Kingboard Laminates | Current investment assessment

1888.HK | Research as of 26 October 2026 | HKD millions unless stated. This private company analysis distinguishes issuer facts, broker estimates and model-selected planning assumptions.

The selected Q4 2026 ceiling is HKD 76.49, compared with HKD 75.35 previously. The Q4 2027 ceiling is HKD 80.49, compared with HKD 80.25 previously. The exact working values are retained in the rolling-window and revision tables. The method remains 15 times current-and-next-three-quarter recurring operating profit, using the window-start share denominator. No broker target sets the result.

The company combines laminate production with owned glass yarn and fabric, copper foil and resin processing. That helps supply access during a materials shortage. Competitive qualification, new capacity, raw costs, collection and refinancing still constrain how much of a pricing cycle becomes cash.

Snapshot item	Exact source value
Saved workbook price, HKD; date unverified	38.36
Analytical Base, percent	72
Excel Base, points; unchanged	72
Valuation multiple	15.0
Initial issued plus outstanding-option proxy, million	3192.8

The saved quote is an undated workbook snapshot, not a refreshed market observation. The share proxy includes all outstanding options; it is not the reported GAAP diluted-EPS denominator. Quote-based context is confined to this snapshot.

The four weighted outcomes cover two specified pricing-duration events on a retained LOW-confidence operating plan. They are not exhaustive macro scenarios. A zero default funding shortfall requires assumed debt renewal and incremental bank access, neither of which is described as a secured facility.

Owned value chain, demand and customer proof

Kingboard Laminates Holdings Limited (1888.HK) owns a laminate and upstream-material subgroup. It combines electronic glass yarn and fabric, copper foil and resin production with prepreg and copper-clad laminates. The wider Kingboard Holdings group is a separate reporting boundary. Its finished-PCB revenue is not revenue owned by 1888.

Consolidated external sales and manufacturing cost are the relevant amounts. Cloth, foil or resin consumed inside the 1888 subgroup is not a second external sale. Integration can protect access and capture an upstream spread, while the actual costs of raw materials, energy, labour and processing remain. A market-price increase on owned internal material is not itself an additional consolidated profit.

The interim report attributes stronger demand to AI, high-frequency and high-speed electronics and high-end packaging substrates. It says material shortages accelerated customer certification, and that laminate shipment volume rose 14% with monthly shipments exceeding 10 million sheets. The issuer does not disclose named AI customers, grade-by-grade qualified shipment volumes, or a verified NVIDIA qualification in the reviewed records.

Sales to the retained Kingboard Holdings group establish a disclosed customer channel. Connected-transaction caps authorize maximum annual activity; they are neither minimum purchases nor customer backlog. Broader AI expenditure and board-material requirements can enlarge the opportunity, but do not establish a company-specific share or order.

The retained core opportunity spans three periods: near-term board and material intensity during 2026-27, specialty glass and low-loss conversion during 2028-29, and broader high-speed, vehicle and electronics content beyond 2030. The earlier 100%/50%/20% thematic weights describe thesis emphasis, not discounts applied to every revenue stream.

The five external operating sources remain established laminates, higher-performance laminates, external glass/yarn, external copper/resin/upstream products, and ancillary operating sales. No finished-PCB revenue from the parent group is introduced. Internal material transfers are eliminated.

Owned vector	Customer/value-capture evidence	Limit
Established CCL and prepreg	Current laminate shipments and repeated price increases	Mixed grades; conventional benchmark eligibility is a selected proxy
Higher-performance CCL and prepreg	Issuer high-frequency/high-speed and packaging-substrate certification progress	No audited M8/M9 split or named NVIDIA allocation
External glass fabric and yarn	Owned kilns/looms and reported glass-business contribution	Own-use output is not another external sale
External copper/resin/upstream	RTF/HVLP demand and selected foil project	Copper price pass-through alone is not profit growth
Ancillary operating	Property/rental and other operating activities	Investment income and marks excluded from recurring OP

Capacity, qualification and competition

The H1 report says four new specialty-yarn kilns brought the total to five. Eight further specialty kilns are planned, including two in the second half of 2026, for an eventual total of thirteen. The two near-term kilns are part of the eight. Shaoguan 70,000 tonnes/year yarn began production at end June 2026; an additional 10,000 tonnes/year ultra-fine phase is targeted for Q1 2027.

The fabric programme includes 95 million metres/year at Shaoguan,Q3 2026;78 million at Qingyuan,the first half of 2027; and 150 million at Nansha,Q3 2027. Total fabric capacity is planned at 1.05 billion linear metres/year by 2028, including 100 million specialty metres, with looms rising from 3,333 to 5,833. These additions and specialty metres must not be added again on top of the stated total.

A 21,000 tonnes/year RTF/HVLP foil project targets Q3 2027. The laminate/prepreg project totals 1.1 million sheets/month plus 20,000 rolls/month; its 350,000 sheet/month Phase I targets mid 2027 and is a subset of the whole programme. Nameplate, commissioned capacity, qualified good output and external shipments are separate measures.

The current report already uses the 5 October BofA source for a 30% judgment that 2027 established/premium laminate margins persist through 2028. Its stated adjustment excludes 2027 earnings, new volume and separate upstream repricing. The source's broader cycle theme overlaps UBS; the exact finite 2027 price curve is additional evidence rather than a second independent demand pool.

The UBS PTFE-hybrid qualification, VR300/NVL576 and Kyber supplier-allocation and earnings scenarios refer to Shengyi. They do not prove KBL PTFE or M9 revenue. NPO/CPO board count, area and grade effects share an underlying material wallet and must not be multiplied as independent growth channels. Elite Material, Shengyi and other qualified suppliers remain competitive alternatives; future grade capture and qualified capacity are not established by nameplate alone.

Programme	Disclosed amount / timing	Boundary
Specialty yarn kilns	Five operating; eight further planned, two in H2 2026; total thirteen	The two are part of the eight
Shaoguan yarn	70,000 tonnes/year; end-June 2026 commissioning	Capacity and deliveries differ
Ultra-fine yarn phaseII	10,000 tonnes/year; Q1 2027 target	Timing and qualification remain conditional
Fabric projects	95 m metres/year Q3 2026;78 m H1 2027;150 m Q3 2027	Included within total programme
Total fabric and looms	1.05 bn linear metres/year by 2028, including 100 m specialty;3,333 to 5,833 looms	Linear metres, not square metres; specialty is a subset
Copper foil	21,000 tonnes/year;Q3 2027 target	RTF/HVLP project, not an external-order award
Laminate/prepreg project	1.1 m sheets/month plus 20,000 rolls/month;350 k-sheet first phase mid 2027	First phase is within whole project

The retained 2027 operating plan requires price and mix as well as physical deliveries. Its old check of 125 million equivalent laminate sheets at HKD 240 is an analyst-equivalent mix, including prepreg effects, rather than a matched quoted FR4 SKU. The retained 2028 glass external fractions and ASPs are also LOW planning inputs. Installed looms and nominal sheets must not be mistaken for qualified external sales.

Issuer actuals and management-record completeness

Kingboard is a half-year reporter. H1 2026 is a six-month period, and the management statement of roughly HKD 1.1 billion July profit does not establish quarterly OP or a permanent monthly run rate. The full written FY 2025 and H1 2026 management discussions are available and have been reviewed within the source packet.

Complete spoken calls, verbatim speaker-labelled Q&A and replays for the newest two results events have not been obtained. These are written management records; complete spoken calls and verbatim Q&A remain unavailable. No newly reported consolidated Q3 2026 actual is asserted; a current reconstructed quarter must remain distinct from published historical forecast snapshots.

The latest two written reporting records are the FY 2025 annual report, published 22 April 2026 following 16 March results, and the H1 2026 interim report published 17 September and uploaded 18 September. The reviewed written management sections cover performance, capacity and prospects. Complete spoken calls, verbatim Q&A and replays were not obtained.

The July 2026 profit statement and the half-year accounts already informed the retained operating calibration. They are not a newly added profit stream or a guaranteed monthly profit floor. Current Q3 reconstruction is explicitly separated from the as-then published historical forecast.

The following source tables preserve the disclosed periods and original accounting scope. Reported net income, EBITDA, gross profit and the selected recurring operating-profit measure are not interchangeable.

Conventional pricing: units, monthly path and recognition

The three preserved UBS pages dated 12 October 2026 describe conventional CCL pricing, upstream fabric scarcity and a 1-2 month lag into recognized profit. Their lower Figure 2 row forecasts pre-tax RMB 383 per sheet in December 2026 and 443 in June 2027, followed by a decline to 380 byDecember 2027. The upper row is HKD per sheet including VAT; Figure 3 carries an after-tax HKD label. No conversion is assumed between those series and the old model's mixed-product HKD-equivalent ASP.

UBS models KBL CCL gross margin above 45% in the second half of 2026 and 44% in 2027. The supplied pages do not reconcile that exact scope to pure laminate sales, the broader laminate/upstream division, or consolidated revenue. The old 2027 plan has 38% pure-laminate GM and about 40.22% across four external material vectors, with higher glass margins. The scope comparison must precede any economic conclusion.

The broker estimates around 2 percentage points of GM per 10% ASP increase while allowing for 2027 material inflation. That estimate is neither a disclosed KBL grade-level measurement nor an independent profit addition after applying a costed margin.

The lower Figure 2 row is the source benchmark. No upper-row HKD/VAT conversion or absolute product-ASP substitution is made.

Source month	RMB/sheet, pre-tax
2026-10	328.0
2026-11	354.0
2026-12	383.0
2027-01	383

Source month	RMB/sheet, pre-tax
2027-02	402
2027-03	402
2027-04	422
2027-05	422
2027-06	443
2027-07	443
2027-08	430
2027-09	417
2027-10	404
2027-11	392
2027-12	380

The selected bridge mixes one-month and two-month recognition equally. It clips negative scarcity premiums at zero and resets unknown future benchmark months to the December 2026 reference. Those are model-selected modelling choices, not additional source observations. Direct pricing effects therefore have a finite tail through Q1 2028; working-capital, interest and cash consequences can continue afterward.

The old plan already contains strong 2027 sales, mix and margins. The source does not justify applying a new absolute price to the entire laminate division, or multiplying a glass windfall, a laminate price rise and a PTFE forecast as independent profit pools.

The distinct second-half 2026 margin claim

The broker forecasts CCL gross margin above 45% in the second half of 2026, as well as 44% in 2027. The earlier report's 45% premium-laminate quarter margin was a narrower scope, not proof that this broad half-year claim was already captured.

The selected model tests both denominator interpretations. The four-material reference is HKD 22,000 million revenue and 9,159 million GP; a 45% threshold gap is 741 million. The pure-CCL alternative is 13,700 million revenue and 5,297 million GP; its threshold gap is 868 million. These are alternative scopes, not amounts to add together.

The model selects the smaller 741 million GP budget and limits it to the 75% eligible established-CCL cohort, producing 555.75 million conditional half-year GP. It is allocated by the unchanged 4,800/5,000 quarterly established sales out of 9,800 for the half-year. The same 40% event probability gives 222.3 million active GP and 200.07 million active OP after the 10% incremental support reserve. No additional revenue, volume, independent probability or second upstream profit is added.

This is a LOW margin/contribution proxy within the retained revenue and cost budget. Its implied COGS effect is not verified unit-cost deflation, a free-material assumption or a whole-group 45% margin floor. The 2027 relative-price bridge applies to a separate period; the existing 30% 2028 persistence event remains active and overlapping GP is still counted once.

Root scope bridge / selected component	Exact source-model value
four material revenue HKDm	22000.0
four material GP HKDm	9159.0
pure CCL revenue HKDm	13700.0
pure CCL GP HKDm	5297.0
four material 45 pct threshold gap HKDm	741.0
pure CCL 45 pct threshold gap HKDm	868.0
smaller scope budget HKDm	741.0
full established the second half of 2026 revenue HKDm	9800.0
eligible net GM add	0.07561224489795919
selected conditional the second half of 2026 GP HKDm	555.75

The current Q3 reconstruction changes under the conditional outcome. The 64 published historical display atoms and their original formulas/vintage remain preserved separately; no newly reportedQ3 actual is claimed.

Conditional outcomes and overlap counted once

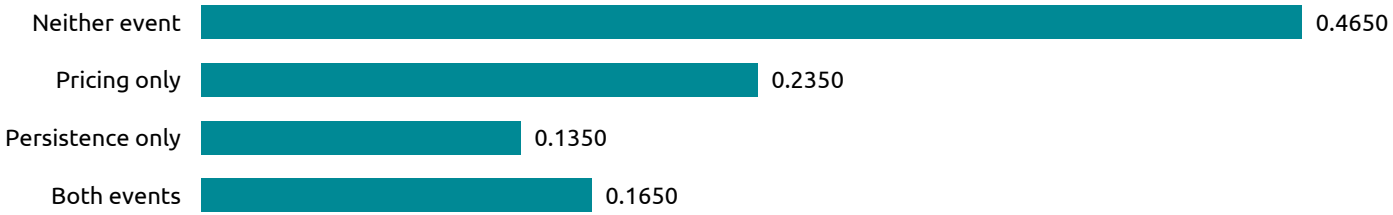

The four joint outcomes distinguish the selected BofA duration event and the selected UBS pricing event on a retained operating plan. They do not constitute a complete probability distribution over macro demand, product mix, qualification, capacity delivery, customer collections or refinancing. The core plan's status and assumptions should remain visible.

The analytical and Excel Bases are both 72%. The analytical assessment totals 43 of 60 points, which rounds to 72%. This measures thesis quality; it is not another economic probability applied to operating profit or price ceilings.

The previously selected BofA event remains active: a 30% probability of established and premium 2027 margins persisting during 2028, rather than normalising to the lower reference. It has not been removed. The shared second-half 2026 margin and 2027 pricing event has a 40% overall probability, with positive correlation to that existing event. Source-authenticity judgment 95% is recorded separately and is not multiplied into the economic probability a second time.

Four conditional joint outcomes

Probability ratio

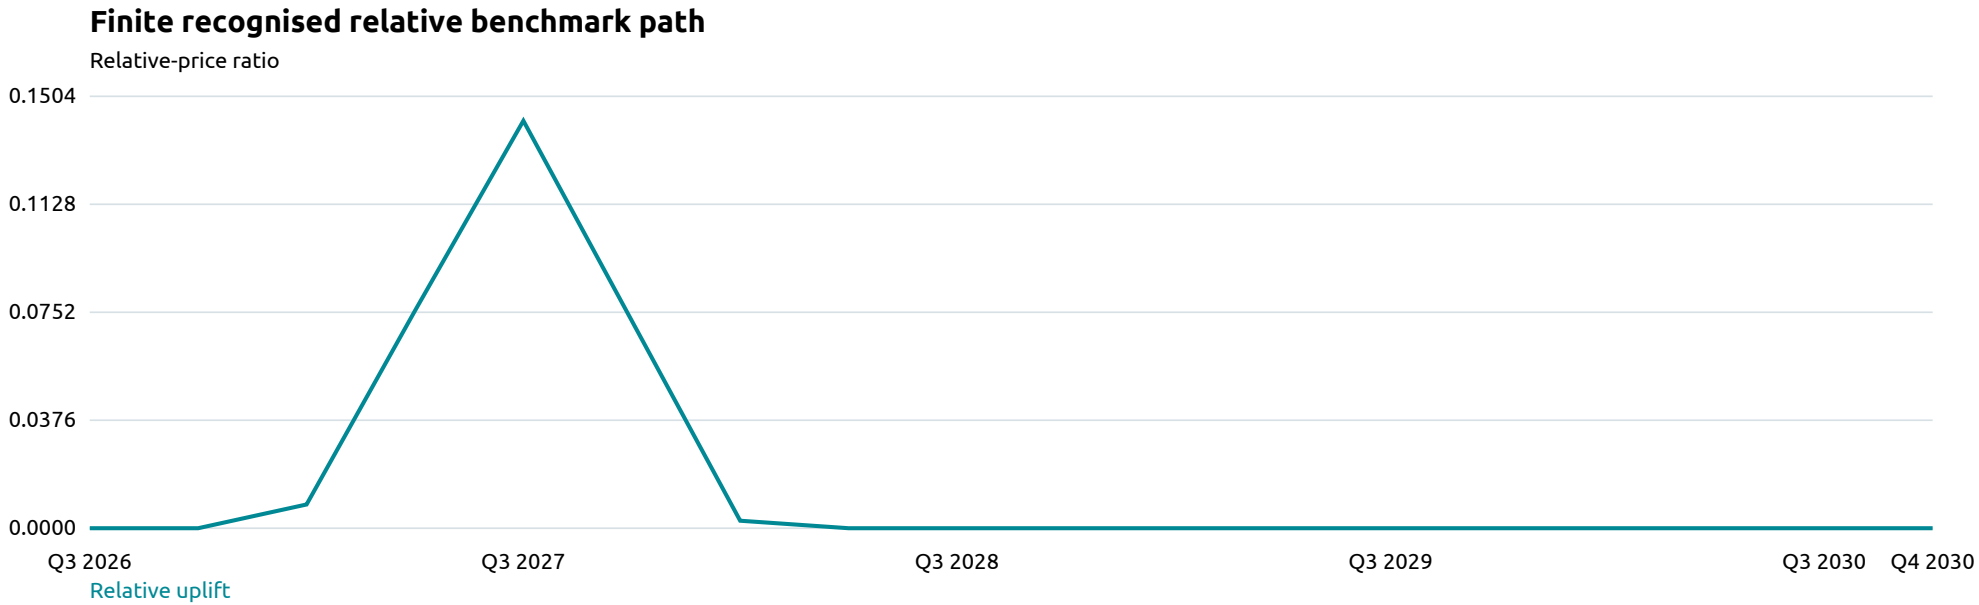

These probabilities distinguish two events on the retained core plan, not the full macro distribution. Exact values appear below.

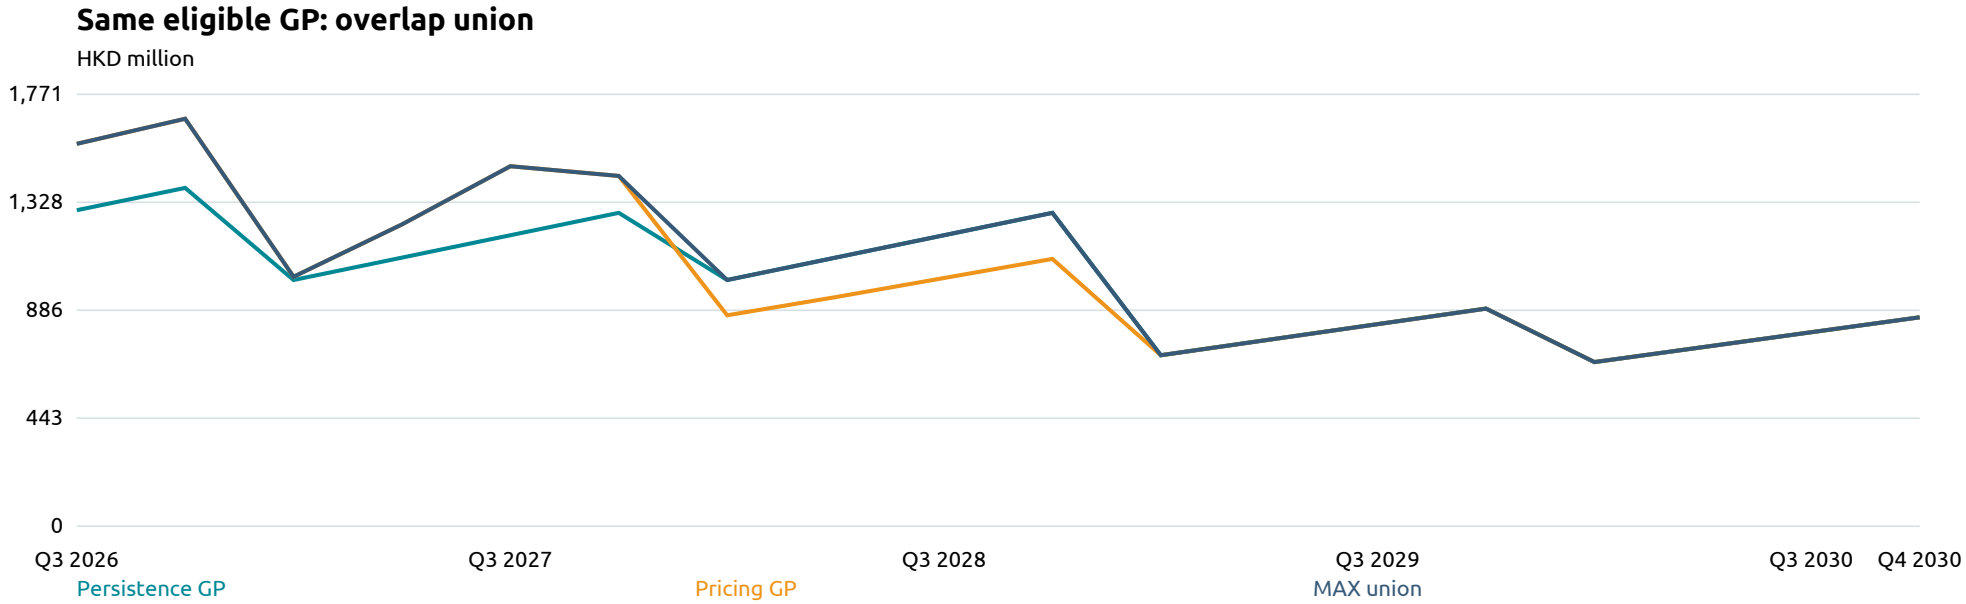

Joint outcome	BofA event	UBS event	Exact joint probability
Neither event	No	No	0.465
Pricing only	No	Yes	0.23499999999999996
Persistence only	Yes	No	0.13499999999999998
Both events	Yes	Yes	0.165

Only 75% of established-CCL reference sales is eligible for the new price bridge. On that same eligible revenue, the GP endpoint is the maximum of the BofA-persistence endpoint and the UBS price/cost endpoint. It is not their sum. Higher-performance and external-material vectors retain their separately selected economics. Normal opex on revenue and an additional 10% reserve against positive incremental GP are deducted.

The overlap rule can make a joint-case quarter less profitable than persistence alone. In Q1 2028 the persistence GP endpoint binds, while the UBS-related extra revenue incurs normal 5% opex; the selected joint-case OP difference is about minus HKD 0.388 million. The model does not guarantee a positive OP contribution in every quarter.

This chart is the positive-only lagged 2027 relative benchmark. The separate bounded H2 2026 net-GP contribution is recorded in the following schedules; zero 2026 relative-price uplift does not mean zero 2026 contribution.

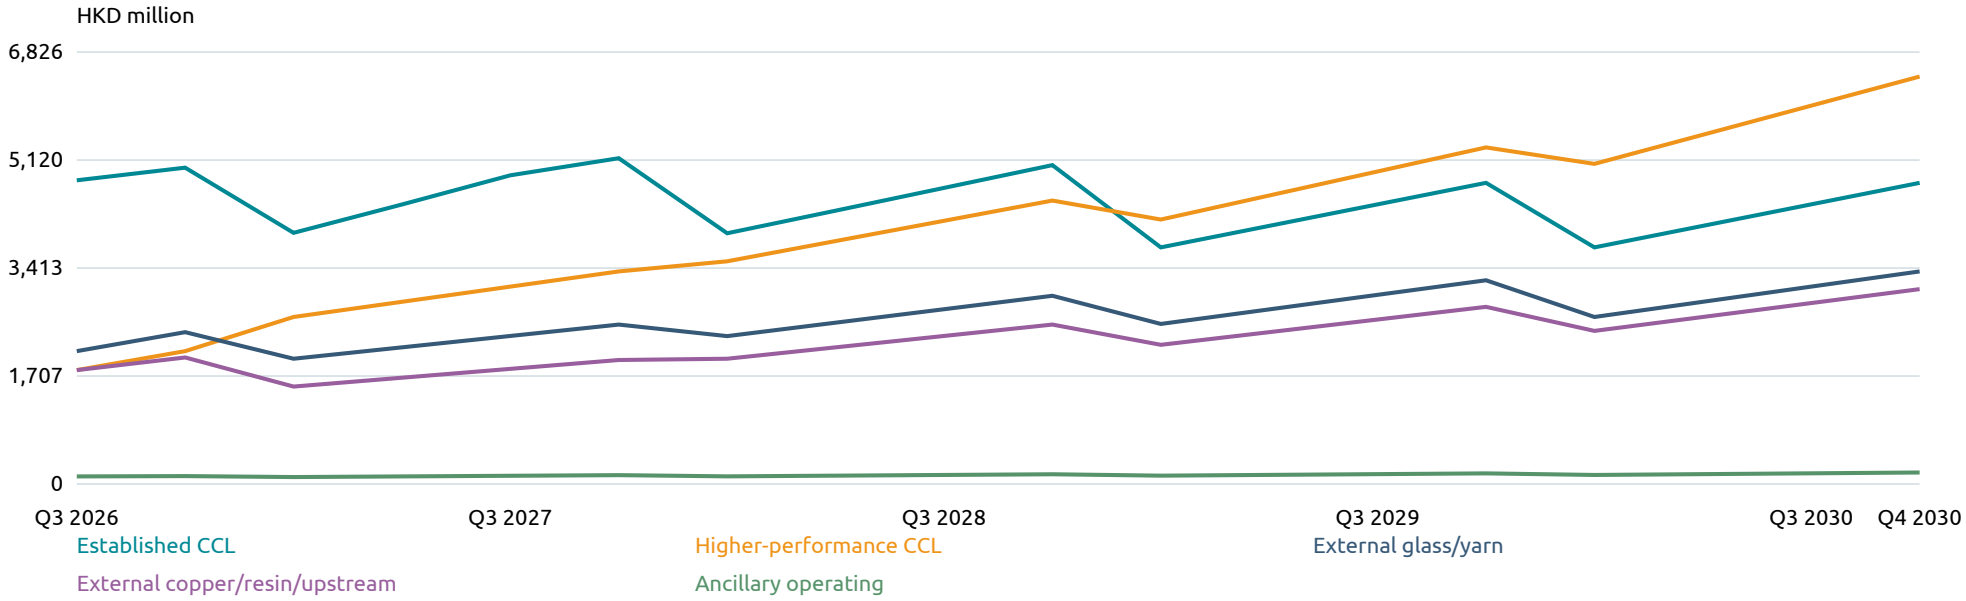

The benefit is counted once on the same eligible GP endpoint. No second addition of the broker 44% margin is made.

Product sales, gross profit and operating costs

Reference operating revenue remains five external vectors. The shared event adds a bounded H2 2026 net-GP contribution within the unchanged revenue budget, followed by a costed relative-price bridge in 2027. No additional physical capacity or shipments are claimed. Gross profit less regular distribution/administrative/development costs and the separate incremental support reserve produces the selected operating-profit measure.

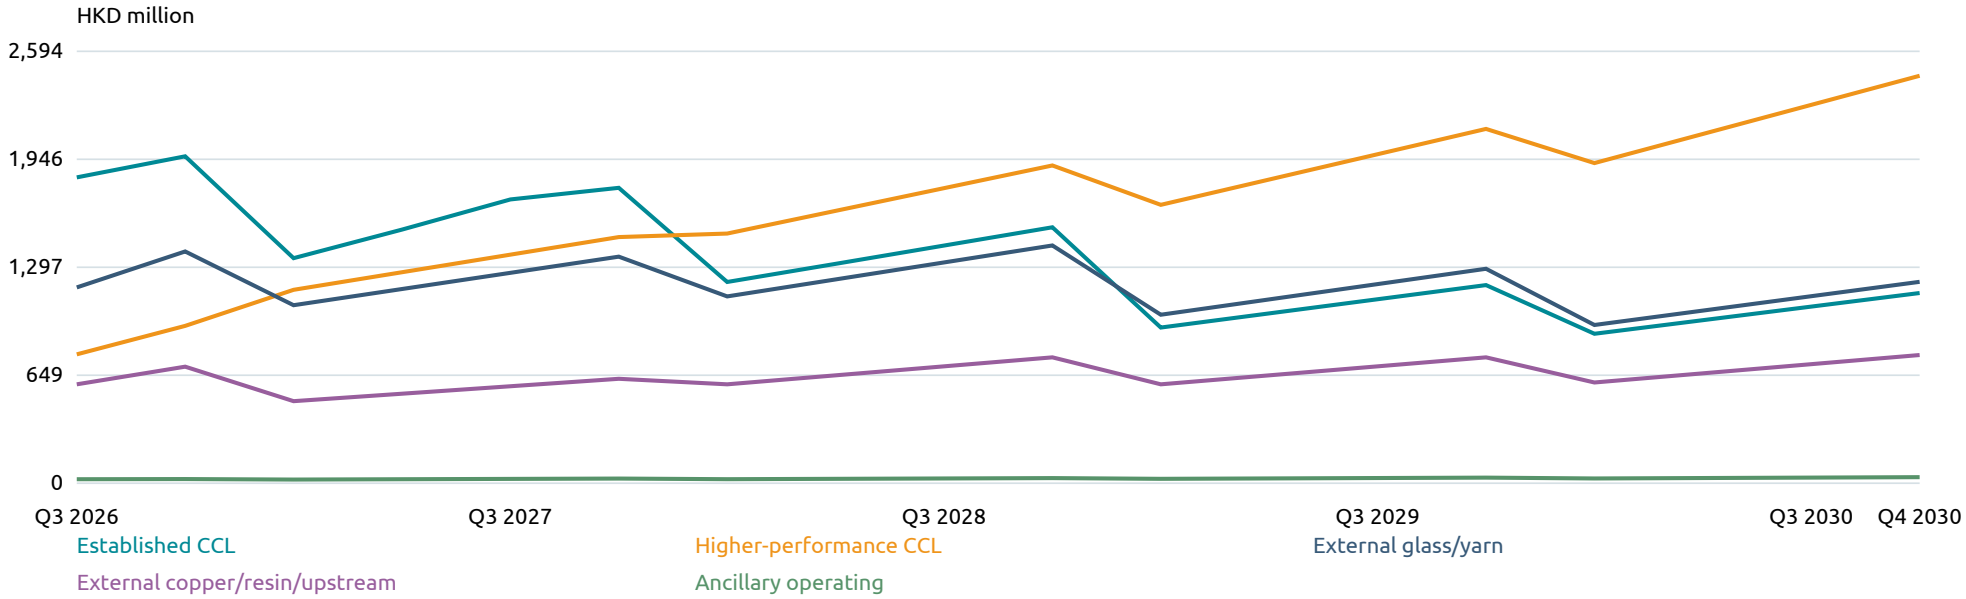

The inherited group recurring-OP measure is used as a parent-OP proxy without a separately forecast NCI deduction. This does not claim legal 100% ownership of every subsidiary. The latest reported H1 non-controlling profit was small, at HKD 0.005 million. No parent-group PCB earnings or investment marks are added.

External operating revenue by vector

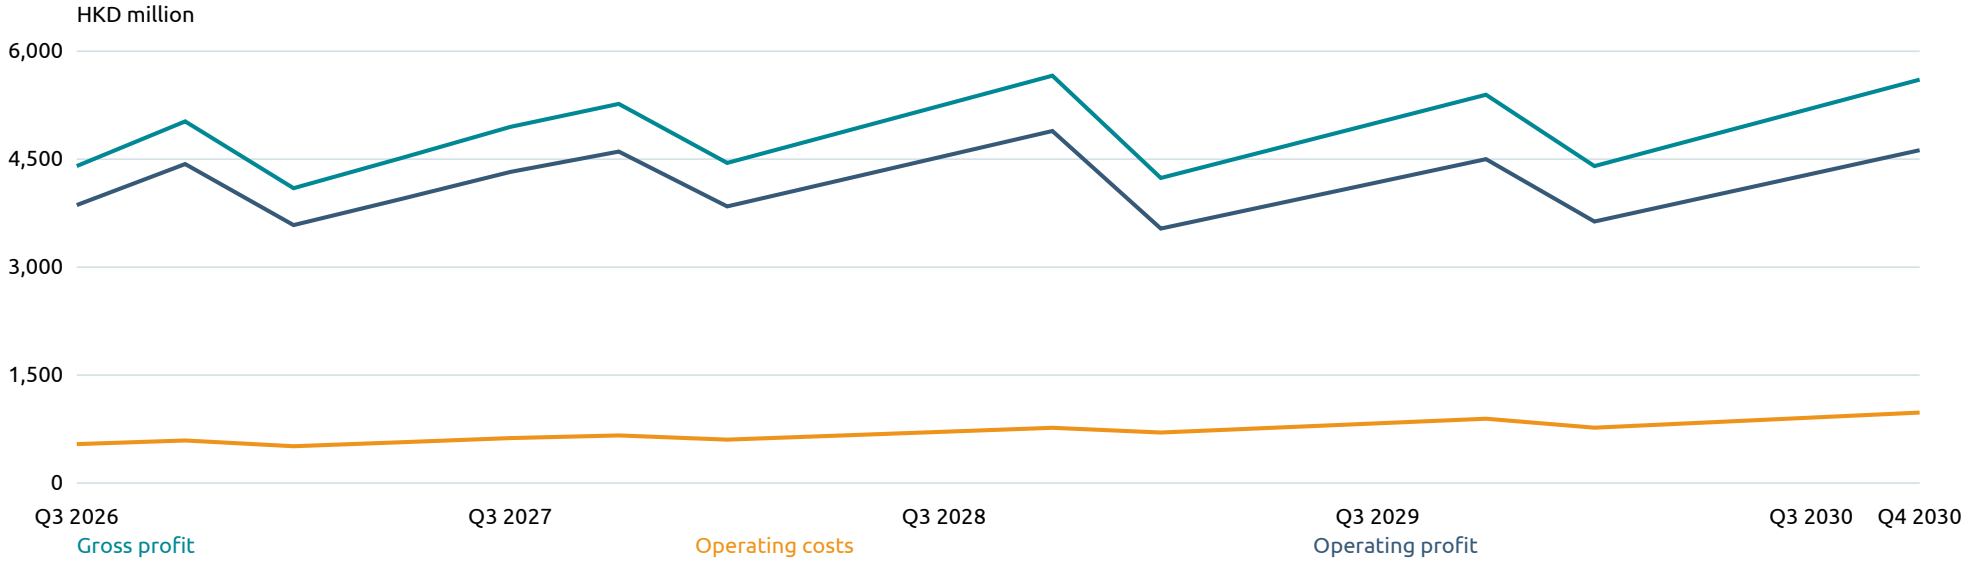

Probability-weighted values within the conditional operating plan. Q3 2026 is a current reconstructed bridge, not a new reported actual.

Product gross profit by external vector

Internal material transfers are not a sixth external vector. Full exact schedules follow.

Gross profit to recurring operating profit

GP includes manufacturing costs and the depreciation proxy. Additional support cost is not omitted from OP.

Cash, capital investment and refinancing conditions

Both original six-page frameworks were made on 16 September 2026 and contain company signatures/stamps. The later English circular prints 9 October 2026 and schedules an EGM for 30 October. A filename/index date of 8 October is retained only as that metadata; it is not substituted for the printed date or execution date. Approval is not assumed from a future meeting notice.

The purchase framework covers chemicals from the retained Kingboard group, at prevailing market terms no less favourable than independent alternatives, with cash settlement and up to 30 days' credit. The supply framework covers laminate and upstream materials sold to that group, with no more favourable terms than independent buyers and up to 90 days' credit. Both expressly impose no obligation to buy or supply.

These terms support a working-capital constraint, rather than free funding or guaranteed full-cap sales. Actual orders, shipment recognition, collection, inventory and supplier payments determine cash. The purchase agreement's non-exhaustive list says phenol resin; the circular's definition names bisphenol A. The source wordings are preserved separately.

Upstream integration does not remove inventory, receivable or capital-investment requirements. Management's approximate H1 2026 new-capacity investment is not interchangeable with accounting PPE additions or an audited project cash-payment schedule. Production depreciation included in product cost and cash-flow addbacks must remain distinct.

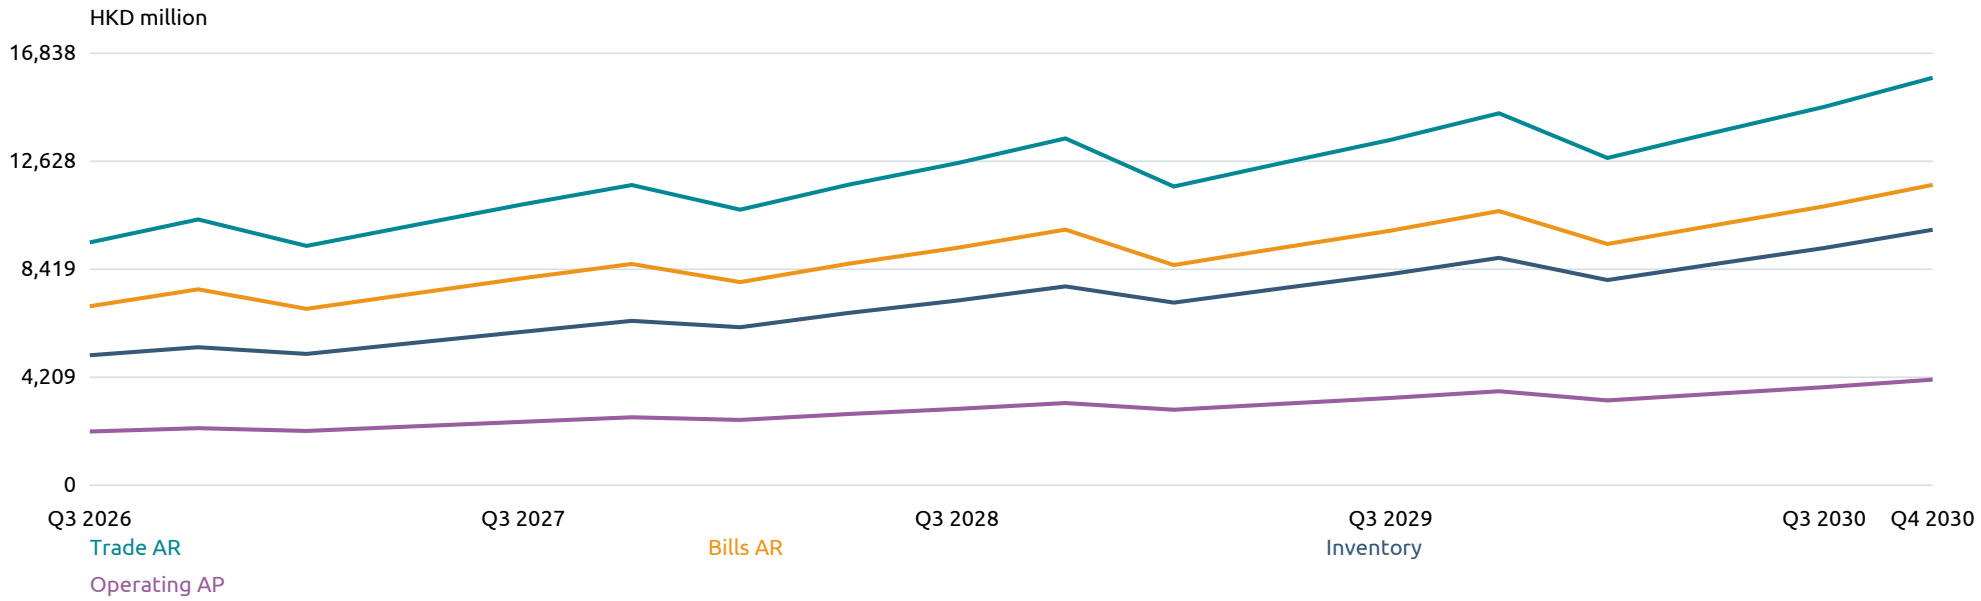

Any future capex budgets, cash buffer, tax rates, dividend convention, refinancing rollover and incremental borrowing headroom in the selected model are assumptions unless separately established by a dated source. A conditional funding bridge must not be described as committed bank finance merely because its default shortfall is zero.

The cash bridge starts from June 2026 balances. The maximum incremental financing need across the four conditional outcomes is about HKD 3,326 million and arises in the current Q3 reconstruction; it is not a newly reported October borrowing or a guaranteed capacity commitment. The selected default assumes principal renewal and up toHKD 5 billion of incremental borrowing, with a HKD 1 billion minimum cash buffer. Those are conditional LOW planning assumptions.

The cash-capex budgets exclude separately modelled gross bank interest. No future capitalised-interest benefit is assumed in projected net income. The cash addback labelled DA is specifically a PPE-depreciation planning proxy based on the disclosed HKD 504.466 million H1 amount, rather than certified total functional D&A or ROU amortisation. It is included in operating costs/margins overall and added back once for cash.

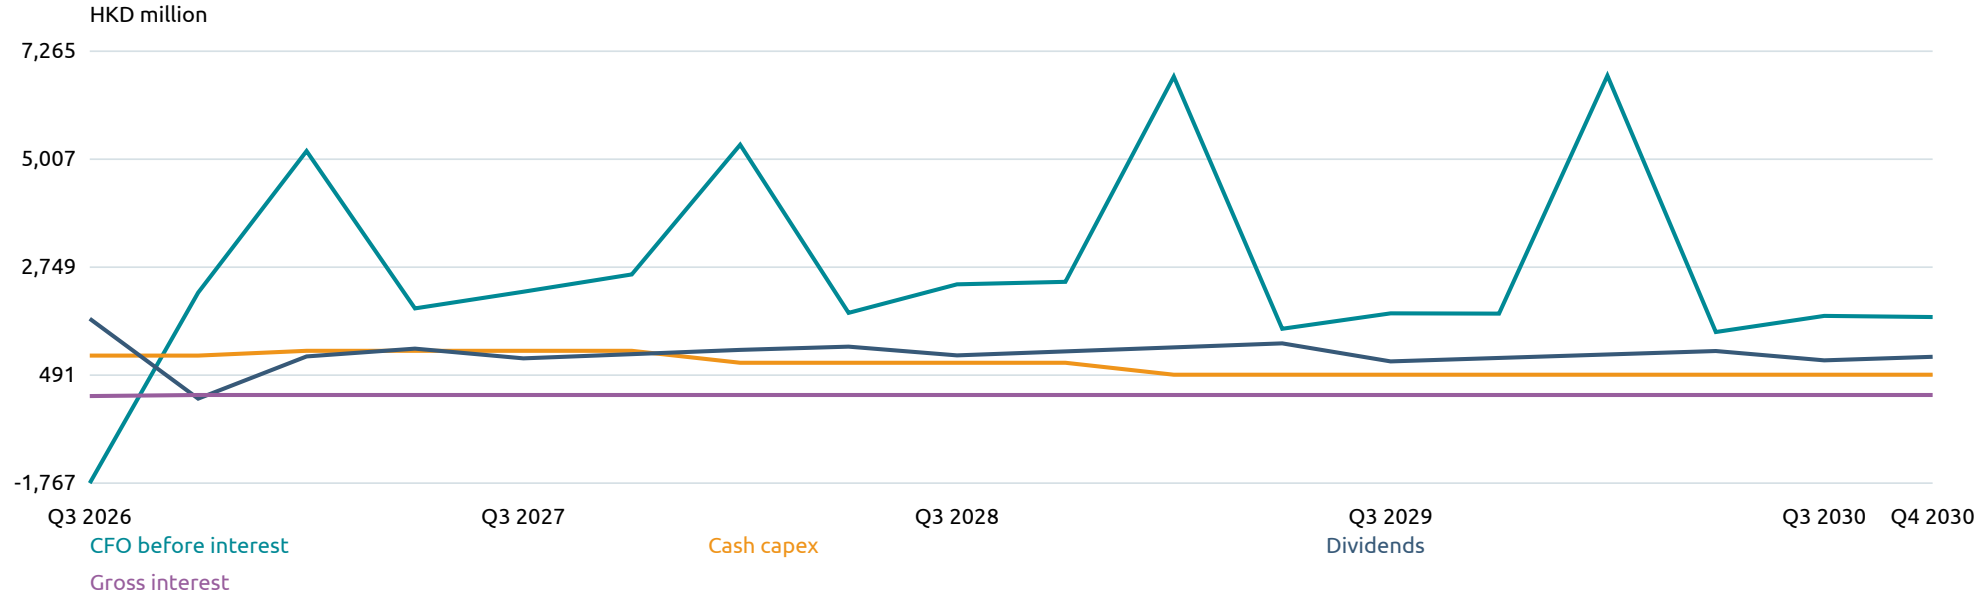

The selected day counts distinguish trade receivables, bills receivable, inventory and operating payables. Other operating net assets are held constant where no forward bridge is established. Timing of the known dividends and the later payout convention are assumptions, not a new board distribution policy.

Operating working-capital components

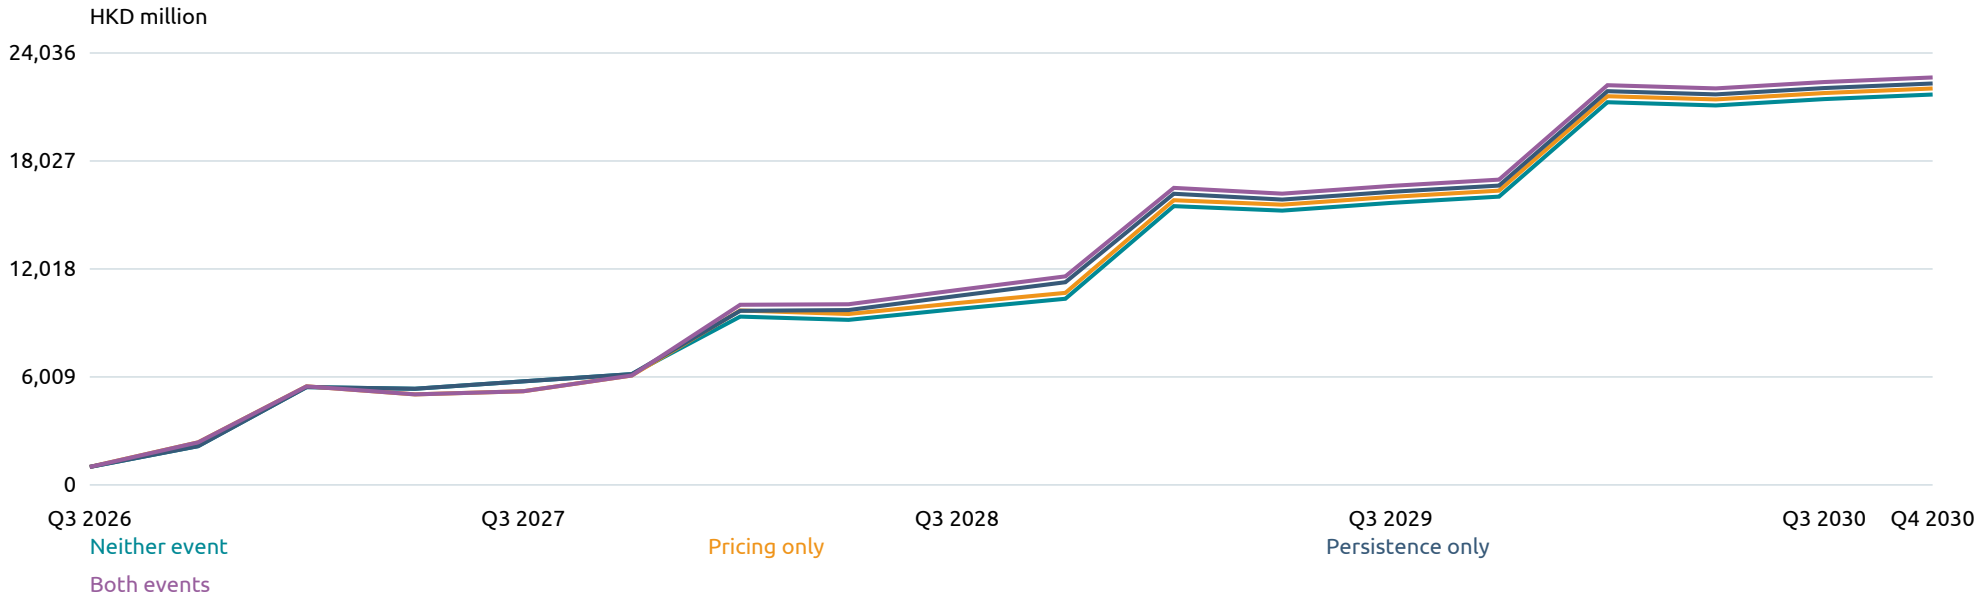

Bills are not merged into ordinary trade AR; capital bills are not an operating cash source. Cash balance changes follow the full bridge.

Cash generation and cash requirements

Capex, dividends and interest are shown as positive requirements for comparison, not cash inflows.

Conditional ending cash by outcome

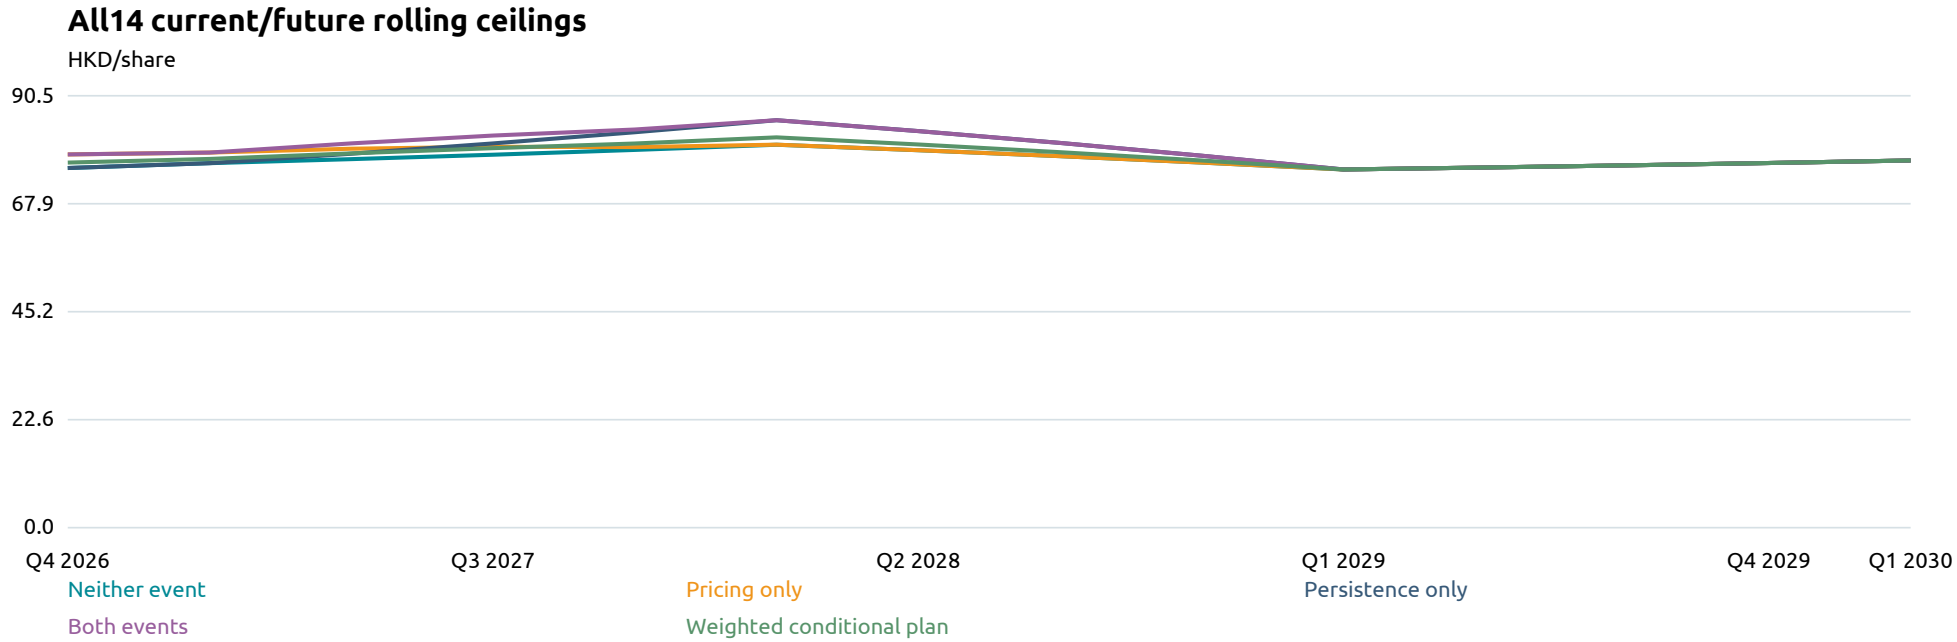

Default cash balances require assumed principal rollover and incremental facilities. Stress cases with shortfalls are not claims of operational feasibility.

Method, shares and all rolling ceilings

Each current/future ceiling uses the current quarter and next three quarters of the selected recurring operating profit, at 15 times, divided by the window-start modeled share denominator. The share path is preserved from the existing method. Shares are not averaged over the window, and Base is not multiplied into the ceiling.

Gross financing interest and income tax remain below the recurring-OP valuation measure; the separate cash analysis tests funding consequences. No cash, securities, debt or property-NAV add-on is made to this operating ceiling.

Four conditional outcomes are computed first, then weighted. Historical as-then Q3 displays remain immutable and are not replaced by current reconstruction.

Sensitivity, risk and follow-up evidence

The principal sensitivities concern whether the finite pricing event is realized, which sales are eligible, recognition lag and the funding conditions of the retained plan. The following results are model-selected recalculations. They do not introduce a second investment case or a new source fact.

Funding shortfalls under selected stresses

HKD million

A retained OP ceiling under an unfunded stress is conditional arithmetic, not an operationally financed forecast.

The unchanged risk classes cover price-cycle and competing supply, qualification and mix, project and raw-material execution, working capital/borrowing/investments, and related-party governance and concentration. Strong current pricing does not eliminate these risks.

Monitor matched-grade realized selling prices less material costs, qualified shipment mix and project commissioning. Recheck the disclosed 1.05 billion-metre capacity path against external sales and own use. Review collections, stock build, gross interest, debt maturities, refinancing and actual capital payments. Earlier price normalisation, late recognition, weaker qualification or limited borrowing can invalidate the retained conditional plan.

Incremental evidence and retained source dispositions

The existing 30% persistence event is retained. The new pricing event is positively correlated with it, and the same eligible GP benefit is counted once through the MAX union. The 44% broker margin is supporting evidence within that same hypothesis, not an independent second earnings increment.

The reference already includes the retained persistence event. This chart includes the bounded H2 2026 margin contribution and later incremental pricing evidence after overlap and costs.

Sources, records and explicit limits

The latest issuer financial tables and full written management records are preserved locally with exact original URLs and hashes. Complete spoken calls, verbatim Q&A and replays remain unavailable. The UBS material consists of only three owner-provided original pages; no full report or full disclosure review is claimed.

Unknowns include matched-grade realized ASP, tax/FX/sheet-specification mapping, exact external versus own-use material fractions, grade-specific qualified volumes and margins, named AI customer awards, current facility/covenant headroom and detailed cash-capex timing. These gaps constrain the interpretation of the selected planning model.

The companion Model retains the complete selected financial definitions, source records and exact unrounded results. The FormulaModel workbook and compressed CalculationGraph provide the linked calculation detail. Saved ArtifactTool checks cover the standalone workbook and a portable affected-sheet projection: 22 standalone and 26 portable perturbation tests passed, with fresh reimport, full restoration and unchanged saved bytes. These checks do not establish whole-native-workbook execution. Native Office execution has not been verified. Source originals, prior vintages and the distinction between current reconstruction and historical displays are retained.

Returned from the field: raise FR4 CCL price forecasts

We conducted several field trips/meetings across APAC PCB/CCL supply chain (here, here) in Sep. After KBL raised FR4 CCL prices again by 10-20% at end-Aug and SYT started another round of hikes in Sep, we believe FR4 CCL prices (pre-tax) are now likely >Rmb340 now. Supply-side, we expect limited new capacity from either E-glass or CCL to come online in 2027; we forecast E-glass fabric prices to increase another 10-15% in Oct (after +10-15% in Sep with industry inventory at near-zero) to Rmb15+ by YE26. We see even tier-1 vendors like ITEQ operating below full UTR due to upstream shortages despite robust demand. Demand-side, our talks with PCB companies reaffirm supply security is prioritized over cost and end-customers have accepted price hikes since July, favouring CCL upcycle sustainability. PCB/CCL players across mainland China and Taiwan are expecting DD% QoQ CCL ASP hikes in Q3/Q426F that are likely to last through 1H27F. We now forecast FR4 ASP to reach Rmb383/443 by YE26/1H27E.

PTFE adds a further wallet share lever for Shengyi from Rubin Ultra

We expect the switch-tray PCB in a potential VR300 NVL576 NPO/CPO form factor to adopt a 32L PTFE-hybrid design with PTFE on 8-10 signal layers and M8/M9 on core layers. We believe SYT's VR200 switch CCL wallet share to be on par with EMC, even though EMC led allocation for the 44L compute-tray midplane. We think SYT's proprietary PTFE solution, which has passed end-customer qualification and is currently undergoing testing with PCB vendors, positions it for further share gains from VR300 onward. Although the team-up of EMC & Taiflex could become a second source PTFE supplier, we expect SYT to win the lion's share in 2027/28E, as it already has sufficient flexible CCL capacity (partly fungible for PTFE) in place to cover NVL576 demand, per our estimates. We expect the Kyber backplane to also adopt a similar PTFE-hybrid solution with volumes more in 2028/29E; our NVL576 and Kyber backplane PTFE scenario analysis points to Rmb137mn/Rmb2,635mn incremental earnings potential in 2027/28E for SYT, or 1%/16% upside to our conservative base case.

CPO/NPO: de-spec concerns overdone, CCL content value upside remains

We believe near-term risk of potential CCL de-spec in a full scale-up CPO solution is limited. We expect NPO as the mainstream solution in the next 2-3 years while inter-rack NPO scale-up in a potential NVL576 form factor would drive incremental CCL content and spec upgrades through: 1) more switch trays for inter-rack connectivity (18x per NVL576 Oberon NVL72 vs. 9x per NVL72 in VR200); 2) larger board area to accommodate NPO/CPO engines, while signals routing from NPO engine to switch ASIC still go through PCB; and 3) larger/higher-spec NPO module PCB vs. pluggables and with tighter warpage/thermal requirements. Even with CPO, despite the ASIC-to-engine traces shortening, connectors/vias and other high-speed links would still require M6-M8 CCL. Ultimately, we reiterate our view that multiple scale-up architectures (cable cartridge/Kyber backplane/NPO/CPO) will coexist in the longer term.

Valuation: reiterate KBL/SYT as top picks, raise PTs to HK$75/Rmb209

We raise KBL and SYT '27/'28E earnings by 31%/11% and 9%/2% respectively and keep '26E largely unchanged; we lift our KBL/SYT PTs to HK$75/Rmb209 from HK$66/Rmb192 mainly to reflect earnings upside from higher FR4 CCL price forecasts, with PTFE contribution not yet in our base case. We continue to believe SYT has the "best of both worlds", with FR4 driving near-term earnings while AI CCL at Nvidia keeps ramping and ASIC breakthrough as an upside. For KBL, we model CCL GPM >45% in 2H26E and 44% in '27E despite some new capacity ramping. Our EPS forecasts of KBL/SYT imply 8.4x/23.7x '27E P/E, which looks attractive given high visibility on near-term growth, while AI CCL materials (glass fabric/copper foil for KBL, PTFE for SYT) expand TAM.

UBS Research THESIS MAP

MOST FAVORED: **Shengyi Tech (SYT), Kingboard Laminates (KBL)**

LEAST FAVORED

PIVOTAL QUESTIONS

Q: Is the market underappreciating the current conventional CCL upcycle?

Yes. We believe the market is overlooking the sustainability of this upcycle and pricing in an approaching peak. We think this cycle could be more extended than past cycles due to structural S/D drivers as well as upstream material tightness, with AI crowding out conventional supply and adding incremental demand while near-term supply responses remain limited. We forecast an industry electronic fabric S/D gap of over 10% through 2027E as effective capacity is bottlenecked by Toyota's loom equipment while peers reallocate capacity towards AI/speciality fabric. A conventional CCL upcycle is likely to benefit KBL and SYT, as it remains the primary earnings driver for both.

Q: How does the potential NVL576 and Kyber backplane adoption shift the AI CCL outlook?

We continue to see AI CCL content value increases in the near term as networking/interconnect demands surges from increasing compute domain sizes: 1) inter-rack optical NPO/CPO scale-up architectures NVL576 from VR300 and; 2) Kyber backplane in NVL144/288 from Feynman. We expect both form factors could likely adopt a PTFE-hybrid CCL solution with SYT as the main supplier; given 1) accumulated flexible/PTFE CCL know-how; 2) ample flexible/PTFE CCL capacity; 3) only CCL maker with both PTFE manufacturing capability and proven track record in rigid M8+ AI CCL.

Q: What is the earnings impact and what is mispriced?

For our top picks, we raise 2027/28E earnings by 31%/11% for KBL and 9%/2% for SYT. We believe the market is not fully pricing in: 1) SYT's leverage to the conventional CCL upcycle, with segment revenue rising 69%/75% in 2026/27E alongside GPM expansion, also helped by a greater AI CCL mix as PTFE know-how supports wallet share gains; 2) KBL's leverage to a stronger-than-expected conventional CCL upcycle while margins expand from cost advantages vs. peers; and 3) the adoption of PTFE in VR300 NVL576 switch boards and Kyber backplane, which we expect could lift SYT earnings by 1%/16% in 2027/28E compared to our current base case earnings estimates.

WHAT'S PRICED IN?

Wind CCL sector index has fallen as much as 46% in July from its June all-time peak but recovered 30% from the trough as of Oct 1st. We see market pessimism specifically among AI CCL names given potential later Kyber backplane timeline alongside concerns on CCL despec from CPO/NPO optical scale-up alternatives in the longer term.

UBS VIEW

We continue to favour CCL/upstream names. Our top picks are KBL (Buy) and SYT (Buy), we believe valuations are undemanding and investor concerns are overdone as inter-rack scale-up solutions such as NVL576 NPO/CPO architectures could drive incremental CCL/PCB content value while suppliers with specialty materials know-how such as PTFE for SYT are well positioned to capture wallet share gains and earnings upside, which we see as not fully priced in. We expect KBL and SYT to benefit from a more sustainable conventional CCL upcycle through 2027, while emerging AI exposure (specialty fabric for KBL; AI CCL & PTFE for SYT) delivers the next leg of growth.

EVIDENCE

1) UBS forecasts top 12 hyperscalers' capex to increase 97%/45% YoY in 2026/27E; 2) KBL has hiked FR-4 CCL prices multiple times YTD, with monthly hikes since March; 3) E-glass fabric has seen monthly price hikes YTD, with prices now at historical highs >Rmb13/meter; 4) UBS forecasts the number of ex-Nvidia accelerator units to increase 49%/98% YoY in 2026/27E versus Nvidia GPU (SIP) units of 17%/36%.

FR4 CCL: RAISING PRICE FORECAST; NO RELIEF BEFORE 2H27

Pricing and margin have further room to grow

From our talks with supply chain players, we highlight both CCL/PCB suppliers expect FR4 to continue rising month over month into YE26 and mostly likely sustain into at least 1H27. **KBL** issued another price hike notice on 28 Aug (FR4 +10%, thin-cloth prepreg +20%) and expects ASP of >Rmb340/sheet pre-tax in Sep. **SYT** followed closely although at a slightly slower pace given its concentration of large customers and pointed out current FR4 CCL GPM is >30% and would likely surpass certain M4/M6 CCL products if hikes persist.

According to management, **ITEQ** raised ASP by c.10%/c.30% in Q126/Q226, and expects c.20-30% hikes in each of Q326/Q426F with hikes continuing into 1H27F, supporting our view that industry pricing could remain firm into 2027. ITEQ management expects c.2-3ppt of GM gain per 10% ASP increase, in-line with our expectation that GPM of KBL/SYT will further improve in FY27.

Tier-2/3 vendors like **Nanya New Material (NNM)**, **Goldenmax** and **Wazam New Material** have been enjoying UTR uplifts thanks to order spill-over from tier-1 players. On pricing, we see ASP hikes trailing leaders at slightly smaller magnitudes (e.g. if KBL +10%, Nanya +5-8%); their profitability also improved dramatically: **NNM**'s overall CCL GPM rose to 15% in 1H26 vs. 7% in 1H25 and indicated FR4 GPM at 35-40% in Sep. **Wazam** achieved NPM of 21% in Jul/Aug from only 8% in Q226, generating Rmb356mn net profit in 2 months vs. Rmb173mn in 6 months of 1H26.

Therefore, we raise our FR4 CCL price forecasts to Rmb383/sheet by Dec-26E and Rmb443/sheet by Jun-27E. Per our industry studies, M2/M4 CCL now sell at Rmb300-400/sheet, close to FR4, while M6 is c.60% more expensive at c.Rmb500-600. We see this level marking the ceiling for FR4 pricing before downstream demand weakens meaningfully.

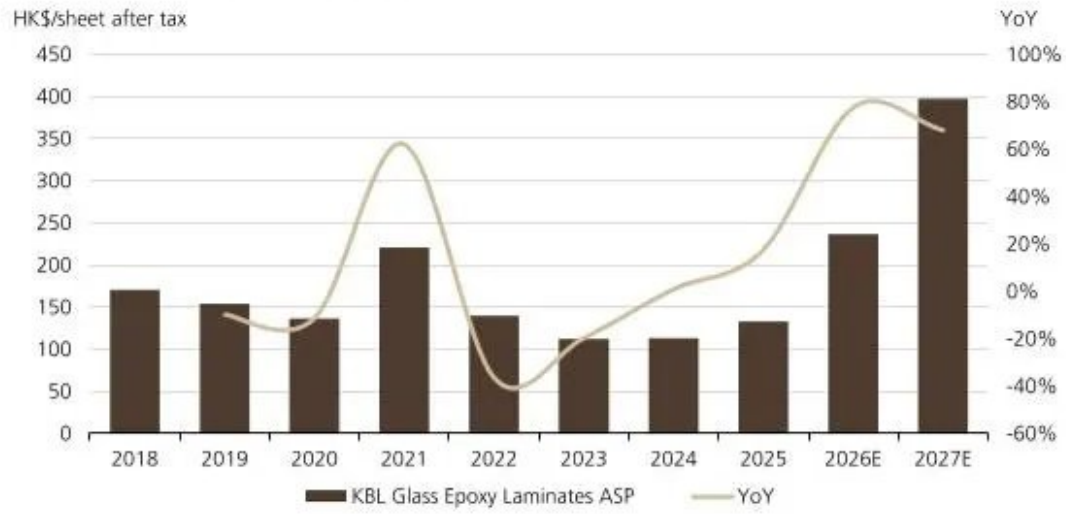

We estimate a c.2ppt GPM expansion from every c.10% CCL ASP increase, all else equal, which factors in inflating raw material costs in 2027E. KBL notes new pricing usually reflects on P&L at a 1-2 months lag given order shipping and lead times.

Issuer capacity and looms

前景

踏入二零二六年下半年，電子玻璃纖維布供應短缺情況更趨嚴重，覆銅面板及其上游物料，包括電子玻璃纖維紗、電子玻璃纖維布及銅箔價格持續飆升，為集團帶來豐厚的紅利，集團二零二六年七月利潤約11億港元，創下集團有記錄以來單月新高。隨著AI產業化浪潮縱深推進，電子產業高景氣度持續延伸，覆銅面板行業供不應求的緊缺格局短期難以緩解，行業將持續處於需求旺盛、供給偏緊的上行週期。

AI技術持續向終端滲透，算力基礎設施建設，加上汽車智慧化升級，將成為行業核心增長的引擎，持續拉動中高端覆銅面板的剛性需求。集團下半年將鞏固垂直整合、規模經濟效益的優勢，結合二零二六年AI爆發的行業紅利，繼續抓緊機遇，搶佔高端市場份額，推動業績繼續攀升。

位於廣東省韶關市，年產7萬噸電子玻璃纖維紗的生產線，提前於六月底投產，有助緩解傳統電子玻璃纖維紗緊缺。下半年，集團充分將發揮於5微米以下超細級特種電子玻璃纖維紗的技術優勢，加快位於廣東省清遠市，8個特種電子玻璃纖維紗窯爐的建設，其中2個將於二零二六年下半年投產。全部投產後，生產特種電子玻璃纖維紗的窯爐總數將增至13個。產品包括低介電一代、低介電二代、低膨脹及石英電子玻璃纖維紗，提高集團在應用於高頻高速及高端封裝載板，AI新材料市場佔有率。同時亦將加快位於廣東省連州市的二期年產1萬噸超細級電子玻璃纖維紗項目建設，力爭在二零二七年第一季度投產，屆時有望大大提升集團的盈利能力。

集團積極部署擴大電子玻璃纖維布產能。位於廣東省韶關市，年產9,500萬米電子玻璃纖維布項目，將於二零二六年第三季度全面投產；廣州市南沙區，年產1.5億米項目，將於二零二七年第三季度投產；廣東省清遠市年產7,800萬米，主要生產用於AI的特種電子玻璃纖維布項目，將於二零二七年上半年投產。

有賴集團管理層高瞻遠矚提早作出部署，縱使市面高效能織布機「一機難求」，集團高效能織布機數量從二零二五年的3,333台，逐步增至二零二八年的5,833台，年總產能躍升至10.5億米，其中特種電子玻璃纖維布年產能將達1億米，有力支撐全球AI電子玻璃纖維布供應鏈。

Exact preserved original PDF-page render; physical page 28. Relevant facts are transcribed and scoped in the narrative and source tables. Full originals remain locally preserved.

為配合集團AI材料一站式生產發展方向，銅箔方面，於廣東省清遠市籌建年產21,000噸項目，主要生產高頻高速、低信號損耗的RTF和HVLP銅箔，將於二零二七年第三季度投產。

於江西省萍鄉市建設月產110萬張覆銅面板，及2萬卷半固化片的工廠，第一期月產35萬張，將於二零二七年年中投產。華固集團作為全球知名垂直整合電子材料供應商的地位，全方位對接AI產業，從算力基礎設施到終端應用的龐大機遇。

國際指數編製公司MSCI於二零二六年五月的指數季度檢討中，正式將建滔積層板控股有限公司(聯交所上市代號：01888)納入為MSCI中國指數的成份股，該指數為外資配置中國市場的重要參考指標，引證集團於市場的重要地位。我們對集團的發展充滿信心，集團產品質量穩定，交期準時，獲得越來越多客戶青睞，集團管理層將一如既往，克盡己任為股東創造更大的回報。

致謝

本人謹代表董事會藉此機會向各位股東、客戶、銀行、管理人員及員工於回顧期內對本集團毫無保留的支持致以衷心感謝。

暫停辦理股份過戶登記

本公司將於二零二六年十二月十五日(星期二)至二零二六年十二月十六日(星期三)(包括首尾兩天)暫停股東登記，期間不會辦理股份過戶登記手續。為符合取得中期股息之資格，各股東須於二零二六年十二月十四日(星期一)下午四時前將所有過戶文件連同有關股票交回本公司之股份過戶登記處香港分處卓佳證券登記有限公司，地址為香港夏慤道16號遠東金融中心17樓，方為有效。

Exact preserved original PDF-page render; physical page 29. Relevant facts are transcribed and scoped in the narrative and source tables. Full originals remain locally preserved.

3.3 Subject to clauses 3.2 and clause 5, this Agreement shall have a term from 1 January 2026 until 31 December 2028, both days inclusive.

4. **PRICE OF MATERIALS**

4.1 The price at which any of the Materials is purchased by any member of the Group from any member of the Retained Group shall be determined in accordance with the then prevailing market price and in any event shall not be less favourable to the Group than the price at which the Group purchases or would be able to purchase similar Materials from independent third parties having regard to the quantity and other conditions of the purchase. The transactions under this Agreement shall be conducted on normal commercial terms that are fair and reasonable to the Group.

4.2 The consideration will be settled in cash.

4.3 The Retained Group shall grant a credit period of up to 30 days to the Group.

5. **TERMINATION**

5.1 This Agreement may be terminated by mutual agreement of the parties when Kingboard and its Associates cease to be connected persons of the Company under the Listing Rules.

5.2 The termination of this Agreement by either party in accordance with clause 5.1 shall be without prejudice to any antecedent right of action it may have against the other party.

6. **NOTICE**

All notices hereunder shall be given in writing to the party intended to receive such notice at its address set forth above and may be delivered by hand, sent by post or facsimile. The parties will promptly notify each other in writing of any changes in address. Notices will be deemed effective on despatch.

7. **SEVERABILITY**

If at any time any provision hereof shall become or be declared illegal or invalid or unenforceable for any reason whatsoever, that provision shall be severable from this Agreement, without affecting or impairing the legality, validity or enforceability of any of the remaining provisions, but if such severance shall substantially affect the commercial basis of this Agreement the parties shall negotiate in good faith to amend or modify this Agreement as may be necessary or desirable in the circumstances.

8. **WAIVER**

The waiver or repeated waiver, by any party hereto of compliance by the other party with any provision of this Agreement will not be deemed a waiver of compliance with such provision on a subsequent occasion nor will such waiver imply the waiver of any other provisions of this Agreement. No waiver shall be effective unless made in writing.

9. **AMENDMENTS**

This Agreement may only be amended or varied in writing and signed by or on behalf of each of the parties.

10. **ENTIRE AGREEMENT**

This Agreement contains the entire agreement of the parties with respect to the subject matter hereof and supersedes all prior agreements and arrangements whether written or oral between the parties.

Exact preserved original PDF-page render; physical page 5. Relevant facts are transcribed and scoped in the narrative and source tables. Full originals remain locally preserved.

3.2 This Agreement is conditional upon approval of the transactions under this Agreement and the maximum aggregate annual caps set out in clause 3.1 above by the independent shareholders of the Company (where necessary under the Listing Rules).

3.3 Subject to clauses 3.2 and 5, this Agreement shall have a term from 1 January 2026 until 31 December 2028, both days inclusive.

4. **PRICE OF MATERIALS AND FEES OF SUBCONTRACTING**

4.1 The price and fee at which any of the Materials is to be supplied and provided by any member of the Group to any member of the Retained Group shall be determined in the accordance with the then prevailing market price and in no event shall the terms be more favourable to the Retained Group than the prices at which the Group sells similar Materials to independent third parties having regard to the quantity and other conditions of the sale. The transactions under this Agreement shall be conducted on normal commercial terms that are fair and reasonable to the Group.

4.2 The consideration will be settled in cash.

4.3 The Group shall grant a credit period of up to 90 days to the Retained Group.

5. **TERMINATION**

5.1 This Agreement may be terminated by mutual agreement of the parties when Kingboard and its Associates cease to be connected persons of the Company under the Listing Rules.

5.2 The termination of this Agreement by either party in accordance with clause 5.1 shall be without prejudice to any antecedent right of action it may have against the other party.

6. **NOTICE**

All notices hereunder shall be given in writing to the party intended to receive such notice at its address set forth above and may be delivered by hand, sent by post or facsimile. The parties will promptly notify each other in writing of any changes in address. Notices will be deemed effective on despatch.

7. **SEVERABILITY**

If at any time any provision hereof shall become or be declared illegal or invalid or unenforceable for any reason whatsoever, that provision shall be severable from this Agreement, without affecting or impairing the legality, validity or enforceability of any of the remaining provisions, but if such severance shall substantially affect the commercial basis of this Agreement the parties shall negotiate in good faith to amend or modify this Agreement as may be necessary or desirable in the circumstances.

8. **WAIVER**

The waiver or repeated waiver, by any party hereto of compliance by the other party with any provision of this Agreement will not be deemed a waiver of compliance with such provision on a subsequent occasion nor will such waiver imply the waiver of any other provisions of this Agreement. No waiver shall be effective unless made in writing.

9. **AMENDMENTS**

This Agreement may only be amended or varied in writing and signed by or on behalf of each of the parties.

Exact preserved original PDF-page render; physical page 5. Relevant facts are transcribed and scoped in the narrative and source tables. Full originals remain locally preserved.

Complete selected financial definitions and control logic
