Every model chart has a searchable numeric table beside it. Main operating charts show probability expectations, not a single achievable physical outcome; all conditional rows and funding flags are preserved in the appendices. Money is CNY millions unless stated otherwise. Physical units, raw project units and analytical capacity equivalents are identified separately.

Front financial summaries and chart labels use whole numbers. Under 1 preserves small nonzero amounts; parentheses denote a negative amount. Exact technical/calibration inputs, Rule 16 derivations and complete F4 appendices retain the precision required to inspect the model. No stored model or audit value is rounded.

Current thesis and score

Hanwei's current earnings engine is gas sensing, intelligent instruments and industrial integration. H1 2026 instrument revenue grew 29% with 42% gross margin. Sensor revenue grew 26%, while sensor gross margin fell 8 percentage points to 27%. Manufacturing utilization, input prices and fixed-cost absorption therefore matter as much as the addressable market.

Flexible sensors, electronic skin, inertial sensing, force sensing and optical packaging create credible extensions into physical AI. The upgraded 20 m-piece flexible line, existing small-batch robot supply and the DroidUp full-body electronic-skin launch support active forecasts before contract sizes become public. They do not establish 20 m robot arrays, a uniform selling price or sole-source customer economics.

The group does not pass the architectural chokepoint test. Robots and gas-safety systems can use competing sensing routes and suppliers. Long production knowhow and customization are useful advantages, but the parent owns only part of several promising businesses and carries a broad set of investments. The model prices those opportunities through coherent conditional outcomes, shared capacity, product costs and economic ownership.

Cash conversion is a binding test. H1 reported parent net income was CNY 68 m and operating cash flow was negative CNY 156 m. Collections, reinvestment, debt service and conditional H-share proceeds must finance the operating plan; cash raised is not added separately to the operating-profit ceiling.

What the local evidence changes

Reported H1 revenue fell 9%, but management's pro-forma comparison excluding Hanwei Zhiyuan's deconsolidation showed 7% growth. These are different scopes. Neither the old utilities revenue nor disposal gains belong in a recurring growth extrapolation.

A dated manufacturer/distributor listing distinguishes an ordinary flexible component, a 492-point plantar array and a 64-scan-point complete testing system. Multiplying a 20 m-piece capacity headline by a system price would erase the missing mix, processing and qualification bridge.

Exact derivation inputs: The proposed H-share base cap is 15% of postissue shares. Including a full 15% greenshoe of the base new issue, the algebraic maximum increase over current shares is 20.2941%, subject to whole-share rounding. Filing acceptance is not a completed listing, and restricted-share unlocks do not increase issued shares.

Exact derivation inputs: Consolidation does not imply full economic ownership. Nengstar's disclosed direct 37.74% plus indirect 13.03% requires an explicit look-through proxy and bounds. Sitaibao's 35.39% economic stake differs from 52.72% voting control. The legacy minority-loss residual is not assumed to be Nengstar's operating result.

The Sitaibao-related five-year minority put creates a contingent liquidity obligation around the end of 2030 and later. Its exercise price and stake purchased are uncertain. A reserve is distinct from a mandatory near-term payment, a current bank maturity or an automatic increase in ownership.

Analytical Base - the category table sums

Category	Points	Maximum	Evidence
Core Thesis	11	20	Long manufacturing knowhow and flexible sensing competence; multiple routes/competitors and diversified group mean no sole-source physics chokepoint.
Cycle Stage	7	10	Robotics remains small-batch while mature gas/instrument demand and underused new lines dominate current economics.
TAM Expansion	9	10	Sensing spans industrial/consumer/auto/medical/physical AI; Phase 2 and 3 are meaningful but do not turn all 20 m capacity into high priced arrays.
Catalysts	4	5	Oct 30 results,2027 line qualification/customer ramps and conditional HIPO are dated; admission is before universal confirmation.
Macro	8	10	Physical AI, localization and gas-safety/lifeline procurement are structural demand vectors; procurement cash and scaling remain uncertain.
Alpha	3	5	Local filing/unit/ownership/put reconciliation gives analytical edge; widespread publicly available robotics coverage limits exclusivity.
Risks	-5	0	Five distinct classes: competition; manufacturing/qualification execution; end-market adoption/timing; receivable/cash/refinancing; conglomerate/M&A/economic ownership/contingent put.

Total 37/60, lattice-rounded 62%, Fail band. Initial coverage score selected before valuation. The score describes thesis quality; it is not a probability applied again to operating inputs or the ceiling.

Latest actuals and management completeness

Unaudited 2026 H1, Jan 1-Jun 30. Q2 group amounts are arithmetic H1 minus Q1, not a separately issued Q2 statement.

The issuer's Oct 21 notice scheduled Q3 for Oct 30; Q3 remains Model at this research cutoff.

The two newest located earnings-briefing records are April 24, 2026 and May 22, 2025. Their written documents are complete; they cover main replies, not full verbatim spoken transcripts. The evidence review also covered April 8, 2025's annual briefing and August 4, 2026's specific-investor visit. No full replay/audio was recovered.

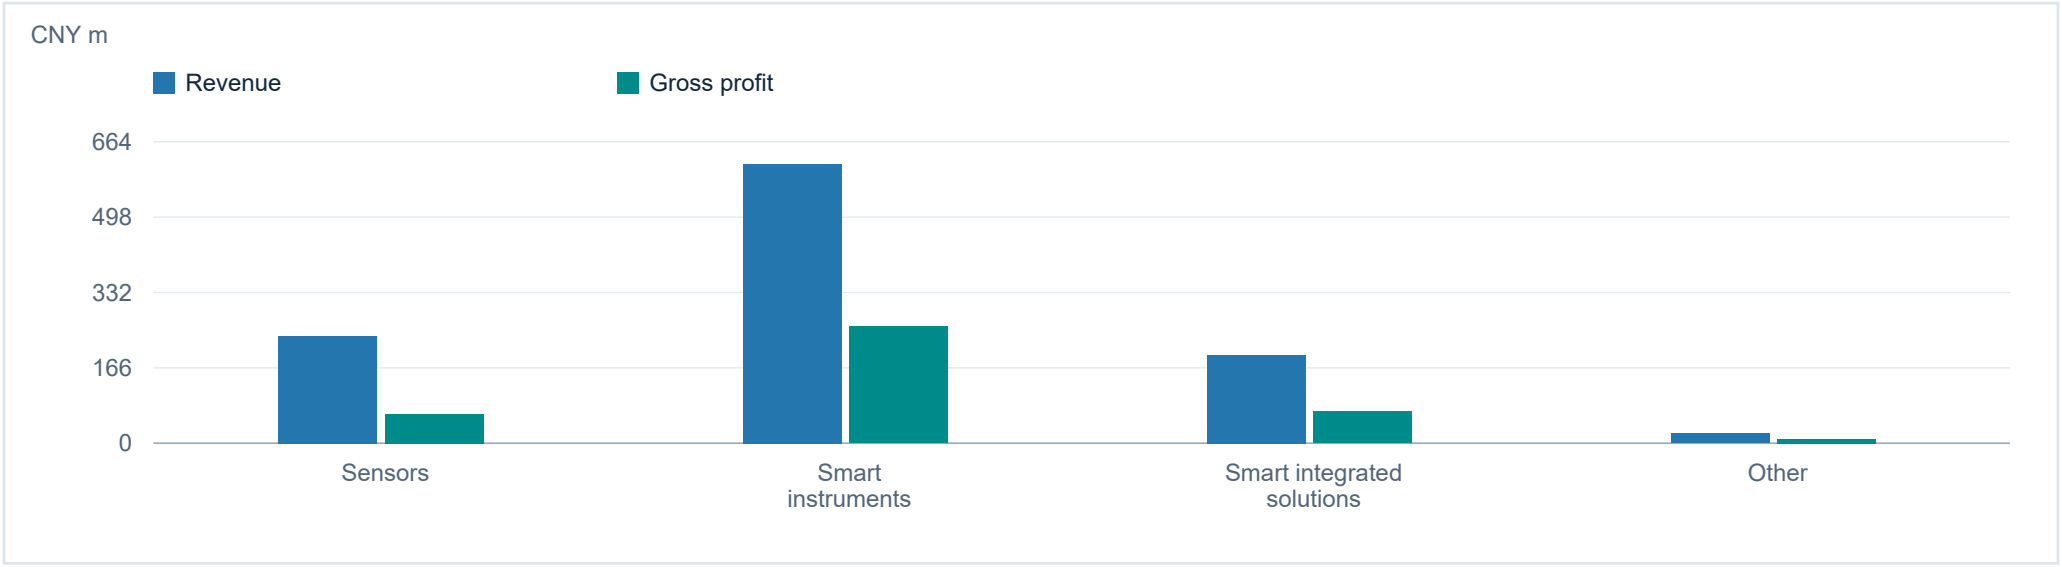

Reported PRC operating profit, model-defined recurring group OP, estimated minority attribution and attributable OP before financing/income tax are shown separately from parent net income.

Latest reported and derived group amounts

Period / status	Revenue	Cost of revenue	reported_OP	Parent-attributable NI	CFO
FY2025 /Actual	2,414	1,658	206	159	151
H1_2026 /Actual	1,066	666	66	68	-156
Q1_2026 /Actual	509	335	22	25	-109
Q2_2026_derived /Actual-derived	558	331	43	43	-46

Source-issued PRC profit is not the recurring group OP used for valuation. Q2 is arithmetic H1 minus Q1, not separately issued. Source H1 pp 70-75;Q1 income/cash statements;FY2025 annual report.

F01 | H1 2026 reported product revenue and gross profit

Reported H1 product partition; derived GP=reported revenue minus cost. H1 p 48. No quarterly subproduct allocations are represented as reported actuals.

F01 - supporting values

Period / item	Revenue	Gross profit
Sensors	236	64
Smart instruments	615	257
Smart integrated solutions	194	70
Other	22	9

Reported H1 product partition; derived GP=reported revenue minus cost. H1 p 48. No quarterly subproduct allocations are represented as reported actuals.

H1 reported product calibration

Product	Revenue CNY	COGS CNY	GP CNY	Reported GM
Sensors	235,824,152	171,596,159	64,227,994	27%
Smart instruments	614,677,539	357,647,281	257,030,258	42%
Smart integrated solutions	194,020,921	124,329,579	69,691,342	36%
Other	21,772,887	12,348,031	9,424,856	43%
Total	1,066,295,500	665,921,050	400,374,450	38%

Exact source-yuan atoms remain in the canonical model and Appendix A4; front financial figures use whole yuan. Application-market and product tables partition the same consolidated revenue.

Earnings-format written evidence and supplementary records

Event date	Format	Questions	Coverage
2026-04-24	FY2025 earnings briefing	26	Complete located written main-Q&A record; not full verbatim spoken transcript; no full replay/audio recovered.
2025-05-22	Collective/earnings briefing	59	Complete located written main-Q&A record; not full verbatim spoken transcript; no full replay/audio recovered.
2026-08-04	Specific-investor visit, supplementary	n/a	Written record; newer event but not an earnings briefing.
2025-04-08	FY2024 annual briefing, supplementary	n/a	Additional written record reviewed; does not replace May 22 record.

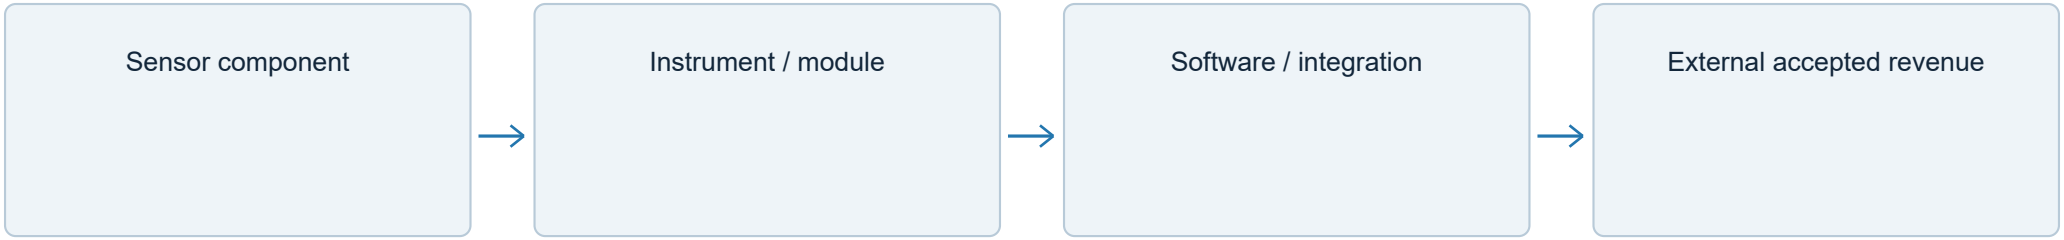

April 24, 2026 and May 22, 2025 are the two newest located earnings-format written records. The newer August 4 specific-investor visit is supplementary and does not replace the May 22 briefing. No numerical current company revenue/profit guidance was located; The forecasts remain explicit model judgments.

China Data Packet

Source-to-model transmission

Vector	Current packet	Confidence / boundary
Source Ladder	Issuer/exchange filings, official tax and procurement records, native issuer product releases; identified supplier material is a dated unit-scope cross-check. Saved local identity research and DOT indexes were searched; no earlier substantive Hanwei model was found.	Primary issuer/exchange and official records; supplier scopes secondary
Demand	Gas-safety instruments and urban lifeline procurement form the current business; physical-AI components are a small but actively modeled extension. A mixed-equipment award is not a one-unit device price. Product and application tables partition the same consolidated revenue.	HIGH current business identity; LOW future capture
Margin	Each product owns its variable inputs, factory cash overhead, depreciation and support costs. Shared fixed costs remain when new production replaces legacy sales. Startup underutilization and lower end prices are documented in the existing sensor projects.	HIGH reported product totals; LOW cohort allocation and future costs
Timing	The 190 k gas-safety project reached ready-for-use on Jun 30; its old feasibility prices and budgets are not current guidance. Flexible-line expansion, customer qualification, H-share execution and revenue acceptance have separate clocks.	HIGH sourced ready/event dates; LOW upgrade/qualification/acceptance timing
Calibration	The latest four product revenue/COGS rows and consolidated totals are matched exactly. Unreported product mix, unit conversion, economic retention and cash timing are explicit LOW proxies, with coherent sensitivity and infeasible-domain flags.	Exact source totals; LOW undisclosed product split/unit map

D01 | The economic chain is not a set of additive wallets

These are different scopes. Internal supply and consolidated subsidiary revenue cannot be counted again as incremental external group sales.

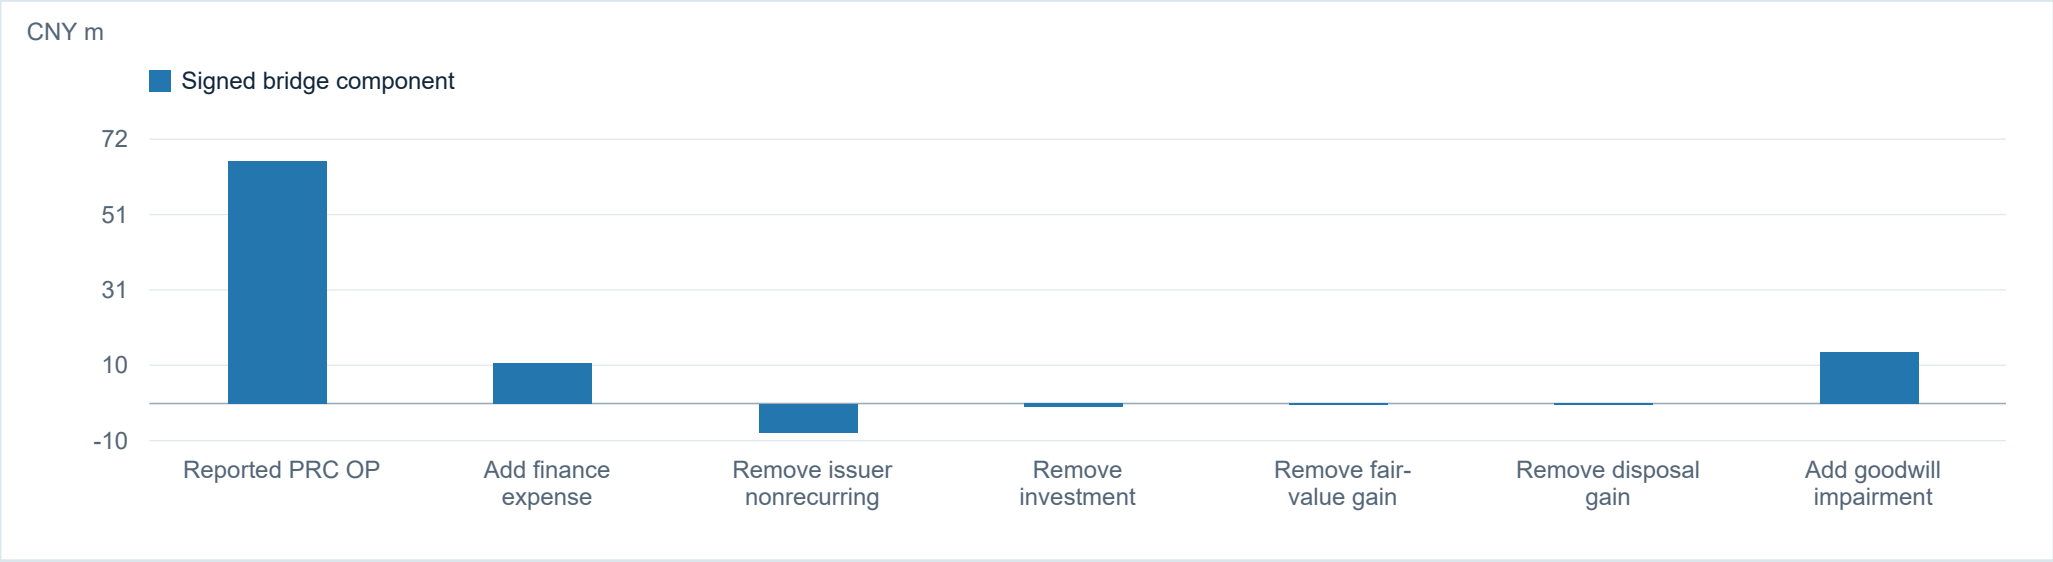

The cycle has two clocks: gas sensing and safety instruments supply the current earnings base, while tactile/electronic-skin and related physical-AI applications are earlier in adoption. The model represents the latter actively before universal official confirmation, with conditional outcomes, source-normalized costs and shared capacity. Market opportunity alone is not a recognized revenue or profit amount.

Operating profit and economic ownership

Reported PRC operating profit (营业利润) includes finance, investment, other income and impairments. The adjustments below preserve source actuals.

The following bridge is model-defined recurring group operating profit before financing and income tax; it is not an issuer-reported adjusted profit metric.

F02 | H1 reported-to-recurring operating bridge

Signed adjustment components, not a cumulative earnings series. Ending recurring group OP about 81 m. Source H1 pp 9,135-136 plus approved normalization.

F02 - supporting values

Period / item	Signed bridge component
Reported PRC营业利润	66
Add finance expense	11
Remove issuer nonrecurring government grants	-8
Remove investment income	-1
Remove fair-value gain	(under 1)
Remove disposal gain	(under 1)
Add goodwill impairment	14

Signed adjustment components, not a cumulative earnings series. Ending recurring group OP about 81 m. Source H1 pp 9,135-136 plus approved normalization.

Source ownership versus modeled economic capture

Entity / scope	Reported direct / economic	Indirect / voting feature	Reported aggregate / control	Model boundary / unresolved gap	Source
Winsen	100%	n/a	100%	Whole ownership	H1pp143-144
Nengstar	37.74% direct	13.03% indirect	50.77% disclosed aggregate	44.255% model retention; indirect chain not established	H1p144; LOW look-through
Najie	78.88% reported	n/a	78.88%	MEMS cohort allocation is not audited Najie external revenue	H1pp143-144; RootR3b
Chongqing Sitaibao	35.39% economic	17.33% concert-party voting	52.72% voting control	Control is not economic ownership	ARp188
Jiayuan	83.90% group equity	nested NCI gap	16.10% stated minority	Simple equity times entity NI does not equal reported NCI allocation	H1pp143-145
Optical analytical cohort	Entity chain varies	n/a	100% model retention	Model proxy; not an external sales guarantee	Model calibration
Funded MEMS line	Parent originally	Winsen added2021-10-21	Parent+wholly ownedWinsen	Najie wafer manufacture is upstream, not the named funded-line entity	Prospectuspp64-65;H1pp53-54;Aug4A5

H1 minority normalization preserves its gap

Field	CNY m / status
Source aggregate minority NI	-11.96340618
Source Jiayuan minority NI	-1.04501407
Source residual after Jiayuan (not the modeled legacy residual)	-10.91839211
Actual group effective tax rate (fraction)	0.16831230
Total source minority NI / (1 - actual ETR)	-14.38449325
Subtract calibrated flexible cohort NCI	-0.10162292
Subtract calibrated MEMS cohort NCI	-0.63349542
Subtract calibrated optical cohort NCI	0.00000000
Modeled legacy residual = total pretax equivalent minus calibrated cohort NCI	-13.64937492
50% carry of modeled legacy residual	-6.82468746
Boundary	Retentions/profit allocations are model proxies, not verified economic look-through. Minority NI contains finance/impairment/nonrecurring effects not individually allocated in source.

The raw NI/ETR conversion is a pretax-NI equivalent, not clean recurring operating profit. The model retains 50% of the unallocated residual before outcome multipliers and tests alternatives; it is not asserted to be Nengstar's result. Only modeled positive minority-cohort NI drives the separate dividend proxy.

Separate product economics

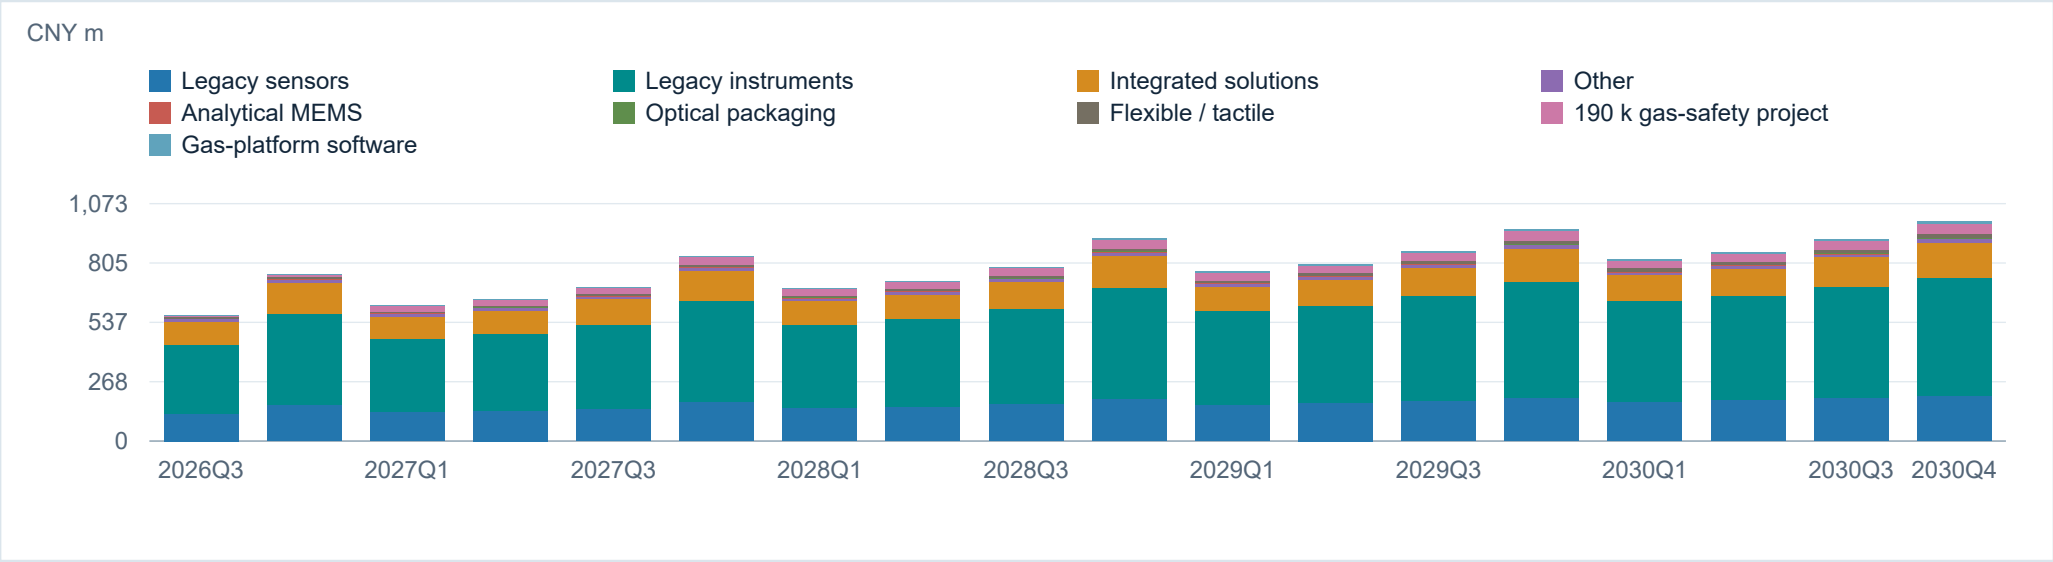

Nine analytical cohorts partition group external revenue. They are not nine issuer-reported segments. H1 flexible/MEMS/optical allocations are LOW and calibrated within reported Sensors; residual legacy sensor GP is recalibrated so source revenue/COGS still match exactly.

LOW H1 allocation controls within reported Sensors

Analytical cohort	Share of reported sensor revenue	Reference GM	Economic retention / boundary
Flexible /tactile	4.00%	42.00%	44.255% LOW look-through proxy
MEMS	2.00%	20.00%	78.88% proxy; not audited Najie external sales
Optical	1.00%	25.00%	100% owning-cohort proxy; tested at 50%

The residual legacy-sensor revenue and GP are recalibrated after every allocation control. No cohort is added on top of the reported sensor total.

F03 | Quarterly external revenue by product - probability expectations

All 18 joint outcomes weighted once per field; this is a display expectation, not one physical production path. Four reported categories and nine model cohorts are alternative partitions.

F03 - supporting values

Period / item	Legacy sensors	Legacy instruments	Integrated solutions	Other	Analytical MEMS	Optical packaging	Flexible / tactile	190 k gas-safety project	Gas-platform software

Representative 2026 product images explain product scope. The ultrasonic meter, safety valve, high-end analyzer and inspection robot are not evidence that those complete systems share the historical 190 k project's units or selling prices.

E07 | Issuer laser product illustration in a gas-sensing exhibition preview. Illustrates optoelectronic components in the sensing chain; it does not prove datacenter-laser orders, upstream wafer ownership or qualification of every package. Source: Hanwei; 2026.07.23. https://hanwei.cn/news_detail/201.html

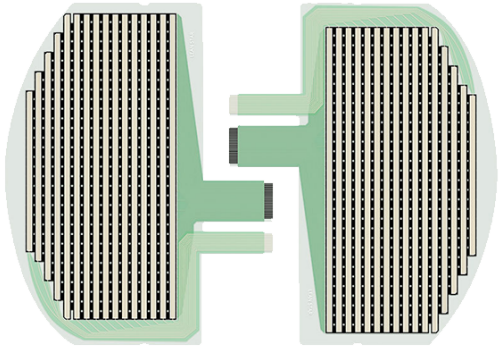

E09 | HGIM800 Fourier-transform infrared gas analyzer in Hanwei's July 23 preview. Shows the range of modern gas-analysis products. It is not an identified SKU/ASP from the historical 190 k funded-project schedule. Source: Hanwei; 2026.07.23. https://hanwei.cn/news_detail/201.html

Optical packaging services, cleanroom scope and product demonstrations support an active bounded extension. They do not establish AI-datacenter laser orders, TOSA/BOSA unit output or external module ASP. The optical cohort is external group revenue; internal sales cannot be added again.

In the August 4, 2026 specific-investor written record, the Shenzhen Weijing business had a 1,000 m² Class 10,000 cleanroom and a semiconductor optoelectronic packaging/test platform. Management described TO, TOSA and butterfly packaging capability, an output ramp and some TOSA/BOSA and wafer-backend contract processing. Initial emphasis was gas detection, Raman analysis and optical-fiber sensing. No annual unit output, realized external ASP or datacenter-laser award was disclosed (introductory tour and Q2-Q4).

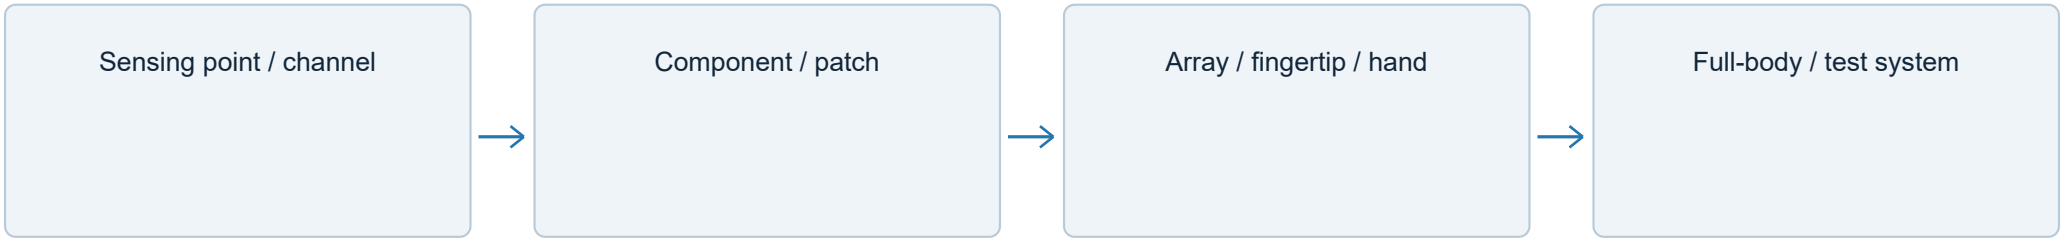

Flexible capacity and unit traps

May 22, 2025 written A26 described the then-current 10 m/year flexible line as saturated and a new line planned in 2025 H2. April 24, 2026 A26 subsequently described a recent upgrade reaching 20 m pieces/year, qualitative good yield and overall Nengstar gross margin above 40%. They are dated capacity states, not additive 10 m+20 m lines, robot array output, accepted shipments or a measured numerical yield.

E03 | MF3216 plantar pressure-array product image from Hanwei's native product page, publication date not stated; captured 2026-10-25. The page specifies 492 sensing points. Points, matrices, readout channels and factory capacity pieces are not interchangeable. The displayed image does not prove 492 capacity equivalents. Source: Hanwei; publication date unstated. https://hanwei.cn/safe_detail_23/MF3216.html

D02 | Distinct physical scopes require an explicit conversion

No source-proven492/64 factory-capacity mapping. The model's ordinary and robot patch unit/ASP assumptions are LOW analytical equivalents, not sourced assembly counts.

Sourced scope versus model capacity units

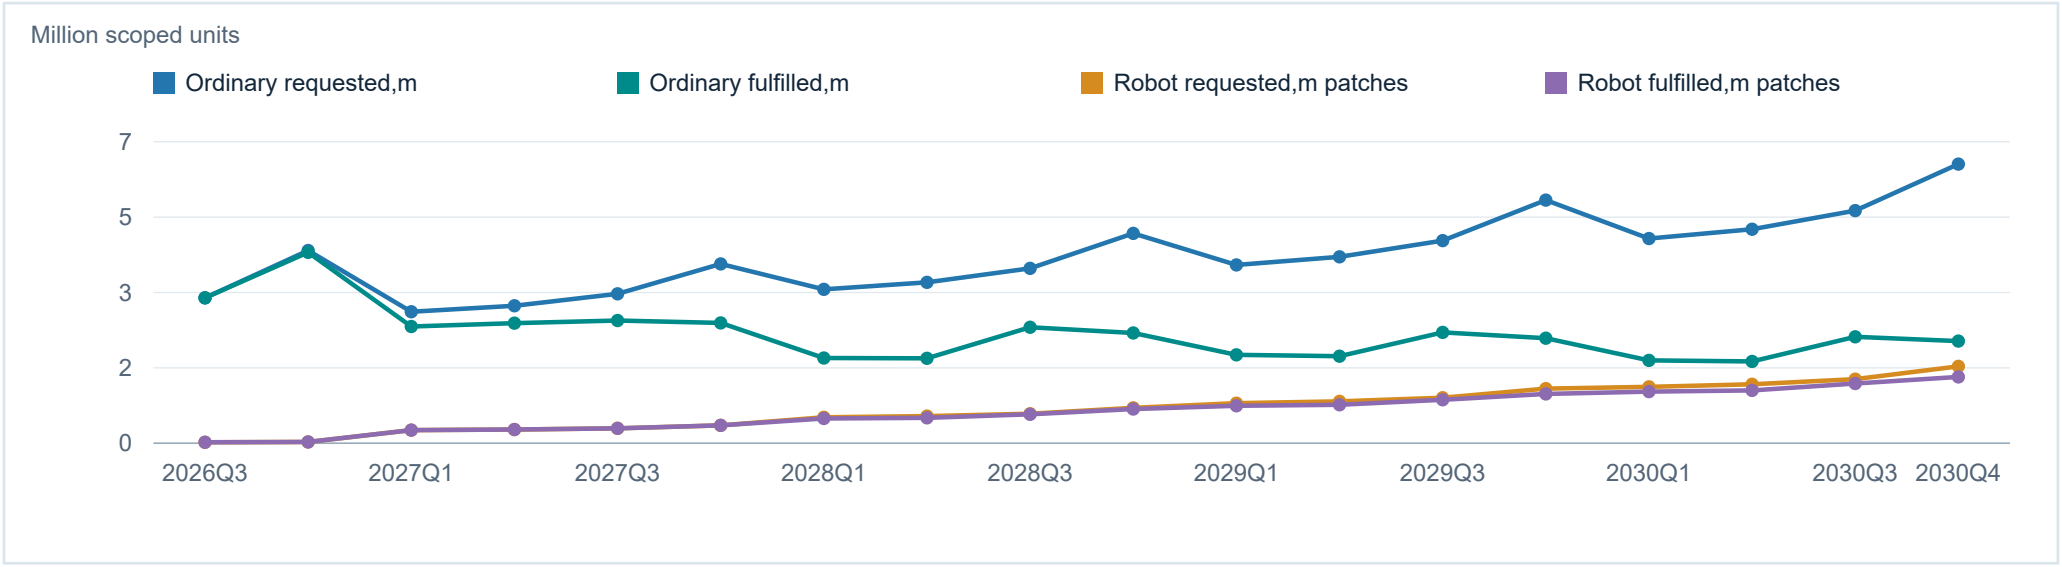

Item	Known source scope	What remains unknown
MF3216 native array	492 pressure points; film product image	No factory-equivalent or channel-count mapping disclosed
RMB 900 supplier reference	492-point plantar array listing	No realized ASP/tax/current-volume or pieces-to-array bridge
RMB 15 k supplier reference	64 scanpoints with electronics/software system	No 64 capacity-equivalent proof; exact current supplied configuration/tax unknown
Ordinary component / robot patch	Model-normalized unit and selling-price proxies	No source-equivalent BOM mapping; sensitivity required
Pt temperature chip	Separate>20 m/year September 17 capacity claim	Not flexible capacity and not robot film output

H1 physical calibration - LOW timing and unit assumptions

Input / result	Canonical value	Unit / source boundary
Ordinary referenceASP	1.50000000	CNY per normalized ordinary piece
Robot referenceASP	12.00000000	CNY per normalized patch
Capacity equivalents per patch	4.00000000	LOW processing/footprint proxy
Ordinary reference output	5.97421186	Million model ordinary pieces
Robot reference output	0.03930403	Million model robot patches
Total used equivalents	6.13142796	Million model capacity equivalents
H1 nominal pool	7.50000000	Million; assumes old 10 m/year Q1 and 20 m/year from April 1
Delivery factor	0.90000000	LOW deliverable fraction; not observed yield
Available equivalents	6.75000000	Million; physical-domain check
Calibration valid	Yes	Double mix at unchanged prices/mapping is INFEASIBLE

Actual upgrade date is not disclosed before the April 24 record. The April 1 timing is a LOW calibration assumption; no reported unit shipments are claimed.

F06 | Requested and fulfilled flexible output - expectation display

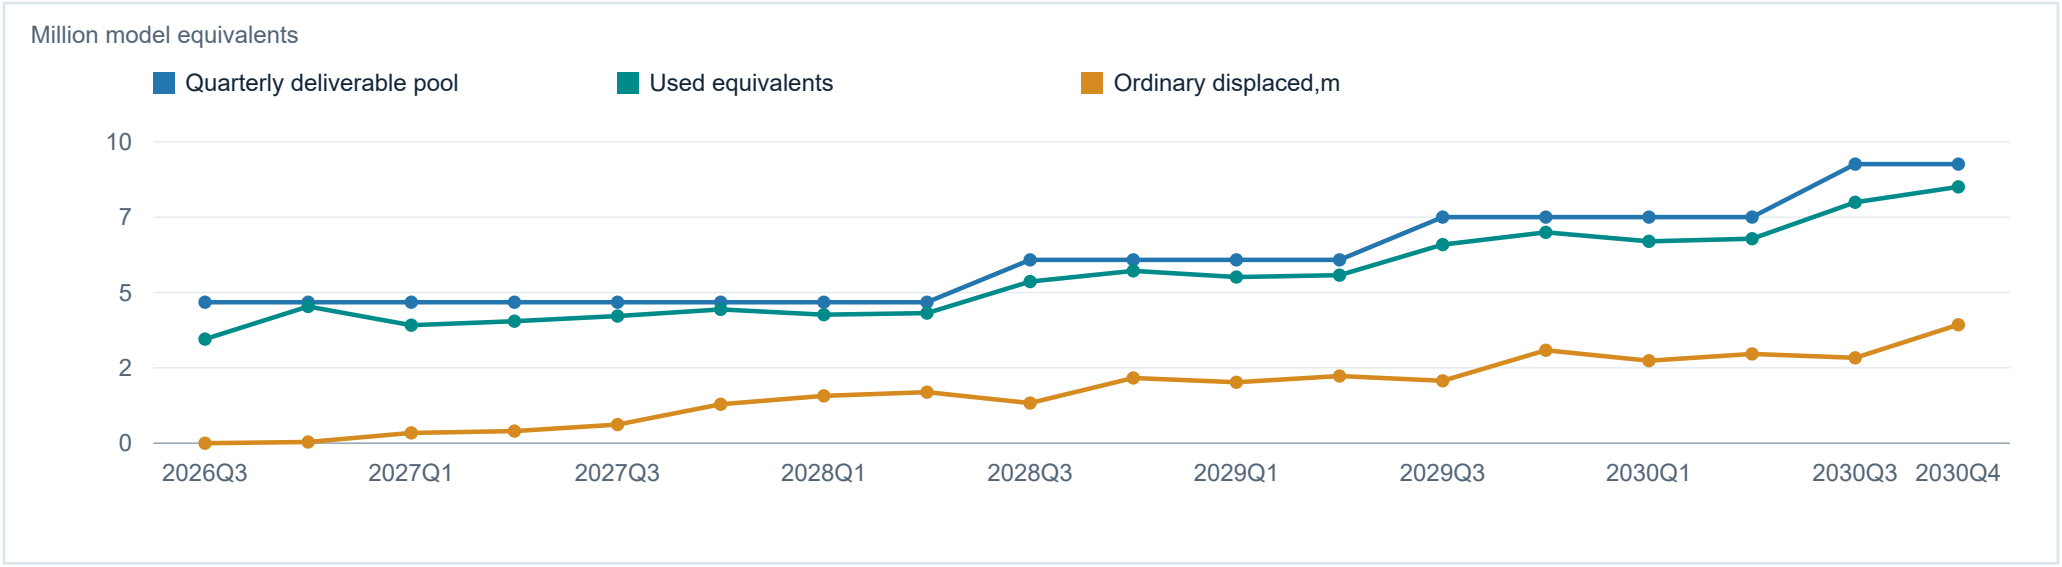

Ordinary units and robot patches are distinct. Robot patches consume the approved model equivalent ratio, not a supplier-proven 64/492 count.

F06 - supporting values

Period / item	Ordinary requested,m	Ordinary fulfilled,m	Robot requested,m patches	Robot fulfilled,m patches

Model assumption: 1.5 m cash capex per incremental 1 m annual equivalents; two-quarter qualification lag; .88 productive fraction and 10% annual DA from next quarter. About 4.31 x installed allocated DA proxy is not a measured engineering premium.

E05 | Issuer illustration of motion-capture apparel in the July 29 World Robot Conference preview. It represents a system-level application, not an ordinary flexible-film piece or a disclosed qualified revenue volume. Source: Hanwei; 2026.07.29. https://hanwei.cn/news_detail/203.html

E06 | Thin-film platinum-resistance temperature-sensor chips in Hanwei's July 23 product preview. The September 17 article separately reports more than 20 m/year chip capacity. This is a different product/capacity pool from Nengstar's flexible-sensor line. Source: Hanwei; 2026.07.23. https://hanwei.cn/news_detail/201.html

Keep the reported>20 m/year thin-film platinum-chip capacity separate from flexible/tactile capacity. Likewise the old 38.2 m/year funded MEMS packaging design concerns gas/humidity/pressure/flow sensors and is separate. The funded MEMS investment was reduced after the Najie strategic investment to avoid duplicate construction; historical design DA is not current actual DA.

190 k commissioning and cannibalization

The gas-safety project reached ready-for-use June 30, 2026. H1 cumulative fund use was about CNY 89 m, or 75% of adjusted commitment CNY 118 m; this is fund-use progress, not physical utilization or customer qualification. The historical source is a December 2020 registration draft mirrored January 2021. Its prices/costs identify bounded product scopes, not current guidance.

Historical source design - three distinct funded project SKUs

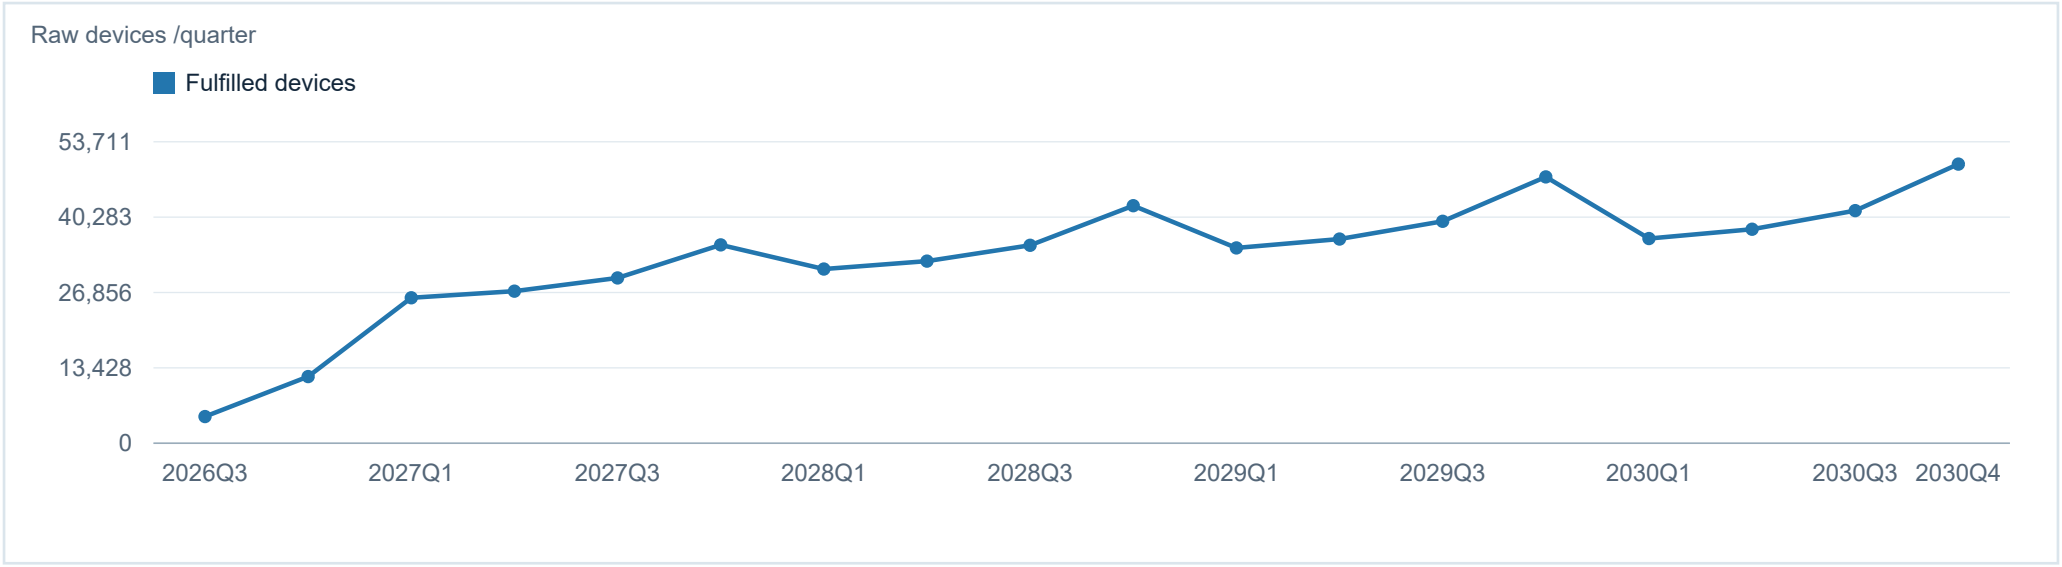

SKU	Annual raw units	Tax-inclusive CNY/unit	Historical BOM CNY/unit
gas_safety_detector	90,000.00	980.00	433.63
alarm_controller	40,000.00	1,150.00	508.85
portable_gas_detector	60,000.00	1,150.00	508.85

Registration draft pp 91-92. Product revenue uses gross ASP/1.13×approved outcome price factor; source cost estimates receive model factor of 1.15 extrapolation, not a measured inflationindex.

Project fixed costs - source and model boundary

Cost	Historical annual CNYm	Approved modeled treatment
Factory payroll	7.94	Costfactor 1.15 and subsequent 3% cash wage growth
FactoryDA	7.09	Charged in owning factory cost; added back once
Admin payroll	6.17	50% incremental fraction, cost factor and cash wage growth
Admin buildingDA	1.90	Only 0.95 annual charged by model; not issuer-reported actual current DA

F10 | 190 k line modeled fulfillment - raw units, not millions

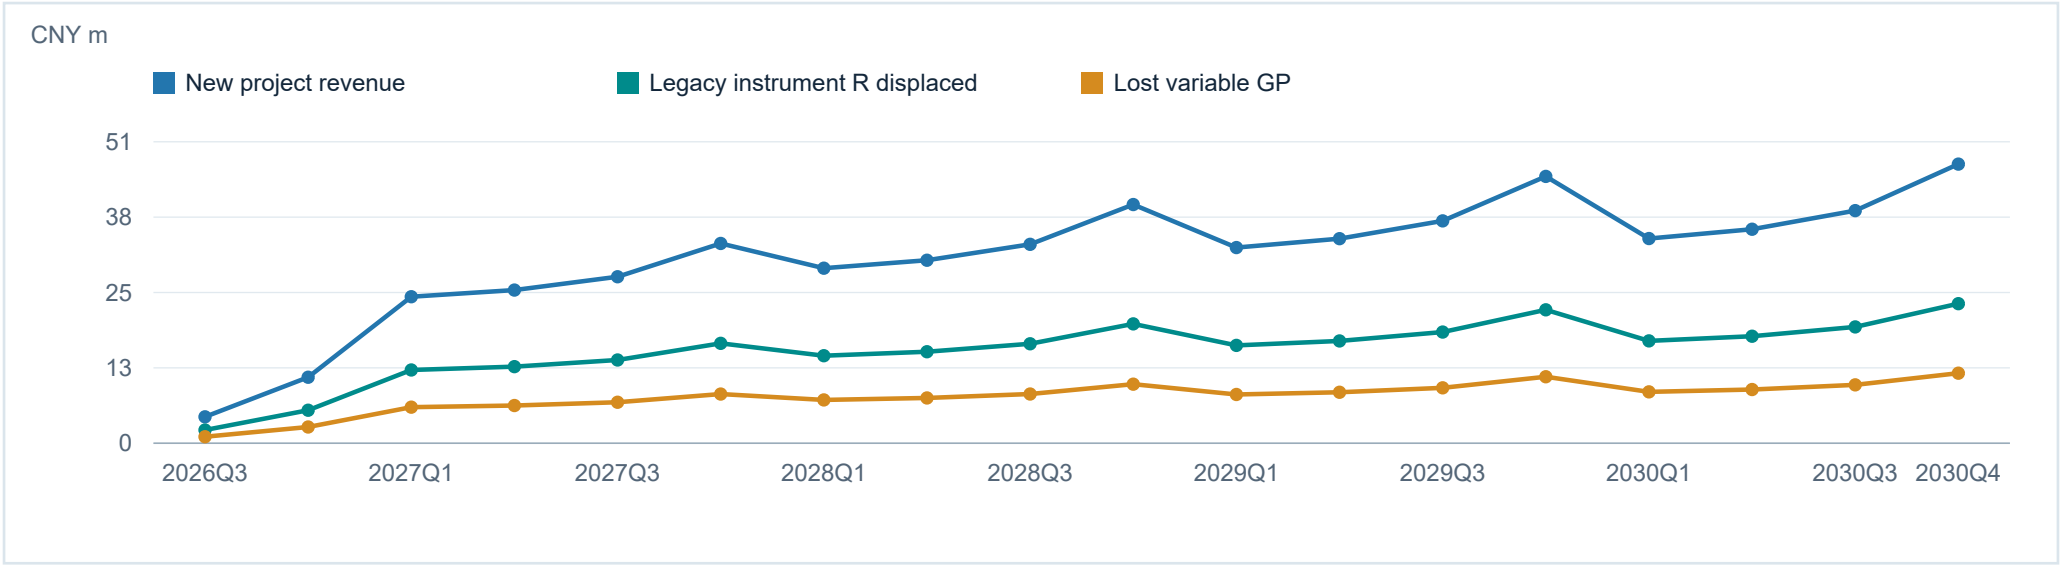

2027+ annual design×annual utilization×quarter seasonality, with no second÷4. H2 2026 uses separate quarter commissioning assumptions. These are model shipments, not reported actuals.

F10 - supporting values

Period / item	Fulfilled devices

54 scoped SKU rows; design units repeat source annual design, fulfilled units are quartermodel output. No inferred whole-meter ASP.

Gas-platform capture after overlap

E08 | September 17 joint launch of the Huawei/Hanwei intelligent gas-management-platform solution, published September 18. The event concerns gas management. It is not evidence of a humanoid hardware award, a booked contract amount or Hanwei capture of the entire cloud/hardware wallet. Source: Hanwei; 2026.09.18. https://hanwei.cn/news_detail/220.html

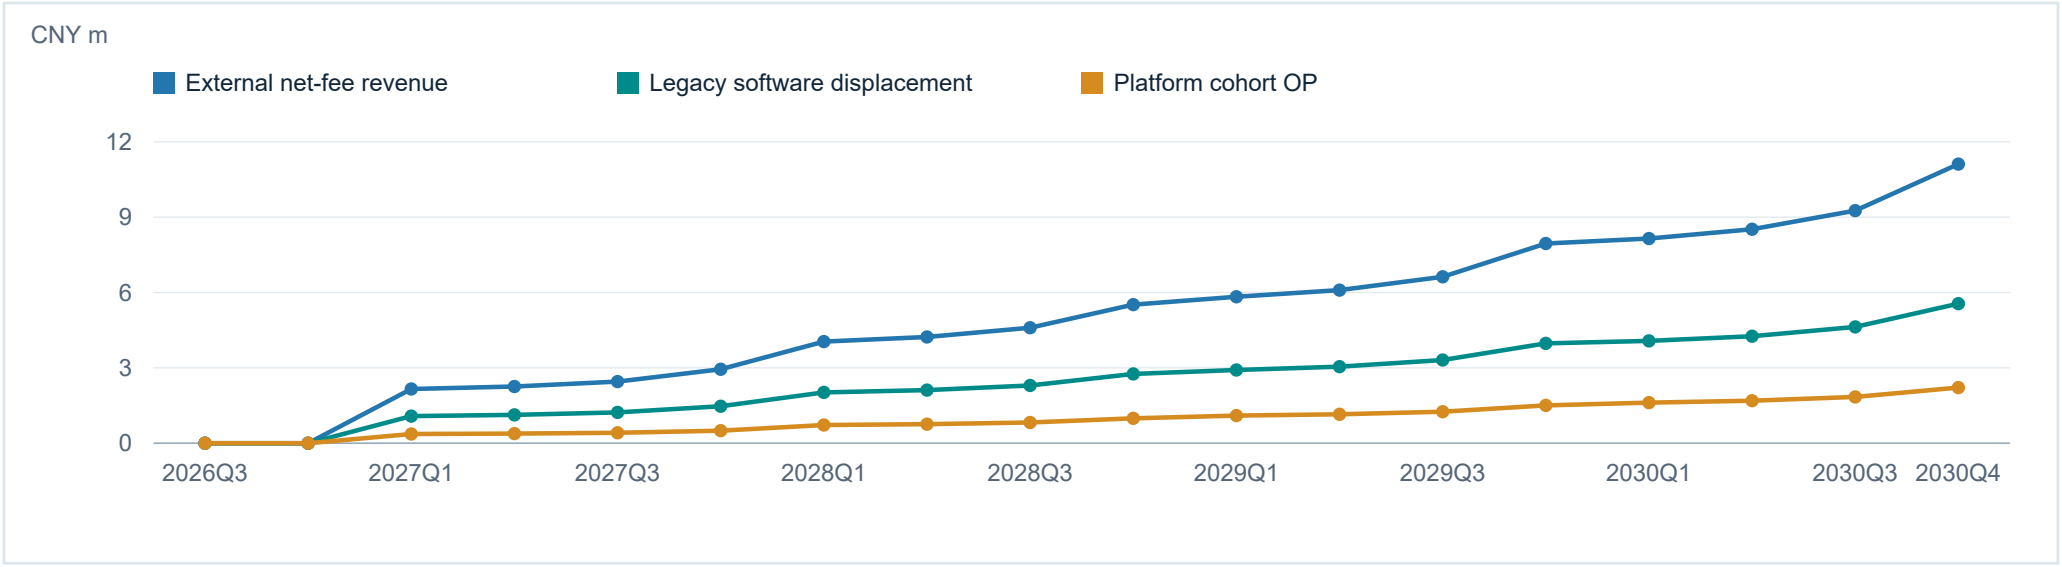

Endpoint gross means Hanwei EXTERNAL-BILLED net software/integration revenue BEFORE company legacy displacement, not combined platform TAM. It excludes Huawei cloud/license pass-through and ALL Hanwei sensor/instrument hardware already counted. Source wallet/capture is undisclosed; selected amounts are LOW bounded net company endpoints. 50% legacy replacement handles cannibalization, not proof of Hanwei market share.

D03 | Net external fee is a narrow company wallet

Gas management program → Exclude cloud/license pass-through → Exclude already counted hardware → Hanwei net fee, then displacement

The source event is a joint gas-management-platform launch. It is not a humanoid supply award or a disclosed contract amount.

F12 | Gas-platform software model and legacy overlap

Model-bounded externalcompany endpoints before legacyreplacement;50% displacement is a model overlap adjustment, not proof of Hanwei market share. Fixed costs remain.

F12 - supporting values

Period / item	External net-fee revenue	Legacy software displacement	Platform cohort OP
2026 Q3	0	0	0
2026 Q4	0	0	0
2027 Q1	2	1	under 1

2030 Q2	8	4	2
2030 Q3	9	4	2
2030 Q4	11	5	2

Model-bounded externalcompany endpoints before legacyreplacement;50% displacement is a model overlap adjustment, not proof of Hanwei market share. Fixed costs remain.

Rule 16 numeric probability ledger

All 13 signal definitions below use the same coherent 18-outcome operating model. Existing cohort group OP exposure is shown before minority attribution. It is not an incremental attributable target, a causal event valuation or a separate amount to add. A signal-off difference is a whole-model counterfactual and remains nonadditive. Initial coverage has no prior approved Hanwei target or score delta.

Instrument and Huawei legacy-overlap fields in ledger records are whole-company overlap context, already included in the instrument/integration bridges. They are not additional costs to deduct from every cohort OP. Flexible ordinary output displaced by robots is its own shared-capacity field.

Every mapped signal-off control holds the selected law and state probabilities except for the named intervention. Shared costs, capacity, overlap, ownership and cash make differences nonadditive. Common revision tests are in the scored-risks/revision section; no automatic score or probability change is assumed.

1. H1 mix and deconsolidation

H1 mix and deconsolidation are actual calibration, probability 1 and included once. No additive event revenue, financial revision, or prior approved Hanwei Base/ceiling exists.

Definition, timing and current disposition

Field	Selected treatment
Probability / factor	1 as defined above; already incorporated once
Probability scope	Shared coherent 18 outcomes; no event multiplication of OP/ceiling/Base
Timing	source calibration
Disposition	No additive increment
Reference / overlap	Source/calibration and legacy overlap stated explicitly in definition. No prior approved model delta; modeled growth is current initial coverage.
Controls	Counterfactual differences share costs/capacity/overlap/ownership/cash; do not sum them or present them as independent news targets.

2030Q4	993.95	603.58	390.37	131.81

Money CNYm; new/totalshares are millions; eligibilityfactor is a ratio. These are expectations of the existing conditional fields, not one physically attainable cash path. Stocks/days are not summed across quarters.

2. Flexible sensing and shared capacity

20 m line nameplate is a source fact, probability 1. Small-batch robots, DroidUp/Moya, IMU/force and BCI evidence enter the SAME slow.35/central.45/fast.20 demand/mix endpoints and shared 20 m component capacity, not independent probabilities or add-on revenues. Robot processing consumes 4 LOW capacity equivalents first; ordinary output is displaced within the same pool.

Definition, timing and current disposition

Field	Selected treatment
Probability / factor	Same 18 joint states; no independent event multiplier
Probability scope	Shared coherent 18 outcomes; no event multiplication of OP/ceiling/Base
Timing	same adoption/funding states and quarterly capacity ramp
Disposition	Conditional modeled bound; signal-off difference is nonadditive
Reference / overlap	Source/calibration and legacy overlap stated explicitly in definition. No prior approved model delta; modeled growth is current initial coverage.
Controls	Counterfactual differences share costs/capacity/overlap/ownership/cash; do not sum them or present them as independent news targets.

3. MEMS packaging and upstream chips

Parent/Winsen funded packaging is distinct from Najie upstream. LOW2% sensor H1 allocation and 78.88% FORECAST retention proxy use explicit cost and capacity; neither is an audited Najie external-revenue segment. Legal holding remains source read-only.

Definition, timing and current disposition

Field	Selected treatment
Probability / factor	Same 18 joint states; no independent event multiplier
Probability scope	Shared coherent 18 outcomes; no event multiplication of OP/ceiling/Base
Timing	same adoption endpoints; calibrated cost/capacity
Disposition	Conditional modeled bound
Reference / overlap	Source/calibration and legacy overlap stated explicitly in definition. No prior approved model delta; modeled growth is current initial coverage.
Controls	Counterfactual differences share costs/capacity/overlap/ownership/cash; do not sum them or present them as independent news targets.

5. 190 k gas-safety delivery

New delivery uses selected raw SKU units, ex VAT prices, BOM, fixed cash/DA/RD and 50% legacy instrument displacement before variable COGS. All legacy fixed cost is retained. Old December 2020 draft economics are conditional references, not current guidance; sunk spending is not added again.

Definition, timing and current disposition

Field	Selected treatment
Probability / factor	Same 18 joint states; no independent event multiplier
Probability scope	Shared coherent 18 outcomes; no event multiplication of OP/ceiling/Base
Timing	ready June 30 source; modeled H2 utilization and annual utilization/seasonality
Disposition	Conditional modeled bound with old-feasibility stress
Reference / overlap	Source/calibration and legacy overlap stated explicitly in definition. No prior approved model delta; modeled growth is current initial coverage.
Controls	Counterfactual differences share costs/capacity/overlap/ownership/cash; do not sum them or present them as independent news targets.

Huawei_increment_off	17.076088	-0.078912	0.0000%	0.000000

7. Dayu mixed-equipment award

Dayu 8.84764 m mixed-package award is already in core instruments, probability 1. Packagequantity 1 is not a gas-detector unit ASP.

Definition, timing and current disposition

Field	Selected treatment
Probability / factor	1 as defined above; already incorporated once
Probability scope	Shared coherent 18 outcomes; no event multiplication of OP/ceiling/Base
Timing	existing core instrument demand
Disposition	Zero extra revenue/OP; already included
Reference / overlap	Source/calibration and legacy overlap stated explicitly in definition. No prior approved model delta; modeled growth is current initial coverage.
Controls	Counterfactual differences share costs/capacity/overlap/ownership/cash; do not sum them or present them as independent news targets.

Actual source bindings - original URLs and exact anchors

CCGP_20260930_Dayu_gas_safety_award /2026-09-30	Award amount, winning Hanweiparent, quantity 1 mixed-equipmentpackage | CNY 8,847,640 mixedlaserdetector/pressure/valve/vehicleinspectionpackage; quantity 1 isnotindividualdevice ASP or incrementalforecastonitsown.	https://www.ccgp.gov.cn/cggg/dfgg/zbgg/202609/t20260930_27435912.htm

Full local paths and source hashes are preserved in Appendix A5 and the companion ledger. Every binding was rehashed against the original.

Already-included award - zero extra increment

Award CNY	Package quantity	Extra revenue CNYm	Extra OP CNYm
8,847,640.00	1.00	0.00	0.00

Already included in ordinary instrument demand; no separate recognized project revenue/acceptance decomposition is disclosed.

8. Contingent minority put

Sitaibao 35.39% economic differs 52.72% voting. Contingent put after 5 years is 2030 liquidity reserve only: no OP, assumed cash payment, automatic acquisition or ownership gain. Aggregate 93.66238962 m book obligation not fully allocated.

Definition, timing and current disposition

Field	Selected treatment
Probability / factor	Same 18 joint states; no independent event multiplier
Probability scope	Shared coherent 18 outcomes; no event multiplication of OP/ceiling/Base
Timing	selected 2030 Q4 reserve; contingent exercise/price/settlement gaps retained
Disposition	Zero OP/outflow/ownership increment; reserve only
Reference / overlap	Source/calibration and legacy overlap stated explicitly in definition. No prior approved model delta; modeled growth is current initial coverage.
Controls	Counterfactual differences share costs/capacity/overlap/ownership/cash; do not sum them or present them as independent news targets.

Money CNYm; new/totalshares are millions; eligibilityfactor is a ratio. These are expectations of the existing conditional fields, not one physically attainable cash path. Stocks/days are not summed across quarters.

13. Minority attribution and cash funding

Economic look-through and unallocated minority residual are explicit LOW proxies. DSO/DIO, cash taxes, nonbank service, contingent reserve and finite bank caps follow selected law; negative OP/cash and unfunded stress are retained. No unlimited debt or forced repair.

Definition, timing and current disposition

Field	Selected treatment
Probability / factor	Same 18 joint states; no independent event multiplier
Probability scope	Shared coherent 18 outcomes; no event multiplication of OP/ceiling/Base
Timing	complete 324 quarter cash/ownership rows
Disposition	Source/proxy gaps and bounded sensitivities
Reference / overlap	Source/calibration and legacy overlap stated explicitly in definition. No prior approved model delta; modeled growth is current initial coverage.
Controls	Counterfactual differences share costs/capacity/overlap/ownership/cash; do not sum them or present them as independent news targets.

18 outcomes and the complete ceiling path

Specific management small-batch/trial evidence supports active ramps, but FY2027 robot revenue is not established. Financing is conditional on execution and market conditions; faster commercialization raises execution probability. Support residual is issuer-classified recurring but exact source/continuation uncertain. These are subjective model judgments, not observed frequencies.

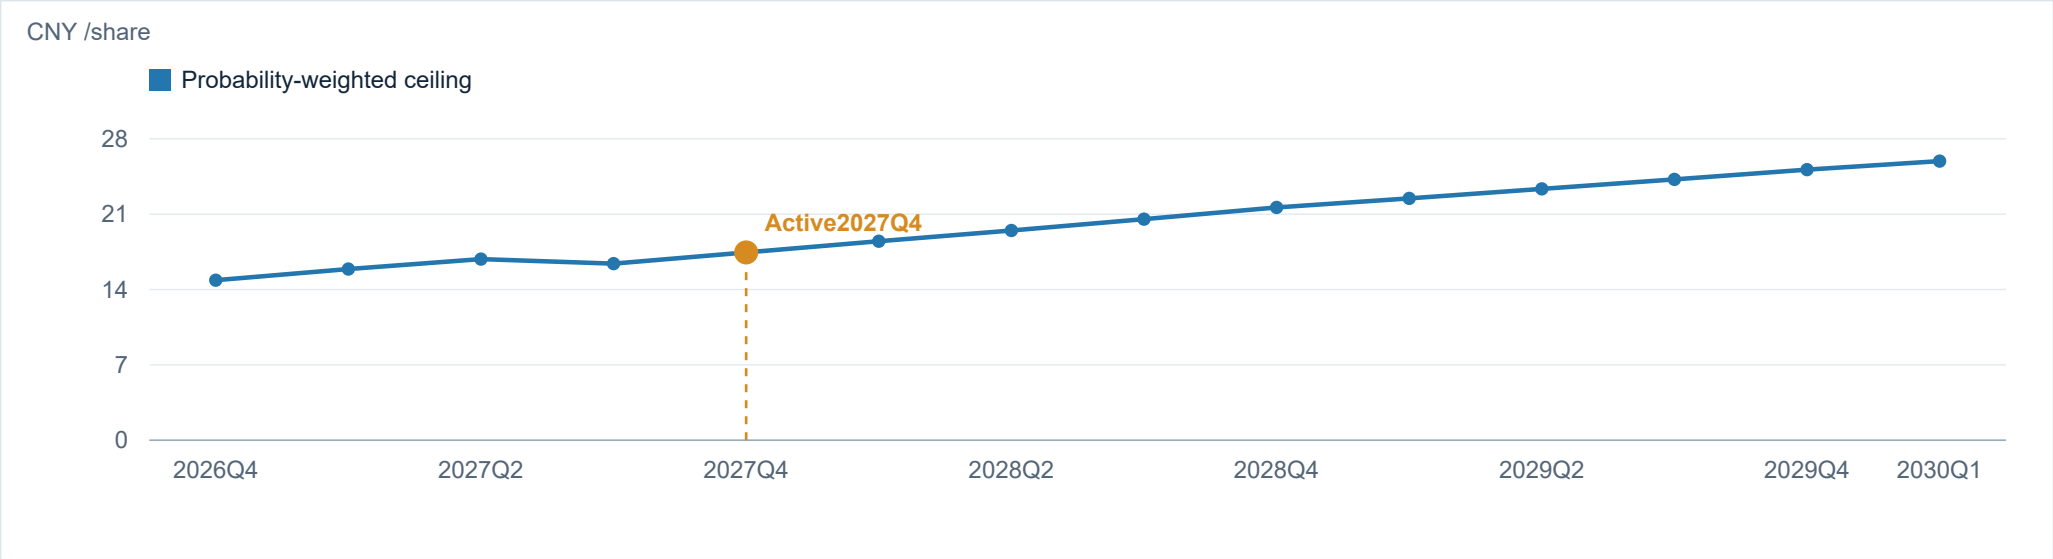

Evaluate each coherent outcome through its quarterly operating and financing law. Each ceiling is MAX(0,SUM(OP_attributable for ceiling quarter plus next three quarters)*20/that outcome beginning-ceiling-quarter diluted shares). Weight these outcome ceilings once. Do not use a probability-weighted denominator or multiply by Base.

Coherent joint outcomes

Outcome ID	Adoption	Funding	Support	Joint probability

Numerical residues within the existing model feasibility tolerance display 0; exact values remain in the model/audit. True small nonzero amounts displayunder 1. Stress gaps are never silently repaired.

Cash tax uses MAX(0, recurringgroup OP minus bank interest minus nonbank interest plus cash interest) times the conditional cash ETR. Charged DA is added once. Thesource ETR and this consolidatedcash proxy do not prove legal inter-entity tax-loss offset. Source H1 CFO remains unaltered rather than forced to match an incomplete operating balance bridge.

H-share listing size, approval, price and timing remain conditional. The put balance of about CNY 94 m is not all proved to be exclusively Sitaibao; the major 2025 increase is linked to that acquisition. The fiveyear exercise mechanism after December 2025 completion creates later contingent liquidity exposure. The model reserves cash at 2030 Q4 and books no exercisepayment or ownership gain during the operating forecast.

Sensitivities and constraint states

Every control is a diagnostic against the same approved operatinglaw. It is not another active case or a set of independent additive news values. A control's changed inputs, held constant conditions, financing/shares and calibration-domain status must be read with the result. Invalidphysicalcalibration produces no ceiling, not zero value.

All reviewed primary controls

Control	Changed input(s)	Active ceiling CNY	Difference CNY	Unfunded p	Max gap CNYm	Physical domain

Each row is a selected diagnostic against the same law. Invalid/no-result cells remainn/a rather than zero. Control differences are not additive news values.

F19 | Separate growth controls are not additive

Named-new-growth-off retains baseline costs/assets; legacy-flat is a different demandcontrol. The sameconditional funding/support law is held unless a namedcontrol changes it.

F19 - supporting values

Period / item	2027 Q4 intrinsic ceiling
active	17
named_new_growth_off	17
legacy_demand_flat	10

Named-new-growth-off retains baseline costs/assets; legacy-flat is a different demandcontrol. The sameconditional funding/support law is held unless a namedcontrol changes it.

Joint DSO+30 days/DIO+15 days stress has 19% unfunded probability and maximum 81 m funding gap. The source-opening-bank-cap stress has 6% unfunded probability and maximum 39 m gap. These are conditional stress diagnostics selected in the model, not healthyfinancing plans or automatically repaired growth paths.

Supplemental utilization 35%/85% and MEMS6%/optical 2% allocations are diagnostics with active-quarter ceilings of about CNY 17/CNY 16/CNY 17 respectively; activeinputs andscore are unchanged. They supplement rather than replace thedefault calibration. The exact control values, LOW unit mapping, capex premium and ownership bounds remain visible.

Scored risks and revision tests

Five distinct risk classes - total deduction 5 points

Risk class	Deduction	approved description
1	-1	Competition: several technical routes and suppliers can serve gas, force and tactile sensing.
2	-1	Manufacturing and qualification: capacity, saleable mix and accepted customer volume can diverge; higher-grade equipment can add depreciation before sales.
3	-1	End-market adoption and timing: full-body skin, data-capture apparel and IMU deployments remain early; strong demonstrations do not fix 2027 revenue.
4	-1	Receivables, cash and financing: cash collections, finite debt headroom, nonbank obligations and conditional equity must support growth.
5	-1	Conglomerate and capital allocation: partial ownership, unallocated subsidiary losses, acquisition goodwill and contingent puts complicate the parent's economic capture.

Evidence that changes the current model

Test	approved revision trigger
1	Oct 30 Q3 actuals: replace reconstructed inputs after the source is published; preserve all already-published historical forecast displays.
2	Named qualification and accepted volume: raise or lower the defined outcome probabilities and unit economics, rather than wait for every customer to become public.
3	Nengstar external sales, product-level gross profit and legal ownership chain: recalibrate the product mix and replace retention proxies.
4	New-line accepted shipments, realized SKU prices and unavoidable manufacturing cost: revise the commissioning and replacement bridge.
5	H-share filed terms, approval, issue price and completed shares: replace cash, timing and denominator assumptions together.
6	Receivable collections, bad-debt charges, VAT eligibility, debt renewals and put exercises: revise the cash feasibility and recurring-income bridge.

Source and model gaps that remain consequential

Latest actual is unaudited H12026;Q3 release scheduled Oct 30. No numericalcurrent guidance found. Q32026 bridge is a current model reconstruction and mustnot populate historical Master/QCdisplays.

Full spoken transcripts/replays unavailable. The evidence review covered the complete 26 Q Apr 24 FY2025 briefing and 59 Q May 22 collectiveearningsbriefing, supplementary Apr 8 FY2024 annualbriefing and Aug 4 specificinvestorvisit. Completewrittenrecords do not establish full spokencoverage.

Nengstar standaloneexternal revenue/profit, productmix, utilization, numericyield and 20 m capacitypiece-to-array/systemmapping undisclosed. LOW model calibratedmix/unit/cost proxies and sensitivities are mandatory.

Nengstar 38% direct13% indirect economicchain is unverified; disclosed 51% aggregate is not assumed provenlookthrough. Totalminority loss residual 11 m is unallocated; do not call it Nengstar.

RMB 900 reference=492 pointfootarray;RMB 15 ksystem=64 scanpoints plus electronics/software. Neither defines 64/492 manufacturingpieces or a realized ASP. Investor 1500 perhand notendorsed.

190 kproject December 2020 draftfeasibilityprices/costs are oldconditionalreferences, notcurrent guidance; ready Jun 30 andfundspend 75% do notproveutilization/qualifiedshipments. Sunk cash and the CNY 33 m fund reclassification must not be added again.

HIPOsize/price/timing/approval remain conditional; announced 15% postissuecap is not 15% ofoldshares. Unlocks are notnew shares.

Sitaibao 35% economic differs 53% votingcontrol;5 yearputafter Dec 2025 completion is notnear-term fixed cashmaturity or automaticownership gain. H1 aggregateput 94 m notfullyallocated.

Input VATextra has 2027 statutoryend/listeligibility; governmentrecurringresidual 10 m source notproven software VAT. Existingperformance-obligationbuckets are 2 m belowstatedtotal; no missingyear invented.

Financially feasible default paths do not establish financing availability. DSO+30/DIO+15 joint stress has 19% unfunded probability and maximum 81 m gap; source-openingbank cap stress has 6% unfunded probability and maximum 39 m gap. No automatic emergency shares/debt.

Cross-watches: official Cubic gas-sensor material and PaXini tactile-sensor materials show competing technical routes and supplier choices; they are not comparativequalification tests or independent demand confirmation. Choho's strategic cooperation is not a purchase order, Huawei's event is gas software, and exida's preliminary cooperation intent is not a new SILcertificate.

Appendix A1 - all 14 aggregate and 252 conditional F4 derivations

Each spread is a complete 18-outcome derivation for its ceiling quarter. OP1-OP4 are signed attributable recurring OP before financing/tax in the exact printed earningswindow. F4 sum remains signed; ceiling uses MAX(0,F4 sum×20/shares). Probability is applied once to that conditional per-share result. Shares are millions at the beginning of the ceiling quarter. Money CNYm unless ceiling/contribution CNY/share.

2026 Q4 - exact window 2026 Q4, 2027 Q1, 2027 Q2, 2027 Q3

2026 Q4 - all 18 conditional windows

Aggregate result uses conditional contributions

Quarter	Sum of 18 p×ceiling	Canonical aggregate	Weighted F4 OP diagnostic	Active
2030Q1	25.49691623	25.49691623	453.51755837	No

No probability-weighted denominator. Complete conditional operating/cash/funding context follows in Appendix A2.

Appendix A2 - all 324 conditional quarterly operating/cash/share rows

All 18 outcomes have 18 forecast quarters. The tables below keep operating economics, minority attribution, net workingcapital, capex/DA, financing, cash and share denominators separate. Model 2026 Q3 is current reconstruction;2026 Q4-2030 Q4 are Model. One cost or cash figure is not inferred from a blended valuation denominator.

Appendix A3 - conditional product economics and physical scope

Lossless printed deduplication: product costs/capacity are printed once only after exact canonical equality proves the specified fields identical between the two support states. The state-sharing key is adoption+funding+quarter and bothoutcome IDs are printed. Separate support/OP/NCI/tax/cash values remain in all 324 rows in Appendix A2; both product OP values are shown here. Nothing is deduplicated in the canonical model. CNYm except explicitly scoped units. These analytical products are not issuer-reported legalentitysegments.

slow /none - exact shared product-cost fields

State-sharing key: slow + none + quarter. Source outcomes: slow__none__continues AND slow__none__not_continued. Common fields below have been compared with exact equality, not an averaging tolerance. Both support-state OP columns remain separate.

All product cost / profit rows - both support states represented

190 kraw units are actualraw model unitcount, notmillions. Normalized MEMS/opticalunits are scopeproxies, not waferoutput or completed 9-axis/datacenter systems.

slow /base - exact shared product-cost fields

State-sharing key: slow + base + quarter. Source outcomes: slow__base__continues AND slow__base__not_continued. Common fields below have been compared with exact equality, not an averaging tolerance. Both support-state OP columns remain separate.

All product cost / profit rows - both support states represented

190 kraw units are actualraw model unitcount, notmillions. Normalized MEMS/opticalunits are scopeproxies, not waferoutput or completed 9-axis/datacenter systems.

slow /full - exact shared product-cost fields

State-sharing key: slow + full + quarter. Source outcomes: slow__full__continues AND slow__full__not_continued. Common fields below have been compared with exact equality, not an averaging tolerance. Both support-state OP columns remain separate.

All product cost / profit rows - both support states represented

190 kraw units are actualraw model unitcount, notmillions. Normalized MEMS/opticalunits are scopeproxies, not waferoutput or completed 9-axis/datacenter systems.

central /none - exact shared product-cost fields

State-sharing key: central + none + quarter. Source outcomes: central__none__continues AND central__none__not_continued. Common fields below have been compared with exact equality, not an averaging tolerance. Both support-state OP columns remain separate.

All product cost / profit rows - both support states represented

190 kraw units are actualraw model unitcount, notmillions. Normalized MEMS/opticalunits are scopeproxies, not waferoutput or completed 9-axis/datacenter systems.

central /base - exact shared product-cost fields

State-sharing key: central + base + quarter. Source outcomes: central__base__continues AND central__base__not_continued. Common fields below have been compared with exact equality, not an averaging tolerance. Both support-state OP columns remain separate.

All product cost / profit rows - both support states represented

190 kraw units are actualraw model unitcount, notmillions. Normalized MEMS/opticalunits are scopeproxies, not waferoutput or completed 9-axis/datacenter systems.

central /full - exact shared product-cost fields

State-sharing key: central + full + quarter. Source outcomes: central__full__continues AND central__full__not_continued. Common fields below have been compared with exact equality, not an averaging tolerance. Both support-state OP columns remain separate.

All product cost / profit rows - both support states represented

190 kraw units are actualraw model unitcount, notmillions. Normalized MEMS/opticalunits are scopeproxies, not waferoutput or completed 9-axis/datacenter systems.

fast /none - exact shared product-cost fields

State-sharing key: fast + none + quarter. Source outcomes: fast__none__continues AND fast__none__not_continued. Common fields below have been compared with exact equality, not an averaging tolerance. Both support-state OP columns remain separate.

All product cost / profit rows - both support states represented

190 kraw units are actualraw model unitcount, notmillions. Normalized MEMS/opticalunits are scopeproxies, not waferoutput or completed 9-axis/datacenter systems.

fast /base - exact shared product-cost fields

State-sharing key: fast + base + quarter. Source outcomes: fast__base__continues AND fast__base__not_continued. Common fields below have been compared with exact equality, not an averaging tolerance. Both support-state OP columns remain separate.

All product cost / profit rows - both support states represented

190 kraw units are actualraw model unitcount, notmillions. Normalized MEMS/opticalunits are scopeproxies, not waferoutput or completed 9-axis/datacenter systems.

fast /full - exact shared product-cost fields

State-sharing key: fast + full + quarter. Source outcomes: fast__full__continues AND fast__full__not_continued. Common fields below have been compared with exact equality, not an averaging tolerance. Both support-state OP columns remain separate.

All product cost / profit rows - both support states represented

Selected law - numerical parameters and mechanics

The following is the approved current law, including R3 a overrides. It omits superseded design prose. All unreported mix/unit/cost/retention/financing assumptions are LOW model judgments. No author-selected assumptions have been added.

All selected numeric law inputs

Selected mechanics and current overrides

Mechanic	Approved specification
Valued profit and shares	Use attributable recurring adjusted operating profit before financing and income tax. For each outcome, value the signed nextfour-quarter OP sum at 20 x, floor the resulting conditional ceiling at 0, divide by that outcome's beginning-ceiling-quarter shares, then apply its joint probability once. Cash/NAV and Base are not additional multipliers.
Demand timing	H2 2026 uses the printed product-specific H1 multipliers and Q3/Q4 seasonality. FY2027-2030 use the printed conditional annual growth and quarter seasonality. Utilities revenue does not recur after deconsolidation. These growth/timing inputs are LOW model assumptions.
Source calibration	Flexible/MEMS/optical allocate 4%/2%/1% of reported H1 sensor revenue. Their reference GM assumptions are 42%/20%/25%. The remaining legacy sensor revenue and GP are residuals, so the exact reported sensor and group totals remain unchanged in valid calibrations.
Factory cost pools	Each product COGS is variable COGS plus unavoidable factory cash cost plus factory depreciation. Flexible variable COGS is 45% of revenue; its reference fixed manufacturing cost is 13% of H1 flexible revenue, split 75% cash/25% DA. Novel MEMS/optical fixed COGS is 15% of calibrated COGS, split 60% cash/40% DA. Remaining source fixed pools are allocated by remaining legacy COGS shares.
H1 flexible domain	The LOW timing proxy assumes 10 m annual capacity in Q1 2026 and 20 m from April 1. H1 nominal capacity is 7.5 m equivalents; the 0.90 delivery factor gives 6.75 m. Ordinary and patch output must fit that pool. The factor is not an observed numerical yield. Invalid mix/ASP combinations have no computed ceiling.
Flexible allocation	Robot patches receive priority and consume 4 model line equivalents each; ordinary pieces consume 1. Both are clipped to the same quarterly deliverable pool. Ordinary displacement and unfilled demand remain explicit. The 492-point array and 64-scan-point system do not establish this mapping.
Flexible expansion	Cash is spent at Q1 of the requested annual capacity step, relative to the previous requested nameplate; installed 2026 capacity is not rebuilt. A positive 1 m annual-equivalent step costs 1.5 m CNY. Capacity qualifies at Q3 aftertwo quarters. Annual support cash is 0.10 m per incremental 1 m qualified annual capacity, with 50% of the quarterly support run-rate before commissioning.
Capital and depreciation	Productive assets equal 88% of cash capex. Newasset depreciation is 10% annually, charged from the following quarter. Charge DA to its owning factory or expense pool and add exactly that charge back for cash once. No halfyear convention or inflation of the fixed source DA pool is used.
Legacy throughput	Baseline 2026 hardware annual revenue-equivalent capacity is the fixed reference run-rate divided by 0.70, excluding flexible, the separate 190 k project and services/other. From 2027, capacity expands by 0.50 times positive cumulative productive legacy capex net of the approved physical DA proxy, divided by source PPE; use only prior-quarter balances. Book depreciation does not destroy baseline physical capacity automatically.
190k units and revenue	From 2027, each SKU's quarter units equal annual design units times annual utilization times quarter seasonality; do not divide by 4 again. H2 2026 uses its separate quarter utilization rule. Revenue uses raw units divided by 1 e 6, historical tax-inclusive ASP divided by 1.13 and the conditional price factor. Materials use the historical BOM times 1.15.
190k fixed costs and overlap	Retain factory payroll and DA after commissioning even when output is low. Other factory cash cost is 1% of project revenue. Incremental annual admin includes 50% of historical admin wages after the cost factor and 50% of historical 1.9 m building DA, plus 2% of project revenue. Thus only 0.95 m admin DA is charged and added back. Remove 50% of new project revenue from requested legacy instrument revenue before computing variable COGS; keep unavoidable legacy fixed cash and DA.
MEMS and optical endpoints	The annual endpoint arrays are total cohort revenue, not additions to reference revenue. Normalized unit ASP is 25 CNY per MEMS sensor-equivalent and 800 CNY per optical packaged-module equivalent. Both are LOW scope proxies and finite legacy throughput constraints apply. They are not full 9-axis systems, wafers or datacenter transceivers.
Gas-platform wallet	The endpoint is Hanwei's external billed net software/integration fee before 50% legacy replacement. It excludes cloud/license pass-through and sensor/instrument hardware already counted elsewhere. Replacement reduces legacy revenue before variable COGS, while unavoidable fixed costs remain.
Operating expense floors	Sales/admin/core R&D and cohort R&D use the selected rate-versus-floor law. Separate source cash from assigned DA: grow cash floors 3% annually while source DA stays constant. Core R&D covers nonflex/non MEMS/nonoptical revenue; novel cohort R&D is separate. Reference flexible R&D already includes robot variable R&D, so subtract it from the baseline before adding the current 12% of robot revenue.
Cohort allocations	Allocate base selling/admin, surcharges, credit and inventory/contract losses to every cohort by recognized external revenue. Incremental 190 k admin belongs only to that project. Allocate recurring grant residual and PIT rebate by revenue; eligible input VAT benefit by COGS. The cohort OP sum must equal group OP.
Government andPIT	Only the issuer-classified recurring government residual 10.05441558 m is scaled in the continuing-support state; its exact source is not proved to be software VAT. PIT handling-fee rebate is a separate linear proxy: H1 rebate/source H1 revenue times forecast revenue times 75% continuation weight. It does not create another joint outcome dimension.
InputVAT timing	Source H1 input VAT additional deduction remains exact. The model uses the selected 90% current-list eligibility proxy through 2027 Q1, the exact Q2 day-weighted renewal formula and 90%×75% in 2027 Q3/Q4. The statutory policy ends December 31, 2027 absent a new admitted extension. Eligibility weights are model judgments, not proof of each entity's listing.
Economic ownership	Flexible retention is 37.74% direct plus 13.03% disclosed indirect times 50% proxy retention, or 44.255%. The indirect legal/economic chain remains unverified. MEMS uses 78.88% as an analytical-cohort proxy; optical uses 100% with explicit bounds. These are not claims of audited standalone cohort profits.
Unallocated minority bridge	Raw total minority NI divided by 1 minus actual group ETR is a pretax-NI equivalent, not recurring OP. Subtract computed product-cohort NCI to form the unallocated residual. Forecast 50% of that residual before conditional annual multipliers; preserve 0/100%/doubleloss tests and the gap to source NI.
Net working capital	Calibrate days from exact source NET AR/inventory/AP and actual LTM revenue/COGS. Future stocks use genuine rollingfour-quarter group values and printed seasonality/day changes from 2027. Prepayments and contract balances scale with source LTM revenue ratios. With NET stocks in delta NWC, do not add back expected receivable/inventory losses again.
Cash tax and cash bridge	Cash income tax is MAX(0, group recurring OP minus bank interest minus nonbank interest plus cash interest) times conditional cash ETR. Start cash operations from consolidated recurring OP, add charged DA once, and subtract netinterest, tax, delta NWC, capex, dividends and paid principal before financing. Source historical CFO is not forced to reconcile to incomplete cash-timing data.
Bank debt	Current bank maturity 679.72756086 m is spread over 2026 Q3-2027 Q2; selected conditional fractions roll. Later scheduled annual maturity is 40% of opening bank debt. Rollovers leave principal outstanding; only unrolled principal consumes cash. New draws are bounded by the selected bank cap and minimumcash/reserve need. Remaining funding gaps are exposed without invented emergency shares or debt.
Issue cash and shares	The base cap is a proposed postissue 15%, not 15% of old shares. Conditional base issue is floor(57,784,521×75%)=43,338,390 new shares; full issue including 15% greenshoe is 66,452,199. Cash and whole new shares enter from the beginning of the selected issue quarter. The 16 CNY issue-price proxy is for financing cash, not a valuation or A/H price claim.
Interest and nonbank service	Bankinterest uses opening bank principal; quarter-end new draws incur no samequarter interest. Cashinterest includes IPOcash issued at the beginning of its quarter. Nonbank interest and lease/installment principal service are separate; later repayment schedules beyond exact source maturities are LOW proxies.
Dividends and put	Parent cash dividends follow the selected annual amount and quarter. Minority dividends are 20% of each positive estimated minority-cohort NI, summed before netting losses; unallocated pretax-NI equivalents do not have interest subtracted twice. The 2030 Q4 put reserve raises the liquidity requirement only: no cash exercise payment, OPexpense, debt principal repayment or automatic ownership gain is booked.
Historical design limits	The 190 k and funded MEMS feasibility source is the December 2020 registration draft mirrored January 2021. The 1.15 cost factor is model extrapolation, not a measured inflation index. Historical MEMS equipment DA15.7795 m plus building DA0.8867 m are original design estimates; reduced equipment investment means they cannot be labeled current actual line DA.

Appendix A5 - offline source register and provenance

All important figures, data tables, assumptions and derivations are embedded in this report for offline reading. Original URLs and absolute localpaths below are supplementary access/provenance, not required externalimage dependencies. Source originals retain fullcontent SHA256. Nativeissuer evidence, officialprocurement/tax material, identified supplier scopes and issuer-authored mirrors have different weights.

Calculation and authoring bindings

The canonical portable model binds the approved frozen default economics and accepted Rule 16 ledger. The final unit metadata identifies money, raw units, million equivalents, ratios and timing without changing any equation or financial output.

Canonical model | Formula workbook | Calculation graph | Rule 16 (in Model)
