NAURA: qualified equipment growth with a paid engineering bill

NAURA can capture a larger share of China's semiconductor equipment purchases as customers expand memory, AI logic and advanced packaging. Its advantage comes from installed process qualifications, local engineering support and a broad equipment portfolio. More accepted process steps can increase receipts even when a customer's equipment budget grows more slowly.

The alpha depends on converting that opportunity into repeat production acceptance while paying for manufacturing, service crews, research and working capital. High sales growth alone does not settle the investment case: H1 margins weakened, capitalized development is large, and the published option-cost schedule is material. Credible competitors and controlled-subsystem sourcing limit any monopoly claim.

All forward figures are conditional analyst estimates in CNY billions unless shown otherwise. Platform, competition and the route to excess returns

Etch removes material to create device structures; deposition builds films; thermal, wet-clean, implant and track tools support neighboring steps. Process windows, uptime, local service response and repeated customer qualification create switching costs. Components and non-IC vacuum products remain separate businesses. Engineering breadth offers procurement options; it does not make every NAURA tool mandatory.

T002 | Distinct receipt wallets

Wallet	Economic role	Principal constraint
Etch	Qualified removal steps in logic, memory and specialty devices	Acceptance, performance, controlled subsystems and competing tools
Deposition	PVD / CVD / ALD / EPI films inside one pool	Film quality, repeatability, chamber qualification and price
Other process / non-IC	Thermal, clean, implant, track and bonding; non-IC carve	Different adoption stages and non-IC demand
Components	Disclosed precision electronic components	Independent customers, mix and paid costs
External other	Residual external revenue	Small disclosed pool; no invented service annuity

ALD is inside deposition. HBM, TSV and Chiplet are applications across existing wallets, not separate pools added on top. Kingsemi is already consolidated despite a small direct economic stake. Hybrid-bonding receipts are carved inside other process. No second service annuity is added above the calibrated revenue pool.

The cycle is an established domestic equipment and memory-investment expansion, with a newer pipeline still in qualification. Near-term core tools are being manufactured and deployed; new programs are in adoption and qualification; mature cash harvesting remains conditional on repeat orders, useful lives and cash conversion. These three-phase labels describe evidence and timing; they do not add another probability factor.

China equipment demand: one regional spine, several cross-checks

The regional China WFE series in the current framework is the shared demand spine, attributed to Morgan Stanley (July 2026), using Gartner, SEMI and company data. Planning FX is 7.1 CNY/USD. Values for 2029-30 extrapolate by 5% annually and are analyst assumptions. The newest global 300mm forecast, regional all-equipment billings and customer capex reports are scope checks, not additive revenue pools.

Semiconductor receipts start with China WFE multiplied by a 62% eligible process wallet, domestic penetration, NAURA qualified share and recognition. Every company capture factor is a LOW analyst proxy. A fitted bridge is not measured market share. Successful paid programs provide a bounded incremental share, capped at 3 percentage points. Etch/deposition/other process split the semiconductor pool 31%/44%/25%. Non-IC equipment is carved at 5% of reported equipment; 3-8% is a scope uncertainty, not a measured composition.

The October 13 SEMI outlook gives global 300mm front-end equipment spending of USD149B in 2026 and USD227B in 2029. It does not publish the matching future China annual series or a 2030 endpoint. Regional actuals report China all-equipment billings of USD10.99B in Q1 and USD11.91B in Q2, totaling USD22.90B in H1. Construction is separate from equipment. Annualizing billings does not create a selected WFE forecast.

The following statements are forward looking statements based on current expectations and involved risks and uncertainties.

First Quarter 2026 Guidance

The Company expects (in accordance with IFRSs):

- Revenue to be flat.
- Gross margin to range from 18% to 20%.

The Management Comments

In the fourth quarter, the Company's revenue was 2,489 million, a sequential increase of 4.5%. Gross margin was 19.2% and the capacity utilization rate remained at 95.7%.

In 2025, the reshuffling effects driven by the shift toward localization of the semiconductor industry chain continued throughout the whole year. According to the unaudited financial results, the Company's revenue in 2025 increased by 16.2% year-over-year to $9,327 million, and gross margin increased by 3.0 percentage points to 21.0%. The Company's capital expenditure in 2025 was $8.1 billion. Monthly capacity was 1,059 thousand standard logic 8-inch equivalent wafers by the end of the year, increased by around 111 thousand wafers compared to the end of previous year. Total shipment reached around 9.7 million wafers, and annualized capacity utilization rate increased by 8 percentage points year-over-year to 93.5%.

Looking ahead to 2026, for SMIC, the Company will face both opportunities from the industrial chain reshoring from overseas and challenges brought by the memory cycle. Combining the above factors, the Company's first quarter guidance is as follows: Revenue is expected to be flat sequentially, and the gross margin is expected to be in the range of 18% to 20%. Based on the premise that there are no significant changes in the external environment, the Company's guidance for the year 2026 are: The revenue growth is expected to be higher than industry average in the same markets, and the capital expenditure is expected to be roughly flat compared to that of 2025.

H1 revenue grew 24.90%, while parent net income grew 5.05%. Gross margin fell from 42.17% to 40.07% as component iteration during customer validation and large-customer concessions raised growth costs. Sales and service staffing plus Kingsemi consolidation lifted selling expense; engineering stayed high. Chinese reported operating profit includes finance, grants, investments and impairment items, so it is not interchangeable with the core revenue-to-cost bridge.

H1 revenue less COGS, business sales taxes, selling expense, G&A and expensed R&D equals CNY3.146754B before finance, grants and investment items. Chinese reported OP is CNY3.489217B. Consolidated net income is CNY3.228548B; negative NCI of CNY0.141473B makes parent-attributable net income higher at CNY3.370021B. Parent-only legal-entity OP and parent net income do not replace the sanctioned group OP basis. Ordinary credit loss is charged, grant/investment income is excluded from the 20x ceiling, and native outside-owner deductions remain.

（1）2026 年 1-6 月公司营业收入 201.61 亿元，同比增长 24.90%，主要原因为：公司集成电路装备领域刻蚀、薄膜沉积、热处理、湿法清洗、离子注入、涂胶显影、键合等多款设备市占率稳步提升，工艺覆盖度及市场占有率增长，营业收入同比增加。

（2）2026 年 1-6 月归属于上市公司股东的净利润 33.70 亿元，同比增长 5.05%，主要原因为：

①公司积极布局多款高端半导体设备研发，持续加大研发投入。2026 年 1-6 月计入损益的研发费用为 26.77 亿元，相较于 2025 年 1-6 月增加 6.00 亿元，同比增长 28.87%。

②公司为应对市场规模扩大，市场拓展及客户服务团队人员数量增加，以及芯源微销售费用并表，2026 年 1-6 月销售费用同比增加 2.95 亿元，同比增长 63.46%。

③ 2026 年 1-6 月公司毛利率由 42.17%下降到 40.07%，主要原因为：公司新产品在客户端验证过程中，零部件迭代升级成本增加较多，以及公司为部分大批量采购客户提供了一定的商务优惠。

（3）2026 年 1-6 月公司经营活动产生的现金流量净额 37.74 亿元，同比增长 218.25%，主要原因为：公司营业收入增加，销售商品收到的货款增加。

Twelve joint outcomes and one numerical probability bridge

Demand probabilities are 30% strong, 50% central and 20% weak. Timely qualification is conditional on demand at 65%, 65% and 35%, giving a 59% marginal timely probability. The approved signed acquisition closes with 90% probability and fails with 10%. Each of twelve joint branches calculates complete financial outcomes before weighting. Industry evidence supports opportunity; engineering lead times prevent instant sales from the whole newest pipeline.

Weak	Delayed	Fails	1.300%	197.654288	3.324514

Joint weight is demand probability x conditional qualification probability x acquisition probability. It is used once. Score, source confidence and phase lens do not reweight the completed ceiling. All main paths fund selected resources without new equity, debt or option proceeds.

T012 | Sequential nonoverlapping contribution bridge

Stage	Forward OP, B	Incremental OP, B	Ceiling, CNY	2027 revenue, B
central delayed no acquisition reference	13.048209	0.000000	355.263403	62.179625

conditional acquisition close	15.361159	-0.046332	418.238049	65.974803

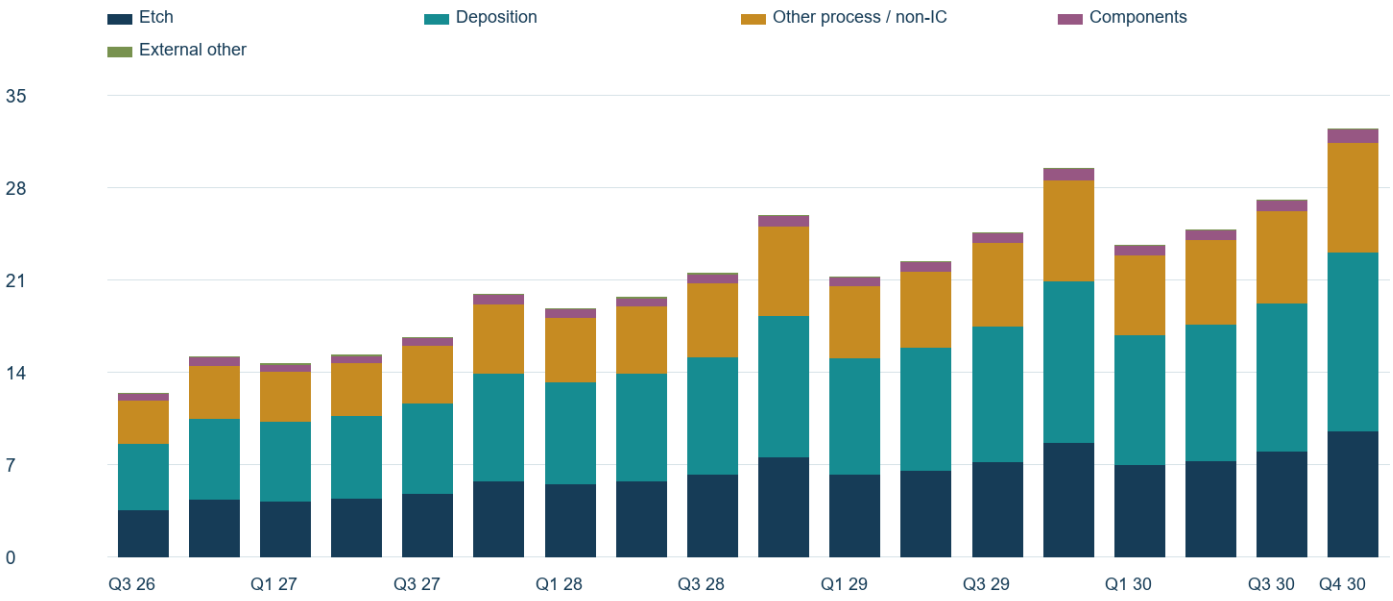

The sequence is central/delayed/no acquisition, then demand mixture, then conditional timed qualification, then acquisition. In that fixed order the increments add to the final outcome. They are not independent marginal effects to be added again. Modest acquisition sales are slightly dilutive near term after paid integration and PPA costs; technical promise does not guarantee immediate accretion.

Receipts, paid production and dedicated field crews

Semiconductor eligible receipts equal China WFE x FX x process wallet x domestic penetration x qualified company share x recognition x seasonal allocation. Components and external other follow separate inputs. The non-IC carve is removed before the semiconductor production guard. Recognition already includes timing; unserved opportunity is not firm backlog and is not carried automatically into a later annual market wallet.

Opening production and service planning guards are CNY22B of semiconductor receipts per quarter. These are LOW revenue-equivalent adequacy assumptions consistent with qualitative spare capacity, not reported tool counts, ASPs or physical capacity. Only funded growth PPE adds production capability after readiness, with 90% allocated to fab equipment. Dedicated crews are paid inside SG&A and qualify after one quarter. Wage inflation raises cost; general selling expense and delay penalties do not create extra crew units.

Five nonoverlapping recognized receipt wallets

CNY billions | Model estimates; no stock-price history

Probability-weighted receipts. Five company wallets sum to group revenue; future allocations are analyst proxies.

Timely learning is bounded to 120 basis points; delayed sourcing adds 200 basis points to semiconductor variable costs. Materials, assembly/test, factory resources, engineering, selling/administration, credit loss and business taxes are paid separately. Warranty work is embedded in these resources; a liability stock is not charged anew every quarter. The guards are stressed at 75%/125%, and an unlimited-capacity diagnostic shows whether the selected constraint actually binds.

市场全面接轨的薪酬激励、人才选聘与决策运行体系。这种“国有背景+市场化机制”的独特体制，既保障了长期主义的研发投入与战略布局，又充分激发了组织与人才的创新活力，与半导体装备行业“重投入、长周期、强人才依赖”的属性高度适配，构成了公司可持续发展的制度保障。

2．全工艺链条的平台化布局与协同能力

平台化是公司的核心特征，也是区别于单一品类设备厂商的壁垒。公司构建了覆盖刻蚀、薄膜沉积、热处理、湿法清洗、离子注入、涂胶显影、键合等核心工序的半导体装备全品类矩阵，可提供集成电路前道多工序成套解决方案。

这种平台化布局具备三重价值：一是客户端价值，一站式满足客户多工序装备采购需求，降低多供应商管理成本，通过工序间工艺协同助力客户提升良率与调试效率，显著增强客户粘性；二是技术端协同，高压真空、等离子体控制、精密温控等底层技术跨品类复用，大幅提升新产品研发效率，支撑公司快速切入面板级封装、第三代半导体等新兴赛道；三是抗周期能力，多赛道、多应用领域的布局可对冲单一行业的周期波动，如报告期内面板级封装装备、半导体材料装备的拓展，持续对冲光伏行业调整的影响。报告期内，公司深化与芯源微、国泰真空的业务整合，平台化布局的完整性与协同效应持续增强。

3．体系化研发与快速产业化能力

半导体装备的竞争本质是技术迭代速度与产业化能力的竞争。公司建立了从基础技术研究、产品开发到客户工艺验证的全链条研发体系，持续高强度的研发投入与高效的成果转化能力，支撑公司产品矩阵持续拓展、技术水平稳步向国际先进水平迈进。

报告期内，公司持续加大研发投入，知识产权布局不断完善，专利数量与质量位居国内半导体装备行业前列。技术成果产业化节奏持续加快：刻蚀、PVD、立式炉等主力设备技术持续迭代，已实现千台级量产应用；新一代 CCP 刻蚀设备、高端 TSV 电镀设备、混合键合设备、碳化硅离子注入设备等高端产品相继突破并落地客户验证，快速填补国内空白。相较于单点技术突破，公司的研发优势更体现为体系化的持续输出能力，可支撑多品类、多技术路线并行攻坚，是平台化战略落地的核心支撑。

4．区位赋能的人才梯队与产业生态协同

半导体装备是典型的跨学科人才密集型产业，人才供给与产业生态是行业发展的基础。公司地处北京，区域内集聚了国内顶尖高等院校与国家级科研院所，高端人才储备与基础科研资源丰厚，为公司持续引进半导体工艺、机械设计、精密控制、软件算法、等离子体物理等跨学科高端人才提供了得天独厚的区位条件，也为深度开展产学研协同创新、攻坚基础核心技术奠定了坚实基础。

公司坐落于北京经济技术开发区，区域内汇聚了集成电路制造、新型显示、高端汽车电子等领域的头部企业与核心供应链资源，形成了上下游联动的完整产业集聚生态。依托产业集群优势，公司可就近开展客户协同研发、工艺验证与快速响应服务，同时联动上下游伙伴推进核心零部件国产化与工艺协同优化，产业集聚的协同效应持续释放。

在内生人才建设方面，公司构建了规模领先、结构完备的研发与工程技术团队，建立了技术、管理、智能制造等多通道职业发展体系，配套多层次激励机制，充分激发人才创新活力，形成了“外部区位引才、内部培养留才、产业生态聚才”的良性人才生态，为技术持续突破与业务规模扩张提供动能。

5．规模化制造与交付保障能力

半导体装备行业中，样机研发与规模化稳定交付之间存在显著壁垒，千台级的量产交付经验是设备企业综合实力的核心体现。公司构建了覆盖供应链管控、精密制造、整机调试、出厂验证的全流程量产体系，设备的一致性、稳定性与可靠性得到大规模量产验证。

截至报告期末，公司刻蚀、物理气相沉积、立式炉三类设备累计交付数千台，标志着公司在产品设计、供应链管理、生产制造、质量控制等环节已形成成熟的规模化能力，可快速响应客户集中扩产需求。在国产替代加速的行业窗口期，规模化交付能力是抢占市场份额的关键要素，公司凭借成熟的量产体系与交付保障能力，可快速将技术优势转化为市场优势，支撑业务规模持续扩张。

6．全生命周期服务与全流程质量管控体系

在等待期内每个资产负债表日，本公司根据最新取得的可行权职工人数变动等后续信息做出最佳估计，修正预计可行权的权益工具数量。上述估计的影响计入当期相关成本或费用，并相应调整资本公积。

（2）实施、修改、终止股份支付计划的相关会计处理

本公司对股份支付计划进行修改时，若修改增加了所授予权益工具的公允价值，按照权益工具公允价值的增加相应地确认取得服务的增加；若修改增加了所授予权益工具的数量，则将增加的权益工具的公允价值相应地确认为取得服务的增加。权益工具公允价值的增加是指修改前后的权益工具在修改日的公允价值之间的差额。若修改减少了股份支付公允价值总额或采用了其他不利于职工的方式修改股份支付计划的条款和条件，则仍继续对取得的服务进行会计处理，视同该变更从未发生，除非本公司取消了部分或全部已授予的权益工具。

在等待期内，如果取消了授予的权益工具，本公司对取消所授予的权益性工具作为加速行权处理，将剩余等待期内应确认的金额立即计入当期损益，同时确认资本公积。职工或其他方能够选择满足非可行权条件但在等待期内未满足的，本公司将其作为授予权益工具的取消处理。

36、优先股、永续债等其他金融工具

37、收入

本公司在履行了合同中的履约义务，即在客户取得相关商品或服务控制权时，按照分摊至该项履约义务的交易价格确认收入。取得相关商品控制权，是指能够主导该商品的使用并从中获得几乎全部的经济利益。履约义务是指合同中本公司向客户转让可明确区分商品的承诺。交易价格是指本公司因向客户转让商品而预期有权收取的对价金额，不包括代第三方收取的款项以及本公司预期将退还给客户的款项。

履约义务是在某一时段内履行、还是在某一时点履行，取决于合同条款及相关法律规定。如果履约义务是在某一时段内履行的，则本公司按照履约进度确认收入。否则，本公司于客户取得相关资产控制权的某一时点确认收入。

本公司根据在向客户转让商品或服务前是否拥有对该商品或服务的控制权，来判断本公司从事交易时的身份是主要责任人还是代理人。在向客户转让商品或服务前能够控制该商品或服务的，本公司为主要责任人，按照已收或应收对价总额确认收入；否则，本公司为代理人，按照预期有权收取的佣金或手续费的金额确认收入，该金额按照已收或应收对价总额扣除应支付给其他相关方的价款后的净额，或者按照既定的佣金金额或比例等确定。

本公司按照业务类型确定的收入确认具体原则和计量方法：

（1）商品销售收入

本公司销售商品的业务通常仅包括转让商品的履约义务，根据不同的产品类型及合同安排，于控制权转移至客户，风险报酬转移时，视不同的产品类型及合同安排根据签收单或验收单等资料确认收入。

（2）提供劳务收入

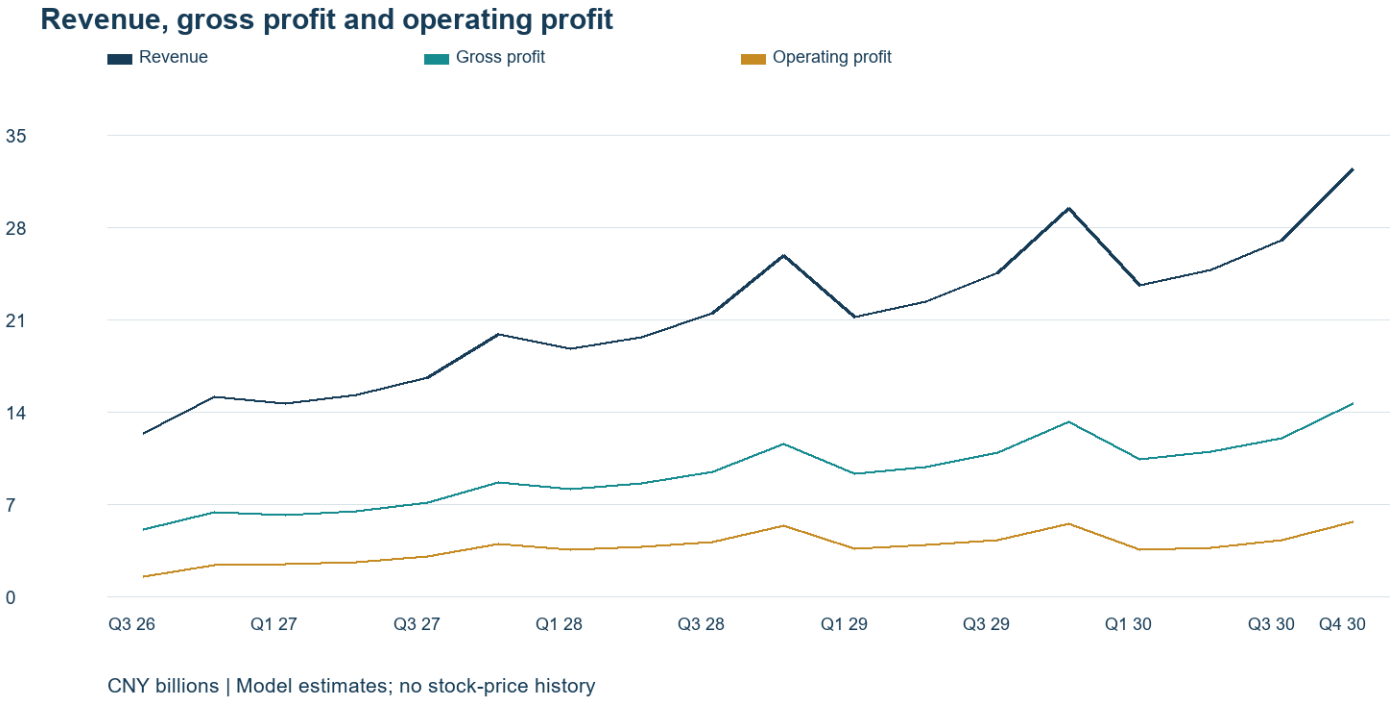

本公司向客户提供技术服务，如果本公司履约的同时客户即取得并消耗本公司履约所带来的经济利益，或者客户能够控制本公司履约过程中研发出的设备，根据履约进度在一段时间内确认收入，履约进度的确定方法为投入法，具体根据累计已发生的成本占总成本的比例确定；当履约进度不能合理确定时，本公司已经发生的成本预计能够得到补偿的，按照已经发生的成本金额确认收入，直到履约进度能够合理确定为止。

（3）使用费收入

根据有关合同或协议，按履约期间分期确认收入。

Vector COGS equals variable production costs plus proportional allocation of common factory cash and ordinary manufacturing D&A. Vector GP is recognized receipts less COGS. The five vectors reconcile to group totals. Development amortization is in R&D, not manufacturing COGS. Group OP equals GP less R&D, SG&A, business taxes, ordinary credit loss and asset impairment.

Research, stock compensation and finite asset economics

H1 note 8 states CNY4.106470B total R&D: CNY2.677199B expensed and CNY1.429271B capitalized accrual. MD&A instead labels CNY3.705627B as investment. The CNY0.400843B difference remains unresolved. Capitalized accrual is not a cash-flow certificate. Historical CFO stays reported; future development cash is paid once outside synthetic CFO before that investment.

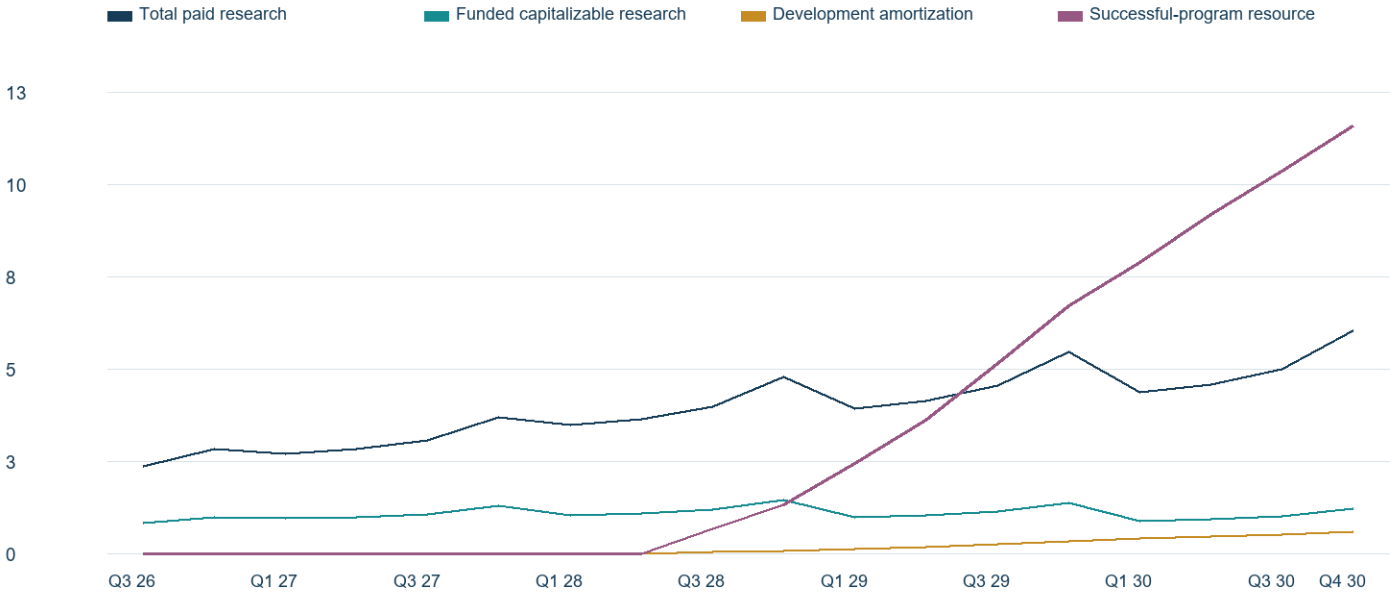

Opening pending development is CNY8.089399B. Timely opening cohorts start readiness in Q3 2028 and spread over six quarters; delayed readiness is four quarters later. New funded development readies after ten quarters, or fourteen when delayed. Timely/delayed project failure is 15%/30%, with successful costs amortized over five years. These are finite-life analyst proxies, not issuer project schedules. Accounting readiness, cash payment and economic capability are distinct.

Opening PPE, ROU, prepaids and six intangible categories charge their observed anchors until finite stock is exhausted. New PPE/software have finite lives; goodwill is not amortized. Opening CIP was already paid, so readiness creates no second purchase. Successful-program economic resources have their own five-year horizon. Successful-program economic resources are separate from accounting book.

Research cash is the higher of the inflation-adjusted existing anchor and 19% of eligible planned revenue. Expensed research stays committed. Protected capital-project resources remain paid; only additional uncommissioned optional projects may be deferred under a cash squeeze. Unfunded cohorts create no capability. Immediately expensing new development retains paid knowledge while removing accounting capitalization and later amortization.

The January issuer estimate for the 2025 option plan is CNY0.8906506B expense in each of 2026/27, then CNY0.5436439B / 0.3123061B / 0.1388027B in 2028-30. H1 SBC of CNY0.009914838B remains actual; the unexplained gap is not silently corrected. Forecast expense prudentially uses the published conditional schedule, with 2026 remaining expense after H1, all expensed and added back once in cash. No option proceeds fund the model; 50%/150% cost cases are separate sensitivities.

Working capital, economic cash and financing availability

Opening observed June cash equivalents are CNY18.944860B, excluding guarantee cash. This is not a certificate of October unrestricted parent cash. Availability reserves are CNY1.398095B for designated project use, CNY1B for undisclosed subsidiary distribution limits and CNY0.114001B overseas cash. These are conservative assumptions. The October internal return of CNY1.25B to project accounts is not another cash outflow.

Opening operating NWC is actual AR plus notes, AR financing, contract assets, prepayments and inventory, less AP, notes payable and customer advances. Smoothing puts 25% weight on current revenue/COGS, using actual opening coverage. No immediate release of CNY30.505709B inventory is invented. A separate 60-day inventory stress can expose a funding gap despite unchanged near-window OP.

Synthetic CFO before development investment equals OP plus D&A, SBC and impairment, less interest, tax and incremental NWC. Development investment, software, maintenance/growth PPE, debt and lease principal, dividends and acquisition cash are then paid once. Commissioned future development commitments are reserved. No new debt, refinancing, grants, option proceeds or external equity rescue a branch. Interest and tax constrain cash but do not replace OP in valuation.

The selected 12% cash-tax rate is a LOW aggregate proxy, not a legal conclusion that book SBC is immediately deductible for cash tax. A separate 15% full-cash-tax sensitivity leaves the Q4 2027 ceiling unchanged at CNY418.238049, with minimum available cash of CNY2B after the funding response and no floor shortfall. The modeled cumulative 12% cash benefit of all SBC is bounded at CNY0.331937B, smaller than the existing additional CNY1B availability-buffer stress; the buffer is not a statement about exact tax timing.

Main branches fund selected resources. Positive stress shortfalls remain unfunded sensitivities, not implemented targets.

Hybrid bonding: a conditional business within the existing wallet

The agreement buys 100% of Nuohé Jianwei for CNY0.4045607B cash. Ninety-five percent follows satisfied/waived closing conditions; 5% follows closing audit. Closing/payment are unverified. The model places payments in Q4 2026 / Q1 2027 conditional on close, with 90% probability. The seller fund LP stake creates no assumed immediate rebate; target cash is not credited.

The target reports a dash for H1 revenue and a CNY9.4203M OP loss, alongside repeat-order and customer-validation commentary. Modest conditional receipts sit inside other process, not above it. Failure removes only that carve. Hypothetical PPA of CNY0.04B PPE, CNY0.03B NWC, CNY0.25B technology and CNY0.0845607B goodwill sums to price; it is not reported accounting. Technology lives of three/seven years test the selected five-year proxy. Integration engineering and 55% variable cost remain paid.

Shares, outside-owner deductions and legal cash stresses

Native shares remain 730M x 1.005^(t/4), using the starting quarter of each window. This is an allowance, not a complete diluted-award registry. The October 23 PRC-dated notice, observable October 22 Toronto evening, gives 727.953799M legal shares. The first 2024-plan tranche is 2.952170M potential shares at CNY139.63, not issued shares. The July 2022 tranche and intervening exercises overlap current shares; the complete remaining-award registry is unavailable.

The 2025-plan grant of 10.403050M starts vesting after 24 months in four conditional 25% tranches. Secondary-market employee-plan purchases do not automatically create shares. Listed-bucket stress assumes immediate full settlement without exercise cash. It is a bound with overlap/eligibility limitations, not a Q4 2027 issuance forecast. Other omitted awards may exist.

Native outside-owner OP deductions are zero through 2028, CNY0.025B quarterly in 2029 and CNY0.04B in 2030. They are attribution proxies, not debt principal or a measured entity-profit forecast. Negative historical NCI is not capitalized as a benefit. Larger deductions and reduced legal cash availability are separate stresses.

4.000000	418.238049	1.517894	0.482106

A positive shortfall means the financing or reserve policy is unfunded under unchanged assumptions. The mechanical ceiling is before unspecified financing, not a funded target. Zero shortfall does not prove subsidiary cash can legally be distributed on demand.

Eighteen diagnostics: earnings and cash answer different questions

These are one-change diagnostics, not new probability selections. Delayed readiness can reduce near-window amortization while harming later receipts. Immediate expensing alters book earnings and tax while retaining paid knowledge. Higher OP valuation alone does not establish better funded economics. Read each result with cash, investment deferral and unserved opportunity.

Revenue grows through the horizon while finite charges and paid engineering constrain conversion. Annual totals sum quarterly outcomes. Later ceilings can flatten as the earnings window, finite charges, outside-owner deduction and growing share denominator roll forward.

Score, five risks and evidence that changes the case

T068 | Analytical scorecard | independent of price and target

Factor	Points	Scale	Reason
Core Thesis	14.000000	20.000000	Broad installed qualified process portfolio; competitors and controlled-subsystem sourcing mean no mandatory monopoly.
Cycle Stage	8.000000	10.000000	Domestic tool substitution and memory expansion established; newest research needs2-3years and mature/power is slower.
TAM Expansion	9.000000	10.000000	Regional WFE expansion and more qualified steps; process wallet, share and acceptance cap capture; no all-capex conversion.
Catalysts	4.000000	5.000000	2027 fab procurement/acceptance, qualification, bonding close/integration and funded engineering; Q3calendar tentative.
Macro	9.000000	10.000000	AI memory/logic and localization demand; export constraints simultaneously raise sourcing cost/timing risk.
Alpha	3.000000	5.000000	Local language product acceptance plus finite development/cash/SBC reconciliation; widely known localization limits information edge.
Risks	-5.000000	Penalty	Five classes scored one each: sourcing/export, demand/acceptance, competition/pricing, R&D/acquisition execution, capitalized development/cash/claims.

Core14 + cycle8 + TAM9 + catalysts4 + macro9 + alpha3 - risks5 = 42/60, or 70%, a beneficiary and analytical Watchlist. Installed qualification and breadth create value, while alternatives, engineering and finite capitalized programs constrain the monopoly score. Widely discussed localization limits information edge. Preserved Excel Base73 is separate.

T069 | Five risk classes, one point each

Class	Failure mechanism	Counterevidence / monitoring
Sourcing / export	Controlled subsystems delay qualified deliveries	Verified alternatives, repeat acceptance and reliability
Investment / acceptance	Customer profit does not become orders or sales on time	Equipment budgets, purchases, acceptance and collections
Competition / pricing	Alternatives or concessions impair gross conversion	Repeat wins, cost learning and margin after support cost
Research / acquisition	Late readiness, failed programs and integration losses	Program readiness, repeat production orders and finite returns
Capitalization / cash / claims	Accruals, unavailable cash or dilution exceed conversion	Cash classification, funded resources, award and legal cash reconciliation

T070 | Catalysts and counters

Window	Evidence that matters	Counter
Next results	Receipts, gross conversion, R&D and collections; date tentative	Another qualitative statement without financial conversion
2027 procurement	Repeat qualified orders and paid delivery resources	Weaker spending or delayed acceptance
2028 pipeline	Pending programs enter successful use	Readiness misses, failure or impairment above assumptions
Bonding close	Verified payments, PPA, receipts and paid costs	Slips, weak revenue or cost above model
Every cash review	Inventory, receivables, reserves and award coverage	Availability loss, funding gap or cumulative dilution

Monitor AMEC in etch and deposition, Piotech in deposition, and Hwatsing and ACMR in adjacent and overlapping qualified process wallets. Customer qualification, repeat acceptance, local support and realized pricing determine where NAURA captures spending; a broad portfolio does not eliminate alternatives. At CXMT and SMIC, watch approved equipment budgets, purchases, installation, acceptance and collections as separate milestones. Memory profit supports financing capacity but is not a NAURA order. Networking and power-system expenditure does not automatically enter domestic WFE. These are company-specific monitoring comparisons, not new forecasts for those companies or additional revenue pools. Localization and controlled sourcing can lift capture while raising cost and delay risk; both effects sit in the same scenarios.

Assumption register and finite equations

Capture, guards, resource splits, readiness, life, failure, financing reserves and future cash assumptions are analyst inputs unless identified as actual or a dated issuer estimate. LOW detail is retained as bounded outcomes, not precise company guidance. Company assumptions do not replace the shared regional framework.

Finite cohort equation: opening book plus funded additions or noncash transfers, less min(remaining book, selected ready-quarter charge), less failure impairment, equals closing book. Unfinished development is not amortized. Economic successful-program resources equal successful initial paid resources within their own selected useful horizon; accounting amortization does not erase this resource. Readiness never repurchases original spending.

Production guard = opening adequacy guard + funded ready growth PPE x fab allocation x capability conversion + ready CIP contribution. Service guard = opening guard + qualified constant-wage crew resources above the opening level x service conversion. Receipt factor is min(1, production coverage, service coverage) on semiconductor tools. Other businesses retain separate paid costs. NWC smooths current revenue/COGS at 25% weight. Availability deducts legal/purpose reserves and commissioned unpaid commitments. Optional uncommissioned resources may be reduced; failure to fund protected work remains a gap.

Source register, confidence and unresolved evidence

Issuer CNINFO/SZSE filings and published local-language management records lead the evidence hierarchy. Product materials establish coverage; customer disclosures establish their own spending scope. Broker summaries and precise market-share rumors do not replace primary evidence. Original financial exhibits are inside this private research artifact, separate from visitor-facing bulletin copy.

Customer category shares and absolute tool capacity are unreported. The regional WFE table is a research spine, not a new issuer budget. H1 development cash classification and the R&D presentation difference remain unresolved. Conditional probabilities do not erase these gaps.
