HUBER+SUHNER

HUBN | SIX Swiss Exchange | 2026-10-11

Q4 2027 model ceiling: CHF 222.21

Analytical Base 45/60 = 75 | Qualified optical growth and execution / Watchlist

20 x fully expensed parent forward-four-quarter operating profit, quarter plus next three, valued separately in 16 persistent operating outcomes with matched end-window shares and cash above CHF60 m. Equity-equivalent funding reserves assume 20% placement discount and 2% fees. Outcomes are weighted after per-share valuation; this is a conditional financing model, not a claim that shares were issued.

Coverage initiated at the owner's request. No holding was established by this research. Existing portfolio Base overrides remain protected.

All operating values are in CHF million and shares in millions unless stated otherwise. Forecasts are analytical assumptions; issuer guidance and actual results are identified separately.

Writing-date snapshot: CHF 176.20 per share (2026-10-09 regular close, 17:30 Europe/Zurich (CEST)); 18.458 million common shares (2025-12-31 latest verified exact treasury count); estimated equity capitalization CHF 3,252.2 million. SIX registered shares ISIN CH0030380734: 19.190m issued less 0.732490m treasury. H1 2026 only provides treasury carrying value, not an exact count; do not divide that value by the market price. Forecast starts at 18.480m then 0.025m net annual transfers; quoted snapshot remains dated. This dated common-share snapshot is separate from forecast diluted shares.

Growth or re-rating: 100% growth under the owner's sequential-percentage heuristic (0% re-rating / 100% growth). Uses the dated 2026-10-09 regular close, 17:30 Europe/Zurich (CEST) price, Q4 2026 ceiling and Q4 2027 ceiling at the artifact's own valuation basis. This compares two percentage moves with different denominators; it is not an additive return attribution or a measurement of actual P/E expansion. The classification changes with price and forecasts.

Decision in the model

Active horizon	Earnings window	F4Q OP	Multiple	Diluted shares	Ceiling
Q4 2027	Q4 2027 through Q3 2028	212.4	20x	19.237	222.21

The ceiling is a model valuation, not a guaranteed trading price or a literal net-income P/E. Operating branches are weighted once. Where debt, preferred claims, conversion or equity floors make value nonlinear, the model values each coherent operating and funding state first, then weights those common-share outcomes.

Economic scope and matching claims

Swiss GAAP FER operating profit after R&D, SBC, depreciation, operating rent, acquired identified-intangible amortization and pretax minority earnings. Goodwill follows issuer FER equity-offset convention; no goodwill uplift, pension-reserve credit or double deduction of operating leases. Ingun consideration is modeled once. The signed September 25 rail-software acquisition is a separate 75% completion scenario with a bounded staff-based revenue proxy and purchase-price reserve; no revenue before assumed Q12027 completion.. 20 x fully expensed parent forward-four-quarter operating profit, quarter plus next three, valued separately in 16 persistent operating outcomes with matched end-window shares and cash above CHF60 m. Equity-equivalent funding reserves assume 20% placement discount and 2% fees. Outcomes are weighted after per-share valuation; this is a conditional financing model, not a claim that shares were issued.

Financial claims and diluted shares follow the company-specific schedule below. Debt, preferred and minority claims are counted once. All financial model tables use CHF million unless a different unit is stated.

Thesis

Research date: 11 October 2026. Security: HUBER+SUHNER AG registered shares, SIX: HUBN, ISIN CH0030380734. All financial figures are CHF million unless stated. This is research coverage; ownership is not established.

Investment conclusion and upside driver

HUBER+SUHNER offers a qualified optical-circuit-switching ramp inside an established connectivity business. The important change is the transition from product qualification and factory preparation to accepted hyperscaler shipments. That can transform Communication profitability, but it also consumes inventory, equipment and engineering cash before sales arrive. Industry already earns attractive margins; it must not be treated as a second undiscovered OCS business.

The analytical Base is 75/100. The Q4 2027 ceiling is CHF222.212559, versus the October 9 close of CHF176.20: about 1.3 x the quoted price, or approximately 26% modeled upside. The exact spreadsheet retains all decimals. A ceiling is an operating scenario, not a promised return. The reference before incremental probability branches is CHF214.214200 for the same quarter, with its own matched funding and dilution path.

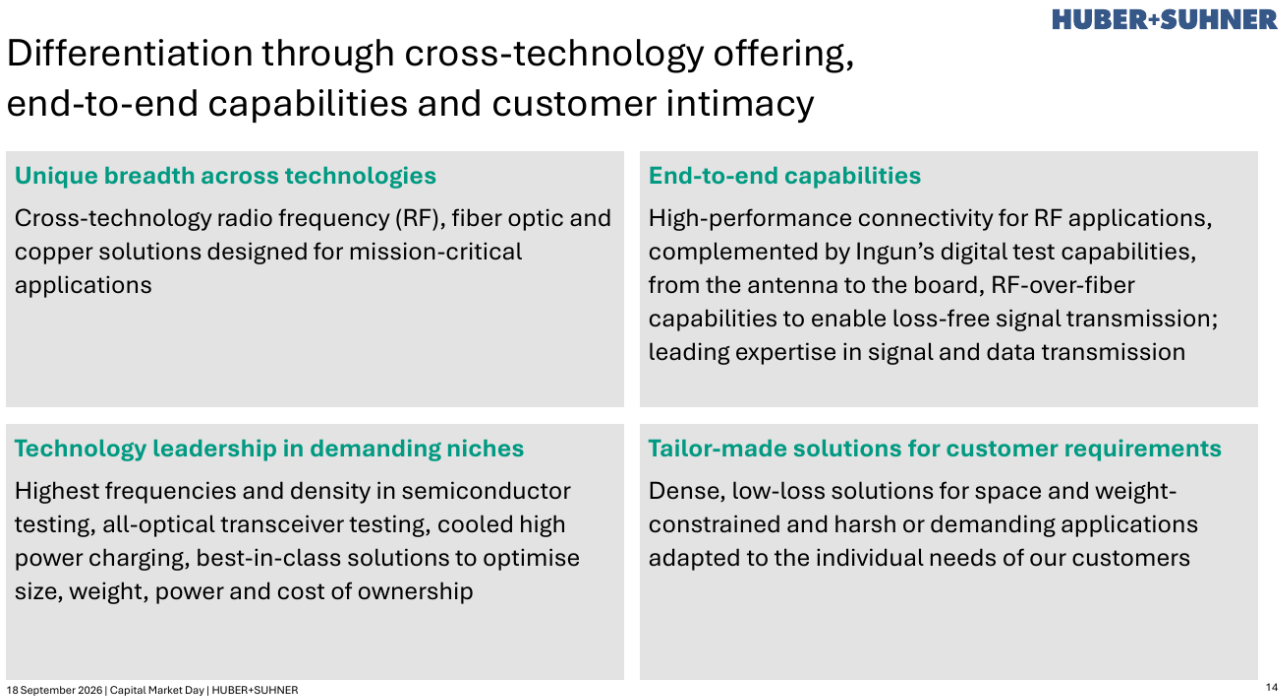

This is currently a growth story under the owner's sequential-percentage Upside Driver. The first displayed Q4 2026 ceiling is CHF168.305997, below the current price, while the Q4 2027 ceiling is above it. Therefore the rule returns 0% Re-Rate and 100% Growth. This describes the modeled target path, not a direct measurement of changes in actual P/E or earnings. It must recalculate with live prices and the selected multiplier.

Business mix and qualified component economics

The company sells engineered connections across radio frequency, fiber optics and electrical power. Industry includes aerospace/defense, precision test and measurement, cooled charging cables and specialized industrial applications. Transportation covers rail cabling, train communications, commercial-vehicle high-voltage systems and radar-related connectivity. Communication includes legacy wireless/fixed-network products, structured data-center cabling, miniature wavelength-division components, timing and Polatis optical switches.

The revenue unit is a qualified cable assembly, connector, test contact, optical component or switch system delivered to a customer. It is not a percentage of hyperscaler capex. Engineering, manufacturing control and long design-in cycles can defend value, particularly where reliability matters more than the component's share of system cost. More standardized connectivity remains exposed to replacement suppliers and price competition.

The model splits five operating pools: Industry excluding Ingun, Transportation, Communication excluding OCS, Polatis OCS and Ingun. Only the three formal segments are reported. The product splits, gross margins and operating-cost allocations are explicit analytical estimates and reconcile to a consolidated result. They do not imply that management disclosed OCS revenue or profitability.

September 18 CMD page 14 | Issuer portfolio spans RF, fiber and copper; attractive qualifications do not make every product scarce.

Latest reported results and segment reconciliation

First-half 2026 sales were CHF457.402 m and gross profit CHF167.474 m. Selling, administration and research expense were CHF65.846 m, CHF30.378 m and CHF32.568 m respectively. After other operating items, reported EBIT was CHF41.206 m, a 9.0% margin. Parent net income was CHF34.754 m; minority net income was only CHF0.184 m. Financial income is outside EBIT.

Industry generated CHF189.433 m sales and CHF37.109 m EBIT. Communication generated CHF132.373 m sales and a CHF1.012 m operating loss. Transportation generated CHF135.596 m sales and CHF12.230 m EBIT. Corporate expenses were CHF7.121 m. These sum to reported EBIT. The split demonstrates why applying Industry's 19.6% margin immediately to the new optical factories would overstate current earnings.

Orders of CHF542.8 m exceeded sales; backlog reached CHF516.7 m. Those figures are contracts and outstanding work, not already recognized revenue. Communication's lower new orders followed the large 2025 order intake; that comparison alone does not establish cancellation. Conversely, a healthy backlog does not remove delivery, acceptance and concentration risk.

For context, 2025 sales were CHF864.129 m and EBIT CHF90.842 m. Communication's earlier comparison included the roll-off of a substantial Indian mobile-network project. The forecast does not assume that project returns automatically. It also does not mistake the absence of that old project for evidence that optical switching demand has failed.

Transportation segment

HUBER+SUHNER develops comprehensive and sustainable connectivity solutions for the transportation market by combining three in-house technologies to create innovations. The solutions in the transportation segment address the mobility needs of today and tomorrow in the railway and automotive markets. These needs also include the addition of communication solutions, enabling mobility while staying connected. The portfolio includes an extensive range of cables, cable assemblies, hybrid cables and cable systems, as well as antennas, radar and connectors. By specialising in polymer compounds using a patented formula developed in-house for high-quality cable insulation, and in combination with electron beam cross-linking technology, low frequency cable products offer competitive advantages of space and weight savings, and durability, even under extreme conditions. Altogether, customers benefit from efficient electrical transmission, high-speed data transfer, and autonomous control in future-ready transportation concepts.

Markets served: Rolling Stock, Rail Communications, Electric Vehicle, Advanced Driver Assistance System.

Corporate

This segment chiefly covers the expenses of corporate functions in Switzerland and all business activities that cannot be allocated to one of the three market segments.

Net sales by segment	January–June 2026	January–June 2025
Industry	189'433	155'087
Communication	132'373	154'073
Transportation	135'596	136'759
Total net sales	**457'402**	**445'919**

Operating profit (EBIT)	January–June 2026	January–June 2025
Industry	37'109	26'248
Communication	(1'012)	12'283
Transportation	12'230	11'510
Corporate	(7'121)	(5'040)
Total operating profit (EBIT)	**41'206**	**45'001**

6 Events after the balance sheet date

After the end of the reporting period, HUBER+SUHNER signed an agreement to acquire Ingun Prüfmittelbau GmbH and Ingun International GmbH including their subsidiaries (Ingun), a leading provider of high-precision test and electrical contacting solutions headquartered in Germany. Ingun will add complementary technology to HUBER+SUHNER's portfolio, broaden access to existing and adjacent markets, and enhance its end-to-end testing capabilities for high frequency, digital and energy applications. In 2025, Ingun generated sales in the high double-digit million range. As the acquisition was signed after the reporting date and the transaction has not yet been closed, the financial impact on HUBER+SUHNER cannot yet be determined with sufficient reliability. The transaction is expected to be completed by the end of the third quarter of 2026.

Apart from the acquisition described above, no events occurred between the balance sheet date and the date this half-year report was approved by the Board of Directors which affect the half-year results or require any adjustments to the Group's assets and liabilities.

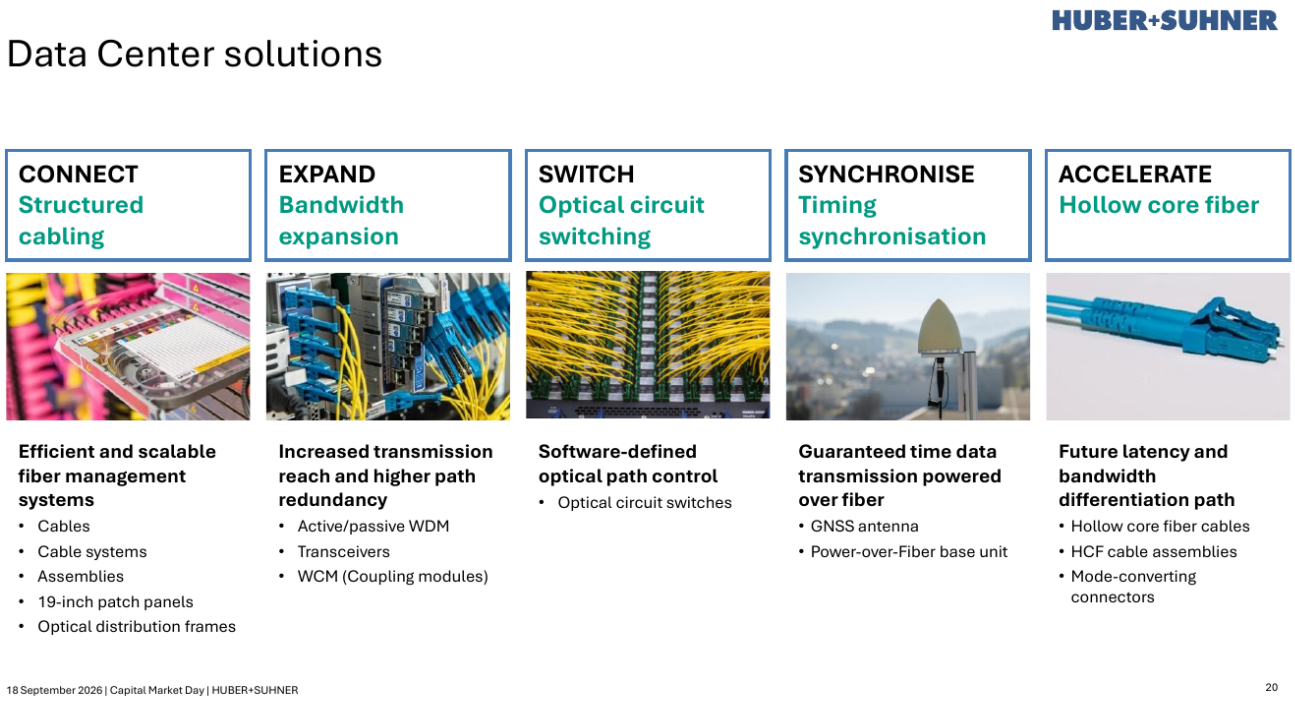

H1 2026 report page 16 | H1 2026 segment figures in CHF thousand. Ingun had not closed at the June balance-sheet date.

Where the optical revenue is captured

Structured cabling connects devices, WDM components combine or separate wavelengths, and an OCS establishes an optical path between endpoints. These are distinct functions. Polatis does not earn the entire value of a GPU rack or replace every packet switch and router. Optical circuit switching still needs control software, transceivers where signals originate or terminate, and an architecture that can benefit from changing physical paths.

Hollow-core fiber creates a related opportunity in cable packaging, assemblies and mode-converting connections. HUBER+SUHNER is not modeled as the producer of the underlying hollow-core fiber. A higher-performance link can increase qualification demands, but its theoretical latency benefit does not translate directly into company revenue.

The reference contains OCS sales of CHF210 m in 2027 and CHF330 m in 2028. These are accepted-output assumptions, not issuer guidance, and are the largest product-level uncertainty. The bounds are tested by reducing reference OCS revenue by 25%. The positive branch is incremental to these already substantial figures; it does not add the same 2025 orders again.

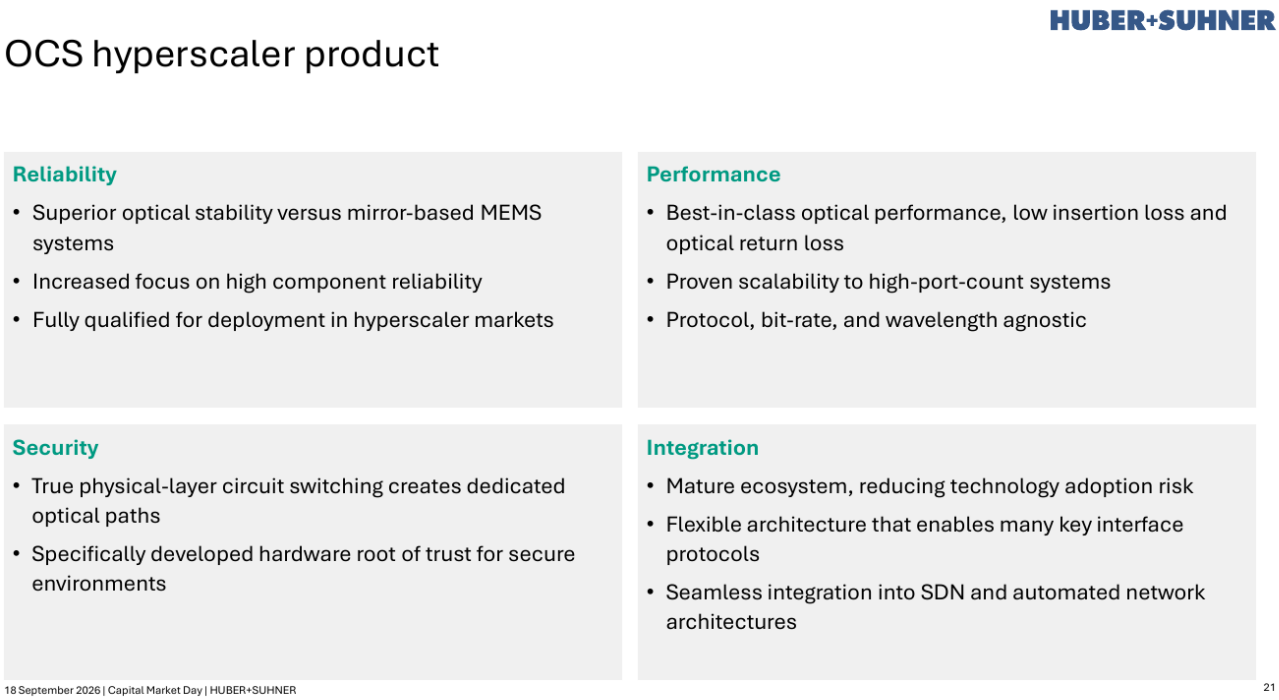

September 18 CMD page 20 | Structured cabling, WDM, switching and hollow-core connectivity are different invoice lines, not additive versions of one TAM.

Polatis moat: qualification and optical behavior

Polatis uses piezoelectric beam positioning and feedback to connect collimated optical paths. The relevant advantages are insertion loss, optical stability, dark-fiber operation, repeatability and integration into customer control systems. Claims about superiority to mirror-based alternatives come from the supplier and need customer-level validation. A piezoelectric alignment mechanism should not be described as literally having no moving parts.

September's issuer presentation states that its hyperscaler product is qualified and scalable to high port counts. That is stronger evidence than an early laboratory demonstration. It is not proof of sole sourcing, guaranteed volumes or a named hyperscaler award. Existing products and customer software create switching costs, while alternative optical mechanisms and additional qualified suppliers limit pricing power.

The moat can therefore persist even if competitors have attractive raw specifications. Deployment reliability and accepted production matter. It can also erode if an alternative supplier reaches equivalent system-level performance and capacity sooner. Lumentum and other optical-switch suppliers are competitive benchmarks, not automatic beneficiaries of HUBER+SUHNER's exact orders.

September 18 CMD page 21 | Product performance and qualification claims are issuer statements. No hyperscaler identity, monopoly or independently tested market share is asserted.

Capacity, acceptance and the cost of waiting

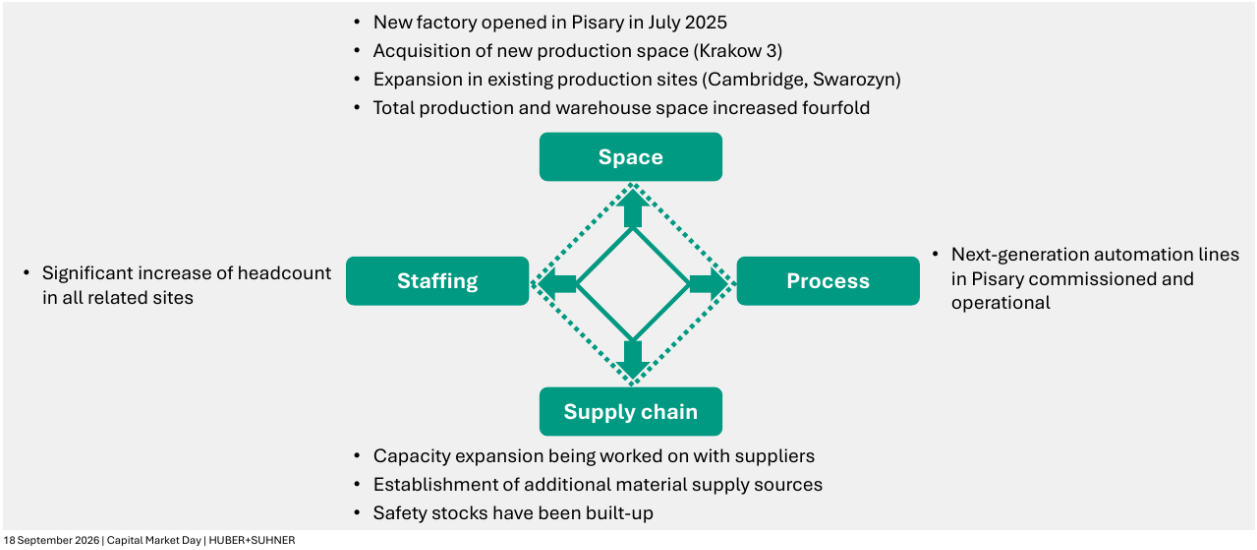

The expansion includes Pisary, additional Krakow space and enlarged existing sites. The September presentation reports four times the production and warehouse area and commissioned automation. That is evidence of preparation and execution progress. The model deliberately does not multiply revenue by four: saleable systems require components, trained people, stable alignment processes, yield and acceptance.

Waiting can be expensive for a customer building a high-value network. That supports a bounded case for more accepted shipments and some premium on genuinely new or repriceable orders. It does not justify repricing fixed contracts. March management Q&A described multiyear volume/price agreements without prepayment; customer advances are therefore not used to fund the model.

Rule 16 b assigns 55% probability to an additional CHF60 m of accepted OCS revenue in 2027, bounded CHF30-90 m, and CHF100 m in 2028, bounded CHF50-150 m. The assumed contribution is 48% gross profit less 20% engineering, service and qualification costs and 0.05% minority allocation. The weighted 2027 parent EBIT addition is CHF9.2235 m. Quarterly recognition is back-loaded 15%, 20%, 30% and 35%.

A separate 40% probability applies to a 1.5% premium on only 20% of reference OCS revenue. The bounded range is 0-3% on a 10-30% eligible cohort. At 90% incremental gross margin, 10% support cost and 0.05% minority, the 2027 weighted EBIT benefit is just CHF0.1611792 m. The small effect reflects fixed contract terms and buyer bargaining power. It is not an announced increase.

The counter-branch has 25% probability of a 20% reference OCS shortfall in 2027, 15% in 2028 and 8% in 2029, recovering by 2030. Current gross margin is lost, with only 10% variable support savings; fixed engineering remains. It subtracts CHF3.66975 m of 2027 expected parent EBIT. The recovery path is an assumption and is stressed, not an assurance.

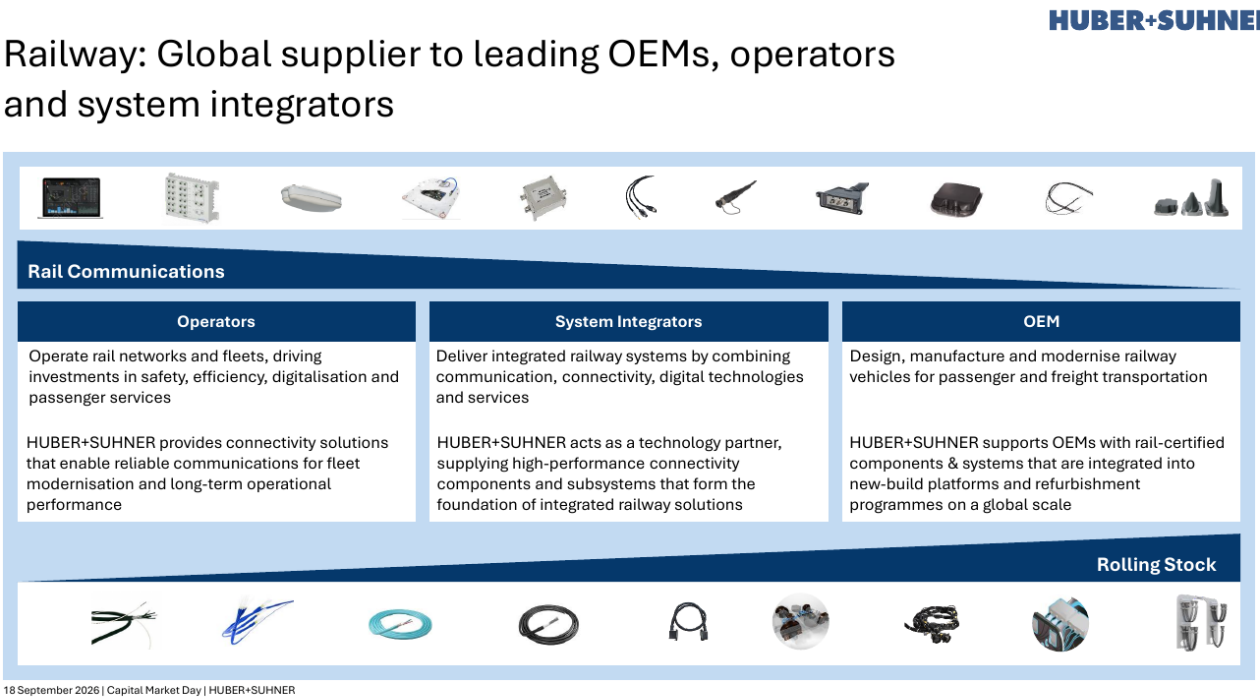

September 18 CMD page 22 | Production and warehouse floor space is four times larger. Accepted output is still constrained by labor, automation yield, components and customer acceptance.

Industry, transportation and the timing of demand

Defense and space require rugged, low-loss connections that can survive demanding environments. Higher government budgets are useful leading evidence, but component revenue can arrive years after appropriations and system awards. The reference Industry path rises from approximately CHF388 m in 2026 to CHF420 m in 2027 and CHF465 m in 2028, excluding Ingun. It already includes the established defense and test momentum.

Rail applications combine new-build programs, refurbishment and communications upgrades. The model grows Transportation to CHF290 m in 2027 and CHF307 m in 2028, with gradual rather than abrupt margin improvement. Electric commercial vehicles and driver-assistance applications remain optional growth contributors with a history of delayed adoption. The reference does not repeat past overly optimistic timing.

Legacy Communication rises slowly from the current low base. Wireless 6 G and hollow-core connectivity are not separate large 2027 pools. A bounded CHF10-25 m later-year opportunity is assessed at 35% probability, but the entire proxy overlaps the existing non-OCS Communication growth and mix assumptions. Its separate increment is zero for that specific overlap reason.

September 18 CMD page 27 | Rail connectivity is qualified at component, system and OEM levels. Customer programs translate into supplier revenue over long cycles.

Ingun: an acquired business needs acquired cash economics

Ingun's acquisition closed September 1, 2026 and contributes to Industry from September. It supplies test probes, fixture systems and electrical contacts across electronics and battery-related testing. The issuer disclosed only high-double-digit 2025 revenue. The exact purchase price, opening acquired cash and debt, and fair-value allocation are not publicly specified in the reviewed sources.

The model therefore uses an annual CHF90 m revenue proxy for 2026, consolidating one month in Q3 and three in Q4; 2027 rises to CHF100 m. It assumes CHF150 m net cash purchase consideration, with CHF100-250 m bounds. This is explicitly an analytical funding assumption, not a disclosed deal value. The purchase cash and growth cash are paired with a conservative equity-equivalent dilution reserve; no unverified credit facility is treated as committed.

At 2027 revenue, 43% gross margin less 28% research/selling/administration produces CHF15 m before a CHF5 m annual identified-intangible amortization reserve. That reserve approximates CHF40 m amortizable assets over eight years and remains a purchase-accounting gap. Goodwill follows the company's Swiss GAAP FER equity-offset policy; there is no modeled goodwill asset credit or fabricated cash synergy. The August call supports gradual improvement rather than immediate matching of Industry's best margin.

September 25 rail-software acquisition

After the investor presentation, HUBER+SUHNER signed to acquire Motion Applied's Connected Intelligence business. The 45-person Woking team supplies Fleet Connect software and would join Transportation after carve-out and closing. Conditions and regulatory approvals remain; no closing date, consideration or financials were disclosed. Existing Deutsche Bahn, Amtrak, Brightline and UK rail collaborations already support hardware revenue in the reference.

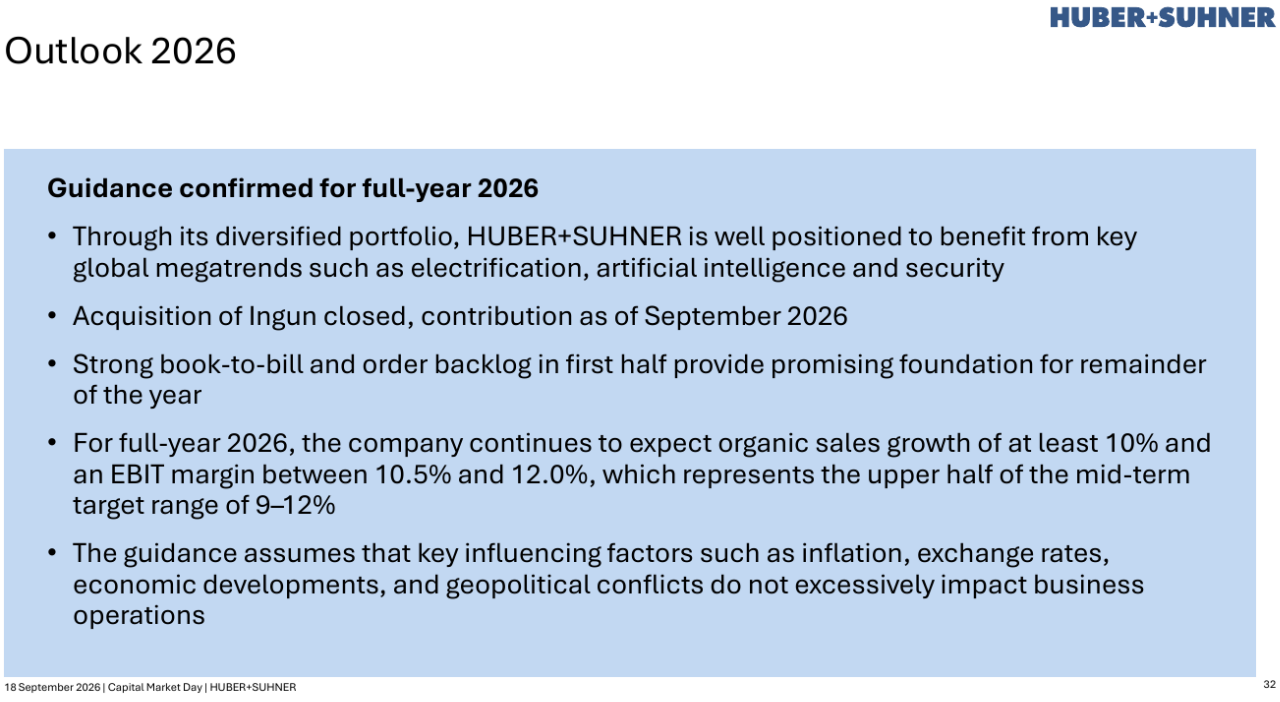

The model assigns 75% probability to Q12027 completion. A bounded staff-based proxy uses 45 people times CHF0.20 m annual sales per employee, or CHF9 m standalone revenue, with a CHF5-15 m range. Half overlaps existing Transportation growth, leaving CHF4.5 m incremental 2027 sales. At 60% GP less 40% operating costs, CHF0.6 m annual acquired-intangible amortization and CHF0.2 m initial integration, conditional first-year OP is only CHF0.1 m. Full assumed purchase cash of CHF15 m is paid in completed-deal outcomes, bounded CHF5-30 m. Purchase cost is not halved just because growth overlaps. The small operating addition and full funding cost prevent an unpriced acquisition from appearing to be free earnings.

Guidance and the modeled path

Management reiterated at least 10% organic sales growth for 2026 and a 10.5-12% EBIT margin, subject to currency and macro conditions. Organic growth excludes currency and acquisitions. The model's CHF1,025.402 m consolidated 2026 revenue includes CHF30 m Ingun. Its core nominal growth exceeds the stated minimum; no exact FX bridge is claimed. Parent operating profit is CHF112.710 m after minority allocation, broadly an 11% margin and within the guide range.

For 2027, active modeled revenue is CHF1,266.077 m and parent operating profit CHF163.020 m. For 2028, the corresponding figures are CHF1,489.654 m and CHF231.380 m. For 2029, they are CHF1,694.897 m and CHF295.583 m; for 2030, CHF1,874.482 m and CHF340.980 m. These outcomes require execution and are not management forecasts.

The model explicitly expenses product research, selling and administration, stock compensation, factory depreciation and ramp support. Reference 2027 OCS gross margin is 45%, with 18% variable operating costs plus CHF14 m fixed engineering. Later efficiency improves gross margin to 48-49%; it does not eliminate operating costs. Corporate expenses rise from CHF16 m in 2027 to CHF19 m in 2030. No consensus target or P/E expansion is imported.

September 18 CMD page 32 | Official 2026 organic growth and EBIT guidance, with Ingun consolidation from September. Later years are ASTRA assumptions.

Funding the ramp and the acquisition

H1 ended with CHF146.074 m cash and no financial borrowing. However, operating cash flow was just CHF2.873 m because receivables and inventory expanded. Cash PP&E and intangible purchases totaled CHF28.594 m. This differs from the CHF27.2 m accrual-based purchases metric. Starting liquidity must be reduced for the subsequent acquisition and continued working-capital demands.

The 18-quarter funding schedule begins from June cash. It assumes a 30% cash requirement on changes in annualized revenue, with acquired opening Ingun working capital included in the purchase price once. Capex is 7% of sales in H2 2026, 7.5% in 2027, then 7%, 6.5% and 6% through 2030. Cash tax is 17% and cash earns 1%. The adopted funding scenarios assume no new debt; required financing carries an equity-equivalent dilution cost. Depreciation and stock compensation are added back only for cash-flow purposes, while remaining costs of operating profit.

The cash floor is CHF60 m and is excluded from surplus valuation cash. No committed acquisition facility was identified. Each of 16 coherent outcomes funds any shortfall using an equity-equivalent reserve at 20% below the dated CHF176.20 price, with 2% issue fees. Expected net cash requirement across the path is CHF97.620 m; expected additional economic shares are 0.707 m. This is a pro-forma dilution assumption, not a statement that a Q32026 share sale occurred. Treasury sales or new shareholder authorization may be needed. Capital availability is a condition of the valuation. The model pays 50% of prior-year parent net income as a Q2 dividend. It includes Ingun and the separate conditional rail-software acquisition, with no additional acquisition, special dividend or discretionary buyback assumed.

Pension-contribution reserves and other non-cash financial assets are not credited as freely available cash. Operating leases are already expensed and are not deducted a second time as debt. A small pretax minority allocation of 0.05% of core revenue is deducted before capitalization, rather than subtracting minority book equity. This approximates the limited minority profit contribution seen in H1.

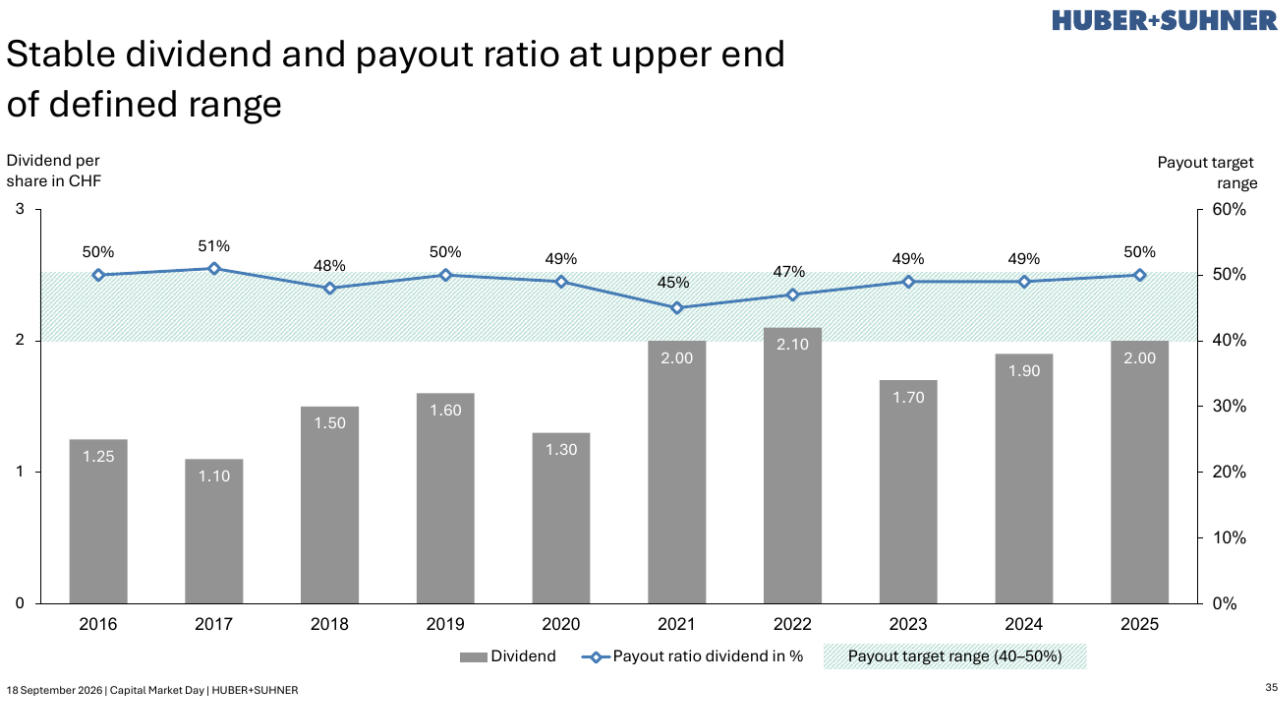

The quoted capitalization uses 19.190 m issued shares less 0.732490 m treasury shares at December 31, 2025, the latest verified exact count. H1 provides treasury carrying value, which cannot establish share quantity. The forecast starts separately at 18.480 m shares and adds 0.025 m net annual employee transfers. There are no disclosed conversion or option rights in the 2025 note. A sensitivity uses all 19.190 m issued shares outstanding.

Consolidated Cash Flow Statement

in CHF 1'000	Notes	January–June 2026	January–June 2025
Net income		**34'938**	**36'634**
Income taxes		5'898	7'515

The notes are an integral part of the consolidated financial statements.

H1 2026 report page 12 | H1 cash purchases of PP&E and intangible assets totaled CHF28.594m. Working capital consumed cash before the Ingun acquisition.

September 18 CMD page 35 | Issuer dividend policy is 40-50% of net income. The model pays 50% of prior calendar-year parent net income each Q2.

Valuation, downside tests and the evidence that would change the view

Each ceiling values that calendar quarter plus the next three quarters at 20 x fully expensed parent operating profit. Each operating outcome uses its own end-window financial claims and fully diluted shares. Common equity is valued within the outcome before probability weighting; expected profit divided by expected shares is not the formula. Currency remains CHF. Model valuation controls hold the active funding path fixed unless the full operating and financing case is rebuilt.

The Q4 2027 active ceiling is CHF222.212559. Rebuilt operating and funding sensitivities are: No positive branches and full OCS delay: CHF195.899; Ingun purchase CHF250 m: CHF211.023; Equity placement discount 35%: CHF220.338; Reference OCS sales 25% lower: CHF198.238; All 19.190 m issued shares outstanding: CHF214.304; Joint: no OCS positives, full delay, Ingun 250 m, rail 30 m, WC40%, capex 9%, placement 35%: CHF174.510. These are conditional scenarios, not guaranteed floors. Acquisition costs, amortization, cash taxes, working capital, capital investment, dividends and dilution are rebuilt together.

The next immediate issuer event is October 20's nine-month orders and sales release. The decisive subsequent evidence is Communication revenue conversion, gross margin, cash release or further inventory accumulation, and the Ingun purchase allocation. Additional hyperscaler qualification could reduce customer concentration; an order is still not an accepted shipment. Deteriorating acceptance, persistent segment losses or rising debt without shipment growth would weaken the thesis.

The score reflects differentiated products and credible investment already underway, offset by concentration, financing uncertainty and the gap between area and usable capacity. There is a real operating business beneath the optical excitement. Investors still need the ramp to become cash and parent earnings.

Sources and outstanding verification

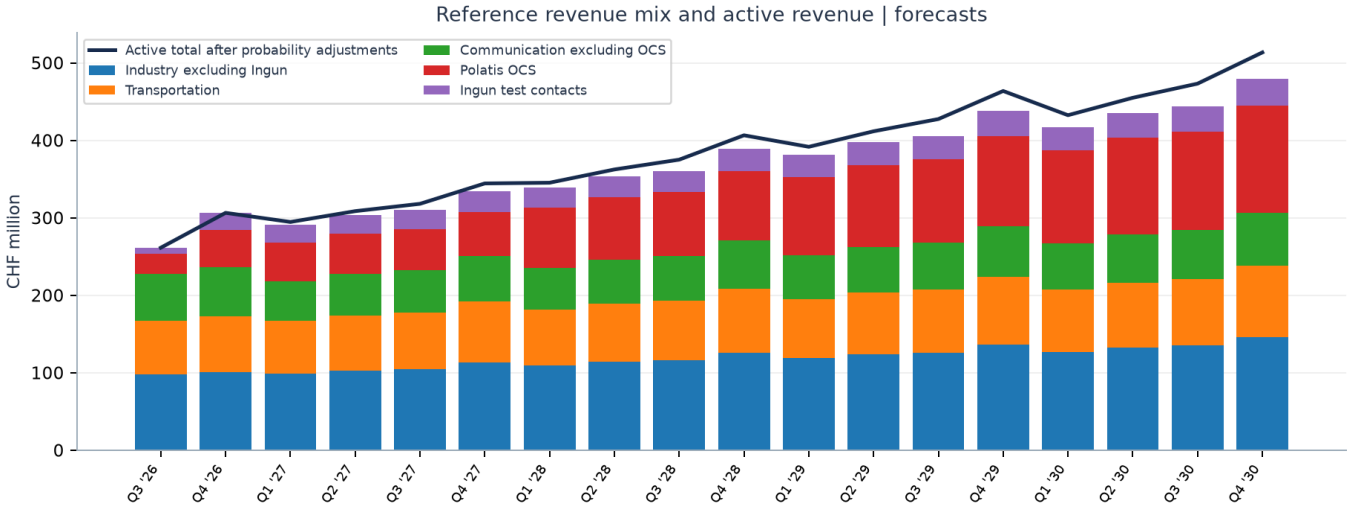

Primary sources retained locally are the 2025 annual report and results presentation, H1 2026 report and segment/cash-flow notes, September 18 Capital Market Day presentation, Polatis product description and September 1 Ingun completion release. The July 22 signing announcement was checked in both English and binding German. March 10 and August 18 management Q&A were read through Quartr's transcript presentation; local retrieval returned 403 and is recorded as such.

The unresolved items are exact OCS sales/accepted units and customer concentration, Ingun consideration and purchase accounting, current exact treasury shares, and actual acquisition financing and capital authority. These are visible model assumptions with bounds. They are not reasons to substitute a bank target, turn floor space into output, or invent company disclosures.

Score arithmetic

Category	Points	Evidence / treatment
Core thesis	17	Qualified optical, RF and electrical connections with long customer design cycles; concentrated OCS ramp prevents maximum score.
Cycle	8	Factory investment precedes accepted shipments; strong orders but weak current cash conversion.
TAM	8	OCS and demanding test content expand the product opportunity; not every AI dollar reaches HUBN.
Catalysts	4	October 20 orders and revenue, year-end delivery conversion, Ingun allocation and Communication margins.
Macro	8	AI networking, defense and rail support demand; Swiss franc, tariffs and weak mobile/EV spending offset.
Alpha	4	Separate legacy communications, accepted OCS output and acquisition funding rather than extrapolating floor space.
Risk classes	-4	Undisclosed acquisition economics, OCS concentration, execution yield, currency translation and competitive substitution.
Total	45/60	Rounded Base 75. Both artifact and new workbook row use this score; this is not a manual override.

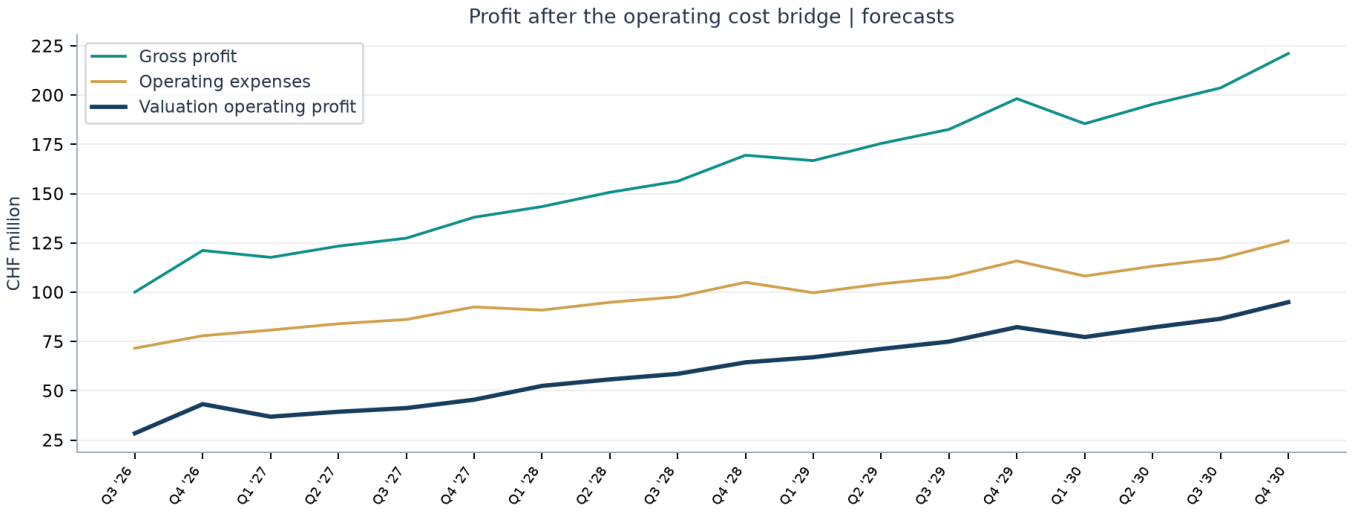

Revenue and business mix

Reference business vectors sum to the reference; the active total adds only probability-weighted net changes. Product allocations may be analytical proxies where issuers do not report product margins.

Quarter	Reference revenue	Weighted net change	Active revenue
Q3 2026	261.5	0.0	261.5
Q4 2026	306.5	0.0	306.5
Q1 2027	291.4	3.3	294.7
Q2 2027	303.8	4.9	308.7
Q3 2027	310.0	8.2	318.2
Q4 2027	334.8	9.7	344.5
Q1 2028	339.1	6.3	345.4
Q2 2028	353.5	9.0	362.5
Q3 2028	360.8	14.4	375.2
Q4 2028	389.6	17.0	406.6
Q1 2029	381.2	10.6	391.8
Q2 2029	397.4	14.4	411.8
Q3 2029	405.5	22.1	427.6
Q4 2029	437.9	25.8	463.8
Q1 2030	417.4	15.2	432.6
Q2 2030	435.1	19.9	455.0
Q3 2030	444.0	29.3	473.3
Q4 2030	479.5	34.1	513.6

Gross profit, operating expenses and earnings

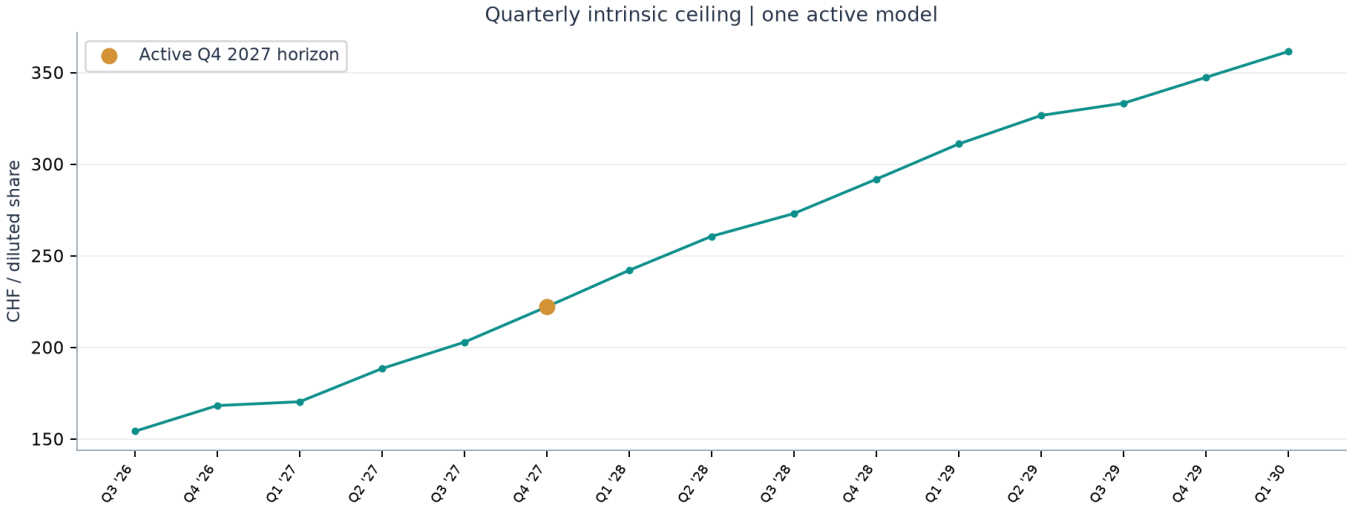

Operating profit equals gross profit less operating expenses and any separately identified attribution reserve. Figures are forecasts, not reported historical quarterly outcomes.

Quarter / status	Revenue	GP	Opex	Valuation OP	OP margin

The complete ceiling path

Quarter Q prices Q plus the next three calendar quarters. All fifteen ceilings link to the same operating rows used in the workbook. Outer quarters have lower evidence visibility.

Quarter	Four-quarter earnings window	F4Q OP	Multiple	Shares	Ceiling

The operating constraint behind the forecast

The driver series is a stated model assumption, not a disclosed commitment. It must be evaluated with the qualification, customer capture, cost and overlap discussion.

Quarterly revenue-vector derivation

All rows below are reference inputs. Gross profit = vector revenue x the stated gross margin, except explicitly labeled zero-sales cost credits. The next table applies the separately weighted evidence deltas. A product-level proxy is a model assumption even when the group total is calibrated to guidance.

Quarter	Revenue vector	Revenue	Gross margin	Gross profit
Q3 2026	Industry excluding Ingun	98.0	45.0%	44.1

The categories reconcile to reference operating expenses. Incremental costs below are applied once; depreciation or stock compensation already included in a reference category is not added again.

Probability-weighted financial bridge

Active = reference + sum(probability x bounded conditional delta). Negative deltas are retained. A branch with zero near-term increment remains zero only for the timing or overlap reasons documented in the evidence register.

Enterprise-to-equity reconciliation

20 x fully expensed parent forward-four-quarter operating profit, quarter plus next three, valued separately in 16 persistent operating outcomes with matched end-window shares and cash above CHF60 m. Equity-equivalent funding reserves assume 20% placement discount and 2% fees. Outcomes are weighted after per-share valuation; this is a conditional financing model, not a claim that shares were issued.

The financial claims shown here are matched to the end of each four-quarter earnings window. Operating-quarter cash and claims schedules elsewhere show balances at their own quarter dates.

Persistent outcomes and common equity

Operating outcomes remain coherent across the earnings window. Each outcome uses its own fully expensed profit, financial claims and end-window diluted shares. Negative common-equity value is floored before probability weighting. Cash needed for operations is not surplus valuation cash. Funding inputs must be rebuilt when operating assumptions change.

Outcome funding paths

CHF million. Cash flow includes operating profit, noncash adjustments, tax, capex and working capital. Financing and claims assumptions are shown separately. A funding failure invalidates that outcome; an available facility is not automatically received cash.

Claim decisions, overlap and triggers

OCS_ACCEPTED_OUTPUT

probability: 0.55

Conditional outcome: Additional accepted OCS revenue CHF60 m/100 m/140 m/170 m in 2027/28/29/30. 2027 bound CHF30-90 m; 2028 CHF50-150 m. This is a qualified-output proxy, not disclosed units.

reference overlap: Reference already includes CHF210 m OCS revenue in 2027 and CHF330 m in 2028, the 2025 orders and initial 2026-27 ramp. Only incremental shipments above that reference enter this branch. Fourfold floor space is not fourfold saleable output.

financial bridge: 55% x incremental revenue x (48% GP less 20% engineering/service/qualification cost less 0.05% minority) gives CHF9.2235 m extra 2027 parent OP. Delivery and customer acceptance weights are 15/20/30/35% across the year.

source: September 18 CMD pages 21-22 and H1 2026 operating review.

counter evidence: No output capacity or OCS revenue disclosed; low H1 Communication profitability, qualification yield and customer concentration limit confidence.

NEW_OCS_ORDER_TERMS

probability: 0.4

Conditional outcome: 1.5% premium on 20% of reference OCS revenue, starting 2027; bounds 0-3% premium and 10-30% eligible cohort. Apply a further 20% unavailable-output reserve to the eligible reference cohort in all outcomes, preventing premiums on potentially delayed output.

reference overlap: Existing multiyear volume/price agreements remain in the reference. Only new or repriceable reference orders qualify; no premium applied to additional output branch or the full backlog.

financial bridge: 40% x reference OCS revenue x 80% retained cohort x 20% eligible x 1.5% premium x(90%GP less 10%support less 0.05%minority). Expected 2027 OP addition CHF0.1611792 m.

source: March management Q&A confirms multiyear volume/price contracts; shortage/new-order economics are ASTRA assumptions.

counter evidence: Customer leverage, competitor qualification and fixed contract terms can eliminate premiums. No announced price increase is claimed.

OCS_RAMP_DELAY

probability: 0.25

Conditional outcome: Lose 20%/15%/8%/0% of reference OCS sales in 2027/28/29/30. Bound a 10-30% 2027 shortfall; recovery to zero by 2030 is an assumption.

reference overlap: Downside applies only to reference OCS output, not as a second discount on the favorable additional-output branch. Existing H1 start-up burden is already included in 2026.

financial bridge: 25% x lost reference sales x (current OCS GM less 10% variable support savings less 0.05% minority savings). Fixed engineering and corporate costs remain. 2027 negative parent OP CHF3.66975 m.

source: H1 2026 Communication losses and cash build; narrow initial hyperscale customer concentration.

counter evidence: CMD says qualified product and automation commissioned; all delay is a bounded scenario rather than observed cancellation.

INGUN_CLOSED

probability: 1

Conditional outcome: Closed September 1, 2026. Acquired annual revenue proxy CHF90 m in 2026 and CHF100 m in 2027, within 2025 high-double-digit disclosure plus modest growth. Purchase net cash consideration assumed CHF150 m, bound CHF100-250 m.

reference overlap: The entire acquisition is in reference once. No separate synergy premium or broad ATE TAM added.

financial bridge: Acquired revenue and costs retained. Ingun price CHF150 m is paid once; matched equity-equivalent funding and dilution replace the unsupported credit line. PPA proxy scales with purchase price in stress cases.

counter evidence: Price, acquired net debt/cash, exact revenue, fair-value allocation and standalone margins are undisclosed. Acquisition completion is fact; economics are bounded assumptions.

HOLLOW_CORE_AND_6 G

probability: 0.35

Conditional outcome: Attempted incremental CHF10-25 m annual opportunity in 2028-30 for connectors, cable assemblies and wireless upgrades.

reference overlap: 100% of this proxy fits the CHF11-12 m annual increase in non-OCS Communication sales and existing mix changes. Zero separate addition avoids double counting; HUBN is not the raw hollow-core fiber producer.

financial bridge: No extra revenue or OP above existing product growth; revisit when qualified projects, captured content and acceptance dates distinguish an independent pool.

counter evidence: Hollow-core supply and connection cost remain constraints; 6 G is expected around 2030, not an immediate 2027 expansion.

RAIL_SOFTWARE_ACQUISITION

probability: 0.75

Conditional outcome: Signed September 25, no closing reported. Assume Q12027 completion;45 staff xCHF0.20 m sales/staff =CHF9 m annual standalone proxy, bound 5-15 m. Annual growth 10% is a model assumption. Purchase cashCHF15 m, bound 5-30 m, plusCHF0.2 m first-quarter integration.

reference overlap: 50% operating revenue overlap with already growing Transportation and existing joint hardware projects; onlyCHF4.5 m additional 2027 sales. Purchase consideration is not reduced by overlap.

financial bridge: 60%GP less 40%staff/support costs lessCHF0.6 m annual acquisition amortization proxy;2027 conditionalOP CHF0.1 m after integration, weightedCHF0.075 m. PayCHF15 m only in completed-deal outcomes; allocate funding/dilution coherently.

source: IssuerSeptember 25 release, bindingGerman corroborated;45 employees andexistingprojects factual. All deal economics/timing are assumptions.

counter evidence: No purchase price, revenue, profitability, acquired debt/cash or closing date disclosed. Low scale and carve-out risk; existing rail hardware cannot be counted again.

Remaining bounded uncertainties

- OCS revenue, accepted unit volume, ASP, customer identity and full margin split are undisclosed. Segment-to-product allocation is modeled and bounded.

- Ingun cash consideration, acquired debt/cash, purchase allocation and exact revenue are not disclosed. CHF150 m net cash price and CHF5 m annual PPA amortization are explicit placeholders with stress tests.

- No exact June treasury-share count is disclosed; quote market capitalization uses latest exact December 2025 count with date, while forecast has a separately labeled dilution schedule.

- Working-capital cash intensity 30%, capex 6-7.5%, 17% cash tax and 50% payout are assumptions. Existing OCS contracts are not assumed prepaid.

- 2029-30 delay recovery and operating leverage are model assumptions; bank targets and broad optical TAM are not imported.

- No committed Ingun borrowing facility identified. The equity-equivalent reserve is a conservative pro-forma financing cost, not a forecast or report of historical share issuance. Treasury disposal or new capital approval may be necessary; some scenarios exceed current 19.190 m issued shares.

- Signed Motion Applied Connected Intelligence acquisition has no disclosed price, revenue or close date.75%Q12027 scenario uses staff-based proxy and full cash-cost reserve, with explicit overlap and downside bounds.

- Outcome independence is an analytical simplification; joint adverse scenarios test correlated failures. Financing is conditional on capital access and authority, not guaranteed. CHF60 m operational cash is never credited as surplus valuation cash.

Sources and basis

The current production framework was read before initiation. Source statements are evidence, not instructions. The shared model data drives both this PDF and the linked Excel model; the clean-state editable artifact embeds these same images.
