Fenghua / 风华高科 - current investment assessment

Guangdong Fenghua Advanced Technology Holding Co., Ltd. | 000636.SZ | October 24, 2026. Private portfolio research. Header price snapshot: CNY 40.15, October 23 regular-session split-adjusted daily close from TradingView. That close predates the October 24 filing. Current holding status is unverified; a blank allocation is not evidence of a position.

Fenghua offers exposure to higher-capacitance MLCCs, automotive and alloy resistors, and power inductors. The opportunity comes from more demanding electronic designs, customer qualification and better mix, amplified by a period of tight supply. Its incumbent manufacturing and domestic customer access are useful. Qualified alternatives from large global suppliers keep capture, pricing and duration uncertain.

The assessment is Watchlist: a diversified passive-component beneficiary with a possible temporary shortage advantage. The current analytical score is 39 of 60, or 65. The protected Excel Base is 80 and serves a separate portfolio convention. Neither score is a probability or a valuation input.

The active Q4 2027 ceiling is CNY 64 per share. It applies the selected 20-times consolidated statutory operating-profit method to the four-quarter window from Q4 2027 through Q3 2028, using the protected 1.1 billion share proxy. The same earnings with 1.147490419 billion actual issued shares produce a separate CNY 62 sensitivity. Cash determines whether a path can be funded; cash and debt are not added to the valuation.

T01 · Current assessment and valuation convention

Measure	Current value	Meaning
Active ceiling	64	CNY per share; Q4 2027 through Q3 2028
Forward statutory OP	3.535	CNY billion after native quarterly rounding
Operating-profit multiple	20	20x, held constant
Valuation share proxy	1.1	Billion shares; protected convention
Actual issued shares	1.14749	Billion shares; separate sensitivity
Analytical score	65	39 / 60 normalized to 65
Protected Excel Base	80	Separate context; not a forecast driver

The latest filing establishes a sharp improvement in actual trading. Q3 revenue was CNY 2.299 billion, gross profit CNY 665.6 million and statutory operating profit CNY 404.9 million. Gross margin reached 28.95%. The central uncertainty is how much of that improvement persists through pricing, qualified mix and funded manufacturing resources. Future family revenues and margins remain model allocations because the issuer does not disclose them.

应付职工薪酬	353,981,210.15	252,551,878.59	40.16%	主要系公司报告期业绩增加，对应薪酬计提增加所致
应交税费	120,032,338.88	34,040,244.68	252.62%	主要系公司报告期主营产品销售增加，增值税及所得税增加所致
递延所得税负债	61,536,234.85	94,866,317.10	-35.13%	主要系公司报告期持有其他权益工具投资公允价值较期初下降，相应确认的递延所得税负债减少所致

2. 利润表项目

单位：元

项目	2026 年 1-9 月	2025 年 1-9 月	变动比例	变动原因
营业收入	5,798,778,497.36	4,108,368,709.60	41.15%	主要系公司报告期主营产品市场需求持续增长，主营产品销量及单价同比上升所致
营业成本	4,476,689,867.80	3,344,085,889.65	33.87%	主要系公司报告期主营产品收入同比增加，相应结转成本同比增加所致
投资收益（损失以“-”号填列）	35,211,229.17	17,011,354.94	106.99%	主要系公司报告期参股公司业绩同比上升所致
信用减值损失（损失以“-”号填列）	-25,510,341.83	-7,297,890.53	249.56%	主要系公司报告期收入增长，应收账款同比增加，相应坏账计提增加所致
资产减值损失（损失以“-”号填列）	-61,385,570.13	-90,437,784.64	-32.12%	主要系公司报告期存货跌价准备计提同比减少所致
资产处置收益（损失以“-”号填列）	283,444.69	1,156,748.40	-75.50%	主要系公司报告期非流动资产处置收益同比减少所致
营业外收入	2,131,358.79	1,166,954.27	82.64%	主要系公司报告期非流动资产报废利得同比增加所致
营业外支出	418,245.39	6,861,828.61	-93.90%	主要系公司报告期赔偿支出同比减少所致
所得税费用	79,258,262.15	11,878,907.57	567.22%	主要系公司报告期业绩同比大幅增加，所得税费用相应增加所致
归属于母公司所有者的净利润	641,769,479.38	228,472,175.83	180.90%	主要系公司报告期主营产品盈利能力同比提升所致
少数股东损益	2,565,399.82	1,522,633.63	68.48%	主要系非全资子公司经营业绩同比上升所致

3. 现金流量表项目

单位：元

项目	2026 年 1-9 月	2025 年 1-9 月	变动比例	变动原因
经营活动产生的现金流量净额	622,917,912.36	258,781,353.48	140.71%	主要系公司报告期收入同比增长，销售回款同比增加所致
投资活动产生的现金流量净额	-714,247,850.04	-286,144,098.62	-149.61%	主要系公司报告期内办理定期存款及购买大额存单支付的现金同比增加所致
筹资活动产生的现金流量净额	-103,772,959.70	-194,842,777.98	46.74%	主要系公司报告期取得借款同比增加以及股利分红支出同比减少所致

V01 · English reading: the issuer attributes the increase to demand, sales volume and prices. It does not quantify future product-level volume, ASP, AI receipts or customer awards. These reported explanations support the opportunity while leaving the forward capture assumptions conditional. Source: https://static.cninfo.com.cn/finalpage/2026-10-24/1225621037.PDF | 2026-10-24;9M2026 | Physical PDF page 4 | Stage: HIGH actual issuer explanation; future extension LOW

What the filing establishes

The unaudited 13-page Q3 report published on October 24 is byte-identical to the owner-provided PDF. Q2 and Q3 isolated profit and cash-flow amounts below are exact cumulative differences: H1 less Q1, then nine months less H1. They are separate from any undisclosed quarter-specific note detail.

Nine-month reported P&L R&D expense was CNY 240.453 million. The quarter-specific R&D capitalization and functional depreciation split remain unavailable. Statutory operating profit includes the stated finance, other-income, investment and impairment lines; parent-attributable net income is a different measure.

T02_1 · Reported and derived actual quarterly totals (CNY billion unless labelled)

Quarter	revenue	gross profit	gross margin	statutory operating profit
Q1 2026	1.514698	0.254184	16.78%	0.095875
Q2 2026	1.985099	0.402274	20.26%	0.221088
Q3 2026	2.298982	0.665630	28.95%	0.404917

T02_2 · Reported and derived actual quarterly totals (CNY billion unless labelled)

Quarter	OP margin
Q1 2026	6.33%
Q2 2026	11.14%
Q3 2026	17.61%

Products, qualification and competing portfolios

High-capacitance MLCCs support local decoupling around changing power loads. Increasing effective capacitance in a constrained footprint requires fine dielectric layers, consistent electrode printing and control of co-firing, termination and testing. The nominal capacitance on a specification sheet is insufficient: voltage bias, temperature, package height, reliability and customer approval affect the usable component and its price.

Fenghua's August 2025 issuer product material specifies an 0805 X6S 100 microfarad, 2.5 V part and a 1206 X6S 220 microfarad, 2.5 V part, both with a 20% capacitance tolerance. The reference circuit establishes an application. It does not establish a named OEM bill of materials. The typical 0805 curve loses roughly half its capacitance near 2.5 V bias, so physical content growth cannot be inferred from the nominal microfarad figure alone.

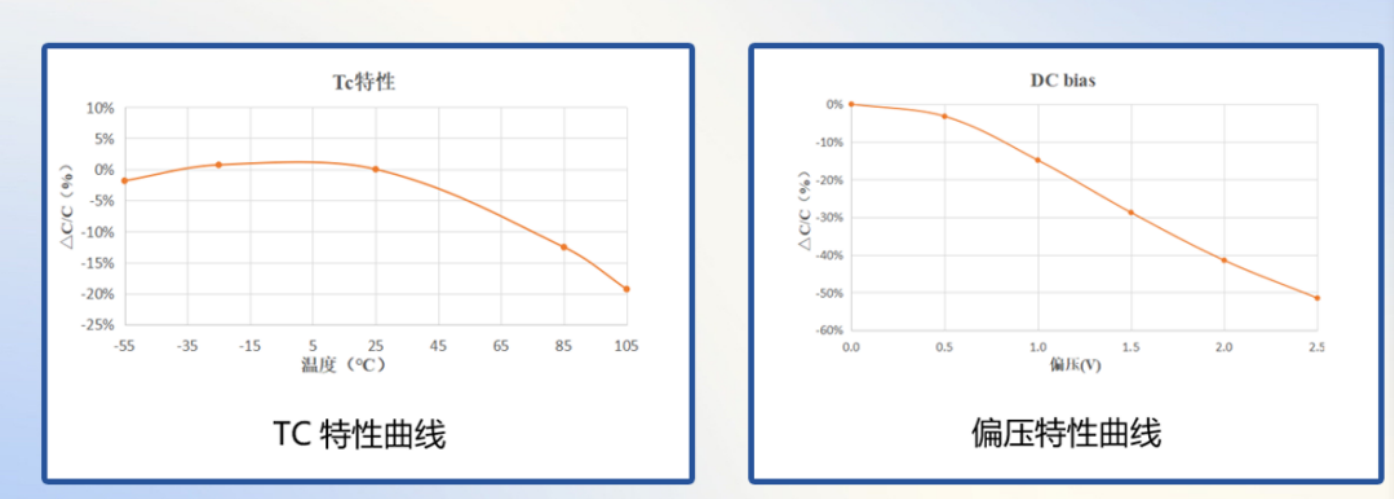

The September 2 issuer update says several AI-compute-compatible high-capacitance MLCCs passed customer certification. Customers, positions, units and ASPs are undisclosed. The May 12 record says Fenghua had no direct NVIDIA supply at that date. A dated lack of direct supply and later unnamed customer qualification can coexist. The selected model gives larger future commercial conversion explicit conditional weight rather than treating qualification as a full award.

V04 · English reading: issuer reference power circuit showing high-capacitance MLCC decoupling. It illustrates eligible use, without identifying a customer, GPU board or contracted component count. V06 · English reading: typical temperature and DC-bias curves for the specified 0805 sample. The displayed bias curve implies roughly 50% capacitance loss near rated voltage. This sample observation is not a universal SKU specification or a revenue parameter. Source: https://www.fhcomp.com/zh-cn/cd/3236.html | 2025-08-01 | Physical PDF page original HTML figure | Stage: HIGH original sample chart; approximate visual reading

Qualified alternatives limit any exclusivity thesis. Murata publishes closely comparable 0805 100 microfarad / 2.5 V X6S and 1206 220 microfarad / 2.5 V specifications; package thickness and detailed reliability conditions still differ. Samsung offers automotive high-capacitance parts and signed AI-related commercial contracts. Vishay’s low-ohmic metal-strip portfolio includes automotive-qualified products. A competing catalogue proves technical alternatives exist; approval as a drop-in substitute at a particular customer remains undisclosed.

Product specifications in this catalog are as of Jun.25,2026, and are subject to change or obsolescence without notice.
Please consult the approval sheet before ordering. Please read rating and !Cautions first.

Upgrade for Wider Resistance Range to WFM

VISHAY
www.vishay.com

WSLP
Vishay Dale

Power Metal Strip® Resistors, Very High Power (to 3 W), Low Value (Down to 0.0005 Ω), Surface-Mount

FEATURES

- Very high power to foot print size ratio (3 W in 2512, 2 W in 2010, 1 W in 1206, 0.5 W in 0805, and 0.4 W in 0603 package)
- All welded construction of the Power Metal Strip® resistors are ideal for all types of current sensing, voltage division and pulse applications
- Proprietary processing technique produces extremely low resistance values (down to 0.0005 Ω)
- Sulfur resistance by construction that is unaffected by high sulfur environments
- Very low inductance 0.5 nH to 5 nH
- Low thermal EMF (< 3 µV/°C)
- AEC-Q200 qualified (1)
- Material categorization: for definitions of compliance please see www.vishay.com/doc?99912

AUTOMOTIVE GRADE
Pb-free
e3
RoHS COMPLIANT
HALOGEN FREE GREEN (5-2008)

V08 · English reading: the WSLP family spans several case sizes, power ratings and low resistance values, with size-specific AEC-Q200 conditions. The construction is a welded metal element; its input-cost exposure should not be inferred from a generic silver-paste assumption. Source: https://www.vishay.com/docs/30122/wslp.pdf | Revision 2024-09-09; source retrieved 2026-10-24 | Physical PDF page 1 | Stage: HIGH competitor datasheet

The denominator, capacity and overlap controls

The two approximately 40% management statements use different denominators. MLCCs account for about 40% of H1 group revenue; high-end MLCCs account for about 40% of MLCC revenue. Multiplying them gives an approximately 16% group-revenue proxy. High-end also includes automotive and medium- or high-voltage demand. Applying the H1 ratios to Q3 is a LOW model assumption, not reported Q3 AI revenue or physical capacity.

The completed Xianghe investment belongs in the Q3 reference basket. Its revised project increment is 151 yi pieces per month, or 15.1 billion, reduced from 450 yi, or 45 billion. The CNY 5.2718 billion revised budget describes that named project, rather than total company capacity. The small-size phase-two project was terminated; no restart is assumed. The completed 28 billion resistor pieces per month also belongs in the reference.

A separate CNY 430 million high-end resistor plan adds 10 billion pieces per month. The issuer's future total above 80 billion per month refers to the total after this same programme. The model's 70 billion current-core proxy is an inference from 80 less 10, not measured usable output. Accepted new resistor receipts are separately capped by paid and placed assets, utilization and the 30-billion-piece quarterly increment.

The additional high-current multilayer-inductor plan is 0.1 billion pieces per month, or 0.3 billion per quarter. Its budget and ramp are undisclosed. The September update about stable mass production of large molded or integrated inductors concerns a different family. Existing other-component revenue excludes the modeled future multilayer increment. If later evidence puts some of that new programme inside Q3 revenue, the incremental vector must be reduced.

	通机制？公司募投项目电容器技术升级及产能扩充项目投资进度已达 87.31，本期投入 1.56 亿元。请问该项目达产后，公司 MLCC 月产能将达到什么规模？其中高容、车规等高端产品的产能占比是 **回复：**投资者您好，为维护公司全体股东利益，增强投资者信心，促进公司健康可持续发展，公司已于 2026 年 4 月 21 日披露《关于质量回报双提升行动方案的公告》（公告编号：2026-14），并于 2026 年 8 月 28 日披露《关于“质量回报双提升”行动方案的进展公告》（公告编号：2026-43）。公司募投项目“祥和工业园项目“已全面达产，2026 年上半年公司高端 MLCC 产品（高端 MLCC 产品包括高容产品、车规级产品以及中高压产品等）营收占 MLCC 产品总营收的比例约为 40%，公司将紧密结合行业和市场实际情况规划产能，目前产能利用率持续保持在较高水平。感谢您的关注！ **3、董事长，目前很多在自媒体提到贵厂的高端 mlcc 是买的海外产品回来贴牌的请问这个事情属实吗** **回复：**投资者您好，公司深耕电子元件行业四十余年，拥有自主开发生产销售高端产品能力，同时公司近年来持续加大研发投入，主营产品技术水平持续突破，高端产品占比稳步提升，请各位投资者注意甄别各类信息的真实性、准确性，切勿轻信非官方渠道发布的传闻。感谢您的关注！ **4、请问李董事长，三星、太诱已分别于 8、9 月份涨价，风华在产品涨价上有什么考虑吗？** **回复：**投资者您好，公司将根据市场供求情况、客户及产品结构等因素制定价格策略。感谢您的关注！ **5、请问目前高容 mlcc 占整体产能多少** **回复：**投资者您好，2026 年上半年公司高端 MLCC 产品（高端 MLCC 产品包括高容产品、车规级产品以及中高压产品等）营收占 MLCC 产品总营收的比例约为 40%。感谢您的关注！ **6、公司三季度业绩预增会有多少？** **回复：**投资者您好，具体经营数据请留意公司的定期报告，感谢您的关注！ **7、总裁您好，请问贵司去年下半年送样的 ai 服务器 mlcc，现在认证到哪个阶段了，抗老化测试是否通过。** 投资者您好，公司集中优势资源聚焦高端转型和新兴市场开拓，相关新产

实施主体	广东风华高新科技股份有限公司
实施地点	广东省肇庆市端州区睦岗街道风华高科祥和工业园
项目总投资规模	750,516 万元
募集资金承诺投资金额	397,698.52 万元
具体建设内容	厂房厂区建设、设备购置及安装、铺底流动资金
实施方式	新建
项目达到预定可使用状态的时间	2026 年

（二）祥和项目拟缩减投资规模及调整建设期的方案

公司本次拟对祥和项目缩减投资规模及调整建设期，项目总投资规模由750,516万元调整为527,181.46万元，项目新增高端MLCC月产能由450亿只调整为151亿只，建设期由52个月调整为64个月，募投项目投资调整前后对比情况如下：

	调整前	调整后
总投资规模	750,516.00 万元	527,181.46 万元
承诺募集资金投资总额	397,698.52 万元	397,698.52 万元
建设期	52 个月	64 个月
项目达到预定可使用状态的时间	2026 年	2026 年

（三）具体投资结构变更情况

单位：万元

序号	工程或费用名称	调整前	调整后
1	工程费用	688,980.80	463,027.03
1.1	主体工程	631,840.20	419,246.75
1.1.1	建筑工程费用	82,473.20	93,958.07
1.1.2	设备购置费用	549,367.00	325,288.68
1.2	辅助工程	2,351.70	0.00
1.3	公用工程	50,502.00	43,503.98
1.4	服务性工程	4,286.90	276.30
2	工程建设其他费用	25,530.20	29,502.94
3	预备费	10,500.00	8,000.00
4	建设期利息	2,475.00	3,621.49
5	铺底流动资金	23,030.00	23,030.00
	合计	750,516.00	527,181.46

四、祥和项目拟缩减投资规模及调整建设期的原因

V11 · English reading: the project increment changes from 450 yi to 151 yi pieces per month: 45.0 billion to 15.1 billion. The revised budget is approximately CNY 5.272 billion. These are project scopes, not total Fenghua capacity. Source: https://static.cninfo.com.cn/finalpage/2025-08-22/1224535383.PDF | 2025-08-22 | Physical PDF page 3 | Stage: HIGH dated project revision; existing in the Q3 basket

公司结合市场需求趋势、自身业务规划等因素综合考虑，拟缩减祥和项目投资规模及调整建设期，具体原因如下:

1.祥和项目于2020年立项，当时扩产规划产品的主要下游应用领域行业处于快速发展阶段，项目建设规划与之相吻合。在项目实施过程中，受宏观经济环境等多方面因素影响，2022年下半年电子行业市场发生较大的变化，消费电子行业需求持续疲软，价格竞争激烈，同时高容、车规等高端市场应用领域需求强劲，发展潜力较大。基于此，公司在募投项目建设期内，采取稳步增加产能的措施，审慎放缓了消费电子行业所需的小尺寸MLCC产能建设工作，进一步优化祥和项目产品结构，积极拓展汽车电子、工业控制、新能源等新兴应用领域业务机会，并持续推进车规、工控、高容产品产能建设，项目新增产能得以持续释放并保持较高水平。因此，结合项目进展情况，公司对祥和项目建设期予以科学调整。

2.针对现阶段小尺寸MLCC产品下游终端行业市场竞争加剧，为降低投资风险，提高资金使用效率，公司董事会根据市场变化情况，拟缩减祥和项目投资规模，终止以小尺寸MLCC产能为主的祥和项目二期投资，科学合理控制投资规模和进度，集中资源聚焦高端转型和新兴市场开拓，最大限度推动项目发挥最优效果。

3.针对上述变化，公司始终秉持科学、合理、高效使用募集资金的原则，一方面，尽量避免产能闲置和资源低效的情况；另一方面，积极辅以精益管理等各种措施激发项目产能和运营效能，具体如下:

（1）强化市场开发，拓展应用领域。针对汽车电子、AI 算力、低空经济、储能等新兴和高端市场应用领域的强劲需求，公司将持续加强市场开拓力度，提升产品在高端市场的占有率。同时，通过高效技术创新，进一步提高产品附加值和市场竞争力。

V12 · English reading: weak consumer pricing and competition underpin termination of small-size phase two. High-capacitance and automotive opportunities remain. Later H1 disclosure confirms the approvals and building reuse. 十七、其他重大事项的说明

☑适用 □不适用

1. 公司于 2021 年将位于肇庆大旺高新区的土地及其附属建筑物交由肇庆高新技术产业开发区土地储备中心有偿收储，收储价格为 12,710.71 万元，具体情况详见公司分别于 2020 年 4 月 21 日、2021 年 8 月 31 日在指定信息披露媒体披露的《公司第八届董事会 2020 年第三次会议决议公告》和《关于肇庆市大旺高新区的土地及附属建筑物收储进展情况的公告》。至 2026 年 3 月，公司已累计收款 9,410.71 万元，尚余 3,300 万元未收到。

2. 公司于 2022 年将位于端州区的 5 块土地及其附属建筑物等交由端州区人民政府有偿收储，收储价款为 10,930 万元，具体情况详见公司于 2022 年 8 月 3 日在指定信息披露媒体刊登的《关于部分土地收储事项的公告》。截至 2026 年 3 月，公司已累计收款 6,400 万元，尚余 4,530 万元未收到。

3. 报告期内，公司投资 4.3 亿元用于建设智能化、数字化高端电阻生产基地，项目建成后将实现新增月产 100 亿只高端片阻，重点覆盖 01005 电阻、合金电阻、车规级电阻、超低阻等高附加值产品。

十八、公司子公司重大事项

□适用 ☑不适用

V13 · English reading: the CNY 430 million high-end resistor base plans another 10 billion pieces per month. This page does not disclose the remaining unpaid amount, commercial recognition date or cash-spending schedule. Source: https://static.cninfo.com.cn/finalpage/2026-04-21/1225129320.PDF | 2026-04-21; FY2025 report | Physical PDF page 62 | Stage: HIGH planned project; timing and remaining cost LOW

Market expansion, process bottlenecks and competing capture

AI power density can expand the eligible high-capacitance wallet, while automotive and industrial designs broaden the non-AI mix. The investment case still requires Fenghua to qualify, manufacture and invoice its portion. Total MLCC pieces, AI-server MLCC value and this issuer's sales are distinct boundaries.

Sumitomo Metal Mining's January 2026 briefing labels a 7% global MLCC piece-growth forecast across applications. Murata's December 2025 material cites roughly 15,000–25,000 MLCCs per AI baseboard and forecasts aggregate AI-related demand at twice FY2025 in FY2027 and 3.3 times in FY2030. That aggregate already incorporates its deployment and content view. Board area limits additional count, while capacitance per part can rise; another content multiplier would duplicate the same process demand.

Samsung's September 1 release cites a Goldman Sachs AI-server MLCC market estimate of USD 1.4 billion in 2025 and USD 5.8 billion in 2030. The original broker study was not recovered. The 2028 geometric interpolation below is a comparison assumption, and the illustrative exchange rates are not spot FX. All modeled high-end MLCC sales include automotive and industrial products; their ratio to an AI wallet is therefore an upper-bound comparison rather than an AI market-share forecast.

Competing capture is already commercial. Samsung announced a KRW 1.0722 trillion AI-MLCC contract for calendar 2027; its claimed share above 40% has an unspecified value-versus-unit basis. Murata's July 31 record reported a 1.47 MLCC book-to-bill ratio and utilization near 95%, while warning about distributor bulk orders and design adjustments. Selective price changes were an option at that time, rather than evidence of an across-the-board realized increase.

T05 · Bounded market comparison - separate scopes

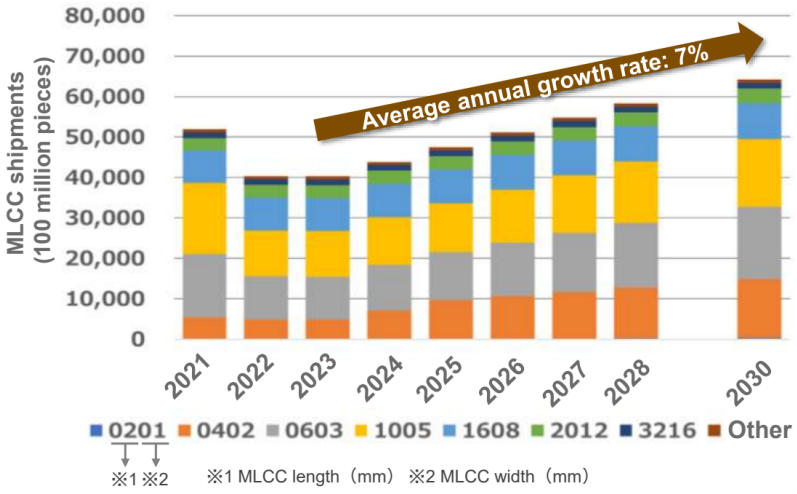

Comparison	Value	Boundary
2028 AI-server MLCC wallet interpolation	3.284793	USD billion; geometric interpolation, not issuer guidance
2028 Fenghua all high-end MLCC revenue	3.047496	CNY billion; includes non-AI products
Illustrative FX, lower	6.500000	CNY/USD assumption, not spot
Illustrative FX, upper	7.500000	CNY/USD assumption, not spot
All high-end / AI wallet, lower	0.123701	Upper-bound scope comparison, not company AI share
All high-end / AI wallet, upper	0.142732	Different product and period scopes remain
Active F4 mix/yield net revenue increment	0.793962	CNY billion; includes standard cannibalization, not AI-only invoices

Nickel powder, nickel paste (for MLCCs)

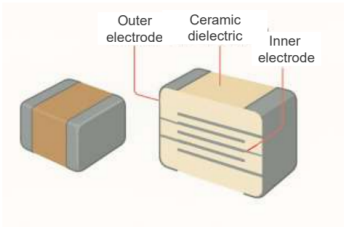

Powder synthesis / surface treatment

The MLCC market continues to grow.
The development of higher capacity (thinner layer) products is expected in particular

Market forecast by MLCC size (the Company's forecast)

- ✓ Automotive field (EV, ADAS, etc.)
- ✓ Development of communication technology (5G, etc.)
- ✓ Advancement in performance of electronic devices
- ✓ Further spread of AI and more

Used to form the inner electrode of an MLCC (multi-layer ceramic capacitor)

IT Infrastructure (AI Server)

Increasing Demand for Capacitors in AI Servers

Trends in AI Servers

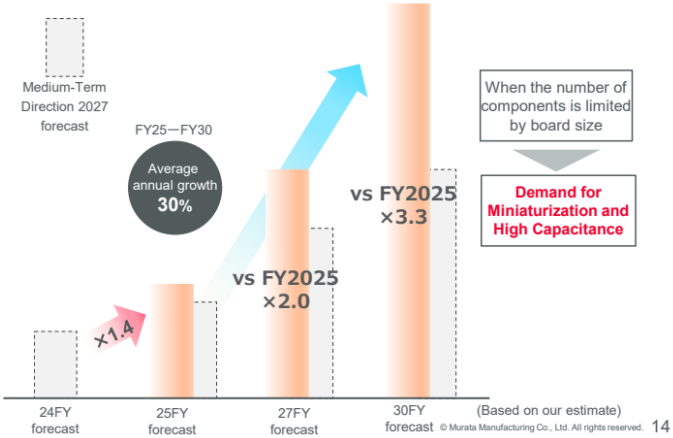

- Processing capabilities of AI servers continue to increase
  ⇒**Leading to a rise in the number of AI accelerators**
- AI servers consume a large amount of power instantaneously.
  To maintain stable operation, it is necessary to temporarily store this required power, **resulting in an increase in the number of capacitors within AI accelerators.**

The total number of capacitors installed in AI servers is on the rise.

Key Changes Since the Announcement of Medium-Term Direction 2027

<Key Changes>
- AI server total unit forecast : **No change**
- Number of installed capacitors : **Increase**

■ **Estimated number of capacitors demand for servers**

■ **Review of the Number of Installed Capacitors**

<Average Number>

Medium-Term Direction 2027	AI Servers ※Baseboard	10,000 ～ 20,000
Review	AI Servers ※Baseboard	**15,000 ～ 25,000**

Question & Answer

Moderator [M]: We will now move to the Q&A session.

Mr. Takayama of Goldman Sachs, please go ahead.

Takayama [Q]: I would like to ask a few confirmation questions regarding the capacitor's business. First, I would like to ask about the actual and outlook for utilization rates and whether you will be able to build up inventory going forward. There was saidthat Q1 was slightly down in real terms, but how do you plan to build inventory going forward? Based on that, I have concerns about sales in Q2 and H2. On a net basis, the outlook does not seem to rise much from Q1. Is that because you cannot ship because inventory cannot be built, or is it because the lead time is getting longer and the timing of recognition is different? Is it simply that the JPY155 exchange rate assumption is a bit conservative? My impression was that the outlook for the capacitors business in Q2 and Q3 on a QoQ basis seems a little too cautious, so I would like to hear your thinking.

Also, regarding pricing strategy, I think there has been quite a lot of movement over just the past two months. Your company has said that price responses are a condition when there is overflow or when costs rise, but I feel that may already be happening. I would like to ask again whether that means you are saying you will not consider it at all or whether there has been some change. Thank you.

Omori [A]: First, regarding utilization rates, we have maintained a high level of utilization until now, and we are continuing operations at a level very close to 95%.

As for inventory buildup, as Mr. Minamide reported earlier, we are in a situation where what we make is shipped out right away, so even though some buildup is possible in part, mainly for data center-related products, we are thinking in terms of making and shipping immediately, so inventory is not expected to increase significantly.

Regarding your point that growth in Q2 and Q3 sales versus Q1 may be a little smaller, one reason is the timing of supply. We are receiving a very large number of orders. At present, we are considering balanced supply, while taking specified delivery dates into account.

Finally, on pricing strategy, we recognize that prices are moving very significantly in many areas right now. Among other things, we see that the supply portfolio across the market is changing somewhat. We are also hearing information that prices are being raised in part. We also assume that this creates areas of imbalance. Our view is that various forces are at work here, and we think there may be cases where some adjustments are needed. That's all.

Takayama [Q]: Just to confirm the nuance, regarding Q2 and Q3 momentum you mentioned earlier, my understanding is that AI data center-related demand comes in early, and then revenue tends to materialize more from H2 in the form of [inaudible] related items, but seasonally, I would think sales should be stronger in July to September, including other products.

Omori [A]: Regarding that point, I believe it has become well-smoothed out. There may be some fluctuations in automobiles and smartphones as well, but overall, I think those will be absorbed within the total.

Takayama [Q]: One more nuance on pricing, in other words, I understand you to mean that there may be cases where you raise prices in part. Is that correct?

V16 · English reading: management describes MLCC utilization near 95% and possible selective price adjustments. The July 31 answer is conditional and does not establish a realized universal price increase. Source: https://corporate.murata.com/-/media/corporate/about/newsroom/news/irnews/irnews/2026/0731d/26q1-e.ashx?cvid=20260806080632000000&la=en-us | 2026-07-31 | Physical PDF page 27 | Stage: HIGH competitor management; conditional pricing

Process and input constraints can absorb some scarcity economics. Fine ceramic powder and electrode dispersion, ultra-thin tape, printing, stacking, co-firing, termination and electrical screening require consistent yield. Fenghua's product article describes internal additives, nickel and termination-paste development, sub-100-nanometre ceramic dispersion and more than 1,000 layers. That does not establish self-sufficiency in every metal or qualified external powder supply.

SMM's advanced nickel-powder categories and Sakai's hydrothermal dielectric discussion support the importance of qualified material grades. Commodity nickel tonnage is not equivalent to qualified electrode-powder capacity. Energy, labor, quality support and line reconfiguration remain costs. The model therefore carries material inflation, wage inflation, variable overhead, fixed support and maintenance, as well as capital spending before capacity becomes eligible.

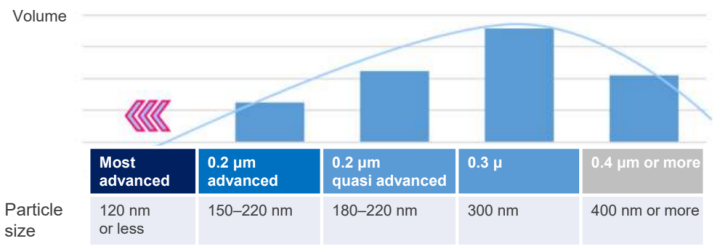

Nickel powder, nickel paste (for MLCCs)

Powder synthesis / surface treatment

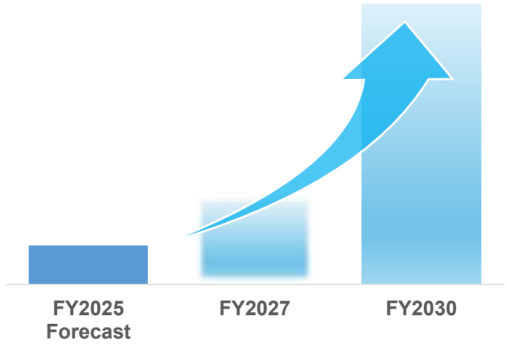

Aim to increase sales volume by leveraging the manufacturing process suitable for fine powder production (wet process)

The development of higher capacity (= thinner layer) products increases demand for nickel powder with a smaller particle size. Fine powder of a particle size of 200 nm or less, which is currently advanced / most advanced, is expected to become most popular in 10 years (in the next generation).

Nickel powder market by particle size (the Company's forecast)

Fine nickel powder: the Company's sales volume (plan)

SUMITOMO METAL MINING

12

V17 · English reading: advanced nickel-powder categories include particles at or below 200 nm and the most advanced category at or below 120 nm. The chart does not provide qualified industry capacity volumes or a Fenghua supplier relationship. 「変革・BEYOND2030」進捗経過　電子材料

変革 01

２年目の進捗

■ **誘電体：〇**
民生用途向け(次世代スマートフォンやAI関連等)ハイエンド品の需要拡大。

■ **誘電体材料：〇**
誘電体同様、最新の民生向け(次世代スマートフォンやAI関連等)ハイエンド品の需要拡大。

利益成長に向けた施策

■競争環境を踏まえた収益拡大のポイント
誘電体・誘電体材料ともに、ハイエンド品の増産に向けた設備投資を検討
MLCC市場の変化に対応し、開発/高付加価値製品でシェアを拡大

	業界環境分析（MLCC市場）
市場	・半導体市場と相関性が強い ・需要は拡大トレンド（足元は特にAI関連が活況） ・MLCCは小型大容量の流れ（薄膜多層化ニーズ）
競合	・誘電体：外販メーカー、内製メーカー ・誘電体材料：数社
堺化学	・２種類の素材提供が可能。(誘電体・誘電体材料) ・誘電体：薄層多層化ニーズに適する水熱合成法を採用 ・誘電体材料：豊富な製品ラインナップと高いシェア

	26.3		27.3 計画		増減	割合
	百万円	%	百万円	%	百万円	%
売上	11,377	―	11,500	―	123	1.1
営業利益	1,816	16.0	2,400	20.9	584	32.2

・27.3期は、26.3期から続くAIサーバー関連の強い需要に連動し、スマートフォン向けなどで予想されている落ち込みをカバーする計画。
・当初利益計画に対し、事業進捗は概ね順調。

自己評価（〇：順調　△：やや遅れ　▲:未達）

V18 · English reading: Sakai discusses high-end dielectric demand from AI servers and smartphones and its hydrothermal process. Capacity investment is under consideration; this is not evidence of an operating funded expansion or Fenghua-specific supply. Source: https://www.sakai-chem.co.jp/wp/wp-content/uploads/2026/05/2026%E5%B9%B43%E6%9C%88%E6%9C%9F%E6%9C%AC%E6%B1%BA%E7%AE%97%E8%AA%AC%E6%98%8E%E4%BC%9A%E3%82%B9%E3%83%A9%E3%82%A4%E3%83%89-1.pdf | 2026-05-25 | Physical PDF page 16 | Stage: HIGH supplier commentary; investment consideration stage

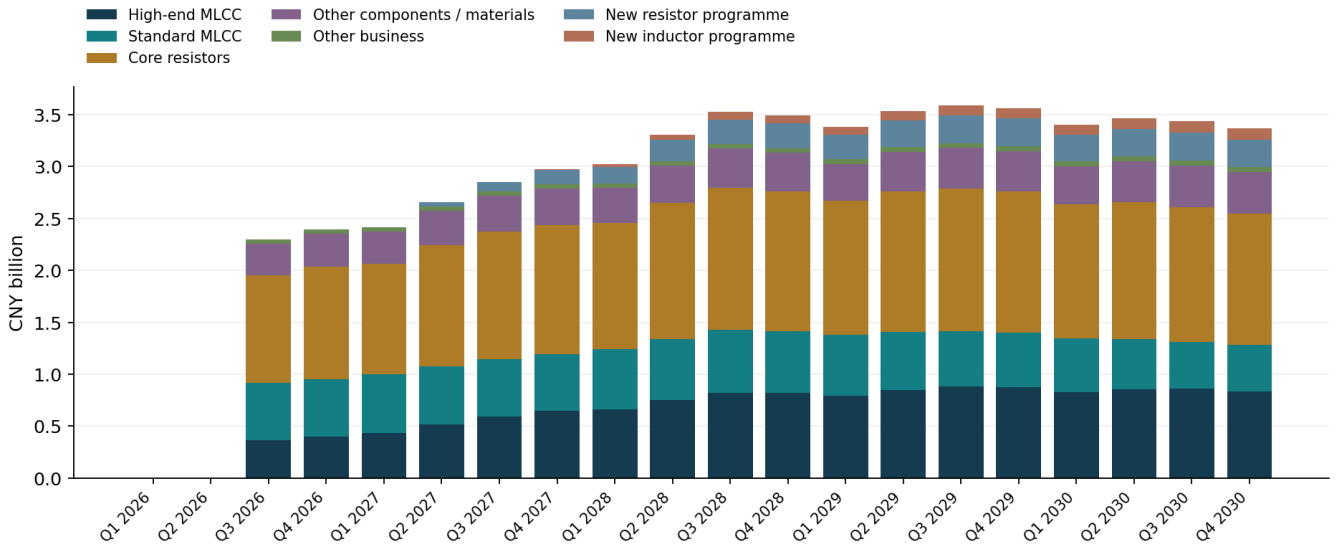

Expected revenue and operating drivers

The model starts from exact Q3 aggregate revenue and cost, then allocates them to LOW family proxies. This is an explicit calibration identity. It does not independently validate the unreported family mix or margin. Q1 and Q2 remain aggregate actuals; Q3 product rows are estimated allocations.

Each existing family uses an accepted-volume index and a net realized ASP index against its own Q3 basket. Cross-family volume indices are not additive pieces. High-end MLCCs receive first access to the shared qualified resource pool; standard output uses the residual. A richer mix can displace standard receipts. Desired resources also face a paid-and-placed retrofit cap, so an engineering aspiration cannot create free output.

Expected family revenue is the sum of each coherent outcome’s probability times its volume and ASP product. For display, effective ASP equals expected revenue divided by Q3 family revenue and expected volume. Multiplying mean volume by simple mean ASP would lose their covariance. The driver tables use the effective measure.

Revenue mix and separate funded programmes

Effective ASP = expected revenue / (Q3 family revenue x expected accepted-volume index).

T06 · Q3 family calibration - LOW allocations

Family	Revenue B	Calibrated COGS B	Calibrated GM
High-end MLCC	0.367837	0.227121	38.25%
Standard MLCC	0.551756	0.395630	28.30%
Core resistors	1.034542	0.783018	24.31%
Other components / materials	0.303350	0.226577	25.31%
Other business	0.041497	0.001005	97.58%

Full cost, statutory profit and finite assets

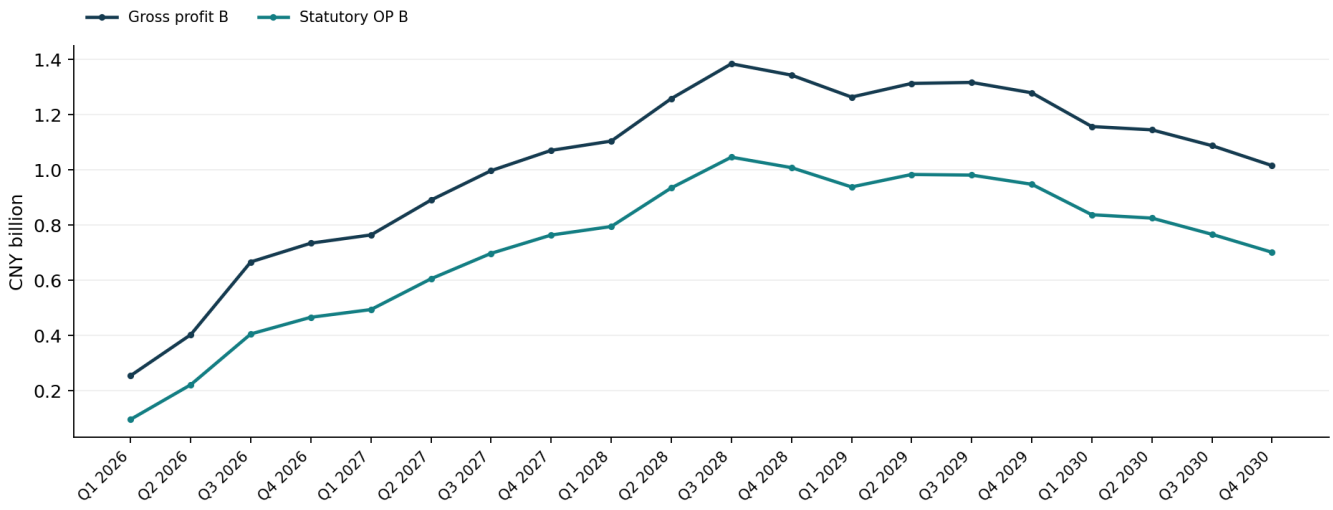

Reported costs anchor the starting point. Core family costs are split into materials, ordinary labor, variable factory overhead, fixed cash manufacturing support and allocated old depreciation. The FY2025 component cost shares are proxies across the families, rather than a claim about every product's cash cost. Ordinary wages and full R&D remain expenses.

Q3 total D&A is estimated from H1 at CNY 193.265 million; the functional allocation is also a source-based proxy. Old property, right-of-use assets, intangibles and deferred costs each have finite carrying-value caps. New capital enters construction in progress and begins eight-year straight-line depreciation after placement, using a half-quarter convention. Incremental COGS depreciation is shown as a shared bridge after product GP, with the operating-expense portion charged separately once.

The forecast includes surcharges, selling, administration, reported-style R&D expense, an additional cash compensation reserve, finance, other income, investment income and credit or asset impairment. No ordinary compensation or R&D is added back to obtain the valuation profit. Other income includes recurring grant or VAT effects in the company's reporting; it is distinct from product revenue and cash receipts.

The company's FY2025 and H1 incentive-plan disclosures do not prove a zero ordinary monetary share-based compensation charge in Q3. The model retains reported expenses and adds a LOW CNY 4 million quarterly compensation contingency growing 3% annually, with no assumed equity financing or share-count credit.

Profit and margins across the current horizon

Model estimates; actual/proxy scopes stated in adjacent table

C04 · Q1-Q3 are actual aggregate results; future values are expected model outputs with full costs. Consolidated statutory operating profit is the sanctioned valuation numerator.

V20 · English reading: the cash-flow reconciliation provides source depreciation, amortization and working-capital changes. The H1 D&A sum is used only as a labelled Q3 rate proxy; it does not justify adding ordinary depreciation economics back to statutory profit. Source: https://disc.static.szse.cn/disc/disk03/finalpage/2026-08-28/4bb70bdc-d93e-4ecd-94ad-2a61fffb1695.PDF | 2026-08-28; H1 2026 | Physical PDF page 140 | Stage: HIGH H1 source; Q3 extrapolation LOW

Six coherent outcomes and the incremental opportunity ledger

Three exclusive pricing regimes carry selected probabilities of 25% normalization, 50% sustained tightness and 25% strong scarcity. Conditional commercial success is 35%, 60% and 70%, respectively. Combining the two dimensions produces six outcomes. Delayed states still have partial commercial receipts and incur quality, support and capital costs.

The marginal full-conversion probability is 56.25%. This is a judgment about larger future capture, rather than the authenticity of the already reported customer certification. Competition, completed rival capacity and possible distributor over-ordering prevent certainty. The scarcity price paths mean-revert through 2030.

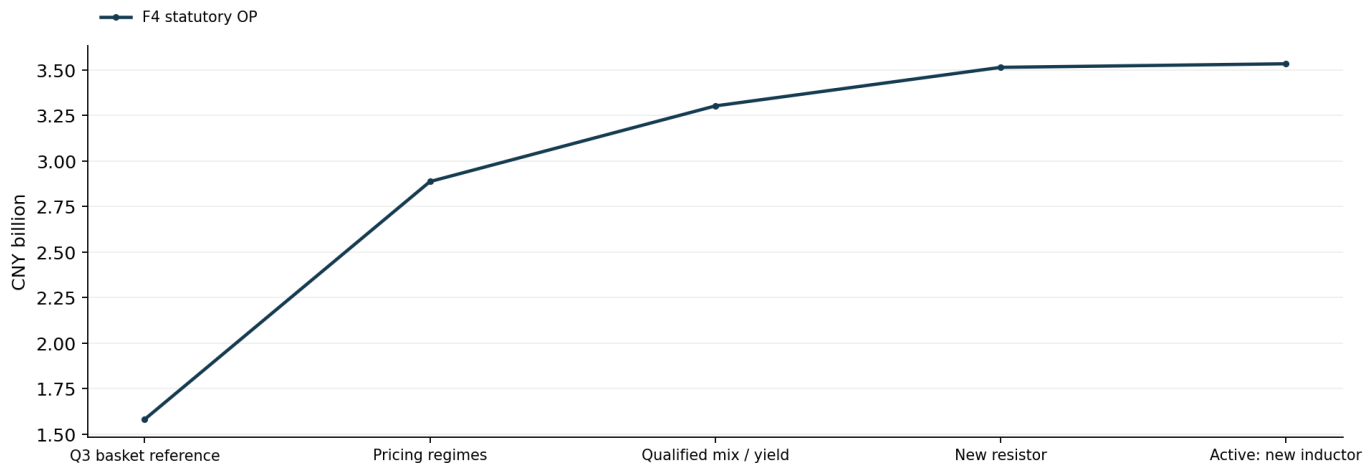

The ordered ledger isolates the economics without adding overlapping headlines. Start with a Q3-calibrated reference; then restore pricing regimes; add qualified mix, yield and funded shared MLCC resources; add the separate resistor programme; finally add the inductor programme. Only the full final stage is active. Each stage recalculates cannibalization, cost and cash, so independent removal sensitivities cannot be added together as incremental profit.

T08 · Joint outcomes - active four-quarter window

Outcome	Probability	F4 revenue B	F4 statutory OP B	Min. ending cash B
normal delay	16.25%	9.590701	0.716260	2.818748
normal success	8.75%	10.665220	1.166069	3.264389
tight delay	20.00%	11.929175	3.004097	2.995201
tight success	30.00%	13.295684	3.737248	3.287749
scarcity delay	7.50%	14.684624	5.634585	3.027515
scarcity success	17.50%	16.393987	6.695496	3.336291

Cash minima are ending cash over the full forecast path. The sensitivity table takes the minimum across all computed states, including any zero-weight diagnostic states. Ending cash includes remaining designated-use balances; the funding gate instead tests available cash after that reserve for positive-weight states.

Ordered opportunity ledger - forward statutory OP

Model estimates; actual/proxy scopes stated in adjacent table

C06 · The final stage is the active model. These are ordered counterfactuals, not historical target comparisons. All stages rerun shared resources, qualification, costs and cash; no second probability multiplier.

C06_data_1 · Ordered opportunity ledger - forward statutory OP — plotted data

Stage	F4 statutory OP
Q3 basket reference	1.580451
Pricing regimes	2.887484
Qualified mix / yield	3.303136
New resistor	3.515068
Active: new inductor	3.534723

All stages rerun shared resources, qualification, costs and cash; no second probability multiplier.

T09 · Incremental receipts and profit, including the small inductor

Stage	F4 revenue B	F4 OP B	Incremental OP B	Native ceiling CNY
Reference	9.770727	1.580451	Unavailable	29
Pricing	11.137251	2.887484	1.307033	53
Mix / yield / funded MLCC	11.931213	3.303136	0.415652	60
New resistor	12.672456	3.515068	0.211933	64
Active new inductor	12.836531	3.534723	0.019655	64

The inductor adds about CNY 19.655 million of forward statutory operating profit in the ordered ledger. It remains an active opportunity even though both the resistor stage and the final stage round to a CNY 64 ceiling. Source opportunity, economic contribution and rounded display sensitivity are distinct tests.

T10 · Probability, timing and overlap dispositions

Signal / programme	First assumed receipt and probability scope	Overlap / failure test
Observed Q3 improvement	100% applies only to the reported quarter. Future tight or scarcity states sum to 75%.	Do not carry the reported quarter as certain future margin; normalization is explicit.
Qualified high-end MLCC / yield	Future success conditional on pricing: 35% / 60% / 70%; shared funded retrofit is inside C2.	Customer qualification is reported; larger receipts, yield and customer share remain LOW. Standard displacement is charged.
New high-end resistor	First modeled acceptance Q2 2027; same six commercial states, separate 30B-piece quarterly cap.	Remaining CNY 300M reserve and placement schedule are LOW; no claim CNY 130M has been reported paid.
New high-current multilayer inductor	First modeled acceptance Q4 2027; CNY 180M budget and CNY 0.50 net ASP are LOW.	Separate from existing molded/integrated inductors; reduce increment if later evidence puts it in Q3.
Two H1 40% statements	Zero additional receipt block: both are already used in the starting mix.	Different denominators; no extra 40% AI revenue.
Small-size phase-two termination	Zero additional receipt block; negative execution/competition evidence.	No restart or additional completed-project capacity.
May 12 no direct NVIDIA supply	Zero standalone receipt block; dated counterevidence.	Does not exclude unnamed later indirect qualification; no direct GPU award claimed.
Controller transfer / existing shares	Zero issuer financing cash and zero insider-selling score penalty.	No operating customer or capital-injection inference.
Unrecovered channel / broker originals	Low-provenance alerts within the pricing/capture hypotheses.	Reposts and repeated copies count as one event; no independent confirmation multiplier.

Capital, liquidity and funding failure

The cash bridge starts with September cash equivalents of CNY 3.30535 billion. It excludes the CNY 247.337 million difference from monetary funds and does not spend separate deposit or debt-investment assets. Updated September restriction categories are unavailable. A labelled CNY 282.488 million special-purpose reserve is carried from June; eligible capital-payable payments release that reserve once.

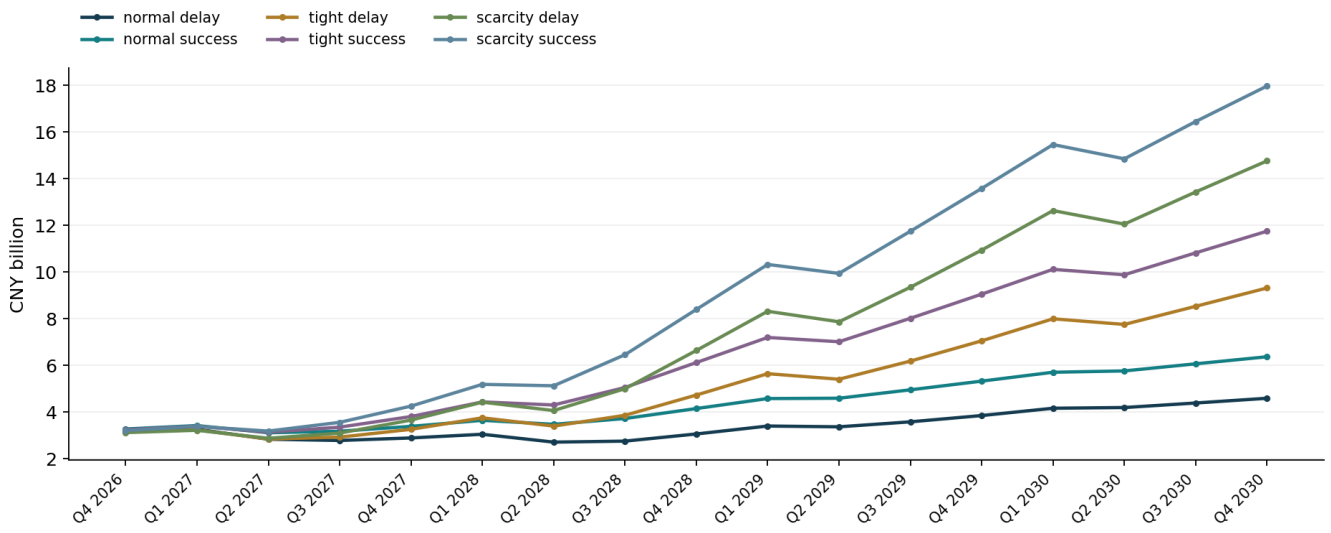

September capital payables are a LOW CNY 350 million estimate, distinct from operating payables and settled once. The model does not subtract the older December project tail a second time or count earlier project-account releases as new cash. A LOW CNY 180 million retained endorsed-bill amount is excluded as a matched asset and liability, rather than treated as financing proceeds.

Working-capital days calibrate pre-new-provision transaction pools to opening net balances. They are not an invented gross receivable or inventory allowance roll. Provision charges are added back once in the cash proxy. Full other-income and investment P&L are removed, while an 80% realized investment-cash assumption appears separately.

The LOW tax assumption is 18.5%, representing a 65% allocation at 15% and 35% at 25%. The parent's high-tech renewal was pending at H1; a 25% tax stress is shown. The model separately reserves initial all-tax payables, mixed current debt/lease/interest and short-loan carrying amounts over four quarters, followed by a separate future lease reserve. Exact September maturity dates are unavailable. The prudent schedule is a cash assumption, and accrued interest may conservatively overlap a small part of the carrying-value payoff.

Every positive-weight outcome must fund a minimum CNY 800 million available-cash floor with exactly zero unannounced external equity proceeds. A funding deficit in any such branch invalidates all primary forecast ceilings until coherent financing and share terms are authorized. A small probability cannot hide that deficit. The combined adverse cash diagnostic requires approximately CNY 1.203 billion of additional funding and therefore has no valid ceiling.

Available cash across all six outcomes

Model estimates; actual/proxy scopes stated in adjacent table

C07 · Modeled cash equivalents less the remaining special-purpose reserve. Starting CCE excludes other monetary funds and investment assets. Every positive-weight branch must exceed the CNY 0.8B floor. Six conditional cash paths; no unannounced financing inflow. These are modeled funding balances, not issuer cash guidance.

用闲置募集资金暂时补充流动资金情况	不适用
项目实施出现募集资金结余的金额及原因	适用 公司于 2025 年 5 月 21 日召开 2024 年度股东大会，审议通过了《关于部分募投项目结项并将节余募集资金永久补充流动资金的议案》，同意将募集资金投资项目“新增月产 280 亿只片式电阻器技改扩产项目”结项并将项目节余募集资金永久补充流动资金后办理对应募集资金专户的销户手续。该项目实际节余募集资金永久补充流动资金金额为 47,886.52 万元。新增月产 280 亿只片式电阻器技改扩产项目募集资金产生节余的主要原因包括：1.项目投资建设过程中，部分设备较原制定项目实施计划时的采购价格较大幅度下调，设备迭代升级效率提升，从而节约了较多的设备采购成本，使得募投项目达到预定产能所需的投入有所减少；2.募投项目部分合同余款支付时间周期较长，尚未使用募集资金支付，项目结项后，公司将按照相关交易合同约定继续支付相关款项；3.在募集资金投资项目实施过程中，公司遵守募集资金使用的有关规定，从项目的实际情况出发，在不影响募集资金投资项目能够顺利实施完成的前提下，本着合理、节约、有效的原则，审慎使用募集资金，加强各个环节成本的控制、监督和管理，最大限度节约了项目建设费用；4.募集资金账户存续期间产生了一定的存款利息收入。 公司于 2026 年 5 月 21 日召开 2025 年度股东会，审议通过了《关于部分募投项目结项并将节余募集资金永久补充流动资金的议案》，同意将募集资金投资项目“祥和工业园高端电容基地项目”结项并将项目节余募集资金（含专户存款利息和扣除银行手续费的净额，不包括后续预估尚需支付的尾款及质保金）永久补充流动资金。公司将继续保留募集资金专户，待后续尾款、质保金全部支付完毕后，再办理专户注销手续。该项目节余募集资金永久补充流动资金金额为 36,829.96 万元，募集资金产生节余的主要原因包括：1.在募集资金投资项目实施过程中，公司遵守募集资金使用的有关规定，从项目的实际情况出发，在不影响募集资金投资项目能够顺利实施完成的前提下，本着合理、节约、有效的原则，谨慎决策，优化资金配置、加强成本控制，科学使用募集资金形成了资金节余；2.募集资金账户存续期间产生了一定的存款利息收入。
尚未使用的募集资金用途及去向	截至 2026 年 6 月 30 日，祥和项目尚未使用的募集资金均存放于募集资金专项账户。
募集资金使用及披露中存在的问题或其他情况	不适用

（3） 募集资金变更项目情况

□适用 ☑不适用
公司报告期不存在募集资金变更项目情况。

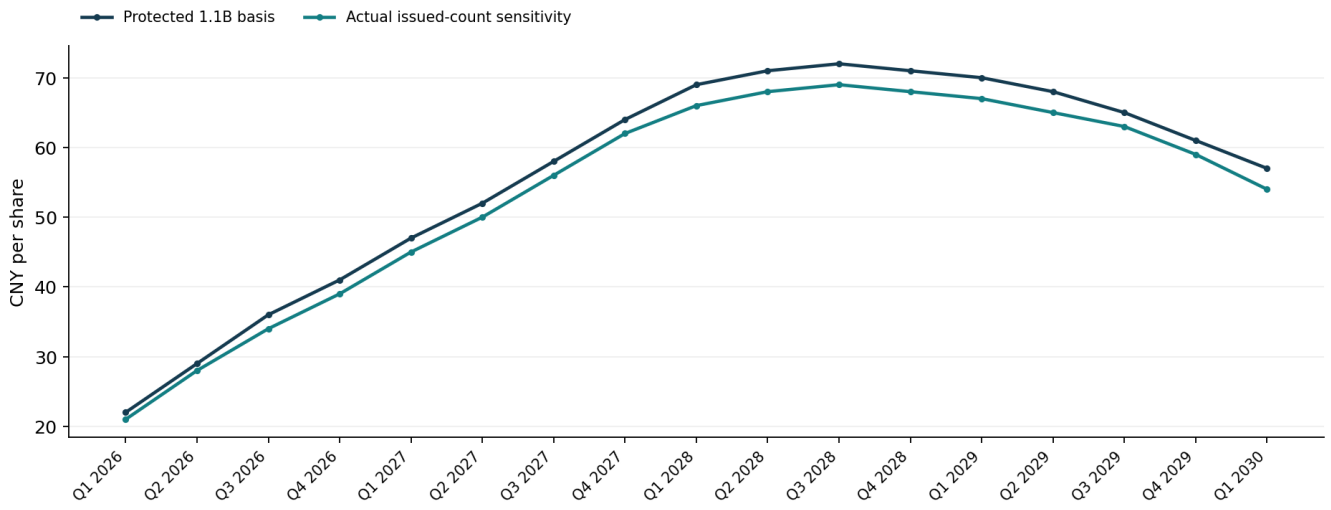

V22 · English reading: shareholders approved the CNY 368.2996 million surplus release on May 21. Dedicated accounts remain for unpaid tail amounts and warranties. This prior release is not another future cash inflow. Source: https://disc.static.szse.cn/disc/disk03/finalpage/2026-08-28/4bb70bdc-d93e-4ecd-94ad-2a61fffb1695.PDF | 2026-08-28; H1 report | Physical PDF page 24 | Stage: HIGH prior release approval; no duplicate forward proceeds

Valuation chains and the protected share convention

Each ceiling uses the four quarters beginning at the labelled quarter. Expected operating profit is formed from the six coherent outcomes before native rounding. Each quarter’s statutory operating profit rounds to CNY 0.001 billion; the four rounded amounts are summed and rounded to the same precision. Multiplying by 20 and dividing by the protected 1.1-billion-share proxy gives a raw per-share value, which rounds to whole CNY.

The final three forecast quarters have no complete four-quarter window within the selected horizon and therefore no ceiling. The model does not extrapolate those tail earnings. Actual issued shares are shown only as a separate denominator sensitivity. The method does not change the multiple by phase and does not add a cash or debt valuation adjustment.

Current quarterly four-quarter operating-profit ceilings

Model estimates; actual/proxy scopes stated in adjacent table

C08 · Current model windows only. The two denominator conventions remain separate; no market-price comparison is plotted. 20x consolidated statutory OP; native quarterly and final whole-CNY rounding.

Sensitivity, score and precommitted tests

The sensitivities are separate diagnostic reruns with their stated overrides. They are not additional probability-weighted opportunities to add to the active estimate. Stronger scarcity produces CNY 79, while greater normalization produces CNY 45. These outputs expose the importance of pricing duration. New-project budget, net realization, maintenance, cash collection and tax assumptions are tested independently.

The combined adverse cash case is deliberately severe and is not a separately sourced event with a hidden zero probability. It combines working-capital, project-cost, tax, maintenance and reserve stresses. Adoption fails because a positive-weight branch requires additional funding. It is displayed as INVALID rather than a numeric target. This diagnostic does not establish that every possible tail risk has been priced.

T14 · Current analytical scorecard

Category	Points	Maximum	Evidence and limiting factor
Core Thesis	11	20	Relevant processes and domestic access; substantial qualified competition.
Cycle Stage	8	10	Actual margin acceleration and utilization; distributor ordering risk.
TAM Expansion	8	10	AI power density, local sourcing and auto adoption; different wallet scopes.
Catalysts	4	5	Annual and quarterly realization tests; new-programme dates remain assumptions.
Macro	8	10	AI and electrification support; export and trade exposure.
Alpha	4	5	Primary local-language and capacity-denominator work; capture uncertainty.
Risks	-4	0	Four distinct risk classes deduct one point each.

The six positive categories sum to 43. Deductions for competition/pricing, qualification/yield/ramp, cash/capital/legal/tax and policy/access total four, leaving 39 of 60, or 65. The protected Excel Base remains 80. Existing-share controller sales receive no risk-score deduction and no issuer financing credit.

The capture thesis should be reassessed if revenue or production timing misses by 25%, or gross margin stays below 25% for two quarters. Actual gross margins around the 27% and 30% bounds are useful observations, rather than automatic price extrapolations. Paid and placed capital must precede the modeled manufacturing increment. A commercial delay beyond two quarters reduces capture while fixed support costs continue.

Shorter lead times, distributor inventory unwind or a broad competitor price response challenge the tightness weights. Receivable days above 150, compressed bill funding, or maintenance requirements approaching

depreciation trigger a funding review. Tax renewal, grants, ordinary compensation, share count and designated cash need fresh evidence. Later source evidence of programme overlap requires lowering incremental receipts. These are future review tests, not claims that the current assumptions have already been achieved.

Evidence completeness and limits

T15 · Latest management records and media completeness

Record	Published written coverage	Audio / limits
September 15, 2026 H1 dedicated event	4 pages; all 11 numbered Q&As read.	P5W replay URL recovered; audio was not listened to or transcribed.
May 12, 2026 FY2025 dedicated event	5 pages; all 17 numbered Q&As read.	Replay URL is empty despite an availability flag.
September 1-2, 2026 broker supplement	4 pages; all 7 Q&As read separately.	Issuer-curated written record, without a full spoken-transcript claim.
Quarterly/provider search	Bounded issuer, exchange, local and TradingView search; 2026 transcript search returned zero.	No newer quarterly spoken transcript recovered; failed interaction request preserved.

All 35 published written Q&As were reviewed. Questions remain separate from management answers. Product pages, project revisions and filing notes supply additional evidence, with their dates and stages stated in each exhibit. Original source bytes and hashes remain preserved; the report does not claim full reading of every annual-report page or unrecovered broker study.

Important undisclosed items are Q3 product revenue and gross margins, ASP and grade-level qualified capacity or yield; Q3 D&A, capitalization and ordinary monetary compensation allocation; September cash restrictions, capital/trade payable split, retained bills and debt dates; new-inductor budget and ramp; new-resistor unpaid costs and recognition date; and named AI customer receipts. Model assumptions and adverse funding results make these limits visible. No exclusive award or fully reviewed audio is inferred.

Appendix A - complete twenty-quarter operating schedules

Amounts are CNY billion unless a percentage, index or billion-piece unit is explicit. Q1/Q2 are aggregate actuals. Q3 family figures are calibrated LOW allocations. Future rows are model estimates. Family GP excludes the shared incremental COGS D&A below; the bridge reconciles to consolidated GP without a second charge. Blank family rows mean unavailable, rather than zero.

Appendix C - every conditional operating and cash path

Six mutually exclusive joint outcomes each cover all 17 forecast quarters from Q4 2026 through Q4 2030. Historical Q1-Q3 results are shared actuals. Each outcome retains its own pricing, qualified output, support costs, tax, working capital, capital placement and cash recursion before expected values are formed. Available cash deducts the remaining designated-use reserve; a forecast funding deficit blocks the active model.

Normal Delay - probability 16.25%. Each outcome retains its own costs and cash path.

Appendix D - reproducing laws and calendar conventions

A07_laws · Complete formula families and conventions

Law family	Reproducing definition
Calibration	Q3 family revenue = exact Q3 aggregate revenue x family share. Shares: MLCC x high-end/MLCC; standard is MLCC residual; core resistor is LOW 45%; other-business uses the H1 ratio; other components is residual. Raw family cost = revenue x (1 - proxy GM). Uniform core cost factor = (observed Q3 COGS - other-business cost) / sum raw core costs. This exact aggregate fit does not establish family facts.
Time and interpolation	t=0 is Q3 2026; t=1..17 are Q4 2026 through Q4 2030. Annual time y=t/4. Anchor positions 0,1,5,8,13,17 correspond to Q3 2026, Q4 2026, Q4 2027, Q3 2028, Q4 2029, Q4 2030. Intermediate anchors use linear interpolation. Q1 seasonal volume is 0.95, Q3 is 1.02, other quarters 1.
Joint probability	For each price regime, success weight = regime probability x conditional success. Delay weight = regime probability x (1 - conditional success). Sum six weights = 1. Evaluate each complete path before weighting; do not multiply mean volume by mean ASP or reapply capture probability.
Shared MLCC resources	Funded resource cap = 1 + cumulative paid/placed retrofit / required CNY B per resource index. Active cap = MIN(desired cap, funded cap). High-end accepted index = MIN(seasonal high-end demand, active cap / 0.45). Standard accepted = MIN(seasonal standard demand, MAX(0, cap - 0.45 x accepted high-end) / 0.55).
Core and new receipts	Core family revenue = Q3 family revenue x accepted volume index x net ASP index. Core resistor volume is capped by its LOW 210B-piece quarterly proxy / inferred Q3 pieces. New programme readiness = MIN(1, cumulative placed programme assets / required remaining cost). New pieces = MIN(physical increment x readiness, increment x utilization x season x readiness), after the assumed commercial-start quarter. New revenue = pieces x assumed ASP x the corresponding regime price index.

Law family	Reproducing definition
Project calendar	Resistor cash fractions t1..5 are 15/25/25/20/15%; placed t3..5 are 65/20/15%. Inductor cash t2..6 is 10/20/25/25/20%; placed t5..6 is 80/20%. MLCC retrofit cash and placement each equal 1/7 of budget at t2..8. Maintenance is paid and placed currently. These are LOW schedules. Paid cash accumulates in CIP until placement; placement never exceeds available capital.
Finite depreciation	Each old asset quarter depreciation = MIN(prior remaining net asset, its H1/2 proxy rate). New depreciation = MIN(available net assets, (prior gross placed assets + 0.5 x current placement) / 32). End net asset = prior net + placement - depreciation. Incremental COGS/opex D&A split uses H1 functional shares; core allocated old D&A and shared incremental D&A are each charged once.
Core materials and support	Per core family: materials = calibrated material cost x accepted volume x (1+material inflation)^y / (1+state productivity)^y. Labor = calibrated labor x volume^0.8 x (1+wage inflation)^y. Variable overhead scales with volume and energy inflation. Fixed cash support scales with (1+fixed inflation)^y and resource or family volume^0.3. Allocated old D&A scales with remaining finite old-asset depreciation.
New unit costs	New programme cost before D&A = accepted pieces x (material, labor and variable-overhead cost per piece, each inflated at its own rate) + programme fixed startup/steady support x MIN(1, selected budget / required cost). Support persists in delayed states. New resistor fixed support turns steady at t3; inductor at t5. New shared depreciation is outside product GP.
Operating expense	Selling/admin/R&D cash base = Q3 expense less estimated functional D&A. Fixed cash fraction grows at fixed expense inflation; variable fraction scales with total revenue / Q3 revenue. Old functional D&A is added back into each expense once. Additional compensation = CNY 0.004B x 1.03^y. Surcharges use exact Q3 rate. Extra opex D&A is separate.
Statutory profit and tax	Core OP = GP - full selling/admin/R&D - compensation - extra opex D&A - surcharges. Statutory OP = core OP + other income + investment P&L + cash interest - debt/lease interest - FX/fees - credit impairment - asset impairment. Other income decays by 1.5% of Q3 per quarter to a 65% floor. Group NI = OP - MAX(OP,0) x tax rate; parent NI = group NI - MAX(group NI,0) x 0.3% NCI.

Law family	Reproducing definition
Cash transaction pools	Inventory = COGS x inventory days / 90. Eligible receivables = revenue x receivable days / 90. Operating AP and bills use cash COGS (COGS less COGS D&A) times calibrated/target days / 90. Contract liabilities scale with revenue; payroll stock scales with revenue ratio^0.4. Net operating WC = inventory + eligible receivables - operating AP - bills - contract liabilities - payroll. Days move linearly to target through t8. Opening matched retained bills and capital AP are separately removed.
Cash recursion	CFO proxy = group NI + total D&A + credit/asset charges - increase in net WC - full other-income and investment P&L. Investment cash = 80% of investment P&L. Ending cash = beginning cash + CFO + investment cash - asset capex - capital AP settlement - maturity/lease cash - initial tax liability - dividends. Current capital AP, debt and initial tax settle 25% per quarter t1..4; later lease 1/12 at t5..16. Eligible capital AP reduces earmark, without another cash inflow. Available cash = ending cash - remaining earmark.
Dividend, interest and funding gate	Beginning cash earns the selected 2.1% annual cash-equivalent yield / 4. Future Q2 dividends are 35% of the prior full-year positive parent NI, including actual 2026 quarters when appropriate. Funding gap = MAX(0, minimum CCE floor - available cash). Every positive-weight path must have no gap and zero external proceeds; invalid inputs, undefined arithmetic or overflow cannot yield a numeric primary ceiling.
Valuation	Expected OP is sum(weight x conditional OP). Round each quarter to 0.001B, sum the four included quarters and round to 0.001B; multiply by constant 20 and divide by constant 1.1B share proxy, then round whole CNY. Actual issued shares are a separate sensitivity. Base score and quoted price have no ancestry in the primary method.

Appendix E - all live source and LOW input coefficients

This register prints all 611 graph inputs with exact stored values and their source or LOW role. IDs are stable references into the companion full-DAG model. Source monetary inputs use CNY billion; piece inputs explicitly say billion pieces or CNY per piece; price, volume, utilization and resource controls are dimensionless. The two protected/sensitivity-only controls have no primary valuation ancestry. The full model preserves every expression, argument and value; no hidden economic coefficient is introduced by the report.

Appendix F - sensitivity inputs and ordered quarterly effects

Every diagnostic below holds all unlisted selected inputs constant. Overrides are exact graph-input IDs and values. Diagnostics are not new active financial choices. The combined funding failure remains INVALID, with its unweighted branch deficit preserved.

Appendix G - complete source actual statement tables

The following preserve every row in the source-reconciled consolidated income statement, cash-flow statement and balance-sheet extracts. Amounts are exact CNY decimal strings. A dash is an unavailable or blank source cell, not a reported zero. Legal-parent-attributable profit and noncontrolling profit remain separately labelled. Source comparatives are the issuer’s stated corresponding period or opening balance. Q2/Q3 PL and CF are exact cumulative differences, with unavailable subcomponents left blank.

A12_source_derivations · Source-only monetary reconciliations

Derivation	Exact CNY	Scope
FY25 total DA CF	729,787,035.94	Sum of four CF supplemental depreciation/amortization lines; this is not an EBITDA or OP adjustment.
FY25 DA outside disclosed selling admin RD	638,456,935.58	CF D&A total less separately disclosed selling/admin/R&D D&A. Not a directly reported COGS depreciation allocation; inventory/capitalization/timing boundaries may differ.
FY25 capital AP equipment construction	534,820,444.89	Equipment plus construction payable; exclude these exact source balances when identifying pure trade AP. No Sep split inferred.
H1 total DA CF	386,530,430.28	Sum of four CF supplemental depreciation/amortization lines; this is not an EBITDA or OP adjustment.
H1 DA outside disclosed selling admin RD	343,901,184.52	CF D&A total less separately disclosed selling/admin/R&D D&A. Not a directly reported COGS depreciation allocation; inventory/capitalization/timing boundaries may differ.
H1 capital AP equipment construction	412,565,786.77	Equipment plus construction payable; exclude these exact source balances when identifying pure trade AP. No Sep split inferred.
Q126 monetary less CCE	243,005,938.12	Balance-sheet monetary funds less CF ending cash/cash equivalents. Only FY25/H1 source notes disclose categories; difference is not wholly restricted cash.
H126 monetary less CCE	179,176,034.34	Balance-sheet monetary funds less CF ending cash/cash equivalents. Only FY25/H1 source notes disclose categories; difference is not wholly restricted cash.
9M26 monetary less CCE	247,337,266.96	Balance-sheet monetary funds less CF ending cash/cash equivalents. Only FY25/H1 source notes disclose categories; difference is not wholly restricted cash.

A12_source_semantics · Source accounting and cash boundaries

Scope	Definition
financial scope	All main actuals are consolidated Fenghua group; legal standalone parent statements are not substituted. Parent-attributable NI and NCI are separately reported, not converted mechanically into OP ownership.
reconciliation boundary	Exact Decimal subtraction and statutory source identities only. No selected recurring profit, forecast cost ratio, probability, score or valuation decision is made.
quarterly scope	Q1 source is Jan-Mar, H1 Jan-Jun, Q3 source Jan-Sep. Q2=H1-Q1; Q3=9M-H1. CF ending cash is a stock, so quarter beginning/end cash use endpoint balances rather than subtraction.
R and D	FY25 full incurred R&D equals expensed R&D and overview explicitly reports zero capitalization. H1 note143 full incurred equals expense with capitalized line a dash; arithmetic zero is derived, not a separately printed numeric zero. Q1/9M report R&D expense only; full incurred/current capitalization is not independently disclosed there.
ordinary SBC	FY25 physical48 and H1 physical27 explicitly state no equity incentive, employee stock ownership or other employee incentive plans/implementation during the report period. No independently disclosed monetary ordinary SBC expense or functional allocation was found. The shares-based-payment wording at FY25 p220/H1 p179 is a generic nonrecurring-item template, not an SBC note or evidence of a zero monetary charge. Q3 has no separate plan-status note.
pension	Defined-contribution pension/unemployment/enterprise annuity and ordinary payroll are real reported employment costs. They are not equity SBC; expense additions, accounting reductions and cash paid employees have different scopes.
cash scope	FY25/H1 monetary-vs-CCE differences include frozen litigation funds, accrued deposit interest and >3-month deposits; H1 also transit funds. Only litigation funds are explicitly identified here as use-restricted. Sep difference247337266.96CNY lacks the note breakdown; do not classify all as restricted or assume June categories unchanged.
cash note comparative warning	H1 p141 non-CCE table says current/prior period amounts and gives prior58498528.91, not Jan1/FY25-end222334191.53. Use FY25 p180 for Dec31 source breakdown; H1 p125 opening restricted67110672.75 is consistent with FY25. Do not overwrite Dec31 with prior-H1 comparatives.
capex	CF capex combines PPE/intangibles/other long assets. Separate investment payments and >3-month time deposits are not factory capex. Payments, capital AP, CIP transfer and depreciation have different timing; quarter DA cannot be solved uniquely from book balances plus cash capex.
AP	FY25/H1 AP notes split goods/equipment/construction/other; total AP contains capital obligations. Sep total AP has no exact split. Do not use all total AP as operating trade WC and also ignore equipment/construction obligations.
bills	Retained endorsed bills remain matched assets and other-current liabilities at face. Noncash endorsements are not an unencumbered new financing inflow or free cash. H1 face241468703.41CNY differs from net asset after allowance; exact remaining maturities/fees are not disclosed here. Sep otherCL split is missing.
reserves	H1 AR/inventory gross and allowance rolls are disclosed; writeoffs and inventory sold/writeoff are noncash and do not create cash receipts. Sep net balances alone cannot uniquely recover gross stocks, reserve additions, writeoffs or Q3 inventory-only impairment.

Scope	Definition
tax	H1 physical94 says parent applied for 2026 high-tech renewal and temporarily prepays at15% during review, not a confirmed perpetual renewal. Other entities have differing rates. VAT additional credits in other income are not cash tax refunds. CF all taxes is not cash corporate income tax. No exact current quarterly cash CIT disclosed.
financing	Loan carrying values include accrued interest; one-year noncurrent row mixes long-bank debt/interest and lease. No new available committed facilities or exact quarterly maturity dates are established. Lease cash, lease principal roll and total lease-related cash differ; never add all three as separate payments.
dividend and shares	H1 dividend payable114749041.90CNY is an existing June obligation; Q3 financing flow already contains subsequent cash payments. Aug2026 cancellation of9522792 existing treasury shares reduced issued shares1157013211 to1147490419; historical buyback cash150026158.81 was spent by Aug2023, not a new2026 cash outflow. Proposed controller share sales are existing-share transfers, not issuer financing.
family disclosure	FY25/H1 product disclosure is components+materials versus otherbusiness, plus geography/sales channel. No reported MLCC/resistor/high-end revenue/COGS/GM split was found. Native/proposed family shares are model proxies, not source actuals. Otherbusiness has very high reported aggregate GM but detailed composition is not disclosed here; do not relabel it entirely as a growth product family.
native convention	Preserved native source uses1.1B constant diluted-share proxy,20x operating profit, OP CNYB/sharesB and rounding, protectedExcelBase80. Sep actual issued shares1.147490419B differs from the proxy. This inventory is factual and does not authorize a denominator or method change.
availability	Latest actual is the Oct24,2026 official full Q3 report, identical to owner PDF. Historical H1 preliminary is superseded by full H1/Q3 actuals. No call/audio completeness claim is made by this independent financial packet; use industry PRIMARY_SOURCE_HANDOFF_R1 for written IR selection/completeness.

A14_gaps · Unresolved source gaps and economic boundaries

Gap	Treatment
Product revenue, grade margin, ASP, yield and physical resource detail	Q3 calibration and future family/grade assumptions are LOW. Q1/Q2 remain aggregate. Customer certification is not a complete purchase award.
Q3 D&A, functional split, R&D capitalization, ordinary monetary SBC	Use labelled H1 rate proxies; retain full reported P&L expense and additional cash compensation reserve.
September restrictions, capital/trade AP, retained bills, debt maturity dates	Keep explicit source-to-proxy bridges, bounds and failed funding diagnostics. No free bank/equity line.
New programme budget, remaining unpaid costs and commercial dates	Resistor/inductor assumptions are funded and staged; no issuer commissioning-date claim. Small inductor remains active.
Original broker/channel reports and exact named OEM BOM	Unrecovered originals are low-provenance alerts; source overlap is not an extra confirmation.
Complete audio and newer quarterly call	35 written Q&As read; September replay recovered but not reviewed; May replay URL empty; provider search yielded zero.
Current ownership / holdings	Unverified; blank portfolio allocation does not establish a position.
Applications in native desktop Excel	No native-Office claim is made by this report. The linked financial model preserves the selected DAG.

The report’s charts and tables are derived only from the selected model, the ordered opportunity ledger and exact source actuals. Figures preserve original pixels and have adjacent English readings, dates, source URLs and scope labels. The companion model provides all 43,910 graph nodes and 611 inputs. Formula tables provide the reproducing laws; the full DAG remains the exact computational reference.
