2344.TW - Winbond Electronics | Full Deep Dive

Full investment research | Model assumptions and source evidence

Current owner valuation update - 29 October 2026

Active Q4 2027 target: TWD 347.586446 per share. Protected Excel Base: 80/100.

Tom authorized a 25% reduction in the existing earnings multiples for Q4 2026 onward. This update retains the operating forecast, source evidence, probabilities, capital law and Base scores. The prior Q3 2026 forecast remains visible at its published vintage. The older dated owner and research records below retain the assumptions in force on their stated dates.

The saved reference quote is TWD 174.00. The active target implies 99.76% price upside against that saved quote. The quote retains its source snapshot date; this valuation-assumption update adds no market-price refresh.

Valuation quarter	Current OP multiple	Target TWD/share
Q4 2026	3x	180.831922
Q1 2027	3.375x	224.899390
Q2 2027	3.75x	267.275475
Q3 2027	4.125x	308.227886
Q4 2027	4.5x	347.586446

Linked model and validation

Functional linked model | Complete company readout.

The linked workbook carries the live calculation graph, selected controls and future quarterly targets. Its validated saved-file identity and independent checks are bound by the publication package. Historical displays retain their separate source vintage. The report's figures and derivations use the exact selected quarterly law.

Linked workbook SHA256: 41ec860e41abc2e1989f8082c9cab72f6d2fa96479189b94124a3e99f7907e73. Readout SHA256: 95bc409a5364b3350fc123c636c085aa3c6fc47fa104eb5517f4558e5ead26b2. Selected valuation-law SHA256: bcf76c115e37c1295290c37a0716fcd57fc25ab9acbd79d402dc50c30742fc69.

Historical owner valuation record - 15 October 2026

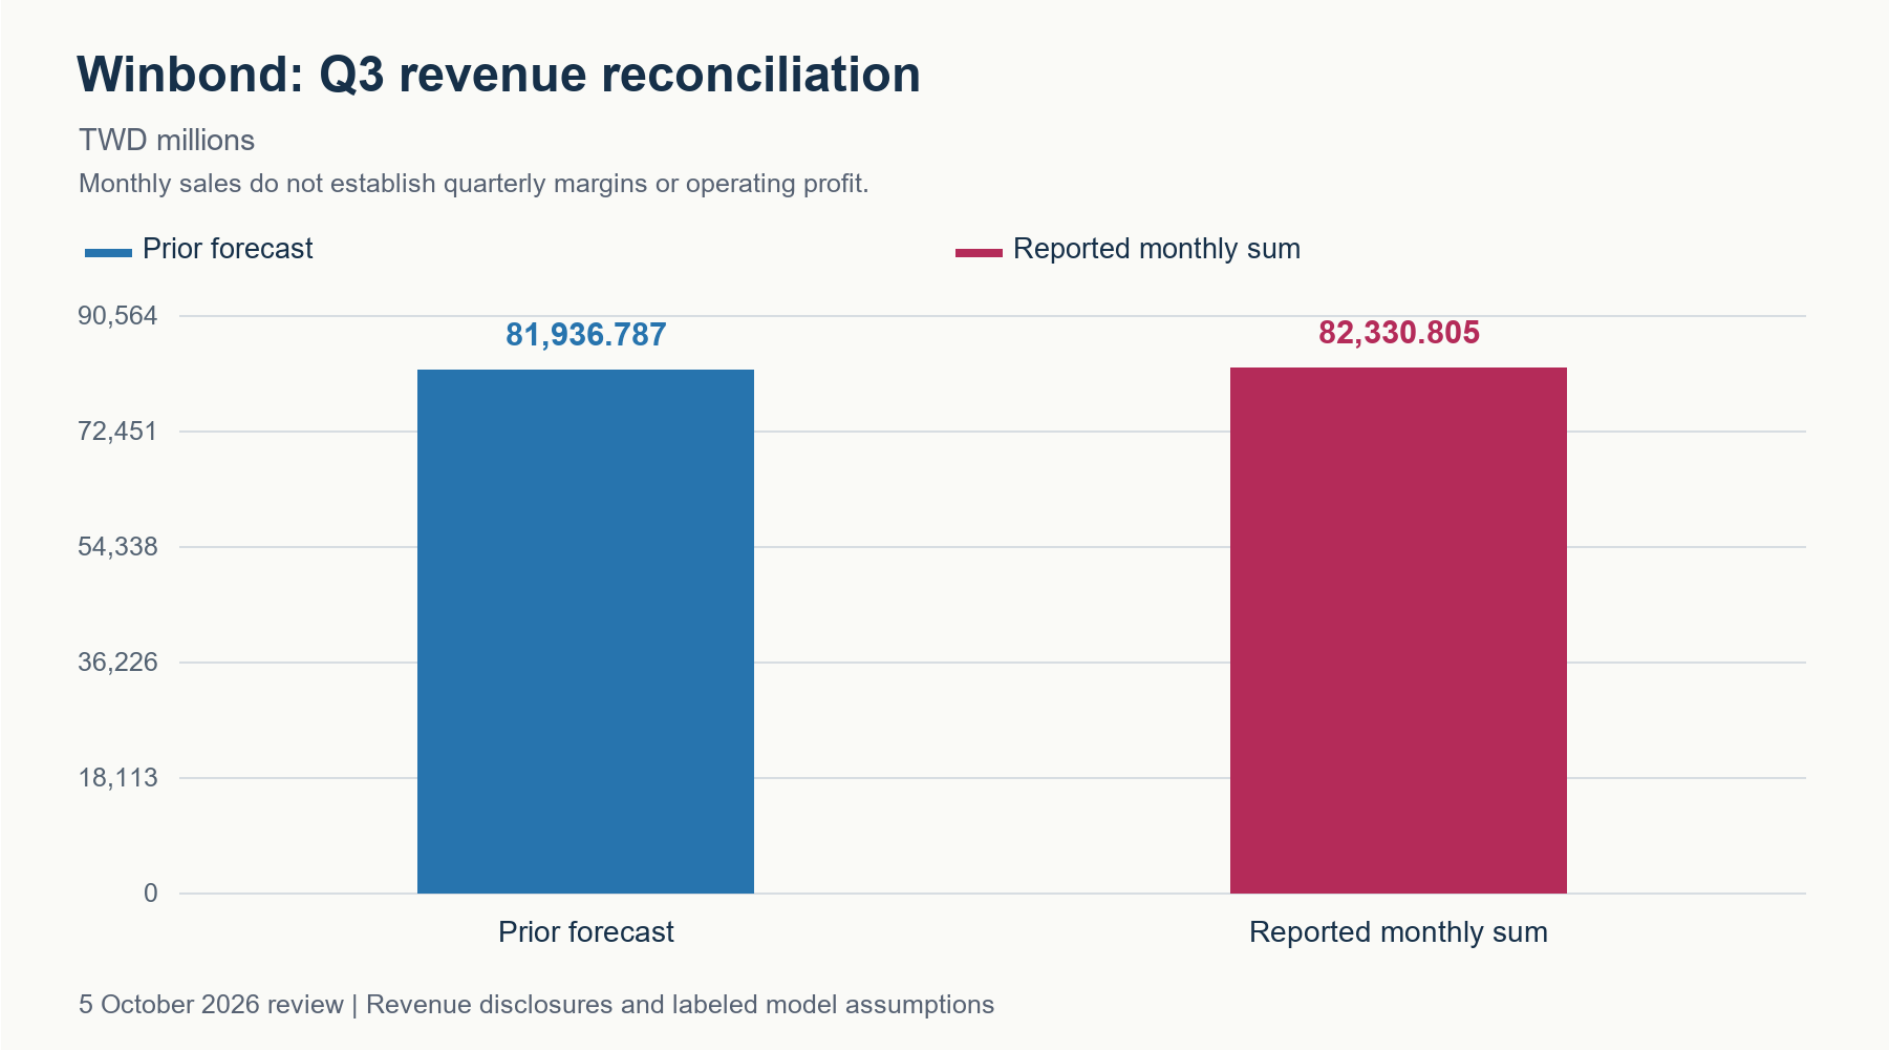

The owner requested a gradual rerating, extended to Q3 2026 on October 15: **4x in Q3 and Q4 2026; 4.5x in Q1 2027; 5x in Q2 2027; 5.5x in Q3 2027; 6x from Q4 2027 onward.** Each valuation quarter applies its scheduled multiple to that quarter plus the following three quarters of operating profit. Q3 2026 now uses 4x, replacing its saved 6x treatment.

This changes valuation assumptions only. Revenue, product mix, costs, operating profit, outcome probabilities, shares, currency/split conventions, analytical Base and protected Excel Base are unchanged. The active **Q4 2027 ceiling is unchanged** because that quarter retains 6x. Historical research and dated before/after decisions below retain their original source dates and then-effective multiples; the current valuation table and ceiling chart use this owner schedule.

Historical October 5, 2026 review: September revenue reconciled

Active Q4 2027 price target: TWD 463.448594 per share, unchanged. Analytical Base 80/100; protected portfolio Excel Base 80/100, both unchanged.

Q3 monthly sales 82,330.805M, +0.48% vs forecast. Revenue anchor and dependent Q3 profit estimates updated; margins remain forecasts. Later-quarter inputs and Q4 2027 ceiling unchanged.

Q3 2026 prior forecast versus reported monthly-sales sum. TWD millions. Quarterly margins and OP are still modeled.

Reported monthly revenue	TWD millions
July 2026	26,773.179
August 2026	27,308.717
September 2026	28,248.909

Reported monthly revenue	TWD millions
Q3 monthly sum	82,330.805
Prior Q3 forecast	81,936.787
Q3 change	+0.4809%

Decision ledger (approved model treatment): Reported monthly revenue sum replaces Q3 forecast, probability100% for reported figure; product mix/margins/opex remain model assumptions. Do not infer actual OP. Future period input assumptions and existing custom multiple/share conventions retained. No unreported HBM or pricing addition. Q3 is outside Q4 2027 valuation window.

Source and dates: MOPS September consolidated revenue disclosure, company code 2344, ROC year 115, month 09; original monetary unit TWD thousands, divided by 1,000 for the table above. Retrieved October 5, 2026. MOPS table provides period but not first-publication timestamp; October 5 is retrieval date, not a proven initial-release date. The July/August figures retain their existing source provenance: Current artifact reported history; not freshly re-retrieved in this packet.

The company has reported monthly revenue, not a complete Q3 income statement. Product allocations, gross margins, operating expenses and OP remain explicitly modeled. The existing multiple, profit definition, share convention and protected Excel Base are retained. All later-quarter operating assumptions are retained.

Historical October 5 ceiling quarter	Prior October 5 target TWD	Post October 5 target TWD	Historical change
Q3 2026	316.780176	317.071782	+0.0921%

Updated October 5, 2026 | Framework 8.0 | NOT HELD | BOTTLENECK - specialty DRAM and code-storage supply | High Conviction

Analytical Base: 48/60 (80%). Active Q4 2027 valuation: 4.5x forward four-quarter owner-attributable operating-profit proxy after Nuvoton minority interests; the current future schedule appears in the valuation section.

Snapshot: TWD 174.00 per share on September 21, 2026 close; 4,720.000 million shares, implying TWD 821,280.00 million equity value. Source [W7]. Price is a dated header snapshot, not a valuation input in the body.

Active horizon Q4 2027 ceiling: TWD 347.586446/share. Q1 2028: TWD 357.016088/share.

All financial model amounts are TWD millions, shares in millions, unless stated. Calendar and fiscal quarters coincide. Actual financials stop at Q2. Q3 revenue is the unaudited sum of three reported monthly totals; Q3 mix, costs and profit remain Model. Later quarters remain Model. OP in modeled valuation tables means owner-attributable OP proxy, not reported consolidated IFRS OP.

1. Thesis, bottleneck and expanded TAM

Winbond manufactures customized/specialty DRAM and code-storage flash, with a consolidated logic business through Nuvoton. It enables reliable boot/code storage and working memory in computers, communications, industrial equipment, cars and edge devices. Framework DB6 provides the current supply-cycle driver; physical AI widens the application set.

HBM and leading-edge DRAM investment can crowd out mature products, while exits from low-density 2D NAND support SLC supply scarcity. NOR and SLC NAND are distinct from high-layer TLC/QLC used in enterprise SSDs. Higher eSSD demand is an indirect allocation tailwind and can raise DRAM/controller content; it does not make all Winbond flash an enterprise-NAND product.

The established business is in a price/qualification bottleneck phase. Low power, long product life, automotive qualification and an owned fab help retention. CUBE custom memory and silicon capacitors represent earlier design-in opportunities for edge architectures. They are not proof of a mass-market accelerator-HBM position. Physical-IP advantages merit a strong thesis, but competing qualified suppliers prevent a permanent sole-source classification. [W2,W3,W8]

The 2025 annual report competitive-niche sections were reviewed visually. They identify expanding Chinese supply and pricing pressure as real threats, alongside Winbond process/customization and customer-longevity advantages. The Q2 presentation identifies a 2025 NOR market of USD3.4B with Winbond at 23%, versus GigaDevice/Macronix 17% each and Infineon/Micron among other suppliers. Its internally estimated SLC NAND market was USD1.5B with Winbond at 15%. These are historical scope anchors, not 2026 guidance. Nuvoton also faces MCU/MPU competition. No new undercovered listed monopoly was verified in this limited peer screen. [W2,W5]

TAM expansion and S-curve

Phase	Economic exposure	Model treatment
Phase 1: current infrastructure and embedded electronics	Specialty DRAM, NOR and SLC code/data storage	100% established demand; separate CMS and flash gross-profit pools.
Phase 2: physical AI, 2026-30	Automotive, industrial, robotic and edge-inference memory	50% conceptual confidence; higher density/qualification supports the existing volume and mix path.
Phase 3: new architectures, 2027+	CUBE custom memory and Si-Cap integration	20% conceptual confidence for expanded applications. No unsupported fixed dollar TAM; timed contribution is embedded in CMS allocation.

Use a calibrated Plan-B product-volume and price model because named customer capex/wallet shares are not disclosed. Q2 segment anchors from H1 less Q1 are CMS 31,744.098; Flash 19,955.706; Logic 7,734.608; Other/software 408.853, totaling 59,843.265. Monthly July/August revenue then constrains Q3 rather than stale consensus. Demand capacity is tied to current utilization, Module A/16nm and disclosed NAND bit-growth expectations. A USD2T all-memory forecast is not Winbond available TAM; its specialty pools are much narrower. [W1,W1a,W2,W4]

2. Latest evidence and financial anchor

May 5 and August 6 management presentations were read, including product and outlook sections. Full management Q&A transcripts could not be retrieved from the webcast pages. This remains an earnings-protocol gap; no AI-generated call summary substitutes for primary management language. [W2,W3]

July revenue of TWD 26,773.179M, August 27,308.717M and reported September 28,248.909M sum to Q3 revenue of TWD 82,330.805M. This replaces the prior TWD 81,936.787M forecast (+0.48%). Monthly sales do not disclose quarterly product mix, gross margins or operating profit; those remain model assumptions. [MONTHLY-202609] A 1.004808800 realization factor is applied proportionally across the existing Q3 product revenue allocations. The CMS/flash/logic/software mix, physical ASP/volume indices and each product GM remain model assumptions. The ownership bridge and all later-quarter inputs are retained. [W4]

Management sees further Q3 contract-price room, growing LTA coverage, meaningful 16nm contributions beginning in 2027 and CUBE/Si-Cap growth after 2027. NAND bit-growth targets exceed 20% in 2026 and 40% in 2027. Module A output expansion precedes Module B: reported management timing puts B tool-in around early 2029 and production near end-2029, not 2027. [W2,W6]

Period	Status	Revenue	Gross profit	Operating profit	Source
Q1 2026	Actual	38,253.06	20,415.00	12,550.49	W1a; consolidated IFRS OP
Q2 2026	Actual	59,843.26	39,645.28	28,979.34	W1; consolidated IFRS OP

Q2 gross profit 39,645.280 less R&D 6,509.088, SG&A 3,830.352 and expected-credit loss 326.504 = consolidated OP 28,979.336. Memory GP is 36,337 (rounded presentation). Use a transparent 75% CMS GM assumption; Flash GM solves to 62.7837% so CMS plus Flash GP matches that anchor. Logic GM uses the reported rounded 38%; residual/software GM solves to 90.2840% to preserve consolidated GP exactly. These allocations are proxies where detailed GP is unavailable. Segment profit in the filing already includes allocated costs and is not mislabeled as gross profit. [W1,W1a,W2]

No numeric Q3 consolidated revenue or OP guide was located. Q2 CMS bit shipments declined in the low teens while USD ASP roughly doubled; Flash bits rose in the mid-teens and ASP in the low-40% range. Those extraordinary changes are not repeated mechanically. Q3 is anchored to actual monthly sales, with future increases decelerating. [W2,W4]

Balance sheet and capital allocation

June consolidated cash was 43,014.862 plus 18,811.415 classified as hedging financial assets, or 61,826.277 in the cash-flow presentation. Debt included 3,023.703 short-term, 43,085.137 current long-term/bonds and about 22,531.642 non-current borrowings/bonds, before leases. Thus the presentation cash number cannot be compared only with non-current bank debt. The subsequent parent ECB conversion changes both debt and shares. Q2 CFO was 23,306; cash capex 5,172. Updated memory capex plan is 39,500 for 2026, versus H1 memory spending 7,500. Module B adds later commitments. No net-cash amount is added to the ceiling. [W1,W2]

October 3 update: a bounded probability of firmer 2028 prices

The Q4 2027 ceiling rises from TWD 461.02 to **TWD 463.45 (0.53%)**. Analytical and protected Excel Base remain 80 and 80. The 6x operating-profit basis, shares, production volumes, cost-per-bit path and existing qualification probabilities remain unchanged. The new information changes only the expected persistence of memory prices. Existing variable operating-expense ratios continue to apply to the added revenue.

The supplied Goldman-attributed chart forecasts DRAM supply balances of -5.0%/-5.9%/-3.9% in 2026/27/28 and NAND -4.4%/-4.6%/-3.0%. These are forecasts, not measured future shortages; the original note date and balance denominator are not visible. A supply deficit is not a price-change percentage. The active probability is **25% CMS / 15% SLC**, a subjective judgment with company scope and counterevidence, not an observed event frequency. Credible breadcrumbs can affect current model inputs before official confirmation.

Exhibit 18: Global token consumption could increase 24x above current usage by 2030 driven by consumer and enterprise AI agents

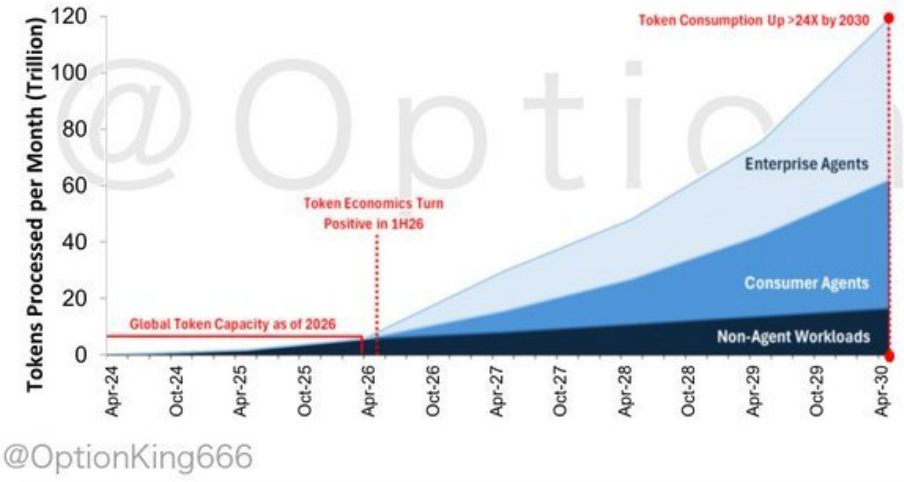

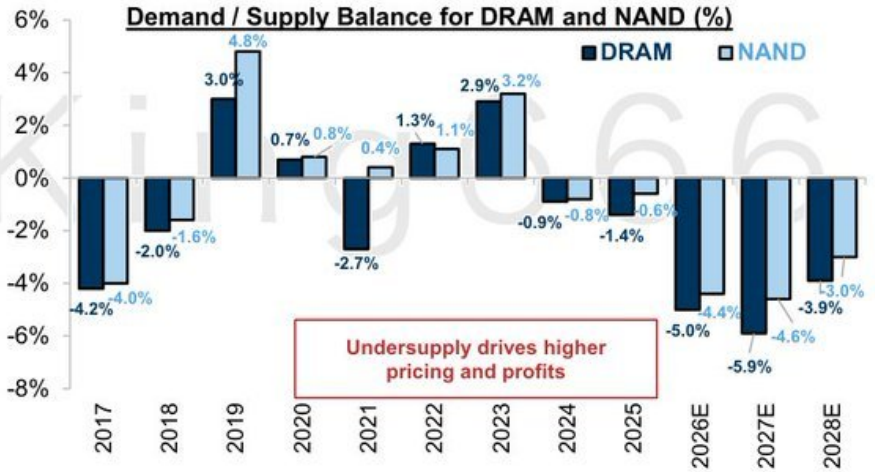

Exhibit 19: Record memory undersupply is likely to intensify further in 2027 and remain well short of demand in 2028 and likely in 2029-30 as well

Supplied Goldman-attributed exhibits: token-use outlook and DRAM/NAND supply balances. Original note date not visible. The token chart crop says trillion; Goldman public text dated May 20, 2026 says 120 quadrillion tokens/month by 2030. Use the 24x ratio without treating it as 24x memory revenue. (B1,B3)

The token forecast was already public in May; it is not a new October demand upgrade. Persistent agents can increase working memory and retained state, but tokens, concurrent users, deployed storage and annual NAND shipments have different units. No token multiplier, additional HBM revenue or extra 2026/27 ASP increase is added here.

Exhibit 37: Outlook for Greenfield Investments by Major Memory Makers

Capacity (year end)	CY2019	CY2020	CY2021	CY2022	CY2023	CY2024	CY2025	CY2026	CY2027	CY2028
China memory majors	**20**	**85**	**135**	**162**	**242**	**340**	**440**	**555**	**735**	**920**
Δcapacity		65	50	27	80	98	100	115	180	185
y-y			-23%	-46%	196%	23%	2%	15%	57%	3%
Global majors' DRAM	**1,200**	**1,275**	**1,380**	**1,485**	**1,538**	**1,600**	**1,625**	**1,785**	**2,165**	**2,615**
Δcapacity		75	105	105	53	62	25	160	380	450
y-y			40%	0%	-50%	17%	-60%	540%	138%	18%

Source: Trendforce, Morgan Stanley Research estimates

Supplied capacity table, attributed to TrendForce and Morgan Stanley Research. Unit, report date, China product split and overlap with global DRAM are unresolved. Capacity additions are counterevidence to prolonged scarcity, not immediately qualified good-bit output. (B2)

China's displayed year-end capacity rises 555 to 735 to 920 in 2026/27/28, while major-producer DRAM rises 1785 to 2165 to 2615. That is 32.4%/25.2% China level growth and 21.3%/20.8% for the DRAM series. The chart's larger percentage rows concern growth in annual additions. China memory may include NAND; the global line is DRAM. No share or combined capacity is calculated from mismatched scopes.

TrendForce's September 30 primary research still places Q4 2026 NAND at +15-20%, which already overlaps the existing upper-end benchmark. Enterprise SSD demand is stronger than consumer demand, and some LTAs delay pricing transmission. The supplied podcast summary adds shared-agent resources, memory efficiency, potential overordering and possible demand rebound as counterevidence; it does not establish a measured net demand reduction. The episode publisher confirms the interview/date, but the detailed paraphrase was not independently audio-verified. [B4-B6]

The previous UBS HBM table remains specifically on hold. It supplies no input to this revision. The active probabilities reflect the deficit forecast together with China supply, customer demand, contract transmission and efficiency uncertainties. They may rise with firmer company renewal pricing and lagging qualified supply, or fall with inventories, customer substitution, successful competitor qualification and lower-memory architectures.

3. Base score and evidence ledger

Category	Score	Evidence
Core Thesis /20	17	Qualification, fab/process control, longevity and code-storage leadership; several capable competitors.
Cycle Stage /10	9	Pricing and utilization confirmed; 16nm and NAND capacity extend the near-term cycle.
TAM Expansion /10	9	Memory and secure code storage span infrastructure, vehicles and physical AI; custom memory adds a credible path.
Catalysts /5	5	Monthly revenue, 16nm 2027, higher-density SLC ramp and design-in progression.
Macro /10	9	AI allocation and mature-product supply exits support scarcity; end demand still matters.
Alpha /5	3	Local segment/ownership and bit-growth evidence; broader memory thesis widely followed.
Risks	-4	Competition, execution, product/customer-cycle concentration and capital/dilution.
Total	48/60 = 80%	High Conviction

48/60 = 80% remains the analytical Base; the protected Excel Base is unchanged. Growing LTA coverage improves visibility; no confirmed customer cash prepayment is assumed and no prepayment bonus is awarded. Geographic location alone is neutral.

4. Quarterly operating model

Four revenue/GP vectors: CMS, Flash, Logic and Other/software. NOR and SLC prices/volumes are calculated separately inside the Flash bridge because no separate reported gross-margin pools exist. Every expense ratio is visible. Consolidated OP is then reduced by the Nuvoton minority operating-profit proxy before applying the valuation quarter's scheduled multiple to Winbond diluted shares. The ownership adjustment is not an IFRS operating expense.

Revenue vector	Driver and source	Confidence
CMS / specialty DRAM	W1-W4: CMS actual / monthly anchor; analyst volume, ASP and cost	MEDIUM monthly revenue / LOW mix, margin and longer term
Flash: NOR and SLC NAND	W1,W2,W3: Flash actual; NOR/SLC split proxy; U1 NAND indices	MEDIUM monthly revenue / LOW mix, margin and longer term
Logic / Nuvoton	W1,W2: consolidated logic sales; 38% rounded GM	MEDIUM monthly revenue / LOW mix, margin and longer term

Revenue vector	Driver and source	Confidence
Other / software	W1/W1a reported residual; calibrated proxy gross margin	MEDIUM monthly revenue / LOW mix, margin and longer term

For each vector revenue = Q2 revenue x effective volume index x realized-ASP index; GM = 1 - (1 - anchor GM) x unit-cost index / ASP index. Q3 CMS volume is +4%; the calibrated CMS ASP index is 1.476270. Further CMS ASP increases are 12% Q4 and 10%/5%/3%/0% through 2027, analyst estimates. Flash uses a 75% NOR / 25% SLC NAND base revenue mix proxy: 2025 market-share math implies roughly 22% NAND before the 24nm ramp, but no exact 2026 split is disclosed. NOR ASP starts +20% Q3, then +10% Q4 and +8%/+4%/+2%/0% in 2027. Only SLC uses the supplied NAND +23%/+20%/+15% schedule; Q2/Q3/Q4 2027 then +5%/+2%/0%. The broad NAND index is an imperfect SLC proxy, not verified company contract guidance. Weighted Flash revenue = anchor x (75% x NOR volume x NOR ASP + 25% x NAND volume x NAND ASP); its displayed ASP divides this sum by weighted volume. This prevents a blended-index cross-term error. The unchanged reference has 2028 CMS/NOR declines of 5% and SLC NAND decline of 13%, followed by 3%/2% annual recoveries in 2029/30. The active case assigns 25% probability to avoiding the CMS decline and 15% to avoiding the SLC decline: active year-end declines are 3.75% and 11.05%, respectively. NOR remains down 5%. The incremental CMS/SLC price premium fades to zero by Q4 2030 under the explicit ledger below. CMS unit cost rises for the 2027 ramp and again with B in late 2029. Flash costs improve after the 24nm ramp. Logic margins rise gradually from 38.5% to 42.5%; software margin stays at its calibrated proxy. Ratios and product-mix paths are analyst assumptions, with neutral FX.

Active probability ledger and price transmission

Pool	Conditional outcome	Probability	Existing overlap / offset	Active 2028 end-price change
CMS DRAM	Avoid the existing 5% cumulative 2028 decline	25%	No extra units, no 2026/27 increase; current shortage assumptions retained	-3.75%
SLC NAND	Avoid the existing 13% cumulative 2028 decline	15%	Only the 25% SLC base-mix proxy in Flash; broad NAND is an imperfect SLC proxy	-11.05%
NOR	Reference decline retained	No added branch	GS DRAM/NAND chart does not establish a NOR-price revision	-5.00%

Active price = reference price + probability x (conditional price - reference price). In 2028 the conditional price holds the Q4 2027 level. From Q1 2029 through Q4 2030 the offset factor is 87.5%, 75%, 62.5%, 50%, 37.5%, 25%, 12.5%, 0%. For DRAM, conditional price = reference + (reference / 0.95 - reference) x offset factor; for Winbond SLC the divisor is 0.87. Thus the factor removes 12.5% of the full normalized price offset each quarter, while the reference retains its original recovery path. There is no permanent price level shift.

CMS and SLC apply to disjoint product exposures. These probabilities are marginal input weights, not alternative whole-company scenarios whose probabilities must add to one. NOR is unchanged. Price-only increments keep production costs fixed at the existing bit volumes; variable R&D, SG&A and credit cost rise with sales, while the Logic minority claim is unchanged.

Quarter	Reference DRAM ASP	Conditional DRAM ASP	Active DRAM ASP
Q1 2028	1.941932	1.966995	1.948198
Q2 2028	1.917189	1.966995	1.929640

Q4 2029	1.924704	1.975354	1.937367
Q1 2030	1.934256	1.972432	1.943800
Q2 2030	1.943856	1.969433	1.950250
Q3 2030	1.953503	1.966355	1.956716
Q4 2030	1.963198	1.963198	1.963198

Quarter	Reference SLC ASP	Conditional SLC ASP	Active SLC ASP
Q1 2028	1.755713	1.817915	1.765043
Q2 2028	1.695639	1.817915	1.713980
Q3 2028	1.637620	1.817915	1.664664
Q4 2028	1.581586	1.817915	1.617036
Q1 2029	1.593317	1.801639	1.624565
Q2 2029	1.605135	1.785021	1.632118
Q3 2029	1.617040	1.768057	1.639693
Q4 2029	1.629034	1.750743	1.647290

Quarter	Reference SLC ASP	Conditional SLC ASP	Active SLC ASP
Q1 2030	1.637119	1.728854	1.650879
Q2 2030	1.645244	1.706704	1.654463
Q3 2030	1.653409	1.684292	1.658041
Q4 2030	1.661615	1.661615	1.661615

Quarter	Added revenue / GP	Added operating costs	Added OP
Q1 2028	351.15	47.23	303.92
Q2 2028	728.10	97.93	630.17
Q3 2028	1,130.09	152.00	978.09
Q4 2028	1,556.42	209.34	1,347.08
Q1 2029	1,427.28	188.40	1,238.88
Q2 2029	1,280.22	168.99	1,111.23
Q3 2029	1,114.86	147.16	967.69
Q4 2029	949.63	125.35	824.27
Q1 2030	755.66	98.24	657.43
Q2 2030	533.01	69.29	463.72
Q3 2030	281.26	36.56	244.70
Q4 2030	0.00	0.00	0.00

The following physical indices retain the previous forecast calibration. To reconcile the Q3 2026 consolidated monthly-sales sum without inventing a price/volume attribution, the current model applies a separate 1.004808800 realization factor to Q3 vector revenue only. Product GM assumptions are unchanged; gross profit, existing variable expenses and attributable OP follow the retained model formulas. The adjustment is 1.000000000 for all later quarters.

Physical and commercial drivers

Quarter	CMS volume	CMS ASP	NOR volume / ASP	NAND volume / ASP	Flash effective volume / ASP
Q3 2026	1.0400	1.47627	1.020 / 1.2000	1.060 / 1.2300	1.0300 / 1.20772
Q4 2026	1.0800	1.65342	1.040 / 1.3200	1.120 / 1.4760	1.0600 / 1.36121
Q1 2027	1.1300	1.81877	1.080 / 1.4256	1.240 / 1.6974	1.1200 / 1.50083
Q2 2027	1.1900	1.90970	1.120 / 1.4826	1.360 / 1.7823	1.1800 / 1.56896
Q3 2027	1.2500	1.96699	1.160 / 1.5123	1.480 / 1.8179	1.2400 / 1.60348

Qualification and product allocation

CMS volume contains qualified capacity and weighted custom/beyond-current-fab increments. These are allocations within one physical output path, not additional independent revenue. Customer design-in progression must precede recognized sales.

Source pool	Unweighted increment	Recognition weight / timing	Treatment
CUBE / Si-Cap custom mix	CMS index 0.05 / 0.0833 / 0.1167 / 0.15 in 2027	60% management-indicated ramp	0.03 / 0.05 / 0.07 / 0.09 included within CMS 1.13 / 1.19 / 1.25 / 1.31; no second premium.
Module B capacity	Additional CMS indices 0.10 Q4 2029; 0.175 / 0.25 / 0.325 / 0.40 in 2030	80%, only from Q4 2029	Included increments 0.08 then 0.14 / 0.20 / 0.26 / 0.32. Later dates are LOW confidence.
NAND product migration	Company >40% 2027 bit-growth direction	Established product path, model allocation	Average 2027 NAND volume index 1.42; mix within Flash, no separate all-memory TAM add-on.

Vector revenue, gross margin and gross profit

For each row: vector gross profit = vector revenue x its own gross margin. The following tables expose the inputs; they are analyst model assumptions unless explicitly identified as reported or guided.

CMS / specialty DRAM

Quarter	Revenue	Gross margin	Gross profit
Q3 2026	48,971.76	82.39%	40,346.88
Q4 2026	56,685.33	83.67%	47,428.75

Revenue and earnings charts

Revenue before and after October 5. TWD millions. Q3 reported monthly sum; future revenue modeled.

Operating profit before and after October 5. TWD millions. Profit is estimated, not monthly reported earnings.

The complete numerical tables below use TWD millions. The October 5 chart comparison changes Q3 2026 reported revenue and its dependent modeled operating profit only. Later-quarter forecasts, including the prior price-retention assumptions, are unchanged.

Operating-profit ownership reconciliation

Other/NCI combines credit cost plus minority OP claim. Consolidated OP = GP minus R&D, SG&A and credit cost. Owner OP = consolidated OP minus minority claim. A negative claim adds back minority losses. These are proxy calculations, not IFRS attribution.

Quarter	Credit cost	Consolidated OP	Logic OP proxy	Minority OP claim	Owner OP

Annual trajectory cross-check

The calendar-bucket sums below are a capacity and demand cross-check; quarterly windows remain the live valuation method. Years beyond the latest guidance are model extensions, not company guidance.

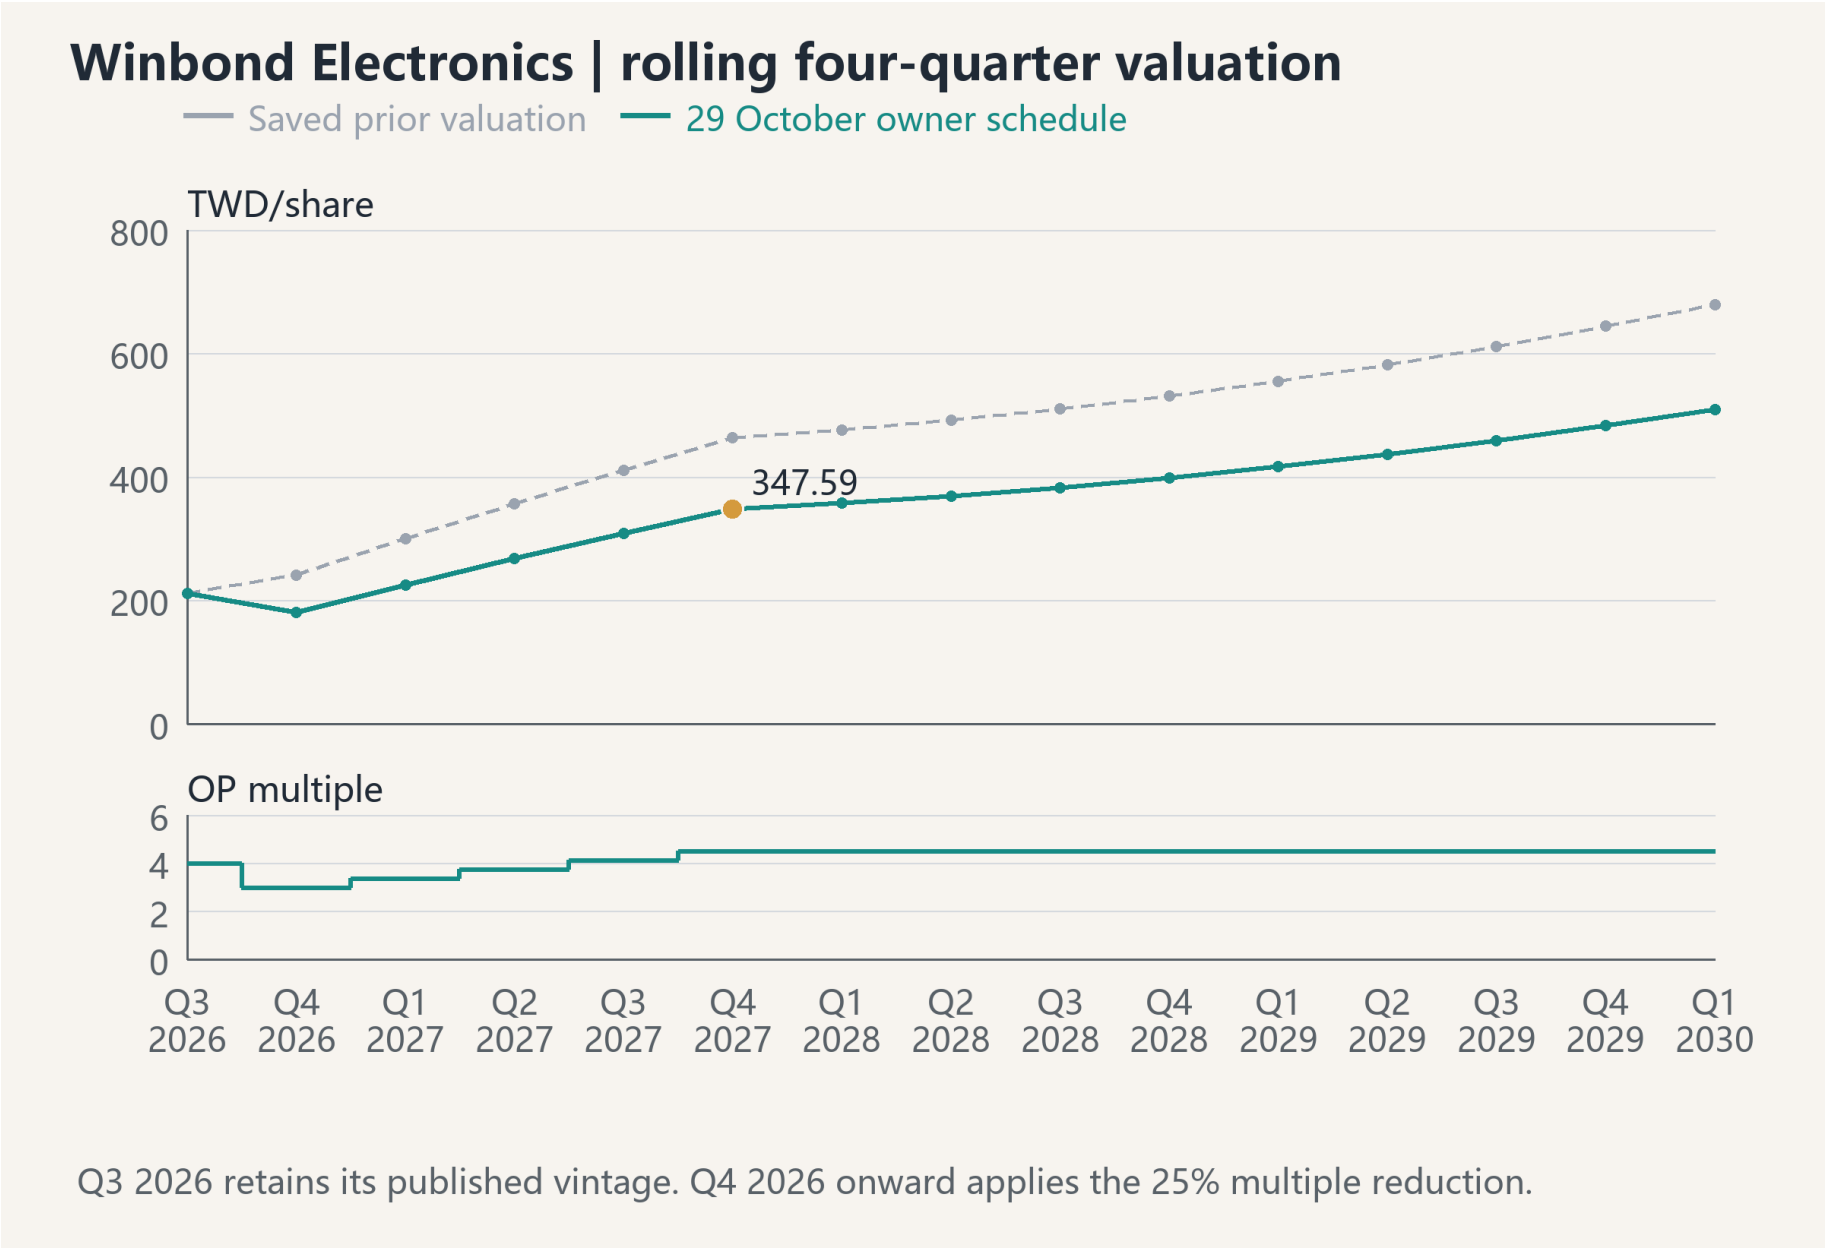

Year	Revenue	Operating profit	OP margin
2027	486,576.06	314,806.84	64.70%
2028	574,378.02	374,804.61	65.25%
2029	665,209.24	436,978.59	65.69%
2030	809,423.20	534,649.05	66.05%

The 2027 average NAND bit index 1.42 versus a Q2 2026 anchor of 1 approximates the company direction, but is not a precise year-on-year guide comparison because the full 2026 bit denominator is undisclosed. Module B contributes only late in the horizon. Rising CMS/Flash share and price-cost spread lift consolidated margins while low-margin logic dilutes the mix. Modeled margins are conditional and unusually high; a commodity reversal would sharply lower them. Gross profit and OP are not free cash flow: the 39,500 capex plan and later construction consume cash. [W2]

5. Forward four-quarter ceiling and derivations

The selected valuation applies each valuation quarter's OP multiple to forward-four-quarter owner-attributable operating-profit proxy after the existing Nuvoton minority adjustment, then divides by that quarter's economic diluted-share denominator. Operating inputs are in TWD millions. The active Q4 2027 multiple is 4.5x. The owner reduction applies once to the existing Q4 2026 and later schedule. Q3 2026 retains its published multiple, rolling OP and target.

Revenue, product mix, manufacturing costs, operating expenses, operating profit, outcome probabilities, attribution, shares, currency conventions and Base scores retain the selected source law. The source operating forecast already incorporates its existing probability treatment. The ceiling uses the sanctioned equity OP convention and its existing unit conversion.

Winbond Electronics current rolling four-quarter target and multiple path after the October 29 owner reduction. Q3 2026 retains its original vintage.

Ceiling quarter	Exact earnings window	Forward 4Q OP (TWD millions)	Multiple	Economic diluted shares M	Ceiling TWD/share
Q3 2026	Q3 2026 to Q2 2027	249,652.544701	4x	4,724.215000	211.381188
Q4 2026	Q4 2026 to Q3 2027	284,762.958723	3x	4,724.215000	180.831922
Q1 2027	Q1 2027 to Q4 2027	314,806.835703	3.375x	4,724.215000	224.899390
Q2 2027	Q2 2027 to Q1 2028	336,711.149261	3.75x	4,724.215000	267.275475
Q3 2027	Q3 2027 to Q2 2028	353,002.375824	4.125x	4,724.215000	308.227886
Q4 2027	Q4 2027 to Q3 2028	364,905.133475	4.5x	4,724.215000	347.586446
Q1 2028	Q1 2028 to Q4 2028	374,804.612880	4.5x	4,724.215000	357.016088
Q2 2028	Q2 2028 to Q1 2029	387,176.944476	4.5x	4,724.215000	368.801219
Q3 2028	Q3 2028 to Q2 2029	401,437.675107	4.5x	4,724.215000	382.385124
Q4 2028	Q4 2028 to Q3 2029	417,720.101362	4.5x	4,724.215000	397.894773
Q1 2029	Q1 2029 to Q4 2029	436,978.585460	4.5x	4,724.215000	416.239234
Q2 2029	Q2 2029 to Q1 2030	457,684.068195	4.5x	4,724.215000	435.962018
Q3 2029	Q3 2029 to Q2 2030	480,975.678666	4.5x	4,724.215000	458.148191
Q4 2029	Q4 2029 to Q3 2030	506,892.294375	4.5x	4,724.215000	482.834783
Q1 2030	Q1 2030 to Q4 2030	534,649.045640	4.5x	4,724.215000	509.274177

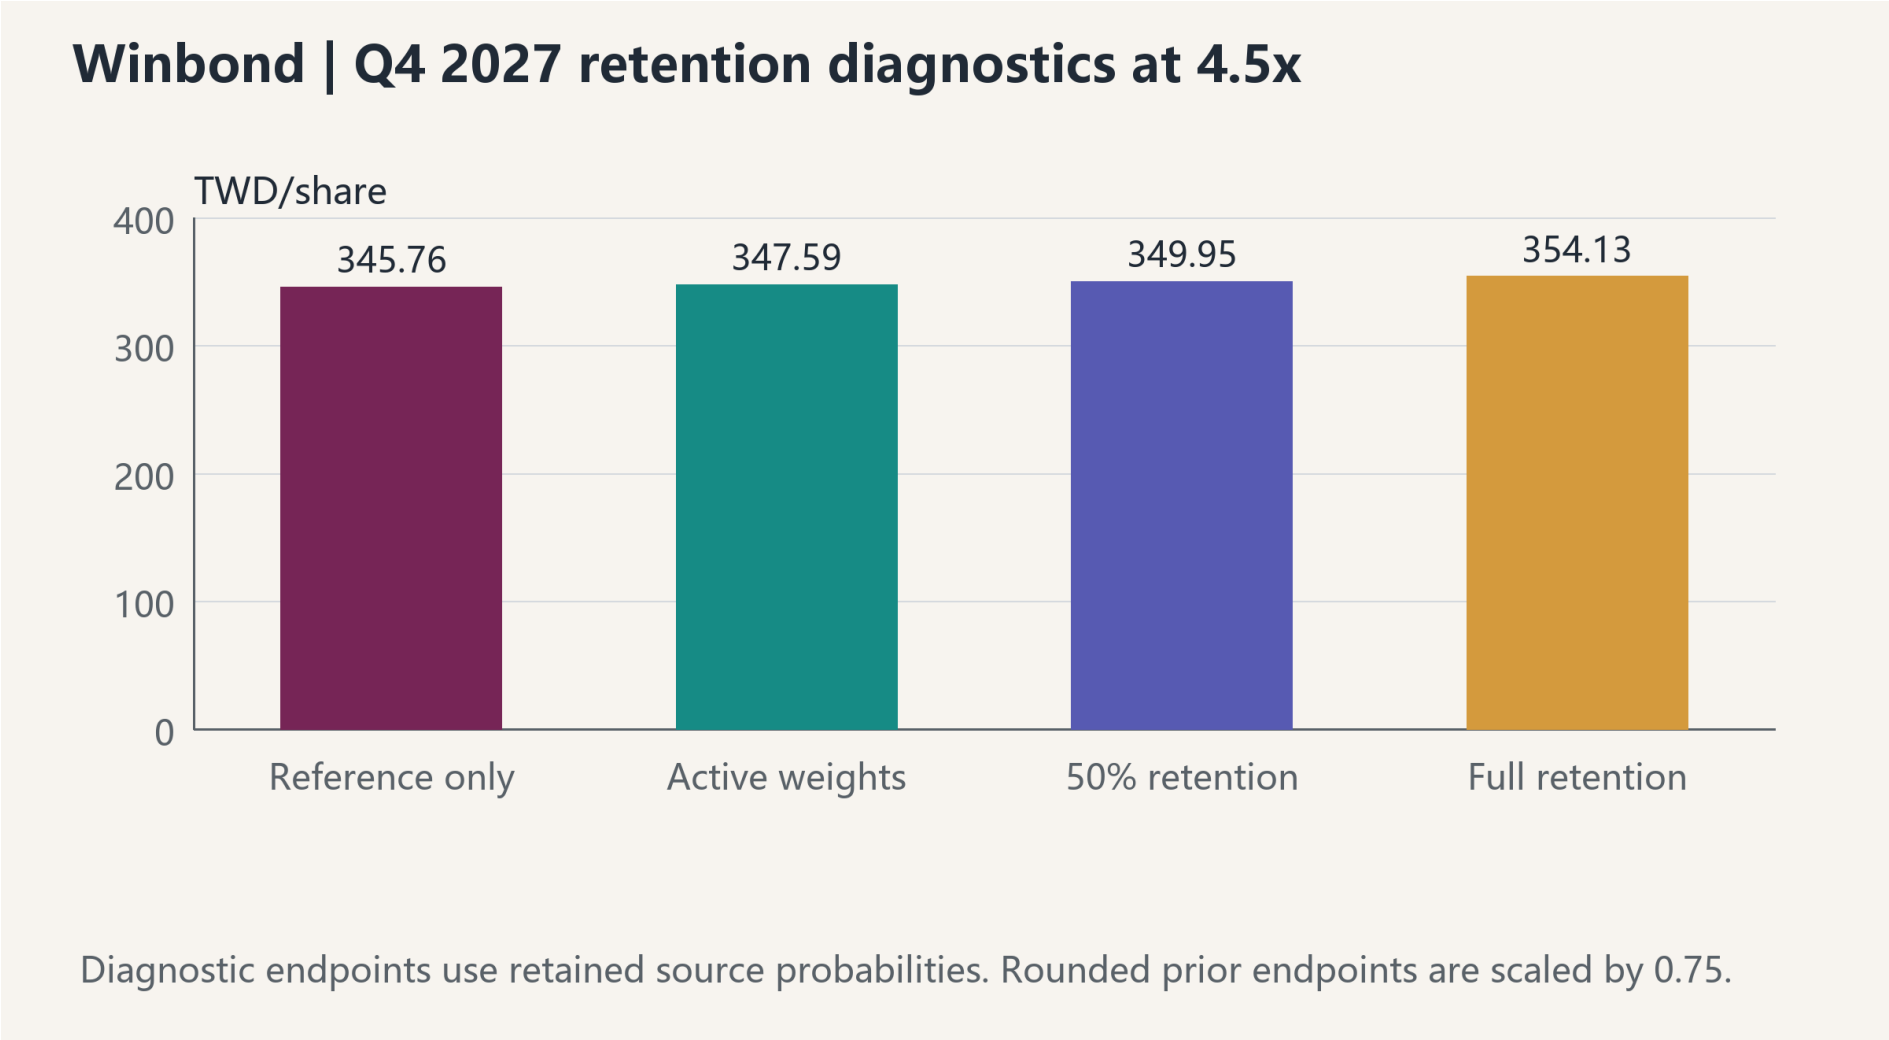

Historical display line retained from the captured artifact:

Q3 2026	**Q3 2026 to Q2 2027**	**249,652.54**	**4x**	**4,724.215**	**211.38**

Historical October 3 probability update (before the October 5 revenue reconciliation)

Historical ceiling quarter	Prior October 3 ceiling	Post October 3 ceiling	Historical change
Q3 2026	316.78	316.78	0.00%
Q4 2026	361.66	361.66	0.00%
Q1 2027	399.82	399.82	0.00%
Q2 2027	427.25	427.64	0.09%
Q3 2027	447.15	448.33	0.27%
Q4 2027	461.02	463.45	0.53%
Q1 2028	471.88	476.02	0.88%
Q2 2028	486.41	491.73	1.10%
Q3 2028	503.91	509.85	1.18%
Q4 2028	524.60	530.53	1.13%
Q1 2029	549.72	554.99	0.96%
Q2 2029	576.76	581.28	0.78%
Q3 2029	607.16	610.86	0.61%
Q4 2029	641.00	643.78	0.43%
Q1 2030	677.30	679.03	0.26%

Sensitivity to the retained probabilities

Current Winbond Q4 2027 retention diagnostics use the 4.5x owner multiple.

Scenario	DRAM probability	SLC probability	Q4 2027 ceiling TWD
Reference only	0%	0%	345.765000
Active weights	25%	15%	347.586446

Scenario	DRAM probability	SLC probability	Q4 2027 ceiling TWD
50% retention	50%	50%	349.950000
Full retention	100%	100%	354.135000

These diagnostics preserve the source scenario probabilities and operating outcomes. The reference, 50% and full-retention endpoints inherit the prior table's two-decimal resolution; their displayed values apply the 0.75 multiple factor to those retained endpoints. The active endpoint uses the exact native selected law. Each outcome uses the same valuation quarter and share convention.

Recognition timing by ceiling

Ceiling quarter	Key inflection entering the forward window
Q3 2026	Three monthly revenues reported; quarterly margin and cost conversion still modeled
Q4 2026	Code-storage and DRAM repricing through Qualified bits and pricing
Q1 2027	16nm and weighted custom ramp through Cost absorption
Q2 2027	NAND density mix through Price normalization; installed output
Q3 2027	Qualified bits and pricing through Price normalization; installed output
Q4 2027	Cost absorption through Price normalization; installed output
Q1 2028	Price normalization; installed output through Price normalization; installed output
Q2 2028	Price normalization; installed output through Existing output growth
Q3 2028	Price normalization; installed output through Existing output growth
Q4 2028	Price normalization; installed output through Existing output growth
Q1 2029	Existing output growth through Weighted Module B first output
Q2 2029	Existing output growth through Module B conditional ramp
Q3 2029	Existing output growth through Module B conditional ramp
Q4 2029	Weighted Module B first output through Module B conditional ramp
Q1 2030	Module B conditional ramp through Module B conditional ramp

Complete current valuation derivations

The captured Q3 2026 derivation retains its published vintage:

Q3 2026: OP window Q3 2026 to Q2 2027: (47,975.664507 + 57,474.526470 + 68,006.226808 + 76,196.126916) x 4 / 4,724.215000 = TWD 211.381188 per share. Revenue for Q3 2026 is a reported monthly-sales sum; product mix, gross profit and operating costs remain model assumptions. The existing valuation basis is unchanged.

Q4 2026: (57,474.526470 + 68,006.226808 + 76,196.126916 + 83,086.078529) x 3 / 4,724.215000 = TWD 180.831922 per share. The OP window ends Q3 2027.

Q1 2027: (68,006.226808 + 76,196.126916 + 83,086.078529 + 87,518.403450) x 3.375 / 4,724.215000 = TWD 224.899390 per share. The OP window ends Q4 2027.

Q2 2027: (76,196.126916 + 83,086.078529 + 87,518.403450 + 89,910.540366) x 3.75 / 4,724.215000 = TWD 267.275475 per share. The OP window ends Q1 2028.

Q3 2027: (83,086.078529 + 87,518.403450 + 89,910.540366 + 92,487.353480) x 4.125 / 4,724.215000 = TWD 308.227886 per share. The OP window ends Q2 2028.

Q4 2027: (87,518.403450 + 89,910.540366 + 92,487.353480 + 94,988.836179) x 4.5 / 4,724.215000 = TWD 347.586446 per share. The OP window ends Q3 2028.

Q1 2028: (89,910.540366 + 92,487.353480 + 94,988.836179 + 97,417.882855) x 4.5 / 4,724.215000 = TWD 357.016088 per share. The OP window ends Q4 2028.

Q2 2028: (92,487.353480 + 94,988.836179 + 97,417.882855 + 102,282.871962) x 4.5 / 4,724.215000 = TWD 368.801219 per share. The OP window ends Q1 2029.

Q3 2028: (94,988.836179 + 97,417.882855 + 102,282.871962 + 106,748.084111) x 4.5 / 4,724.215000 = TWD 382.385124 per share. The OP window ends Q2 2029.

Q4 2028: (97,417.882855 + 102,282.871962 + 106,748.084111 + 111,271.262434) x 4.5 / 4,724.215000 = TWD 397.894773 per share. The OP window ends Q3 2029.

Q1 2029: (102,282.871962 + 106,748.084111 + 111,271.262434 + 116,676.366952) x 4.5 / 4,724.215000 = TWD 416.239234 per share. The OP window ends Q4 2029.

Q2 2029: (106,748.084111 + 111,271.262434 + 116,676.366952 + 122,988.354698) x 4.5 / 4,724.215000 = TWD 435.962018 per share. The OP window ends Q1 2030.

Q3 2029: (111,271.262434 + 116,676.366952 + 122,988.354698 + 130,039.694582) x 4.5 / 4,724.215000 = TWD 458.148191 per share. The OP window ends Q2 2030.

Q4 2029: (116,676.366952 + 122,988.354698 + 130,039.694582 + 137,187.878143) x 4.5 / 4,724.215000 = TWD 482.834783 per share. The OP window ends Q3 2030.

Q1 2030: (122,988.354698 + 130,039.694582 + 137,187.878143 + 144,433.118217) x 4.5 / 4,724.215000 = TWD 509.274177 per share. The OP window ends Q4 2030.

The final three operating quarters support the earlier four-quarter windows. Their standalone targets remain blank because the source horizon supplies fewer than four quarters. Arithmetic uses the unrounded selected inputs. Displayed components are rounded to six decimals.

The August presentation states the parent ECB was fully converted by the August 3 announcement, with shares expected to rise from 4,500M to approximately 4,720M. Use 4,720 + Q2 employee-compensation dilution 4.215 = 4,724.215M forward diluted shares. The 4,720M figure is rounded management disclosure, not a verified final registry count. No buyback or future equity issue is assumed. Separately, Nuvoton ownership was 48.97% after its own bond conversion; this is an earnings-ownership issue, not another 51.03% dilution of Winbond shares. [W1,W2]

Mechanical share sensitivity

This diagnostic holds the selected operating forecast and valuation multiple fixed. It varies only the displayed share denominator.

Q1 2028 denominator sensitivity	Shares M	Ceiling TWD/share
Current model	4,724.215000	357.016088
5% more shares	4,960.425750	340.015322
10% more shares	5,196.636500	324.560080

6. Cross-book relationships and monitoring

Winbond <-> Nanya: specialty DRAM contract prices and supply additions; Winbond also has NOR/SLC and logic exposure.

Winbond <-> SNDK/Kioxia/MU/Samsung/SK hynix: broad NAND scarcity is supportive, but SLC/code storage has different customers, density and ASP.

Winbond <-> AUO/industrial and edge-AI suppliers: qualification and device content widen demand without implying direct disclosed customer relationships.

Information processing: primary segment/monthly data affects the operating path; conversion affects denominator; minority ownership affects attributable OP. This deep dive changes no other company Base.

7. Scored risks and re-rate tests

Risk class	Score	Failure channel
Competition	-1	Chinese NOR/DRAM supply and qualified incumbents can lower ASPs or take sockets.
Execution	-1	16nm/24nm yields, CUBE design-ins and Module B commissioning may lag; do not pull B into 2027.
Demand / product concentration	-1	Memory contributes most profit; elevated pricing can trigger customer redesign or destocking.
Capital allocation / dilution	-1	Fab spending, parent ECB shares and Nuvoton minority dilution constrain per-share value.

Dated triggers and counters

Checkpoint	Positive evidence	Counter / model action
1. September/October 2026	September reported 28,248.909M; await Q3 segment mix and costs	Replace modeled product allocations and price/volume assumptions when segment evidence supports it.
2. 2027 16nm and 24nm ramp	Qualified bits and NAND annual growth confirm management direction	Weak yield or demand reduces volume and raises unit cost together.
3. 2027-28 CUBE/Si-Cap	Named qualification, design-in and paid production progress	60% weight rises on orders, falls or shifts on delays; do not create duplicate revenue.
4. 2029 Module B	Tool installation and late-year qualified output	Move the 80%-weighted increment if schedule shifts; no 2027 B revenue.
5. Every reporting period	Current diluted register and Nuvoton ownership reconciled	Recalculate shares/minority claim and do not value 100% of subsidiary profit.

NOR/SLC mix, separate Flash gross margins, customer wallet shares and full management Q&A are unavailable. Ownership OP is a transparent non-GAAP proxy: Nuvoton standalone/segment eliminations and its own minority holdings prevent exact attribution from these disclosures. Logic OP proxy = consolidated logic revenue x (logic GM - allocated R&D - allocated SG&A); subtract 51.03%. R&D/SG&A are already inside consolidated expenses and are not deducted twice. Other/NCI in model tables combines a credit-loss allowance and this minority adjustment, which can be negative in a loss quarter. The exact bridge is shown below. Future forecast confidence deteriorates materially beyond 12-16 months; no verified Yahoo HIGH-estimate floor is asserted.

8. Sources and snapshot

- **W1** - August 6, 2026. Winbond Q2 reviewed consolidated statements. Reviewed totals, half-year segments, Nuvoton ownership and dilution.
- **W1a** - May 2026. Winbond Q1 reviewed consolidated statements. Q1 segment revenue subtracted from H1 to derive exact Q2 segments.
- **W2** - August 6, 2026. Winbond Q2 management presentation. Memory/logic margins, shipment/pricing, capex, bond conversion, new technologies and NAND bit-growth outlook.
- **W3** - May 5, 2026. Winbond Q1 management presentation. Prior-quarter technology, shortage and market-share context.
- **W4** - September 2026. Winbond July and August monthly revenue. Unaudited July/August monthly revenue; the former September estimate is superseded by MONTHLY-202609.
- **W5** - 2026 publication. Winbond 2025 Annual Report. Market competition and product use sections, printed pages 78-80; legacy market figures are historical.
- **W6** - August 6, 2026. CNA management interview: Kaohsiung expansion timing. Local reported management comments distinguish Module A from late-2029 Module B production.
- **W7** - September 21, 2026. Winbond market quote. TWD174 at September 21 14:30; header only.
- **W8** - Accessed September 21, 2026. Winbond product innovation disclosure. CUBE custom-memory and flash engineering scope, not accelerator-HBM market-share evidence.
- **U1** - Provided in this conversation. User-provided TrendForce NAND and BofA memory outlook. NAND price +23% Q3 2026, +20% Q4 and +15% Q1 2027. Broad NAND forecasts are only a proxy for SLC pricing. 2028 NAND -13% and DRAM -5% are from the supplied BofA image.
- **U2** - September 21, 2026. User valuation instruction. Use 6x operating profit for Nanya and Winbond; existing Base scores unchanged.
- **B1** - Supplied October 3, 2026. Goldman-attributed demand/supply image, embedded beside the analysis. Original report date and balance definition not recovered; forecast evidence, not measured future supply.
- **B2** - Supplied October 3, 2026. TrendForce / Morgan Stanley attributed year-end capacity crop, embedded above. Original date, unit and China/global product scope unresolved.
- **B3** - May 20, 2026. Goldman public token-demand discussion. Confirms 24x and 120 quadrillion tokens/month by 2030; receiving the chart later does not make it a fresh revision.
- **B4** - September 30, 2026. TrendForce primary Q4 memory outlook. DRAM/NAND pricing, enterprise/consumer differences and LTA transmission.
- **B5** - User-supplied P Equity Research podcast summary. Shared resources, efficiency, ordering risk and rebound remain attributed commentary, not measured company financial inputs.
- **B6** - September 21, 2026. Episode 166 publisher page. Interview identity/date and memory topic corroborated; no independent full-audio verification claimed.

Model snapshot: October 3, 2026. 2344.TW. Framework 8.0. Base 48/60 (80%). Eighteen modeled operating quarters and fifteen complete forward-four-quarter ceilings. Current full PDF and synchronized Markdown: G:/My Drive/1amInvesting/Artifacts/2344TW_WinbondElectronics_DeepDive.pdf and .md. The companion company worksheet uses this same model and links its ceiling series to the master portfolio.

October 5 source register and synchronization record

MONTHLY-202609: TWSE-2344-REVENUE-202609, revision 1. Primary MOPS disclosure; company 2344, period2026-09, retrieved2026-10-05T11:30:41.460067+00:00. Source SHA-256: 01535a8e4d086225ef0c82ca94c2ab8a09c8af158da4ac08f2f49f9c70b02214. The publication timestamp is not established from the monthly table. This current record supersedes September forecast-status wording while preserving earlier source cutoffs.

Current model snapshot: owner valuation update October 29, 2026; operating-research cutoff October 5, 2026; full original research retained. Master workbook sheet WINBOND_Q_Model. Active Q4 2027 target TWD 347.586446; analytical Base 80, protected Excel Base 80. Quarterly revenue, profit and ceiling tables above use the staged, validated workbook values.
