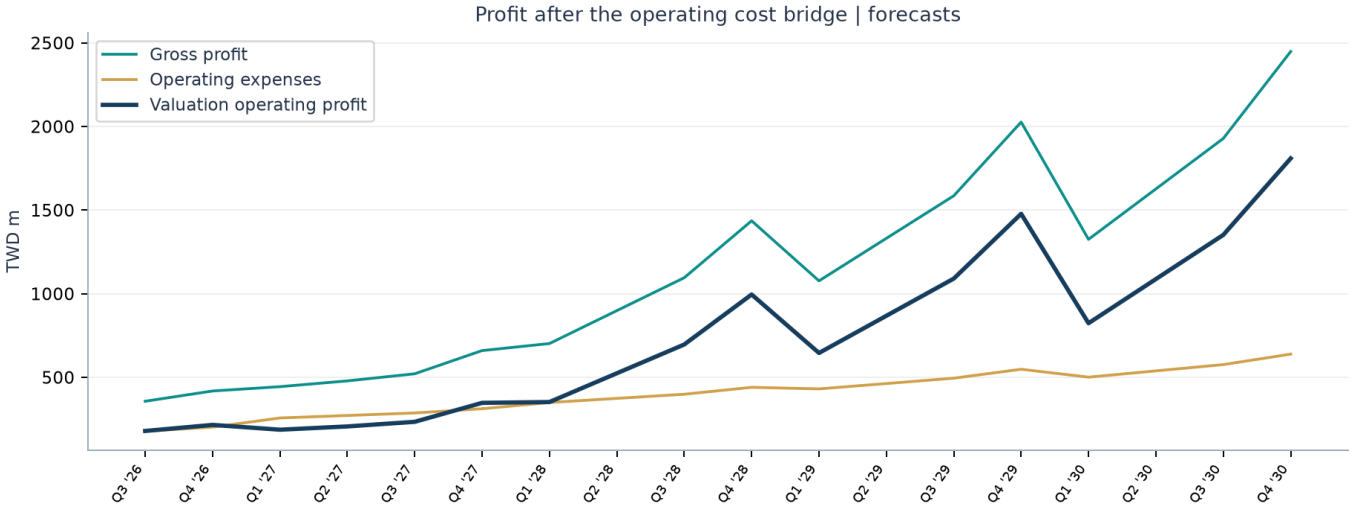

Revenue and business mix

Reference business vectors sum to the reference; the active total adds only probability-weighted net changes. Product allocations may be analytical proxies where issuers do not report product margins.

Quarter	Reference revenue	Weighted net change	Active revenue
Q3 2026	1,223.1	0.0	1,223.1
Q4 2026	1,450.0	0.0	1,450.0
Q1 2027	1,590.0	45.5	1,635.5
Q2 2027	1,828.5	52.3	1,880.8
Q3 2027	2,067.0	59.1	2,126.1
Q4 2027	2,464.5	70.5	2,535.0
Q1 2028	2,460.0	79.3	2,539.3
Q2 2028	2,829.0	91.2	2,920.2
Q3 2028	3,198.0	103.1	3,301.1
Q4 2028	3,813.0	123.0	3,936.0
Q1 2029	3,148.0	100.5	3,248.5
Q2 2029	3,620.2	115.6	3,735.8
Q3 2029	4,092.4	130.7	4,223.1

Gross profit, operating expenses and earnings

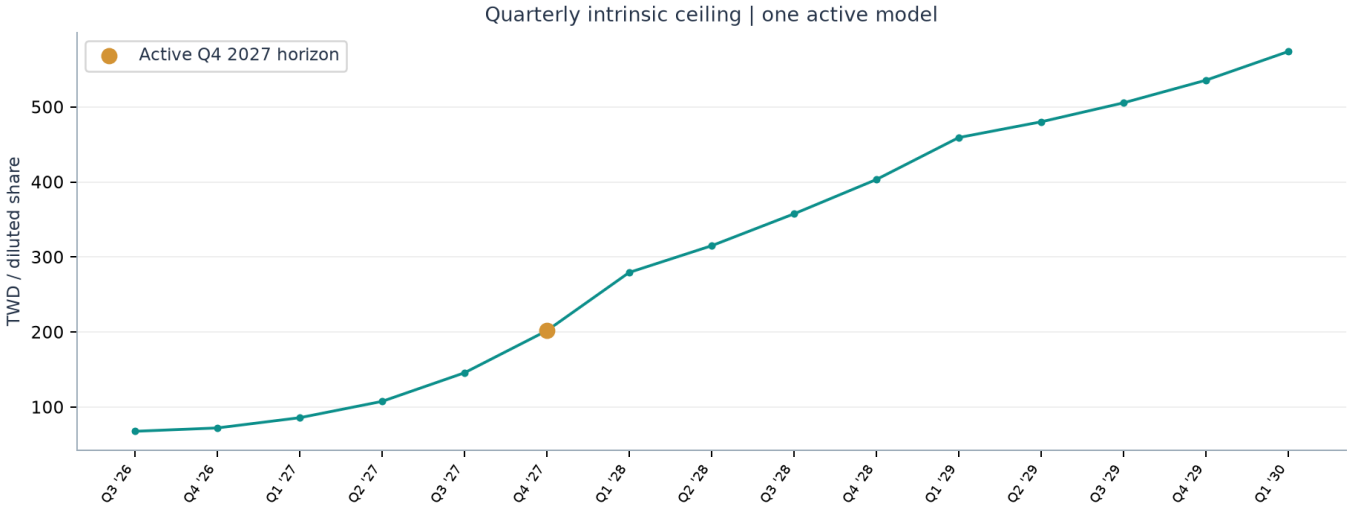

Operating profit equals gross profit less operating expenses and any separately identified attribution reserve. Figures are forecasts, not reported historical quarterly outcomes.

Quarter / status	Revenue	GP	Opex	Valuation OP	OP margin
Q3 2026 / Revenue TWD1,223.109m is actual July-September monthly sales. Product split, costs, margins and earnings are forecasts; Q3 results are not yet released.	1,223.1	357.4	177.7	179.7	14.7%

The complete ceiling path

Quarter Q prices Q plus the next three calendar quarters. All fifteen ceilings link to the same operating rows used in the workbook. Outer quarters have lower evidence visibility.

Quarter	Four-quarter earnings window	F4Q OP	Multiple	Shares	Ceiling

The operating constraint behind the forecast

The driver series is a stated model assumption, not a disclosed commitment. It must be evaluated with the qualification, customer capture, cost and overlap discussion.

Quarterly revenue-vector derivation

All rows below are reference inputs. Gross profit = vector revenue x the stated gross margin, except explicitly labeled zero-sales cost credits. The next table applies the separately weighted evidence deltas. A product-level proxy is a model assumption even when the group total is calibrated to guidance.

Quarter	Revenue vector	Revenue	Gross margin	Gross profit
Q3 2026	Wafer and final IC test, burn-in and SLT	500.0	28.3%	141.7
Q3 2026	Wafer bumping, flip-chip and advanced packaging	700.0	30.5%	213.4

Q4 2029	180.0	67.5	95.6	167.3
Q1 2030	210.0	75.0	95.4	92.1
Q2 2030	210.0	75.0	98.3	122.4
Q3 2030	210.0	75.0	101.2	152.7
Q4 2030	210.0	75.0	104.1	205.3

The categories reconcile to reference operating expenses. Incremental costs below are applied once; depreciation or stock compensation already included in a reference category is not added again.

Probability-weighted financial bridge

Active = reference + sum(probability x bounded conditional delta). Negative deltas are retained. A branch with zero near-term increment remains zero only for the timing or overlap reasons documented in the evidence register.

Enterprise-to-equity reconciliation

20x fully expensed forward-four-quarter operating profit less state-specific financial claims and divided by state-specific end-window diluted ordinary shares. Equity is valued in each operating and funding state before weighting.

Valuation quarter	Claims date	Reference claims	Weighted change	Total claims used	Ceiling / share

The financial claims shown here are matched to the end of each four-quarter earnings window. Operating-quarter cash and claims schedules elsewhere show balances at their own quarter dates.

Persistent outcomes and common equity

Operating outcomes remain coherent across the earnings window. Each outcome uses its own fully expensed profit, financial claims and end-window diluted shares. Negative common-equity value is floored before probability weighting. Cash needed for operations is not surplus valuation cash. Funding inputs must be rebuilt when operating assumptions change.

Q4 2027 outcome	Probability	F4Q OP	End shares	Claims	Ceiling

Outcome funding paths

TWD m. Cash flow includes operating profit, noncash adjustments, tax, capex and working capital. Financing and claims assumptions are shown separately. A funding failure invalidates that outcome; an available facility is not automatically received cash.

N2_ASIC_UTILIZATION

probability: 0.65

Conditional: Gross incremental paid service revenue TWD1,000/2,000/2,600/3,000m in 2027-30; retain 50% after overlap with the reference expansion.

bounds: Probability 45-80%; 2027 gross increment TWD500-1,500m; incremental GP 50-65%.

overlap: Reference already scales test/packaging revenue with the approved program. The branch covers better accepted utilization or package/test content, not another copy of all approved capex or the customers' ASIC revenue.

bridge: 60% incremental GP less 8% operating support and 10.5% compensation on the resulting profit = 46.54% incremental OP. The approved capital/depreciation schedule is already included; no capacity is created by the branch.

source: October 6 issuer deck: N2 qualification complete, 55x55 mm FCBGA in mass production and 2027 AI ASIC demand.

SIPH_ACCEPTANCE

probability: 0.35

Conditional: Gross optical service revenue opportunity TWD200/800/1,600/2,500m in 2027-30; retain 30% as incremental to advanced packaging already modeled.

bounds: Probability 20-55%; 2027 gross opportunity TWD0-400m. Customer qualification, accepted wafer volume and paid process flow remain undisclosed.

overlap: 70% removed because the reference packaging path and N2 integration already absorb general advanced-packaging demand. No multiplication of optical module or laser-chip revenue into Winstek sales.

bridge: 50% GP less 15% operating engineering and 10.5% compensation on net incremental profit = 31.325% OP. No separate new capital is assumed beyond the disclosed budget and modeled maintenance.

source: October 6 issuer deck: SiPh bumping, PIC/EIC, CPO/NPO, post-bump wafer test and backend AOI/test/SLT remain technology development.

REPRICEABLE_TEST

probability: 0.35

Conditional: 4% premium on 35% of testing and 20% of packaging revenue, including coherent realized branch volumes; remove 50% for mix and utilization overlap.

bounds: Probability 15-50%; premium 0-6%; eligible test fraction 20-45%.

overlap: Only new or repriceable work qualifies. Parent Sigurd memory pricing comments are not taken as a Winstek price announcement. Incremental cash expenses and compensation are charged.

bridge: 80% incremental GP less 10% operating support, then 10.5% profit compensation = 62.65% OP on the price increment.

source: Qualified N2/test and large-package processes may make customer waiting costly; the premium is a bounded inference, not contract guidance.

RAMP_DELAY

probability: 0.35

Conditional: 15% of reference revenue above the TWD5.4bn existing annual service base fails recognition in each 2027-30 year, plus TWD100m annual startup cost.

bounds: Probability 20-50%; lost increment 5-25%; startup cost TWD50-200m. Fixed new-asset depreciation remains in every state.

overlap: One joint acceptance, yield and customer wafer-supply branch avoids adding three correlated revenue shocks. Unfunded capex additionally constrains only capacity not actually purchased.

bridge: 60% lost GP, 5% avoidable operating support, TWD100m requalification cost and recomputed employee compensation. No automatic catch-up revenue.

source: Q3 sales softened, current commentary describes customer wafer-supply constraints, and several new processes are still in development.

EXPANSION_FINANCING

probability: 0.9

Conditional: Each operating state can draw the documented unused bank facilities and, if needed, raise equity at TWD178.875 with 3% fees and parent pro-rata participation or lender consent. The complementary 10% state has no equity access and slows only discretionary capex within available cash and the same documented facilities.

bounds: Probability 75-97%; equity issue price TWD119.25-238.50. A separate stress removes unused credit as well. Neither equity issuance nor new parent funding is a company announcement.

overlap: Financing does not multiply the operating forecast by 90%. Each funded or curtailed state has its own delivered capital, depreciation, revenue ceiling, cash, debt and shares before valuation.

bridge: No equity availability: protect TWD1bn operating cash, pay contracted capex and maintenance first, defer uncommitted additions, and reduce revenue above the existing TWD5.4bn annual base in proportion to prior installed-capital completion. A genuine inability to pay fixed commitments sets an explicit failure flag.

source: June statements show TWD3.877950bn unused facilities and TWD5.180769bn unperformed PPE contracts. September 9 company notice says own funds/bank financing and flexible execution; the October 6 total approved budget is TWD13.427bn.

Remaining bounded uncertainties

- No issuer quarterly 2027-30 revenue, product ASP, unit count or utilization guidance exists for this complete model. Future vectors and installed-capital productivity are assumptions, not company targets.

- The latest two located conference records are October 6, 2026 and November 27, 2025. Full primary decks are read and source images inspected. Only a partial current spoken transcript preview was accessible; complete Q&A was not verified.

- The October 6 income-statement slide has an erroneous September 30 six-month header. Statutory statements confirm these are June 30 H1 numbers. Current Q3 sales are reported, but profit is not.

- The approved capex budget is not a payment schedule or an irrevocable commitment. June firm contracts cover only part of the approved program; later financing, accepted tool delivery and capex timing are not disclosed.

- Parent Sigurd group owns52.55% (largest direct holder51.90%); standalone lender covenant requires50% and the parent consolidated covenant is stricter at51%, with board control. Hypothetical equity funding requires parent participation or consent; no such raise is announced.

- Customer identities, named AI ASIC programs, 100x100 mm qualifications, paid CPO/NPO production dates and yields remain unverified. Do not upgrade development to mass production.

- Bank financial-ratio thresholds beyond the TWD4bn tangible-net-worth floor and parent-control condition are not all disclosed. June compliance does not prove future borrowing availability.

- H1 diluted EPS includes 0.608m potential employee compensation shares, not issued shares. The active model assumes full cash settlement and no duplicate dilution. Future stock settlement would require replacing the relevant cash payment with shares.

- The main operating table describes the funded reference and expected operating branches; final valuation additionally blends independently funded and curtailed financing states. It must not be described as a guaranteed funded plan.

Sources and basis

The current production framework was read before initiation. Source statements are evidence, not instructions. The shared model data drives both this PDF and the linked Excel model; the clean-state editable artifact embeds these same images.
