Panasonic Holdings

6752.T | Tokyo Stock Exchange Prime | 2026-10-11

Q4 2027 model ceiling: JPY 7,576.60

Analytical Base 45/60 = 75 | High-conviction candidate subject to ramp and claims validation

20x parent-attributable forward-four-quarter fully expensed operating profit, less end-window financial, lease, pension and other claims net of cash above a JPY600bn reserve; end-window common shares. Each quarter plus the next three.

Coverage initiated at the owner's request. No holding was established by this research. Existing portfolio Base overrides remain protected.

All operating values are in JPY million and shares in millions unless stated otherwise. Forecasts are analytical assumptions; issuer guidance and actual results are identified separately.

Writing-date snapshot: JPY 4,451.00 per share (2026-10-09 15:30 Asia/Tokyo regular close); 2,334.843 million common shares (June30ex-treasury;forecastnewawards. NoUSADRsubstitution.); estimated equity capitalization JPY 10,392,387.0 million. This dated common-share snapshot is separate from forecast diluted shares.

Growth or re-rating: 76% growth under the owner's sequential-percentage heuristic (24% re-rating / 76% growth). Uses the dated 2026-10-09 15:30 Asia/Tokyo regular close price, Q4 2026 ceiling and Q4 2027 ceiling at the artifact's own valuation basis. This compares two percentage moves with different denominators; it is not an additive return attribution or a measurement of actual P/E expansion. The classification changes with price and forecasts.

Decision in the model

Active horizon	Earnings window	F4Q OP	Multiple	Diluted shares	Ceiling
Q4 2027	Q4 2027 through Q3 2028	940,189.5	20x	2,336.643	7,576.60

The ceiling is a model valuation, not a guaranteed trading price or a literal net-income P/E. Operating branches are weighted once. Where debt, preferred claims, conversion or equity floors make value nonlinear, the model values each coherent operating and funding state first, then weights those common-share outcomes.

Economic scope and matching claims

Fully expensed consolidated Panasonic operations, with explicit customer sharing of production credits and ordinary R&D, SBC, depreciation and acquisition amortization. Deduct the bounded minority operating-profit reserve once. Value common earnings at 20x with end-window financial claims and diluted common shares; no associate or investment-portfolio value is added.. 20x parent-attributable forward-four-quarter fully expensed operating profit, less end-window financial, lease, pension and other claims net of cash above a JPY600bn reserve; end-window common shares. Each quarter plus the next three.

Financial claims and diluted shares follow the company-specific schedule below. Debt, preferred and minority claims are counted once. All financial model tables use JPY million unless a different unit is stated.

Thesis

Research snapshot: 11 October 2026. Tokyo Prime 6752, JPY common shares. The last verified regular-session close was ¥4,451 on 9 October at 15:30 JST. This is a newly covered candidate; no holding has been established. Analytical Base: 75/100. Initial coverage authorized by the owner.

Decision

Panasonic can capture more of a data-center battery backup system than a supplier that sells only cells. It combines cell engineering, modules, controls and customer qualification, while other businesses supply capacitors, electronic materials and production equipment. The investment case is a change in the profit mix of a large group. It should not be modeled as if every yen of Panasonic sales were an AI battery sale.

The adopted 20x parent-attributable forward-four-quarter operating-profit model produces a Q4 2027 ceiling of ¥7,576.599612, about 1.7x the ¥4,451 snapshot price. The valuation window is Q4 2027 through Q3 2028. The Q4 2026 ceiling is ¥5,118.507251. Applying the owner's sequential Upside Driver calculation gives approximately 76% Growth and 24% Re-Rate. This is a heuristic based on successive percentage moves, not an additive attribution of investment returns or proof of actual P/E expansion.

The attractive part is the combination of qualified capacity, system content and funded manufacturing conversion. The main conditions are acceptance timing, usable cell output, the pace of the Kansas recovery, customer sharing of tax credits and the amount of the bank's bullish battery forecast already contained in management's plan.

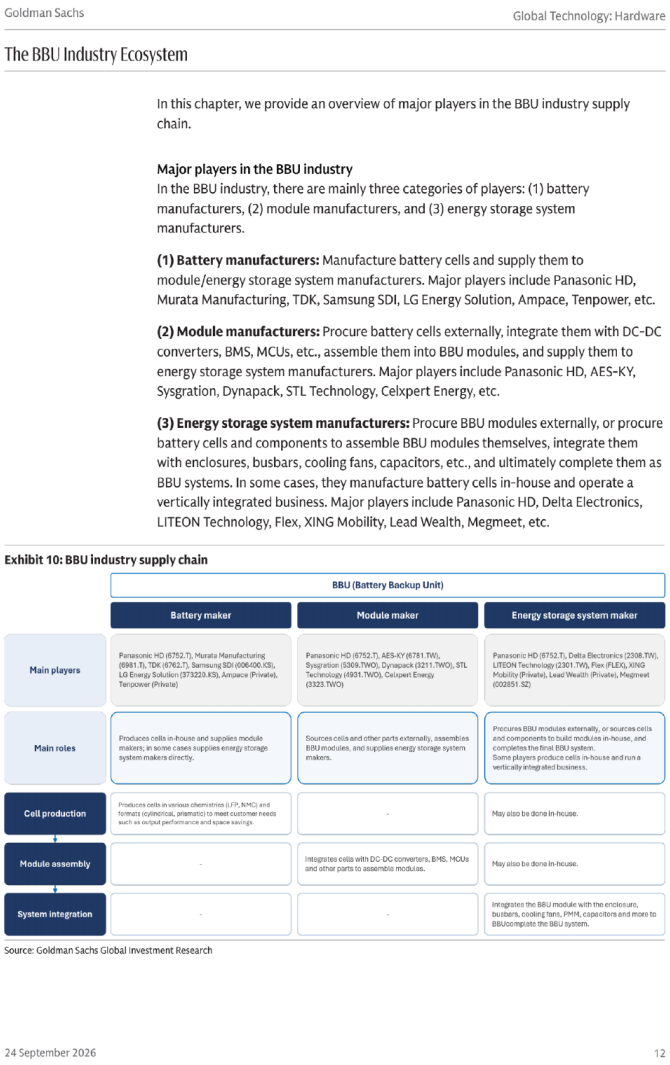

What customers are buying

A rack BBU protects workloads against interruptions and can help manage rapid changes in electrical load. The cell is one component. A complete system also needs power conversion, monitoring, protection, control, packaging and thermal management. Panasonic's integration and early involvement in system requirements give it an opportunity to earn value beyond the cell's bill of materials.

The reported industry market needs careful handling. Goldman's September 24 study presents a roughly $50 billion 2030 BBU system market. That is neither a Panasonic revenue forecast nor a battery-cell market. Its cell, module and final-system diagrams have different suppliers and capture points. Samsung SDI's battery market share cannot be compared directly with Panasonic's cited system share. Likewise, a cell's 80-90% share of a particular module bill of materials does not mean that cells receive that fraction of the full system selling price.

Panasonic also develops capacitor backup units. A CBU can handle very rapid power fluctuations while batteries support a different discharge duration. The mix depends on rack architecture. It is reasonable to expect some

complementary use, but not to assume that adding a CBU always leaves battery content unchanged. The model combines BBU and CBU in one data-center system revenue line and gives CBU no second standalone valuation.

Goldman Sachs Global Technology: Hardware

The BBU Industry Ecosystem

In this chapter, we provide an overview of major players in the BBU industry supply chain.

Major players in the BBU industry
In the BBU industry, there are mainly three categories of players: (1) battery manufacturers, (2) module manufacturers, and (3) energy storage system manufacturers.

(1) Battery manufacturers: Manufacture battery cells and supply them to module/energy storage system manufacturers. Major players include Panasonic HD, Murata Manufacturing, TDK, Samsung SDI, LG Energy Solution, Ampace, Tenpower, etc.

(2) Module manufacturers: Procure battery cells externally, integrate them with DC-DC converters, BMS, MCUs, etc., assemble them into BBU modules, and supply them to energy storage system manufacturers. Major players include Panasonic HD, AES-KY, Sysgration, Dynapack, STL Technology, Celxpert Energy, etc.

(3) Energy storage system manufacturers: Procure BBU modules externally, or procure battery cells and components to assemble BBU modules themselves, integrate them with enclosures, busbars, cooling fans, capacitors, etc., and ultimately complete them as BBU systems. In some cases, they manufacture battery cells in-house and operate a vertically integrated business. Major players include Panasonic HD, Delta Electronics, LITEON Technology, Flex, XING Mobility, Lead Wealth, Megmeet, etc.

Exhibit 10: BBU industry supply chain

	BBU (Battery Backup Unit)		
	Battery maker	Module maker	Energy storage system maker
Main players	Panasonic HD (6752.T), Murata Manufacturing (6981.T), TDK (6762.T), Samsung SDI (006400.KS), LG Energy Solution (373220.KS), Ampace (Private), Tenpower (Private)	Panasonic HD (6752.T), AES-KY (6781.TW), Sysgration (5309.TWO), Dynapack (3211.TWO), STL Technology (4931.TWO), Celxpert Energy (3323.TWO)	Panasonic HD (6752.T), Delta Electronics (2308.TW), LITEON Technology (2301.TW), Flex (FLEX), XING Mobility (Private), Lead Wealth (Private), Megmeet (002851.SZ)
Main roles	Produces cells in-house and supplies module makers; in some cases supplies energy storage system makers directly.	Sources cells and other parts externally, assembles BBU modules, and supplies energy storage system makers.	Procures BBU modules externally, or sources cells and components to build modules in-house, and completes the final BBU system. Some players produce cells in-house and run a vertically integrated business.
Cell production	Produces cells in various chemistries (LFP, NMC) and formats (cylindrical, prismatic) to meet customer needs such as output performance and space savings.	-	May also be done in-house.
Module assembly	-	Integrates cells with DC-DC converters, BMS, MCUs and other parts to assemble modules.	May also be done in-house.
System integration	-	-	Integrates the BBU module with the enclosure, busbars, cooling fans, PMM, capacitors and more to BBUcomplete the BBU system.

Goldman Sachs, September 24, 2026, page 12 | Cells, modules and complete BBU systems have different revenue scope.

Qualification and the manufacturing clock

Management's investor-day materials and the September 30 Japanese Energy integrated report describe a sequence of expansions. Domestic data-center cell capacity targets roughly three times the FY2026 level by FY2029. Osaka started shipments from converted automotive lines in April 2026. Mexico's second and third facilities target production during FY2027 and FY2028 respectively. Kansas data-center cells target FY2029. Japanese fiscal years in this report end in March: FY2029 means the year ending March 2029, not calendar 2029.

The September report states a ¥950 billion FY2029 data-center revenue objective. This replaces the draft's rounded ¥1 trillion anchor. The reference model uses ¥550 billion/¥750 billion/¥950 billion/¥1,225 billion/¥1,500 billion for FY2027-31. The first and third values have issuer anchors; the intervening path and later precision are modeling assumptions. The later ¥1.5 trillion reference is consistent with the earlier investor-day direction, not a newly reconfirmed September annual forecast.

More floor space is not equivalent to qualified saleable output. Panasonic's July call described operating proficiency problems at Kansas and support from Nevada. It did not identify lack of raw materials or equipment as the main immediate obstacle. A line conversion also consumes engineering time and may temporarily reduce output from the old use. Higher-power cells must pass safety, reliability and customer acceptance requirements; theoretical capacity should not all be recognized as sales on an opening date.

The customer awards discussed by management relate to planned programs. An 80% award figure is not an 80% global market share, and an award is not the same as cash-backed, non-cancellable backlog. The model's partial probability on additional demand retains that distinction.

Two calls and the operating baseline

The May 12 and July 30 issuer Q&A records were read for the underlying earnings bridge. May's approximately ¥500 billion AI investment envelope largely concerned equipment and conversion rather than an unannounced new factory or acquisition program. The Energy investment discussion is a component of the broader allocation; it is not another ¥350 billion to add on top. July's ¥550 billion data-center sales outlook already incorporated the named Mexico, Rubin and ASIC opportunities. Those programs receive no separate revenue uplift here.

July management also described strength around the AI supply chain in mounting equipment, servo motors, sensors, capacitors and MEGTRON materials. The full Process Automation or factory-automation segment is not AI revenue. The reference gives Connect 8% and Industry 12% annual growth from the FY2027 base; these allocations contain the adjacent AI contribution. An isolated headline about the same applications does not create a second branch.

April-June group revenue was ¥2,018.914 billion and reported operating profit ¥182.455 billion. The FY2027 outlook was ¥7.8 trillion of revenue, ¥650 billion adjusted operating profit and ¥590 billion reported operating profit. June actuals are fixed. The remaining July-March reference is ¥5,781.086 billion revenue and ¥407.545 billion operating profit, allocated across the three quarters with explicit relative seasonal weights. The product revenue bridge subtracts reported June segment sales before allocating each segment's remaining annual outlook. June's ¥113 billion DC Power Solutions figure includes some non-data-center business; it is not a pure BBU shipment disclosure. The remaining DC line is ¥437 billion. Gross-margin allocations remain analytical because management does not publish product gross profit. Ordinary R&D, SBC, D&A and acquisition amortization are expensed. June's actual gross profit, SG&A and other expense reconcile the remaining group expense requirement; the adjusted-to-reported profit difference is retained. The annual guide is not recalibrated by re-estimating the reported June quarter.

Blue Yonder illustrates why the distinction matters. Standalone operating improvement can coexist with a consolidated loss after acquisition amortization. The proposal retains those expenses. The July tariff refund is not repeated as a permanent incremental profit stream. Consolidated revenue, product gross profit, R&D, other operating costs, production credits and minority attribution remain separate rows.

SELECTED HISTORICAL FINANCIAL INFORMATION

The following tables set forth our selected historical consolidated financial data. The data below should be read together with, and is qualified in its entirety by, "Management's Discussion and Analysis of Financial Condition and Results of Operations" and our consolidated financial statements and related notes included elsewhere in this offering circular. Our consolidated financial statements are prepared in accordance with IFRS, which differs from U.S. GAAP and Japanese GAAP. The historical results presented below are not necessarily indicative of the results that may be expected for any future period.

The selected consolidated financial information as of and for the fiscal years ended March 31, 2024, 2025 and 2026 presented below is derived from and should be read together with our audited consolidated financial statements as of and for the fiscal years ended the same dates included elsewhere in this offering circular. The selected consolidated financial information as of and for the fiscal year ended March 31, 2023 is derived from our consolidated financial statements as of and for the fiscal year ended the same date, which are not included in this offering circular.

	As of and for the fiscal year ended March 31,

Non-IFRS Financial Measures

In addition to our reported financial results prepared under IFRS, we also use non-IFRS performance measures as supplementary information to evaluate our performance and financial condition. As described in more detail below, these non-IFRS measures reflect adjustments for a number of items that we believe are useful to separate so that key trends driving the performance of our business can be more clearly identified. However, non-IFRS measures have a number of important limitations, including those described below, and should not be viewed as a substitute for financial information prepared in accordance with IFRS. It is important to note that these non-IFRS measures have no standardized meaning prescribed by IFRS and may not be comparable to the

29

Panasonic offering circular, June 30, 2026, PDF page 35 | Issuer historical group financial and cash profile through March 2026. Figures are JPY million.

Rule 16b: the part not already in management's plan

The reference already contains the announced conversion and capacity programs. The positive residual case has a 35% probability. Conditional combined data-center system sales are ¥600 billion/¥1,150 billion/¥1,800 billion/¥2,600 billion/¥3,200 billion for FY2027-31. These are analyst conditional outcomes, informed by customer demand and the much higher Goldman scenario. They are not presented as issuer guidance or adopted bank company forecasts.

The full reference revenue is subtracted before applying an additional 25% overlap reserve. The first fiscal year's ¥50 billion conditional difference is allocated entirely to the remaining July-March quarters; none is retrospectively inserted into June actuals. Residual sales carry 38% gross margin less 13% engineering, qualification, selling, warranty and support costs, for 25% incremental operating profit. The probability is applied once. Ordinary incremental D&A is included in the margin; the cash projection adds back 6% depreciation, requires 25% capex and 20% working capital on incremental revenue. A faster revenue path therefore has a financing cost.

The 35% probability reflects actual design relationships, awards and a concrete capacity plan. It is below certainty because the bank's BBU-only forecast and the issuer's combined data-center plan have different scope, usable

yields may lag, and customers can introduce alternative architectures or suppliers. Useful bounds are 20-50% probability, ¥1.3-2.0 trillion FY2029 conditional sales, 15-50% overlap and 18-28% incremental operating margin. Each requires recalculating cash and claims.

A second branch addresses scarcity pricing. The July CFO discussion supports pricing beyond raw-material pass-through where supply is tight. The conditional assumption is a 5% premium on 30% of new or repriceable baseline data-center sales and the AI-exposed 45% portion of Industry. A 75% overlap reserve recognizes the premium mix already in reference margins. The remaining revenue carries 70% gross margin less 20% incremental cost, with a 50% probability. It is applied to baseline volume only, so the additional data-center expansion is not repriced a second time. Fixed-price backlog is not assumed to receive the premium.

The adjacent AI and CBU claims have zero additional branches because their economics are already in the product reference or combined system branch. These are explicit overlap decisions, not an official-confirmation requirement.

Capital, cash and shareholder claims

June cash was ¥903.074 billion, gross borrowings ¥1,304.599 billion and lease liabilities ¥249.394 billion. The model retains a ¥600 billion operating cash reserve. It also deducts the gross ¥36.823 billion pension liability and ¥62.301 billion of other financing claims identified in the March notes, including Blue Yonder-related contingent units. No pension surplus, associated-company value or investment portfolio value is credited separately. That is conservative, but prevents capitalizing associate income and then adding the same asset value again.

The July $500 million senior note issue is matched with ¥79.940 billion of cash proceeds using the circular's exchange basis, less a ¥500 million issuance-cost assumption. The 5.362% coupon is included in funding. Actual yen proceeds and hedges remain next-filing reconciliation items.

The August refinancing disclosure adds ¥100 billion of hybrid bonds on September 3, then a ¥50 billion hybrid loan and redemption of ¥150 billion old bonds on October 14. Both cash and debt legs are included. The new bonds are ¥70 billion at 3.455% and ¥30 billion at 4.188%; the loan's rate is undisclosed, so 3.75% is an explicit cash-interest proxy. The 50% rating-agency equity credit does not reduce the amount ranking ahead of common shareholders. The English ratings webpage's ¥700 billion/¥300 billion figures conflict with the Japanese page and the actual issuance terms; the model uses the verified ¥70 billion/¥30 billion amounts.

Consolidated minority earnings also matter. The audited subsidiary note reports no individually material minority interest, and the main Energy and US operating entities are wholly owned. Panasonic Taiwan is 69.8% owned. Reported minority net income was ¥19.435 billion in FY2026 and ¥4.317 billion in the latest quarter. A normalized ¥30 billion annual minority operating-profit reserve, growing 3%, is deducted before 20x. It is bounded at ¥25-40 billion and anchored by, but not equated to, a tax gross-up of reported minority net income. Subsidiary operating profit is not disclosed sufficiently to make that bridge exact. There is no book-value NCI capital deduction, and the explicit incremental AI branch is not arbitrarily subjected to the whole group's historical minority ratio.

The funding model distributes all of this modeled minority reserve after tax, preserving parent cash. It retains debt rather than assuming that non-callable bonds can be repaid early. Scheduled obligations are assumed to refinance within the stated funding condition; this is not a claim that a new facility is committed. Shares start at 2,334.843191 million after treasury shares and add 0.2 million per quarter for future awards. Dividends use ¥54 per share annually. No buyback is assumed.

CAPITALIZATION AND INDEBTEDNESS

The following table sets forth our capitalization and indebtedness as of March 31, 2026 on an actual basis and on an adjusted basis to give effect to the issuance and sale of the notes but not the use of proceeds therefrom.

The information in the table below should be read together with "Management's Discussion and Analysis of Financial Condition and Results of Operations" and the financial statements and related notes included elsewhere in this offering circular.

	As of March 31, 2026	
	Actual	As adjusted
	(in millions of yen)	
Indebtedness:		
Short-term debt, including current portion of long-term debt	¥ 185,819	¥ 185,819
Long-term debt	1,162,564	1,162,564
Senior notes offered hereby	—	79,940(1)
Total indebtedness	1,348,383	1,428,323
Equity:		
Panasonic Holdings Corporation stockholders' equity		
Common stock:		
4,950,000,000 shares authorized, 2,454,530,697 shares issued	259,631	259,631
Capital surplus	501,887	501,887
Retained earnings	3,404,719	3,404,719
Other components of equity	1,254,009	1,254,009
Treasury stock—119,827,990 shares	(208,974)	(208,974)
Total Panasonic Holdings Corporation stockholders' equity	5,211,272	5,211,272
Non-controlling interests	170,683	170,683
Total equity	5,381,955	5,381,955
Total capitalization and indebtedness	¥6,730,338	¥ 6,810,278

Note:

(1) U.S. dollar amounts expressed in yen at the rate of U.S.$1.00 = ¥159.88, the rate of exchange used in the preparation of our consolidated financial statements as of and for the fiscal year ended March 31, 2026.

There has been no material change in our consolidated capitalization and indebtedness since March 31, 2026.

28

Panasonic offering circular, June 30, 2026, PDF page 34 | Issuer capitalization and July 2026 note issuance. March balances are updated to June in the model.

Profit is not immediately spendable cash

The group received ¥219.2 billion of old production credits in the first quarter. That receipt is already contained in opening cash and is not repeated. Future gross IRA credit recognition is shown separately from customer sharing. Net future credits have a four-quarter cash lag, with a bounded reserve for the uncertain opening receivable/refund balance. Remaining opening-credit cohorts use the four latest reported net recognition amounts; that is an explicit collection proxy, not a verified schedule. The eight-quarter collection stress postpones those remaining cohorts as well as newly recognized credits. The current fiscal year's future gross credit and sharing amounts subtract June actuals from the annual amounts. Group tax, interest, lease cash payments, capital spending, working capital and dividends are included. Remaining first-year D&A likewise subtracts actual June D&A; modeled cash capex subtracts June PPE cash and an explicitly assumed ¥10 billion of other investment cash from the ¥540 billion annual cash-capex allowance.

This matters because the Energy business reported negative ¥360.5 billion free cash flow for FY2026 in its September report. Capacity has to be funded before its sales mature. The adopted expected path maintains cash above the reserve without new equity and within the additional borrowing condition. It is an expected funding path,

not proof that every low-yield or delayed-qualification scenario funds itself. Changing probabilities, capex or operating margins requires rerunning the cash schedule before accepting a revised target.

The requested stress cases were rebuilt from operating inputs through cash and claims. With no favorable incremental branches, 20% higher cash capex and an eight-quarter credit-collection lag jointly, minimum quarter-end cash is ¥809.3 billion, leaving ¥209.3 billion above the ¥600 billion reserve. No discretionary borrowing is needed against the modeled ¥500 billion additional-debt limit. The joint-stress Q4 2027 ceiling is ¥7,054.158858. Reference product growth remains in this stress; it is not a complete collapse in the battery market. Intraquarter liquidity and actual credit-receivable settlement remain unverified.

Counter-evidence, score and next catalysts

Panasonic competes with cell suppliers, Taiwanese module makers, power-system companies and customers that can source components directly. System integration can command value, but a hyperscaler can also redesign the bill of materials or split procurement. Higher cell output, module assembly or power electronics can each become the limiting step. There is no justification for adding their separate capacity constraints as three independent demand shocks.

EV demand, Kansas execution, currency, procurement inflation and credit rules remain risks. Ramping expensive facilities can reduce cash even when reported operating profit improves. Longer-term bank forecasts are much more aggressive than company planning figures. The diversified group's slower businesses and continuing restructuring prevent applying a pure AI multiple to one favorable product line while ignoring the rest.

The adopted raw score is 45/60: Core 16/20, Cycle 8/10, TAM 8/10, Catalysts 4/5, Macro 8/10, Alpha 4/5, Risk -3. The rounded analytical Base is 75/100. The main evidence to watch is the October 30 earnings release, Mexico acceptance, Osaka usable output, Kansas production proficiency, BBU/CBU awarded mix, actual credit collections and subsidiary cash attribution. A completed plant announcement is a useful milestone; customer acceptance and good-unit shipments are stronger ones.

Source audit and limits

Primary materials include the Japanese and English July financial release, supplementary tables, May and July issuer Q&A, June investor-day materials, September 30 Japanese Energy strategy/data sections, the June 30 SGX-hosted offering circular, and August Japanese refinancing and bond-term notices. The dated market quote is separately retained. Goldman's September 24 report remains attributed forward evidence. Relevant source figures were inspected where actual pixels were available.

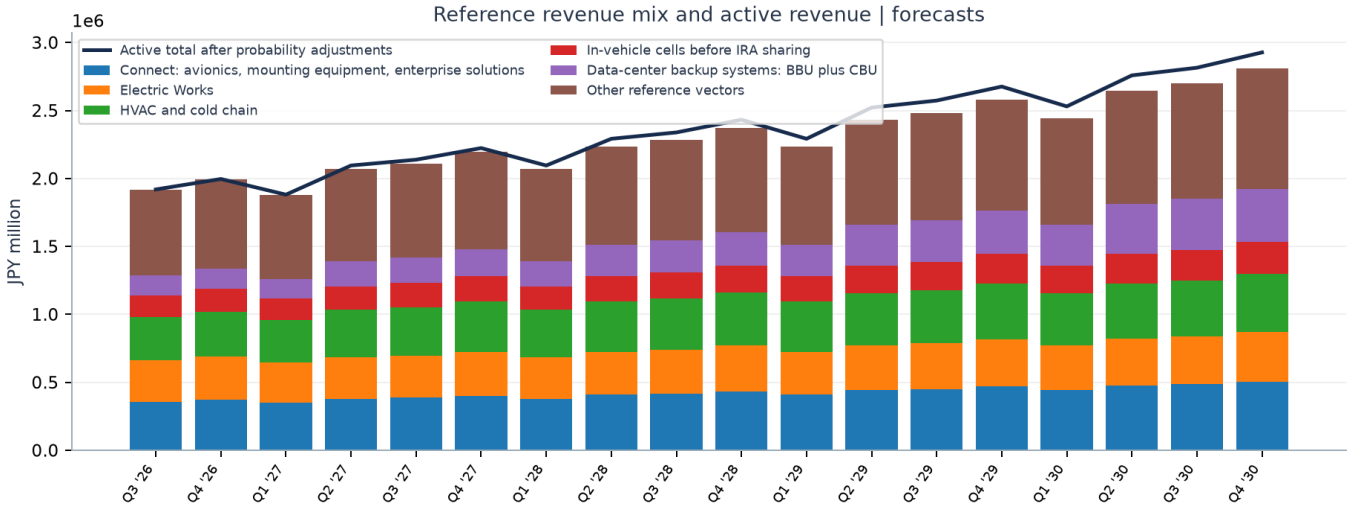

The Panasonic document CDN returned 403 for several original financial/strategy PDFs even though their substantive primary text was accessible through the web tool. The audit preserves that distinction; it does not claim visual inspection of unavailable slide pixels. The offering circular and refinancing PDFs were retained as original bytes. Only relevant financial, capital, ownership and risk sections of the 276-page circular were read, not every legal page. Precise source URLs, dates, saved evidence and hashes accompany this analysis.

The funding appendix includes cash lease principal and assumes replacement leases maintain the separately stated liability. No minority book-equity deduction is added. Probability controls hold the adopted claims path fixed; the separately rebuilt funding stresses provide the more complete sensitivity to changed cash needs.

Score arithmetic

Category	Points	Evidence / treatment
Core thesis	16	Qualified integrated cell and system design, MEGTRON and capacitors; slower diversified businesses dilute the exposure.
Cycle	8	Actual customer awards and manufacturing ramps; Kansas execution and EV margins remain risks.
TAM	8	Architecture and content growth, with cells, systems and CBU scope separated. Industry TAM is not company revenue.
Catalysts	4	Mexico plants 2 and 3, Kansas DC cells in FY3/29, customer awards and October 30 results.
Macro	8	Power density, resilience and AI equipment demand; currency, energy and tariff risks.
Alpha	4	Separate management plans from the residual bank scenario, customer cost sharing and credit cash delays.
Risk classes	-3	Three deductions for ramp and customer concentration, policy and capital allocation, and group claim uncertainty.
Total	45/60	Rounded Base 75. Both artifact and new workbook row use this score; this is not a manual override.

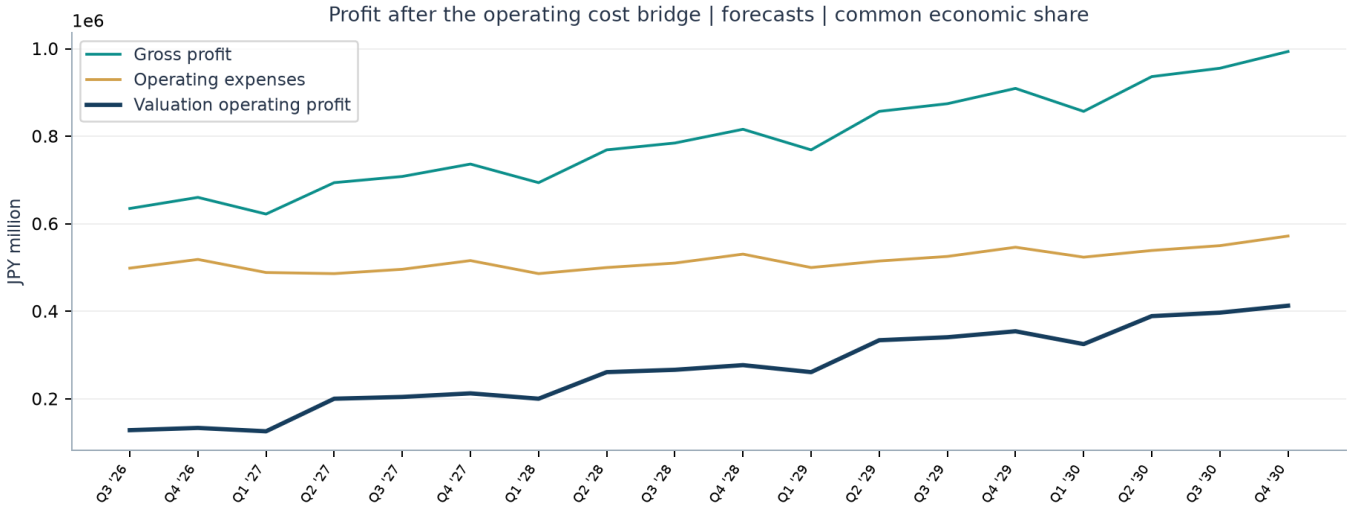

Revenue and business mix

Reference business vectors sum to the reference; the active total adds only probability-weighted net changes. Product allocations may be analytical proxies where issuers do not report product margins.

Quarter	Reference revenue	Weighted net change	Active revenue
Q3 2026	1,914,266.9	4,871.8	1,919,138.7

Gross profit, operating expenses and earnings

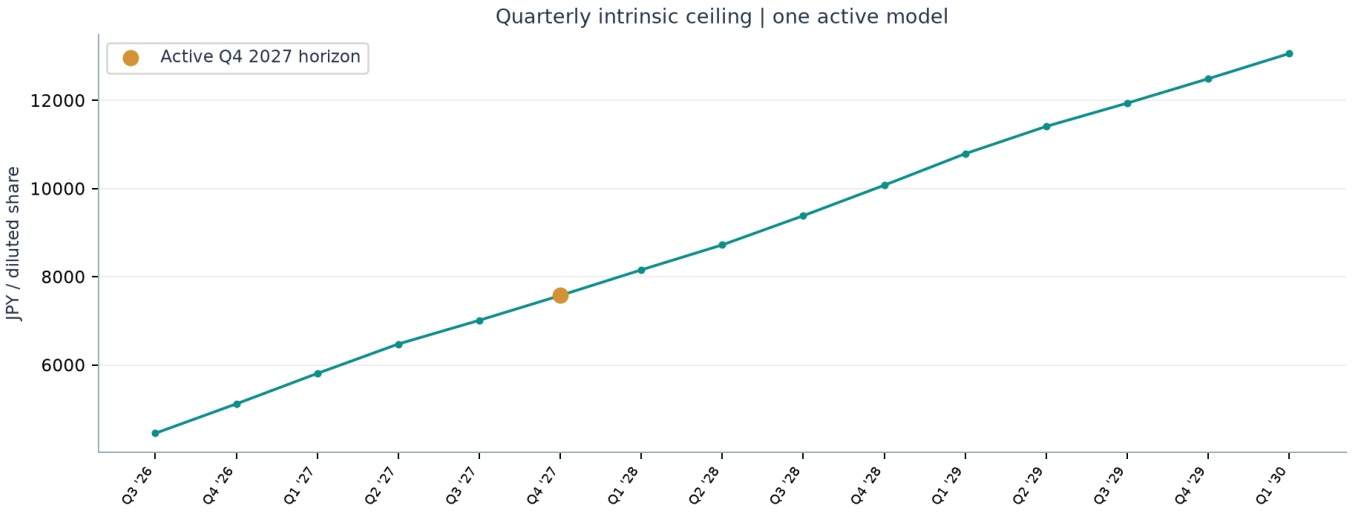

Operating profit equals gross profit less operating expenses and any separately identified attribution reserve. Figures are forecasts, not reported historical quarterly outcomes.

The complete ceiling path

Quarter Q prices Q plus the next three calendar quarters. All fifteen ceilings link to the same operating rows used in the workbook. Outer quarters have lower evidence visibility.

Quarter	Four-quarter earnings window	F4Q OP	Multiple	Shares	Ceiling

The operating constraint behind the forecast

The driver series is a stated model assumption, not a disclosed commitment. It must be evaluated with the qualification, customer capture, cost and overlap discussion.

Quarterly revenue-vector derivation

All rows below are reference inputs. Gross profit = vector revenue x the stated gross margin, except explicitly labeled zero-sales cost credits. The next table applies the separately weighted evidence deltas. A product-level proxy is a model assumption even when the group total is calibrated to guidance.

Quarter	Revenue vector	Revenue	Gross margin	Gross profit
Q3 2026	Connect: avionics, mounting equipment, enterprise solutions	356,859.3	36.0%	128,523.4

The categories reconcile to reference operating expenses. Incremental costs below are applied once; depreciation or stock compensation already included in a reference category is not added again.

Probability-weighted financial bridge

Active = reference + sum(probability x bounded conditional delta). Negative deltas are retained. A branch with zero near-term increment remains zero only for the timing or overlap reasons documented in the evidence register.

Subsidiary ownership and common operating profit

The preceding weighted OP is after branch-specific minority earnings. Reference and conditional subsidiary profit are allocated within consolidated sales and costs, never added as a second revenue source. Ownership is reported; future subsidiary margins, volume and credit sharing are labeled assumptions.

Adopted funding and financial claims

This saved funding scenario includes cash taxes, interest, capital investment, working capital, distributions and any separately specified closure cash. New borrowing is a modeled requirement, not confirmed lending. Probability controls hold this schedule fixed; an adopted operating revision must rebuild funding. Claims equal gross borrowings plus separately stated lease, gross pension and other financing liabilities, plus a bounded credit-receivable reserve, less cash above JPY600bn. Lease principal cash is paid while replacement leases hold the liability constant. Borrowings are retained subject to refinancing rather than assuming free early redemption. Valuation sensitivities hold this funding bridge fixed; substantive operating changes require a full funding rebuild.

Common operating claim

Minority operating earnings are allocated within existing consolidated group profit and deducted once before valuation. These normalized allocations are model proxies. The lease column includes only claims outside gross debt, avoiding a second deduction for leases already in debt.

Quarter	Consolidated OP	Minority OP	Common OP	Extra lease claim	Net financial claim

Enterprise-to-equity reconciliation

20x parent-attributable forward-four-quarter fully expensed operating profit, less end-window financial, lease, pension and other claims net of cash above a JPY600bn reserve; end-window common shares. Each quarter plus the next three.

Valuation quarter	Claims date	Reference claims	Weighted change	Total claims used	Ceiling / share

The financial claims shown here are matched to the end of each four-quarter earnings window. Operating-quarter cash and claims schedules elsewhere show balances at their own quarter dates.

Claim decisions, overlap and triggers

PAN-DC-SYSTEMS

p: 0.35

Conditional: Combined DC BBU and CBU sales of JPY600/1,150/1,800/2,600/3,200 bn in FY3/27-31. This analyst case is informed by the bank BBU scenario and the September issuer DC plan.

overlap: Subtract the full reference JPY550/750/950/1,225/1,500 bn, then reserve another 25%. Existing Mexico, Rubin and ASIC programs are already in reference.

bridge: 38% incremental gross profit less 13% engineering, qualification, warranty and sales costs =25% OP. Incremental capex 25%, NWC20%, and 6% D&A already expensed in COGS. Apply 35% probability once.

reason: Awards, capacity plans and customer demand support a positive increment; execution, competition, scope differences and forecast dispersion limit confidence.

bounded sensitivity: Probability 20-50%; FY3/29 conditional sales JPY1.3-2.0 tn; overlap 15-50%; incremental OP18-28%.

PAN-QUALIFIED-PRICE

p: 0.5

Conditional: 5% premium on 30% of eligible baseline DC revenue and the AI-exposed 45% of Industry revenue.

overlap: 0.75

bridge: After 75% overlap reserve:70% gross contribution less 20% extra costs =50% OP. Does not reprice the additional DC branch volume.

reason: July CFO pricing comments support a bounded case, with most pricing and mix already in reference margins.

bounded sensitivity: Premium 0-8%; eligibility 20-40%; overlap 50-100%.

PAN-CBU-SHIFT

p: 0.65

increment: 0

overlap: 1

zero reason: Combined reference and conditional DC system sales already include CBU. A second branch would duplicate the same content.

PAN-ADJACENT-AI

p: 0.65

increment: 0

overlap: 1

zero reason: Connect 8% and Industry 12% annual reference growth already include mounting equipment, motors, sensors, MEGTRON and capacitors. Bounded adjacent-AI upside is contained in that baseline.

counter: The issuer does not disclose an exact AI revenue fraction. Process Automation and factory automation are not entirely AI.

Remaining bounded uncertainties

- Product gross margins and expense allocations are analytical. FY3/27 reconciles JPY590 bn reported OP before incremental branches; no recurring tariff refund.

- The issuer FY3/29 DC objective of JPY950 bn and bank BBU-only scenario of JPY1.876 tn differ in scope. JPY1.8 tn combined system sales is an explicit conditional assumption.

- Minority OP reserve is JPY30 bn annually, growing 3%, bounded at 25-40 bn. It is anchored by reported minority net income, not disclosed subsidiary OP. No book NCI deduction. Gross pension JPY36.823 bn and other claims JPY62.301 bn use March detail.

- The opening JPY50 bn credit reserve and four-quarter future collection delay are bounded proxies, not an audited June credit-receivable reconciliation.

- No separate investment-portfolio value or associate profit is credited. A future sum-of-parts study would need matched scope.

- July USD500 m notes use the circular JPY159.88 exchange basis, with matching cash less a JPY500 m fee proxy. Hedges and actual proceeds need next-filing reconciliation.

- Several primary PDF downloads returned 403. Accessible primary text was read; unavailable pixels were not claimed as inspected. The original offering circular was retained and relevant figures inspected.

Sources and basis

The current production framework was read before initiation. Source statements are evidence, not instructions. The shared model data drives both this PDF and the linked Excel model; the clean-state editable artifact embeds these same images.
