Company deep dive

Jianghai Capacitor: demand needs paid and qualified capacity

002484.SZ | Research date: 22 October 2026 UTC | Framework 8.0 | CNY millions unless specified. Main money and percentages are rounded; technical tables retain six decimals and original exhibits retain source precision.

Jianghai sells aluminium electrolytic, film and supercapacitors, supported by integrated formed-foil operations. Server-power orders and new applications are real opportunities. Accepted physical deliveries, manufacturing input costs, qualification and paid plant capacity determine the profit captured.

The Q4 2027 rolling operating-profit value is CNY 22 per ordinary share, covering Q4 2027 through Q3 2028. The method remains 20x current-quarter-plus-next-three claim-adjusted operating profit. This is a research estimate, with no fresh market-price return asserted.

Current measure	Basis
Q4 2027 forward four-quarter OP	935
Ordinary-share proxy	850,523,941 shares
Native claim adjustment	CNY 500,000 per quarter
Analytical score	41/60; displayed 68% | Watchlist
Protected Excel Base	70%
Latest actual	Q3 ended 30 September 2026; issuer-dated 23 October
Cash qualification	Active positive-weight states are funded only under the selected paid-capacity and stress-stop rules.

The prolonged materials/qualification stress state stops the new site after its initial spending in this model. This is a capital-discipline assumption, not news that the company cancelled its project. Retained full-build and collection/input-price stresses still show funding failures. Consolidated quarter-end cash does not prove unrestricted parent or intraperiod liquidity.

Markets, competition and one company receipt boundary

Market group	Evidence and opportunity	Capture boundary
Established applications	Industrial power, energy, automotive and existing capacitor customers support the current product base.	Five real product families; externally sold foil is separate from eliminated internal supply.
Adjacent applications	Server power, UPS, grid storage and higher-voltage film applications need qualified production and support.	Accepted deliveries stay inside the same demand envelope and paid manufacturing capacity.
Emerging applications	MLPC, new supercapacitor formats and evolving data-center power architectures offer design opportunities.	Samples, qualification and supplier equipment capability are not measured accepted SKU capacity or separate AI orders.

Materials integration, product breadth and customer qualification support competitiveness. Other capacitor technologies, storage solutions, price competition and customer certification constrain capture. The model assigns no industry-wide AI capex wallet or monopoly share.

Model assumptions and derivation

Source dates and completeness

The newest unaudited Q3 filing is issuer-dated 23 October 2026. It was retrieved on 22 October at 18:43:58 UTC, already 23 October at 02:43:58 in Shanghai. The filing is available evidence rather than a hypothetical future release. All twelve pages were read.

The exact Q3 source-derived calibration, in CNY millions, is revenue 1769.37521972, gross profit 466.17527194 and group recurring pre-financing OP 276.73318845. The model's native claim-adjusted OP is 276.23318845 after its CNY 0.5 million proxy; that adjusted figure is not reported parent OP. Reported parent net income is 240.90306345 and statutory Chinese OP is 278.94332471. Signed credit and asset impairment charges remain expenses.

The latest two located issuer written IR records are dated 26 May and 29 April. All five supplied Q&A in the two-page May record and all three supplied Q&A in the three-page April record were read. They are company-written records, not independently verified verbatim audio earnings calls. Spoken opening, closing and complete audio Q&A were not verified. H1 management discussion, June risk notices and Q3 actuals provide later supplementary evidence.

No official group Q4 or FY2027 revenue/OP guide or Q3 product split was supplied. April's specific server/application ambition above CNY 150 million is distinct from total supercapacitor or group sales. Q1 AI-server supercapacitor sales of approximately CNY 12 million sit inside approximately CNY 106 million of supercapacitor sales. Q1 MLPC sales of approximately CNY 22 million also sit inside existing product revenue. June's notice says the company has no MLCC business or production plan. No fresh market quote was verified, so no price-dependent investment return is asserted.

Original primary source

Second latest written management record: opportunity and qualification

All three supplied questions and answers over three pages were read. The relevant-application sales ambition is distinct from total supercapacitor or group revenue. No complete spoken call is claimed.

	中心的应用走在行业前列。 2. 薄膜电容营业收入5.75亿元，同比增长33.9%，在新能源、电动汽车等应用领域取得积极进展，特别是三相交流薄膜电容实现技术突破。 3. 超级电容营业收入3.52亿元，同比增长52.51%，在电网调频、汽车电子应用领域快速发展，在服务器电源等新应用场景诸多规格产品获广泛试验认证。 2026年开局良好，各业务板块需求旺、订单多，产能利用率处于较高水平，公司将发挥三大类产品的产业链和协同优势，实现多项新产品系统、新应用突破，特别是服务器电源领域实质性成为公司发展新引擎。一是提升MLPC产品可靠性，实现服务器电源端量能突破；二是牛角铝电解在全球服务器电源应用全面展开，力争取得更大份额。三是薄膜电容器在SST、三相交流等应用规模化销售，逐步在铝电解战略用户取得较为适配的市场份额。 **2、超级电容深度受益于服务器UPS、数据中心供电升级趋势，请问目前超级电容在下游新兴领域订单落地情况以及后续产能扩张规划？** 答：超级电容已深度受益于服务器UPS、数据中心供电升级趋势，无论是EDLC还是LIC都取得全球电源用户的试验、认证和批量试流，2026年已取得千万级营收，在全球同行具有产品品类全、产能、应用成效、成本等诸多优势，力争年营收1.5亿元以上。同时，已着手产线自动化改造、扩产等提高产能和效率的举措，同时推进客户技术合作支持、关键材料供给保障、成本优化等工作。 **3、公司上游原材料价格存在周期波动，同时行业价格竞争有所加剧，请问公司2026年毛利率管控策略是什么？** 答：过去一年，受全球宏观环境波动影响，大宗原材

29 April written management Q&A: server-power opportunity and an ambition for relevant supercapacitor application revenue above CNY 150 million. This is not group guidance. Original source dated 2026-04-29, physical page 2.

Original primary source

A dated AI baseline and its countercase

The issuer reports approximately CNY 12 million of Q1 AI-server supercapacitor applications inside CNY 106 million of supercapacitor sales. MLPC revenue is also inside existing product totals. Qualification, order timing and capacity mismatch remain risks.

2026 年一季度，超级电容业务收入 1.06 亿元，占公司同期营业收入比例为 7.66%，其中在 AI 服务器电源端的应用约为 1200 万元。

2025 年度、2026 年一季度，固态高分子叠层电容器（MLPC）收入分别约为 5200 万元、2200 万元，占公司同期营业收入比例分别为 0.95%、1.59%（2026 年一季度相关数据未经审计）。

公司目前超级电容器、MLPC 的规模、营收占比及其在 AI 服务器电源上的应用都较小。敬请广大投资者理性投资，注意投资风险。

3、公司产品在下游服务器电源等应用领域景气度易受宏观环境与政策影响，需求存在不及预期的可能，同时行业竞争也可能会加剧、易出现产能与需求不匹配的情况；此外新兴市场客户认证周期较长，现有及新增订单落地进度也存在不确定性。

一、股票交易异常波动的情况

南通江海电容器股份有限公司（以下简称“公司”或“本公司”）股票交易价格连续 3 个交易日（2026 年 6 月 15 日、2026 年 6 月 16 日、2026 年 6 月 17 日）收盘价格涨幅偏离值累计超过 20%，根据《深圳证券交易所交易规则》的有关规定，属于股票交易异常波动的情况。

二、公司关注并核实相关情况

针对公司股票异常波动情况，根据相关规定的要求，公司对有关事项进行了核查，现就相关情况说明如下：

1、公司前期披露的信息不存在需要更正、补充之处；

Issuer risk notice: Q1 supercapacitor sales of approximately CNY 106 million include approximately CNY 12 million of AI-server applications. MLPC sales are approximately CNY 22 million. Printed units are CNY 100 million and CNY 10,000; qualification and order timing remain risks. Original source dated 2026-06-18, physical page 2.

Reported calibration and demanded versus delivered products

The five H1 product revenue and COGS totals reconcile to the issuer's consolidated totals. The forecast allocates Q3-equivalent product anchors using H1 revenue and COGS proportions while matching actual Q3 group totals. Those allocations are neutral forecasting proxies, not reported Q3 product sales or margins. Source product costs already include normal depreciation.

Q4 requested unit indices relative to the Q3-equivalent anchors are 1.04 for aluminium, 1.08 for film, 1.18 for supercapacitors, 1.04 for external formed foil and 1 for other. Normalized ASP is 1. The existing 2026 normalized volume baseline is actual H1 plus Q3-equivalent and Q4 reference volumes. Later annual requested unit growth and ASP growth are separate. Seasonality of 21%, 24%, 26.5% and 28.5% allocates annual demand, after which paid capacity limits deliveries. These are indexed proxies rather than reported SKU quantities.

Initial quarterly legacy capacity is Q4 reference normalized output multiplied by 1.05. That 5% peak headroom is LOW judgment consistent with qualitative high utilization, not a measured utilization statistic. The paid maintenance/technical-upgrade budget starts at CNY 60 million per quarter and grows 2% annually: CNY 40 million sustains facilities and CNY 20 million supports capacity/efficiency. Growth spending is allocated 55% to aluminium, 15% to film and 30% to supercapacitors.

Growth spending adds capacity after two quarters at 0.35 of capital per unit of annual 2026-price output capacity. That intensity, mix and lead time are LOW engineering proxies. They are informed by source PPE/revenue scale rather than a vendor quotation. Legacy delivered units equal the lower of requested units and paid capacity divided by anchor revenue. Existing unallocated CIP provides no free capacity credit.

Materials and power scale with delivered physical activity and independent input-cost indices. Labour is 60% variable and 40% fixed; manufacturing overhead is 30% variable and 70% fixed. Fixed budgets grow 3% annually. FY2025 industry cost weights allocate product costs; they are not reported subtype cash-cost curves. External formed foil uses the separate electronic-materials weights, and internal foil sales are eliminated.

The historical roughly 20% aluminium input-price increase is not another assumed forward annual increase. Future supplier levels are explicit LOW forecasts. Cumulative material-efficiency factors are 0.98/0.95/0.93/0.92 in strong conditions, 0.99/0.97/0.96/0.95 in orderly conditions, and 1 throughout stress. These numerical bounds interpret qualitative design, automation and domestic-sourcing work. The no-efficiency sensitivity shows the cost of failing to achieve them.

Model assumptions and derivation

One paid factory, inside the same company demand envelope

The model reserves CNY 1 billion of future phase-one spending and uses one CNY 2 billion annual output pool at 2026 prices, allocated 60% to aluminium, 10% to film and 30% to supercapacitors. The government's projected CNY 3 billion of taxable sales has uncertain scope and is tested separately. The overall CNY 5 billion plan is not added. The mixed 150-million-unit index implies CNY 13.333333 per capacity-equivalent unit; it is not a disclosed supercapacitor ASP or observed SKU capacity.

The new site serves only product demand left after legacy deliveries. For each product, accepted normalized project receipts are the lower of unfilled company demand and CNY 500 million multiplied by available utilization and product allocation. Legacy plus project deliveries therefore cannot exceed the same normalized product demand. Available/planned utilization is a capacity ceiling; actual accepted utilization is normalized accepted project receipts divided by 500 and can be lower.

Cash schedules total CNY 1 billion in completed-build outcomes, with dates selected as LOW assumptions. The full amount is reserved from September forward. The unallocated CNY 135 million of group CIP is not assigned as a matching project credit. Each actually paid cohort becomes ready after two quarters, or five in the long-delay outcome.

New-site assets are 70% machinery with a ten-year life and 30% buildings with a twenty-year life, both with 5% residual value. A fully ready CNY 1 billion pool therefore incurs exactly CNY 20.1875 million of quarterly DA. The site also has CNY 2.5 million of quarterly fixed cash manufacturing cost at full readiness and CNY 3 million of quarterly paid engineering R&D as specified. Underabsorbed DA is charged before accepted revenue. The stop outcome never commissions, produces no later receipts and writes off its CNY 100 million initial asset in Q1 2028. The exact noncash writeoff is added back only for cash because capex was paid earlier.

Project selling price follows the corresponding product ASP path with a conditional premium of 1.03, 1 or 0.95. Variable manufacturing costs depend on accepted normalized physical activity and separate material, labour, power and other input prices; realized ASP does not reduce the production budget. The base variable cash-cost ratios are 62% materials, 4% labour, 1% power and 3% other. These are LOW unit-cost proxies, not disclosed source costs. Technical support is a further 3% of project receipts.

Model assumptions and derivation

Probabilities, overlap and active expectations

The joint core regimes have weights of 30% strong mix/orders, 50% orderly conversion and 20% prolonged materials/qualification stress. Conditional early/orderly/delay/stop weights are 35%/45%/15%/5% in the strong regime, 15%/45%/30%/10% in orderly conditions and 0%/0%/0%/100% in prolonged stress. The resulting project marginals are 18%, 36%, 19.5% and 26.5%.

The stress stop is a LOW capital-discipline response to its unfunded full-build counterfactual. It is not news of cancellation, a zero probability of physical success, or proof that external finance cannot exist. The affiliated finance-company credit line is not treated as drawn cash. Full-build and factorized-dependence sensitivities retain their funding failures.

All nine positive-weight joint paths are calculated before quarterly weighting. Demand, pricing, supplier costs and project timing are correlated scenarios. This avoids replacing expected volume-times-price with the product of their separate averages. AI-server, MLPC, UPS, grid and automation opportunities remain inside existing product demand and the single site. Repeated management statements are not counted as independent orders, and receipt probability is not multiplied by Base.

The current contribution bridge starts with a neutral recalibrated core, adds the core-regime effect, subtracts paid at-risk project fixed/R&D/DA/writeoff costs, then adds accepted project receipts net of their variable, support and operating-reserve costs. These stages reconcile to active native OP. The no-receipts counterfactual keeps the active funded schedule fixed; it does not assert that an unfunded business could spend indefinitely.

Current operating contribution and paid failure costs

The neutral recalibrated core is a current counterfactual with no new-site programme. The bridge adds the joint core-regime effect, deducts at-risk new-site fixed/R&D/depreciation/writeoff costs, and adds accepted receipts net of their variable/support/reserve costs. These stages sum to active native OP and measure operating contributions rather than a market-price return.

Quarter	Neutral core	Core regime effect	At-risk site cost	Accepted site net	Active native OP
Q3 2026	276	0	0	0	276
Q4 2026	264	0	(3)	0	261
Q1 2027	190	(3)	(3)	0	184

Q2 2029	2,334	2,092	2,044	135	118

Quarter	Demand envelope	Paid legacy capacity	Accepted legacy	Available new-site ceiling	Accepted new site
Q3 2029	2,577	2,107	2,096	158	157
Q4 2029	2,772	2,122	2,122	185	185
Q1 2030	2,263	2,137	2,032	203	126
Q2 2030	2,586	2,152	2,107	222	213
Q3 2030	2,855	2,167	2,160	240	240
Q4 2030	3,071	2,183	2,183	258	258

Available new-site utilization is an upper capacity ceiling. Actual accepted utilization equals normalized accepted new-site receipts divided by 500; it can be lower. The mixed 150-million-unit index is not a reported SKU count.

Model assumptions and derivation

Paid cash and finite assets

Opening September cash equivalents are CNY 1269.01247079 million, rather than all CNY 1486.98771792 million of cash funds or trading assets. The CNY 217.97524713 million difference is not fully classified. Consolidated quarter-end CE does not prove parent remittability, unrestricted availability or intraperiod liquidity.

Opening trade NWC uses reported receivables/notes, inventory, prepayments, AP/notes and advances. H1 capital AP of CNY 103.82066436 million is excluded from trade AP as a conservative September carry reserve and settled once in Q4 2026. Its actual September classification remains unverified. No inconsistent cumulative capex difference is used as cash released.

Legacy/project receivable days are 143/160; inventory days 92/120; prepayment days 8/15; payable days 125/90. Legacy advances are 0.4 days. Purchase-day pools remove a LOW noncash manufacturing-DA allocation, capped by finite total DA and manufacturing overhead. Its CNY 68.03349724 million residual calibration comes from H1 total DA less disclosed R&D/admin DA and amortization. It is not a reported COGS split; the zero-allocation sensitivity quantifies that limitation. Project purchase pools exclude DA and writeoffs entirely.

The finite legacy opening asset pools are PPE/investment property CNY 2341.26938958 million, intangibles 179.19345207 million, ROU 9.38865973 million and prepaid assets 18.27038966 million. Paid maintenance is allocated 90%/5%/0%/5% to those pools. Target quarterly DA is half the corresponding H1 charge, grown 3% annually and capped by remaining book plus paid additions. This is a finite cash-addback pool, not a detailed commissioned maintenance-cohort accounting schedule. After a pool expires, the ongoing cost budget is treated as cash service/replacement cost, with no fictitious addback or automatic OP uplift. Goodwill and unmapped CIP provide no additional DA credit.

The debt/lease planning proxy pays September short borrowing of CNY 121.23870833 million in Q4 2026; the mixed current CNY 45.55358016 million evenly in 2027; long borrowing of CNY 113.37666662 million evenly through 2028-2029; and noncurrent leases of CNY 9.68768410 million evenly through 2027-2030. The mixed current bank/lease amount is paid only once. Cash interest of 4% on opening combined balances is a LOW

budget proxy rather than a sourced coupon on every liability. Cash tax is 16% of the positive pre-tax operating proxy, and desired distributions are 22% of positive after-tax profit.

A CNY 40 million one-time reserve covers uncertain additional minority-consideration cash. It is a prudence assumption, not the CNY 34.18438589 million NCI book movement or a sourced transaction price. The native CNY 0.5 million quarterly economic claim remains unchanged, and acquiring consolidated minorities adds no duplicate group OP.

The model can retain desired payouts first and defer unpaid project spending second to protect its CNY 200 million floor. Catch-up spending is capped at CNY 250 million per quarter, and only actually funded cohorts create later readiness and DA. No new debt or equity is assumed. None of the nine active baseline paths actually requires payout retention or capex deferral; their lowest closing cash is approximately CNY 398 million. This result is conditional on the selected stress stop and does not fund every adverse full-build or collection outcome.

Conditional liquidity cannot be hidden in an average

Expected and minimum conditional cash

CNY millions

Analytical estimates. The complete observations appear in the table below. Q3 group actual is distinguished from inferred future product allocations.

Quarter	Expected closing cash	Minimum conditional cash
Q3 2026	1,269	1,269
Q4 2026	910	869

Quarter	Expected closing cash	Minimum conditional cash
Q1 2027	1,271	990
Q2 2027	1,021	650
Q3 2027	897	472
Q4 2027	913	398
Q1 2028	1,285	783
Q2 2028	1,128	699
Q3 2028	1,145	585
Q4 2028	1,218	637
Q1 2029	1,614	1,329
Q2 2029	1,492	1,087
Q3 2029	1,524	963
Q4 2029	1,613	1,003
Q1 2030	2,035	1,471
Q2 2030	1,939	1,093
Q3 2030	2,025	775
Q4 2030	2,170	641

This is consolidated quarter-end planning cash. The active stress-stop response is selected, not official cancellation. Full-build/collection/input-price failures in the diagnostics remain unfinanced outcomes. No uncommitted credit line, trading-asset sale or new equity is added.

Model assumptions and derivation

Authority and native method

The valuation uses 20x the selected quarter plus its next three quarters of native claim-adjusted operating profit. The denominator is 850,523,941 gross ordinary-share claims at the starting quarter. Treasury shares of 8,449,368 are already included in that gross proxy. The 842,074,573 dividend/EPS-eligible share basis serves a different purpose. September gross issued shares are unchanged, and the active case assumes no future equity raise.

The model values group recurring pre-financing OP after the native outside-owner/senior-claim proxy of CNY 0.5 million per quarter. In the existing ownership formula, S=(F+Q) x P-Q-R, P=1, Q=0 and R=0.5 million, so S=F-0.5 million. This is neither reported parent OP nor a substitution of net income or EPS for group operating profit. A purchase of already consolidated minorities does not create a second stream of group sales or OP.

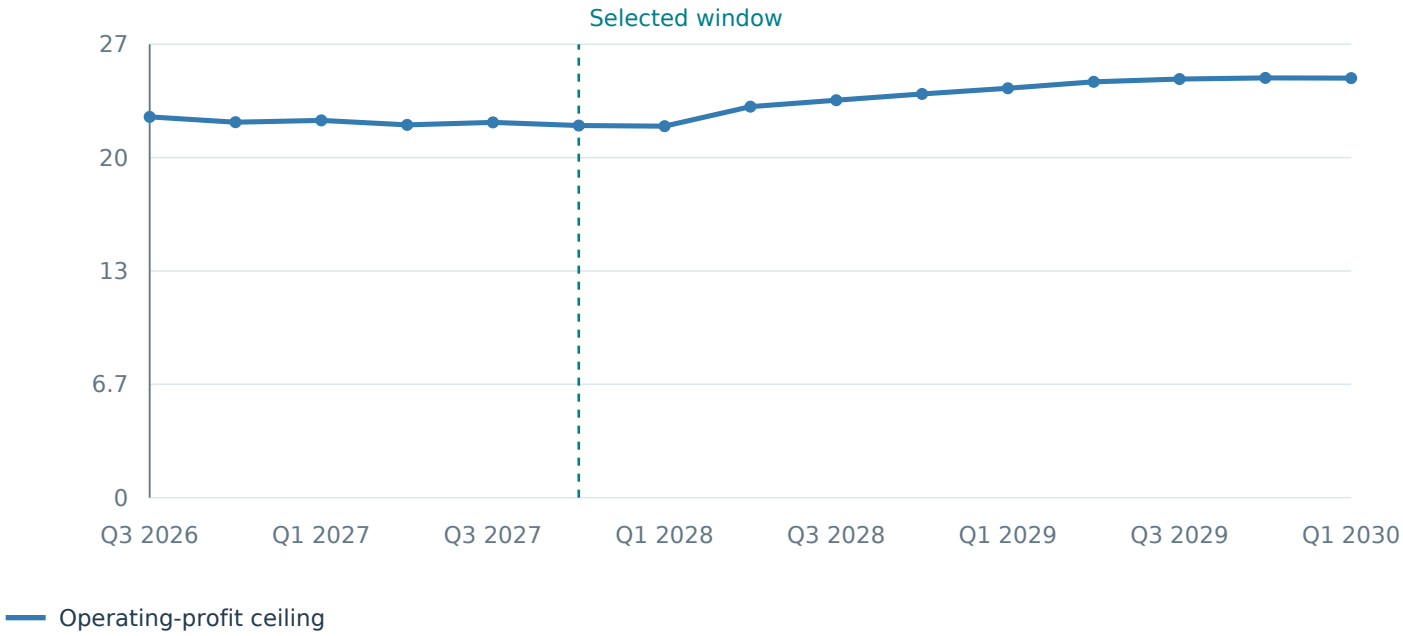

No net-cash NAV, multiple expansion, score multiplier, assumed credit draw or extra AI spending wallet is added to valuation. The analytical score is 41/60 (68.333333% at six-decimal display), displayed as 68% and classified Watchlist. Protected Excel Base remains 70%.

Product breadth, materials integration and qualification experience support the thesis. Competition across capacitor and storage technologies prevents a unique chokepoint claim. The four risk deductions cover demand/qualification, competition/substitution, materials/manufacturing execution, and capital/collection/cross-border execution. These are score judgments, not additional receipt probabilities.

Quarterly rolling operating-profit value

Fifteen current-plus-next-three ceilings

Technical terms retain six decimals for reproduction. Each sum is multiplied by 20 and divided by 850.523941 million gross ordinary-share claims. The last three quarters lack the next three OP inputs and therefore have unknown, genuinely incomplete ceilings.

Analytical score and the protected workbook control

Category	Selected points
CoreThesis	15
Cycle	8
TAMExpansion	8
Catalysts	4
Macro	8
Alpha	2
Risks	-4
Total	41/60
Analytical display	68% - Watchlist
Protected Excel Base	70%

The analytical score evaluates thesis quality. It is not a receipt probability and is not multiplied into operating profit or the ceiling. Protected Excel Base remains a separate workbook ranking control.

Sensitivities include funding failures

Case	Q4 2027 value	Min. cash	Floor shortfall	Failed mass	States
Active case	22	398	0	0%	0
No material efficiency	19	369	0	0%	0
Material unit cost +5%	16	(335)	535	20%	1
ASP -5% from 2027	13	(464)	664	20%	1
Product demand +20% from 2027	23	472	0	0%	0
No legacy growth allocation	21	447	0	0%	0
No initial capacity headroom	21	496	0	0%	0
Initial capacity headroom 10%	23	289	0	0%	0
Legacy growth capital intensity 0.50	22	413	0	0%	0
New site: CNY 3 billion rated output	22	374	0	0%	0
New site: no accepted receipts	21	448	0	0%	0
No purchase-pool DA allocation	22	418	0	0%	0
Independent core/project weights	22	(507)	707	15%	3
Full-build stress, current inputs	22	(507)	707	14%	3
Receivable days +20	22	199	1	20%	1

These are selected mechanics tests, not confidence intervals. A raw OP valuation from an unfunded path is not an executable funded target. All fifteen horizon values and precise failure details follow in the technical appendix.

Model assumptions and derivation

Sensitivity interpretation and validation boundary

The fifteen sensitivity rows include the main identity and selected changed-input tests. At Q4 2027, rounded operating values are CNY 19 without material efficiency, CNY 16 with a further 5% material-cost increase, CNY 13 under a 5% ASP reduction, CNY 23 with 20% higher demand, CNY 22 with a larger effective site output pool and CNY 21 with no accepted site receipts but paid programme costs. The complete technical values and all fifteen rolling horizons appear in the tables.

These selected tests are not confidence intervals. Higher demand has limited value when qualified output is the binding constraint. Longer collection periods may defer capex and depreciation, briefly improving one

early earnings window while worsening later capacity and cash. One favorable window is not evidence of greater lifetime value.

Some price, input-cost, collection and dependence shocks leave conditional funding gaps. Their operating-profit ceilings are raw stress calculations before a feasible financing or capacity response, not funded target cases. The displayed failure mass, minimum cash and floor shortfall make that distinction visible.

Each complete ceiling is the sum of four native claim-adjusted OP terms multiplied by 20 and divided by starting-quarter gross shares. Eighteen quarters produce fifteen complete windows; Q2-Q4 2030 remain genuinely incomplete. Q3 group results are source-derived actuals, while the following seventeen quarters are conditional research estimates rather than company guidance.

Model assumptions and derivation

Source gaps that remain

H1 long-asset purchase cash of CNY 87.01293233 million exceeds the nine-month CNY 72.71836991 million figure. Original source pixels confirm both. The difference is not allocated as negative Q3 capex or a cash release, and no restatement or reclassification is invented.

The named H1 Jinhai minority transaction costs CNY 8 million, while H1 minority-purchase cash is CNY 13.6 million, leaving CNY 5.6 million of entity/payment/timing detail unresolved. Q3 additional minority consideration and terms are not disclosed. NCI book movements and the recent reported NCI loss do not automatically remove the native CNY 0.5 million forward economic claim.

Project commissioning, accepted customer budgets, product unit ASPs/costs, engineering throughput and capital timing remain LOW assumptions. The government project page has a bounded direct-access gap, and some supplier originals were not recovered. These gaps limit confidence in the timing and scale of capture.

Original primary source

Group income, ownership and claim perimeter

Gross ordinary shares remain unchanged. Minority book movements do not establish paid consideration or an incremental stream of consolidated operating profit.

H1 cashflow adjustment bridge, including fixed-asset and ROU depreciation, amortization and impairment; CNY yuan. DA already sits in burdened operating costs. Original source dated 2026-08-21, physical page 129.

Original primary source

Bank and lease maturity scopes are separate

These are dated June undiscounted contractual buckets, including future interest. The active September debt/lease repayment timing is separately labeled a LOW planning proxy.

为控制该项风险，本公司综合运用票据结算、银行借款等多种融资手段，并采取长、短期融资方式适当结合，优化融资结构的方法，保持融资持续性与灵活性之间的平衡。本公司已从多家商业银行取得银行授信额度以满足营运资金需求和资本开支。

金融负债按剩余到期日分类

项　目	期末数				
	账面价值	未折现合同金额	1 年以内	1-3 年	3 年以上
银行借款	380,154,851.32	392,732,143.19	263,271,861.08	80,312,703.62	49,147,578.49
应付票据	630,952,489.37	630,952,489.37	630,952,489.37		
应付账款	1,139,440,663.38	1,139,440,663.38	1,139,440,663.38		
其他应付款	13,865,423.99	13,865,423.99	13,865,423.99		
其他流动负债-已背书未到期票据	11,667,051.25	11,667,051.25	11,667,051.25		
租赁负债(包含转列至一年内到期的非流动负债部分)	14,505,901.28	16,261,728.45	4,650,474.98	5,374,253.47	6,237,000.00
小　计	2,190,586,380.59	2,204,919,499.63	2,063,847,964.05	85,686,957.09	55,384,578.49

（三）市场风险

市场风险，是指金融工具的公允价值或未来现金流量因市场价格变动而发生波动的风险。市场风险主要包括利率风险和外汇风险。

1. 利率风险

利率风险，是指金融工具的公允价值或未来现金流量因市场利率变动而发生波动的风险。固定利率的带息金融工具使本公司面临公允价值利率风险，浮动利率的带息金融工具使本公司面临现金流量利率风险。本公司根据市场环境来决定固定利率与浮动利率金融工具的比例，并通过定期审阅与监控维持适当的金融工具组合。本公司面临的现金流量利率风险主要与本公司以浮动利率计息的银行借款有关。

截至 2026 年 6 月 30 日，本公司以浮动利率计息的银行借款人民币 179,096,240.21 元，在其他变量不变的假设下，假定利率变动 50 个基准点，不会对本公司的利润总额和股东权益产生重大的影响。

2. 外汇风险

外汇风险，是指金融工具的公允价值或未来现金流量因外汇汇率变动而发生波动的风险。本公司面临的汇率变动的风险主要与本公司外币货币性资产和负债有关。对于外币资产和负债，如果出现短期的失衡情况，本公司会在必要时按市场汇率买卖外币，以确保将净风险敞口维持在可接受的水平。

June bank and lease undiscounted maturity buckets, shown separately in CNY yuan and including future interest. Original source dated 2026-08-21, physical page 146.

Original primary source

Minority purchases are claims and cash, not extra group sales

The named CNY 8 million Jinhai purchase differs from CNY 13.6 million of first-half minority-purchase cash. The remaining CNY 5.6 million and later Q3 transaction terms are not inferred from book movements.

2. 交易对于少数股东权益及归属于母公司所有者权益的影响

公司以 800 万元收购山西晋海公司 20%的少数股权，持有山西晋海公司股权自 80%增长至 100.00%，公司资本溢价（股本溢价）本期增加 2,033,064.05 元，系收购子公司山西晋海少数股权前后享有该子公司净资产差额与收购成本的差额。

（2） 交易对于少数股东权益及归属于母公司所有者权益的影响

单位：元

购买成本/处置对价	
--现金	
--非现金资产的公允价值	
购买成本/处置对价合计	
减：按取得/处置的股权比例计算的子公司净资产份额	
差额	
其中：调整资本公积	
调整盈余公积	
调整未分配利润

Technical sensitivity cash and funding failures

CNY millions and probability weights are shown to six decimals. The floor shortfall is max(200 minus the lowest conditional closing cash, zero). Failed weight is the sum of the probabilities of paths that breach that floor. These operating values remain raw stress calculations where funding fails.

Case	Minimum cash	Floor shortfall	Failed weight	Failed states
Active case	398.245172	0.000000	0.000000	0
No material efficiency	369.049322	0.000000	0.000000	0

Technical calibration: source manufacturing weights

Industry pool	Materials	Labour	Power	Overhead	Total COGS
electronic components	3,543.861222	252.206142	42.980468	215.713292	4,054.761123
electronic materials	53.862379	3.020778	33.163407	6.052793	96.099358

CNY millions, at six-decimal technical precision. Each cost-allocation weight is its component divided by the row total. External formed foil uses the electronic-materials row. All other product allocations use electronic components. These are industry-level source weights, not reported subtype costs.

Technical cash and depreciation source primitives

Source primitive	CNY millions
Opening September cash equivalents	1,269.012471
Opening September short borrowing	121.238708
Opening September mixed current liabilities	45.553580
Opening September long borrowing	113.376667
Opening September noncurrent lease	9.687684
H1 fixed-asset/IP DA	152.805959
H1 ROU DA	1.910012
H1 intangible amortization	4.670337
H1 prepaid amortization	3.474228
Opening trade NWC proxy	2,325.966611
H1 capex AP carried as September reserve	103.820664
Unknown-minority-consideration reserve	40.000000
Opening PPE and investment property	2,341.269390
Opening intangible	179.193452
Opening ROU	9.388660
Opening long prepaid	18.270390

Each legacy target quarterly DA pool starts at half the corresponding H1 figure, then follows the declared 3% annual budget with finite source-book limits. September mixed current liabilities are paid once, without duplicating a separate bank/lease allocation. The equations above specify the assumed principal dates and interest proxy.

Technical inputs: probability and shared demand regimes

The packet contains 13 original documents, with text extracted from all 434 pages. Eleven smaller documents were read in full. The H1 and FY originals were read at the listed relevant full pages; this is not an exhaustive line-by-line archive review. The newest two management records were read through every supplied question and answer. Spoken-audio completeness was not verified.

The newest two supplied written management records were read in full. Audio, spoken opening/closing and a separate complete prepared presentation were not independently verified. Government project figures include a cached official page with a direct-fetch gap, not a claimed recovered original HTML. Unofficial clues are separated from issuer facts.
