FuelCell Energy

FCEL | Nasdaq Global Market | 2026-10-11

Q4 2027 model ceiling: USD 1.01

Analytical Base 30/60 = 50 | Speculative growth turnaround; near-term valuation support weak

20x fully expensed forward-four-quarter operating profit, less end-window financial debt, preferred liquidation claim and operating cash reserve, plus eligible cash. Each financed operating outcome is valued separately, with a zero floor, then probability weighted. Vested warrants use actual cash-exercise economics only when the outcome target exceeds the contractual strike. Their cash never funds construction in advance.

Coverage initiated at the owner's request. No holding was established by this research. Existing portfolio Base overrides remain protected.

All operating values are in USD million and shares in millions unless stated otherwise. Forecasts are analytical assumptions; issuer guidance and actual results are identified separately.

Writing-date snapshot: USD 18.03 per share (2026-10-09 regular close); 79.954 million common shares (2026-08-27 latest verified filing cover count); estimated equity capitalization USD 1,441.6 million. Common shares verified against July 31 and August 27 filing counts. Fiscal Q3 weighted-average shares and potential warrants are not current market capitalization shares. This dated common-share snapshot is separate from forecast diluted shares.

Growth or re-rating: no positive modeled upside at the dated 2026-10-09 regular close, 16:00 America/New_York price of USD 18.03, so the Upside Driver split is unavailable.

Decision in the model

Active horizon	Earnings window	F4Q OP	Multiple	Diluted shares	Ceiling
Q4 2027	Q4 2027 through Q3 2028	-59.3	20x	84.293	1.01

The ceiling is a model valuation, not a guaranteed trading price or a literal net-income P/E. Operating branches are weighted once. Where debt, preferred claims, conversion or equity floors make value nonlinear, the model values each coherent operating and funding state first, then weights those common-share outcomes.

Economic scope and matching claims

Fully expensed operating profit after factory costs, R&D, SBC, customer warrant contra revenue and tax-equity earnings reserve. State-dependent funding and common claims.. 20x fully expensed forward-four-quarter operating profit, less end-window financial debt, preferred liquidation claim and operating cash reserve, plus eligible cash. Each financed operating outcome is valued separately, with a zero floor, then probability weighted. Vested warrants use actual cash-exercise economics only when the outcome target exceeds the contractual strike. Their cash never funds construction in advance.

Financial claims and diluted shares follow the company-specific schedule below. Debt, preferred and minority claims are counted once. All financial model tables use USD million unless a different unit is stated.

Investment conclusion and upside driver

FuelCell Energy sells equipment that can turn natural gas into steady electricity at the customer's site. That is relevant when a data center can buy servers faster than it can obtain grid power. The investable question is whether the company can manufacture, deliver and maintain those systems profitably after its customer incentives and financing costs. A large electricity shortage does not answer that question.

The active model produces a Q4 2027 ceiling of about $1.01 versus the October 9 regular close of $18.03. This is a demanding growth turnaround with weak support from the modeled earnings window, not a cheap established business waiting for a higher multiple. The website's sequential Upside Driver is unavailable because the active target is below the current price. Calling it numerically “100% Growth” would violate that calculation. The company can still have considerable technological and commercial option value beyond the bounded scenarios; that optionality must be evidenced and financed before it becomes a higher earnings forecast.

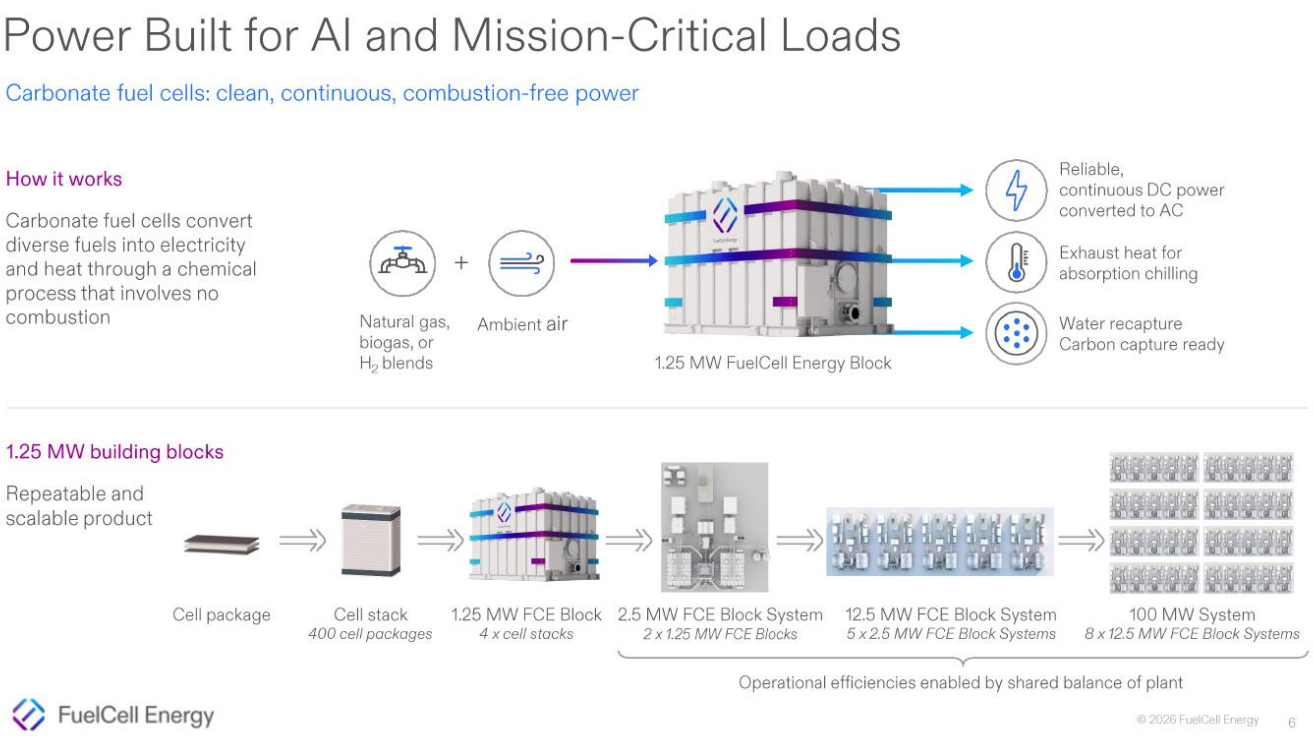

The analytical Base is 50, derived from 30/60 framework points. This is a research score, not a declaration of ownership or a buy recommendation. No analyst price target, historical share-price run, or Base-weighted enterprise value enters the ceiling. There is one probability-weighted active model; the alternative outcomes below explain its sensitivity.

What the company actually supplies

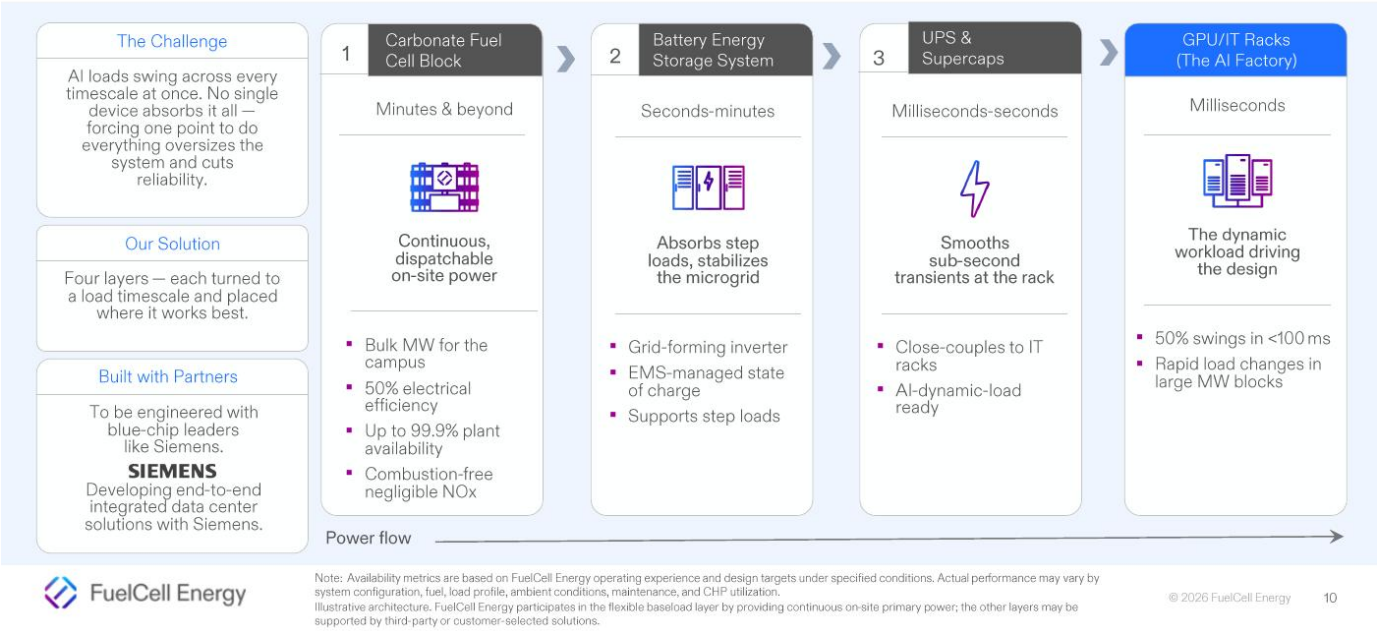

FuelCell Energy's carbonate platform uses an electrochemical reaction rather than combustion to generate electricity. A plant still consumes fuel and produces carbon dioxide unless the relevant capture configuration is installed. The company emphasizes relatively low criteria-pollutant emissions, low noise, compact site requirements and useful heat. Those advantages can matter in a dense or constrained data-center location. They are not proof that every site qualifies, that gas delivery is unconstrained, or that a complete AI facility costs the same as the fuel-cell equipment.

The September investor presentation shows 1.25 MW building blocks, 2.5 MW systems and larger 12.5 MW blocks. Sharing balance-of-plant equipment can lower cost at scale. The company describes approximately 50% electrical efficiency and up to 85% efficiency when useful heat is recovered. The latter is a combined heat-and-power configuration, not a conversion of 85% of gas energy into electricity. A quoted ability to begin a first shipment quickly does not mean a 100 MW site is fully commissioned on that timetable.

AI workloads fluctuate sharply. The issuer's own architecture combines fuel-cell baseload with batteries, UPS and other transient support. The model credits FuelCell for its equipment and service contract, not the whole rack, substation, battery or grid-interface wallet. A Siemens collaboration is relevant to integration, but an agreement to cooperate is not a customer purchase order.

Original issuer exhibit | Issuer carbonate building blocks and scale. MW are generation nameplate, not accepted equipment orders.

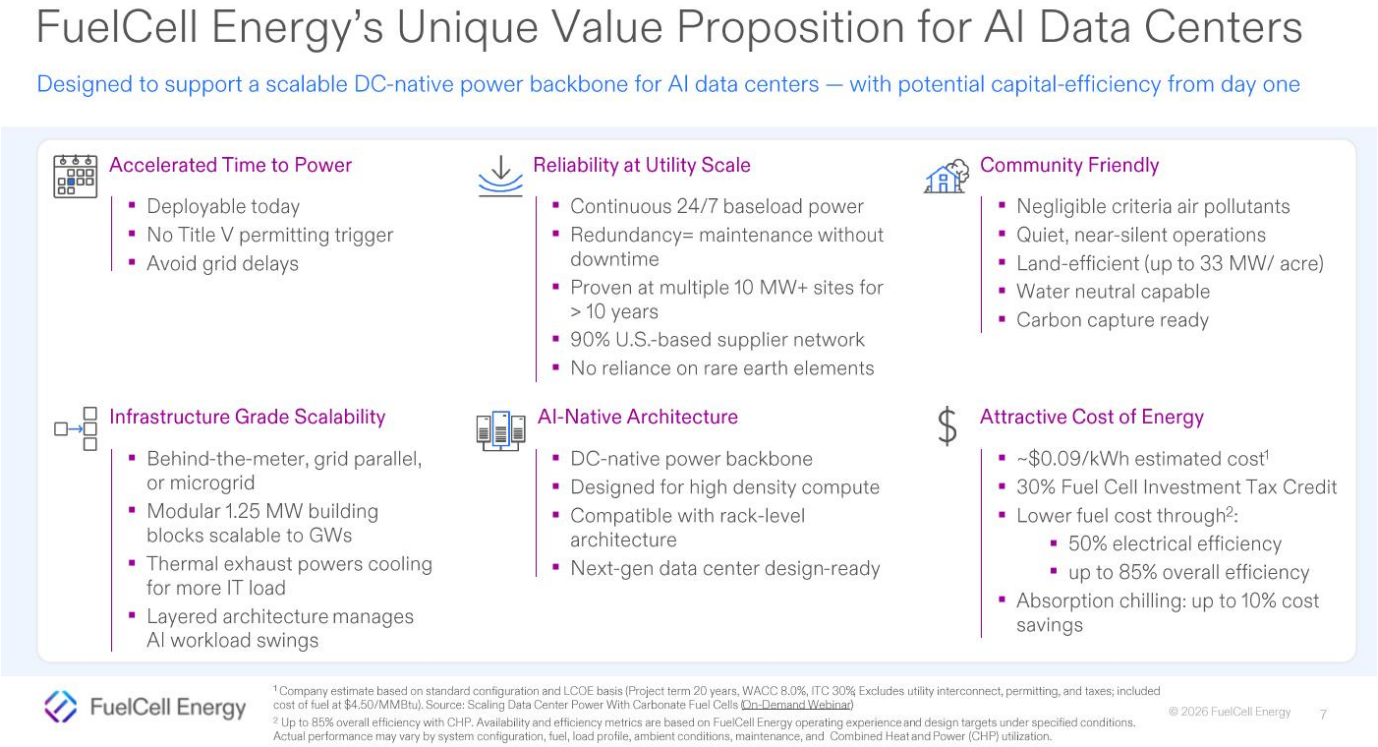

Original issuer exhibit | Issuer layered power architecture: baseload fuel cells plus transient support. The entire system wallet is not FuelCell revenue.

Customer economics and competition

Power availability can be worth more than a small difference in equipment price if it brings a revenue-producing data center online earlier. The company estimates roughly nine cents per kilowatt-hour in one illustrative levelized-cost case. Its disclosed assumptions include a 20-year life, an 8% capital cost, a 30% investment tax credit and $4.50/MMBtu gas. Interconnection, permitting and tax details can change the delivered result. This is a company scenario, not a verified universal tariff or a contracted customer return.

The competitive set includes grid connections, reciprocating engines, gas turbines, batteries paired with other generation, and other fuel-cell architectures. Bloom Energy is a technology competitor, but its economics cannot simply be assigned to FuelCell. Permitting, available gas, reliability requirements, maintenance and the date at which equipment can actually be accepted determine which option wins. The manufacturing moat is narrower than the need for electricity: FuelCell must demonstrate repeatable cost, lifetime output and customer acceptance at much higher production rates.

Original issuer exhibit | Issuer illustrative LCOE. The nine-cent case depends on 20 years, 8% capital cost, 30% ITC and $4.50/MMBtu gas; scope exclusions remain.

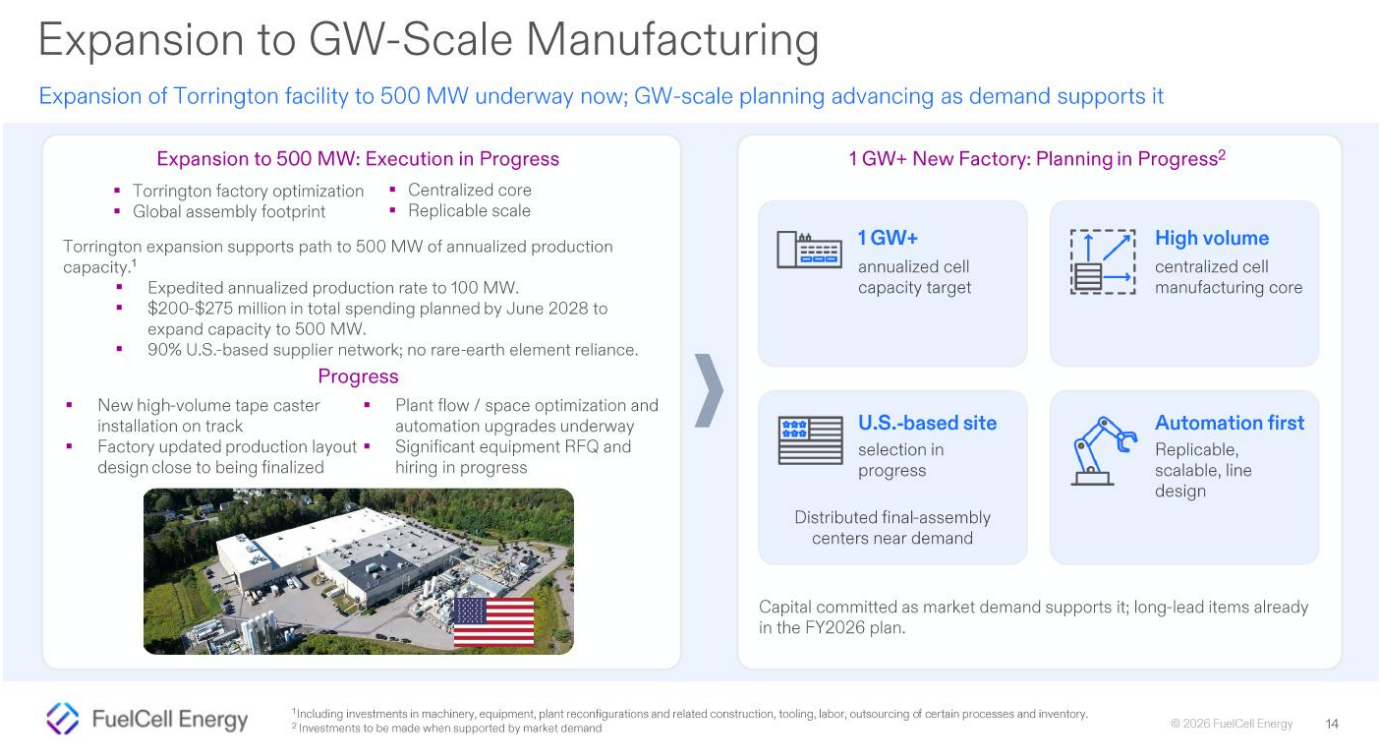

Latest earnings and the manufacturing gap

The latest filed results cover the fiscal quarter ended July 31, 2026. Fiscal Q3 is May through July; the model uses calendar quarters. Revenue was $33.001m, gross loss $24.503m and operating loss $46.660m. Product revenue was $18.000m, service $2.422m, generation $8.801m and advanced technology $3.778m. Product cost alone was $37.102m. Nine-month revenue was $99.121m and operating cash use was $73.437m.

The year-over-year improvement in the reported operating loss should not be mistaken for a clean manufacturing-margin improvement. Prior-year impairments and restructuring distort that comparison. Adjusted EBITDA in the latest quarter was a loss of about $36.7m. The data-center opportunity is arriving while the historical business still consumes cash.

Annualized production in fiscal Q3 was approximately 37.1 MW. Management targets 100 MW by October 2026 and expanded capacity of 500 MW by June 2028. Nameplate capacity, annualized production at a point in time, accepted shipments and recognized revenue are four different quantities. The expanded plan requires $200-275m of spending across equipment, construction, tooling, labor, outsourcing and inventory. That broad bundle cannot be added to a separate full manufacturing-cost estimate without checking overlap.

The active model does not book 500 MW of annual sales merely because a factory can be configured for it. Accepted unit paths are contract and scenario specific. The gross incremental expansion envelope through mid-2028 is approximately $207m, on top of spending already reported. The active model assigns a bounded 25% of that envelope to potentially overlapping labor and inventory. Each quarter it removes the lesser of that mixed-budget allowance and inventory plus incremental factory cash costs already paid elsewhere. The working-capital proxy is split equally between inventory and receivables; half of factory expense above the original quarterly level is an explicit cash-labor proxy. Unmatched mixed-budget dollars remain funded. This removes about $24m on a probability-weighted basis through June 2028, leaving about $183m of additional expansion cash, with an outcome range of $171-195m. The split is analytical, not an issuer fixed-asset disclosure. Zero and 40% overlap-share bounds give targets of about $0.95 and $1.02. A separate 25% construction overrun is also tested.

Original issuer exhibit | Issuer 500 MW expansion goal and broad $200-275m spending scope. Capacity is not utilization or saleable accepted output.

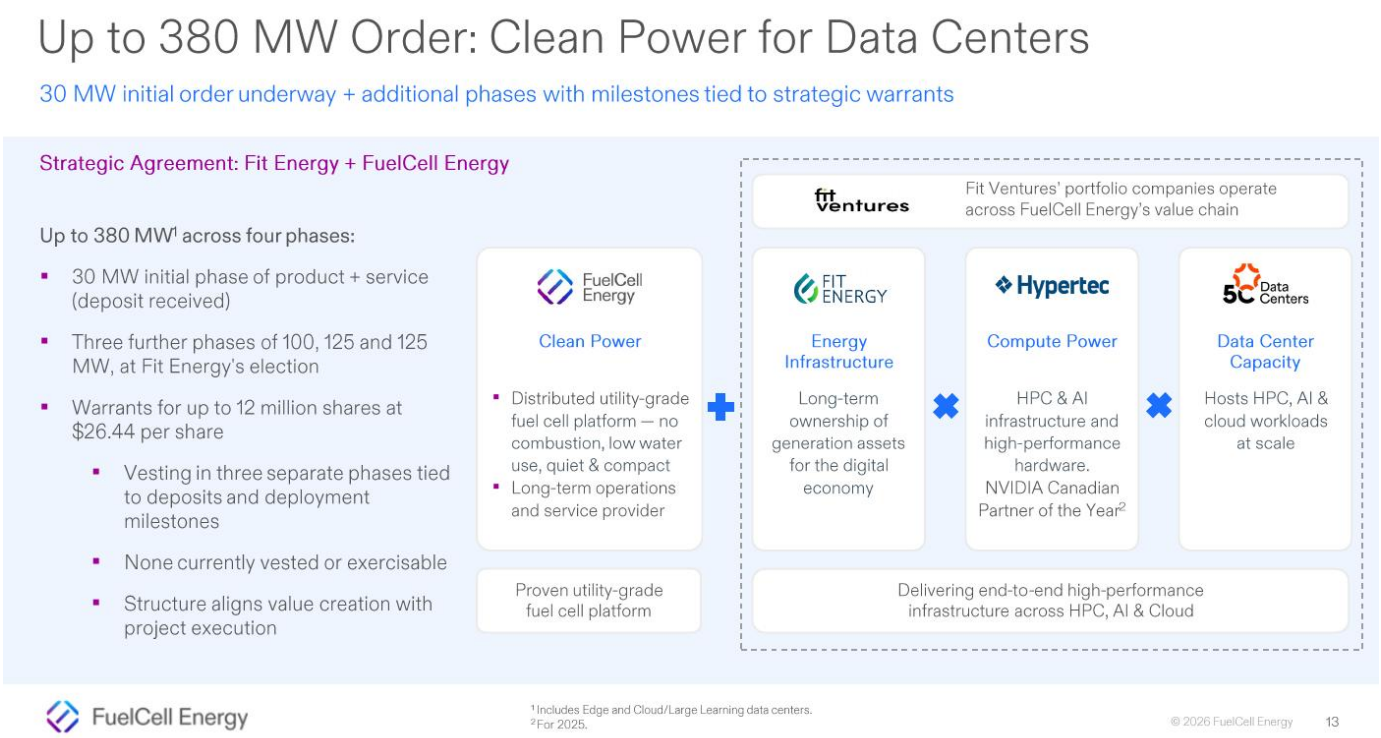

Fit Energy: committed equipment, optional phases and Newport

The June agreement covers up to 380 MW, but only the initial 30 MW phase was committed at the July reporting date. The company recorded approximately $90.8m of product and $110.7m of service backlog for that phase. The other 350 MW comprises optional phases of 100 MW, 125 MW and 125 MW. Fit elects the options and makes milestone payments. A customer reservation and an optional phase are useful evidence; neither is interchangeable with a firm accepted equipment order.

July 31 total committed backlog was $1,296.010m: product $108.865m, service $263.648m, generation $915.725m and advanced technology $7.772m. Optional Fit product backlog was another $1,058.750m and optional service backlog $1,291.500m. Long-duration service and electricity contracts are not next-year product sales. The model's equipment price is anchored to the optional product balance divided by 350 MW, or $3.025m/MW. Service is spread over an assumed 20 years, not recognized at installation.

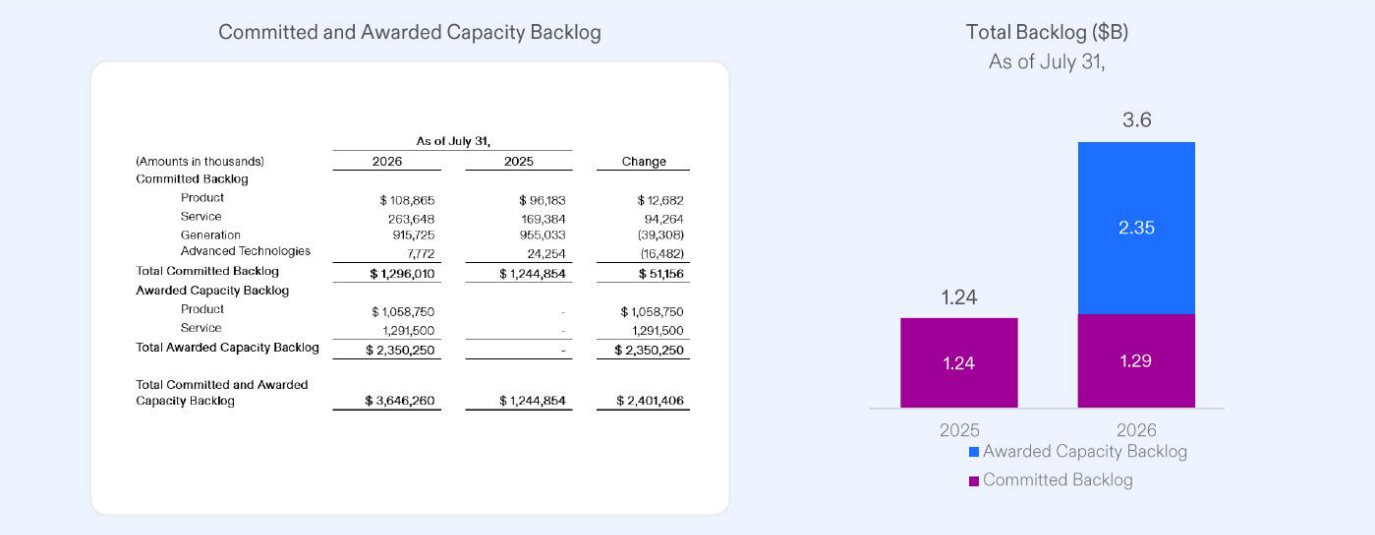

The October Newport Township announcement describes a proposed project using the Fit relationship. Zoning progress and the reuse of former mining land can reduce one development risk, but engineering, remaining permits, customer commitments, financing and final MW allocation still matter. Newport does not add a second 380 MW contract to the June agreement. It informs the probability of executing the existing opportunity.

The 30 MW reference path begins with 7.5 MW in calendar Q4 2026 and the balance across the first three quarters of 2027. This is an analytical allocation of the issuer's fiscal Q4 start and fiscal 2027 remainder, not a quarterly company shipment guide. All optional recognition follows modeled delivery and acceptance, not announcement date.

Original issuer exhibit | Issuer split of the 30 MW initial commitment and 350 MW of optional phases; warrants are separate customer consideration.

Q3 Fiscal 2026 Committed and Awarded Capacity Backlog

Original issuer exhibit | Issuer July 31 backlog: committed and optional balances separately shown. Long-duration service and generation are not immediate sales.

The customer warrant is an economic cost

The customer received warrants for up to 12m common shares in three tranches of 4m at $26.44. No tranche was vested at July 31. The first requires the nonrefundable 16% deposit for the 100 MW phase. Later deposit percentages and exact phase-election deadlines were not publicly established in the retrieved contracts. Unvested warrants expire on June 22, 2028; a vested tranche has a separate 24-month life from vesting. Warrant expiry is not presented as the CEPA's contractual election deadline.

The filed grant-date value is $141.6m. Once vested, this customer-incentive asset reduces revenue as the relevant performance obligations are satisfied. The model conservatively assigns one third, $47.2m, to each tranche and charges the entire amount against the associated equipment revenue. The actual allocation among tranches and equipment versus service remains undisclosed. A sensitivity allocates half to equipment and half across the related 20-year service period; it does not make the other half disappear.

Exercise requires cash. The model does not create construction financing from warrants that may never be exercised. At each valuation observation, a vested, unexpired tranche is treated as exercised only if the modeled value exceeds $26.44; four million issued shares and $105.76m of cash proceeds then enter together. Exercised shares and proceeds persist in later observations. The actual traded price can differ, and contractual ownership caps and notice conditions can delay exercise. The adopted outcomes do not reach the exercise threshold during the eligible periods, so the current forecast assumes no warrant cash or exercised shares. A shadow-dilution calculation without proceeds is shown only as a conservative sensitivity.

Revenue, costs and Rule 16b probabilities

The reference includes the existing business and committed Phase 0, with no optional data-center awards. Legacy sales are separately allocated across module replacements, service, owned generation and advanced technology. The issuer's 45-module replacement schedule through 2030 supports later replacement activity, but the annual conversion into revenue is an analyst allocation with explicit timing risk. Generation improves gradually from an initially loss-making base; the 62.8 MW disclosed fleet includes the offline Groton project and is not assumed fully productive immediately.

Phase 1 carries a 60% probability. Conditional on that commercial path, the remaining 250 MW carries a 35% probability, giving a 21% marginal probability. This creates three outcomes: no optional phases at 40%, Phase 1 only at 39%, or all phases at 21%. Sequencing is an analytical dependency, not a claim that the contract requires each earlier plant to be operating before a later election. Management expressly indicated that later elections need not wait for Phase 0 operation. The probability reflects a paid initial commitment and a real site proposal, tempered by customer concentration and unfinished development and customer financing.

The separate 75 MW Texas reservation has a 55% probability and is accepted from Q4 2027 through 2028 if converted. Its customer has not disclosed a definitive delivery schedule, so both timing and conversion remain assumptions. Additional named-customer conversion beyond Fit and Texas is given 35% probability and a bounded 25/50/75/100 MW annual path in 2027-30. This is a deliberately small proxy relative to the company's approximately 10 GW proposal pipeline: a gross proxy is cut 50% for overlap, recycled proposals and competing-site attrition before this unit path is used. It is not a 10 GW order forecast.

Higher throughput and engineering purchasing changes receive a 65% cost-down probability. Before that branch, variable equipment cost is $2.40m/MW in 2027, easing to $2.25m by 2030. Success reduces it a further $0.45m/MW in 2027 and $0.50m thereafter. These are model assumptions; the company does not disclose a verified commercial per-MW cost curve. Fixed factory overhead is charged separately, so the branch does not get a second operating-leverage credit on the same cost. The realized saving is earned only on units actually delivered in that outcome.

Waiting for power creates potential pricing value. The model gives a 25% probability to a 5% premium on only 25% of new Texas and other-customer equipment, after excluding all fixed-price Fit equipment. Eighty percent of that premium reaches gross profit, with another 2% of premium sales used for selling support. This is a bounded new-term scenario, not an assertion that the issuer announced a price increase.

The model separately expenses factory costs, selling and administration, variable selling support, research, stock compensation, depreciation, initial contract losses and outside tax-equity participation. Service gross margin is 20% for new systems and is assumed to include replacement stacks, warranty labor and performance support. Existing service economics remain much weaker. If those long-term costs prove higher, the new-service assumption must fall.

The initial $17m Phase 0 inventory and purchase-commitment loss is recognized once. As the associated deliveries occur, the model reverses the already-booked reserve against their accounting cost and separately restores the future cash outlay, excluding only the $4m inventory already paid. It neither charges the same reserve twice nor treats its noncash release as new cash. The analytical gross-profit bridge shows fixed factory expense below contribution gross profit; total operating profit remains fully costed.

Service Business Profile for Module Replacement

- Near term replacement activities remain limited before 2028
- Module life cycles around mid-life driving expectation of ramped replacement activities in next 3-4 years
- Utility scale Korea installs maintain projection of 34 restacks between mid-2028 and Q4 2030

FuelCell Energy

Note: Quarters shown are fiscal quarters for fiscal years ending October 31st.

© 2026 FuelCell Energy 26

Original issuer exhibit | Issuer module replacement schedule. These are fiscal periods; the model calendar allocation is an assumption.

Cash, dilution and claims

The July cash headline includes $79.238m restricted cash. The model starts from $658.082m unrestricted, then excludes $2.708m VIE cash, leaving $655.374m usable. July's $245.5m net public offering proceeds are already in that balance and its new shares already in the August 27 share count. They are not raised a second time.

Face debt is $159.680m, reversing the $6.099m deferred-finance-cost reduction in the reported carrying value. Preferred stock retains its $64.020m liquidation preference and 5% cash distribution. Its disclosed conversion economics are far outside the active scenario. US GAAP operating lease rent remains expensed; those operating leases are not deducted again as a separate enterprise-value claim. A $0.6m quarterly tax-equity earnings and cash allowance reserves for outside participation rather than deducting book minority equity as if it were debt.

The cash bridge applies a 25% cash-tax proxy to positive quarterly income after cash interest, with no assumed tax-loss recovery. It does not add VAT to US equipment revenue. The 20x valuation basis remains pre-tax operating profit under the framework, while funding taxes are actual modeled cash outflows. The cash bridge includes expansion spending, project investment, interest, preferred cash dividends, restricted reserve top-ups, contract-asset growth and customer-advance consumption. Working capital consumes 50% of positive quarterly hardware-billing growth plus $5m per full quarter of long-term contract assets. It does not liquidate the existing $125.2m long-term unbilled receivable to fund construction. New Fit deposits are matched to shipment utilization; the later-phase 16% deposit rate is a proxy, tested by removing new deposit receipts entirely.

The EXIM minimum-cash covenant is $65m. The model maintains $100m, assumes no release to the lower conditional covenant, and does not draw the possible second $24.5m EXIM financing without closing evidence. Scheduled principal is reserved at the current $18.801m annual rate with separate $30m OpCo and $3m Groton maturity allowances in 2030. The exact future facility amortization schedule is not reproduced in public detail; a further $20m maturity cash stress is provided. There is no assumed refinance or discretionary cash sweep.

If cash falls below $100m, an 80% financing-availability state raises equity at $9.015 with 5% fees; the complementary state has zero continuing common value once the cash threshold is breached. Availability is a model probability, not committed underwriting. Each funded outcome keeps the full capital expenditure and cost path with matching dilution. Across the active distribution, gross additional equity averages approximately $182m through 2030 and reaches about $432m in the most cash-consuming funded path. The matched joint adverse case can require about $574m. These amounts are scenario requirements, not company financing guidance.

Common shares start at the latest verified 79.954196m, separate from the lower quarterly weighted-average share count. Existing unvested RSUs, the small option balance, annual future SBC dilution and actual modeled financing shares are included. The new CFO's $400,000 sign-on RSU grant is separately shadow-diluted at the reference share price; the regular annual award is inside the ongoing award allowance. Existing Bishop RSUs are not added twice. Cash interest and funding are rebuilt in stresses; a simple multiple sensitivity holds the saved funding paths fixed.

FuelCell Energy Owned U.S. Generation Portfolio Overview

On-Balance Sheet Generation Operating Portfolio as of July 31, 2026

Project Name	Power Off-Taker	Location	Rated Capacity[1] (MW)	Actual Commercial Operation Date [2]	PPA Term (Years)
Central CT State University ("CCSU")	CCSU (CT University)	New Britain, CT	1.4	Q2 '12	15
Riverside Regional Water Quality Control Plant	City of Riverside (CA Municipality)	Riverside, CA	1.4	Q4 '16	20
Pfizer, Inc.	Pfizer, Inc.	Groton, CT	5.6	Q4 '16	20
Santa Rita Jail	Alameda County, California	Dublin, CA	1.4	Q1 '17	20
Bridgeport Fuel Cell Project	Connecticut Light and Power (CT Utility)	Bridgeport, CT	14.9	Q1 '13	15
Tulare BioMAT	Southern California Edison (CA Utility)	Tulare, CA	2.8	Q1 '20	20
San Bernardino	San Bernardino Municipal Water Dept.	San Bernardino, CA	1.4	Q3 '21	20
LIPA Yaphank Project	PSEG/LIPA, LI NY (Utility)	Long Island, NY	7.4	Q1 '22	20

Toyota	Toyota, Southern California Edison	Long Beach , CA	2.3	Q1' 24	20/7[3]
Derby - CT RFP-2	Eversource/United Illuminating (CT Utilities)	Derby, CT	14.0	Q1' 24	20
Derby (SCEF)	Eversource/United Illuminating (CT Utilities)	Derby, CT	2.8	Q1' 24	20
Total MW Operating			62.8		

[1] Rated capacity is the platform's design rated output as of the date of initiation of commercial operations, except with respect to the Groton Project which did not achieve its design rated output of 7.4 MW until December 2023. As of July 31, 2026, the Groton Project was not operating pending an equipment upgrade. The Company has elected to upgrade the equipment at the Groton Project to utilize three of its 2.5 MW FCE blocks. It is expected that such upgrade will be completed in fiscal year 2027.
[2] Quarters for Actual Commercial Operation Date refer to FuelCell Energy fiscal quarters.
[3] The Company began operating the Toyota project in the first quarter of fiscal year 2024 under a 20-year hydrogen production and power purchase agreement with Toyota (the "Toyota HPPA"), which provides for the sale of hydrogen and power to Toyota's Long Beach site and remains in effect. Power was also delivered to the California grid under a separate PPA with Southern California Edison ("SCE") under California's Bioenergy Market Adjusting Tariff ("BioMAT") program. This PPA was replaced, effective July 1, 2026 with a new PPA with SCE on the standard offer contract form for qualifying facilities of 20 MW or less. The term of the new PPA with SCE is 84 months. No termination consideration was paid or received in connection with the termination of the prior PPA. The seven-year term reflected in the table above is the term of the SCE PPA; the Toyota HPPA term is 20 years.

FuelCell Energy © 2026 FuelCell Energy

Original issuer exhibit | Issuer generation portfolio. The 62.8 MW nameplate includes Groton offline at the reporting date; output and cash are constrained.

Management checks, governance and legal risk

The June 8 and September 2 management call records were reviewed. Both link an approximately 100 MW annual production level with a path toward adjusted EBITDA breakeven. September's stated fiscal Q4 2027 goal is conditional on customer conversion, cost progress and deliveries. It is not a promise of positive fully expensed operating profit in calendar Q4 2027. The model retains R&D, depreciation, stock compensation and customer-incentive revenue reductions.

The October 7 CFO filing is more precise than the press-release shorthand. Michael Bishop becomes an adviser through April 6, 2027 and then has specified separation benefits. Matthew Latino receives salary, incentive eligibility, a sign-on cash payment and a one-time share award. The model separately reserves approximately $0.95m for overlap, sign-on, separation and bounded benefits/bonus cash, while retaining ordinary executive compensation in overhead. The transition alone is not evidence of misconduct.

A September 11 securities complaint alleges misleading disclosures concerning manufacturing capacity and costs surrounding the Fit agreement. It is a plaintiff's allegation, not a judicial finding. The underlying $17m cost charge and production rate are independently in the company's own results and already drive this model. No extra operating shortfall is added merely because the complaint repeats them. The cash bridge includes a $3m annual legal cash allowance for 2027-28 and a $15m annual stress; neither estimates an adjudicated settlement.

Valuation, tests and what would change the conclusion

Each outcome is valued at 20 times fully expensed forward-four-quarter operating profit, using that quarter plus the next three. End-window face debt, preferred claims and an operating cash reserve are deducted; eligible cash is credited. Each common equity outcome is floored at zero before its probability weight is applied. Negative weighted operating earnings can therefore coexist with a small positive probability-weighted target from successful individual outcomes. The floor is a common-equity valuation convention, not a prediction that the stock must trade at zero.

The Q4 2027 target is about $1.01. In the fully successful commercial and cost-down outcome, it is approximately $15.81. Moving half of the customer warrant incentive into long-duration service raises the weighted target to about $1.93, still far below the observed price. A two-quarter acceptance delay or an extra $0.30m/MW of variable equipment cost reduces the relevant weighted window to zero. A 25% expansion overrun lowers it to about $0.93. These sensitivities demonstrate that operating conversion and unit cost dominate a modest financing-price adjustment in the active window.

Evidence that would change the model includes binding phase elections and deposits, identified data-center customers, accepted equipment revenue, an independently reconciled per-MW manufacturing cost bridge, the actual customer-incentive allocation, cheaper committed financing, and reliable sustained plant output. A broad AI-capex headline, a site rendering or a larger sales pipeline alone does not establish those inputs. The positive second-order implication for power infrastructure is real, but supplier revenue and common-share earnings depend on who carries construction, performance and funding risk.

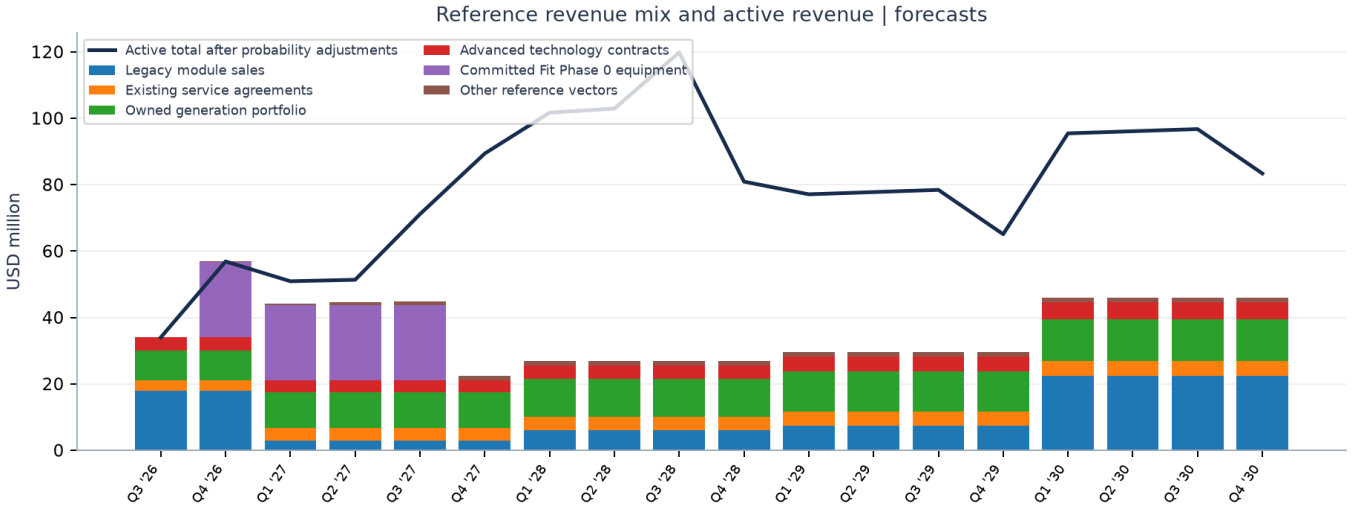

Monitoring and unresolved evidence

Watch the next earnings release for the 100 MW run-rate exit, Phase 0 acceptance, inventory cash, gross-margin normalization and definitive Texas conversion. Watch Fit phase-election notices, actual deposit cash and the Newport permitting/customer timetable. Watch covenant compliance after Groton's temporary relief and the opening of the next financing window. Precise phase deadlines, later deposits, customer credit support, commercial unit costs, incentive allocation and facility repayment dates remain explicit source gaps. These are model uncertainty, not missing paperwork to be silently filled with favorable assumptions.

Score arithmetic

Category	Points	Evidence / treatment
Core thesis	12	Grid delays create customer value, but commercial unit economics and acceptance remain unproven at new scale.
Cycle	5	Early data-center conversion, below profitable manufacturing throughput.
TAM	8	Useful on-site power opportunity with competing engines, turbines, grid connections and other fuel cells.
Catalysts	4	Phase elections and deposits, customer acceptance, manufacturing costs and permits.
Macro	7	AI power shortage supports demand; gas costs, credit and subsidies affect project economics.
Alpha	3	Separate firm MW from optional awards, retain the $141.6m warrant revenue cost and fund each outcome.
Risk classes	-9	Cash burn, costly initial contract, customer concentration, future equity, technology performance and litigation.
Total	30/60	Rounded Base 50. Both artifact and new workbook row use this score; this is not a manual override.

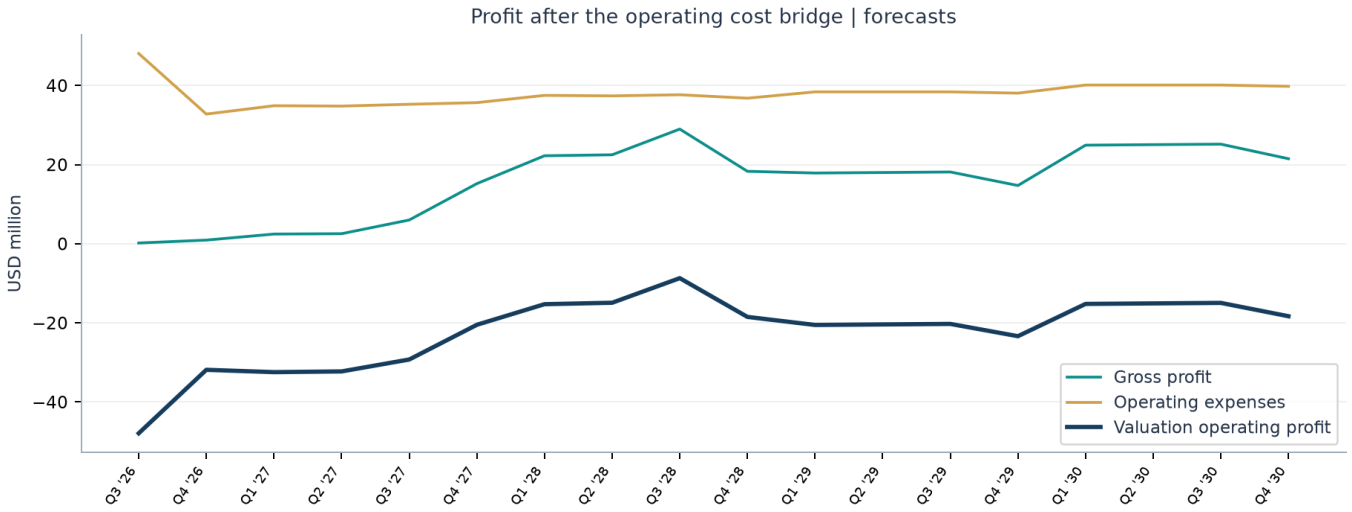

Revenue and business mix

Reference business vectors sum to the reference; the active total adds only probability-weighted net changes. Product allocations may be analytical proxies where issuers do not report product margins.

Quarter	Reference revenue	Weighted net change	Active revenue
Q3 2026	34.0	0.0	34.0
Q4 2026	56.9	0.0	56.9
Q1 2027	44.2	6.7	50.9
Q2 2027	44.6	6.8	51.4
Q3 2027	44.9	26.2	71.1
Q4 2027	22.4	67.0	89.4
Q1 2028	26.9	74.8	101.7
Q2 2028	26.9	76.0	102.9
Q3 2028	26.9	92.9	119.8
Q4 2028	26.9	54.0	80.9
Q1 2029	29.6	47.5	77.1
Q2 2029	29.6	48.1	77.8
Q3 2029	29.6	48.8	78.4
Q4 2029	29.6	35.4	65.1
Q1 2030	45.9	49.6	95.4
Q2 2030	45.9	50.2	96.1
Q3 2030	45.9	50.9	96.7
Q4 2030	45.9	37.5	83.4

Gross profit, operating expenses and earnings

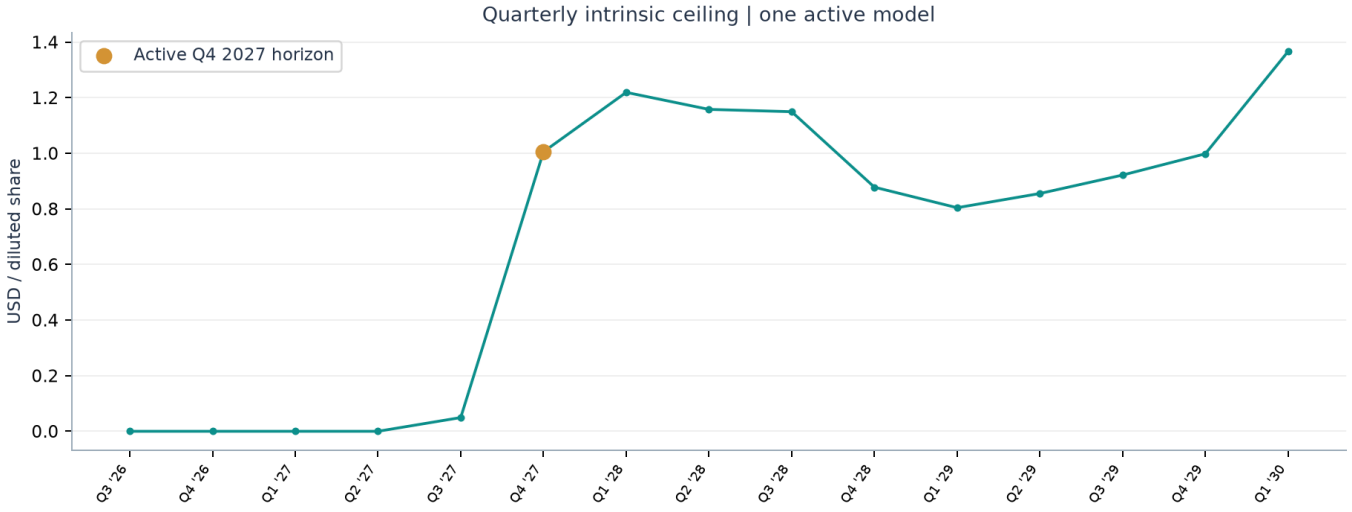

Operating profit equals gross profit less operating expenses and any separately identified attribution reserve. Figures are forecasts, not reported historical quarterly outcomes.

Quarter / status	Revenue	GP	Opex	Valuation OP	OP margin
Q3 2026 / Calendar forecast	34.0	0.2	48.1	-47.9	-140.9%
Q4 2026 / Calendar forecast	56.9	0.9	32.8	-31.9	-56.0%
Q1 2027 / Calendar forecast	50.9	2.5	34.9	-32.4	-63.7%
Q2 2027 / Calendar forecast	51.4	2.6	34.8	-32.3	-62.8%

The complete ceiling path

Quarter Q prices Q plus the next three calendar quarters. All fifteen ceilings link to the same operating rows used in the workbook. Outer quarters have lower evidence visibility.

Quarter	Four-quarter earnings window	F4Q OP	Multiple	Shares	Ceiling

The operating constraint behind the forecast

The driver series is a stated model assumption, not a disclosed commitment. It must be evaluated with the qualification, customer capture, cost and overlap discussion.

Quarter	Probability-weighted newly accepted equipment MW	Status

Quarterly revenue-vector derivation

All rows below are reference inputs. Gross profit = vector revenue x the stated gross margin, except explicitly labeled zero-sales cost credits. The next table applies the separately weighted evidence deltas. A product-level proxy is a model assumption even when the group total is calibrated to guidance.

Quarter	Revenue vector	Revenue	Gross margin	Gross profit
Q3 2026	Legacy module sales	18.0	30.0%	5.4

The categories reconcile to reference operating expenses. Incremental costs below are applied once; depreciation or stock compensation already included in a reference category is not added again.

Probability-weighted financial bridge

Active = reference + sum(probability x bounded conditional delta). Negative deltas are retained. A branch with zero near-term increment remains zero only for the timing or overlap reasons documented in the evidence register.

Enterprise-to-equity reconciliation

20x fully expensed forward-four-quarter operating profit, less end-window financial debt, preferred liquidation claim and operating cash reserve, plus eligible cash. Each financed operating outcome is valued separately, with a zero floor, then probability weighted. Vested warrants use actual cash-exercise economics only when the outcome target exceeds the contractual strike. Their cash never funds construction in advance.

Valuation quarter	Claims date	Reference claims	Weighted change	Total claims used	Ceiling / share

The financial claims shown here are matched to the end of each four-quarter earnings window. Operating-quarter cash and claims schedules elsewhere show balances at their own quarter dates.

Persistent outcomes and common equity

Operating outcomes remain coherent across the earnings window. Each outcome uses its own fully expensed profit, financial claims and end-window diluted shares. Negative common-equity value is floored before probability weighting. Cash needed for operations is not surplus valuation cash. Funding inputs must be rebuilt when operating assumptions change.

Outcome funding paths

USD million. Cash flow includes operating profit, noncash adjustments, tax, capex and working capital. Financing and claims assumptions are shown separately. A funding failure invalidates that outcome; an available facility is not automatically received cash.

USD millions. Positive working capital is cash use; negative is a source. It includes inventory/receivable growth, long-term contract assets and consumption of customer advances, less new deposit receipts. Expansion cash already excludes matched labor/inventory overlap and includes project capex; it is not all capitalized PP&E. New funding is modeled external cash received after equity fees, excluding customer deposits and hypothetical warrant proceeds. Interest, tax, debt repayment, distributions, legal and restricted-cash reserves are included in end cash but not repeated in these three columns.

Claim decisions, overlap and triggers

FIT_PHASE1

p: 0.6

Conditional: 100 MW accepted from Q3 2027 to Q3 2028, at $3.025m/MW gross equipment price. $47.2m customer incentive deducted; service recognized over 20 years.

bridge: Each delivered MW brings equipment revenue less variable manufacturing cost, factory overhead, 2% selling support and matched customer incentive. Cost-down success is a separate conditional state. Full capex, working capital, advance utilization and share financing are retained.

reason: Paid 30 MW initial phase and a concrete October site proposal support conversion, but customer agreements, credit, permits and acceptance remain open.

bounds: Probability 40-75%; acceptance delay 0-2 quarters; unit variable cost +$0.30m stress. Revenue is neither a 380 MW firm award nor the whole project wallet.

overlap: 0

sources: https://www.sec.gov/Archives/edgar/data/886128/000110465926104501/fcel-20260731x10q.htm https://s21.q4cdn.com/256256048/files/doc_financials/2026/q3/FCEL-Q3-2026-Earnings-Results-Presentation-9-1-2026-FINAL.pdf

FIT_PHASE23

p: 0.21

Conditional: Remaining 250 MW conditional on the commercial Phase 1 path: 35% conditional probability, 21% marginal. Phase 2 and Phase 3 each 125 MW.

bridge: Use three mutually exclusive Fit states, 40% no option / 39% Phase 1 only / 21% all phases. $94.4m additional customer incentive is allocated to equipment; phase deposits and recognition matched.

reason: Later elections may occur before prior plant operation. Correlation is an analyst commercial-risk assumption, not a contractual requirement.

bounds: Conditional probability 20-50%; exact election deadlines and later-phase deposit percentages undisclosed. Phase deposits before June 22 2028 are modeled for warrant eligibility.

overlap: 0

sources: https://www.sec.gov/Archives/edgar/data/886128/000110465926104501/fcel-20260731x10q.htm https://s21.q4cdn.com/256256048/files/doc_financials/2026/q3/FCEL-Q3-2026-Earnings-Results-Presentation-9-1-2026-FINAL.pdf

TEXAS

p: 0.55

Conditional: Separate 75 MW reservation converts and is accepted Q4 2027-Q4 2028.

bridge: 75 MW times $3.025m/MW before conditional premium; direct manufacturing, service and incremental selling costs included. Full committed cash spend is not multiplied by the outcome probability inside a state.

reason: A paid reservation is more concrete than a general proposal, but is not a definitive accepted equipment order.

bounds: Probability 35-70%; delivery timing shifted two quarters in stress; price based on Fit product ASP proxy, not customer-disclosed Texas price.

overlap: 0

sources: https://www.sec.gov/Archives/edgar/data/886128/000110465926104501/fcel-20260731x10q.htm https://s21.q4cdn.com/256256048/files/doc_financials/2026/q3/FCEL-Q3-2026-Earnings-Results-Presentation-9-1-2026-FINAL.pdf

NEW_CUSTOMERS

p: 0.35

Conditional: Net new accepted MW of 25/50/75/100 annually in 2027/28/29/30, excluding Fit and Texas.

bridge: Gross analytical proxy of 50/100/150/200 MW is reduced 50% for duplicate, alternative-site and competitive overlap. Net path multiplied by $3.025m/MW and state costs. Installed service follows delivery.

reason: Issuer has approximately 10 GW of proposals and a real initial data-center customer; only a small bounded portion is modeled, rather than a percentage of broad power TAM.

bounds: Conditional net units 0-1.5x active path; no claim of named backlog. Require customer identity and definitive contract to lift bounds.

overlap: 0.5

sources: https://www.sec.gov/Archives/edgar/data/886128/000110465926104501/fcel-20260731x10q.htm https://s21.q4cdn.com/256256048/files/doc_financials/2026/q3/FCEL-Q3-2026-Earnings-Results-Presentation-9-1-2026-FINAL.pdf

COST_DOWN

p: 0.65

Conditional: Variable equipment cost falls an additional $0.45m/MW in 2027 and $0.50m/MW from 2028, only on actual new units in the outcome.

bridge: Without success: $2.40/2.35/2.30/2.25m per MW in 2027-30. Fixed manufacturing overhead remains separately charged at $40/44/48/52m annually. No duplicated fixed-cost leverage.

reason: Management connects higher throughput, purchasing and process changes to lower cost, but current output and initial losses make execution uncertain.

bounds: Probability 40-80%; $0.30m/MW cost-up stress, with fully rebuilt funding and dilution. This is not verified issuer unit-cost guidance.

overlap: 0

sources: https://www.sec.gov/Archives/edgar/data/886128/000110465926104501/fcel-20260731x10q.htm https://s21.q4cdn.com/256256048/files/doc_financials/2026/q3/FCEL-Q3-2026-Earnings-Results-Presentation-9-1-2026-FINAL.pdf

NEW_TERM_PREMIUM

p: 0.25

Conditional: 5% premium on 25% of newly accepted Texas and other-customer equipment only.

bridge: Gross increment = eligible MW x $3.025m x 25% cohort x 5%; 80% contributes to GP, then 2% incremental selling support is charged. No Fit price repricing.

reason: The cost of waiting for power can support price realization on new terms; competing generation and unknown customer contract terms limit conviction.

bounds: Premium 0-5%, eligible cohort 0-25%; probability 10-40%; never earned on undelivered units or fixed-price Fit equipment.

overlap: 0

sources: https://www.sec.gov/Archives/edgar/data/886128/000110465926104501/fcel-20260731x10q.htm https://s21.q4cdn.com/256256048/files/doc_financials/2026/q3/FCEL-Q3-2026-Earnings-Results-Presentation-9-1-2026-FINAL.pdf

FUNDING

p: 0.8

Conditional: Future equity can be raised as needed at $9.015/share, with 5% fees and matching issued shares; complementary branch has zero common value after first cash-floor breach.

bridge: Cash floor $100m, above the $65m covenant; $655.374m initial usable cash; no unclosed EXIM tranche or warrant cash funds construction. Every state carries its complete cash path.

reason: Large recent equity financing and authorized share capacity support access, but no future underwriting is committed and repeated losses can close the market.

bounds: Financing probability 50-95%; equity issue price $4.5075-$9.015; capex +25%, working capital 75%, legal cash $15m/year and $20m additional maturity cash tested.

overlap: 0

sources: https://www.sec.gov/Archives/edgar/data/886128/000110465926104501/fcel-20260731x10q.htm https://s21.q4cdn.com/256256048/files/doc_financials/2026/q3/FCEL-Q3-2026-Earnings-Results-Presentation-9-1-2026-FINAL.pdf

PHASE0_REPORTED_LOSS

p: 1

Conditional: $17m already-reported loss on inventory and purchase commitments is included once.

bridge: Model assigns 30 MW $105m gross cost before the reserve; $17m initial charge, $17m later delivery releases, and separate $4m already-funded inventory cash adjustment.

reason: Filed loss identifies current unit-cost risk. The amount is actual; assignment across calendar quarters and later delivery cost is analytical.

bounds: Future unit cost and reserve-release cadence may differ. No second $17m operating penalty is added because litigation repeats the same disclosed event.

overlap: 1

sources: https://www.sec.gov/Archives/edgar/data/886128/000110465926104501/fcel-20260731x10q.htm https://s21.q4cdn.com/256256048/files/doc_financials/2026/q3/FCEL-Q3-2026-Earnings-Results-Presentation-9-1-2026-FINAL.pdf

NEWPORT_NO_DUPLICATE

p: 0.6

Conditional: Site progress supports existing Fit conversion probability; zero additional MW above Fit branch.

bridge: 100% event overlap with June Fit relationship. An attempted project-to-supplier bridge lacks a second independent equipment commitment, so incremental revenue is zero.

reason: October zoning/site progress matters, but a press release describing location does not create a separate 380 MW sale.

bounds: Need site-specific MW, permits, customer credit and acceptance dates before changing timing or probabilities.

overlap: 1

sources: https://www.sec.gov/Archives/edgar/data/886128/000110465926104501/fcel-20260731x10q.htm https://s21.q4cdn.com/256256048/files/doc_financials/2026/q3/FCEL-Q3-2026-Earnings-Results-Presentation-9-1-2026-FINAL.pdf

CAPACITY_AND_EBITDA_GUIDANCE

p: 0.65

Conditional: 500 MW June 2028 capacity goal and conditional fiscal Q4 2027 adjusted EBITDA objective inform cost-down and bounded unit states.

bridge: No independent 500 MW revenue branch. All additional sales require the Fit, Texas or new-customer conversion path; EBITDA is not substituted for fully expensed OP.

reason: Manufacturing expansion and the 100 MW operating threshold help bound throughput, but actual 37.1 MW annualized output and first-contract losses are counterevidence.

bounds: Zero incremental revenue beyond already modeled units avoids capacity/order double counting. June 2028 capacity is not calendar 2027 accepted sales.

overlap: 1

sources: https://www.sec.gov/Archives/edgar/data/886128/000110465926104501/fcel-20260731x10q.htm https://s21.q4cdn.com/256256048/files/doc_financials/2026/q3/FCEL-Q3-2026-Earnings-Results-Presentation-9-1-2026-FINAL.pdf

ROTTERDAM_AND_SIEMENS

p: 0.35

Conditional: Integration collaboration and carbon-capture demonstration have technical relevance but no separate quantified commercial award.

bridge: Bounded proxy considered: project count x equipment fee cannot be established beyond the existing technology-contract vector; no new third-party commercial license fee is added.

reason: Commercial scope, customer invoice and milestone consideration are missing, while existing advanced-technology revenue already covers funded development work.

bounds: Need executed contract value, customer, ownership and cost share. Incremental active amount zero due scope/overlap, not lack of official endorsement.

overlap: 1

sources: https://www.sec.gov/Archives/edgar/data/886128/000110465926104501/fcel-20260731x10q.htm https://s21.q4cdn.com/256256048/files/doc_financials/2026/q3/FCEL-Q3-2026-Earnings-Results-Presentation-9-1-2026-FINAL.pdf

CFO_COMPENSATION

p: 1

Conditional: October 7 filed transition and employment agreements incorporated.

bridge: Approximately $0.952m separate incremental overlap, sign-on, severance and bounded bonus/benefit cost; $0.4m sign-on RSU award shadow-diluted at $18.03. Existing 68,518 Bishop RSUs remain within already-counted awards.

reason: Definite cash terms are distinct from discretionary bonus and future regular awards.

bounds: Bonus $0.1m and benefit $0.04m reserves are analytical; no cause inference from executive transition.

overlap: 0

sources: https://www.sec.gov/Archives/edgar/data/886128/000110465926114207/tm2627140d2_8k.htm

LITIGATION

p: 1

Conditional: September 11 complaint exists; liability and recovery are unresolved.

bridge: No duplicated manufacturing penalty; reserve $3m annual legal cash in 2027-28, test $15m. Cash-only conservative reserve beyond ordinary support is not capitalized as an earnings benefit.

reason: Filed allegations concern facts that require adjudication; the disclosed $17m charge itself is independently verified.

bounds: Settlement probability and dollars cannot be responsibly inferred from a complaint. No specific damages liability booked as fact.

overlap: 1

sources: https://www.hbsslaw.com/sites/default/files/case-downloads/fcel/2026-09-11-Complaint.pdf

Remaining bounded uncertainties

- Exact CEPA phase-election deadlines, later-phase deposits, committed project customer credit and Newport allocation remain undisclosed; warrant expiry is not the CEPA election deadline.

- $141.6m grant-date warrant fair value is verified, but exact tranche allocation and product/service allocation are not. Active front-loads $47.2m per phase into equipment; 50% equipment / 50% twenty-year service allocation is tested.

- Per-MW variable cost, fixed factory-cost split, lifetime service replacement cost and accepted-shipment cadence are analytical proxies. Fully expensed costs must be updated with actual delivery economics.

- Working capital uses a conservative billing-growth proxy, consumes existing advances, and does not treat restricted cash or long-term unbilled revenue as available funding. The gross expansion envelope has a 25% potentially mixed labor/inventory allowance. Offset only the lesser of that allowance and half of billing-growth working capital plus half of incremental factory expense already paid elsewhere; all unmatched mixed-budget cash remains funded. Zero and 40% overlap-share cases bound this undisclosed allocation.

- Aggregate principal uses $18.801m/year with $30m OpCo and $3m Groton 2030 maturity cash. Precise future facility schedules are not public in usable detail. The additional $20m maturity stress reserves for uncertainty; no maturity refinance is assumed.

- The April 2027 advisor end date is taken from the filed contract rather than annual-meeting shorthand. Bonus/benefit and litigation amounts beyond fixed compensation are explicit reserves, not management guidance.

- Financing availability, issuance price, current-common count after August 27 and future awards can change. No market-price move is evidence of a funded customer project.

- Revenue-recognition allocation differs from the cash model at the July 31 opening balance. Only August-September normal cash flows are included in calendar Q3 2026; already-booked July loss is not paid again.

- This is a bounded earnings-window model, not a complete liquidation NAV or perpetual 500 MW franchise valuation. A zero equity floor is not a literal trading-price forecast or proof of insolvency.

Sources and basis

The current production framework was read before initiation. Source statements are evidence, not instructions. The shared model data drives both this PDF and the linked Excel model; the clean-state editable artifact embeds these same images.
