# 2408.TW - Nanya Technology | Full Deep Dive

*Full investment research | Model assumptions and source evidence*

## Current owner valuation update - 29 October 2026

**Active Q4 2027 target: TWD 783.121960 per share. Protected Excel Base: 75/100.**

Tom authorized a 25% reduction in the existing earnings multiples for Q4 2026 onward. This update retains the operating forecast, source evidence, probabilities, capital law and Base scores. The prior Q3 2026 forecast remains visible at its published vintage. The older dated owner and research records below retain the assumptions in force on their stated dates.

The saved reference quote is TWD 516.00. The active target implies 51.77% price upside against that saved quote. The quote retains its source snapshot date; this valuation-assumption update adds no market-price refresh.

| Valuation quarter | Current OP multiple | Target TWD/share |
|---|---|---|
| Q4 2026 | 3x | 443.052430 |
| Q1 2027 | 3.375x | 525.644223 |
| Q2 2027 | 3.75x | 603.333959 |
| Q3 2027 | 4.125x | 687.707950 |
| Q4 2027 | 4.5x | 783.121960 |

### Linked model and validation

Functional linked model | Complete company readout.

The linked workbook carries the live calculation graph, selected controls and future quarterly targets. Its validated saved-file identity and independent checks are bound by the publication package. Historical displays retain their separate source vintage. The report's figures and derivations use the exact selected quarterly law.

Linked workbook SHA256: 41ec860e41abc2e1989f8082c9cab72f6d2fa96479189b94124a3e99f7907e73. Readout SHA256: 95bc409a5364b3350fc123c636c085aa3c6fc47fa104eb5517f4558e5ead26b2. Selected valuation-law SHA256: bcf76c115e37c1295290c37a0716fcd57fc25ab9acbd79d402dc50c30742fc69.

# Historical owner valuation record - 15 October 2026

The owner requested a gradual rerating, extended to Q3 2026 on October 15: **4x in Q3 and Q4 2026; 4.5x in Q1 2027; 5x in Q2 2027; 5.5x in Q3 2027; 6x from Q4 2027 onward.** Each valuation quarter applies its scheduled multiple to that quarter plus the following three quarters of operating profit. Q3 2026 now uses 4x, replacing its saved 6x treatment.

This changes valuation assumptions only. Revenue, product mix, costs, operating profit, outcome probabilities, shares, currency/split conventions, analytical Base and protected Excel Base are unchanged. The active **Q4 2027 ceiling is unchanged** because that quarter retains 6x. Historical research and dated before/after decisions below retain their original source dates and then-effective multiples; the current valuation table and ceiling chart use this owner schedule.

**Updated October 12, 2026 | Framework 8.0 | NOT HELD | BOTTLENECK - qualified DRAM supply, with a capacity clock | High Conviction**

**Analytical Base: 45/60 (75%). Active Q4 2027 valuation: 4.5x forward four-quarter IFRS-style operating profit; the current future schedule appears in the valuation section.**

Snapshot: TWD 516.00 per share on September 21, 2026 close; 3,450.206 million shares, implying TWD 1,780,306.24 million equity value. Source [N7]. Price is a dated header snapshot, not a valuation input in the body.

**Active horizon Q4 2027 ceiling: TWD 783.121960/share. Q1 2028: TWD 825.209996/share.**

All financial model amounts are TWD millions, shares in millions, unless stated. Calendar and fiscal quarters coincide; fiscal year ends December 31. Q1/Q2 are Actual. Q3 2026 is the issuer's preliminary, unaudited income statement. Product allocations and exact shipment/FX indices remain proxies. Later quarters are probability-weighted Model.

## 1. Thesis, bottleneck and expanded TAM

Nanya designs and manufactures DRAM for PCs, communications, consumer devices, industrial/automotive uses and a growing server/AI infrastructure base. It sells the volatile working-memory component; it is neither Nanya PCB nor a NAND manufacturer. Framework DB6 is the principal cycle, with DB1 networking and physical-AI adoption widening applications.

Large DRAM suppliers allocating advanced capacity to HBM and premium products reduce supply available to mature-node and specialty customers. Nanya benefits through contract repricing and technology conversion. The immediate earnings mechanism is price on constrained existing output, followed by more bits. HBM industry growth is an indirect supply-allocation tailwind, not proof that Nanya sells leading accelerator HBM.

Qualification, process know-how and a functioning wafer fab are real barriers. They are not a permanent sole-source position: added industry capacity, alternative DRAM suppliers and customer product redesign can remove scarcity. Current pricing is a bottleneck phase of the S-curve; 1C/1D/1E and customized AI memory are earlier technology transitions. Do not treat a peak commodity margin as an irreversible structural floor. [N2,N3]

The 2025 Annual Report Market Status and risk sections identify Samsung, SK hynix, Micron and CXMT alongside Nanya. Its 2025 share was about 1.4%; that stale historical share is not multiplied by a 2030 all-memory TAM. CXMT capacity and product overlap are explicit competitive threats. The named competitor screen establishes no verified overlooked listed sub-$2B monopoly. Nanya needs reliable qualification and niche customer retention as well as cost reduction. [N6]

### TAM expansion and S-curve

| Phase | Economic exposure | Model treatment |
|---|---|---|
| Phase 1: current computing and AI infrastructure | DRAM working memory in servers, eSSD controllers, networking, PCs and devices | 100% weight to established demand; do not count an entire eSSD as Nanya NAND revenue. |
| Phase 2: physical AI, 2026-30 | Low-power/custom memory for edge inference, industrial control, robotics and vehicles | 50% conceptual confidence; product mix within the DRAM pool, not an added memory market. |
| Phase 3: ubiquitous compute, 2028+ | Customized low-power/high-bandwidth memory for new embedded architectures | 20% conceptual confidence; no separately verified dollar TAM or unannounced design-win revenue. |

Demand-side Plan B uses Q2 DRAM revenue x qualified bit-volume index x realized-ASP index, calibrated to 82,522.846 with zero anchor error. Customer-specific capex, purchase quantities and wallet shares are not disclosed; multiplying aggregate hyperscaler capex by an invented Nanya share would overstate evidence. Management identifies AI/server demand above 20% of sales and a high-teens 2026 bit-growth goal. Monthly revenue then constrains near-term recognition. The annual report cites approximately 16-20% industry bit-demand growth in 2026-29; model volume growth is tested against that range and disclosed fab timing, rather than assumed to match it exactly. [N1,N2,N4,N6]

## 2. Latest evidence and financial anchor

The newest October 12 presentation and release anchor Q3 2026. The July 10 presentation provides the prior-quarter context. An accessible reproduction of management's October 12 English call was read, but its page footer claims partial coverage despite displaying the closing remarks; original issuer-hosted audio was not independently verified. Transcription errors include an apparent 113.6B revenue misstatement against the issuer's 133.649B table. Official financial tables control numeric facts. Attributed Q&A context remains labeled. [N9,N10,N2]

Q3 2026 revenue is TWD 133,649M, gross profit 114,482M, R&D 5,145M, SG&A 2,443M and operating profit 106,894M. The prior monthly sum 133,648.966M differs by only 0.034M due to presentation rounding; the new report supplies the previously estimated profit and costs. These self-calculated figures are preliminary, not accountant-reviewed. DRAM ASP increased more than 60% QoQ, bit shipments decreased mid-single-digit percent and FX was favorable by low-single-digit percent. The issuer attributes most pricing improvement to renewals of earlier low-priced agreements. A precise shipment decline/FX decomposition is not disclosed. [N9]

NANYA

# 2026 年第 3 季財務摘要

*Nanya issuer Q3 financial summary, slide5; original supplied via QQ_Timmy October 12. TWD million, unaudited.*

The tiny existing Other pool 26.130613M and 30% GP proxy are retained; DRAM is the residual reported revenue/GP. This is a modeling allocation, not reported segment disclosure. A 5% Q3 bit decline proxy, bounded 3-7%, gives index 0.95 versus Q2=1. Under neutral FX the Q3 DRAM ASP index solves the reported revenue at 1.704445. It is a calibration proxy, not a disclosed contract index. All future absolute ASP levels and prior price branches remain unchanged; no retrospective 60% price gain is added again.

The issuer states broadly flat shipments until new-fab output starts in Q4 2027, followed by gradual growth. Its Mandarin slides 15-16 discuss customer shipments, not merely wafer-start capacity; actual shipment comparisons elsewhere are in bits. Applying that forward statement to a bit-index curve is a labeled semantic inference. The existing rising pre-fab bit path is adjusted through one joint shipment/cost outcome, while later accepted-output increments remain. Equipment move-in is Q1 2027, capacity goals of 30,000 wafers/month by end 2028 and 50,000 by end 2030. These are exit-capacity milestones, not annual qualified good-bit sales. [N9]

*Nanya operations outlook, slide 16. Flat shipments before Q4 2027 output; capacity milestones / AI application mix. Original source image retained.*

## Balance sheet and capital allocation

Q3 cash and equivalents are 288,507M, long-term debt approximately 18,400M and net cash approximately 270.1B. Operating cash flow in the reconciled source table is 96,017M and capex 20,783M, yielding free cash flow 75,234M. The source bar reads 96,107M, a 90M inconsistency; the table reconciles beginning 217,603+96,017-20,783-4,330=288,507. No net-cash addition is made to the protected direct 6x OP/share method. [N9]

Approved 2026 capex is capped at 69.7B, with Q1-Q3 spending of 27.6B. This was authorized August 5, raising the old 52B ceiling mainly for equipment prepayments; it is redisclosed in October, not a fresh October demand event. Phase-one 2026-29 capex of 346.6B targets35,900 monthly wafer starts. The updated 2030 full-capacity goal of 50,000 differs from the earlier 45,000 design description, but no extra output is added solely from that nameplate change. Ping Tung 3D packaging/test plans, TSV and wafer-stacking capabilities support future qualification; no separate chip-revenue pool or undisclosed capex/depreciation increment is inserted. [N9,N11]

## Retained October 3 case: a bounded probability of firmer 2028 prices

At the October 3 cutoff, the Q4 2027 ceiling rose from TWD 1,224.54 to **TWD 1,233.05 (0.69%)**. These historical values isolate the retained 2028 branch before the separate October 7 update. Analytical and protected Excel Base remain 75 and 75. The 6x operating-profit basis, shares, production volumes, cost-per-bit path and existing qualification probabilities remain unchanged. That dated October 3 decision changed price persistence only. The retained pricing levels now feed the October 12 joint shipment/cost model.

The supplied Goldman-attributed chart forecasts DRAM supply balances of -5.0%/-5.9%/-3.9% in 2026/27/28 and NAND -4.4%/-4.6%/-3.0%. These are forecasts, not measured future shortages; the original note date and balance denominator are not visible. A supply deficit is not a price-change percentage. The active probability is **30% DRAM**, a subjective judgment with company scope and counterevidence, not an observed event frequency. Credible breadcrumbs can affect current model inputs before official confirmation.

**Exhibit 18: Global token consumption could increase 24x above current usage by 2030 driven by consumer and enterprise AI agents**

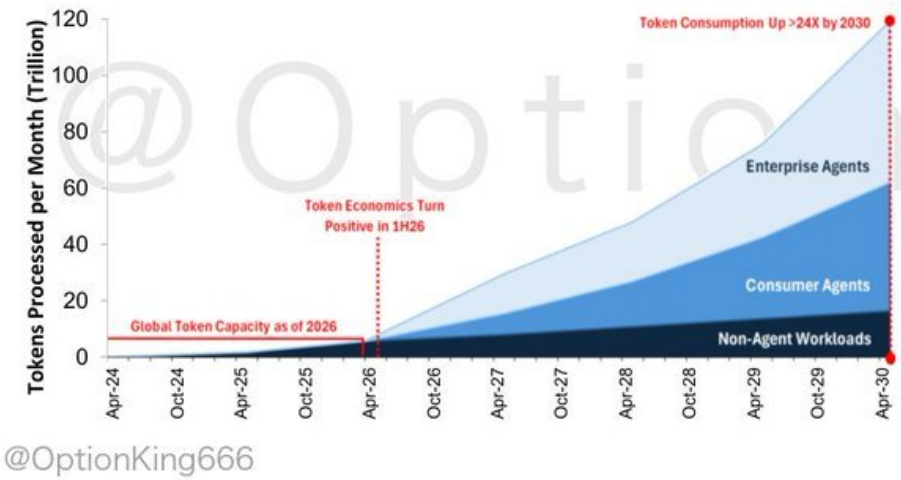

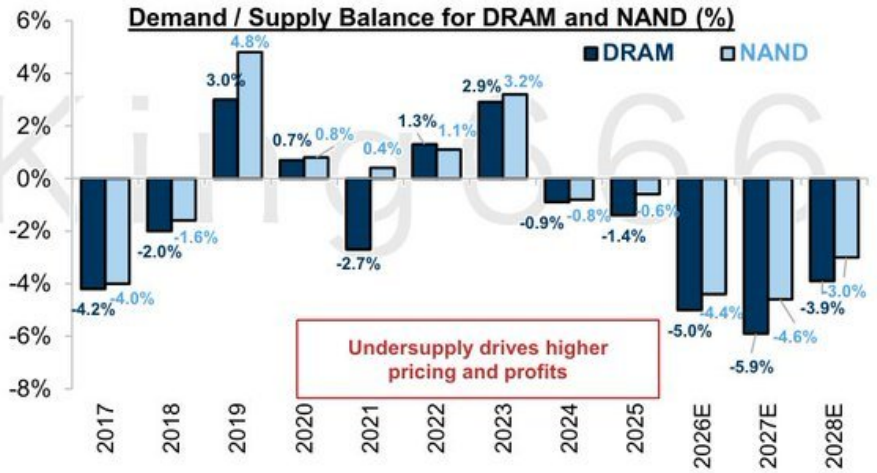

**Exhibit 19: Record memory undersupply is likely to intensify further in 2027 and remain well short of demand in 2028 and likely in 2029-30 as well**

*Supplied Goldman-attributed exhibits: token-use outlook and DRAM/NAND supply balances. Original note date not visible. The token chart crop says trillion; Goldman public text dated May 20, 2026 says 120 quadrillion tokens/month by 2030. Use the 24x ratio without treating it as 24x memory revenue. (B1,B3)*

The token forecast was already public in May; it is not a new October demand upgrade. Persistent agents can increase working memory and retained state, but tokens, concurrent users, deployed storage and annual NAND shipments have different units. No token multiplier, additional HBM revenue or extra 2026/27 ASP increase is added here.

**Exhibit 37:** Outlook for Greenfield Investments by Major Memory Makers

| Capacity (year end) | CY2019 | CY2020 | CY2021 | CY2022 | CY2023 | CY2024 | CY2025 | CY2026 | CY2027 | CY2028 |
|---|---|---|---|---|---|---|---|---|---|---|
| **China memory majors** | **20** | **85** | **135** | **162** | **242** | **340** | **440** | **555** | **735** | **920** |
| Δcapacity | | 65 | 50 | 27 | 80 | 98 | 100 | 115 | 180 | 185 |
| y-y | | | -23% | -46% | 196% | 23% | 2% | 15% | 57% | 3% |
| **Global majors' DRAM** | **1,200** | **1,275** | **1,380** | **1,485** | **1,538** | **1,600** | **1,625** | **1,785** | **2,165** | **2,615** |
| Δcapacity | | 75 | 105 | 105 | 53 | 62 | 25 | 160 | 380 | 450 |
| y-y | | | 40% | 0% | -50% | 17% | -60% | 540% | 138% | 18% |

Source: Trendforce, Morgan Stanley Research estimates

*Supplied capacity table, attributed to TrendForce and Morgan Stanley Research. Unit, report date, China product split and overlap with global DRAM are unresolved. Capacity additions are counterevidence to prolonged scarcity, not immediately qualified good-bit output. (B2)*

China's displayed year-end capacity rises 555 to 735 to 920 in 2026/27/28, while major-producer DRAM rises 1785 to 2165 to 2615. That is 32.4%/25.2% China level growth and 21.3%/20.8% for the DRAM series. The chart's larger percentage rows concern growth in annual additions. China memory may include NAND; the global line is DRAM. No share or combined capacity is calculated from mismatched scopes.

TrendForce's September 30 primary research still places Q4 2026 NAND at +15-20%, which already overlaps the existing upper-end benchmark. Enterprise SSD demand is stronger than consumer demand, and some LTAs delay pricing transmission. The supplied podcast summary adds shared-agent resources, memory efficiency, potential overordering and possible demand rebound as counterevidence; it does not establish a measured net demand reduction. The episode publisher confirms the interview/date, but the detailed paraphrase was not independently audio-verified. [B4-B6]

The previous UBS HBM table remains specifically on hold. It supplies no input to this revision. The active probabilities reflect the deficit forecast together with China supply, customer demand, contract transmission and efficiency uncertainties. They may rise with firmer company renewal pricing and lagging qualified supply, or fall with inventories, customer substitution, successful competitor qualification and lower-memory architectures.

## 3. Base score and evidence ledger

| Category | Score | Evidence |
|---|---|---|
| Core Thesis /20 | 15 | Qualified DRAM manufacturing and constrained supply; substitutable and exposed to major rivals. |
| Cycle Stage /10 | 9 | Contract repricing already recognized; volume capacity follows later. |
| TAM Expansion /10 | 8 | A memory primitive serving infrastructure and physical AI, with credible custom/low-power paths. |
| Catalysts /5 | 5 | Monthly revenue, 2026 contract reset, 2027 tools and 2028 capacity entering forward windows. |
| Macro /10 | 9 | AI memory allocation supports specialty scarcity; consumer demand remains price-sensitive. |
| Alpha /5 | 3 | Local monthly and contract-reset evidence improves timing; major industry narrative is well known. |
| Risks | -4 | Competition, execution, cycle/customer demand and capital commitments. |
| Total | 45/60 = 75% | High Conviction |

45/60 = 75% remains the analytical Base; the protected Excel Base is unchanged. Taiwan location alone receives no penalty. No governance penalty or prepayment bonus is asserted without specific evidence.

*Nanya Q4 DRAM supply/demand outlook, slide 13. Longer qualification / equipment timing supports shortages; down-specification / recycled parts are counter-evidence.*

## 4. Quarterly operating model

One active probability-weighted operating case contains 18 quarters and 15 complete ceilings. DRAM and the immaterial Other pool are the two available revenue vectors. Ordinary depreciation remains in production cost. Q3 is preliminary actual; later periods are low-confidence models.

## Active joint shipment and cost ledger

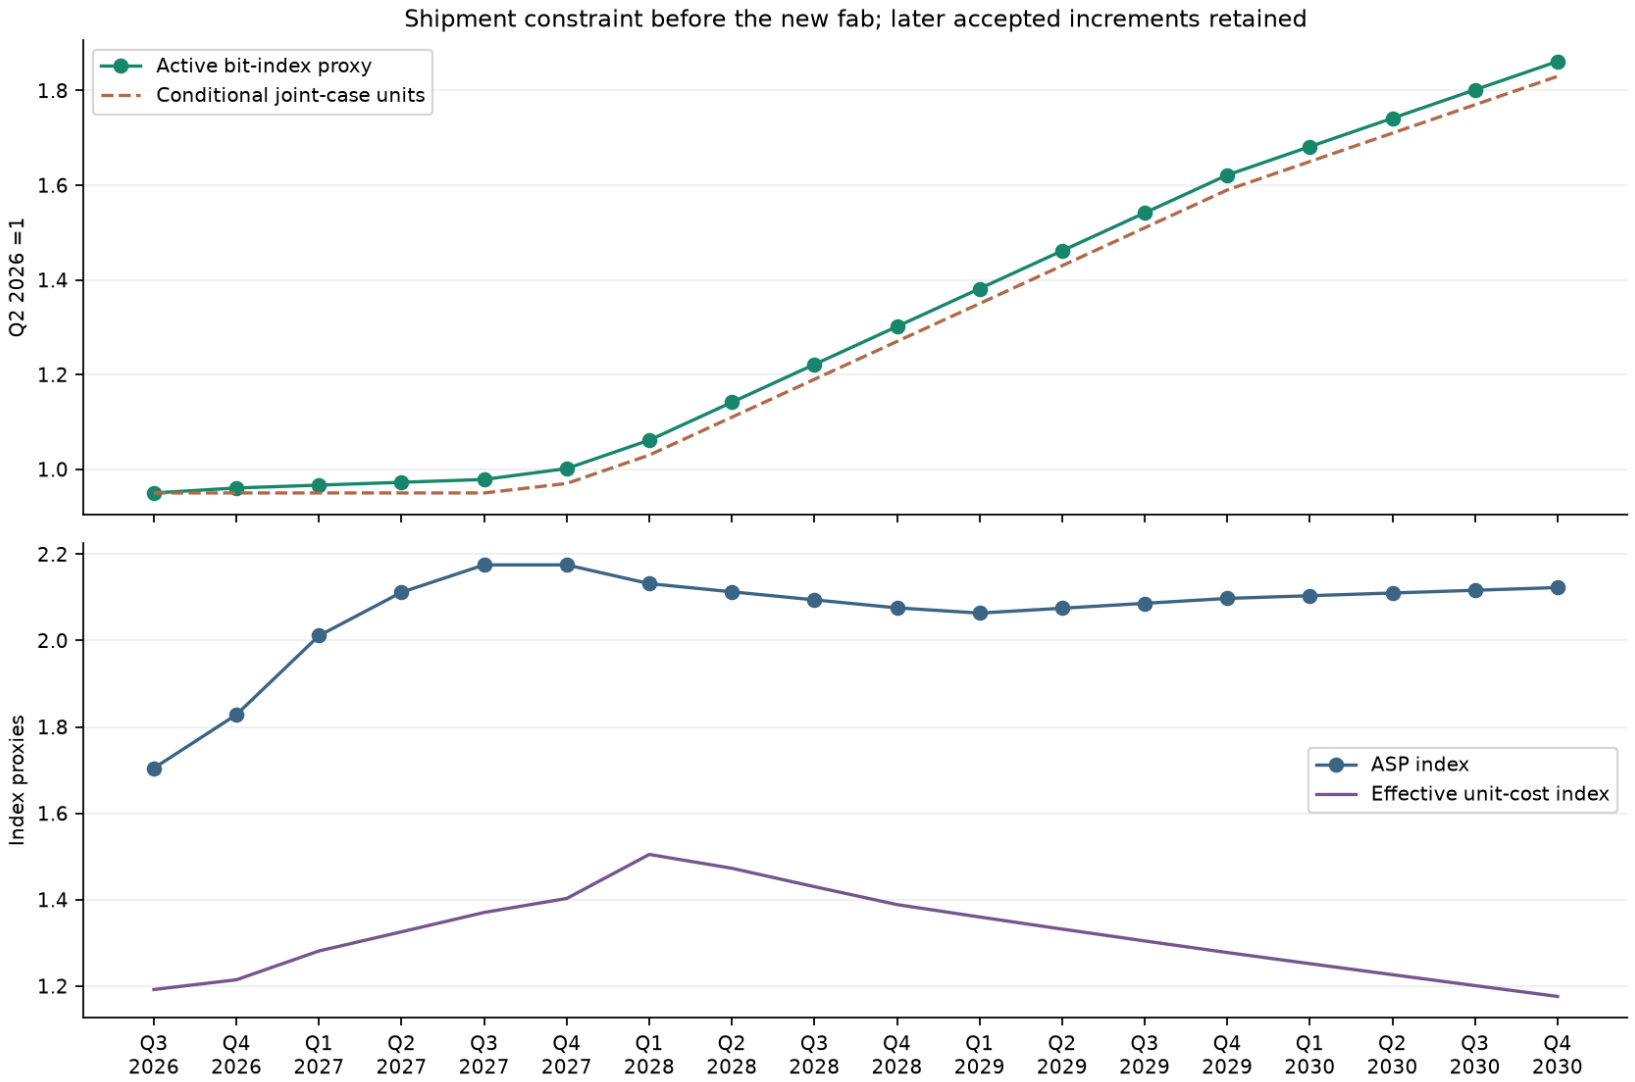

The subjective probability of the defined joint constraint/cost outcome is 85%, with 15% retaining the prior operating path. The weight reflects direct issuer shipment guidance, low inventory, a dated new-fab timetable and newly reported expenses; the magnitude, cost split and early qualified output remain proxies. It is not a global earnings haircut. The conditional bit index is 0.95 through Q3 2027 and0.97in Q4 2027, comprising a 2%-index first accepted-output addition bounded 0-4%. From 2028 the conditional volume is the previous volume minus 0.21: old Q4 2027 base 1.18 less new 0.97. Existing absolute future increments, including their 80% qualified-output weight, are retained once. The path continues growing after the new fab begins; it is not frozen indefinitely.

Q3 DRAM COGS is the reported total less retained Other COGS. The calibration factor is 1.131655858, calculated from actual DRAM COGS 19,148.708570 divided by previous 17,354.835356 times(50% fixed+50%x0.95 volume). The 50/50 cost split is an illustrative assumption, not issuer classification. Forward conditional COGS equals previous COGS x calibration x[50% fixed+50%x(conditional bits / prior bits)]. Only half of matched production costs are avoided on reduced units; fixed costs remain. Existing relative learning/commissioning costs persist; no second D&A charge is layered on top.

Conditional R&D/SG&A ratios equal their previous future ratios plus the observed Q3 ratio difference. Each scenario's expense amount is calculated using its own revenue and then weighted 85/15. Multiplying separately weighted revenue and ratios would distort their correlation. Reported Q3 financials enter at 100%, with no 85% haircut. Effective displayed ratios/cost indices are derived from those coherent weighted amounts.

The existing price schedule is retained in absolute levels. The earlier Q4 reset case used a 20% reported maximum versus 10% already modeled, on 50% eligible sales at 50% realization. Its incremental level is retained through 2027, halved in 2028 and removed from 2029. The original 30% 2028 retention branch remains on its own unchanged reference/conditional prices. After the Q3 actual calibration, the old 12.5% blended reset label describes that original reference construction, not a new issuer forecast relative to the re-estimated Q3 index. No probability is reapplied to its economic contribution.

## Physical and commercial drivers

*Shipment, ASP and effective cost indices. Q2 2026 = 1; exact Q3 bit decline, FX and cost split are proxies, not measured issuer indices. Future ASP levels and qualified capacity increments retained.*

| Quarter | Status | Bit-index proxy | ASP-index proxy | Effective cost index | DRAM GM |
|---|---|---|---|---|---|
| Q3 2026 | Preliminary | 0.950000 | 1.704445 | 1.191883 | 85.67% |
| Q4 2026 | Model | 0.960500 | 1.828344 | 1.214480 | 86.39% |
| Q1 2027 | Model | 0.966500 | 2.011179 | 1.281209 | 86.94% |
| Q2 2027 | Model | 0.972500 | 2.111738 | 1.325522 | 87.14% |
| Q3 2027 | Model | 0.978500 | 2.175090 | 1.370322 | 87.09% |
| Q4 2027 | Model | 1.001500 | 2.175090 | 1.402715 | 86.78% |
| Q1 2028 | Model | 1.061500 | 2.131738 | 1.504669 | 85.54% |
| Q2 2028 | Model | 1.141500 | 2.112799 | 1.472679 | 85.72% |
| Q3 2028 | Model | 1.221500 | 2.094100 | 1.430048 | 86.01% |
| Q4 2028 | Model | 1.301500 | 2.075640 | 1.388558 | 86.29% |
| Q1 2029 | Model | 1.381500 | 2.063523 | 1.359835 | 86.50% |
| Q2 2029 | Model | 1.461500 | 2.074781 | 1.331821 | 86.85% |
| Q3 2029 | Model | 1.541500 | 2.086093 | 1.304407 | 87.19% |
| Q4 2029 | Model | 1.621500 | 2.097459 | 1.277504 | 87.52% |
| Q1 2030 | Model | 1.681500 | 2.103740 | 1.251768 | 87.81% |
| Q2 2030 | Model | 1.741500 | 2.110033 | 1.226273 | 88.09% |
| Q3 2030 | Model | 1.801500 | 2.116336 | 1.200996 | 88.37% |
| Q4 2030 | Model | 1.861500 | 2.122650 | 1.175914 | 88.65% |

### Qualification and product allocation

New-fab output is part of the same DRAM volume pool, with an 80% qualification/ramp weight already embedded in the existing absolute increments. The 85% joint constraint shifts the existing-output baseline, without weighting those increments a second time. AI/WoW products are within these bits and do not earn an invented premium ASP.

| Period | Prior existing base | Conditional existing base | New-fab conditional increments | Already embedded qualification weight |
|---|---|---|---|---|
| 2026 toQ3 2027 | 1.00to1.14 | 0.95 | None | No separatefaboutput |
| Q4 2027 | 1.18 | 0.97 | 0.02firstaccepted-outputproxy | Withinjoint85%case |
| 2028 | 1.20 | 0.99 | 0.05/0.15/0.25/0.35 | 80% |
| 2029 | 1.28 | 1.07 | 0.35/0.45/0.55/0.65 | 80% |
| 2030 | 1.40 | 1.19 | 0.575/0.650/0.725/0.800 | 80% |

### Vector revenue, gross margin and gross profit

For each row: vector gross profit = vector revenue x its own gross margin. The following tables expose the inputs; they are analyst model assumptions unless explicitly identified as reported or guided.

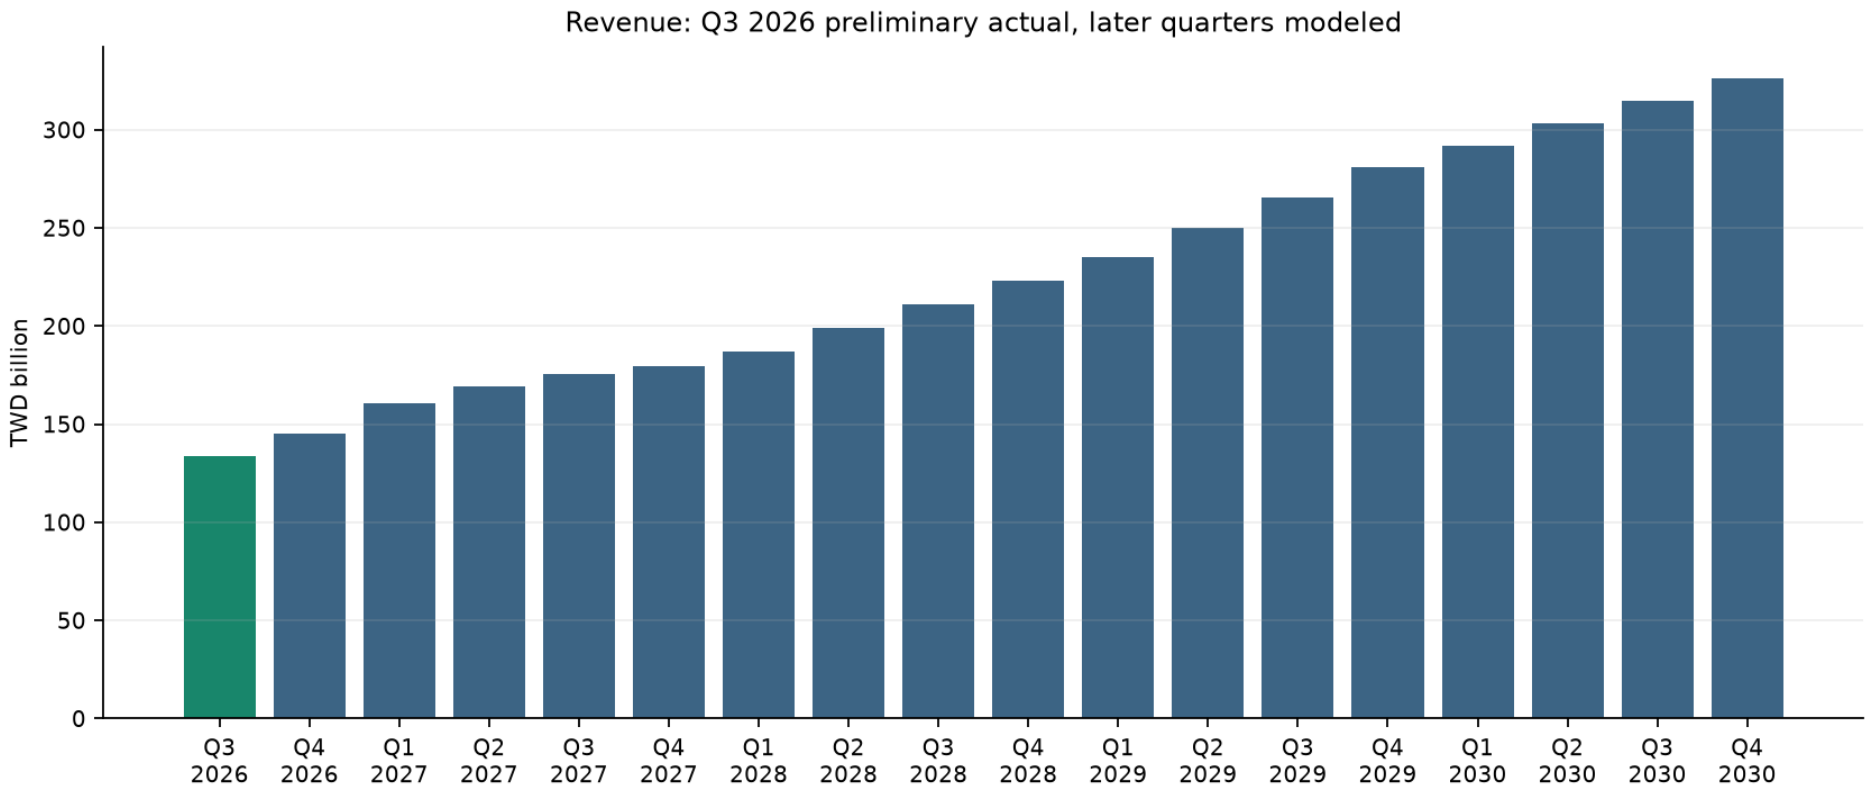

## DRAM

| Quarter | Revenue | Gross margin | Gross profit |
|---|---|---|---|
| Q3 2026 | 133,622.87 | 85.67% | 114,474.16 |
| Q4 2026 | 144,920.42 | 86.39% | 125,193.02 |
| Q1 2027 | 160,408.27 | 86.94% | 139,466.95 |
| Q2 2027 | 169,474.29 | 87.14% | 147,674.17 |
| Q3 2027 | 175,635.48 | 87.09% | 152,959.51 |
| Q4 2027 | 179,763.86 | 86.78% | 156,006.26 |
| Q1 2028 | 186,736.01 | 85.54% | 159,724.84 |
| Q2 2028 | 199,025.26 | 85.72% | 170,595.96 |
| Q3 2028 | 211,088.77 | 86.01% | 181,547.67 |
| Q4 2028 | 222,930.97 | 86.29% | 192,368.35 |
| Q1 2029 | 235,252.61 | 86.50% | 203,482.45 |
| Q2 2029 | 250,233.46 | 86.85% | 217,315.94 |

### Annual trajectory cross-check

The calendar-bucket sums below are a capacity and demand cross-check; quarterly windows remain the live valuation method. Years beyond the latest guidance are model extensions, not company guidance.

| Year | Revenue | Operating profit | OP margin |
|---|---|---|---|
| 2027 | 685,392.05 | 557,670.50 | 81.37% |
| 2028 | 819,896.40 | 656,616.09 | 80.09% |
| 2029 | 1,031,639.07 | 838,880.67 | 81.32% |

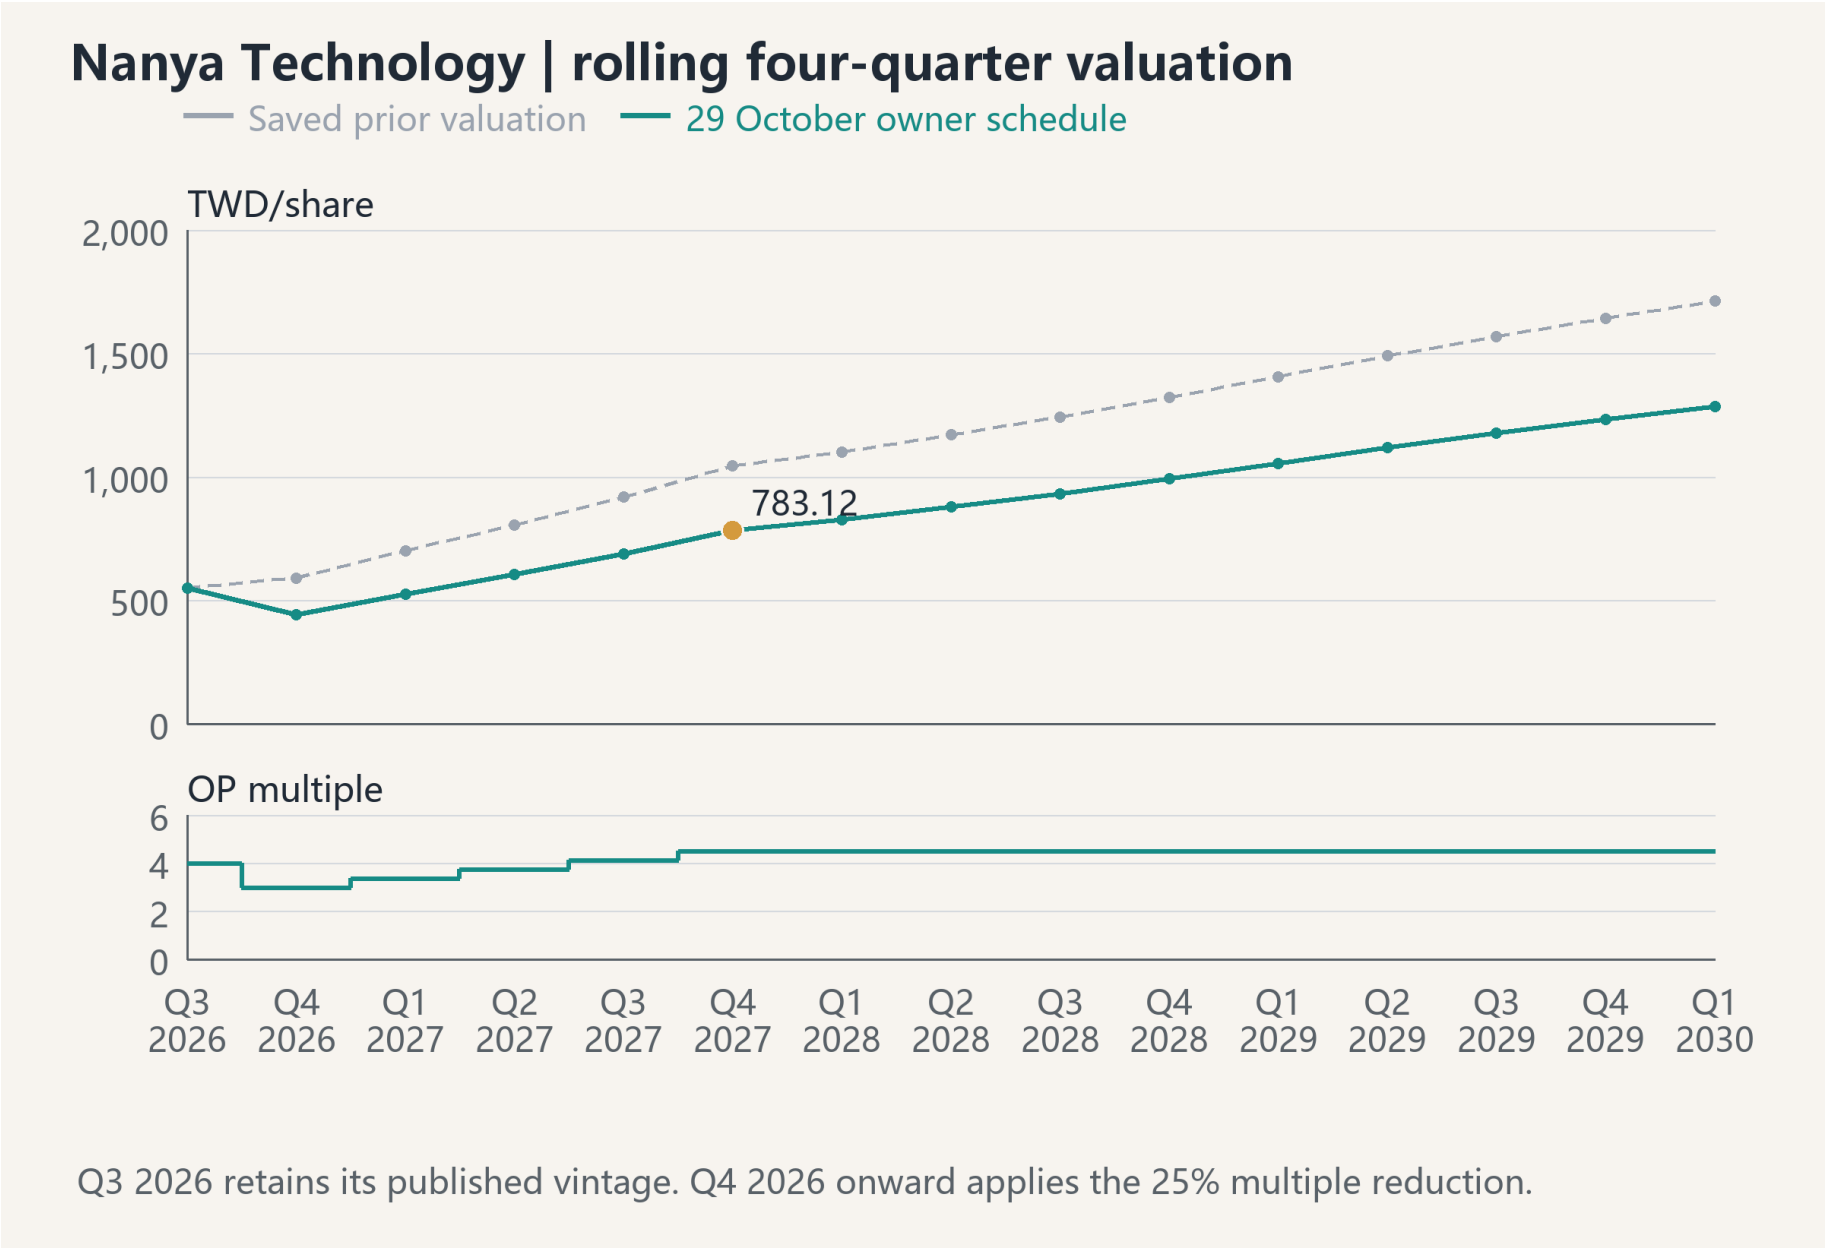

| Year | Revenue | Operating profit | OP margin |
|---|---|---|---|
| 2030 | 1,235,984.31 | 1,021,173.05 | 82.62% |

2027 growth is now predominantly retained pricing and annualization, with constrained existing shipments ahead ofQ4 new-fab output. Qualified new-fab bits resume the volume ramp thereafter. Capacity/installation and accepted good bits remain distinct. Extremely high model margins remain conditional on pricing; a 10% ASP fall at unchanged units / production costs lowers GP nearly dollar for dollar before variable opex. The joint case explicitly retains fixed costs, compensation and commissioning burden. Broad all-memory TAM includes NAND / HBM and is not Nanya addressable revenue.

## 5. Forward four-quarter ceiling and derivations

The selected valuation applies each valuation quarter's OP multiple to forward-four-quarter operating profit, then divides by that quarter's economic diluted-share denominator. Operating inputs are in TWD millions. The active Q4 2027 multiple is 4.5x. The owner reduction applies once to the existing Q4 2026 and later schedule. Q3 2026 retains its published multiple, rolling OP and target.

Revenue, product mix, manufacturing costs, operating expenses, operating profit, outcome probabilities, attribution, shares, currency conventions and Base scores retain the selected source law. The source operating forecast already incorporates its existing probability treatment. The ceiling uses the sanctioned equity OP convention and its existing unit conversion.

*Nanya Technology current rolling four-quarter target and multiple path after the October 29 owner reduction. Q3 2026 retains its original vintage.*

| Ceiling quarter | Exact earnings window | Forward 4Q OP (TWD millions) | Multiple | Economic diluted shares M | Ceiling TWD/share |
|---|---|---|---|---|---|
| Q3 2026 | Q3 2026 to Q2 2027 | 492,586.100503 | 4x | 3,580.630900 | 550.278556 |

### Historical October 3 probability update (before the October 5 revenue reconciliation)

| Historical ceiling quarter | Prior October 3 ceiling | Post October 3 ceiling | Historical change |
|---|---|---|---|
| Q3 2026 | 894.28 | 894.28 | 0.00% |
| Q4 2026 | 991.31 | 991.31 | 0.00% |
| Q1 2027 | 1,073.01 | 1,073.01 | 0.00% |
| Q2 2027 | 1,129.38 | 1,130.70 | 0.12% |
| Q3 2027 | 1,178.41 | 1,182.52 | 0.35% |
| Q4 2027 | 1,224.54 | 1,233.05 | 0.69% |
| Q1 2028 | 1,276.37 | 1,291.05 | 1.15% |
| Q2 2028 | 1,344.60 | 1,363.70 | 1.42% |
| Q3 2028 | 1,420.44 | 1,441.96 | 1.52% |
| Q4 2028 | 1,504.33 | 1,526.04 | 1.44% |
| Q1 2029 | 1,597.07 | 1,616.47 | 1.21% |
| Q2 2029 | 1,685.54 | 1,702.22 | 0.99% |
| Q3 2029 | 1,769.46 | 1,783.01 | 0.77% |
| Q4 2029 | 1,848.64 | 1,858.69 | 0.54% |
| Q1 2030 | 1,922.89 | 1,929.07 | 0.32% |

**Historical October 3 sensitivity, before the October 7 price revision**

*Q4 2027 ceiling sensitivity. TWD per share. Solid lines show model calculations, not company guidance.*

| Scenario | DRAM probability | SLC exposure | Q4 2027 ceiling |
|---|---|---|---|
| Reference only | 0% | None | 1,224.54 |
| Active weights | 30% | None | 1,233.05 |
| 50% retention | 50% | None | 1,238.72 |

| Scenario | DRAM probability | SLC exposure | Q4 2027 ceiling |
|---|---|---|---|
| Full retention | 100% | None | 1,252.90 |

These historical sensitivities isolate the retained October 3 branch before the October 7 revision; they are not the current total ceiling. They use the same Q4 2027 window, share basis and 6x multiple. They change only the stated retention probabilities. No multiple expansion, extra share repurchase or additional unit growth is assumed.

### Recognition timing by ceiling

| Ceiling quarter | Key inflection entering the forward window |
|---|---|
| Q3 2026 | Issuer preliminary revenue, GP and operating expenses reported |
| Q4 2026 | Contract-price carry-through through Qualified DRAM volume |
| Q1 2027 | Current-fab bits and renewal through Cost discipline |
| Q2 2027 | Technology conversion through New-fab weighted volume; price normalization |
| Q3 2027 | Qualified DRAM volume through New-fab weighted volume; price normalization |
| Q4 2027 | Cost discipline through New-fab weighted volume; price normalization |
| Q1 2028 | New-fab weighted volume; price normalization through New-fab weighted volume; price normalization |
| Q2 2028 | New-fab weighted volume; price normalization through Conditional bit growth and yield |
| Q3 2028 | New-fab weighted volume; price normalization through Conditional bit growth and yield |
| Q4 2028 | New-fab weighted volume; price normalization through Conditional bit growth and yield |
| Q1 2029 | Conditional bit growth and yield through Conditional bit growth and yield |
| Q2 2029 | Conditional bit growth and yield through Conditional bit growth and yield |
| Q3 2029 | Conditional bit growth and yield through Conditional bit growth and yield |
| Q4 2029 | Conditional bit growth and yield through Conditional bit growth and yield |
| Q1 2030 | Conditional bit growth and yield through Conditional bit growth and yield |

### Complete current valuation derivations

The captured Q3 2026 derivation retains its published vintage:

**Q3 2026:** (106,894.000000 + 117,058.631419 + 130,466.019424 + 138,167.449661) x 4 /3,580.630900 =TWD550.278556. Exact operating-profit window Q3 2026 throughQ2 2027.

**Q4 2026:** (117,058.631419 + 130,466.019424 + 138,167.449661 + 143,110.306557) x 3 / 3,580.630900 = TWD 443.052430 per share. The OP window ends Q3 2027.

**Q1 2027:** (130,466.019424 + 138,167.449661 + 143,110.306557 + 145,926.727674) x 3.375 / 3,580.630900 = TWD 525.644223 per share. The OP window ends Q4 2027.

**Q2 2027:** (138,167.449661 + 143,110.306557 + 145,926.727674 + 148,879.840098) x 3.75 / 3,580.630900 = TWD 603.333959 per share. The OP window ends Q1 2028.

**Q3 2027:** (143,110.306557 + 145,926.727674 + 148,879.840098 + 159,035.449428) x 4.125 / 3,580.630900 = TWD 687.707950 per share. The OP window ends Q2 2028.

**Q4 2027:** (145,926.727674 + 148,879.840098 + 159,035.449428 + 169,284.802347) x 4.5 / 3,580.630900 = TWD 783.121960 per share. The OP window ends Q3 2028.

**Q1 2028:** (148,879.840098 + 159,035.449428 + 169,284.802347 + 179,415.999742) x 4.5 / 3,580.630900 = TWD 825.209996 per share. The OP window ends Q4 2028.

**Q2 2028:** (159,035.449428 + 169,284.802347 + 179,415.999742 + 190,048.365559) x 4.5 / 3,580.630900 = TWD 876.949025 per share. The OP window ends Q1 2029.

**Q3 2028:** (169,284.802347 + 179,415.999742 + 190,048.365559 + 203,024.907648) x 4.5 / 3,580.630900 = TWD 932.233294 per share. The OP window ends Q2 2029.

**Q4 2028:** (179,415.999742 + 190,048.365559 + 203,024.907648 + 216,208.183794) x 4.5 / 3,580.630900 = TWD 991.204806 per share. The OP window ends Q3 2029.

**Q1 2029:** (190,048.365559 + 203,024.907648 + 216,208.183794 + 229,599.214675) x 4.5 / 3,580.630900 = TWD 1,054.273151 per share. The OP window ends Q4 2029.

**Q2 2029:** (203,024.907648 + 216,208.183794 + 229,599.214675 + 239,940.078539) x 4.5 / 3,580.630900 = TWD 1,116.975148 per share. The OP window ends Q1 2030.

**Q3 2029:** (216,208.183794 + 229,599.214675 + 239,940.078539 + 250,105.220826) x 4.5 / 3,580.630900 = TWD 1,176.143886 per share. The OP window ends Q2 2030.

**Q4 2029:** (229,599.214675 + 239,940.078539 + 250,105.220826 + 260,375.797056) x 4.5 / 3,580.630900 = TWD 1,231.652053 per share. The OP window ends Q3 2030.

**Q1 2030:** (239,940.078539 + 250,105.220826 + 260,375.797056 + 270,751.949272) x 4.5 / 3,580.630900 = TWD 1,283.371237 per share. The OP window ends Q4 2030.

The final three operating quarters support the earlier four-quarter windows. Their standalone targets remain blank because the source horizon supplies fewer than four quarters. Arithmetic uses the unrounded selected inputs. Displayed components are rounded to six decimals.

Forward diluted denominator = period-end basic 3,450.2059M + Q2 dilutive employee options 121.276M + employee compensation 9.149M = 3,580.6309M. The reported Q2 weighted-average diluted 3,553.586M includes less than a full quarter of the April placement; using it unchanged would understate the current capital base. Flat future dilution is a modeling convention, not a repurchase promise. [N1]

### Mechanical share sensitivity

This diagnostic holds the selected operating forecast and valuation multiple fixed. It varies only the displayed share denominator.

| Q1 2028 denominator sensitivity | Shares M | Ceiling TWD/share |
|---|---|---|
| Current model | 3,580.630900 | 825.209996 |
| 5% more shares | 3,759.662445 | 785.914282 |
| 10% more shares | 3,938.693990 | 750.190906 |

## 6. Cross-book relationships and monitoring

Nanya <-> MU/Samsung/SK hynix: HBM/DDR5 capacity allocation supports mature DRAM pricing; restored legacy output is a counter-signal.

Nanya <-> Winbond: shared specialty DRAM scarcity, different flash/custom mix. Compare company realized prices rather than applying one NAND index to both.

Nanya <-> SNDK/Kioxia: eSSD expansion can consume Nanya controller DRAM; the NAND chips and DRAM chips are distinct revenue pools.

Information processing: monthly data changes the price/recognition model; customer equity improves funding but causes dilution; no other portfolio Base is changed by this deep dive.

## 7. Scored risks and re-rate tests

| Risk class | Score | Failure channel |
|---|---|---|
| Competition | -1 | CXMT and incumbent production can normalize ASPs; qualification does not assure permanent scarcity. |
| Execution | -1 | Process yields, commissioning, packaging and customer qualification can delay new bits. |
| Cycle / demand concentration | -1 | A DRAM-dominated earnings stream is sensitive to contract renewal and downstream inventory. |
| Capital commitments / dilution | -1 | Large fab spending and future equity compensation can lower cash returns and per-share earnings. |

### Dated triggers and counters

| Checkpoint | Positive evidence | Counter / model action |
|---|---|---|
| 1. September/October 2026 revenue | September reported 45,091.089M; Q3 monthly total incorporated | Monitor October contract pricing, bits and mix; monthly total alone does not separate those drivers. |
| 2. Q3 2026 reporting | Gross profit converts the revenue step; no new inventory build | Reported Q3GP114,482M and OP 106,894M now anchor actuals. Subsequent cost / pricing tests revise the joint model. |
| 3. 2027 tool installation / qualifications | Fab and 1C/customer milestones arrive on time | Delay shifts the incremental bit path; reduce 80% weight if a milestone fails. |
| 4. 2028 production | Qualified phase-one output rises toward announced capacity | Only accepted bits enter revenue. Do not equate installed wafers with sold bits. |
| 5. Each competitor/customer report | Tight supply and stable order commitments | Legacy supply restoration, customer destocking or renewals below assumed ASP cuts earnings immediately. |

Issuer-hosted Q&A audio was not independently verified; accessible third-party call reproduction has partial footer / transcription caveats. Customer-level capex purchases and audited DDR-generation GP remain unavailable. No verified Yahoo HIGH-estimate series is used as a floor. Near-term Q3 nowhas issuer preliminary financials; future volume, mix, cost and price are conditional Plan-B estimates. LTA 50-70% coverage and 3-month to 3-year terms remain attributed Q&A context, with floor/ceilingpricing under discussion. No claim that all long contracts float uncapped. Precision in the tables is arithmetic. The next 12-16 months carry the principal decision weight; 2028-30 are LOW-confidence extensions.

## 8. Sources and snapshot

- **N8** - October 6, 2026, 23:59:39 Asia/Taipei. Economic Daily: attributed Nanya customer DRAM price notifications. Reported maximum 20% is not a company-wide realized ASP. Root-reviewed source supports the bounded October 7 price bridge; final product/customer coverage and acceptance remain unresolved.
- **N1** - August 2026. Nanya Q2 2026 reviewed consolidated financial statements. Actual revenue, gross profit, expenses and share dilution; values in TWD thousands converted to millions.
- **N2** - July 10, 2026. Nanya Q2 management presentation. Bit/price direction, supply, capex, fab timing and AI application mix; preliminary financials superseded by N1.
- **N3** - April 13, 2026. Nanya Q1 management presentation. Prior-quarter operating context, customer investment and technology roadmap.
- **N4** - September 2, 2026. August and July company monthly revenue. Unaudited July/August monthly actuals; the September assumption at that source cutoff is superseded by MONTHLY-202609.
- **N5** - August 2026. July company revenue release. Contract renewal timing and July step in revenue.
- **N6** - April 23, 2026. Nanya 2025 Annual Report, primary filing reproduced by FinancialFilings. Market Status, competitive threats and new-fab construction; historical 2025 share is not a current estimate.
- **N7** - September 21, 2026. Nanya dated market quote. TWD516 at September 21 14:30, header only.
- **U1** - Provided in this conversation. User-provided BofA memory outlook and TrendForce NAND outlook. BofA image supplied the reference 5% 2028 DRAM decline, now partially offset by the explicit active probability branch. NAND +23%/+20%/+15% is not a Nanya DRAM price schedule.
- **U2** - September 21, 2026. User valuation instruction. Use 6x operating profit for Nanya and Winbond; existing Base scores unchanged.
- **B1** - Supplied October 3, 2026. Goldman-attributed demand/supply image, embedded beside the analysis. Original report date and balance definition not recovered; forecast evidence, not measured future supply.
- **B2** - Supplied October 3, 2026. TrendForce / Morgan Stanley attributed year-end capacity crop, embedded above. Original date, unit and China/global product scope unresolved.
- **B3** - May 20, 2026. Goldman public token-demand discussion. Confirms 24x and 120 quadrillion tokens/month by 2030; receiving the chart later does not make it a fresh revision.
- **B4** - September 30, 2026. TrendForce primary Q4 memory outlook. DRAM/NAND pricing, enterprise/consumer differences and LTA transmission.
- **B5** - User-supplied P Equity Research podcast summary. Shared resources, efficiency, ordering risk and rebound remain attributed commentary, not measured company financial inputs.
- **B6** - September 21, 2026. Episode 166 publisher page. Interview identity/date and memory topic corroborated; no independent full-audio verification claimed.

Historical model baseline: October 3, 2026. The current numerical tables above are the October 12 model. 2408.TW. Framework 8.0. Base 45/60 (75%). Eighteen modeled operating quarters and fifteen complete forward-four-quarter ceilings. Current full PDF and synchronized Markdown: G:/My Drive/1amInvesting/Artifacts/2408TW_NanyaTechnology_DeepDive.pdf and .md. The companion company worksheet uses this same model and links its ceiling series to the master portfolio.

## October 5 source register and synchronization record

**MONTHLY-202609:** TWSE-2408-REVENUE-202609, revision 1. Primary MOPS disclosure; company 2408, period2026-09, retrieved2026-10-05T11:30:37.430406+00:00. Source SHA-256: 1dc82de09bb4535cb3c851471ce94ecc63ce67985b2fe6ba90a662a98de482ed. The publication timestamp is not established from the monthly table. This current record supersedes September forecast-status wording while preserving earlier source cutoffs.

Historical synchronization snapshot: October 5, 2026; full original research retained. Master workbook sheet NANYA_Q_Model. Active Q4 2027 target TWD 1,233.047490; analytical Base 75, protected Excel Base 75. Quarterly revenue, profit and ceiling tables above use the staged, validated workbook values.

## Current synchronization record

October 12, 2026. Q3 preliminary actuals and all 18 operating quarters / 15 ceiling windows use one model. The active joint case is 85%; before versions remain in the recoverable audit snapshot. 6x IFRS-style OP, 3,580.6309M forward diluted shares and both Base 75 remain unchanged.

## Principal-driver numerical detail

| Quarter | Conditional bits | Active bits | ASP | Effective cost index |
|---|---|---|---|---|
| Q3 2026 | 0.950000 | 0.950000 | 1.704445 | 1.191883 |
| Q4 2026 | 0.950000 | 0.960500 | 1.828344 | 1.214480 |
| Q1 2027 | 0.950000 | 0.966500 | 2.011179 | 1.281209 |
| Q2 2027 | 0.950000 | 0.972500 | 2.111738 | 1.325522 |

## Joint-case sensitivities

Current Q4 2027 diagnostic prices use the 4.5x owner multiple. Probabilities, shipments, growth, selling prices, costs, operating profit and shares retain their existing case inputs. The active row uses the exact selected law; other rows retain the six-decimal source endpoint resolution before the 0.75 multiple factor.

| Changed control | Joint probability | Q3 decline | First Q4 accepted addition | Q4 2027 ceiling TWD |
|---|---|---|---|---|
| 0% joint case | 0% | 5% | 2% | 939.597854 |
| Active 85% | 85% | 5% | 2% | 783.121960 |
| 100% joint case | 100% | 5% | 2% | 755.508567 |
| Q3 decline3% | 85% | 3% | 2% | 797.464458 |
| Q3 decline7% | 85% | 7% | 2% | 768.775181 |
| Q4 first growth0% | 85% | 5% | 0% | 769.975516 |
| Q4 first growth4% | 85% | 5% | 4% | 796.268404 |

Sensitivity tests hold the valuation method, shares, future ASP levels and relative cost curve constant; each controls a coherent unit / cost / expense outcome. They are diagnostics, not extra active forecasts. The 0% joint control retains prior future forecasts while reported Q3 financials remain anchored. The 100% case prices the conditional outcome.50% fixedcostproxy is illustrative; all-fixed/all-avoidablecontrols are not issuer cost disclosures.

## Latest source register

- **N9** - October 12, 2026. Issuer Q3 release, Mandarin 18-page presentation, English presentation. Preliminary financials, pages 5-9 / 18; shipments/capacity/ASP guidance, pages 11 / 13 / 15-16. Original webcast link found; no independently verified audio.
- **N10** - October 12, 2026. Public management-call reproduction. 49 speaker segments displayed through closing, but partial-coverage footer and ASR errors; quantitative financials use N9. Attributed LTA mix / price-term context, no guaranteed contract margin.
- **N11** - August 5, 2026. Issuer board capex decision. 52B to 69.7B 2026 budget and 346.6B 2026-29 phase-one authorization; older event redisclosed October 12.
- **RAML** - XDATA-20261012-0816-ET-RAML/R0. Three QQ_Timmy original images above were hash-verified. TrendForce-reposted original 2109577313679532497 image missing; no unsupported claim depends on it because N9 primary financials were independently retrieved.
