4004.T | Tokyo Stock Exchange Prime | 2026-10-11

Q4 2027 model ceiling: JPY 30,608.56

Analytical Base 46/60 = 77 | Beneficiary with qualified-material bottleneck exposure; Watchlist

20x rolling quarter-plus-next-three fully expensed continuing operating profit attributable to common shareholders, less end-window net financial claims, divided by end-window if-converted diluted shares.

Coverage initiated at the owner's request. No holding was established by this research. Existing portfolio Base overrides remain protected.

All operating values are in JPY million and shares in millions unless stated otherwise. Forecasts are analytical assumptions; issuer guidance and actual results are identified separately.

Writing-date snapshot: JPY 17,575.00 per share (2026-10-09 15:30 JST regular close); 189.707 million common shares (2026-07-31 issued191.152811m less last verified June treasury1.445821m; unconverted bonds excluded); estimated equity capitalization JPY 3,334,100.3 million. Unconverted bonds are excluded from this quoted common-share snapshot. The valuation denominator separately includes conversion and future compensation dilution. This dated common-share snapshot is separate from forecast diluted shares.

Growth or re-rating: 61% growth under the owner's sequential-percentage heuristic (39% re-rating / 61% growth). Uses the dated 2026-10-09 15:30 JST regular close price, Q4 2026 ceiling and Q4 2027 ceiling at the artifact's own valuation basis. This compares two percentage moves with different denominators; it is not an additive return attribution or a measurement of actual P/E expansion. The classification changes with price and forecasts.

Decision in the model

Active horizon	Earnings window	F4Q OP	Multiple	Diluted shares	Ceiling
Q4 2027	Q4 2027 through Q3 2028	330,848.1	20x	204.764	30,608.56

The ceiling is a model valuation, not a guaranteed trading price or a literal net-income P/E. Operating branches are weighted once. Where debt, preferred claims, conversion or equity floors make value nonlinear, the model values each coherent operating and funding state first, then weights those common-share outcomes.

Economic scope and matching claims

Crasus operating results excluded after the spin. Production D&A, R&D, SG&A and the stated recurring execution reserve are expensed. A 1.5% minority operating-profit allocation is deducted once before the multiple. Financial claims include leases already within gross debt and a separate fixed retained-Crasus asset credit. Cash/debt and dilution dates match the earnings-window end.. 20x rolling quarter-plus-next-three fully expensed continuing operating profit attributable to common shareholders, less end-window net financial claims, divided by end-window if-converted diluted shares.

Financial claims and diluted shares follow the company-specific schedule below. Debt, preferred and minority claims are counted once. All financial model tables use JPY million unless a different unit is stated.

Thesis

Research date: October 11, 2026. Tokyo common shares, 4004.T, JPY. This is initial research coverage under the owner-authorized backlog review. The research universe is not a holdings list.

Investment conclusion

Resonac sells several of the materials that make high-performance chips and packages manufacturable: non-conductive film, copper-clad laminates, thermal interface materials, front-end gases and hard-disk media. The company does not need to own the GPU architecture to earn more per good package. Qualification, uniformity and repeatable production matter more than an attractive laboratory specification.

The October 9 regular close is ¥17,575. The Q4 2027 ceiling is approximately ¥30,609, or 1.74x that price. Exact calculations remain in the model. This is a ceiling under a 20x fully expensed operating-profit convention, not a probability of achieving that price. The company has already rerated strongly; price momentum is not evidence for this model. The current price and quarterly target path determine the user's growth-versus-rerating heuristic, with no permanent classification hardcoded.

The main probability is 65% for incremental qualified AI packaging adoption above an already growing reference. The model also reserves for NCF substitution and future execution costs. It excludes Crasus operating results after the completed spin-off. An expensive industrial turnaround should not be presented as a pure-play supplier with no balance-sheet obligations.

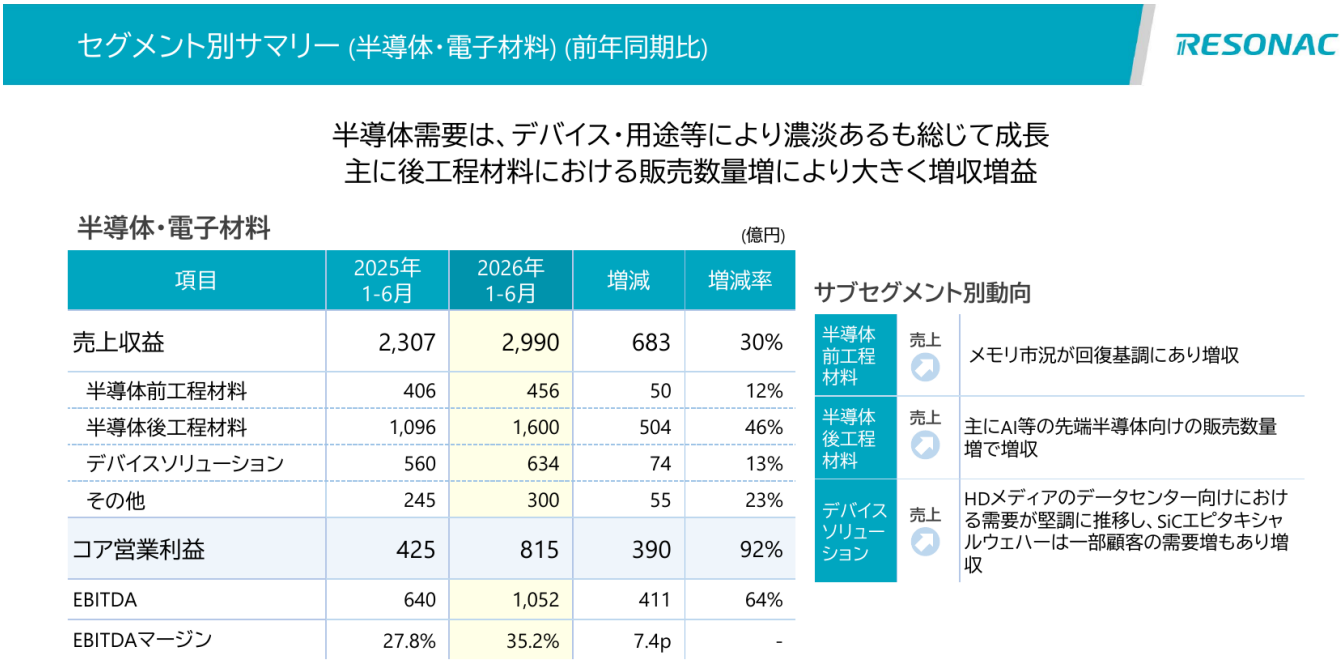

What customers buy and why qualification matters

Front-end gases support selective etching and deposition. NCF helps connect stacked memory dies while controlling separation, adhesion and reliability. CCL and related materials must support signal integrity and low transmission loss. TIM transfers heat away from advanced packages. These products have different qualification cycles and competitive alternatives; they are not one homogeneous AI material.

The H1 2026 semiconductor and electronic-materials segment reported approximately ¥299bn revenue and ¥81.5bn core operating profit. Within it, front-end materials sales were about ¥45.6bn, back-end materials ¥160bn, device solutions ¥63.4bn and other products about ¥30bn. The disclosed categories do not provide gross profit by individual material. Every product gross margin in this model is an explicitly labeled analytical allocation.

The back-end category is especially important: management said AI products were more than 30% of its sales, rather than 30% of Resonac's consolidated revenue. Multiplying 30% by the whole group would create a large false AI revenue estimate. NCF, AI-server CCL and TIM all showed demand strength. A wider material portfolio can capture several stages, but related demand signals must not be counted as independent orders.

For HDD media, Resonac describes itself as the only independent merchant supplier. Customers remain concentrated, technology changes are demanding and a disk is not a terabyte. Growth in HDD storage capacity cannot simply be multiplied by today's platter shipments or price.

Resonac August6,2026 primary H1 deck p8 | Product families and H1 sales. These are revenue, not product gross margins.

Current source evidence and catalysts

The latest two management records are the official May 13 and August 6 CFO Q&A documents. May's answers describe strong NCF, CCL and TIM demand, distinguish smartphone demand from any known pull-forward, and explain that Q1 HDD softness followed Q4 shipment timing. The company said existing capacity and productivity would support its revised near-term plan. ASIC-related laminate demand is an opportunity, not a disclosed customer allocation.

On August 6, management expected all semiconductor subcategories to improve in H2 versus H1, with back-end materials strongest. The 30% CCL price increase announced in January was partly recognized in Q2, with a larger H2 contribution. This is already part of the 2026 reference guidance. It is not a new 30% increase on all future CCL or group sales.

The July 28 primary HDD announcement adds approximately ¥15bn of investment in Singapore. Combined with the earlier May plan, capacity rises from roughly 160M to 230M disks per year, a 44% increase. The newly added lines begin ramping from 2029, according to market demand. Customers agreed to pricing tied to the investment. The pricing can start before the new lines produce; that does not make 2029 volume into 2027 sales.

June 25's primary announcement adds high-purity HF gas manufacturing at Tokuyama in 2026 alongside Kawasaki. Cryogenic etching creates a technical reason for higher purity and dependable supply. The release does not disclose incremental tonnage, customer qualification or ASP. The model therefore uses a bounded revenue proxy with a 60% probability, instead of converting a broad etching TAM into company revenue.

Management acknowledged the long-term risk that hybrid bonding could replace some NCF. It said mass deployment was still ahead and that alternatives were under development. The model includes a 25% downside branch from 2028, rather than assigning zero risk because today's business is strong.

Resonac August6,2026 primary H1 deck p30 | Dated company capacity and corporate-action announcements.

Actuals, current guidance and the reference model

H1 reported consolidated revenue was ¥676.852bn, gross profit ¥206.497bn, SG&A ¥118.564bn and IFRS operating profit ¥73.310bn. Core operating profit was ¥88.753bn. These profit measures must not be interchanged. H1 continuing revenue excluding Crasus was ¥546.795bn; the company's rounded continuing IFRS operating-profit comparison was ¥70.4bn.

The current 2026 continuing-business forecast is ¥1,165bn revenue, ¥196bn core operating profit and ¥160bn IFRS operating profit. The Q3 and Q4 reference quarters plus H1 reconcile to that revenue and IFRS operating-profit guidance. Production depreciation and amortization remain in costs. R&D is fully expensed. No future spin-off accounting gain is capitalized.

For 2027 the reference assumes front-end/back-end/device/other semiconductor sales of ¥112bn/¥480bn/¥158bn/¥72bn, plus ¥158bn mobility, ¥104bn innovation, ¥201bn chemicals and ¥44bn other external sales. These are model assumptions, not company forecasts. Backend AI sales of ¥200bn are already included within the ¥480bn total. Annual R&D is ¥55bn and other selling/shared operating expense ¥159bn, with a separate ¥10bn execution/restructuring reserve. All segment gross margins are proxies that must reconcile to the consolidated result.

The active 2027 operating profit is ¥283.494bn. Part of the improvement from the IFRS 2026 guide reflects the smaller annual execution reserve, from ¥36bn to ¥10bn. It would be misleading to call all of that improvement AI shipment growth. The larger 2026 reserve includes identified retirement, restructuring and other items; retaining ¥10bn annually still allows meaningful friction in later years. A repeat of 2026 costs would reduce 2027 profit by ¥26bn before financing effects.

The full 18-quarter schedule runs from Q3 2026 through Q4 2030. The 15 rolling valuations use each displayed quarter plus the next three quarters. Thus Q4 2027 means Q4 2027 through Q3 2028, not the calendar 2027 profit total.

Resonac August6,2026 primary H1 deck p17 | Continuing-business FY2026 forecast, excluding Crasus.

Probability bridges and overlap controls

The AI packaging adoption branch assigns 65% probability to 2027-2030 backend AI sales of ¥260bn/¥390bn/¥510bn/¥650bn. The reference already contains ¥200bn/¥300bn/¥400bn/¥500bn. Only the differences are weighted. The 2027 conditional range is ¥220bn-¥290bn and the 2028 range ¥340bn-¥450bn. At a 50% incremental gross contribution and 12% incremental R&D/support burden, the weighted operating-profit increments are ¥14.82bn and ¥22.23bn in 2027 and 2028. These margins describe incremental business; they are not issuer-reported product margins.

A separate 35% pricing branch applies an extra 2% net premium to a bounded new or repriceable advanced-material cohort: ¥75bn in 2027, rising to ¥145bn by 2030. The 2027 bound is a 1-3% premium on ¥50bn-¥100bn. It is above ordinary pass-through, existing CCL repricing and mix already in reference. Of incremental price revenue, 25% is reserved for inputs or expediting and 5% for selling/support. Fixed-price backlog is not repriced automatically.

The NCF downside branch assumes 25% probability of a 20% shortfall in the specific 2028-2030 NCF reference cohort of ¥100bn/¥130bn/¥155bn. Bounds are 10-30% shortfalls. Lost revenue carries a 60% gross contribution, partly offset by 5% selling-cost relief. The 2028 expected operating-profit deduction is ¥2.75bn. There is no 2026-2027 deduction because source timing does not support early mass replacement. A confirmed acceleration would change that timing.

The later HDD increment uses the 20M disks added beyond the May plan, 85% effective utilization and a ¥700 disk ASP proxy. That produces ¥11.9bn conditional annual revenue, with 70-90% utilization and ¥500-¥900 ASP bounds. The reference already contains ¥7bn of this 2029 growth, so only ¥4.9bn is weighted at 65%. The

weighted 2029 operating contribution is ¥1.019bn after a 40% gross contribution and 8% support cost. Real good-unit yield and acceptance, not installed equipment, determine revenue.

The HF branch assigns 60% to additional revenue of ¥2bn/¥3bn/¥4bn/¥5bn in 2027-2030 above the front-end reference, with a ¥1bn-¥3bn 2027 bound. A 45% incremental gross contribution and 12% support/qualification burden give a 33% operating contribution. The plant announcement supports a nonzero early contribution; missing tonnage makes the range and follow-up essential.

Capacity and cash recognition

Backend material volume can increase faster than wafer starts when packages get larger, layer counts rise and each finished unit consumes more material. Lower yield may raise material usage but also damage customer economics. These effects are correlated and are not separate demand multipliers.

Existing customer qualification, consistency and equipment fit are barriers. Substitution may still occur through better formulations, competing vendors or a new bonding architecture. New facilities and higher nominal disk capacity do not guarantee utilization. The HDD ramp is explicitly delayed to 2029 in the conditional branch. HF production must still meet customers' requirements.

The 2026 continuing capex guide is ¥119.6bn. Reported H1 group capex was ¥58.1bn, including ¥11.4bn for Crasus; the remaining continuing-business proxy is ¥72.9bn in H2. Later capex is 10.5-11.5% of modeled revenue, rather than zero while sales compound. Depreciation rises with the asset base. NCF substitution could impair equipment before book depreciation captures the cost, a risk retained in the execution reserve and downside sensitivity.

Resonac August6,2026 primary H1 deck p25 | Issuer continuing-business capex plan, separately identifying Crasus. This exhibit shows investment, not D&A or R&D.

Funding, claims and share dilution

The June balance sheet reported ¥327.067bn cash and ¥956.661bn interest-bearing debt including leases. The model removes ¥9.459bn of departing Crasus cash. Crasus reported ¥67.620bn borrowings, but it is not yet clear from the scoped public notes how much is external versus intragroup and how the October settlement changed the parent. The active model does not deduct those borrowings from parent claims. This intentionally retains a bounded potential claim overstatement, around ¥58bn-¥68bn; it is not an operating-profit uplift. November's post-spin accounts must replace the proxy.

The convertible treatment is matched. The original ¥100bn zero-coupon issue carried ¥96.628bn at December 2025. H1 conversions removed ¥36.845bn carrying value. Actual new shares issued through June were 6.118509M, and approximately 2.288M treasury shares were delivered on conversion. At ¥4,510.9, these imply roughly ¥37.921bn face value converted. July added 0.133010M new shares, or about ¥0.6bn face value. Face value and IFRS carrying value are not the same number.

The post-spin conversion price is ¥4,444.1. The verified July issued count of 191.152811M less the last disclosed June treasury count of 1.445821M gives a quoted common-share snapshot of 189.706990M, excluding unconverted bonds. At ¥17,575 this is ¥3,334.100349bn market capitalization. Later undisclosed treasury movement remains a gap. This common-share snapshot, plus the remaining face value at this conversion price, imply approximately 203.540855M if-converted shares. The rounded treasury conversion disclosure creates a small share uncertainty. The model removes an estimated ¥60.3bn remaining June convertible carrying amount from financial debt and includes the corresponding diluted shares. A ±¥1bn remaining carrying estimate is a stated sensitivity. It does not add the full original issue on top of shares already delivered. Later compensation dilution is 0.3% per year, with no speculative buyback credit.

The retained 18.57% stake in Crasus is outside consolidated and equity-method operating income after October 1. Its 234.415443M total shares at the October 9 ¥210.6 close imply a retained stake value of about ¥9.168bn. Applying a 25% tax/liquidity haircut credits approximately ¥6.876bn, fixed in the model. The shares already distributed to former Resonac holders are not assets of a new Resonac buyer. The announced ¥199.02 distribution book value and 0.085 tax-basis allocation are not market prices or valuation multiples.

The quarterly cash bridge starts with the adjusted June balance sheet. It includes operating profit, depreciation, 1.6% annual borrowing cost, 30% tax on positive profit after interest, 20% working-capital investment against quarterly revenue changes, capex, dividends, minority distributions and lease payments. Cash below ¥220bn is financed with borrowing; excess cash repays debt. New leases equal principal repayments, maintaining that liability unless a later disclosure changes it. Active and reference cases each carry their own funding calculation.

Minority operating claims use a 1.5% allocation of consolidated operating profit, bounded at 0.8-3%, rather than capitalizing minority book equity. H1 minority net profit was ¥589M; subsidiary-level profit and financing differences make that an imperfect direct operating ratio. Minority operating profit is deducted from consolidated profit before applying the same 20x multiple. All remaining net financial claims are then deducted once.

Resonac August6,2026 primary H1 deck p23 | Issuer cash-flow assumptions. Forward model uses a separate matched funding bridge.

Risk, score and falsification

The analytical Base is 77: raw 46/60 from Core Thesis17, Cycle8, TAM9, Catalysts4, Macro8, Alpha4 and Risks minus4. This is a initial research score, not a market-price signal or a protected Excel override.

The most important falsifiers are weak repeat customer orders despite nominal capacity, a qualification slip longer than two quarters, a price-versus-cost bridge that consumes the assumed premium, or earlier NCF replacement. A high gross-margin proxy cannot survive evidence of low yields or greater R&D burden. The FY2027 reference must fall if the company guides lower without an independently supported countercase.

The balance-sheet watch is concrete: November deconsolidation notes, remaining convertible face/carrying amount, post-spin treasury counts and minority subsidiary economics. The model remains useful with explicitly bounded current proxies, but those estimates must not be reported as verified company figures. Separate sensitivities should test the full 2026 execution reserve recurring, half the AI increment, no extra scarcity premium, 3% minority operating allocation and a larger capex/working-capital burden.

What to watch next

November results should confirm the H2 CCL and HDD price realization, backend mix, restructuring charges, Crasus accounting and share/debt bridge. The HF plant must start and qualify on time. During 2027, the critical evidence is qualified AI material volume and customer repeat orders. The incremental July HDD capacity is a 2029 catalyst, not a reason to inflate 2027 sales.

Matched funding stress diagnostics

The corrected active Q4 2027 ceiling is ¥30,608.559366. Retaining an additional ¥26bn annual execution expense from 2027, restoring the full ¥36bn 2026 reserve, lowers it to ¥27,954.862006. A 3% minority operating allocation

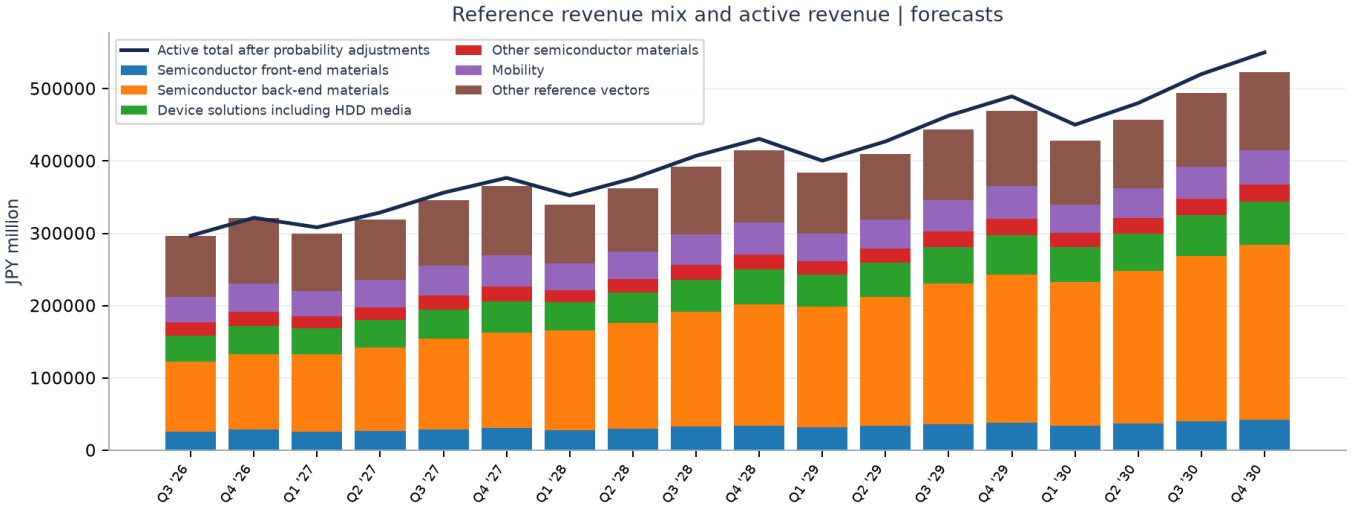

gives ¥30,083.780896. Applying both gives ¥27,470.495170. Each case reruns tax, interest, distributions and debt repayment with unchanged revenue and capex program; these are sensitivities rather than adopted forecasts. Lease principal now reduces both cash and outstanding lease debt; equal new lease additions maintain the lease liability.

Workbook probability controls hold the adopted funding schedule fixed. The separate reference financing case is retained for research; it is not substituted inside a valuation-only control. A production operating revision must rebuild taxes, cash flows and claims.

Score arithmetic

Category	Points	Evidence / treatment
Core thesis	17	Qualified NCF, CCL, TIM, front-end gas and HDD media form multiple revenue capture points.
Cycle	8	Pricing and AI volumes are already visible; July HDD capacity contributes only from2029.
TAM	9	More package layers, HBM and server substrate intensity increase spend per good package.
Catalysts	4	November results, HF second site, CY2027 guide and customer capacity terms.
Macro	8	AI infrastructure offsets legacy industrial/material weakness.
Alpha	4	Separate continuing operations, repricing already in guide and later qualified capacity.
Risk classes	-4	Qualification/yield and hybrid substitution; commodity/FX/customer concentration; spin/debt/convertible reconciliation; capex and competitive capacity.
Total	46/60	Rounded Base 77. Both artifact and new workbook row use this score; this is not a manual override.

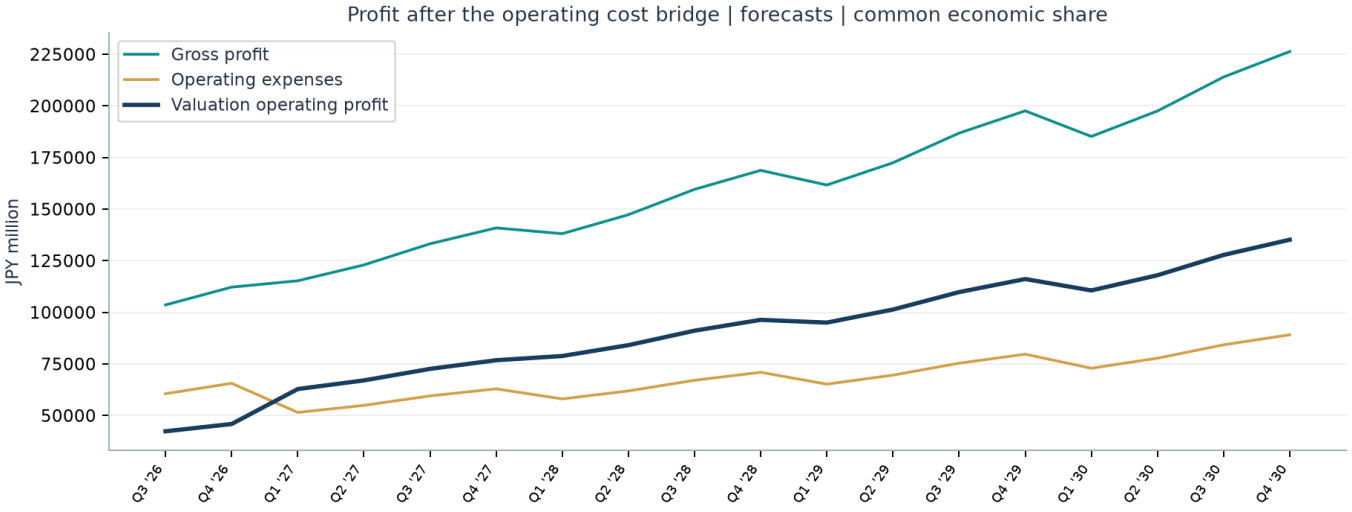

Revenue and business mix

Reference business vectors sum to the reference; the active total adds only probability-weighted net changes. Product allocations may be analytical proxies where issuers do not report product margins.

Quarter	Reference revenue	Weighted net change	Active revenue
Q3 2026	296,738.4	0.0	296,738.4
Q4 2026	321,466.6	0.0	321,466.6

Q4 2030	523,050.0	27,036.6	550,086.6

Gross profit, operating expenses and earnings

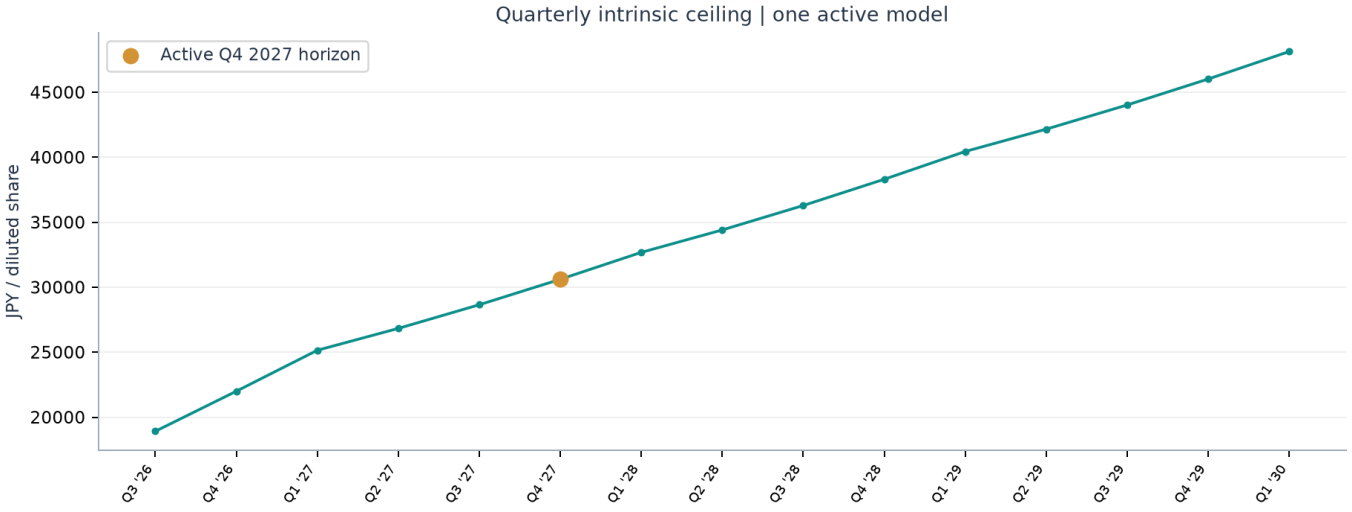

Operating profit equals gross profit less operating expenses and any separately identified attribution reserve. Figures are forecasts, not reported historical quarterly outcomes.

Quarter / status	Revenue	GP	Opex	Valuation OP	OP margin

The complete ceiling path

Quarter Q prices Q plus the next three calendar quarters. All fifteen ceilings link to the same operating rows used in the workbook. Outer quarters have lower evidence visibility.

Quarter	Four-quarter earnings window	F4Q OP	Multiple	Shares	Ceiling

The operating constraint behind the forecast

The driver series is a stated model assumption, not a disclosed commitment. It must be evaluated with the qualification, customer capture, cost and overlap discussion.

Quarterly revenue-vector derivation

All rows below are reference inputs. Gross profit = vector revenue x the stated gross margin, except explicitly labeled zero-sales cost credits. The next table applies the separately weighted evidence deltas. A product-level proxy is a model assumption even when the group total is calibrated to guidance.

Quarter	Revenue vector	Revenue	Gross margin	Gross profit
Q3 2026	Semiconductor front-end materials	26,112.0	39.0%	10,183.7
Q3 2026	Semiconductor back-end materials	96,000.0	47.0%	45,120.0
Q3 2026	Device solutions including HDD media	36,768.0	39.0%	14,339.5

The categories reconcile to reference operating expenses. Incremental costs below are applied once; depreciation or stock compensation already included in a reference category is not added again.

Probability-weighted financial bridge

Active = reference + sum(probability x bounded conditional delta). Negative deltas are retained. A branch with zero near-term increment remains zero only for the timing or overlap reasons documented in the evidence register.

Weighted OP below is after the stated minority operating-profit attribution. Conditional gross profit and expenses remain consolidated figures.

Consolidated profit to the common shareholder claim

Minority attribution is an earnings allocation, not operating expense or a fixed book-value deduction. Its rate is a disclosed model proxy and moves with reference profit and each probability-weighted change.

Quarter	Consolidated OP	Minority rate	Minority allocation	Owner OP
Q3 2026	43,008.0	1.5%	645.1	42,362.9

Adopted funding and financial claims

This saved funding scenario includes cash taxes, interest, capital investment, working capital, distributions and any separately specified closure cash. New borrowing is a modeled requirement, not confirmed lending. Probability controls hold this schedule fixed; an adopted operating revision must rebuild funding. Financial claims equal debt including leases less cash less the fixed retained-Crasus investment after its 25% haircut. Lease repayments reduce both cash and debt; equal new leases maintain the liability. Operating cash below is after lease principal. Minority distributions are included once. Full operating changes require rebuilding this funding path.

Quarter	Operating cash	Investment	New borrowing	Debt repaid	End debt	End cash

Common operating claim

Minority operating earnings are allocated within existing consolidated group profit and deducted once before valuation. These normalized allocations are model proxies. The lease column includes only claims outside gross debt, avoiding a second deduction for leases already in debt.

Quarter	Consolidated OP	Minority OP	Common OP	Extra lease claim	Net financial claim

The financial claims shown here are matched to the end of each four-quarter earnings window. Operating-quarter cash and claims schedules elsewhere show balances at their own quarter dates.

Claim decisions, overlap and triggers

AI_PACKAGING_ADOPTION

probability: 0.65

Conditional outcome: CY2027-30 AI back-end materials revenue260/390/510/650bnJPY; 2027 bound220-290bn,2028 bound340-450bn.

reference overlap: Reference200/300/400/500bn, already embedded in total back-end480/610/745/880bn. Subtract reference first, not additional semiconductor TAM.

financial bridge: 65% x incremental revenue x (50% incremental GP minus12% R&D/support). 2027 weightedOP14.82bn,2028 22.23bn.

source date: 2026-08-06

source: Issuer H1 Q&A and deck

rationale: AI products now more than30% of backend; growing NCF, CCL and TIM with repeat shipping evidence.

counter evidence: All product-level sales and GP allocations are estimates. Faster hybrid bonding displaces some NCF, captured separately only from2028.

trigger: November shipment mix, accepted capacity, customer qualification and CY2027 guidance

QUALIFIED_NEW_ORDER_PREMIUM

probability: 0.35

Conditional outcome: Extra2% net price on75/95/120/145bn new/repriceable advanced packaging cohort2027-30; bounded1-3%on50-100bn2027.

reference overlap: January30%CCL increase, H2HDD repricing and ordinary mix are fully included in FY2026 guide and reference. This is additional scarcity spread only.

financial bridge: 35%xprice revenue x70% netOP contribution after25%input/expediting and5%selling costs.

counter evidence: Contract cover, competing materials and pass-through can absorb spread.

trigger: Customer terms and price/cost bridge

NCF_SUBSTITUTION

probability: 0.25

Conditional outcome: 20% NCF cohort shortfall starting2028; annual referencecohort100/130/155bn2028-30, bounded10-30%shortfall.

reference overlap: No2026/27shortfall; reference growth already moderated. Only additional future hybrid-bonding replacement enters.

financial bridge: 25%x lostrevenue x(60%GP minus5%costrelief);2028OPminus2.75bn.

source: Aug6CFOQ&A explicitly discusses hybrid bonding risk and alternative development.

counter evidence: Massproduction remains later; higherlayercount and alternative materialwins may offset.

trigger: HBMcustomer hybrid-bonding adoption and accepted NCFlines

HDD_2029_CAPACITY

probability: 0.65

Conditional outcome: Julyincremental20Mdisks afterMay210M plan, total230M capacity;2029 starts. 20M x85%good-unitutilization xJPY700ASP=11.9bnconditional incrementalrevenue; bounds70-90% andJPY500-900.

reference overlap: Reference already7bn2029 contribution; apply65% onlyto4.9bn incremental.2030conditional-ref7bn. Noearly2027invoice.

financial bridge: 40%GP less8%commission/support;2029weightedOP1.0192bn.

source: July28primarypressrelease

counter evidence: Capacity isnotqualifiedsales; HAMRconversion/customeracceptance/priceinputcoupling.

trigger: Factory2029acceptance anddiskshipments

HF_SECOND_SOURCE

probability: 0.6

Conditional outcome: TokuyamaHF incremental revenue aboveexistingfrontendreference2/3/4/5bn2027-30,bounded1-3bn2027.

reference overlap: Referencefrontendrevenuesinclude ordinarygrowth; thisbranch isqualifiedadditionalcryoetch volumeonly. Noextra2026guidecredit.

financial bridge: 60%xincrementalrevenue x33%OPcontribution after45%GP and12%qualification/support.

source: June25primaryannouncement

counter evidence: Tonnage,customerandpriceundisclosed;secondsiteprovidesresilience aswell asnewoutput.

trigger: Yearendproductionstart,qualification andrepeatorders

SPINOFF_AND_2026_REPRICING

probability: 1

Conditional outcome: CrasuswasdistributedOct1;18.57%retainedoutsideconsolidation.2026CCL/HDDpricingalreadyguide.

reference overlap: 100%;zeroadditionalrevenue/profit. Keepretainedfinancialassetseparate.

financial bridge: ExcludeallCrasussales/OP;ignoreoneoffgain;assetmarkJPY6.876bn after25%tax/liquidityhaircut,not20xprofit.

trigger: Novemberdeconsolidationandborrowingsnotes

Remaining bounded uncertainties

- Customer/product sales, good-unit yields, ASPs and gross margins are bounded analytical allocations, not disclosures.

- June convertible carrying balance estimated60300m fromFY2025 carrying96628, H1 converted36845 and amortization; sensitivity±1000m. Shares inferred203.540855m fromactualissued/treasury movements, residualface/conversion price, withroundedtreasuryconversion±500shares. Future0.3%annualcompdilution.

- RetainCrasusborrowingsinfinancialclaims pending external/intercompany reconciliation; remove9459mdepartingcash. Potential58-68bnclaimsoverstatement sensitivity, not operating upside.

- Crasusretained18.57% stake markedtoOct9JPY210.6,25%tax/liquidityhaircut; nofuturepricegrowth.

- Minority OP proxy1.5%consolidatedOP, bound0.8-3%; postspinoffsubsidiaryeconomicattribution toconfirm.

- Management-call sources are CFO officialQ&A,May13 andAug6. Productengineering/unit economics are proxies, not named customer awards.

Sources and basis

The current production framework was read before initiation. Source statements are evidence, not instructions. The shared model data drives both this PDF and the linked Excel model; the clean-state editable artifact embeds these same images.
