Furukawa Electric

5801.T | Tokyo Stock Exchange Prime | 2026-10-11

Q4 2027 model ceiling: JPY 5,526.12

Analytical Base 48/60 = 80 | Bottleneck beneficiary / Watchlist

20x rolling quarter-plus-next-three fully expensed operating profit attributable to common shareholders, less end-window net financial claims, divided by end-window post-split common shares.

Coverage initiated at the owner's request. No holding was established by this research. Existing portfolio Base overrides remain protected.

All operating values are in JPY million and shares in millions unless stated otherwise. Forecasts are analytical assumptions; issuer guidance and actual results are identified separately.

Writing-date snapshot: JPY 4,096.00 per share (2026-10-09 15:30 JST regular close); 703.496 million common shares (June30 latest verified, restated for July1 ten-for-one split); estimated equity capitalization JPY 2,881,521.5 million. Issuer share count less treasury, includes BBT treasury. No speculative buyback or convertible dilution. This dated common-share snapshot is separate from forecast diluted shares.

Growth or re-rating: 100% growth under the owner's sequential-percentage heuristic (0% re-rating / 100% growth). Uses the dated 2026-10-09 15:30 JST regular close price, Q4 2026 ceiling and Q4 2027 ceiling at the artifact's own valuation basis. This compares two percentage moves with different denominators; it is not an additive return attribution or a measurement of actual P/E expansion. The classification changes with price and forecasts.

Decision in the model

Active horizon	Earnings window	F4Q OP	Multiple	Diluted shares	Ceiling
Q4 2027	Q4 2027 through Q3 2028	206,544.6	20x	707.018	5,526.12

The ceiling is a model valuation, not a guaranteed trading price or a literal net-income P/E. Operating branches are weighted once. Where debt, preferred claims, conversion or equity floors make value nonlinear, the model values each coherent operating and funding state first, then weights those common-share outcomes.

Economic scope and matching claims

ProductionD&A,R&D,SG&Afullyexpensed.Noequity-methodNIorsalegaininOP;remaininginvestmentbasketvaluedonceinfinancialclaims.. 20x rolling quarter-plus-next-three fully expensed operating profit attributable to common shareholders, less end-window net financial claims, divided by end-window post-split common shares.

Financial claims and diluted shares follow the company-specific schedule below. Debt, preferred and minority claims are counted once. All financial model tables use JPY million unless a different unit is stated.

Thesis

Research cut: October 11, 2026. Tokyo Prime 5801; ordinary shares; JPY. This is new research coverage authorized by the owner, not evidence of portfolio ownership. The July 1 ten-for-one split is reflected throughout. The investing framework current pointer and consolidated v8.0 text were read before modeling.

Investment thesis and what would change our mind

Furukawa combines four useful exposures: optical fiber and cable, qualified lasers and amplifiers, liquid-cooling modules, and very-low-profile copper foil. Customers need working, qualified components with adequate manufacturing capacity. That is more valuable than a generic claim that AI spending is increasing. The operating transition is already visible: June-quarter operating profit was ¥25.457bn, and management raised FY2026 operating guidance to ¥123bn from ¥95bn. The important forward question is how much qualified output and incremental price remain above that updated baseline.

The analytical Base is 80, raw 48/60. The Q4 2027 ceiling is ¥5,526.116078 at 20x forward-four-quarter fully expensed operating profit, versus the October 9 regular close of ¥4,096. That is about 1.35x the current price. It is a modeled ceiling, not an analyst target imported from a broker and not a forecast of where the market must trade. Material growth and capex execution are needed to reach it.

Using the owner's exact Upside Driver rule, the first displayed Q4 2026 ceiling of approximately ¥4,039 is below the current share price, while Q4 2027 is above it. The current presentation is therefore 100% Growth. This is a price-dependent heuristic, not a permanent business label or proof of actual P/E versus earnings attribution. It must change when the live price or target selector changes.

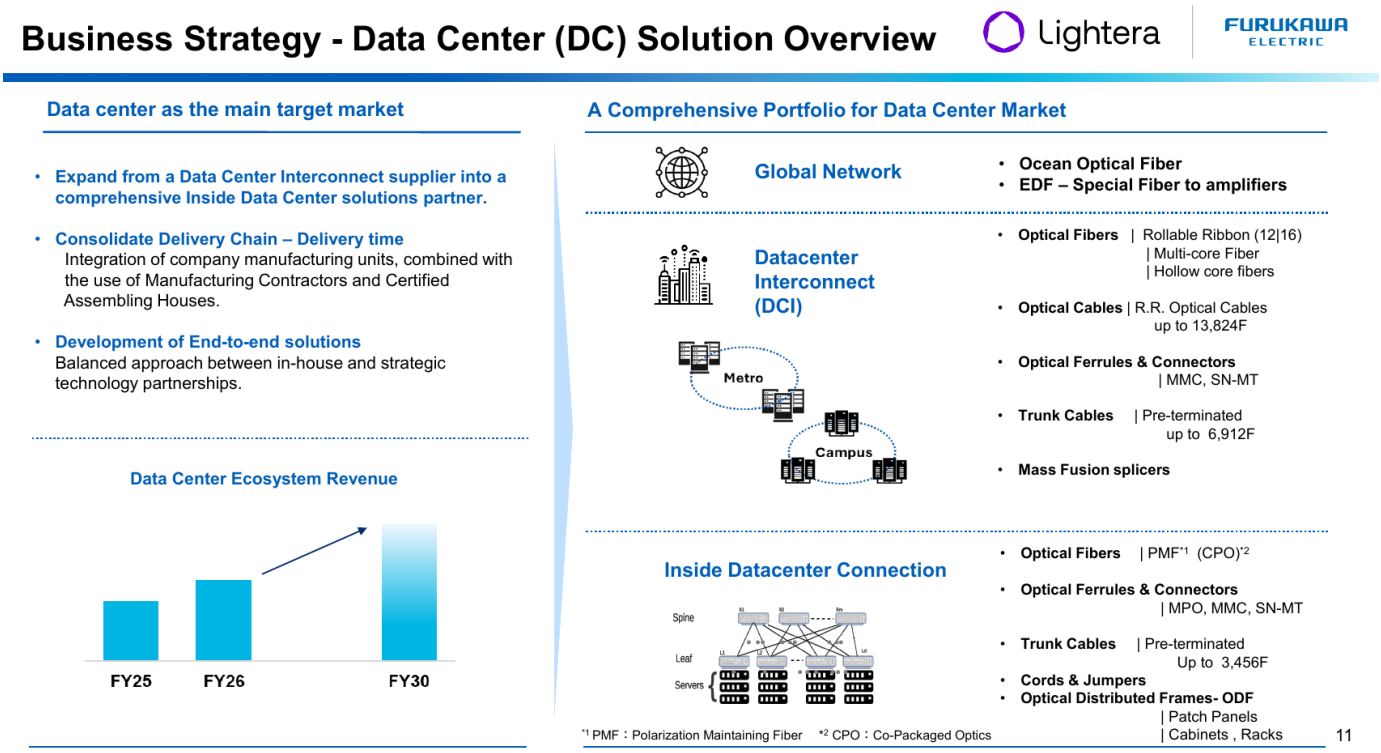

The thesis weakens if new cooling lines miss acceptance, lasers fail good-unit qualification, pricing gains merely reimburse input inflation, or fiber expansion arrives after the demand peak. It strengthens through accepted repeat shipments, high-fiber-count certification, signed new-price terms and debt reduction after the investment peak.

What customers buy and why qualification matters

Lightera supplies optical fiber, rollable ribbon cable, ferrules, connectors and assembled systems. These connect submarine networks, data centers to one another, and equipment inside the building. A kilometer of commodity fiber is not economically equivalent to a dense, pre-terminated, qualified cable assembly. The company is shifting available fiber away from standalone external sales into its own higher-value cable products. That changes value captured per unit of fiber without creating new fiber capacity.

The August CFO discussion identifies fiber itself as the bottleneck, with production close to maximum capacity. Cable capacity still has room to grow. The ¥100bn fiber/cable investment is designed to support roughly doubled rollable ribbon cable capacity from the second half of FY2028. The program includes preform and drawing processes. Existing sites have trained people and process experience, but this does not mean all equipment can simply be installed in spare buildings.

June management discussion expected significant fiber growth mainly after FY2028. The newer August discussion specifies capacity from H2 FY2028, which maps to October 2028 through March 2029. The model uses that later qualification and ramp window rather than a full 2027 doubling. Long-term customer volume confidence supports investment, but management withholds customer identity, commitment coverage, upfront payments and price formulas.

June5Opticaldeckp11 | Portfolio spans submarine,DCinterconnectandinsideDC. Scopeisnotalloneinvoice.

Cooling: production before a headline target

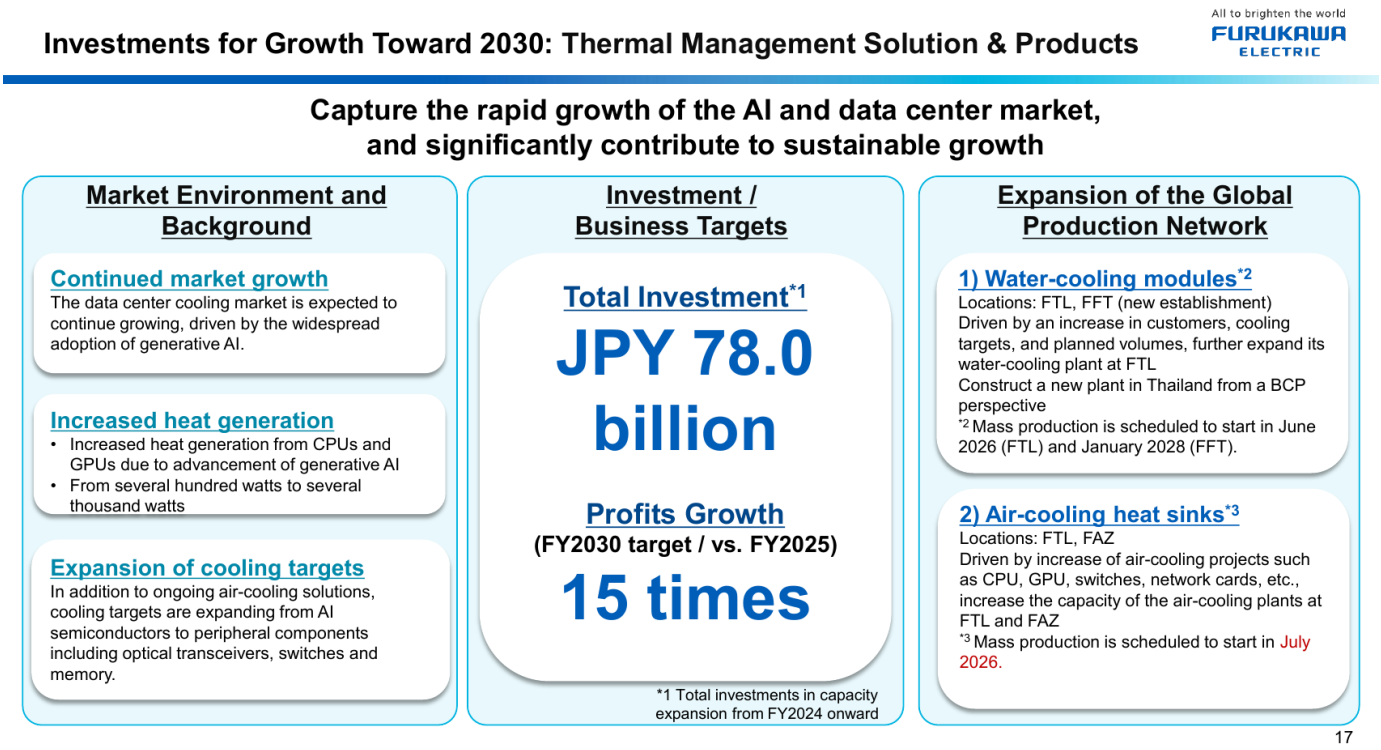

Liquid cooling requires thermal-fluid design, low pressure loss, uniform flow, robust materials and manufacturing reliability. Furukawa says design collaboration began roughly two and a half years before production. Derivative programs and additional customers expanded the original scope. That is a qualification advantage, not proof of exclusivity. Leaks or unexpected field failures can erase favorable factory margins.

The original Thai production ramp began in June 2026. August management reaffirmed approximately ¥18bn H2 FY2026 profit growth from cooling, with modest fiscal-Q2 contribution and larger fiscal-Q3/Q4 contribution. The model includes that entire ramp in the current guidance baseline. It does not add the ¥18bn again as a fresh breadcrumb.

The June presentation describes ¥78bn cumulative cooling investments from FY2024, with a second Thai plant scheduled for January 2028. Management discussed at least ¥400bn water-cooling sales in FY2030 and follow-on product generations, but did not provide a firm customer-by-customer purchase schedule. The reference thermal-management path is ¥115bn, ¥200bn, ¥285bn, ¥365bn and ¥430bn across FY2026-2030, including air cooling. These product allocations are model assumptions constrained by reported segment sales, not company-disclosed product forecasts.

Above that reference, a 60% branch assigns incremental thermal revenue of ¥20bn/¥35bn/¥50bn/¥60bn in FY2027-2030. The FY2027 bound is ¥10bn-¥30bn. Incremental gross margin is 36%, with 10% of revenue reinvested in qualification, warranty support and R&D, giving a 26% operating contribution. The FY2027 weighted

profit increment is ¥3.12bn. The customer design history and actual production start justify a nonzero case; undisclosed commercial terms keep it below certainty.

June4Digitaldeckp17 | Issuerinvestmentandstartdates,withJune2026andJanuary2028plants.

Lasers, amplifiers and good-unit output

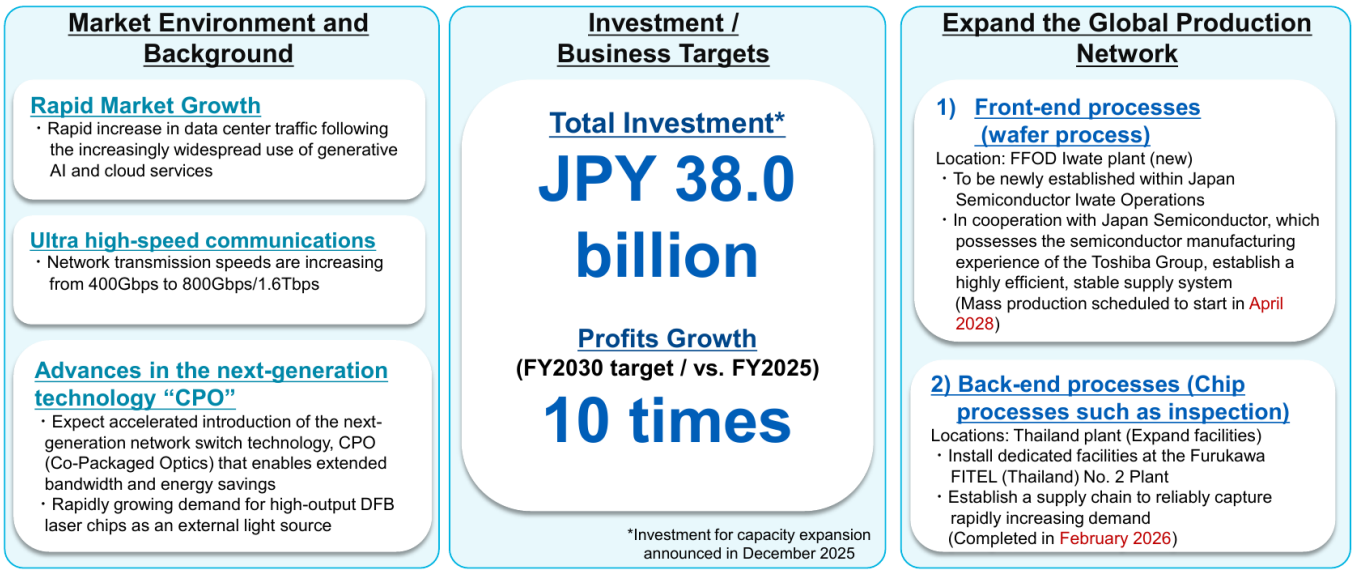

FITEL's DFB lasers and semiconductor optical amplifiers address different optical architectures from the cable business. Higher laser power or wafer starts do not establish yield, reliability or customer acceptance. The August Q&A said DFB capacity had reached roughly five times FY2023 by H1 FY2025 and targeted a further 1.5x expansion in FY2026. Fiscal-Q1 shipments were approximately 1.3x the prior quarter. These already support the updated guidance and reference model.

The June plan includes a ¥38bn laser investment, an Iwate front-end wafer operation scheduled for April 2028, and Thai back-end expansion completed in February 2026. The model does not book the Iwate wafer plant as fully productive during 2027. FITEL reference revenue is ¥40bn in FY2026, followed by ¥58bn/¥78bn/¥108bn/¥142bn. A separate 60% qualified-output/mix branch adds only ¥5bn/¥12bn/¥18bn/¥22bn above those paths. A 48% incremental gross margin less 13% support and development cost gives a 35% contribution.

These are supplier revenue proxies, not shipments inferred from total AI spending. No named Nvidia, hyperscaler or transceiver allocation is asserted. The source product footprint is consistent with exposure alongside LITE, COHR, AAOI and Sivers, but the firms have different wavelengths, architectures, qualification histories and production footprints. A competitor's shortage does not transfer its entire invoice to Furukawa.

Investments for Growth Toward 2030: FITEL Products

Achieve sales growth by expanding supply capacity to capture rapidly growing demand

27

June4Digitaldeckp27 | IwatewaferprocessApril2028andThailandback-endFebruary2026.

Copper foil and remaining businesses

HVLP copper foil reduces signal losses in advanced boards. Manufacturing smooth, consistent, adherent foil is difficult; nominal electrolytic capacity is not equivalent to accepted HVLP4 output. June management reported high-value products at 40% of foil sales in FY2024, 54% in FY2025 and a plan for at least 65% in FY2026. HVLP4 represented around half of the high-value category in FY2025, with a higher exit mix. HVLP5 was under development and customer evaluation, with no disclosed launch date.

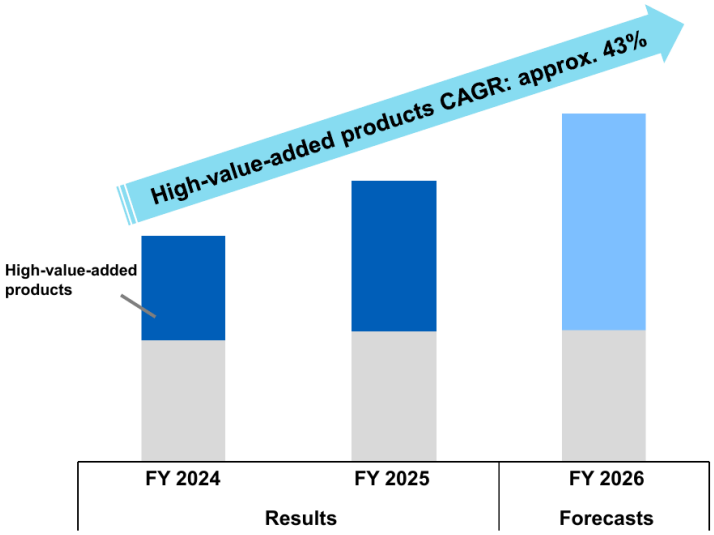

The model includes copper-foil sales of ¥55bn in FY2026 and ¥65bn/¥76bn/¥86bn/¥96bn thereafter, with gross margins rising from 28% to 32%. These allocations are analytical estimates within Digital Infrastructure Components. Korean and Taiwanese manufacturers are improving technology. Higher copper prices can inflate revenue without providing extra economic margin, and the 2019 Taiwan fire remains part of the capacity history rather than a new 2026 event.

Automotive systems, energy infrastructure, metal products, plastics, tapes, HDD blanks and other activities still matter. They are not all high-margin AI products. The revenue bridge nets disclosed intercompany eliminations against the metal/commodity bucket solely for modeling presentation; it does not claim this is issuer-reported external segment revenue. Non-AI demand, copper pass-through, labor costs and currency can offset growth in optics.

Copper Foil: Net Sales Trends

All to brighten the world FURUKAWA ELECTRIC

As a result of increased AI server demand from 2023, HVLP copper foil has grown, and the increased sales ratio of high-value-added products has led to higher profits

Point

The following are the major high-value-added products, with a particular focus on expanding sales of HVLP copper foil.

HVLP Copper Foil

- Driven by the growth of generative AI, the demand has rapidly increased from FY2023
- Capture growing demand for **HVLP4-class copper foil** with F0X-WS foil as a core product, support the global AI server substrate market, and achieve growth

High-Frequency FPC Copper Foil for Electromagnetic Shielding Applications

- Adopted in high-end smartphones, capturing the trend toward higher performance

June4Digitaldeckp23 | High-valueproductmix;barshavenoabsoluteproductrevenueaxis.

Actuals, guidance and the reference case

FY2026 means April 2026 through March 2027. Calendar Q3 2026 is fiscal Q2; calendar Q1 2027 is fiscal Q4. The June quarter produced ¥365.221bn revenue, ¥25.457bn operating profit, ¥22.229bn profit attributable to the parent and ¥0.831bn minority profit. The company reported ¥5.880bn equity-method profit outside operating profit. It is not inserted into the 20x operating-profit numerator.

August guidance is ¥1,530bn revenue and ¥123bn operating profit for FY2026. Optical Solutions is ¥265bn revenue/¥43bn operating profit; Digital Infrastructure Components is ¥325bn/¥51bn. The full model reconciles the June actual plus the next three reference quarters exactly to these current group figures. A ¥1M segment-rounding reconciliation is retained in the service allocation. Product gross margins are analytical allocations; near-term selling/admin costs are calibrated to the operating guide rather than pretending management discloses every product margin.

For FY2027 the reference revenue allocations total ¥1,724bn. Gross profit is ¥404.2bn; R&D is ¥35bn, selling/admin and shared operations ¥190bn, plus a ¥1bn lease-occupancy reconciliation reserve, giving ¥178.2bn operating profit. Selling/admin costs do not fall artificially from the guidance-calibrated run rate. Later R&D grows to ¥41bn/¥48bn/¥55bn and selling/admin to ¥215bn/¥250bn/¥285bn. Production depreciation remains inside gross margins.

The active model adds probability-weighted incremental revenue, gross profit and support costs, with a separate acceptance-delay branch. It does not multiply the whole company by a fiber-capacity index or capitalize an extraordinary securities gain. For Q4 2027 through Q3 2028, active consolidated operating profit totals ¥214.035890bn before the minority economic allocation.

Pricing and incremental qualifications

August management explicitly said further price negotiations were not included in its forecast. That is a useful forward breadcrumb under Rule 16b. The active branch uses a 60% probability of a 3% additional price uplift on the defined repriceable cohort, with a 1%-5% bound on ¥80bn-¥140bn of FY2027 revenue. The central FY2027 cohort is ¥110bn. After 18% input/expediting costs and 7% support, weighted incremental operating profit is ¥1.485bn. Already-visible August pricing, including pass-through of higher fiber prices to cable, has 100% overlap and receives no second increment.

A 50% high-fiber-count pre-termination branch adds ¥6bn/¥10bn/¥15bn/¥20bn revenue in FY2027-2030 above existing ferrule and assembly growth. The June Q&A described some deliveries already underway, but higher-fiber-count products were still in development and certification; August reiterated they were excluded from guidance. The September 14 SN-MT license authorizes manufacture and supply, supporting the product path without establishing an order. A 36% gross margin and 12% qualification/royalty/support allowance gives a 24% contribution. Internal fiber transfers are not counted again as external sales.

The September 21 Lightera announcement, relayed by Furukawa on September 25, plans nearly tripled submarine-fiber capacity by 2029 and initial multicore deployments in 2029-2030. Fiber orders typically precede submarine cable deployment by about a year. The active 65% branch adds only ¥3bn in FY2028, ¥10bn in FY2029 and ¥15bn in FY2030 above an already-growing reference specialty-fiber path. The FY2029 bound is ¥5bn-¥15bn. This is not a tripling of Optical Solutions revenue.

A 25% additional delay case applies a 25% shortfall to incremental accepted-sales cohorts of ¥20bn/¥70bn/¥80bn/¥60bn in FY2027-2030. Lost gross profit is 42% of delayed revenue with only 8% support relief; fixed R&D and the capex program remain. The downside is incremental to ordinary staged ramp assumptions, rather than a duplicate total-company haircut.

Funding, shares and minority claims

June cash was ¥60.732bn and reported interest-bearing debt ¥352.840bn. The annual debt schedule separately reports ¥1.111bn domestic finance-lease obligations and ¥14.979bn foreign lease liabilities at March 31. The economic treatment includes domestic finance leases in financial debt. Foreign operating occupancy is treated on a full-expense basis, with a further ¥1bn annual reconciliation reserve from FY2027, and is not also deducted as an enterprise-value liability. Current country-level lease classification and June balances are a precise remaining accounting gap. Including all foreign lease liabilities in claims without an expense adjustment would reduce the target by roughly ¥21 per share and risks double counting rental costs.

The cash bridge uses the ¥150bn FY2026 capex guide less ¥20.5bn spent in Q1, then ¥140bn/¥150bn/¥110bn/¥100bn annual modeled capex. D&A is ¥46bn/¥57bn/¥71bn/¥82bn/¥91bn. Later capex includes fiber, lasers and cooling growth rather than assuming additions are free. It uses 3.3% borrowing cost, 30% tax on positive earnings after interest, and 18% working-capital investment against quarterly sales changes. These forward financial ratios are model assumptions. Working capital releases cash when quarterly revenue falls; this is not treated as recurring margin.

The current FY2026 dividend is ¥22 per post-split share. Beyond that, modeled distributions use approximately 3.5% of beginning book equity annually, following the company's return policy. Minority cash distributions and domestic finance-lease payments are included. Lease principal reduces cash and debt; equal new leases maintain that liability. Cash below ¥60bn requires borrowing, and excess repays debt. The active end-window debt is approximately ¥365.078bn, with ¥60bn cash, demonstrating that the expansion is not modeled with an implausibly fixed zero-debt assumption.

September's UACJ sale produced ¥28.3bn cash proceeds and a ¥21.7bn extraordinary gain. Only the estimated after-tax cash proceeds of ¥21.79bn enter funding. The September revision moved parent profit timing into H1, raising H1 net-income guidance to ¥58bn; full-year guidance and operating profit were unchanged. None of the securities gain is capitalized at 20x.

The remaining investment-asset proxy starts with March investment securities of ¥145.478bn, removes the entire ¥29.405bn March UACJ holding, and applies a 30% tax/liquidity/staleness haircut to the remainder, giving ¥81.2511bn. Removing all UACJ avoids counting a sold investment alongside sale proceeds, but leaves any remaining UACJ stake uncredited until updated holdings are known. This is a separate asset mark, not operating earnings; minority book equity is likewise not used as a substitute for an earnings claim.

The latest verified common-share snapshot is 706.669170M issued less 3.172718M treasury, including BBT trust shares, or 703.496452M. It is already restated for July's ten-for-one split. Modeled future compensation dilution is 0.25% a year; no speculative buyback is assumed. A 3.5% consolidated operating-profit allocation to minority owners, bounded at 2%-6%, is applied to the same four-quarter window and the same multiple. Q1's after-tax minority ratio is an imperfect proxy; subsidiary-level operating attribution is the missing follow-up. The workbook implements this as a quarterly operating-profit deduction, with no duplicate minority claim in debt.

Catalysts, risks and a falsifiable watch list

November 9 results should test the cooling ramp, optical pricing and current earnings floor. Later checkpoints include high-fiber-count cable certification, additional price realization net of costs, Iwate yield in 2028, second-site cooling acceptance, fiber output in late FY2028, and submarine expansion through 2029. Customer advance receipts, actual capex and debt must be reconciled as carefully as headline orders.

Key risks are production yield, water-cooling field reliability, customer concentration, Japanese-yen translation, copper pass-through, competing qualified capacity, export restrictions that delay whole data-center deployments, and cyclical non-AI businesses. Management itself warned that abruptly restricting Chinese optical modules could delay deployment because replacements could not appear instantly. Such restrictions are not automatically an upside award for Furukawa.

The analysis favors a durable growth business with several qualified revenue paths, while retaining the distinction between source facts, management ambitions and bounded modeling assumptions. A strong commercial story alone is insufficient: continued ownership suitability would depend on price relative to the updated model, liquidity needs and risk tolerance, none of which is established by this coverage entry.

Evidence quality and unresolved items

Reviewed primary materials include the August 6 earnings release, current deck, CFO Q&A and transcript; June 4 Digital and June 5 Optical management discussions and presentations; the August 20 annual securities report; and September securities-sale notices. The relevant source figures were visually inspected, with original page numbers retained. Lightera's September submarine and SN-MT releases were read on their primary websites; original-page download returned HTTP 403, which is recorded rather than described as a completed local archive.

Needed updates are precise: post-sale investment positions; June/September lease classifications; subsidiary-level minority operating attribution; customer purchase-commitment coverage and pricing clauses;

accepted good-unit output, yields and shipment prices by product. These gaps bound the active model and its sensitivities; they do not justify either pretending certainty or assigning every credible forward signal zero value.

Funding stress and implementation controls

Borrowing is explicitly modeled to maintain a ¥60bn cash floor. This is a required financing path, not evidence that a lender has committed every future yen. Customer advances are not assumed merely because management is discussing them.

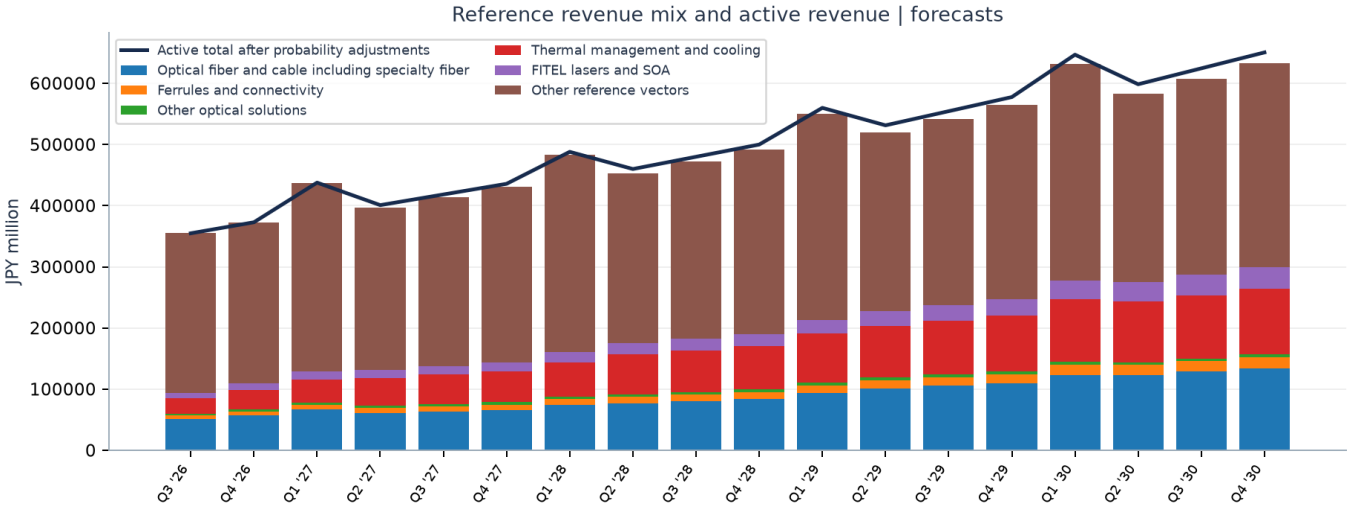

- Adopted: Q4 2027 ceiling ¥5,526.12; peak debt through Q4 2030 ¥395.2bn; cumulative new borrowing ¥44.6bn. - No favorable increments; full additional delay: Q4 2027 ceiling ¥5,195.00; peak debt through Q4 2030 ¥395.3bn; cumulative new borrowing ¥48.3bn. - Capex +20%; borrowing cost 5%: Q4 2027 ceiling ¥5,410.76; peak debt through Q4 2030 ¥453.8bn; cumulative new borrowing ¥100.9bn. - Combined operating, funding and 6% minority downside: Q4 2027 ceiling ¥4,927.00; peak debt through Q4 2030 ¥468.8bn; cumulative new borrowing ¥119.5bn.

These scenarios rebuild earnings, tax, minority distributions, capex, dividends and debt. Higher funding costs reduce cash and increase net claims; they are not added back as operating income. The workbook probability controls keep the adopted funding path fixed for a simple valuation sensitivity; a substantive forecast change requires rebuilding the cash schedule.

Revenue and business mix

Reference business vectors sum to the reference; the active total adds only probability-weighted net changes. Product allocations may be analytical proxies where issuers do not report product margins.

Quarter	Reference revenue	Weighted net change	Active revenue
Q3 2026	354,779.0	0.0	354,779.0

Gross profit, operating expenses and earnings

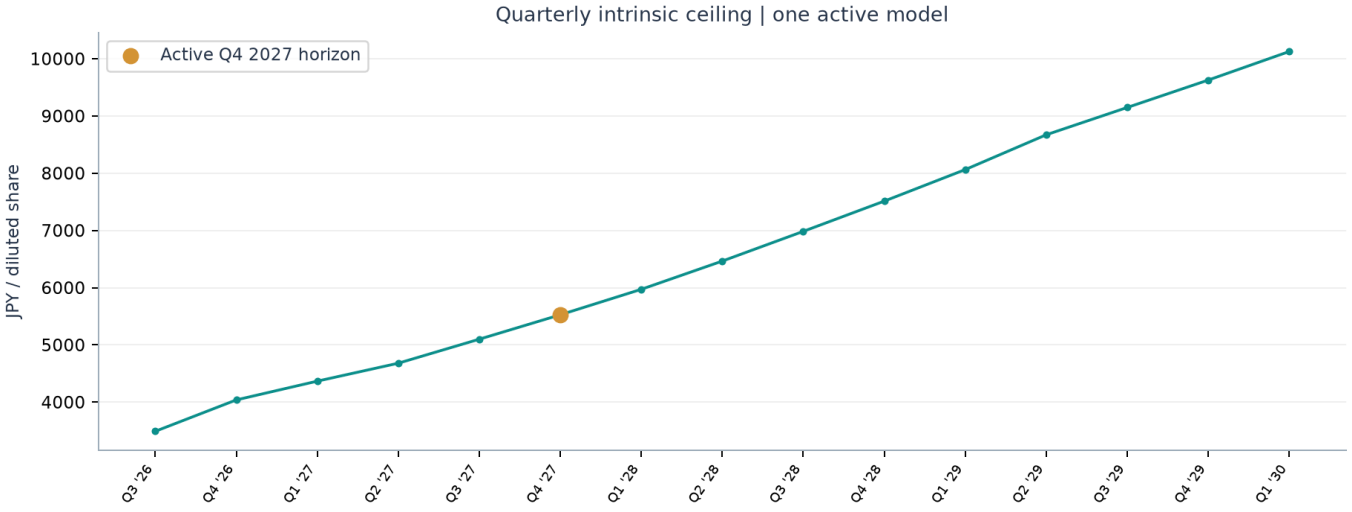

Operating profit equals gross profit less operating expenses and any separately identified attribution reserve. Figures are forecasts, not reported historical quarterly outcomes.

Quarter / status	Revenue	GP	Opex	Valuation OP	OP margin

The complete ceiling path

Quarter Q prices Q plus the next three calendar quarters. All fifteen ceilings link to the same operating rows used in the workbook. Outer quarters have lower evidence visibility.

Quarter	Four-quarter earnings window	F4Q OP	Multiple	Shares	Ceiling

The operating constraint behind the forecast

The driver series is a stated model assumption, not a disclosed commitment. It must be evaluated with the qualification, customer capture, cost and overlap discussion.

Quarterly revenue-vector derivation

All rows below are reference inputs. Gross profit = vector revenue x the stated gross margin, except explicitly labeled zero-sales cost credits. The next table applies the separately weighted evidence deltas. A product-level proxy is a model assumption even when the group total is calibrated to guidance.

Quarter	Revenue vector	Revenue	Gross margin	Gross profit
Q3 2026	Optical fiber and cable including specialty fiber	50,925.6	32.0%	16,296.2
Q3 2026	Ferrules and connectivity	5,658.4	46.0%	2,602.9
Q3 2026	Other optical solutions	3,395.0	28.0%	950.6
Q3 2026	Thermal management and cooling	24,905.5	33.0%	8,218.8
Q3 2026	FITEL lasers and SOA	8,662.8	43.0%	3,725.0
Q3 2026	Copper foil	11,911.3	28.0%	3,335.2

The categories reconcile to reference operating expenses. Incremental costs below are applied once; depreciation or stock compensation already included in a reference category is not added again.

Probability-weighted financial bridge

Active = reference + sum(probability x bounded conditional delta). Negative deltas are retained. A branch with zero near-term increment remains zero only for the timing or overlap reasons documented in the evidence register.

Weighted OP below is after the stated minority operating-profit attribution. Conditional gross profit and expenses remain consolidated figures.

Consolidated profit to the common shareholder claim

Minority attribution is an earnings allocation, not operating expense or a fixed book-value deduction. Its rate is a disclosed model proxy and moves with reference profit and each probability-weighted change.

Quarter	Consolidated OP	Minority rate	Minority allocation	Owner OP
Q3 2026	24,043.0	3.5%	841.5	23,201.5

Adopted funding and financial claims

This saved funding scenario includes cash taxes, interest, capital investment, working capital, distributions and any separately specified closure cash. New borrowing is a modeled requirement, not confirmed lending. Probability controls hold this schedule fixed; an adopted operating revision must rebuild funding. Claims equal closing debt, including domestic finance leases, less cash and the separately valued investment basket. Operating cash includes lease principal; net investment below is capex less after-tax disposal proceeds. Modeled borrowing balances cash but is not a committed credit facility. Minority operating profit is deducted before valuation, not added to debt.

Quarter	Operating cash	Investment	New borrowing	Debt repaid	End debt	End cash

Common operating claim

Minority operating earnings are allocated within existing consolidated group profit and deducted once before valuation. These normalized allocations are model proxies. The lease column includes only claims outside gross debt, avoiding a second deduction for leases already in debt.

Quarter	Consolidated OP	Minority OP	Common OP	Extra lease claim	Net financial claim
