ORCL | FULL DEEP DIVE | 13 OCTOBER 2026

Oracle: delivery is the product

Framework 8.0 | NEW RESEARCH COVERAGE | no holding recorded | TEMPORAL BOTTLENECK
Analytical Base: 40/60 (67%) | Band: Watchlist
Dated header snapshot: $139.25 per share (2026-10-13 11:23 EDT, Stock Analysis [S19]); 3,023.736m issued shares (7 September 2026 filing cover date); implied equity value $421.06B. Price and share dates differ.
Active Q4 2027 ceiling: $314.63; values Q4 2027 through Q3 2028 at 20x fully expensed operating profit, with end-of-window dilution.

Oracle combines an established database and business-applications franchise with a rapidly expanding infrastructure cloud. Database customers buy compatibility, reliability and support for systems that are expensive to migrate. Applications customers use software embedded in finance, human resources and operational workflows. OCI adds compute, storage, networking and the operation of large accelerator clusters. These businesses share customer relationships and technology, but have different capital requirements and margins.

The growth thesis is the conversion of contracted infrastructure demand into delivered service. Oracle can earn revenue when useful computing capacity reaches customers; announcing a campus or buying hardware does not complete that chain. FY27 Q1 provided operating evidence: OCI revenue reached $7.388 billion, and Oracle reported delivery of 850MW of additional capacity and more than 300,000 GPUs. Those figures support an execution thesis. They do not establish that every future contracted dollar will convert on time or at the same profitability.

Figure E1. Oracle Financial Analyst Meeting, 16 October 2025, p26: original campus photograph. Site is not identified here. The model needs functioning, accepted capacity, not just buildings. [S4]

The central judgment

Oracle has a credible route from contracted demand to a much larger infrastructure business. Its scarcer capability is delivering an integrated, powered cluster at scale. The database franchise supports stickier economics, but GPU capacity is substitutable and the buildout is financed. The investment case therefore depends on service revenue, fully loaded margins and cash funding progressing together.

This is a single active operating forecast with explicit input probabilities and separate sensitivities. Neither the analytical score nor a backlog announcement is a statistical probability that the ceiling will be achieved. All forecasts beyond the next 12-16 months carry lower confidence. Figures in this report are presentation-rounded; the synchronized model retains full precision.

BUSINESS MODEL AND TAM EXPANSION

Database distribution broadens the opportunity

Oracle's database franchise creates switching costs through application dependencies, operational knowledge and the work needed to migrate and validate a critical system. Database@AWS illustrates how Oracle can monetize that installed base even when a customer chooses a rival for other computing services. The July 8, 2025 launch placed OCI-managed database infrastructure inside AWS, supporting Exadata, Autonomous Database, RAC and existing licensing options.

This reduces the need to win every customer's entire technology budget. It also makes Oracle's mix more interesting than a pure GPU rental business. However, database growth is already inside the modeled OCI and software paths. Oracle's reported 404% Q4 FY26 multicloud growth came without an absolute revenue figure in that release; it cannot be applied to the entire database franchise or added independently to OCI revenue. Cloud migration can also move dollars out of software, so segment growth must reconcile to the consolidated total.

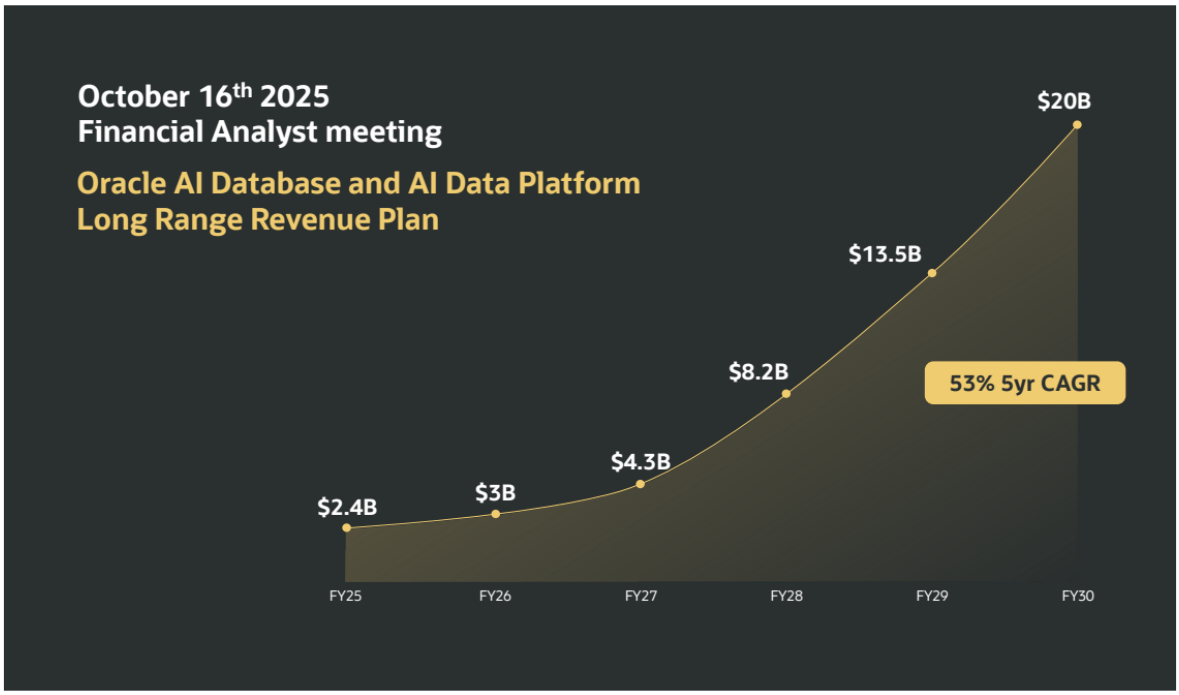

Figure E2. Oracle FAM, 16 October 2025, p37. Historical management AI Database/Data Platform plan, USD billions: FY25 2.4; FY26 3.0; FY27 4.3; FY28 8.2; FY29 13.5; FY30 20.0. These are a subset of the opportunity already within OCI/software; no extra revenue line is added. [S4]

Framework lens	Company-level capture and limitation
New workloads	Training, inference, enterprise data and agents widen utilization; the same workload can appear in several market descriptions.
Lower cost per useful result	Faster clusters can expand usage while reducing unit prices. Revenue needs paid volume and service mix, not just technical speed.

COMMERCIAL ECONOMICS

An attractive gross margin is not operating profit

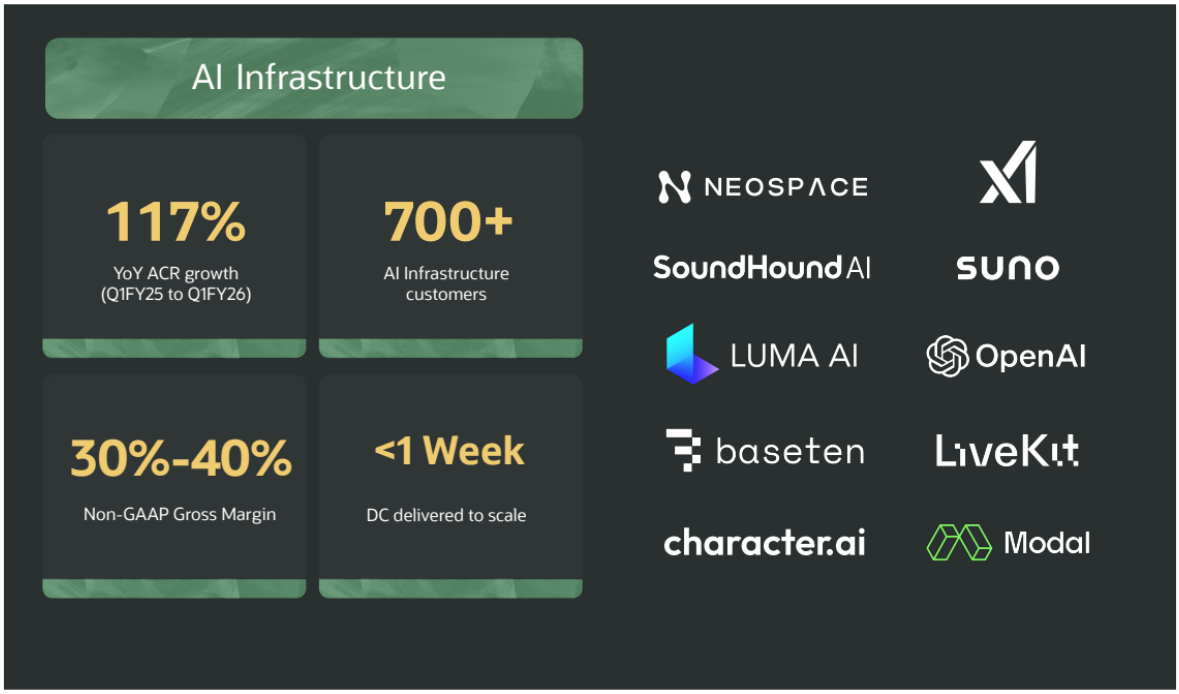

Figure E3. Original Oracle FAM AI-infrastructure exhibit, 16 October 2025, p22. The stated 30-40% range is non-GAAP gross margin for this business context, not Oracle GAAP operating margin. The customer and deployment claims are dated presentation claims. [S4]

Management described a Q1 FY27 GPU renewal cohort priced about 20% above its previous contracts, with most of that cohort over four years old. This supports a possibility of durable useful capacity. It does not establish a 20% price rise across Oracle's fleet. The active forecast contains no separate fleet-wide renewal uplift. [S15]

The same call described 97.9% GPU utilization and delivery of 850MW and more than 300,000 GPUs. Utilization is management-reported and fleet scope matters: it cannot establish each site's margin or revenue per GPU. The coherent bridge is delivered service volume, then fully loaded product gross profit, then operating functions, interest, tax, funding and dilution.

Metric	What it measures	What it cannot establish
GPU count	Delivered accelerator units	Comparable compute or profit without type, term and utilization
MW / GW	Power or capacity scale; scope must be stated	Recognized Oracle sales without IT power and service dates
RPO	Contracted performance not yet recognized	Cash on hand or guaranteed annual revenue
Gross margin	Revenue less the defined service costs	Operating profit, cash return or equity value

COST AND DURATION

The equipment and facilities must earn their cost

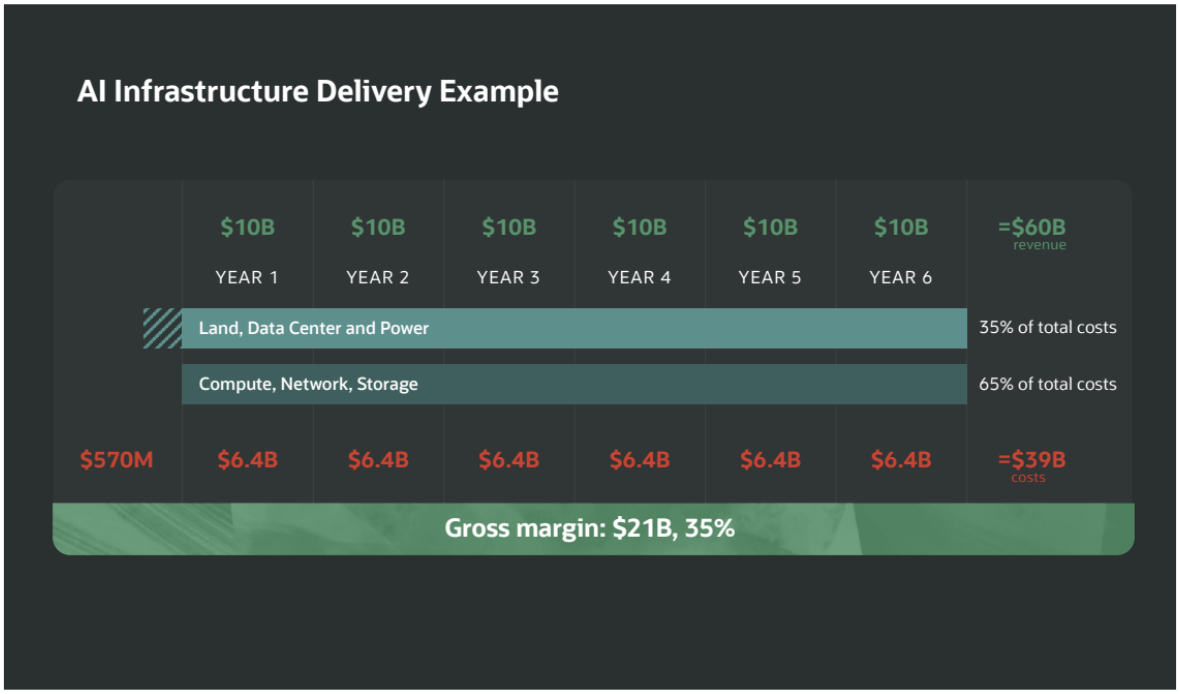

Figure E4. Original Oracle FAM illustrative economics, 16 October 2025, p24. Six-year aggregate USD60B revenue less USD39B cost = USD21B gross profit (35%). Cost mix: 35% land/datacenters/power; 65% compute/network/storage. This is an example, not a delivered contract audit. [S4]

Management's October 2025 presentation illustrated $60 billion of revenue over six years against approximately $39 billion of costs, or a 35% gross margin. It allocated 35% of costs to land, datacenters and power, and 65% to computing, networking and storage. This is an illustrative gross-profit case. It is not consolidated operating profit, and it does not remove corporate operating expenses, stock compensation, interest, tax or dilution.

Model treatment	Accounting consequence
Fully loaded product margins	Depreciation, facility leases and cost-category SBC sit inside COGS. Baseline costs are not subtracted twice.
Operating functions	R&D, selling, administration, amortization and restructuring remain expensed; SBC is not added back to valued OP.
Economic life sensitivity	Shorter hardware life or capex overruns add incremental depreciation to COGS and reduce OP.
Cash funding	Capex, debt principal, customer advances and possible new shares are modeled separately from accounting OP.

SCARCITY AND PHYSICAL DELIVERY

Power, networks and cooling set the service date

A GPU by itself is not a usable cloud service. Oracle must combine the site, power, cooling, racks, accelerators, high-speed networking, storage, control software and trained operators. Failure or lateness in one critical element can delay recognition on the entire cluster. The relevant capacity measure is customer-usable output, rather than announced land area, nameplate generation or the number of chips ordered.

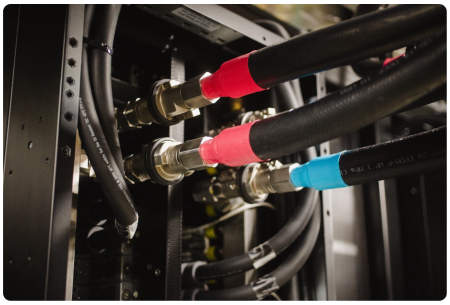

The strongest competitive argument is coordinated delivery at scale. Network design and cluster operation influence utilization and time to complete a workload, which matter more to a customer than an isolated hardware specification. Oracle's NVIDIA roadmap describes Acceleron networking, BlueField-4 and Rubin integration. These are technical capabilities and product plans, not proof of future realized margins. The model should capture higher delivered volumes and bounded cost improvement without separately adding a networking premium, power premium and backlog premium for the same service.

E5a. Power infrastructure, Oracle FAM p27.

E5b. Networking, Oracle FAM p29.

E5c. Liquid cooling, Oracle FAM p30.

Original photographs published 16 October 2025; sites are not identified here. These illustrate the required systems, not current commissioning status. [S4]

Bloom announced 1.2GW contracted for deployment through 2027 within a possible 2.8GW framework on 13 April 2026. Generation still requires fuel and permits. New Mexico's 15 July decision rejected a state-land gas-pipeline segment for Project Jupiter; it establishes a local execution risk, not cancellation of the entire campus. [S10-S11]

Step in delivery	What must be true before the next step
Site and permitted energy	Firm fuel/power access, connection dates and site approvals; generation capacity is not automatically IT power.
Integrated infrastructure	Cooling, electrical systems, racks and networking must be installed and tested together.
Accepted compute	A customer-usable cluster needs reliable communications and software, with workload-specific performance.
Recognized economics	Service delivery must produce collectable revenue after power, facility, hardware and operating costs.

BACKLOG, CUSTOMER FINANCE AND ROADMAP

A contract becomes revenue only as service arrives

At August 31, 2026, RPO was $664 billion. Oracle expected approximately 13% to become revenue over the next year, 37% in months 13-36, 34% in months 37-60 and the remainder later. This schedule demonstrates why the whole backlog cannot be divided by one year or used as immediate liquidity. The percentages are rounded expectations covering contracted performance, not a guaranteed quarterly delivery schedule.

Customer evidence supports real usage: OpenAI said on April 29, 2026 that GPT-5.5 had been trained at Abilene on OCI using NVIDIA GB200 systems. That is stronger evidence than an announcement of a future campus. OpenAI's wider Stargate capacity commitments cover multiple partners, however, and must not all be assigned to Oracle. Public sources reviewed here do not establish an audited customer-level breakdown of Oracle RPO or the precise economics of every OpenAI commitment.

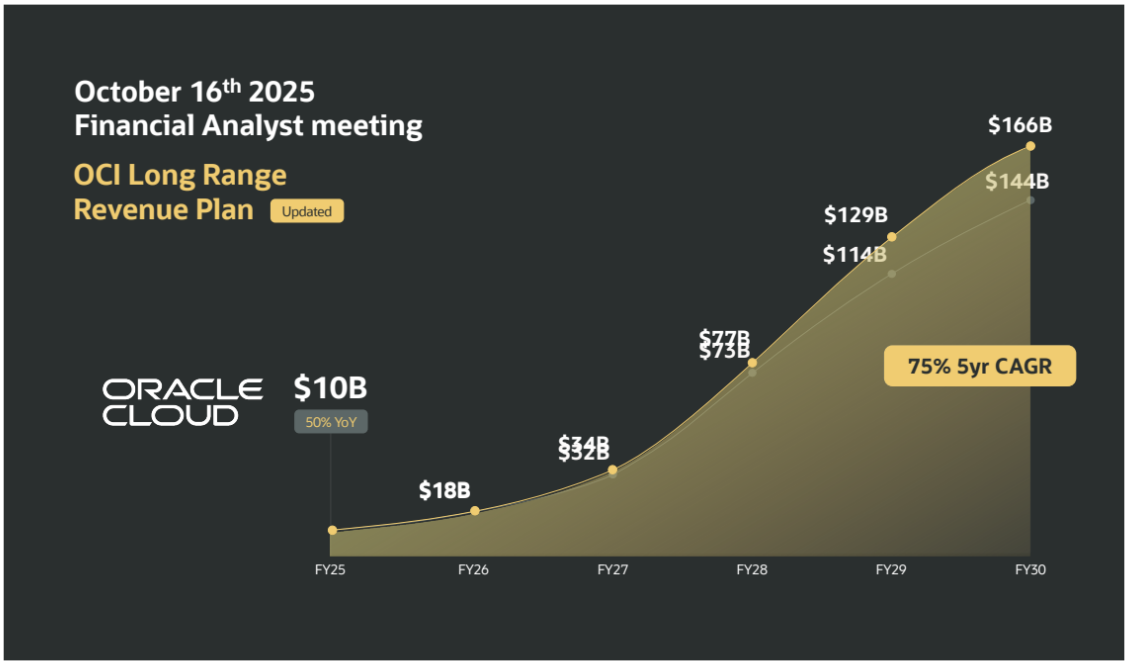

Figure E6. Original Oracle FAM OCI roadmap, 16 October 2025, p36. Active dated management endpoints used as conditional outcomes: FY28 USD77B, FY29 USD129B, FY30 USD166B. The original exhibit also contains historical comparison figures; those are not active model series. FY27 old OCI numbers are not presented as current guidance. [S4]

At 31 Aug 2026	Next 12 months	Months 13-36	Months 37-60	Later
RPO timing, rounded	13%	37%	34%	16%
USD664B x share	86.32B	245.68B	225.76B	106.24B

The table translates rounded filing percentages mechanically; it is not a quarter-by-quarter revenue forecast. OpenAI's March 2026 financing announcement concerned committed capital, not audited cash immediately available to pay Oracle. Its August 2026 strategy explicitly preserves provider and hardware choice. Contract concentration and customer financing remain substantive risks. [S2, S8-S9]

ACTUAL RESULTS AND THE TWO LATEST CALLS

The near-term forecast begins with current guidance

USD billions, except EPS	FY26 Q4 actual	FY27 Q1 actual
Quarter end	31 May 2026	31 Aug 2026
Revenue	19.18	19.34
OCI	5.79	7.39
SaaS	4.13	4.22
GAAP operating profit	6.13	6.73
Stock compensation	1.20	1.13
Operating cash flow	14.62	23.10
Cash capex	16.49	28.50
Free cash flow	-1.87	-5.40
Q1 diluted EPS: GAAP / non-GAAP	n/a	1.56 / 1.92

10 September 2026: Q1 FY27 call

Current FY27 guidance is at least USD90B total revenue and USD8.10 non-GAAP EPS. Q2 USD revenue growth of 30-34% and cloud growth of 65-71% imply midpoint revenue of USD21.197B and cloud revenue of USD13.401B from the reported prior-year base. Gross FY27 capex is USD90-95B, while management's net cash capex measure is no more than USD70B. The model uses gross cash capex and shows customer funding in CFO. No current absolute FY27 OCI guide was established in the reviewed materials. [S1, S15]

10 June 2026: Q4 FY26 call

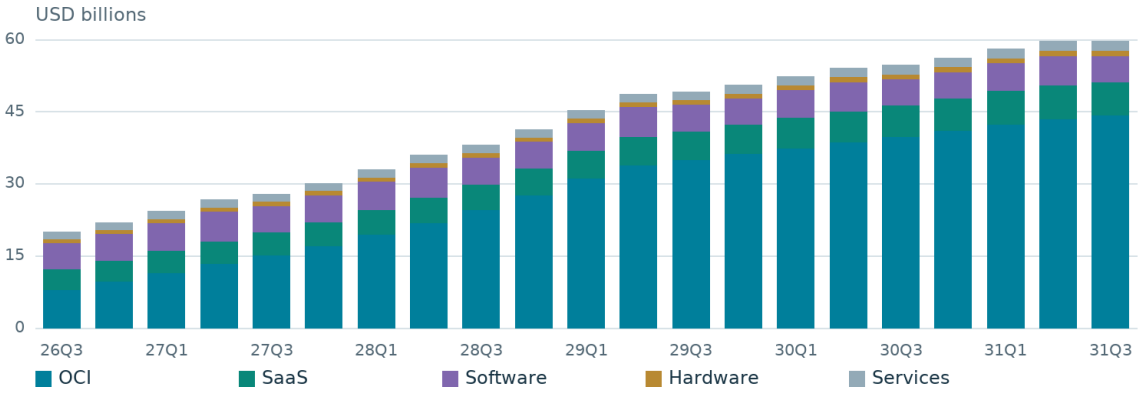

Management expected near-term gross-margin pressure from the infrastructure ramp, while describing lower spending below gross profit. It described fixed-price economics when costs are locked and pass-through arrangements where they are not; this does not establish universal repricing. Prepaid or customer-supplied hardware contracts may improve funding, but contract value is not cash received. The stated high-20s project return measure adds back depreciation and is not conventional after-tax ROIC. [S3, S16]

Calibration and its limit

FY27 total model revenue is USD90.00B. The weighted annual non-GAAP EPS calibration proxy is 8.10; all excluded operating costs are then deducted to construct fully expensed OP. FY27 Q1 is actual. The later quarters are a model translation of guidance, not reported segment profit. A calendar quarter is approximated as two months of one fiscal quarter plus one month of the next; actual monthly revenue is not disclosed.

FIGURE M1 | CALENDAR QUARTER MODEL

OCI drives the revenue mix

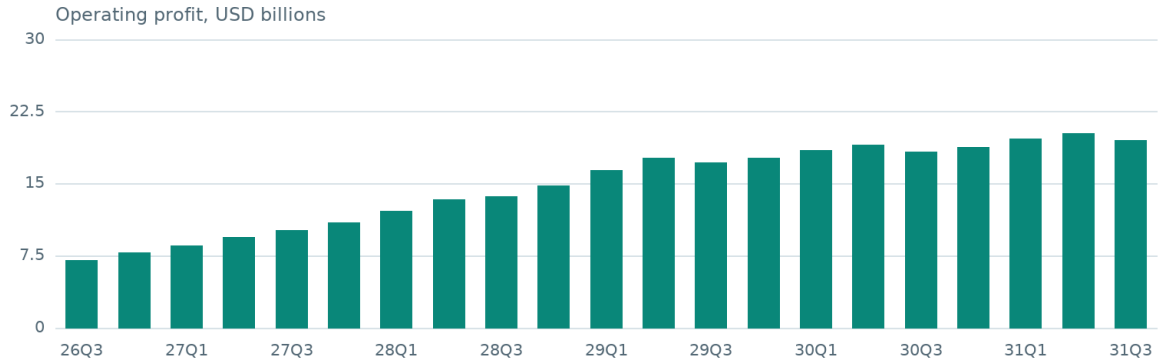

M1. USD billions. Calendarized model, including two actual months in Q3 2026; all later calendar quarters are forecasts. Hardware and services are distinct small stacks. Beyond Q4 2027, confidence is low.

Quarter	OCI	SaaS	Software	Hardware	Services	Total
2026 Q3	7.95	4.26	5.53	0.80	1.43	19.96
2026 Q4	9.67	4.38	5.50	0.82	1.46	21.82
2027 Q1	11.51	4.53	5.83	0.80	1.51	24.18
2027 Q2	13.30	4.69	6.19	0.88	1.56	26.62
2027 Q3	15.08	4.77	5.57	0.85	1.56	27.83
2027 Q4	17.10	4.97	5.57	0.85	1.56	30.05
2028 Q1	19.38	5.17	5.88	0.86	1.56	32.85
2028 Q2	21.90	5.28	6.18	0.95	1.59	35.90
2028 Q3	24.61	5.30	5.54	0.90	1.65	38.01
2028 Q4	27.66	5.53	5.54	0.90	1.65	41.28
2029 Q1	31.08	5.75	5.85	0.91	1.65	45.24
2029 Q2	33.91	5.87	6.14	1.00	1.68	48.61
2029 Q3	35.03	5.89	5.50	0.95	1.75	49.11
2029 Q4	36.18	6.13	5.50	0.95	1.75	50.51
2030 Q1	37.38	6.38	5.80	0.96	1.75	52.27
2030 Q2	38.59	6.48	6.10	1.06	1.78	54.01
2030 Q3	39.82	6.44	5.47	1.00	1.85	54.58
2030 Q4	41.08	6.71	5.47	1.00	1.85	56.11
2031 Q1	42.38	6.98	5.78	1.01	1.85	58.00
2031 Q2	43.49	7.06	6.07	1.11	1.88	59.62
2031 Q3	44.18	6.96	5.45	1.05	1.95	59.58

Every row reconciles to the total before rounding. Model status: Q3 2026 is Model (two actual months); remaining quarters are Model. Confidence: MEDIUM through Q4 2027; LOW thereafter. FY2027 means June 2026-May 2027, distinct from calendar 2027.

FIGURE M2 | FULLY EXPENSED OPERATING PROFIT

The profit ramp needs both volume and cost control

All periods calendarized model; FY27 Q1 actual anchors the start.

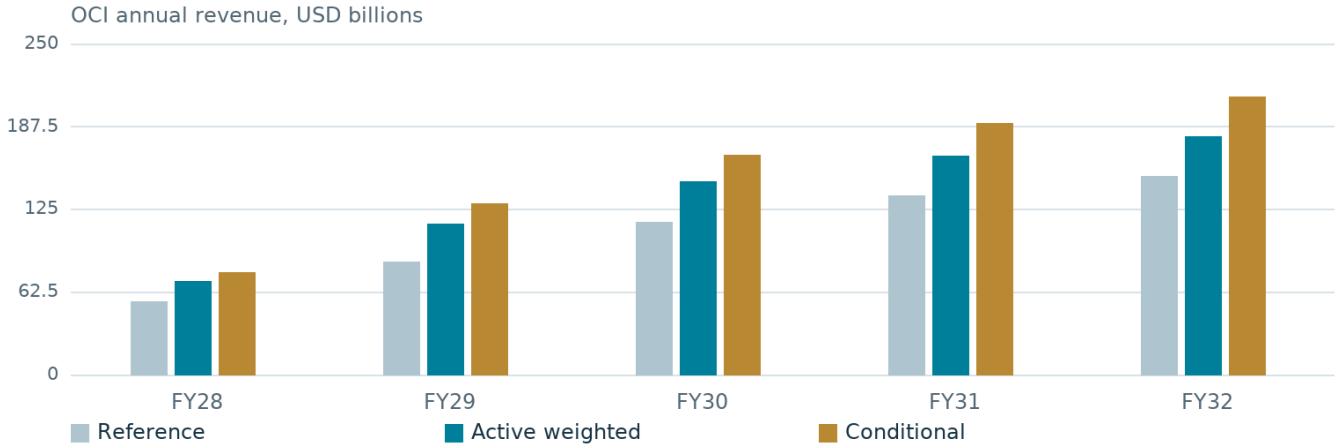

M2. USD billions. Product gross profit less all modeled operating functions produces the valued operating profit. SBC remains an expense. The table supplies the margin path and GP-to-OP bridge.

Quarter	OCI GM	Total GP	OpEx	OP	OP margin
2026 Q3	31.0%	11.95	4.92	7.03	35.2%
2026 Q4	33.9%	12.84	5.02	7.81	35.8%
2027 Q1	31.7%	13.65	5.13	8.52	35.2%
2027 Q2	31.0%	14.66	5.24	9.42	35.4%
2027 Q3	36.5%	15.49	5.36	10.14	36.4%
2027 Q4	36.5%	16.39	5.47	10.92	36.3%
2028 Q1	36.5%	17.68	5.59	12.09	36.8%
2028 Q2	36.5%	19.04	5.72	13.32	37.1%
2028 Q3	36.6%	19.46	5.85	13.61	35.8%
2028 Q4	36.6%	20.75	5.99	14.76	35.8%
2029 Q1	36.6%	22.48	6.14	16.34	36.1%
2029 Q2	36.4%	23.89	6.28	17.61	36.2%
2029 Q3	36.0%	23.56	6.39	17.16	34.9%
2029 Q4	36.0%	24.17	6.51	17.66	35.0%
2030 Q1	36.0%	25.09	6.63	18.46	35.3%
2030 Q2	35.5%	25.76	6.75	19.00	35.2%
2030 Q3	34.5%	25.14	6.88	18.26	33.5%
2030 Q4	34.5%	25.79	7.01	18.79	33.5%
2031 Q1	34.5%	26.75	7.14	19.61	33.8%
2031 Q2	34.3%	27.47	7.27	20.20	33.9%
2031 Q3	34.0%	26.85	7.40	19.46	32.7%

OCI GM is a fully loaded ASTRA allocation, not an issuer-reported GAAP segment margin. The actual FY27 Q1 gross-profit total is reconciled, while the OCI/SaaS/software split uses explicitly labeled proxies. Extra depreciation in sensitivities reduces OP below this base bridge.

FIGURE M3 | COMPANY CAPTURE, NOT AN ADDED TAM

Only the increment receives the execution weight

M3. USD billions by fiscal year. Reference, weighted active and conditional OCI revenue. FY28-FY30 conditional endpoints use the dated management roadmap; FY31-FY32 are ASTRA extensions, not company guidance.

Fiscal year	Reference	Conditional	Execution p	Active	Increment
2028	55.00	77.00	70%	70.40	15.40
2029	85.00	129.00	65%	113.60	28.60
2030	115.00	166.00	60%	145.60	30.60
2031	135.00	190.00	55%	165.25	30.25
2032	150.00	210.00	50%	180.00	30.00

Active OCI = reference + probability x (conditional - reference). The reference already grows substantially from FY27; it is neither a flat-business case nor a liquidation case. Execution weights fall with the longer delivery, funding and technology horizon. The conditional endpoints do not add a second RPO or GW revenue stream.

Fiscal year	OCI GM ref	GM conditional	GM p	Active GM	SaaS active
2028	30.0%	40.0%	65%	36.5%	20.00
2029	30.0%	41.0%	60%	36.6%	22.25
2030	30.0%	41.0%	55%	36.0%	24.70
2031	29.0%	40.0%	50%	34.5%	27.02
2032	29.0%	40.0%	45%	34.0%	29.20

The 41% conditional OCI gross margin in FY29-FY30 is an ASTRA blended mix assumption including higher-margin enterprise services; it is not an official 41% AI-rental forecast. Revenue and margin probabilities are separate weighted inputs, not an estimated joint statistical distribution. The combined adverse case tests their correlation.

S-curve classification: OCI is in a delivery ramp, while database/support is established. A precise share of an unknown ultimate market is not fabricated. The model is company-calibrated; training, inference, enterprise data and agents expand workload demand inside these same vectors.

PROBABILITY LEDGER | ALL AMOUNTS USD BILLIONS

Rule 16b: the active revenue-to-profit bridge

All probabilities below are ASTRA judgments. They are distinct from the analytical Base. Dated roadmap, RPO, delivered GPUs, OpenAI usage and power arrangements inform a single OCI ramp. The separate additive overlap adjustment on those supporting signals is 100%. [S1-S7, S10]

Fiscal year	Volume p	Rev increment	GP at ref GM	Added sales	Volume OP
2028	70%	15.40	4.62	0.23	4.39
2029	65%	28.60	8.58	0.43	8.15
2030	60%	30.60	9.18	0.46	8.72

Fiscal year	Margin p	Ref / conditional	Active GM	Margin OP
2028	65%	30.0% / 40.0%	36.5%	4.58
2029	60%	30.0% / 41.0%	36.6%	7.50
2030	55%	30.0% / 41.0%	36.0%	8.81

Fiscal year	SaaS p	Ref / conditional	Rev increment	GP before shared OpEx
2028	50%	19.00 / 21.00	1.00	0.80
2029	50%	21.00 / 23.50	1.25	1.00
2030	50%	23.20 / 26.20	1.50	1.20

Ordered bridge and recognition

First apply incremental volume at reference OCI gross margin and deduct incremental selling cost of 1.5% of OCI revenue. Then apply the margin improvement to weighted active OCI revenue. This includes the volume/margin interaction once. SaaS uses an 80% fully loaded margin proxy, before shared R&D, selling and administration. Baseline D&A, lease cost and cost-category SBC are inside product COGS; operating functions remain expensed.

Recognition follows service delivery in June-May fiscal years, then the stated two-thirds/one-third calendar conversion. Smooth OCI phase weights preserve each annual endpoint and are listed in the assumption register. No network premium, power premium or backlog premium is added separately. Cloud migration remains within OCI/SaaS/software, with software nearly flat to modestly declining.

Pre-committed tests and counter-evidence

Raise execution confidence only if accepted capacity and service revenue convert together with funded customers and workable site economics. Reduce it for repeated service-start slippage, customer funding pressure, persistent margin shortfalls or unfavorable renewal terms. Margin confidence depends on actual mix, cost control and utilization; a single selected GPU renewal cohort cannot justify a fleet-wide pricing uplift. The same tests apply at each earnings release, beginning with the fiscal quarter ending 30 November 2026.

PROBABILITY LEDGER | ACTIVE MODEL CONTRIBUTIONS

Quarterly contributions remain traceable

The table isolates the weighted revenue contribution above the reference for each supported calendar quarter. It does not represent a new additive scenario. Margin uplift is measured on weighted active OCI revenue against the applicable fiscal reference; the monthly conversion uses the same weights as the operating model.

Calendar quarter	OCI rev increment	OCI volume OP	OCI margin OP	SaaS rev increment	SaaS GP increment
2026 Q3	0.00	0.00	0.00	0.00	0.00
2026 Q4	0.00	0.00	0.00	0.00	0.00
2027 Q1	0.00	0.00	0.00	0.00	0.00
2027 Q2	1.05	0.30	0.31	0.08	0.06
2027 Q3	3.30	0.94	0.98	0.24	0.19
2027 Q4	3.74	1.07	1.11	0.25	0.20
2028 Q1	4.24	1.21	1.26	0.26	0.21
2028 Q2	5.05	1.44	1.43	0.27	0.22
2028 Q3	6.20	1.77	1.62	0.30	0.24
2028 Q4	6.96	1.98	1.83	0.31	0.25
2029 Q1	7.83	2.23	2.05	0.32	0.26
2029 Q2	8.06	2.30	2.17	0.34	0.27
2029 Q3	7.36	2.10	2.12	0.36	0.29
2029 Q4	7.60	2.17	2.19	0.37	0.30
2030 Q1	7.86	2.24	2.26	0.39	0.31
2030 Q2	7.75	2.19	2.26	0.42	0.34
2030 Q3	7.29	2.00	2.19	0.48	0.39
2030 Q4	7.52	2.07	2.26	0.50	0.40
2031 Q1	7.76	2.13	2.33	0.52	0.42
2031 Q2	7.72	2.12	2.31	0.53	0.42
2031 Q3	7.36	2.02	2.19	0.52	0.42

FY27 quarters are calibrated to current revenue and EPS guidance; their zero separate breadcrumb increment does not imply no growth. They already contain the near-term ramp. FY31-FY32 extend the model only to support complete four-quarter windows; lower confidence and declining probabilities apply. SaaS GP remains before shared expenses; the full OP table includes those expenses.

PROBABILITY LEDGER | OVERLAP AND ADVERSE EVIDENCE

A justified zero increment still needs a test

TD Cowen capacity post | 11 October 2026 | 30% judgment

More than 12 GW additional GPU capacity over five years; approximately 19 GW overall cited with a literal unit typo in the post. Original bank methodology was not retrieved.

Illustrative FY30 AI revenue share 50-70% of modeled OCI 145.6 B gives 72.8-101.9 B. At an assumed 15-25 M revenue per IT MW per year, this implies 2.91-6.79 GW average energized GPU capacity. Neither AI mix nor economics per IT MW is disclosed; these bounds test scale, not a forecast. Twelve GW additions over 5 years cannot be compared directly with one year average operating GW.

Same capacity demand as roadmap/RPO; uncertain nameplate/average scope and $19 GW typo. Logo attachment has no chart or evidence. No separate input after bounded proxy attempt.

Obtain original broker capacity definitions, start/end timing, power basis, capex and utilization; retain outside model until it supplies incremental scoped evidence.

Project Jupiter power route | 15 July 2026 | 50% local-delay judgment

One- to two-quarter delay on the affected site if no alternative route or fuel/power solution; does not establish cancellation of the full campus.

At 2-5% of annual OCI revenue exposed and a 1-2 quarter delay, annual revenue at risk would be 0.5-2.5% of OCI. This scope is an ASTRA diagnostic, not known Jupiter share. The 30-40% gap below full ramp success already covers wider timing/customer/equipment uncertainty.

Timing risk is included in execution haircut, not an additional haircut to the same pool. Precise affected capacity/contract size unavailable.

Alternative route approval, operating power evidence or disclosed customer-service delay; then replace broad proxy with scoped site effect.

Customer prepayments | 50% planning probability

Fiscal year	Reference receipts	Conditional receipts	Active receipts
2028	24.00	40.00	32.00
2029	26.00	44.00	35.00
2030	22.00	38.00	30.00

These are gross cash-planning assumptions, not company guidance. They fund already-modeled contracts: incremental revenue and incremental OP are zero. The Q1 net deferred-funding increase, future collections, revenue releases and financing interest are separate in the cash model. A 50% collection reduction and faster prepaid-revenue release are tested independently and together. Actual cash movements, contract terms and financing instruments can replace these proxies. [S2, S14-S16]

FISCAL-YEAR CROSS-CHECK AND FUNDING

Growth consumes capital before it releases cash

Customer-supplied hardware and advance payments reduce Oracle's funding burden, but they do not create cost-free capital. Prepaid revenue must later be earned without collecting the same cash again. FY27 Q1's operating cash flow included $11.363 billion of customer prepayments with significant financing components. A forecast therefore needs a deferred-prepayment roll-forward and the related financing cost, as well as capex, debt maturities and possible equity issuance.

The different asset durations are equally important. Oracle uses a six-year life for much of its server and network equipment, while its additional uncommenced datacenter leases generally last 15-19 years. An initially profitable hardware contract can leave refresh and renewal risk after the first cycle. Hardware obsolescence, lower renewal prices or weak utilization can absorb cash even while accounting operating profit grows. The framework's operating-profit ceiling should be read alongside the funding and useful-life sensitivities; it is not a debt-adjusted liquidation value or a free-cash-flow valuation.

USD billions	FY27	FY28	FY29	FY30	FY31
Revenue	90.00	123.35	169.25	204.10	226.57
OCI	40.08	70.40	113.60	145.60	165.25
SaaS	17.70	20.00	22.25	24.70	27.02
Operating profit	31.73	45.35	61.06	71.92	76.45
Gross cash capex	92.50	105.00	115.00	110.00	105.00
Operating cash flow	66.22	89.02	115.96	130.79	140.77
Advances (Q1 actual net; forecast gross)	25.86	32.00	35.00	30.00	25.00
Prepaid-revenue release	2.62	6.42	11.70	17.35	22.24
Net cash advances	23.24	25.58	23.30	12.65	2.76
Free cash flow	-26.28	-15.98	0.96	20.79	35.77
New debt	20.00	20.00	20.00	10.00	0.00
Principal repayment	3.01	10.14	5.50	7.25	9.75
New equity	0.00	1.31	0.52	0.00	0.00
Ending cash	27.48	15.00	23.30	39.29	57.69
Ending debt	142.33	152.18	166.68	169.43	159.68

FY27 comprises one actual quarter and three modeled quarters; FY28 onward is Model. Negative free cash flow is shown with a minus sign. Cash breakeven later in the forecast depends on the modeled margins, useful life, prepayments and financing; it is not a management commitment. FY27 new equity here is post-Q1 incremental funding: the completed USD20B ATM is already in the opening cash/share balances.

FISCAL FUNDING AUDIT | USD BILLIONS; SHARES BILLIONS

Cash, debt and shares move together

Fiscal quarter	CFO	Cash capex	FCF	Advances*	Revenue release	New debt	Debt paid	New equity	End cash	End debt	Valuation shares

FY 2032 Q2	37.83	25.00	12.83	5.00	5.69	0.00	2.00	0.00	73.74	155.68	3.270

Q1 CFO/capex/FCF are actual. *Advances: Q1 is the USD11.363B net deferred-funding increase; forecast entries are gross. Q1 financing zeros are opening-balance conventions: actual USD4.202B debt repayment and USD19.909B net ATM proceeds are already reflected in opening cash/shares and are not repeated. Q1 valuation shares of 3.089B include allowances, distinct from reported weighted diluted shares of 3.000B.

CFO includes net advances and noncash financing-interest addback; FCF = CFO - cash capex. Ending cash = prior cash + FCF + debt - principal paid - dividends - finance-lease repayments + equity. A USD15B cash floor triggers equity at the header-price proxy, not a prediction of issuance terms. Later rows are forecasts.

FISCAL COST AUDIT | USD BILLIONS

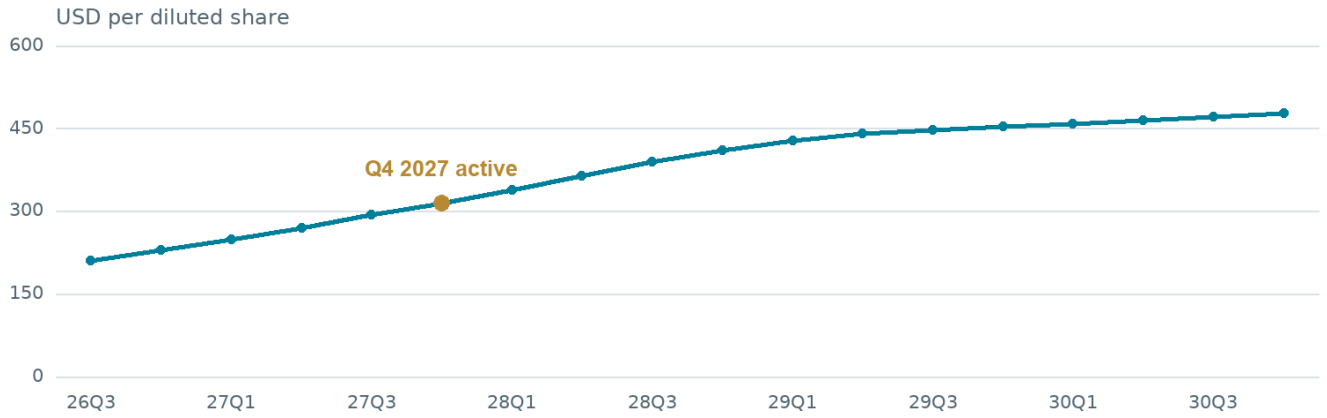

The profit and asset-cost assumptions are visible

Fiscal quarter	Revenue	OCI GP	Other GP	R&D	Selling	Admin	Amort + restr.	SBC total	D&A	Lease cost	Residual cash COGS	OP
FY 2027 Q1	19.34	2.16	9.45	2.40	1.81	0.38	0.30	1.13	3.16	1.10	4.39	6.73

SBC total is disclosed as a cross-check, not an additional expense to subtract from the table: cost-category SBC is already inside product margins and operating SBC inside functions. D&A and leases likewise sit in COGS. Residual cash COGS = revenue - total GP - D&A - cost-category SBC; it includes lease cost and other operating costs, so it is not profit or spare cash. Positive residuals do not prove physical feasibility.

FIGURE M4 | USD PER DILUTED SHARE

Every ceiling prices an explicit four-quarter window

Fully expensed F4Q OP; 20x; end-of-window dilution. No market-price overlay.

M4. The complete supported 18-quarter ceiling path. Gold marks the active Q4 2027 horizon; the long-range region is lower confidence. No analyst target or market-price comparison is plotted.

Ceiling quarter	Exact earnings window	F4Q OP, B	Multiple	Diluted shares, B	Ceiling, USD
2026 Q3	2026Q3 - 2027Q2	32.78	20x	3.121	210.04
2026 Q4	2026Q4 - 2027Q3	35.89	20x	3.129	229.37

2027 Q2	2027Q2 - 2028Q1	42.56	20x	3.154	269.85
2027 Q3	2027Q3 - 2028Q2	46.47	20x	3.166	293.52
2027 Q4	2027Q4 - 2028Q3	49.93	20x	3.174	314.63
2028 Q1	2028Q1 - 2028Q4	53.78	20x	3.182	337.98
2028 Q2	2028Q2 - 2029Q1	58.03	20x	3.190	363.80
2028 Q3	2028Q3 - 2029Q2	62.31	20x	3.198	389.69
2028 Q4	2028Q4 - 2029Q3	65.87	20x	3.206	410.92
2029 Q1	2029Q1 - 2029Q4	68.77	20x	3.214	427.95
2029 Q2	2029Q2 - 2030Q1	70.89	20x	3.222	440.05
2029 Q3	2029Q3 - 2030Q2	72.29	20x	3.230	447.58
2029 Q4	2029Q4 - 2030Q3	73.39	20x	3.238	453.26
2030 Q1	2030Q1 - 2030Q4	74.51	20x	3.246	459.08
2030 Q2	2030Q2 - 2031Q1	75.66	20x	3.254	465.04
2030 Q3	2030Q3 - 2031Q2	76.87	20x	3.262	471.26
2030 Q4	2030Q4 - 2031Q3	78.06	20x	3.270	477.41

For every row: sum the four corresponding calendar OP values, multiply by the sanctioned multiple, and divide by the diluted share count at the end of that earnings window. Values are calculated unrounded. The final three operating quarters supply the tail, not unsupported additional ceilings. This is the framework's OP convention, not EV-to-equity DCF; no net-debt deduction is made.

FRAMEWORK SCORE AND CROSS-BOOK EXPOSURE

Strong demand, with five distinct risk deductions

Category	Points	Evidence and interpretation
Core thesis	14/20	Database switching costs, operating clusters and funding capability. Includes one point for demonstrated customer prepayments; OCI hardware is substitutable.
Cycle stage	8/10	OCI scaling rapidly; energized delivery and utilization determine recognition.
TAM expansion	9/10	Training, inference, enterprise data and agent workflows. Adjacent demand is within OCI/SaaS forecasts.
Catalysts	4/5	FY27 capacity conversion, FY28 contracted service starts and evidence of cash funding.
Macro	9/10	AI infrastructure demand and constrained power; spending durability remains conditional.
Alpha	1/5	Widely followed mega-cap; advantage is cost, financing and calendar reconciliation.
Risks	-5	One point each: competition; site/power execution; customer concentration; funding/dilution; hardware life versus lease duration.
Total	40/60	67% analytical Base; Watchlist band. New research coverage, not an assertion of ownership.

One scored point per risk class

Risk / deduction	What could impair the thesis
Competition / -1	Other clouds, GPUs and custom chips limit renewal pricing and customer dependence on Oracle. OpenAI explicitly preserves choice.
Site and power execution / -1	Permits, generation, networking or cooling can delay usable capacity and recognition while costs accrue.
Customer concentration / -1	Large AI customers depend on financing and monetization. Precise RPO concentration and remedies remain undisclosed.
Funding and dilution / -1	Capex, maturities and weaker advances can require debt or new shares on unattractive terms.
Hardware / lease duration / -1	Six-year accounting life may exceed economic life; 15-19-year leases can outlast the initial hardware cycle.

Dated concentration guard: no single customer accounted for 10% or more of total revenue in FY26, FY25 or FY24 (FY26 10-K, Note 1). That historical statement does not establish the FY27 Q1 revenue mix, receivable concentrations or current RPO concentration. The large-AI-customer risk is forward-looking and unquantified. [S14]

Paired watches across covered names

ORCL / NVDA: verified GPU-platform supplier, with custom-chip substitution a competitive watch. ORCL / BE: verified power partnership; deployment depends on fuel, permitting and commissioning. ORCL / NBIS / CRWV: cloud-capacity peers with potentially correlated customer funding and service-start risk. ORCL / AAOI / LITE / COHR: industry optical volume/cost exposure, without verified Oracle-specific allocations. The master marks AAOI as a position; NVDA, BE, NBIS, CRWV, LITE and COHR are covered with blank holding flags. No supplier allocation or new holding is inferred.

SENSITIVITIES AND RE-RATE TRIGGERS

The modeled ceiling is not a downside floor

Q4 2027 sensitivity	F4Q OP, B	Diluted shares, B	Ceiling, USD	New equity through FY30, B
Active forecast	49.93	3.174	314.63	1.83
OCI execution 50%	48.17	3.185	302.43	3.38
OCI execution 90%	52.14	3.162	329.80	0.15
No long-range ramp increment	43.20	3.223	268.06	8.61
No margin improvement	44.51	3.213	276.99	7.31
Capex +20%	48.47	3.400	285.12	43.25
Prepayments -50%	49.93	3.336	299.40	25.48
Prepaid revenue releases in 12 quarters	49.93	3.253	306.96	13.30
Four-year hardware life	38.89	3.161	246.09	0.00
Combined adverse case	29.89	3.673	162.73	112.72

All rows retain the same Q4 2027 horizon, 20x method and end-of-window dilution convention. Each named single-input case changes that driver while preserving other assumptions and recalculating dependent costs/funding. OCI execution overrides apply from FY28. The combined adverse case sets OCI probability to 50%, removes margin improvement, halves new prepayments, raises capex 20%, shortens hardware life to four years and releases prepaid revenue over 12 quarters.

The combined adverse ceiling is not a floor. A severe customer default, contract restructuring, stranded assets, refinancing failure or large equity issuance at a lower price can produce outcomes below the table. Such a tail is not bounded credibly by available contract and financing disclosures. Book-tax depreciation changes may not create immediate cash-tax savings, another limitation of the planning sensitivities.

Dated tests, not automatic upgrades

Checkpoint	Evidence that changes conviction
30 Nov 2026 quarter end	Q2 service revenue versus current 30-34% total / 65-71% cloud guidance; customer cash, capex and funding.
FY27 through May 2027	Capex delivery, power readiness, accepted GPUs, cost conversion and actual diluted shares.
Through 2027	Bloom contracted deployments and Project Jupiter route/power resolution. Delayed service dates reduce execution confidence.
FY28 service starts	New AI contract conversion; no improvement without usable capacity, payments and retained economics.
FY28-FY30 roadmap	Compare actual OCI revenue and full costs with dated conditional endpoints. Confidence declines with longer horizon.

SOURCE AND MODEL-ASSUMPTION REGISTER

Assumptions are explicit, not disguised as disclosures

Vector / field	Basis and confidence	Transmission into the model
OCI	Q1 actual [S1-S2]; FY27 calibrated model; FY28-FY30 conditional roadmap [S4]. MEDIUM near term, LOW later.	Delivered service is the revenue driver. Separate execution and fully loaded GM assumptions; no additive RPO/GW revenue.
SaaS	Actual revenue [S1]; ASTRA reference/conditional growth. LOW on undisclosed segment costs.	80% GM proxy includes product costs. AI/database expansion is within this vector/OCI, not a new layer.
Software	Actual license/support [S1]; nearly flat modeled annual path. MEDIUM near term.	94% GM proxy. Modest erosion permits cloud migration; not a disclosed product-margin forecast.
Hardware / services	Actual costs/revenue [S1]; modest modeled growth. MEDIUM near term.	GM proxies fixed at Q1 actual: 63.7% / 25.6%.
Operating costs	Actual [S1]; ASTRA growth mechanics. MEDIUM near term / LOW later.	Cash R&D +8% annual; cash sales/admin +6%; SBC +10%. Incremental selling 1.5% of OCI above Q1 level. Amortization declines to a floor; restructuring retained.
Cash and debt	Actual balance sheet [S2]; modeled future funding. LOW beyond disclosed plans.	4.8% annual debt interest plus finance-lease interest and advance financing component; 20% tax proxy; debt principal modeled separately.
Shares	Cover-date common shares [S2], mandatory preferred [S17]; future award/funding proxies.	34m award buffer, 8m new awards per quarter, maximum 31.238m preferred conversion; cash shortfalls issue equity using header-price proxy.

Fiscal phasing and accounting controls

Fiscal year	Q1 OCI weight	Q2	Q3	Q4
2028	20.51%	23.25%	26.36%	29.88%
2029	20.81%	23.38%	26.28%	29.53%
2030	23.80%	24.58%	25.39%	26.23%
2031	23.84%	24.60%	25.38%	26.18%
2032	24.42%	24.80%	25.19%	25.59%

OCI weights are solved to preserve each annual endpoint and a smooth progression from the preceding Q4. SaaS uses 23.5/24.5/25.5/26.5%; software 24/24/24/28%; hardware 24/25/23/28%; services evenly. These are temporal allocations, not additional growth. Near-term EPS translation assumes no ongoing nonoperating income; actual Q1 keeps its reported net income and EPS.

Principal schedule: remaining FY27 USD3.008B (FY26 schedule less Q1 repayment); FY28 10.145B; FY29 5.500B; FY30 7.250B; FY31 9.750B; FY32 8.000B planning proxy. Mandatory preferred conversion is due January 2029; actual ratio depends on contractual price rules. Maximum dilution is modeled conservatively, and principal is not separately subtracted as if the converted security remained debt.

CASH ASSUMPTIONS AND SOURCE INDEX, PART 1

Funding proxies have an explicit expiration test

Opening financed-prepayment proxy is USD15.955B = FY26 net USD4.592B plus Q1 FY27 net USD11.363B. The opening nominal amount releases over 20 quarters. Future collections release over 24 quarters after a two-quarter lag. Revenue release reduces CFO rather than reducing already-modeled OCI revenue. Noncash financing interest at 2.5% accrues to the liability and is added back to CFO. Residual unamortized interest makes this a planning proxy, not an exact statutory contract-liability roll-forward.

The remaining working-capital proxy consumes 6% of positive sequential revenue growth. Cash flow starts with after-tax earnings before preferred dividends, adds D&A, amortization and SBC, deducts working-capital investment, and includes net advances/noncash finance interest. Cash capex includes paying the opening asset payable; it does not create the same asset twice. Customer-supplied hardware is not counted again as Oracle asset purchases. Sensitivities explicitly challenge capex, useful life and advance timing.

Evidence gaps that remain material

AI versus enterprise OCI revenue/margin split not disclosed; explicit blended proxy used.

Power/GPU capacity date and unit comparability incomplete; no additive GW revenue.

Full customer concentration, cancellation/remedy and financing terms are not disclosed.

Forecast cash-margin allocation versus depreciation and lease load requires ongoing checks; cost-cohort schedule is a planning proxy.

Six-year server/network accounting life is not proof of economic life; replacement capex, obsolescence and default can produce worse outcomes than listed sensitivities.

Cash taxes are approximated from pretax profit; book-tax useful-life changes may not create contemporaneous cash-tax savings.

No full primary earnings-call transcript retrieved; third-party transcripts are attributed, corroborated with issuer release/filing wherever possible.

Asset-cost mechanics for the fiscal audit: opening depreciation rolls off at 3% per quarter. All USD48.546B opening construction-in-progress commissions over two years (60% then 40%); new assets commission after two quarters. Equipment is 85% of new assets with a six-year life; other assets use 15 years. The USD6.247B opening capex payable consumes cash over two quarters without recreating the asset. These are planning proxies, not a contract-by-contract engineering audit.

What the evidence does and does not establish

Issuer filings and releases anchor actuals, official guidance and accounting policies. Oracle's dated FAM visuals are original presentation evidence, not proof of current realized unit economics. Earnings-call claims are attributed to third-party transcripts and cross-checked against issuer material wherever possible. OpenAI evidence is customer-authored, Bloom is supplier-authored, and the New Mexico source establishes an official permitting action. The TD Cowen post remains indirect evidence because its original methodology was not retrieved.

All four model charts and all financial tables use the same saved model as the linked workbook. The full original source photographs and presentation pages are embedded; this PDF and its editable HTML work offline. Published exhibits preserve their own dates and historical comparison labels, while the active analytical tables show only the current forecast.
