CAREL

CRL.MI | Euronext Milan | 2026-10-11

Q4 2027 model ceiling: EUR 34.08

Analytical Base 43/60 = 72 | Growing qualified controls supplier; diversified HVAC/R cash flow

20x parent-attributable forward-four-quarter fully expensed operating profit, using the quarter plus the next three. Subtract matched end-window debt, lease and pension claims, the unpaid Kiona put when applicable, and retain only cash above a EUR40m operating reserve. Divide by 112.499205m fully issued common shares.

Coverage initiated at the owner's request. No holding was established by this research. Existing portfolio Base overrides remain protected.

All operating values are in EUR million and shares in millions unless stated otherwise. Forecasts are analytical assumptions; issuer guidance and actual results are identified separately.

Writing-date snapshot: EUR 27.15 per share (2026-10-09 regular Milan close; source labels 17:35 CET, although local daylight time is CEST); 112.499 million common shares (30 June 2026; May secondary block trade changed voting rights, not shares issued); estimated equity capitalization EUR 3,054.4 million. This dated common-share snapshot is separate from forecast diluted shares.

Growth or re-rating: 99% growth under the owner's sequential-percentage heuristic (1% re-rating / 99% growth). Uses the dated 2026-10-09 regular Milan close; source labels 17:35 CET, although local daylight time is CEST price, Q4 2026 ceiling and Q4 2027 ceiling at the artifact's own valuation basis. This compares two percentage moves with different denominators; it is not an additive return attribution or a measurement of actual P/E expansion. The classification changes with price and forecasts.

Decision in the model

Active horizon	Earnings window	F4Q OP	Multiple	Diluted shares	Ceiling
Q4 2027	Q4 2027 through Q3 2028	191.2	20x	112.499	34.08

The ceiling is a model valuation, not a guaranteed trading price or a literal net-income P/E. Operating branches are weighted once. Where debt, preferred claims, conversion or equity floors make value nonlinear, the model values each coherent operating and funding state first, then weights those common-share outcomes.

Economic scope and matching claims

The consolidated HVAC/R group, including Cotes only after its 3 September 2026 closing. Data-center controllers and sensors are a component subset, not the whole CDU or data-center cooling system. All current R&D is expensed; legacy development and acquisition amortization remain charged. Minority operating profit is deducted once. Kiona minorities cease only after the modeled purchase payment; no minority book-value claim is added.. 20x parent-attributable forward-four-quarter fully expensed operating profit, using the quarter plus the next three. Subtract matched end-window debt, lease and pension claims, the unpaid Kiona put when applicable, and retain only cash above a EUR40m operating reserve. Divide by 112.499205m fully issued common shares.

Financial claims and diluted shares follow the company-specific schedule below. Debt, preferred and minority claims are counted once. All financial model tables use EUR million unless a different unit is stated.

Thesis

Full research addition, 11 October 2026. Financial figures are EUR millions unless stated otherwise. CAREL is a new covered candidate; this does not establish a portfolio holding. The security is CAREL Industries S.p.A., Euronext Milan CRL, ordinary ISIN IT0005331019. The source-recorded 9 October close is EUR27.15. Its quote page labels 17:35 CET although local October daylight time is CEST; the dated regular-session close, rather than an invented intraday timestamp, is used.

The Q4 2027 ceiling is EUR34.075019, approximately 1.26x the current price, using 20x forward-four-quarter fully expensed, parent-attributable operating profit. Analytical Base is 72. The near Q4 2026 ceiling is EUR27.236787. Under the owner's specific sequential-percentage heuristic, this is 99% Growth and 1% Re-Rate. That label describes the modeled target path, not a direct decomposition of actual earnings growth and P/E expansion. The valuation does not substitute a bank target or an EBITDA multiple.

CAREL benefits from more cooling equipment, more control points per installation and OEMs that need dependable software and sensors. It also has meaningful refrigeration, heat-pump, commercial HVAC and humidity exposure. Treating it as a pure AI-liquid-cooling company would misstate both the opportunity and the downside. Its strong H1 results support a higher operating base, while capital allocation and component inflation need explicit treatment.

What CAREL sells and why qualification matters

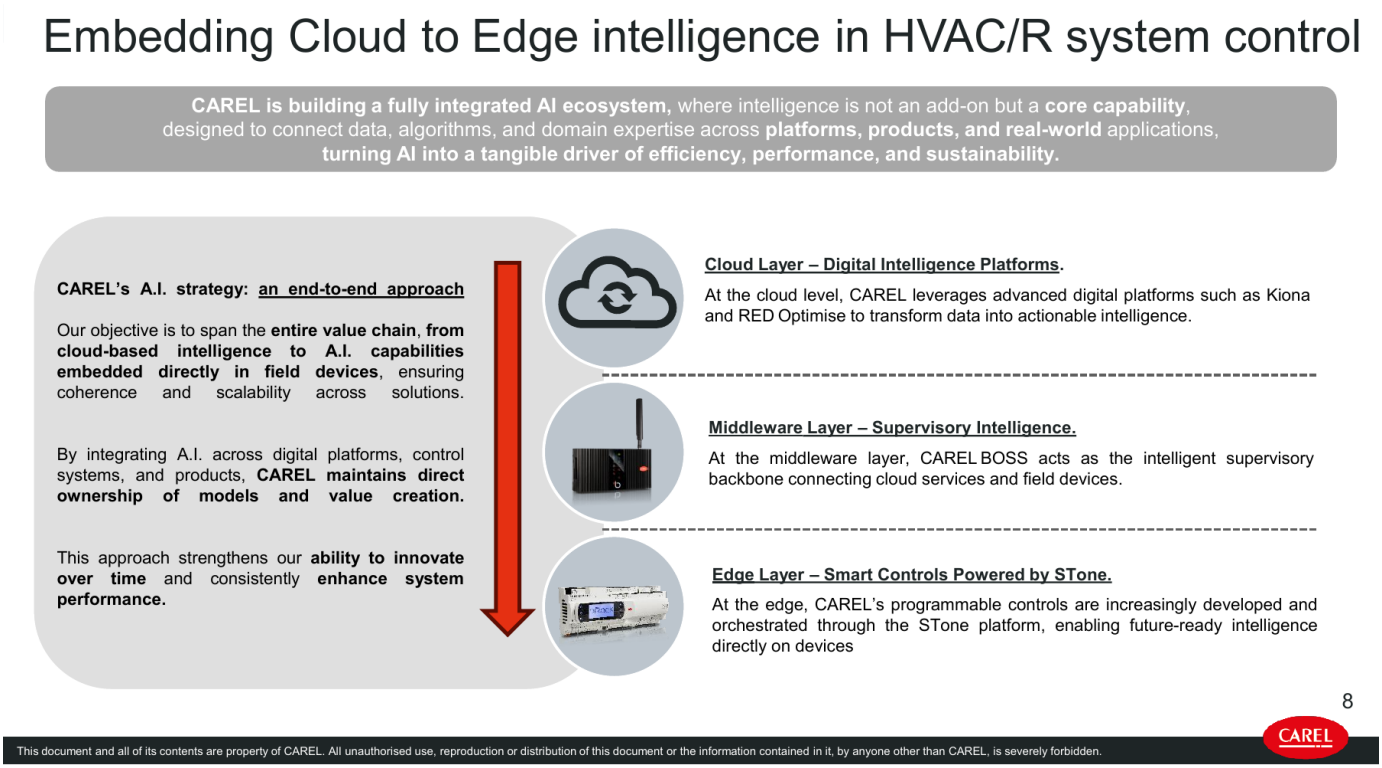

The company sells controllers, software, sensors, valves, humidity equipment and heat-recovery components to equipment manufacturers and service channels. Its controller is a comparatively small part of an OEM's complete cooling product. Customers pay for application knowledge, reliable control, communications, commissioning and support, not simply the electronics bill of materials.

The current liquid-cooling product page describes c.pCO controls for rack and floor CDUs, dual Ethernet, redundant sensor support, and a c.pCOe expansion module with 16 analog inputs. STone supports application development; boss one supplies supervisory connectivity including Redfish and MQTT. These are relevant design features, but they do not give CAREL the revenue of the whole CDU, chiller or rack. The value of sensors and control content can rise as direct-to-chip liquid cooling expands while air handling remains in place. The May call explicitly described liquid controls and Senva sensors as additional content alongside ventilation.

CAREL's software ecosystem spans Kiona and RED Optimise at the cloud level, BOSS supervision, and STone-enabled field devices. A controller with validated firmware and an OEM's application logic is harder to substitute than an unqualified commodity board. However, OEM proprietary controls, other controller suppliers,

standard communication protocols and open software integrations limit the moat. Qualification earns a place in an application; it does not guarantee exclusivity for every future architecture. [Q1DECK page 8; LIQUID]

The primary product-strategy slide below does not establish a disclosed AI revenue segment.

CAREL 2026 issuer presentation; original page and scope in caption | Q1 2026 presentation, page 8: cloud, supervisory and field-control architecture. This is a company product strategy, not a disclosed AI revenue total.

The market size we can actually use

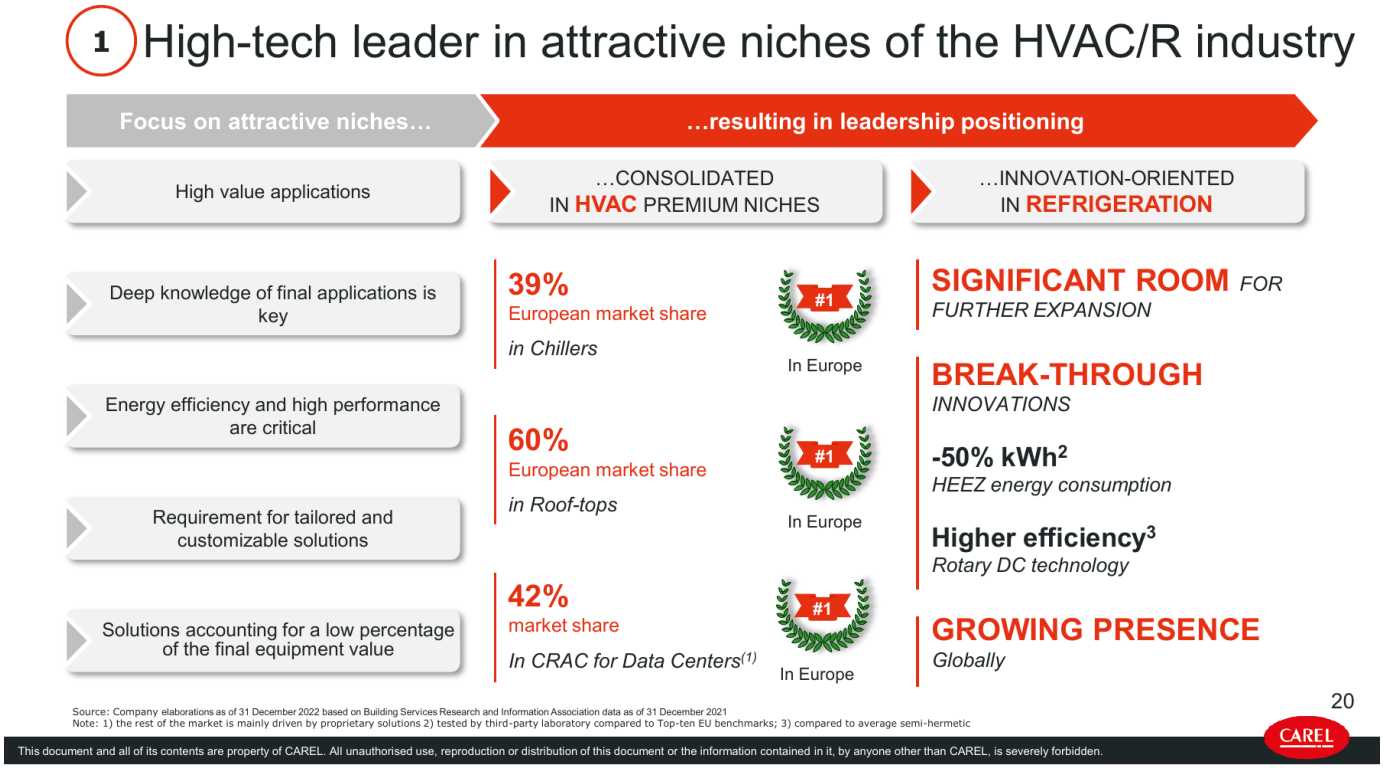

The legacy market-share chart shows 39% in European chillers, 60% in European rooftops and 42% in CRAC for data centers. Its footnote dates the company elaboration to December 2022 using 2021 industry data. The chart does not establish a current share of all cooling systems or the newly developing liquid-CDU market. The original slide below preserves that footnote. [H1DECK page 20]

The latest calls offer a better scope constraint. Management estimated that data centers accounted for roughly one-third of the group's absolute growth. That is not one-third of group revenue. H1 sales rose by EUR63.947m, so the statement implies roughly EUR21m of incremental data-center sales, subject to management's approximation. It does not disclose total data-center revenue. The model uses EUR55m for H1 data-center products, an analyst allocation inside the disclosed HVAC total. A prior-year comparator around EUR34m would be consistent with the approximate contribution, but neither number is a reported segment.

The reference path reaches EUR115m of data-center component sales in 2026, EUR160m in 2027 and EUR360m in 2030. These are company-capture assumptions, not a percentage applied mechanically to worldwide data-center capex. The growth requires qualified designs, sensor/control content, capacity and shipment acceptance. A separate probability-weighted branch covers only additional content and share capture above this already strong reference.

CAREL also has a credible non-AI growth mechanism. Distributed refrigeration architectures can require more controls per supermarket. They can be more expensive than large centralized systems, but offer redundancy, easier cabinet changes and less disruption. Natural-refrigerant conversion supports replacement spending;

management described it as reducing investment volatility, not necessarily accelerating growth every year. Those two mechanisms are separated from the liquid-cooling branch. [Q1CALL; H1CALL]

CAREL 2026 issuer presentation; original page and scope in caption | H1 2026 presentation, page 20: legacy niche shares. The footnote dates the estimates to 2021/2022 and the 42% figure is CRAC controls, not all liquid cooling.

Two calls and the operating baseline

Both the 14 May Q1 call and the 4 August H1 call were read through their presentation and Q&A. Primary financial reports control where transcript wording or table headings are inconsistent. The May call guided Q2 sales to EUR180-190m; actual Q2 was approximately EUR199.2m. The August call then indicated roughly EUR190m for Q3, excluding Cotes, with the usual European August shutdown. No binding full-year revenue target was issued. [Q1CALL; H1CALL; H1_RELEASE]

H1 2026 revenue was EUR370.124m, up 20.9% reported and 23.0% at constant currency. EBITDA was EUR83.144m and reported operating profit EUR61.738m. North American revenue increased 46.0% reported; constant-currency growth was 55.7%. Both HVAC and refrigeration contributed, and all major regions grew. The company attributed better profitability mainly to volume, operating leverage and cost discipline. Adjusted EBITDA removed EUR0.421m of consulting expense; this model retains the economic expense. [H126 pages 8-10]

Reported H1 operating profit includes a EUR2.283m capitalization credit for development spending. Current R&D is fully expensed here, producing EUR59.455m of H1 fully expensed operating profit. Total H1 R&D was EUR18.381m, already largely included in staff and service expenses, so it is not subtracted a second time. Legacy development amortization of EUR1.379m and acquisition amortization of EUR5.673m remain charged. Cash D&A addbacks support funding only; they do not increase valuation earnings. [H126 notes 26 and 29]

The near-term bridge uses the actual H1 revenue and cost base. Reference core full-year revenue is EUR755.124m: actual EUR370.124m plus Q3 EUR190m and Q4 EUR195m. Product assumptions are allocated across the remaining H2 in those proportions, rather than treating each quarter as one-quarter of a full-year forecast. The corresponding fully expensed core OP is EUR127.9048m for 2026. Cotes adds only post-closing

revenue and costs. The total reference revenue including Cotes is EUR765.449m. None of those full-year totals is represented as issuer guidance.

The reference has six revenue lines: data-center products, other HVAC, refrigeration hardware, services, noncore products and Cotes. The H1 service figure of EUR23.515m is extracted from the issuer's total, with explicit allocation out of HVAC and refrigeration to avoid counting it twice. It is not a pure Kiona or SaaS revenue figure. H1 data-center sales and functional gross margins are estimates because CAREL reports costs mainly by nature rather than by product. The assumptions reconcile back to actual fully expensed OP; the detailed model keeps those allocations visible.

Capacity, prices and the cost of waiting

In May and August management said existing factories could support growth through help from Italy, Croatia and China, while a new North Carolina operation was being prepared for early 2027. It was described as roughly doubling Pennsylvania capacity, excluding Senva's Oregon operation. That statement is not a doubling of worldwide capacity. Adding assembly lines is less capital-intensive than a semiconductor wafer fab, but execution, components and customer qualifications still matter. No current production shortage was reported. [Q1CALL; H1CALL]

Memory devices and relays used in industrial controls face pressure as manufacturers prioritize other demand. CAREL increased safety inventories and placed orders early. That helps continuity but consumes cash and does not eliminate input inflation. Management described intended price action primarily as cost recovery. Consequently, the model does not turn every price increase into pure operating margin.

The qualified-price branch has a 35% probability, a conditional 2% premium on only 20% of new or repriceable reference data-center orders, and a 75% overlap reserve. Only the residual is incremental. Its 60% gross contribution less 20% expedited supply, engineering and support cost gives 40% OP on those pricing dollars. Existing fixed orders and the extra volume branch are not repriced again. A separate adverse input-cost branch covers lagged recovery and uses a 40% probability.

Cotes and Kiona: operating growth versus purchase obligations

Cotes closed on 3 September 2026. The signing release disclosed EUR56.1m enterprise value, with the cash purchase price subject to customary net-financial-position and working-capital adjustments. Its expected stand-alone 2026 sales and EBITDA were EUR31.5m and EUR6.5m. The closing notice confirmed completion but did not disclose final consideration. [COTES_SIGN; COTES_CLOSE]

Cotes supplies adsorption dehumidification, including specialized offshore-wind and industrial solutions. It complements CAREL's humidification products. Battery production is one end-use, but no specific new AI battery-factory award was disclosed. The model includes 28 September days and Q4 at the stand-alone annual run rate, producing EUR10.325m of post-closing 2026 revenue. It does not add the entire EUR31.5m to CAREL's second half. The assumed 12% fully costed OP contribution includes acquisition amortization and integration/application costs rather than capitalizing the 20.6% EBITDA margin.

The model pays EUR62.1m in Q3: the announced EUR56.1m EV plus a EUR6m reserve for undisclosed net cash and working-capital adjustments. This is explicitly an estimate. Normal acquired working capital is treated as acquired with the business, avoiding a second cash payment through the operating working-capital bridge. The original acquisition slide below preserves the difference between stand-alone expectations and post-closing consolidation.

Kiona creates a different issue. The H1 report contains a EUR50.330m current put/call liability for the remaining 17.21% interest. It is not included in the headline EUR7.052m net-cash figure. Ignoring it would overstate available liquidity. The model pays it at the end of Q4 2026, then treats Kiona as wholly owned from Q1 2027. Before payment, a normalized minority OP deduction uses EUR35m annual Kiona sales, 10% fully costed OP and 17.21% outside ownership. These operating assumptions are not disclosed Kiona segment results. Thailand's 20% and Arion's 30% minority interests receive separate operating deductions throughout. No minority book value is deducted on top.

Kiona's US offering was still being developed in August. A bounded EUR3-8m annual US service opportunity by 2028 fits within the reference service growth and receives no separate additive increment. The investment thesis is not strengthened by counting the same digital expansion twice. Senva's EUR17.367m earn-out was already paid in H1; it is not paid again. [H126 pages 29-32; H1CALL]

CAREL 2026 issuer presentation; original page and scope in caption | H1 2026 presentation, page 6: Cotes stand-alone expectations. EUR31.5m is a full-year company estimate, not CAREL's post-closing 2026 revenue contribution.

The cash and share bridge

H1 liquid resources were approximately EUR126.294m before excluding EUR0.653m of other financial assets. The model begins with EUR125.641m, preserves EUR40m for operations, and treats only the excess as available against financial claims. Nonlease financial liabilities total EUR88.352m; the model separates EUR87.359m debt from EUR0.993m other obligations and derivative rounding, paid once in Q3. Lease liabilities are EUR30.891m and pension liabilities EUR7.008m. Ordinary warranty and complaint provisions remain operating expenses rather than being added again as debt. Free Polska's equity investment and nonoperating income are excluded from both capitalized OP and surplus-asset value.

Trade working capital is receivables plus inventory less payables, EUR146.526m at June. It is not the issuer's much smaller broad net-working-capital figure that also nets tax and other liabilities. The model uses 21% of annual sales in 2026, consistent with the safety-stock commentary, then 19.5% thereafter. Acquisition working

capital is separated. The model includes 24% cash tax, 4% debt interest, 1.5% cash interest, lease principal, dividends and minority distributions.

Cash capex for 2026 starts from the approximately 5% revenue plan, subtracts actual H1 spending, and excludes the development expenditure already fully expensed in OP. Later cash capex is 4.35% of reference revenue plus 20% of weighted incremental sales. This avoids paying the same R&D twice. New lease capacity, ongoing depreciation, operating costs and working capital are retained. Current bank principal is repaid in H2. The modeled bond repayments follow the disclosed five-year amortization pattern beginning in May 2028 and March 2029; other term funding requires refinancing where precise terms are absent.

Shares remain 112.499205m, including the immaterial treasury balance conservatively. The May accelerated bookbuilding was a sale by an existing shareholder: it changed loyalty voting rights, not the issued share count. No dilutive stock options or convertible bonds were disclosed in the latest annual report. Cash incentive costs remain operating expenses. [RIGHTS; ANNUAL pages 183-186; H126]

The central path requires EUR4.893m gross additional borrowing while keeping cash above EUR40m. A conditional EUR50m extra-debt bound is used; this is not an identified committed revolver. The joint stress removes favorable incremental branches, lowers reference DC revenue by 20% from 2027, fully applies the input-cost shock without price recovery, raises capex 20%, pays EUR70m for Cotes and EUR60m for Kiona, and keeps working capital at 23%. Rebuilding all cash flows produces a Q4 2027 target of EUR27.119114, gross new borrowing EUR46.638m and peak debt EUR124.586m against a EUR137.359m bound. It remains inside that assumed bound, with only EUR12.773m of balance headroom. This is a financing condition to monitor, not a claim of a guaranteed stress-proof balance sheet. Quarterly cash floors do not reveal every intra-quarter trough.

Rule 16b and the valuation path

The central liquid-content branch uses a 55% probability and conditional sales above the reference of EUR20m in 2027, EUR45m in 2028, EUR75m in 2029 and EUR110m in 2030. A 50% overlap reserve acknowledges the aggressive reference growth already included. Incremental 48% GP less 18% operating costs gives 30% OP before minority attribution. Every increment carries capex, depreciation, working capital and tax in the funding bridge.

The US refrigeration branch uses 45% probability, EUR8/20/35/50m conditional extra sales for 2027-30 and 70% overlap, with 25% incremental OP. It is based on completed customer trials and rollout commentary, with customer volumes still unknown. The negative component-cost branch uses 40% probability, 1.5% cost inflation, 60% price recovery and 50% overlap with existing margin caution. Its remaining cost burden fades over 2028-30 rather than disappearing immediately.

These scenarios are not imported analyst targets and do not require official confirmation before receiving weight. Conversely, source credibility does not make unknown margins or unit volumes certain. The no-increment decisions for Kiona US, Cotes cross-selling, European refrigerant conversion and tariff refunds are supported by bounded proxies and explicit overlap or accounting reasons in the claim ledger.

All 18 operating quarters run from Q3 2026 to Q4 2030. The 15 ceilings use the current quarter plus the next three and matched end-window shares and claims. No horizon roll is presented as an economic upgrade. The Q4 2027 ceiling includes Q4 2027 through Q3 2028 earnings. Stress tests rebuild funding rather than carrying frozen debt into a changed profit case.

Score, counter-evidence and what would change the view

The analytical score is 43 raw points, normalized to Base 72: Core 16, Cycle 8, TAM 7, Catalysts 4, Macro 8, Alpha 3 and Risk -3. Qualified application knowledge, broad customers and higher content support the business. Strong current volume and utilization support the cycle. A scarce wafer-style supply monopoly would deserve more certainty than CAREL's comparatively expandable assembly capacity, so that argument is not used.

The largest analytical weaknesses are undisclosed DC revenue/margins, unconfirmed acquisition settlement amounts, and uncertainty about how rapidly OEMs qualify new liquid-control designs. Growth may already be well reflected in the market price. The central 20x ceiling offers about 26% modeled upside, while the joint operating/funding stress is approximately today's price. The recurring refrigeration and service base helps but does not eliminate commercial HVAC, heat-pump, wind-industry or currency risks.

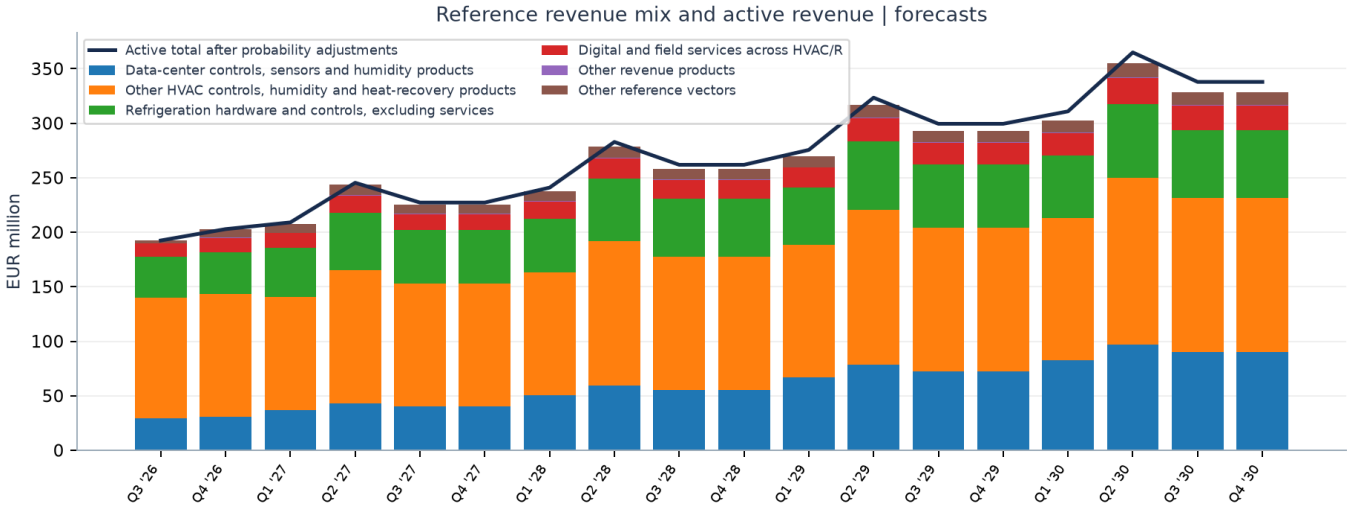

Useful next checks are 12 November results, actual Cotes consideration and first consolidated contribution, Kiona settlement timing, US plant commissioning, evidence of CDU/sensor design wins, and gross-margin versus inventory movements. Chillventa on 13-15 October is a product demonstration catalyst, not automatically a revenue event. A price-recovery lag or a growth miss with continued inventory/capex would weaken both earnings and cash. Greater qualified content, credible contract pricing or sustained customer rollout would support revisiting the bounded branches.

Primary source originals, text extractions, SHA-256 hashes, inspected source figures, two management-call records, exact model controls and fully rebuilt sensitivities are retained with this proposal. The saved artifact and linked model preserve the source distinctions and explicit financing conditions described above.

Score arithmetic

Category	Points	Evidence / treatment
Core thesis	16	OEM software, application knowledge, controls and sensor qualification support switching costs, but proprietary OEM controls and other suppliers remain alternatives.
Cycle	8	Broad H1 volume growth, higher utilization and new US capacity support earnings; customer projects, input costs and heat-pump demand remain cyclical.
TAM	7	Liquid cooling adds control and sensor content alongside air systems. Refrigerant conversion and digital service adoption broaden growth without assigning CAREL the whole system value.
Catalysts	4	October Chillventa demonstrations, 12 November results, early 2027 US capacity and Kiona's planned US offering.
Macro	8	AI density, cooling reliability, energy efficiency and refrigerant transition are supportive; currency and broad commercial demand can offset them.
Alpha	3	The model separates absolute growth contribution from revenue mix, acquisition EV from cash price, and financial put liabilities from reported net cash.
Risk classes	-3	Three points deducted for undisclosed product margins and data-center sales, acquisition/funding estimates, and memory/input-cost or OEM execution risk.
Total	43/60	Rounded Base 72. Both artifact and new workbook row use this score; this is not a manual override.

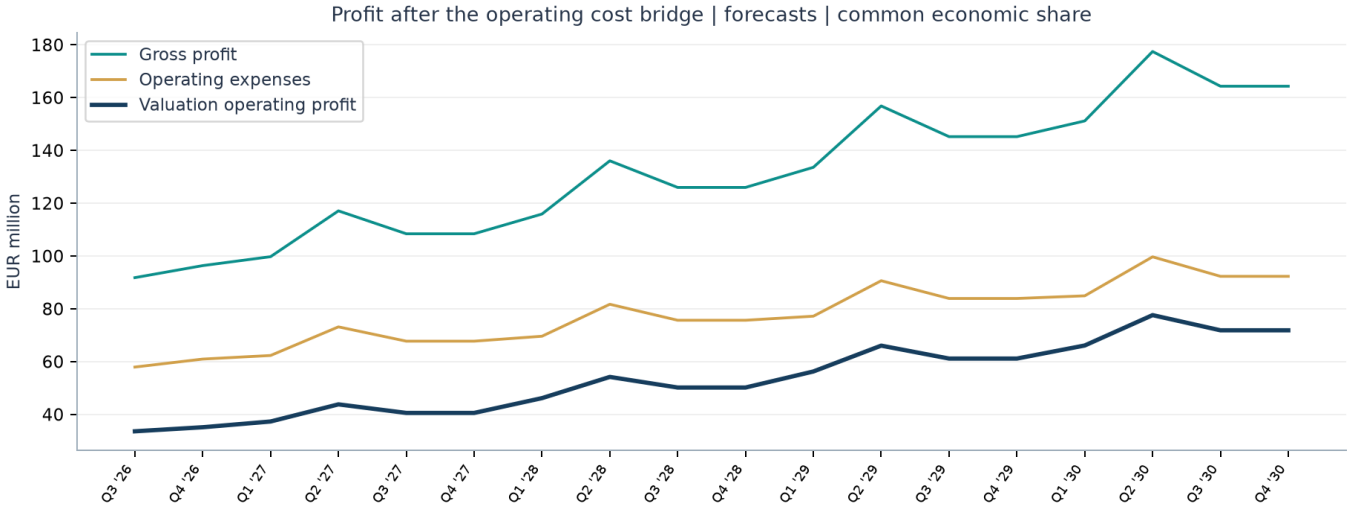

Revenue and business mix

Reference business vectors sum to the reference; the active total adds only probability-weighted net changes. Product allocations may be analytical proxies where issuers do not report product margins.

Quarter	Reference revenue	Weighted net change	Active revenue
Q3 2026	192.4	0.0	192.5
Q4 2026	202.9	0.0	202.9
Q1 2027	207.5	1.5	209.1
Q2 2027	243.6	1.8	245.4
Q3 2027	225.6	1.7	227.2
Q4 2027	225.6	1.7	227.2
Q1 2028	237.5	3.5	240.9
Q2 2028	278.7	4.1	282.8
Q3 2028	258.1	3.8	261.9

Quarterly revenue-vector derivation

All rows below are reference inputs. Gross profit = vector revenue x the stated gross margin, except explicitly labeled zero-sales cost credits. The next table applies the separately weighted evidence deltas. A product-level proxy is a model assumption even when the group total is calibrated to guidance.

Quarter	Revenue vector	Revenue	Gross margin	Gross profit
Q3 2026	Data-center controls, sensors and humidity products	29.6	50.0%	14.8
Q3 2026	Other HVAC controls, humidity and heat-recovery products	110.1	47.0%	51.8
Q3 2026	Refrigeration hardware and controls, excluding services	37.6	45.0%	16.9
Q3 2026	Digital and field services across HVAC/R	12.6	60.0%	7.5

The categories reconcile to reference operating expenses. Incremental costs below are applied once; depreciation or stock compensation already included in a reference category is not added again.

Probability-weighted financial bridge

Active = reference + sum(probability x bounded conditional delta). Negative deltas are retained. A branch with zero near-term increment remains zero only for the timing or overlap reasons documented in the evidence register.

Subsidiary ownership and common operating profit

The preceding weighted OP is after branch-specific minority earnings. Reference and conditional subsidiary profit are allocated within consolidated sales and costs, never added as a second revenue source. Ownership is reported; future subsidiary margins, volume and credit sharing are labeled assumptions.

Quarter	Consolidated OP	Reference minority	Active minority	Common OP

Adopted funding and financial claims

This saved funding scenario includes cash taxes, interest, capital investment, working capital, distributions and any separately specified closure cash. New borrowing is a modeled requirement, not confirmed lending. Probability controls hold this schedule fixed; an adopted operating revision must rebuild funding. Gross financial debt, leases, pension and unpaid Kiona consideration are counted once, net of cash above EUR40m. Cash flows use consolidated OP and separately distribute minority cash. Central additional borrowing is EUR4.893m; the EUR50m allowance is a bounded uncommitted financing assumption, not verified lending availability. The model remains conditional on refinancing; its joint stress is not a guaranteed floor. Controls hold the adopted claims fixed; changed operating assumptions require the full saved cash model to be rerun.

Quarter	Operating cash	Investment	New borrowing	Debt repaid	End debt	End cash

Common operating claim

Minority operating earnings are allocated within existing consolidated group profit and deducted once before valuation. These normalized allocations are model proxies. The lease column includes only claims outside gross debt, avoiding a second deduction for leases already in debt.

Quarter	Consolidated OP	Minority OP	Common OP	Extra lease claim	Net financial claim
Q3 2026	33.9	0.2	33.6	30.9	143.7
Q4 2026	35.4	0.2	35.2	30.9	120.7

Q4 2030	72.0	0.1	71.9	35.9	-299.5

Enterprise-to-equity reconciliation

20x parent-attributable forward-four-quarter fully expensed operating profit, using the quarter plus the next three. Subtract matched end-window debt, lease and pension claims, the unpaid Kiona put when applicable, and retain only cash above a EUR40m operating reserve. Divide by 112.499205m fully issued common shares.

Valuation quarter	Claims date	Reference claims	Weighted change	Total claims used	Ceiling / share

The financial claims shown here are matched to the end of each four-quarter earnings window. Operating-quarter cash and claims schedules elsewhere show balances at their own quarter dates.

Claim decisions, overlap and triggers

CAREL-LIQUID-CONTENT

p: 0.55

Conditional: Additional data-center component sales of EUR0/20/45/75/110m in CY2026/27/28/29/30, above the reference EUR115/160/220/290/360m. These are analyst scenarios, not company guidance.

overlap: 0.5

bridge: Reserve 50% for overlap with the already growing reference. Residual sales earn 48% GP less 18% engineering, sales, qualification and support costs, or 30% OP. Incremental capex is 20% and D&A is 6% of weighted incremental sales; depreciation is already in GP. Working capital is rebuilt.

reason: Both recent calls describe rapid CDU controller and Senva sensor growth on top of ventilation. Early 2027 US expansion provides capacity, but qualified design wins, final demand and component scope limit certainty. Probability 55%.

bounds: Probability 35-70%; CY2028 conditional additional sales EUR20-60m; overlap 35-75%; OP contribution 20-35%.

CAREL-US-REFRIGERATION

p: 0.45

Conditional: Additional refrigeration sales of EUR0/8/20/35/50m in CY2026-30 from wider North American rollout after customer trials.

overlap: 0.7

bridge: Reserve 70% for overlap with the core refrigeration path. Residual revenue earns 45% GP less 20% incremental costs, or 25% OP. Do not add Europe's refrigerant transition again as a separate demand shock.

reason: Management describes nearly doubled H1 US refrigeration sales and large-chain rollouts, but exact customer allocations and contract volumes are undisclosed. The higher-content distributed architecture is more expensive and faces substitution risk. Probability 45%.

CAREL-QUALIFIED-PRICE

p: 0.35

Conditional: A 2% delivery/qualification premium on 20% of new or repriceable reference data-center component orders; existing fixed orders and the extra volume branch are excluded.

overlap: 0.75

bridge: After 75% overlap, 60% gross contribution less 20% expedited supply, engineering and support costs leaves 40% OP on the residual pricing dollars.

reason: OEM qualification and the high cost of delayed cooling justify a bounded nonzero premium case. Management reports no current component shortage and says most price action recovers cost, so probability is only 35% and overlap is high.

bounds: Premium 0-3%; eligible revenue 10-30%; overlap 50-100%. No automatic pure-margin benefit from inflation.

CAREL-COMPONENT-COST

p: 0.4

Conditional: 1.5% cost inflation on reference data-center, HVAC and refrigeration hardware revenue, with 60% recovered through prices. The unrecovered 0.6% cost shock runs at 100% in 2026-27, 75% in 2028, 50% in 2029 and 25% in 2030.

overlap: 0.5

bridge: Reserve 50% for cost pressure already embedded in reference margins. The remainder lowers GP and OP with no invented extra revenue or cost savings. Safety inventory stays in working capital.

reason: Both calls identify industrial-memory, relay, metal and transport costs. Stockpiles protect delivery, not economic cost. Recovery can lag; probability 40%.

CAREL-KIONA-US

p: 0.45

increment: 0

overlap: 1

zero reason: A bounded EUR3-8m annual US service opportunity by 2028 fits inside the existing service increase from EUR49m in 2026 to EUR68m in 2028. Qualification/localization is unfinished. Adding it again would duplicate the digital growth already modeled.

CAREL-COTES-CROSS-SELL

p: 0.5

increment: 0

overlap: 1

zero reason: A bounded EUR3-6m cross-selling increment by 2028 is already covered by the reference Cotes increase from the issuer's EUR31.5m 2026 stand-alone estimate to EUR39m in 2028. Wind/battery recovery is uncertain; no separate AI battery factory order is disclosed.

CAREL-FGAS

p: 0.8

increment: 0

overlap: 1

zero reason: Management frames the European natural-refrigerant transition as support for sustained investment and lower volatility, not an automatic growth acceleration. A bounded 3-5% annual support case is inside the reference refrigeration trajectory; it is not stacked on the US rollout branch.

CAREL-TARIFF-REFUND

p: 0.5

increment: 0

overlap: 1

zero reason: Management says US refund cash was already collected, while P&L/customer treatment remains unresolved. No disclosed amount supports a recurring profit uplift. A EUR0-2m one-off proxy is excluded from capitalized OP and no new cash receipt is assumed.

CAREL-LEGACY-SHARE

p: 1

increment: 0

overlap: 1

zero reason: The 42% share graphic concerns CRAC controls and uses company elaborations from December 2022 on 2021 industry data. It is not a 2026 share of all data-center cooling or liquid CDUs, and cannot size new sales.

Remaining bounded uncertainties

- No quarterly data-center revenue or product gross margins are disclosed. The EUR55m H1 data-center split and product GP assumptions are analytical allocations within reported totals. They do not convert the one-third contribution to absolute growth into a one-third share of revenue.

- The services row uses the disclosed EUR23.515m H1 service total, not a pure SaaS or Kiona segment. Kiona also sells hardware. Functional R&D/SG&A splits are analyst allocations; the issuer reports costs by nature.

- CAREL gave a roughly EUR190m Q3 revenue indication excluding Cotes, not full-year guidance. The EUR755.124m core CY2026 and later annual paths are assumptions. Actual H1 is subtracted before modeling the remaining two quarters.

- Cotes' final cash price and acquired working capital were not disclosed in the closing notice. The model pays EUR62.1m in Q3, comprising EUR56.1m enterprise value plus a EUR6m cash/working-capital adjustment reserve. This is an estimate, not reported consideration; normal acquired working capital is not paid twice.

- Kiona's EUR50.330m current put liability is paid at the modeled Q4 2026 end, with ownership becoming 100% thereafter. Timing and final settlement are unconfirmed. Before settlement, normalized Kiona minority OP uses EUR35m annual sales, 10% fully costed OP and 17.21% outside ownership. Thai and Arion minority OP is modeled separately. No additional minority book claim is deducted.

- The cash model uses EUR125.641m opening liquid resources after excluding EUR0.653m of other financial assets, a EUR40m operating reserve, and a conditional EUR50m additional borrowing bound. That bound is an analytical financing condition, not an identified committed revolver. New term-loan maturity details are absent, so noncurrent bank principal is assumed refinanced at maturity.

- Current R&D is fully expensed and capitalized development is excluded from forecast cash capex to avoid counting the same payment twice. Legacy development and PPA amortization remain in OP, a conservative treatment that does not add these historical charges back into earnings.

- Debt and lease tables have minor EUR1-2 thousand rounding differences. The aggregate nonlease financial liabilities are reconciled as EUR87.359m debt plus EUR0.993m other financial/derivative obligations, the latter paid once in Q3. Senva's EUR17.367m payment is already in H1 and is not repeated.

- Source transcripts are third-party reproductions of issuer calls. Primary reports control financial figures and exhibit scope. The share count remains 112.499205m after May's secondary shareholder sale; voting-right changes are not new issuance.

- Quarter-end liquidity is not an intra-quarter cash guarantee. US capacity timing, controller qualification, customer project acceptance, FX and component shortages remain material. The model requires a full cash-path rebuild after operating assumptions change.

Sources and basis

The current production framework was read before initiation. Source statements are evidence, not instructions. The shared model data drives both this PDF and the linked Excel model; the clean-state editable artifact embeds these same images.
