Bloom Energy: the paid ramp matters

Bloom combines modular on-site generation, automated manufacturing and a growing service fleet. Its time-to-power advantage addresses a real constraint for data centers and industrial customers. Scaling demand into accepted installations still requires factory capacity, qualified suppliers, commissioning, permits and working capital.

The current Q4 2027 valuation window is 195.884358 USD per share, using the existing 20x non-GAAP operating-profit method and the native 339.5 million starting-quarter diluted proxy. The prior same-window value was 191.782451; the unrounded revision is 2.14%. A substantial 2027 ramp was already in the previous forecast.

This valuation is conditional on modeled customer collections, supplier funding and debt availability. It excludes an enterprise-value or cash adjustment and does not certify lender covenants. The undated owner quote of 219.34 is retained as context; a current-price return is not calculated. Holding status is unspecified.

Analytical score: 46/60, or 76.67%, rounded to 77. Protected Excel Base: 72. Forecast dollars are USD millions, shares are millions and GW are analytical physical-volume proxies unless a source label says otherwise.

Active window and analytical classification

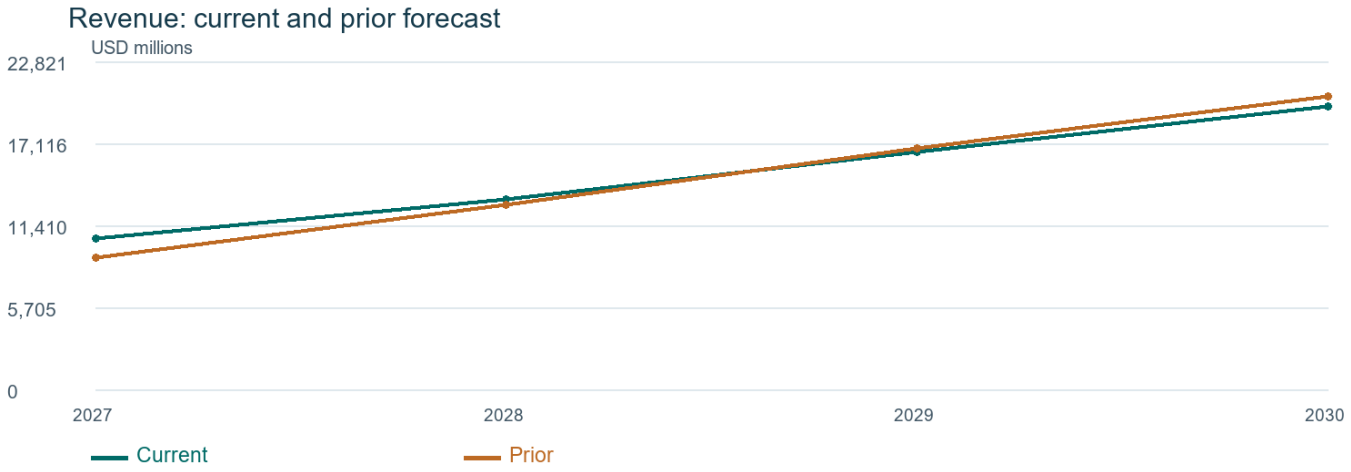

Measure	Current
Forward window	Q4 2027 through Q3 2028
F4 operating profit	3,325.136973
Starting-quarter shares	339.500
Native multiple	20
USD per share	195.884
Same-window prior USD per share	191.782
Revision	2.14%

A larger ramp, with a larger resource bill

Raised 2026 guidance and a stronger reported third quarter reset the near-term operating base. The forward model then replaces the previous volume path with three correlated demand-and-execution paths. It pays for conversion labor, factory overhead, freight, assurance warranty, field service, capital additions and working capital before weighting the outcomes.

The central 2027 requested-output endpoint of 3.3 GW is about 17% above the prior 2.82 GW schedule. The accelerated endpoint of 4.5 GW is about 60% higher, while delayed output of 2.4 GW is about 15% lower. Physical ceilings reduce probability-weighted accepted output to about 3.249 GW. All endpoints are analytical estimates, with customer programs already inside the aggregate demand path; no extra program wallet is added.

Requested output and headline annualized factory capacity are separate measures. Later-year profits respond to physical constraints and the service burden; an ambitious demand endpoint alone does not create recognized sales.

Full-year forecast totals; 2027-2030

Year	Accepted GW	New R	New OP	Prior R	Prior OP
2027	3.249	10,488.5	2,808.9	9,176.4	2,382.8
2028	4.026	13,233.6	3,540.4	12,838.4	3,503.1
2029	4.920	16,489.9	4,512.7	16,754.2	4,681.6
2030	5.776	19,683.5	5,392.3	20,375.9	5,619.8

Each total sums the four modeled calendar quarters. Q3 2026 is an actual row; Q4 2026 is a derived guide residual and is shown separately.

Q3 actuals: four distinct economics

Product sales generated the bulk of revenue and gross profit. Installation remained loss-making, service earned a positive margin and legacy electricity contributed a small profit. The model preserves those categories instead of applying a single product margin to the entire company.

The source reports consolidated non-GAAP gross profit of 426.216. The four individually rounded category figures sum to 426.217; the explicit reconciliation is minus 0.001. Reported consolidated totals control. E01 pp2,11-13; E02 p18; E03 p4.

Q3 2026 actual category bridge

Category	Revenue	Non-GAAP GP
Energy Server product, net of customer consideration	1,073.610	412.213
Installation	84.855	(3.004)
Service on commissioned fleet	67.557	14.486
Legacy electricity sales	9.815	2.522
Segment rounding	--	(0.001)
Consolidated	1,235.837	426.216

1. Please reference section "GAAP to Non-GAAP reconciliation: Gross profit and margin" of the appendix for detailed GAAP to Non-GAAP reconciliations

Bloom Energy Proprietary & Confidential 18

Issuer Q3 supplemental, page 18, dated October 22, 2026. Rounded USD million category reconciliation; the precise consolidated figure and explicit rounding adjustment appear in the table above.

The guide anchors Q4, with an explicit allocation

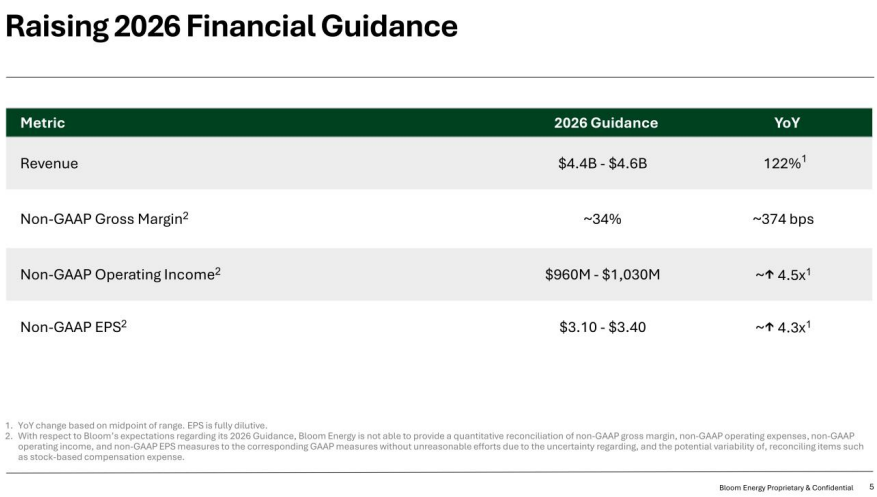

Company FY2026 guidance is revenue of 4.4-4.6 billion, approximately 34% non-GAAP gross margin, non-GAAP operating income of 960-1,030 million and diluted non-GAAP EPS of 3.10-3.40. Management has not supplied a quantitative forward GAAP reconciliation.

Reported nine-month revenue of 3,052.256, non-GAAP GP of 1,027.884 and non-GAAP OP of 655.043 are subtracted from the annual endpoints. Applying exactly 34% is an approximate calibration of an approximate guide. The quarterly category and cost allocation is a LOW-confidence analytical residual, rather than issued Q4 category guidance.

Guide-derived Q4 2026 allocations

Case	Weight	FY R	FY OP	Q4 R	Q4 GP	Q4 OP
Delayed	25.0%	4,400.0	960.0	1,347.7	468.1	305.0
Central	55.0%	4,500.0	995.0	1,447.7	502.1	340.0
Accelerated	20.0%	4,600.0	1,030.0	1,547.7	536.1	375.0

The positive or negative product-cost calibration reconciles the chosen detailed Q4 budget to the annual guide residual. It is not a disclosed supplier saving or a new cash receipt.

Raising 2026 Financial Guidance

Metric	2026 Guidance	YoY
Revenue	$4.4B - $4.6B	122%[1]
Non-GAAP Gross Margin[2]	~34%	~374 bps
Non-GAAP Operating Income[2]	$960M - $1,030M	~↑ 4.5x[1]
Non-GAAP EPS[2]	$3.10 - $3.40	~↑ 4.3x[1]

1. YoY change based on midpoint of range. EPS is fully dilutive.
2. With respect to Bloom's expectations regarding its 2026 Guidance, Bloom Energy is not able to provide a quantitative reconciliation of non-GAAP gross margin, non-GAAP operating expenses, non-GAAP operating income, and non-GAAP EPS measures to the corresponding GAAP measures without unreasonable efforts due to the uncertainty regarding, and the potential variability of, reconciling items such as stock-based compensation expense.

Bloom Energy Proprietary & Confidential 5

Issuer FY2026 guidance, Q3 supplemental page 5. EPS is fully diluted. The issuer highlights uncertainty in forward non-GAAP reconciling items.

What the newest two complete calls establish

The October 22 Q3 and July 28 Q2 management earnings calls were read in full provider-written form: prepared remarks, all provided analyst Q&A, management closing and operator closing. Q3 contains 92 mapped paragraphs and Q2 contains 82. Audio was not independently listened to; exact spoken fidelity and omitted audio cannot be certified. E04 and E05 are the complete Quartr/TradingView written sources.

Across the calls, management describes a bottom-up guide using existing customer and site-readiness conversion plus probability-weighted near-term bookings. Capacity is reserved for customers that need power within the year. The stronger time-to-power message supports the demand thesis, while the customer/site mix controls recognition timing.

Q3 emphasizes copy-exact manufacturing expansion within Fremont and Newark. The CEO declines a completion timetable beyond the 5 GW milestone and rejects an analyst assumption of 250-300 MW of extra capacity each quarter. A statement about roughly 600 production-line employees is an automation example, not a total-company payroll budget.

Q2 explains the role of project financiers and the Brookfield and IDF funding shelves. Those facilities finance customers and projects. The CFO describes working-capital timing and a self-funding objective, with no binding quarterly cash-collection guarantee. Q2 commentary about 375+ million CFOA is explanatory, not formal numerical cash-flow guidance.

Evidence that changes the modeling question

Call topic	Reader implication
Demand and backlog	Keep customer conversion, permits and installation readiness conditional.
Modular manufacturing	Pay for capacity and support; distinguish nameplate from output.
Service economics	Retain replacement demand and field cost as the installed fleet grows.
Cash conversion	Revenue can precede billing and cash. Model contract assets explicitly.
Disclosure limit	No quarterly GW, 2027 GW, verified ASP or complete unit-cost ledger is issued.

Customer channels and the AEP overlap

AEP announced 702 MW of Bloom fuel cells for a Google-linked project near Cheyenne on October 14. Its roughly 4 billion dollar investment covers the whole project, with a 20-year Google power-purchase agreement and approximately 92% AEP/8% Basalt ownership. Construction is planned in 2026 and full operation by the end of 2028. E09 is the full original AEP article.

The earlier AEP disclosure already included 2.65 billion dollars of fuel-cell purchase commitments. The new project headline therefore overlaps the existing program. The model adds no separate 4 billion dollars of Bloom revenue and does not force all 702 MW into 2027. Carbon-capture credits and project-financing shelves create no additional modeled product sale.

Oracle, Nebius, utility, industrial and broader data-center demand are correlated channels within the aggregate paths. Army-related lease announcements remain conditional partner/project evidence rather than firm Bloom purchase orders. Customer concentration, permitting and the availability of financing can delay conversion together.

Demand evidence and overlap control

Evidence	What is counted
AEP/Google 702 MW	Aggregate dated demand and timing; zero separate award addition.
Brookfield 25B / IDF 2.6B shelves	Customer project-finance capacity; no BE cash balance or sale addition.
800V DC, CHP and CCS	Adoption and efficiency thesis; no independent savings-revenue line.
Quarterly reported revenue	Only revenue recognition and acceptance within each selected path.

Supercycle, adoption curve and reachable markets

AI data-center expansion turns time to usable power into a binding economic constraint. Bloom can supply modular generation before some grid interconnections are available. The relevant supercycle exposure is the conversion of funded projects into accepted Energy Servers and long-lived service relationships.

The adoption curve has three practical phases. First, urgent data-center and specialist on-site deployments establish reference installations and commissioning capability. Second, repeat utility, colocation and industrial projects test manufacturing reproducibility, financing and service density. Third, broader commercial adoption depends on delivered power cost, reliability, fuel infrastructure and customer credit.

The available market is not converted into revenue by multiplying all global power demand by a Bloom price. Product, installation, service and electricity have separate economics. Gas access, permitting, financing and field performance bound the reachable market; service expands with commissioned fleets rather than an independent duplicate hardware TAM.

Framework exposure to AI data centers, physical AI and ubiquitous AI should remain separate from probability-weighted company outcomes. The selected joint paths already integrate correlated customer and execution risks. Analytical scoring does not multiply those outcomes a second time.

Scorecard: advantage with a full risk deduction

The selected six positive categories total 51 points. Five independent scored risk groups deduct one point each, reaching the permitted maximum deduction of five. Broader subrisks belong inside those groups rather than an extra unbounded deduction. The resulting 46/60 equals 76.67%, displayed as 77.

Core advantage rests on automated modular production, time to power and the service relationship. Cycle, addressable market and macro judgments recognize demand for power. Catalysts and alpha remain moderated because substantial expansion was already present in the reference model and the specific quarterly economics remain estimates.

Selected framework points

Category	Points
Core	16
Cycle	10
Tam	9
Catalysts	5
Macro	8
Alpha	3
Risks	(5)
Total	46
Maximum	60
Analytical display	77
Protected Excel Base	72

Five independent risk groups

Group	Distinct transmission
1. Demand and concentration	Customer credit, financing, permits and acceptance.
2. Industrial execution	Supplier ramp, labor, yield, freight and paid capacity.
3. Lifetime performance	Degradation, replacement stacks, warranty and guarantees.
4. Liquidity and claims	Working capital, take-or-pay, debt maturities and dilution terms.
5. Policy and competition	Gas/carbon rules, tax support, grid alternatives and rival technology.

One joint probability law

Delayed 25%, central 55% and accelerated 20% are complete conditional company paths. Demand, yield, utilization, unit costs, support budgets, customer deposits and cash conversion are evaluated together within each path before weighting. Zero separate customer multipliers are applied to already-included demand.

The evidence ledger is an overlap ledger, not an additional set of independent outcome weights. The AEP completion/timing assessment and adoption confidence explain the selected aggregate endpoints without creating another award or a second probability haircut.

Joint paths

Path	Probability	2027 requested GW	2027 cash opex
Delayed	25.0%	2.400	1,030.0
Central	55.0%	3.300	1,040.0
Accelerated	20.0%	4.500	1,200.0

Signal ledger; all entries bind the same company paths

Signal	Overlap treatment
Q326 actual and raised FY26 guidance	Replaces prior FY26 forecast, never added to it.
Demand conversion, supplier ramp, broader utility/C&I channels	Replaces old2.82GW2027/3.9/5/6GW schedule. Oracle/Nebius/Brookfield/supplier evidence are correlated, not independent wallets.
AEP/Google702MW with CCS	$4B includes full project; earlier$2.65B purchase commitment overlaps. No$4B BE sale; no CCS-credit revenue or ASP surcharge.
Army leases/international/800V DC and time-to-power	No extra globalpower TAM; no standalone savings revenue; retained prior factor10 engineering correction.
Supplier minimums and cash funding	Minimums already included in purchases and deltaNWC, never added again to COGS/capex. Q2disclosure uses different scope.
Oracle consideration, concentration and site readiness	Issued2.154231M shares already capitalization; do not add max warrant3.531073M as fresh issuance or306.5Mcash expense.

Calibration endpoints are analytical estimates

A common gross product realization proxy of 2,950 USD per kW translates modeled accepted GW into product revenue before Oracle consideration. It is an analytical calibration, with no claim of a disclosed contract ASP. The factory coefficients below are similarly LOW-confidence budgets. Actual requested shipments are reduced by physical availability.

2028-2030 materials, conversion labor and overhead coefficients follow the selected learning assumptions; freight and warranty retain explicit path economics. Service costs apply to the average modeled installed fleet. Quarterly cost, revenue and cash outputs in this report are direct projections of the frozen model.

Conditional operating and collection assumptions

Parameter	Delayed	Central	Accelerated
Manufacturing yield	93.0%	94.0%	96.0%
Utilization	86.0%	93.0%	95.0%
Materials per GW, USD M	1,390.0	1,310.0	1,260.0
Conversion labor per GW, USD M	145.0	125.0	115.0
Overhead per annualized GW per quarter, USD M	39.0	35.0	33.0
Freight per GW, USD M	65.0	50.0	45.0
Product warranty / gross product R	2.5%	2.0%	1.8%
Service cash cost per fleet GW-quarter, USD M	25.2	23.4	22.2
AR days	55	46	40
Contract-asset days	75	60	50
Inventory days	130	115	100
Deposits / next-R proxy	40.0%	55.0%	65.0%

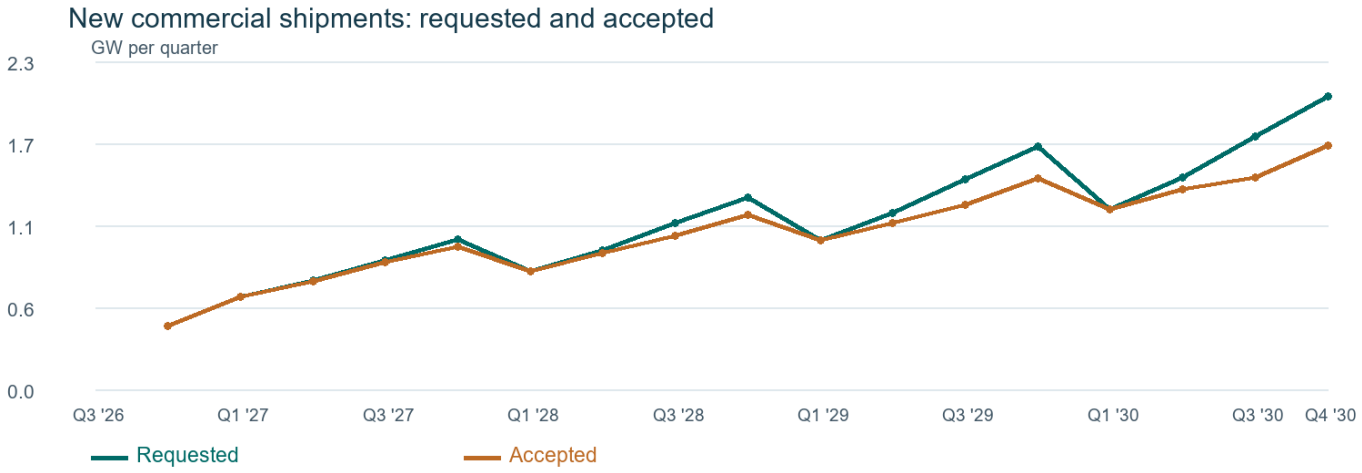

Requested annual GW, before physical caps

Year	Delayed	Central	Accelerated
2027	2.400	3.300	4.500
2028	3.000	4.200	6.000
2029	3.700	5.200	8.000
2030	4.300	6.200	10.000

Capacity becomes revenue through acceptance

Nameplate GW is an annualized factory rate. Quarterly available output equals nameplate/4 times path yield and utilization, less replacement demand on the opening fleet. Accepted new commercial output is the smaller of requested shipments and available output. Replacement capacity supports prior customers and is not resold as a new product shipment.

The Q4 2026 guide allocation has a separate physical proxy; it is calibrated to the residual financial guide rather than a reported volume. Future capital additions are paid in cash. The nameplate schedule is an analytical commissioning path, not a management completion promise.

Quarterly physical bridge

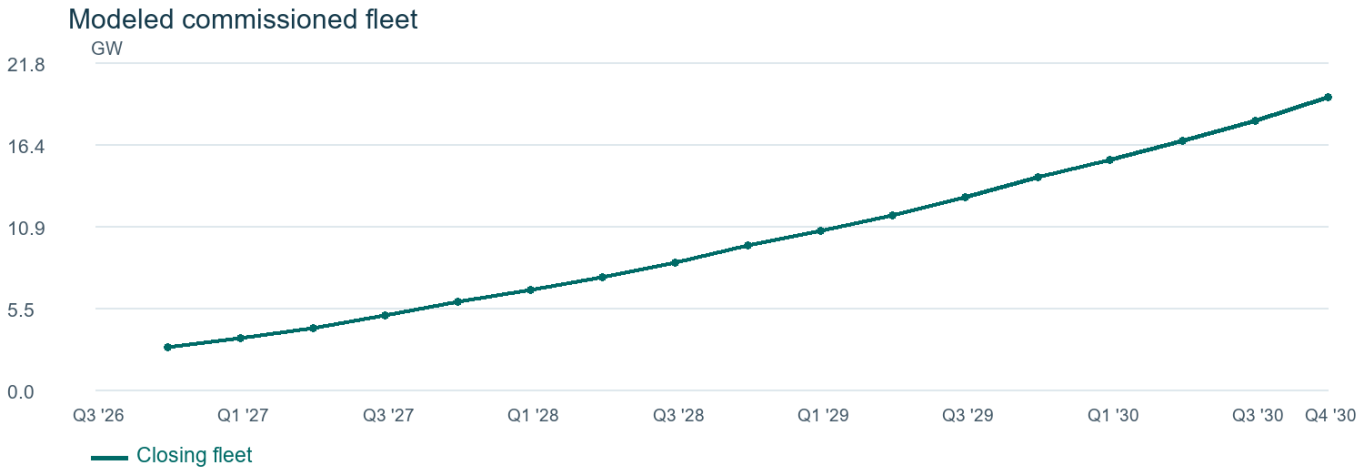

Quarter	Requested	Available	Accepted	Replacement	Unaccepted
Q3 2026	--	--	--	--	--
Q4 2026	0.437	0.656	0.437	0.072	0.000

Q4 2028	1.329	1.204	1.204	0.255	0.125
Q1 2029	1.033	1.170	1.030	0.288	0.003
Q2 2029	1.218	1.151	1.151	0.317	0.067
Q3 2029	1.454	1.278	1.278	0.349	0.175
Q4 2029	1.681	1.461	1.461	0.385	0.220
Q1 2030	1.242	1.420	1.242	0.425	0.000
Q2 2030	1.466	1.386	1.386	0.460	0.080
Q3 2030	1.752	1.462	1.462	0.498	0.289
Q4 2030	2.025	1.686	1.686	0.538	0.340

All columns GW per quarter. Q3 actual physical output is undisclosed and left blank. Availability is after replacement allocation.

Service follows the commissioned fleet

The modeled fleet opens at 2.4 GW, adds 95% of new commercial shipments and retains a quarterly attrition assumption. Revenue uses the average fleet; field support, parts and stack replacement are paid within service cost. Three percent of the opening fleet consumes replacement manufacturing capacity each quarter.

Assurance warranty accrual and cash payments cover product obligations. Routine service labor, parts and replacement stacks belong to the separate service budget. The model preserves those scopes without adding the source 42.5 million assurance reserve as a second expense.

Fleet and service economics

Quarter	Opening GW	Average GW	Closing GW	Service R	Cash cost	Service DA
Q3 2026	--	--	--	67.6	--	--

Fleet GW are LOW-confidence analytical cohorts, not reported installed-fleet guidance.

Revenue across four business vectors

Product revenue is net of Oracle customer consideration. Installation is linked to the delivered product mix; service is linked to the average commissioned fleet; legacy electricity remains a separate declining business. The four categories sum to consolidated revenue in every row.

Q3 2026 is reported actual. Q4 is a guide-derived forecast. All 2027-2030 values are conditional weighted estimates, with no separate company quarterly or GW guidance.

Full eighteen-quarter revenue table

Quarter	Product	Install	Service	Electricity	Total
Q3 2026	1,073.6	84.9	67.6	9.8	1,235.8
Q4 2026	1,263.1	90.0	80.0	9.6	1,442.7

Q4 2030	4,972.8	174.0	562.3	6.8	5,716.0

USD millions; one decimal is display rounding. Exact raw values and source pointers accompany the report data contract.

Gross profit preserves the category boundary

Product GP includes conversion materials, labor, factory overhead, freight, assurance warranty and production depreciation. Service GP includes field costs and service D&A. Installation and electricity have their own direct cost budgets.

The Q3 category rounding of minus 0.001 is explicit. Forecast periods have no segment-rounding adjustment. Non-GAAP GP remains after depreciation, and it should not be described as EBITDA.

Full eighteen-quarter non-GAAP GP

Quarter	Product	Install	Service	Electricity	Rounding	Total
Q3 2026	412.2	(3.0)	14.5	2.5	(0.001)	426.2
Q4 2026	483.5	(3.2)	17.6	2.5	0.000	500.4
Q1 2027	735.2	(1.4)	18.2	2.5	0.000	754.5

Factory cost: the physical ramp is paid

Materials and conversion labor scale with accepted output, while factory overhead follows installed annualized capacity. Freight and warranty remain explicit. Product D&A charges the paid asset base. The Q4 guide-cost calibration reconciles detailed proxy components to the company annual guidance residual; it is zero from 2027.

The source does not disclose an audited materials/labor/overhead ledger per GW. These decomposed costs are LOW-confidence model allocations. Each component is an expense once; purchase timing and supplier minimums are separate cash and inventory mechanics.

USD millions. Undisclosed actual component figures are blank; zero is not substituted for missing source detail.

Operating expenses and paid support

The annual conditional cash operating-expense budgets are 1,030/1,180/1,360/1,600 million in the delayed path, 1,040/1,360/1,720/2,150 million centrally and 1,200/1,700/2,350/3,100 million in the accelerated path for 2027-2030. They carry a rising quarterly seasonal profile.

Model R&D, sales/marketing and G&A allocate total non-GAAP opex 36%/23%/41%. Opex includes its assigned depreciation; cash opex removes only that amount. These are paid planning budgets, not an issued headcount or guidance schedule. Source payroll and service support cannot be inferred from one automated production-line staffing example.

Non-GAAP operating-expense bridge

Capital and depreciation stay in the economics

Opening net PPE is 539.726 million. The model pays for nameplate additions at 120 million per added annualized GW, plus 2% of revenue and 75/4 million of quarterly capital spending. Capital cash flows remain separate from current operating costs.

Forecast depreciation uses the retained opening asset base and incremental paid PPE; product receives 70%, service 15% and operating expense 15%. It reduces OP once and is added back once in CFO. The redacted new-lease rent and exact commissioning dates remain unresolved source detail. The model is a planning bridge rather than a full audited asset register.

Capital and total depreciation

Opening asset and capital disclosures

Source fact	USD M / scope
Net PPE at September 30	539.726; E03 p19
Gross PPE / CIP	843.644 / 208.176; E03 p19
New Fremont lease	158,400 sqft; 150 months; uncommenced September 30
Lease disclosure limit	Rent and commencement schedules are redacted; E10 pp1-3

Working capital is a material conditional estimate

Revenue recognition, billing and cash collection occur at different times. September contract assets total 858.646 million; 463.887 million of quarterly revenue remained unbilled while 33.539 million moved from opening contract assets to receivables. A growing balance can coexist with individual collections. E03 p13.

Opening accrued expenses of 479.782 million include broad reported obligations. The forward accrual budget uses 20% of cash COGS plus 80% of cash operating expenses as a planning proxy. Vendor advances of 355.017 million combine operating and capital advances without a disclosed split. The forecast holds 7% of annualized materials plus 10% of new capex as an aggregate advances proxy; new-asset capex and on-account advances remain disjoint cash uses.

Opening other operating assets of 190.285 million reconcile 178.244 + 372.115 - 355.017 - 2.384 - 0.740 - 1.933. Separately tracked advances, current and long-term financing costs and deferred tax are excluded. Forward other operating assets at 14% of quarterly revenue and deferred costs at 10% are analytical approximations. Lease rent stays inside operating budgets; detailed rent and commencement timing remain undisclosed.

NWC equals AR + contract assets + inventory + advances + deferred costs + other operating assets, less AP, accrued expenses, customer deposits and warranty. D&A and the noncash warranty accrual are excluded from the purchased cash-cost pool. No balance is used twice as an expense or a cash outflow.

Opening September 30 balance sheet inputs

Balance	USD M
Ar	634.743
Ca	858.646
Inventory	927.670
Advances	355.017
Ap	493.033
Accrual	479.782
Deposits	754.380
Warranty	70.267
Deferred Cost	117.610
Other Operating Assets	190.285

Oracle: noncash consideration and issued shares

The remaining customer-consideration asset is 306.5 million, comprising 90.967 million current and 215.533 million long term. It amortizes against product revenue as underlying servers are delivered. The actual Q3 adjustment increased revenue by 0.5 million; the model retains that sign.

May settlement issued 1.905433 million cashless-exercise shares plus 0.248798 million inducement shares, or 2.154231 million in total. Those shares are already in current capitalization. The original maximum warrant of 3.531073 million is not issued again in the forecast.

Future amortization reduces product R and OP once and is added back once to CFO as noncash consideration. It is not a second cash payment, materials expense or new award. The timing schedule is analytical and capped by the remaining asset. E03 pp14-15,43-44.

Oracle remaining asset and amortization

Quarter	Opening asset	Contra revenue	Closing asset	Net product R
Q3 2026	--	(0.500)	--	1,073.6

Q1 2030	0.0	0.000	0.0	3,664.6
Q2 2030	0.0	0.000	0.0	4,087.8
Q3 2030	0.0	0.000	0.0	4,314.2
Q4 2030	0.0	0.000	0.0	4,972.8

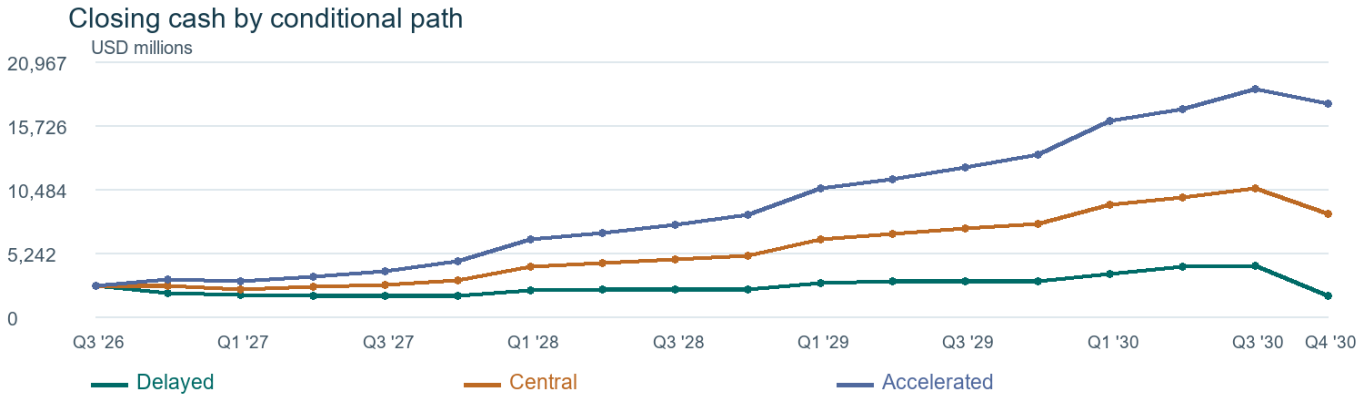

Q3 actual contra revenue is -0.500 (a revenue increase). The actual remaining asset is the next forecast opening asset.

Cash generation and funding are separate from OP

Forecast CFO = OP + depreciation + noncash Oracle consideration - cash interest - cash tax - change in NWC. FCF = CFO - capex. Closing cash = opening cash + FCF - JV investment - principal cash + new conditional debt. Product assurance warranty accrual/cash differences flow through the warranty balance inside NWC.

Operating-profit multiple is unchanged and is not a cash valuation. Cash is a separately reconciled feasibility bridge; conditional debt is disclosed, no new equity issue asserted. No enforceable covenant forecast is claimed because test definitions/adjustments are not fully inspected.

The planning liquidity floor is 500 million. Any quarter shortfall raises conditional new debt, which carries 8% annual interest in later quarters. No new equity proceeds are assumed. The floor is a modeled funding response rather than committed financing. The native diluted share proxy is retained even where debt maturity is planned as cash settlement.

USD millions; each line includes its own paid-capacity, procurement and collection path.

Delayed path: every quarterly cash balance

Joint probability 25%. The conditional path is evaluated before weighting. Revenue, production cost, service support, working capital and capital spending belong to the same execution case. Q3 2026 is actual; its opening cash and forecast-specific fields remain blank where the model does not provide them.

Each forecast row satisfies opening cash + CFO - capex - JV investment - principal + conditional debt = closing cash. A positive modeled cash balance after financing does not demonstrate lender availability or covenant compliance.

Purchases, supplier floors and maturity cash

Reported 5.8 billion dollar supplier agreements have terms longer than twelve months, with expected payments of 100 million in the rest of 2026, 2.6 billion in 2027, 1.3 billion in 2028 and 1.8 billion in 2029. Price adjustments are excluded. June disclosure used a different beyond-twelve-month fulfillment test, so the difference from 16.4 million is not an exact new-commitment measure. E03 p36; E08 p36.

The model compares an eligible supply-purchase need plus inventory build with the payment floor. Unconsumed purchases remain in inventory and NWC. The floor is not added again to COGS or capex. Forecast advances remain a separate aggregate holding proxy.

The model plans 22.771 million cash principal in Q2 2029 and 2,500 million in Q4 2030 at contractual maturities, plus the small 2026 obligation. Actual settlement can be cash, shares or a mixture. Cash interest income is conservatively omitted. The future native diluted proxy is a valuation convention rather than a fully sourced cap-table prediction.

The native method and the no-increment control

The retained native method values the current quarter plus the next three quarters of non-GAAP parent-economic operating profit at 20x, divided by the starting-quarter diluted share proxy. Depreciation and Oracle contra revenue remain inside that operating profit.

For quarter t, take the four OP terms from t through t+3, multiply the sum by 20 and divide by the native starting-quarter diluted shares. Ownership is 100%, parent-only adjustment is zero and outside claim is zero. Depreciation and Oracle contra revenue remain inside OP. Cash and debt are not separately added or subtracted from the price.

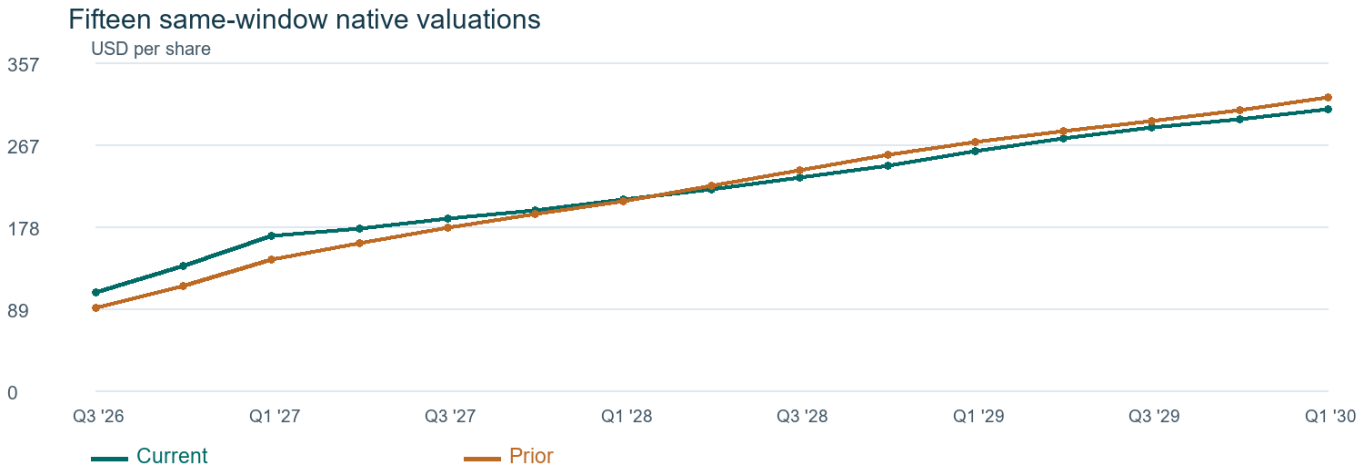

At Q4 2027 the exact calculation is 3325.136972668 x 20 / 339.5 = 195.884357742. The no-increment control retains the prior exact native OP/vector path and the same quarter, multiple and shares, giving 191.782451429. This comparison isolates the economic revision without a calendar or valuation-method change.

Because all three paths share the native starting-quarter share schedule here, the price from weighted OP equals the weighted conditional prices. That equality is a denominator property, not a general license to substitute a ratio of expectations when path-specific share counts differ. The last three quarters have no complete next-three-quarter window and remain blank.

All weighted quarterly operating outcomes

The full eighteen-row schedule keeps actual results and forecasts explicit. The first fifteen rows have complete forward-four-quarter claims. Three trailing ceilings remain blank. The prior and current values use the same native quarter and method.

Values in the report are rounded for legibility. The accompanying numeric contract retains exact underlying raw values and canonical pointers; percentage revisions use unrounded prices.

Every four-term forward derivation | first eight

The four displayed OP terms are consecutive calendar quarters. Sum the terms, apply 20x and divide by the displayed starting-quarter diluted proxy. All figures come from the weighted native schedule. The table uses three decimals for OP and price; the stored numeric contract carries the unrounded values.

These are operating-profit method outputs after depreciation, rather than EBITDA multiples. Future years include physical capacity, lifetime support and paid cash-cost budgets. No current market-price upside or rank is inferred.

Delayed: all fifteen priced windows

Conditional probability 25%. Each window uses this path's own four OP quarters, with the common native starting-quarter diluted share proxy. The entire path includes its resource and cash consequences before probability weighting.

The final three quarter starts are unpriced because their required future quarters extend beyond the modeled horizon. Prices are conditional arithmetic valuations, not a statement that every financing and delivery requirement is contractually secured.

GAAP, non-GAAP and cash have different adjustments

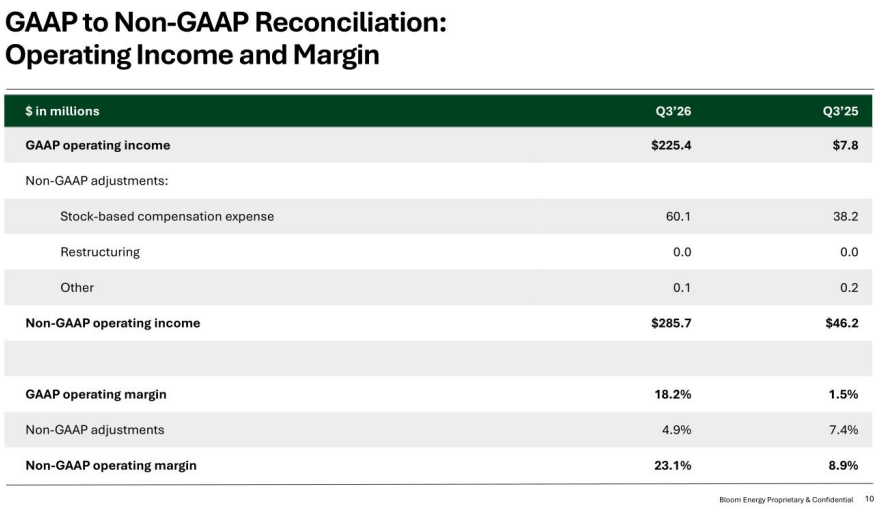

Reported Q3 GAAP OP is 225.449 million. The non-GAAP bridge includes stock-based compensation of 60.109 million, restructuring of 0.034 and other adjustments of 0.101. Individually rounded components sum to 285.693; the direct reported non-GAAP OP is 285.691, with an explicit minus 0.002 reconciliation. Q3 cash-flow SBC addback is 57.209, a different disclosed scope. E01 p11; E03 pp8,30,51.

The native valuation method uses non-GAAP parent-economic OP and includes depreciation. It excludes recurring SBC under that sanctioned method, so a separate model sensitivity field shows 5% of forecast revenue as a GAAP-SBC cost diagnostic. That field is not silently deducted from the approved non-GAAP valuation.

Adjusted EBITDA adds depreciation and excludes other identified costs. Net income also includes below-operating items. Neither replaces OP in the native method. A one-quarter warranty-reserve decline is not treated as a recurring clean gross-profit benefit.

Precise reported operating-income bridge

Component	USD M
GAAP OP	225.449
SBC adjustment	60.109
Other OP adjustments	0.135
Source bridge rounding	(0.002)
Reported non-GAAP OP	285.691

Other	0.1	0.2
Non-GAAP operating income	**$285.7**	**$46.2**
GAAP operating margin	**18.2%**	**1.5%**
Non-GAAP adjustments	4.9%	7.4%
Non-GAAP operating margin	**23.1%**	**8.9%**

Bloom Energy Proprietary & Confidential 10

Issuer Q3 supplemental page 10, October 22, 2026. The rounded slide supports the operating-income adjustment categories; the exact source reconciliation is retained in the adjacent table.

What can challenge the paid-ramp thesis

Demand and concentration: track customer-funded installations, contract-asset billing and receivable collection, rather than financing-shelf headlines. Current Q3 customers accounted for 43% and 26% of revenue. The amended Q2 disclosure identifies a single customer at 73%; end user and project financier can differ. E03 p10; E08 explanatory note.

Industrial execution: watch accepted commercial output, paid factory capacity, yield, freight and supplier advances. The counter is modular automation and repeated production processes. A source 5 GW milestone does not establish quarter-by-quarter available output.

Lifetime performance: watch service margins, replacement manufacturing demand and warranty cash. Product assurance and routine service budgets remain disjoint. Source total performance-guarantee exposure is contingent; neither its 466.1 million remaining potential payment nor the 847.2 million cap is booked as an immediate payment.

Liquidity and claims: compare CFO and supplier purchases with recognized OP, deposits and maturity cash. The counter is cash on hand and customer-funded demand, subject to collection and debt-access assumptions. Policy and competition: track permits, gas supply, tax eligibility, fuel economics and competing grid or generation options; no CCS credit is required in the modeled product revenue.

Observable signposts

Signpost	What would improve confidence
Revenue to cash	Lower unbilled balances per unit of accepted revenue and completed collections.
Capacity to delivery	Accepted shipments keep pace with paid nameplate additions.
Service cohorts	Fleet growth without disproportionate parts, stack or guarantee costs.
Procurement	Purchases and advances convert into sold units rather than excess inventory.
Funding	Documented access through maturity dates, without assuming an unissued equity rescue.

Source confidence and remaining gaps

HIGH confidence covers reported consolidated actuals and the issued annual guidance as stated. The individual rounded category bridges retain explicit reconciliation differences. Medium confidence applies to management descriptions of demand and manufacturing strategy; their operational and market claims are not independent audited volume records.

LOW confidence covers the physical-volume realization, factory unit-cost allocation, fleet cohorts, learning, cash collection days, deposit rates, capital conversion and forward expense budgets. The report labels these as model estimates. No verified customer-by-customer ASP, complete unit-cost ledger or quarterly commissioned-capacity plan was disclosed.

Outstanding source boundaries include the split of vendor advances between capital and operating uses; the specific warranty-reserve reduction by utilization versus estimate changes; redacted new-lease rent and commencement; customer payment milestones; and the precise definitions needed to certify future lender covenants. No omission is converted into a claim of source certainty.

Cross-company comparison should focus on power availability, delivered economics, recurring support burden and cash conversion. Total project investment, customer funding shelves and global data-center demand are different denominators and cannot be added as company revenue.

Source register and completeness

Originals, full written-call texts, complete graphic bundles and exact hashes are retained in the source packet. Selected issuer exhibits appear beside the corresponding claims. The report does not reproduce entire calls, annual filings or raw inline-XBRL data.

All newest-two written call content was reviewed through closing. Audio remains independently unreviewed. The current 57-page visible 10-Q and the 19-page current supplemental were read in full; the amended Q2 filing and new lease were reviewed only for the specifically described passages. Original documents remain controlling.

Retained source register

ID / source	Source date	Review scope	SHA prefix
E01 Q3 earnings release	2026-10-22	17-page original issuer PDF retained; full release text read through SEC ex99.1 plus actual financial/reconciliation page images.	6925f72a3f5f
E02 Q3 supplemental	2026-10-22	All19 pages extracted/read; all4 contact sheets personally viewed. Original PDF/complete SEC graphic bundle retained.	90de462a4040
E03 Q3 10-Q	2026-10-22	Complete visible57-page current filing read; inline-XBRL hidden contexts excluded from reading derivative. Prior-year material incorporated by reference remains outside this source refresh.	59d93f8c97a7
E04 Q3 complete written call	2026-10-22	Full92-paragraph TradingView/Quartr written transcript read: operator handoff, IR/CEO/CFO prepared remarks, Q&A, CEO closing and operator end. No audio listening or audio-text verification.	22a56eef8da9
E05 Q2 complete written call	2026-07-28	Full82-paragraph TradingView/Quartr written transcript read: operator opening, IR/CEO/CFO prepared remarks, Q&A, CEO closing and operator end. No audio listening or audio-text verification.	cf2272e7a9d7
E06 Q2 earnings release	2026-07-28	Original17-page issuer PDF retained; prior-quarter and Q1 comparative financial/guidance/reconciliation tables used. Not a claim of a new full historical audit.	cd68e281e5b2
E07 Q2 supplemental	2026-07-28	All19-page text read; original PDF and complete SEC graphic bundle retained.	9341130a90a3
E08 Amended Q2 10-Q	2026-07-29	Targeted amended-source reading: amendment scope/customer concentration, supplier commitments, vendor advances, PPE, warranty/expense roll. Not newly read in full. Amendment fixes three/six-month concentration transposition.	edea4606a229
E09 AEP original project article	2026-10-14	Complete article body read; canonical official host redirects successfully, original press subdomain TLS mismatch retained as failed attempt. Original project image retained.	3089f3289b7d
E10 New lease exhibit	2026-08-28	Original image-based lease exhibit and13 graphics retained. First3 original pages personally viewed for premises/term/rent-redaction/operating-cost obligations; remaining boilerplate not certified fully read.	74ebbe147cb7
E11 SEC submissions listing	2026-10-22	Actual current SEC recent filings list establishes Q3 10-Q066931 and8-K066890 and Q2 amended filing050325.	18c31d7f1628
E12 Issuer financial-document API	2026-10-22	Public widget response resolves actual PDF URLs. Its category ReportDate11/30(Q3)/9/30(Q2) is not the release date; document/SEC dates control.	cfe5d6161f80

Sources, units and decision boundaries

USD millions are used for operating and cash tables; per-share figures are USD and diluted share proxies are in millions. Accepted output is GW per quarter; factory nameplate is annualized GW. Fleet GW is a separate commissioned-cohort proxy. Table totals may differ at the displayed decimal because exact raw values are rounded only for presentation.

Q3 2026 is the actual anchor. Q4 2026 is derived from FY2026 guidance less reported nine-month results; the two 2026 rows do not form a full-year forecast table. Calendar 2027-2030 annual totals each include four forecast quarters. Three trailing native valuation windows remain blank.

The analytical score and protected Excel Base have different roles and remain 77 and 72 respectively. The owner-saved quote of 219.34 has no date, and the holding field is unspecified. No current-price upside, holding assertion, enterprise-value bridge or price-dependent ranking is presented.

The conditional cash bridge is a feasibility estimate, with aggregate working-capital and financing qualifications. The operating-profit valuation remains the native convention. Exact source links below support the factual claims; reported observations and forward model estimates should be evaluated separately.

The linked workbook dynamically connects expected revenue, disjoint costs and operating expenses to OP, the forward-four-quarter sum and the native 20x valuation divided by starting-quarter shares. The full nonlinear conditional paid-capacity, service-cohort and cash solver resides in the canonical JSON model and the report data, with the conditional path tables retained there. The workbook does not provide a fully live simulation of that cash solver.
