Three-Circle Group: qualified components must earn their growth

Research cut: October 23, 2026, Toronto. Three-Circle supplies advanced ceramics and electronic components across MLCCs, optical interconnect parts, ceramic materials and equipment. The opportunity comes from higher-value qualified content, precision manufacturing and customer acceptance as computing and power infrastructure expand.

Miniaturized high-capacitance MLCCs can occupy more valuable board positions. Optical ferrules, guide pins and ceramic packages can gain qualified content in faster links. Fuel-cell electrolyte sheets add a distinct materials opportunity. Each sale must fit a specific product wallet, clear qualification and cover manufacturing, support, research and working-capital costs.

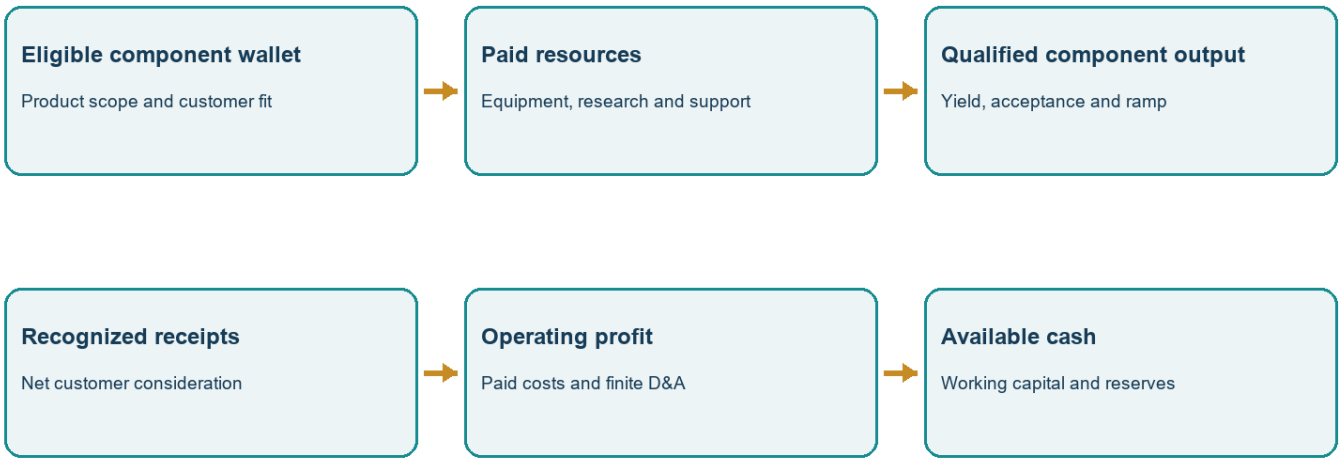

The current probability-weighted Q4 2027 ceiling is CNY 98.872695 per share at the preserved 28× operating-profit method. Its owning four-quarter operating profit is CNY 7.050748B. The analytical score is 41/60, or 68%; the separate protected Excel Base remains 73. These are model estimates. The saved CNY 127.39 quote has no verified date and cannot establish current upside.

H1 2026 is the latest financial actual reviewed. Q2 is calculated as H1 less Q1. The two newest discoverable complete issuer management records are written investor Q&A dated April 16, 2026 and May 19, 2025. Their entire disclosed bodies were reviewed; live audio and a verbatim quarterly-call transcript were unavailable. An October 28 board meeting to approve third-quarter results is still ahead of this research cut.

T001 | Current valuation controls

Control	Value
Ticker	300408.SZ
Financial units	CNY billions; shares in millions; valuation in CNY/share
Current Q427 ceiling	98.872695
Forward-four parent economic OP	7.050748
Native multiple	28.000000
Constant issued shares, millions	1,996.718571
Analytical score	41/60 = 68%
Protected Excel Base	73.000000
Saved quote; date unverified	127.390000
Holding	Blank; no numeric-zero holding inferred

How qualified component demand becomes cash

Analyst schematic | No invented part counts, membrane area or output per MW

Three-Circle Group | October 23, 2026 Toronto | Conditional model

Four exclusive product wallets

A qualified supplier earns the net price of the components it supplies. MLCC content, optical connector parts, ceramic housings and electrolyte sheets each have different eligibility and cost structures. Internal powders and pastes enter manufacturing costs. A sheet used within an internally sold stack is eliminated within the group before external sales are counted.

Three-Circle combines ceramic chemistry, forming, sintering, precision tooling and self-developed equipment. This supports yield, product breadth and switching costs after qualification. Japanese, Korean and local competitors constrain pricing and share. Customer-specific nominations, usable yields, current product prices and AI-related sales shares remain undisclosed.

T002 | Wallet boundaries

Native vector	Eligible external products	Capture and overlap boundary
Electronics / MLCC	MLCCs, MLCIs and fixed resistors	AI is one application within electronics; board spend and rich specifications cannot each create another full revenue pool.
Telecom / optical	Ceramic ferrules and sleeves, MT parts and guide pins, optical housings, resonator packages	Conventional ceramic ferrule positioning does not establish a universal share of multifiber MT/MPO, modules or CPO.
Ceramic materials / SOFC	Alumina/AlN substrates, pastes, rods, metallized parts and electrolyte sheets	Count the eligible sheet or material content once; the complete fuel-cell system belongs to a different wallet.
Equipment / other	Externally sold precision equipment, micro-dispensing, other products and other business	Internal equipment is paid productive capital; the fourth vector already includes other-business sales.

T003 | FY2025 ASBE group crosswalk

Vector	Revenue, CNY B	COGS, CNY B
Electronics / MLCC	3.308090	1.908642
Telecom / optical	2.594310	1.443603
Ceramic materials / SOFC	1.959378	1.213118
Equipment / other	1.145376	0.646398

FY2025 main-business revenue of CNY8.868527278B plus CNY 0.138626616B other-business revenue reconciles to group revenue of CNY9.007153894B. The prospectus product categories cover main business. Its cost presentation includes approximately CNY 142.314M of taxes and inventory charges within categories. This model consistently uses ASBE COGS and separate operating charges; exact category reclassification remains unresolved.

Three-Circle Group | October 23, 2026 Toronto | Conditional model

Latest actuals and the owning operating-profit bridge

H1 revenue reached CNY 6.423331756B, gross profit CNY 2.846798879B and gross margin 44.31966%. Q2 revenue was CNY 3.742338363B, with CNY 1.680863464B gross profit and 44.91479% gross margin. H1 operating cash flow was CNY 1.297319595B; purchases of long-lived assets paid CNY 0.476370999B.

The clean pre-financing operating bridge deducts COGS, selling, administration, all expensed R&D and sales taxes from revenue, then ordinary credit and asset charges. Statutory Chinese operating profit also contains finance income, grants, investment and fair-value items. Parent net income includes tax and financing effects. The native 28× valuation uses the clean parent-economic operating basis.

T004 | Actual and derived quarters, CNY B

Measure	Q1 2026 actual	Q2 2026 derived	H1 2026 actual
Revenue	2.680993	3.742338	6.423332
COGS	1.515058	2.061475	3.576533
Selling expense	0.022237	0.022573	0.044810
Administration	0.123015	0.131915	0.254930
Expensed R&D	0.155810	0.184456	0.340265
Sales taxes	0.028119	0.032080	0.060199
Credit loss	0.016587	0.039358	0.055945
Asset impairment	0.037390	0.036652	0.074042
Parent net income	0.790900	1.141219	1.932118
Operating cash flow	0.156685	1.140634	1.297320

T005 | H1 clean operating bridge, exact CNY

Measure	CNY
gross profit	2846798878.74
taxes surcharges	60199391.15
selling	44809875.71
administration	254930420.36
R and D expense	340265460.29
core OP before impairment ex finance othergains investment fairvalue disposals	2146593731.23
credit impairment loss	55945048.93
asset impairment loss	74041634.54
core OP after impairment	2016607047.76
statutory operating profit	2226772196.63
consolidated net profit	1931995816.94
parent net profit	1932118240.71

H1 asset charges include CNY 54.601057M inventory impairment and CNY 19.440577M PPE impairment. The entire CNY 74.041635M asset charge cannot be described as inventory alone. Parent net income exceeded consolidated net income by CNY 122,423.77 because minority earnings were negative; the model grants no recurring parent-profit bonus for that difference.

Management evidence: complete written Q&A, explicit gaps

The April 16, 2026 record contains 28 published questions and answers across seven pages. The May 19, 2025 record contains 14 across four pages. Repeated questions remain in the review below, with repeated claims receiving one evidentiary weight. These are issuer-published written annual-results investor records. Their completeness applies to the disclosed written bodies.

Management describes demand growth, product development and qualification. It supplies no current numeric AI-MLCC capacity, high-end yield, membrane content per MW or named fuel-cell customer award. The answer to the high-end MLCC share question gives the entire electronics revenue share; it does not isolate high-end AI MLCCs.

T006 | April 16, 2026 complete record review | 1–14

Item / topic	Management response summary	Model interpretation
Q1 | MLCC demand and research	Broad consumer, automotive, computing and industrial applications; new specifications and technical improvement.	Supports multiple end markets; no unit or revenue guidance.
Q2 | Solid-state battery membrane	The disclosed membrane is used in solid-oxide fuel cells.	Keep SOFC and battery-separator markets separate.
Q3 | MLCC technical progress	Products cover 0201–2220 sizes, higher voltages, automotive grades and differentiated patented series.	Product breadth supports qualification; no measured current yield.
Q4 | MLCC strategic targets	Research-led development across multiple application requirements.	No numerical five-year sales target.
Q5 | Prices and applications	Pricing depends on demand, supply and production costs; applications include AI and data centers.	Conditional pricing; no announced companywide uplift.
Q6 | Repeated pricing and holders	Same pricing/application answer, plus dated shareholder count.	Repeated evidence adds no independent demand confirmation.
Q7 | Competition	More research, management improvement, technology and potential industry consolidation.	Competitive alternatives remain relevant.
Q8 | Shareholder count	Dated shareholder-count disclosure.	Administrative fact; no operating-model increment.
Q9 | Competitive capabilities	Long experience in forming, sintering, tooling and integrated research/industrialization.	Supports process capabilities without proving a physical monopoly.
Q10 | FY2025 research	CNY 653M stated research spending, up 12.07%.	Cross-check paid research scale against the annual filing.
Q11 | Dividends	Historical annual payouts exceeded 30% of parent earnings; cumulative distributions stated.	History informs a cash-planning assumption; future payments remain conditional.
Q12 | Cost control	Technical innovation and internal cost management.	No quantified margin uplift promised.
Q13 | H-share progress	Application filed in December 2025; subsequent issuer announcements govern progress.	Use actual later issued shares and net proceeds.
Q14 | MLCC outlook	Broad and expanding applications support long-term demand.	Qualitative context; no independent additional receipt pool.

T007 | April 16, 2026 complete record review | 15–28

Item / topic	Management response summary	Model interpretation
Q15 | Repeated demand and research	Same end-market and product-development explanation.	Same event and claim; no duplicate economic credit.
Q16 | Repeated MLCC outlook	Same demand and product-development explanation.	Same event and claim; no duplicate economic credit.
Q17 | High-end MLCC revenue share	The answer gives 36.73% for total electronic components in 2025.	High-end/AI-specific MLCC share remains unknown.
Q18 | Repeated industry outlook	Broad applications and long-term opportunity.	No quantified new order evidence.
Q19 | MLCC product direction	Diversified product matrix for multiple downstream applications.	Qualification and product mix remain conditional.
Q20 | Purpose of H-share financing	Global expansion, overseas construction, automation, technical iteration and working capital.	Separate productive PPE, research and operating uses.
Q21 | Long-term materials strategy	Advanced ceramics, low-carbon applications, new materials and functional pastes.	Prospective adjacencies require qualified capture.
Q22 | Server infrastructure impact	Cloud spending and larger data-processing needs support communication-component demand.	Broad demand context within the optical wallet.
Q23 | Product progress	New MLCC series, MT/guide-pin combinations and optical ceramic housings exhibited to customers.	Exhibition and interest do not establish accepted orders.
Q24 | Automotive electronics	Automotive-grade MLCC products are gradually entering relevant systems.	Automotive is inside electronics, not another additive whole-company TAM.
Q25 | Website information	Company will improve updates.	Disclosure-quality point; no forecast increment.
Q26 | Repeated website feedback	Same commitment to improve communication.	No independent economic increment.
Q27 | Costs, housings, capacity and SOFC	Supply-chain/technical cost work; related 800G/1.6T housings under development; capacity planned to demand; unnamed overseas fuel-cell leader is a long-term customer.	No numeric yield/capacity/order guidance. Customer name and exclusive supplier status remain unverified.
Q28 | Repeated price question	Pricing considers market conditions and costs.	No unconditional product-price increase.

T008 | May 19, 2025 complete record review | 1–14

Item / topic	Management response summary	Model interpretation
Q1 | Dividend timing	Payment follows shareholder approval and the implementation announcement.	Historical event; avoid treating it as current cash.
Q2 | Growth opportunities	Technical innovation and scale expansion to improve competitive products.	Growth requires paid resources and execution.
Q3 | Applications	Electronics, communications, consumer, industrial and new-energy applications.	Defines broad eligibility rather than supplier share.
Q4 | Q1 2025 performance	Management stated growth in revenue and parent net income.	Historical context; current anchor is H1 2026.
Q5 | Growth causes	Demand recovery and earlier research broadened product specifications.	Research and customer adoption jointly support growth.
Q6 | Profit drivers	Recovery in consumer, automotive and optical demand plus industrial/digital applications.	Shared demand context; no new separate order pool.
Q7 | Repeated growth question	Same demand recovery and application explanation.	Repeated claim receives one evidentiary weight.
Q8 | Orthopedic ceramics	Hip ceramic components achieved a regulatory master-file registration.	Adjacent product progress; no sales guidance or automatic medical TAM capture.
Q9 | MLCC progress	Multiple grades developed; competitiveness and customer share improving.	Direction supports conditional capture; no measured current shares.
Q10 | Shareholder count	Dated shareholder-count disclosure.	No operating-model increment.
Q11 | Strategy	Product innovation, scale and materials/component development.	Paid execution and competitive response remain necessary.
Q12 | Research institutes	Shenzhen and Chengdu in use; Suzhou structure topped out.	Physical progress supports research resources, not instant qualified revenue.
Q13 | FY2024 research	CNY 583M research,6.83% growth and 7.91% revenue share stated.	Historical paid-resource cross-check.
Q14 | Industry outlook	AI models/data growth support higher network carrying and transmission needs.	Communication-component demand context; qualification and wallet capture still apply.

Demand, shared overlap and six numerical outcomes

A common demand state couples the four product wallets. Weak, central and strong demand carry 20%,55% and 25% probabilities. Timely qualification has conditional probabilities 55%,70% and 80% within those states. The six resulting joint outcomes are evaluated with their full resource, operating-cost, asset, cash and claim consequences before probability weighting.

The eligible-receipt estimates are bounded forecasts within company-specific wallets. They are not signed orders. Pricing/specification and unit demand remain inside the same product pool. Generic AI spending, data-center budgets and fuel-cell system revenue cannot be stacked into extra supplier revenue. The reference broker path already contained MLCC, optical and SOFC growth.

T009 | Dated broker revenue reference, CNY B

Forecast year	Revenue reference
2026	13.958000
2027	22.243000
2028	29.011000

T010 | Joint Rule 16b outcomes

Outcome	Demand	Qualification	Probability
weak timely	weak	timely	11.000%
weak delayed	weak	delayed	9.000%
central timely	central	timely	38.500%
central delayed	central	delayed	16.500%
strong timely	strong	timely	20.000%
strong delayed	strong	delayed	5.000%

T011 | Weak annual eligible receipts, CNY B

Year	Electronics / MLCC	Telecom / optical	Ceramic materials / SOFC	Equipment / other
2026	5.900000	3.950000	2.600000	0.850000
2027	7.800000	4.400000	2.900000	0.950000
2028	9.000000	4.800000	3.200000	1.030000
2029	10.000000	5.200000	3.550000	1.100000
2030	11.000000	5.600000	3.900000	1.180000

T012 | Central annual eligible receipts, CNY B

Year	Electronics / MLCC	Telecom / optical	Ceramic materials / SOFC	Equipment / other
2026	6.600000	4.150000	2.550000	0.900000
2027	10.200000	5.000000	3.400000	1.030000
2028	13.000000	6.100000	4.300000	1.180000
2029	15.500000	7.100000	5.100000	1.350000
2030	18.000000	8.200000	6.000000	1.530000

T013 | Strong annual eligible receipts, CNY B

Year	Electronics / MLCC	Telecom / optical	Ceramic materials / SOFC	Equipment / other
2026	6.900000	4.350000	2.900000	0.950000
2027	12.300000	5.500000	4.100000	1.100000
2028	17.000000	6.700000	5.200000	1.320000
2029	21.000000	8.200000	6.500000	1.560000
2030	25.500000	9.800000	8.000000	1.820000

Evidence that would raise confidence includes repeat qualified high-capacitance, MT or membrane shipments, documented usable capacity and customer receipts. Delays, rejected grades, price erosion, weak collection or a May 2027 milestone miss would reduce confidence. Employee-plan transfer is separately modeled at 90% probability for the expected compensation expense, with no employee cash financing the forecast.

Capacity is a paid receipt index with disclosed uncertainty

The prospectus reports broad segment capacity in thousand Units, where a Unit can mean 10,000 pieces or 1 kg. Rated output assumes 24 hours per day and 264 days per year, excluding equipment upgrades and adjustments. Those mixed categories cannot produce a single meaningful AI-MLCC unit price or membrane output per MW.

Electronics utilization was 89.5% and telecom 94.0% in 2025. Ceramic-material capacity fell as low-priced rod production and obsolete equipment were removed; its higher utilization does not establish a specific membrane ramp. Current H1 category mix, qualified capacities, yields and prices are undisclosed.

The model allocates the derived Q2 group run rate using LOW H1 category proportions. Historical utilization calibrates a normalized receipt index, with unmeasured common-state upgrade multipliers of 1.0/1.2/1.4 phased across four quarters. These are scenario estimates. Paid maintenance, ordinary growth investment and research support ongoing capability, while no disclosed project establishes those exact upgrade percentages.

T014 | 2023 disclosed category capacity

Category	Production	Capacity	Utilization %
Materials	2,712	4,257	63.70
Electronics	24,119	30,897	78.10
Telecom	1,433	2,100	68.20
Equipment	8	12	72.00

T015 | 2024 disclosed category capacity

Category	Production	Capacity	Utilization %
Materials	2,606	3,683	70.70
Electronics	36,030	39,541	91.10
Telecom	2,142	2,376	90.10
Equipment	9	12	73.60

T016 | 2025 disclosed category capacity

Category	Production	Capacity	Utilization %
Materials	2,050	2,438	84.10
Electronics	51,933	58,055	89.50
Telecom	2,242	2,386	94.00
Equipment	8	12	71.10

T017 | Selected normalized capacity assumptions

Measure	Electronics	Telecom	Materials	Other
Opening utilization proxy	0.895000	0.940000	0.841000	0.800000
Growth PPE allocation	0.650000	0.180000	0.120000	0.050000
Annual receipts / growth PPE	1.200000	1.000000	0.850000	0.600000
Qualification lag, quarters	3.000000	2.000000	3.000000	2.000000

Other domestic growth PPE is paid at 10% of eligible planned receipts and allocated 65/18/12/5% across the four wallets. Output waits for a 2–3 quarter qualification lag and a four-quarter ramp; delayed outcomes add two quarters. Eligible receipts are capped by qualified normalized capacity and price/specification. Unserved opportunity is not carried as contracted backlog.

Domestic MLCC project and overseas qualification

The current high-capacitance MLCC funding allocation is CNY 3.729811674B. Cumulative spending of CNY 1.861492237B represents 49.91% of investment, with CNY 1.868319438B remaining. Completion moved from May 10, 2025 to May 31,2027. Spending progress does not measure physical capacity, usable yield or accepted sales.

The original 2021 design provided 300B pieces of annual output and CNY 2.25B full-ramp annual sales, implying a historical CNY 0.0075 per piece. The model assigns half that old sales design, CNY 1.125B annual receipts, as a LOW remaining unqualified increment. Existing H1 output is already included in the opening index. A0.75/1.5× sensitivity tests the remaining increment.

Remaining project cash is paid across Q32026–Q22027. Opening construction in progress was already funded before the model begins; it is commissioned and depreciated without a second cash payment. Timely readiness is Q22027 with a subsequent four-quarter qualification ramp; delayed readiness shifts three quarters.

T018 | Domestic project paid-cash plan, CNY B

Quarter	Paid remaining project cash
Q3 2026	0.400000
Q4 2026	0.400000
Q1 2027	0.500000
Q2 2027	0.568319

The issuer reported actual net H-share proceeds of HKD 7.9253B after fees. A planning conversion of 0.92CNY/HKD creates a CNY 7.291276B reference inflow in Q32026. Actual net CNY settlement, conversion dates and subsequent disbursements remain unknown. The June prospectus net-proceeds illustration is not added to the actual financing.

T019 | IPO proceeds allocation assumptions

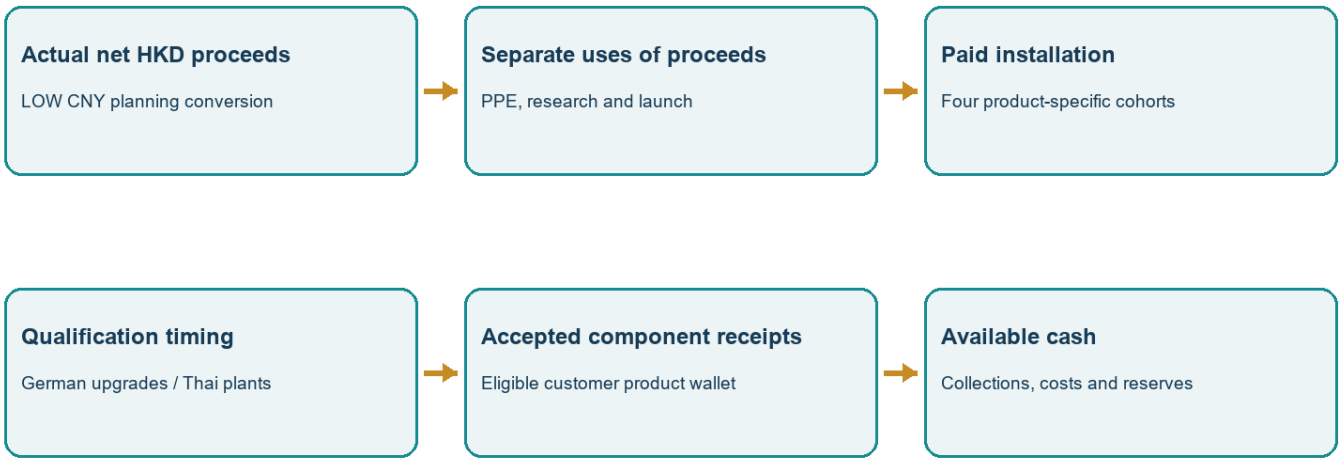

Use	Total fraction	Treatment
Construction / automation	41.200%	65% production PPE;35% startup/support cash, LOW split
Technical iteration / materials	48.800%	25% research PPE;75% paid research, LOW split
General working capital	10.000%	Available funding; not another productive asset

Thailand projects cover fuel-cell materials, electronic components and telecom products. The prospectus describes 24–48 month pilot/commercial boundaries, subject to facilities, utilities and approvals. German micro-dispensing upgrades can qualify earlier. The model assigns timely Thai qualification from Q12029, delayed by four quarters in delayed outcomes; German assets require at least four quarters after payment. Each paid vector has its own cohort.

Technology proceeds fund laboratories, researchers and product work. Research PPE supplies research capability; production capacity requires separate productive capital and customer qualification. The full research program stays

within group expensed R&D through the greater of the recurring research floor and actual cash research plus the tagged IPO program. Construction startup cash enters SGA. The IPO purse is not all productive PPE.

Financing must pass through paid installation and qualification

Analyst schematic | No invented part counts, membrane area or output per MW

Three-Circle Group | October 23, 2026 Toronto | Conditional model

Manufacturing, research and finite ordinary assets

Group H1 COGS calibrates the cash manufacturing floor after ordinary depreciation. LOW vector variable-cost rates are 44/45/50/46% of 2026-price receipts. Materials and labor are explicit components; assembly, testing and other variable costs reconcile to the remainder. Annual inflation pays 2% more for inputs and labor. Timely learning reduces cost by 40 basis points per year to a 120 basis-point limit; delayed cases instead incur a 120 basis-point sourcing surcharge.

Price/specification indices phase over 2027–28. More valuable output can increase receipts per normalized capacity, with the same factor used once in variable unit-cost normalization. Exact richer-specification material and process intensity is undisclosed. Variable-cost and research-cost sensitivities keep that risk visible.

Fixed factory cash includes a 5% annual charge on qualified productive investment. Ordinary depreciation is allocated 90% to COGS,6% to research and 4% to SGA as LOW function assumptions. All research is expensed. Paid R&D is at least 5.8% of eligible receipts or the actual cash run rate plus the IPO research program. Paid SGA adds 3.5% of incremental accepted receipts, startup costs and CNY 15M per delayed quarter.

T020 | Variable manufacturing rates

Rate	Electronics	Telecom	Materials	Other
Total variable	44.000%	45.000%	50.000%	46.000%
Materials	34.000%	33.000%	38.000%	33.000%
Labor	8.000%	9.000%	9.000%	10.000%

Opening PPE, investment property, leases and intangible assets each retain a finite book balance. CFS depreciation of CNY 391.289669M comprises CNY 389.441242M PPE and CNY 1.848427M investment property depreciation. They are split once. New production and project assets use an eight-year model life, with depreciation starting at their individual readiness; research PPE uses five years. No capitalized development asset or development amortization is created.

T021 | Finite opening ordinary assets, CNY B

Asset	Net stock
PPE	6.088684
Investment property	0.057471
Construction in progress	0.848374
Intangibles	0.435738
Right of use	0.024001

Opening construction in progress and remaining project additions are separate accounting cohorts within one domestic project. Cash additions are paid once. Finite depreciation stops at each cohort's remaining book value. Maintenance spending supports continuing economic use after accounting assets age; accounting book value alone is not a physical-output measurement.

Working capital, financing, treasury and claims

Cash-equivalent opening funds are CNY 3.080479740B. Wealth products, long-term deposits and legally earmarked funds have different liquidity. Gross financial assets of CNY 12.775246282B do not represent immediately available cash. The model redeems earmarked wealth for project use and 90% of free wealth, while retaining earmark and subsidiary/legal availability reserves.

The CNY 0.53B earmarked term-deposit maturity allocation is imperfectly matched to balance-sheet categories. CNY 10M in Q32026 and CNY 520M in Q12028 are dated release proxies. Releasing a cash restriction on identified spending changes availability; it does not create another financing inflow.

All verified buybacks after June through October 19 total CNY 2.389597891B and are deducted in the first modeled quarter. Earlier treasury purchases are already inside the opening cash stock. Treasury shares have not been shown cancelled. The constant native denominator retains 1,996.718571M gross issued A+H shares, including treasury.

T022 | Opening operating working-capital stocks, CNY B

Stock	Amount
Trade receivables	3.027749
Notes receivable	0.802977
Receivable financing	0.357087
Prepayments	0.141655
Inventory	2.811048
Trade payables	1.264235
Notes payable	1.487996
Customer advances	0.078373

Operating working capital uses actual H1 coverage ratios, with 35% current-quarter smoothing. More inventory or receivables consumes cash. Operating cash flow equals operating profit plus finite D&A and noncash share compensation, less interest, cash tax and the change in working capital. Paid PPE, principal and dividends are then deducted. The tax planning rate is 14%; it does not alter the pre-financing OP multiple basis.

The forecast credit and asset reserve is an economic cash-leak allowance retained in operating cash flow. It is not added back as an assumed noncash accounting charge. Historical impairment classification and the forecast economic reserve have different scopes.

Bank debt and leases retain their actual classifications, with dated repayment proxies and paid interest. No new debt or equity rescues the six active paths. Expected dividends are a cash-planning assumption. The approved employee plan uses treasury stock: the initial 3M-share transfer remained unconfirmed at the October 13 account notice, while 2M reserve shares were not granted. Its 90%-weighted finite compensation expense is included in SGA and added back once in cash. No employee subscription cash is credited to funding.

T023 | Employee-plan expense before probability, CNY B

Year	Indicative expense
2026	0.017038
2027	0.068152
2028	0.068152
2029	0.011359
2030	0.000000

Weighted quarterly operating model

Every point in the following charts is an output of the six complete conditional outcomes. The tables retain the exact quarterly data used in each chart. Financial values are CNY billions unless stated otherwise. Weighted margins are ratios of weighted gross profit and revenue, rather than averages of branch margins.

T024 | Weighted annual financial totals, CNY B

Year	Revenue	COGS	Gross profit	Operating profit	Parent economic OP
2027	19.070972	10.099523	8.971449	6.117677	6.117677
2028	23.589818	12.457037	11.132781	7.555123	7.555123
2029	27.333555	14.806655	12.526900	8.442959	8.442959
2030	31.075488	17.356198	13.719290	9.243948	9.243948

T025 | Weighted annual paid resources, CNY B

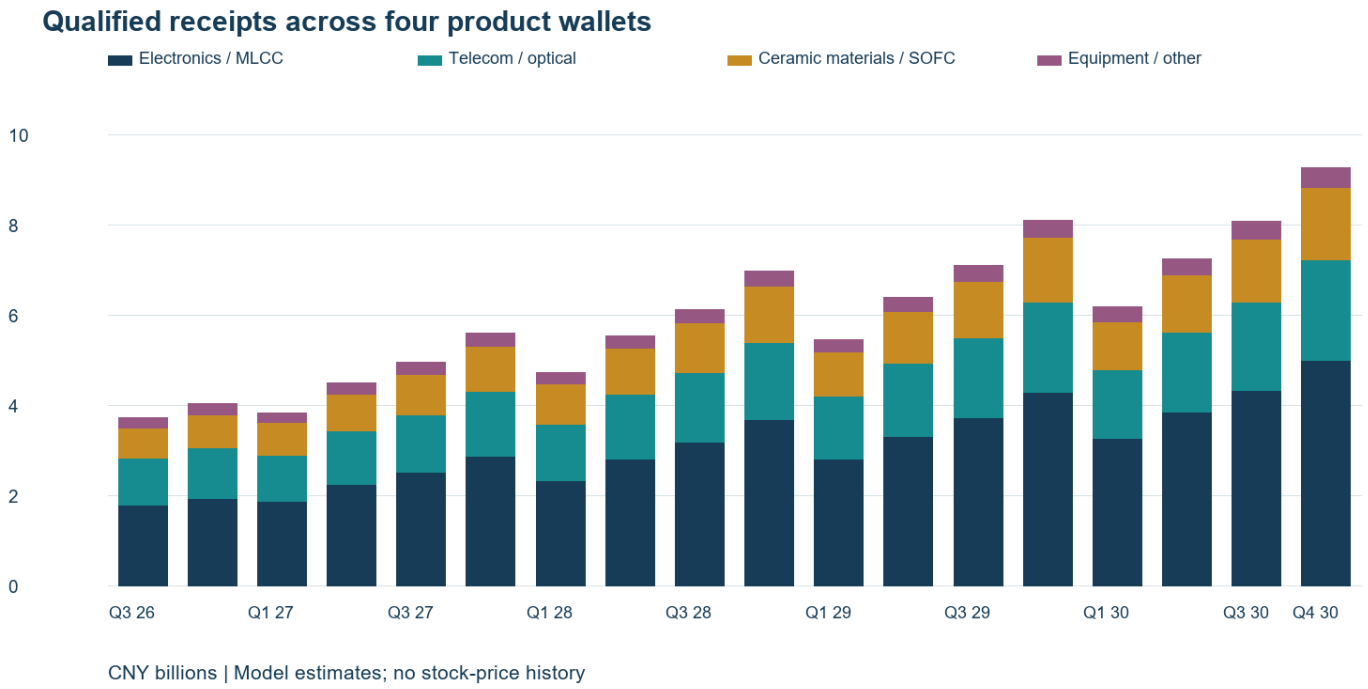

Year	R&D expense	SGA expense	Ordinary D&A	Paid PPE	Change in NWC
2027	1.270534	1.118442	1.094347	3.983976	1.568318
2028	1.610659	1.392068	1.589496	3.635378	1.610841
2029	1.884026	1.533741	2.050384	4.178892	1.400591
2030	2.145436	1.572536	2.592604	4.356756	1.375853

T026 | Weighted annual financing cash uses, CNY B

Year	Interest cash	Cash tax	Dividend cash	IPO research cash
2027	0.007399	0.855439	0.900000	0.507035
2028	0.001406	1.057520	0.945000	0.720524
2029	0.000904	1.181888	0.992250	0.800582
2030	0.000423	1.294093	1.041863	0.507035

T027 | Weighted year-end liquidity, CNY B

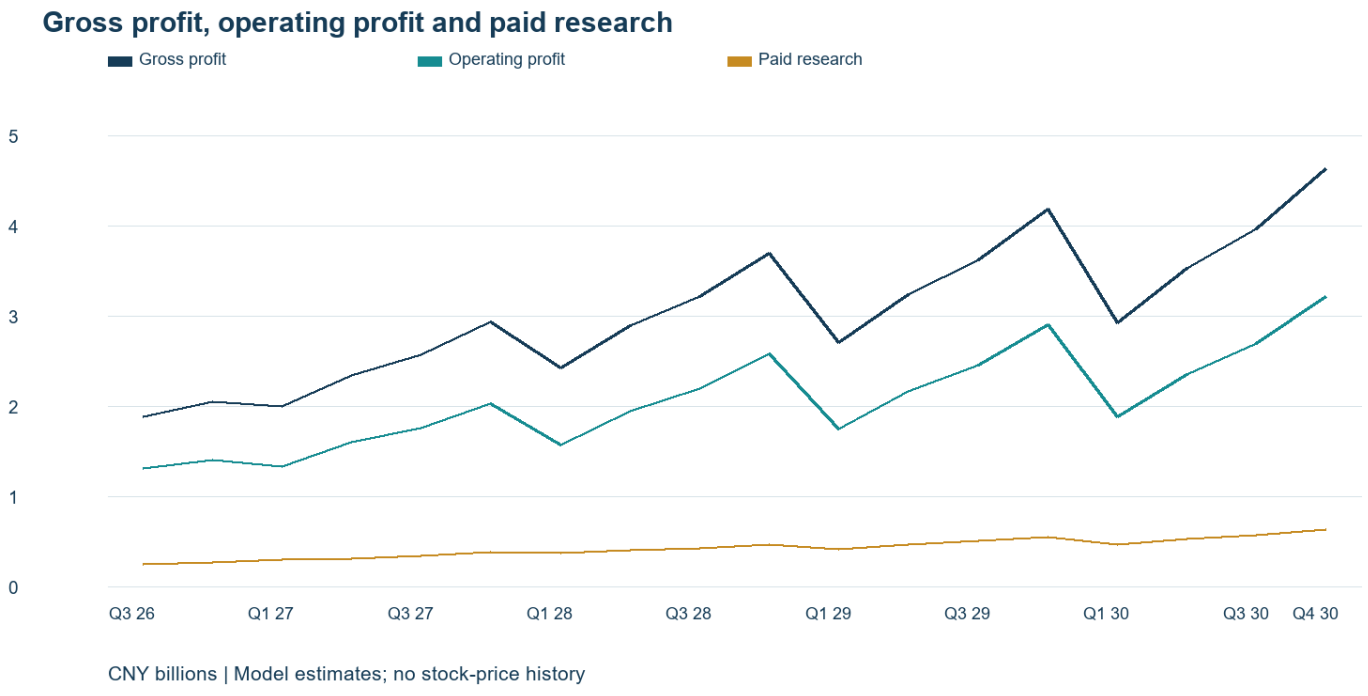

Year	Closing cash	Availability reserves	Available cash
2027	10.333650	5.487233	4.846417
2028	12.796913	4.235453	8.561460
2029	15.533407	2.266808	13.266598
2030	19.292573	1.020000	18.272573

Model estimates. Four mutually exclusive external-receipt wallets; internal materials and overlapping customer budgets are excluded.

All current-plus-next-three-quarter valuation chains

The native equation is 28 times the current and next three quarters of recurring parent-economic operating profit, multiplied by 1,000 to convert CNY billions per million shares into CNY per share. Participation is 1, pool deduction is zero and other quarterly claims are zero. Gross issued shares remain constant. Tax, finance income and parent net income do not replace operating profit in this equation.

The Q2, Q3 and Q4 2030 starting windows require one, two and three additional 2031 quarters respectively. Their four-quarter ceilings remain incomplete. The model shows the available 2030 operating results and does not supply invented tail earnings.

Sensitivity, funding limits and contribution bridges

The most consequential disclosed uncertainty is current qualified output. Scaling the opening receipt index to 0.8/1.2× moves the Q4 2027 ceiling to CNY 77.909125/105.926860. These bounds expose a material proxy dependency; they do not establish confidence in a measured physical capacity.

Timing, remaining domestic-project conversion, manufacturing costs, paid research, working capital, legal cash access and shares have separate sensitivities. Funding tests that breach available cash are marked infeasible. Their unchanged operating-profit opportunity cannot be treated as deliverable without a new funded plan.

T047 | Root-selected sensitivities

Case	Q427 CNY	Δ CNY	Min available B	Max gap B	Funded
opening qualified index x 0.8	77.909125	-20.963570	2.588041	0.000000	True

T048 | Probability and qualification bridge

Stage	Q427 F4 OP B	Q427 CNY	2027 revenue B	Incremental F4 OP
central delayed reference	6.355785	89.127220	18.558244	0.000000
common demand distribution overlap adjusted	6.471271	90.746687	18.790476	0.115486
conditional paid qualification	7.050748	98.872695	19.070972	0.579477

T049 | Order-specific product contribution bridge

Activated wallets	Q427 F4 OP B	Q427 CNY	2027 revenue B	Incremental F4 OP
2026 receipts held flat	2.710328	38.006953	14.245000	0.000000
Electronics / MLCC	5.463194	76.610409	17.269472	2.752866
Electronics / MLCC / Telecom / optical	6.274448	87.986629	18.114472	0.811254
Electronics / MLCC / Telecom / optical / Ceramic materials / SOFC	6.937410	97.283348	18.941972	0.662962
Electronics / MLCC / Telecom / optical / Ceramic materials / SOFC / Equipment / other	7.050748	98.872695	19.070972	0.113339

The product bridge recomputes costs, capacity and cash as each wallet is activated in a specified order. The final step equals the active model. Its contributions depend on that order and shared costs. They decompose the current forecast; the pre-existing broker reference already included AI, optical and membrane growth, so this table creates no second additive AI-spending increment.

Risks, milestones and analytical score

Process chemistry, yield control and customer qualification support a valuable materials platform. Broad alternatives limit the evidence for supplier-specific scarcity. The forecast depends on higher-value accepted output, paid expansion and collections. Delayed qualification, rich-specification cost inflation, price competition, inventory growth and uncertain cash mobility can reduce excess returns.

The next useful checks are verified Q3 disclosure, the May 2027 domestic-project milestone, delivered high-capacitance/MT/membrane mix, actual IPO deployment and overseas customer qualification. Employee-plan transfer, treasury cancellation, collection cycles and inventory conversion also affect the owning economics.

The five risk deductions cover qualification/capacity timing, pricing/competition, expansion/research execution, cash/treasury claims and source/product/customer concentration uncertainty. The score evaluates current operating evidence and risk. Share-price performance and the saved quote are excluded.

T050 | Current analytical scorecard

Category	Score	Rationale
Core Thesis	14 /20	Integrated ceramics, tooling, process yield and qualified customer relationships.
Cycle Stage	9 /10	Current AI/industrial demand and rich-specification pull.
TAM Expansion	8 /10	Several adjacent eligible component wallets with explicit capture boundaries.
Catalysts	4 /5	Domestic project readiness, qualification and overseas milestones.
Macro	8 /10	AI infrastructure and localization support, coupled across wallets.
Alpha	3 /5	Competing suppliers and missing supplier-specific scarcity awards limit differentiation.
Risks	−5	Five material execution, market, cash and information-risk classes.
Analytical total	41 /60 =68%	Materials platform / Watchlist beneficiary.
Protected Excel Base	73	A separate preserved workbook input; not a probability.

Source confidence is highest for disclosed historical totals and issued shares. Forecast product mix, receipts, acceptance, capacity, cost allocation, IPO conversion and spending remain LOW estimates. Current customer-specific volumes, membrane content per MW and accepted AI-related supplier share are unknown. The unnamed overseas fuel-cell customer in issuer Q&A remains unnamed here; broker references to Bloom do not establish exclusivity.

Primary source exhibits and provenance

The following full-page exhibits preserve their original headers, legends, footnotes and page numbers. The listed PDF page is the file index; printed page labels may differ. Financial statements and complete written management records were reviewed in their disclosed form. Selected business, capacity, cost and proceeds pages of the 456-page prospectus were reviewed; no complete-prospectus reading is claimed.

A-share ASBE actuals supply the operating model. Prospectus category production and cost disclosures supply bounded cross-checks. Competitor material and technology brochures identify wallet boundaries; they do not establish Three-Circle customer awards or market share.

第九章 员工持股计划的会计处理

按照《企业会计准则第 11 号——股份支付》的规定：完成等待期内的服务或达到规定业绩条件才可行权的换取职工服务的以权益结算的股份支付，在等待期内的每个资产负债表日，应当以对可行权权益工具数量的最佳估计为基础，按照权益工具授予日的公允价值，将当期取得的服务计入相关成本或费用和资本公积。

假设公司于 2026 年 10 月底将首次授予的标的股票过户至本次员工持股计划名下，则预计 2026 年至 2029 年员工持股计划费用摊销情况测算如下：

单位：万元

股份支付费用合计	2026年	2027年	2028年	2029年
16,470.00	1,703.79	6,815.17	6,815.17	1,135.86

注：上述对公司经营成果的影响最终结果将以会计师事务所出具的年度审计报告为准。

上述测算部分不包含预留份额，预留份额授予时将产生额外的股份支付费用。公司以目前信息初步估计，在不考虑本员工持股计划对公司业绩的刺激作用情况下，本员工持股计划费用的摊销对有效期内各年净利润有所影响，但影响程度不大。考虑本员工持股计划对公司发展产生的正向作用，由此激发管理团队的积极性，提高经营效率，本员工持股计划带来的公司业绩提升将远高于因其带来的费用增加。

求增长。面对这一市场趋势，公司已推出覆盖 0201 至 2220 规格，电容值范围在 0.1pF～47μF 的车规 MLCC 系列产品，目前正逐步配套应用于新能源汽车电源系统、电机驱动系统、信息娱乐系统等核心部件。

推进全球化布局，拓宽融资渠道

报告期内，公司向香港联交所递交了发行境外股票（H 股）并在香港联交所主板挂牌上市的申请。此次募集资金将投资于公司在国外新建扩建项目及自动化建设、核心业务领域技术迭代及产品性能优化，以及补充运营资金。本次发行 H 股并上市将进一步推进公司全球化战略布局，拓宽境外融资渠道，助力海外项目建设，增强公司核心竞争力。

报告期内，公司被授予“第七届全国文明单位”、“全国工业和信息化系统先进集体”荣誉称号，公司超高容 MLCC 荣获第十三届中国电子信息博览会创新金奖。公司将持续聚焦“材料”基因，以“材料+结构+功能”为发展方向，继续推进公司的技术创新和业务发展。

2、收入与成本

（1） 营业收入构成

营业收入整体情况

单位：元

第八节 财务报告

一、审计报告

半年度报告是否经过审计

□是 ☑否

公司半年度财务报告未经审计。

二、财务报表

财务附注中报表的单位为：元

1、合并资产负债表

编制单位：潮州三环（集团）股份有限公司

2026 年 06 月 30 日

单位：元

项目	期末余额	期初余额
流动资产：		
货币资金	3,825,541,538.74	3,057,778,568.16
结算备付金		
拆出资金		
交易性金融资产	3,256,567,110.27	3,758,511,639.05
衍生金融资产		
应收票据	802,976,534.04	754,921,601.58
应收账款	3,027,749,331.69	2,159,447,994.75
应收款项融资	357,087,092.38	345,552,116.73
预付款项	141,655,047.30	75,509,121.21
应收保费		
应收分保账款		
应收分保合同准备金		
其他应收款	17,120,880.49	18,439,500.88
其中：应收利息		
应收股利		
买入返售金融资产		
存货	2,811,047,901.85	2,391,722,373.47
其中：数据资源		
合同资产		
持有待售资产		
一年内到期的非流动资产		
其他流动资产	469,676,761.29	519,639,706.89
流动资产合计	14,709,422,198.05	13,081,522,622.72
非流动资产：

（二）将重分类进损益的其他综合收益		
1. 权益法下可转损益的其他综合收益		
2. 其他债权投资公允价值变动		
3. 金融资产重分类计入其他综合收益的金额		
4. 其他债权投资信用减值准备		
5. 现金流量套期储备		
6. 外币财务报表折算差额		
7. 其他		
六、综合收益总额	889,130,914.96	446,715,465.95
七、每股收益：		
（一）基本每股收益		
（二）稀释每股收益		

5、合并现金流量表

单位：元

项目	2026 年半年度	2025 年半年度
一、经营活动产生的现金流量：		
销售商品、提供劳务收到的现金	5,413,408,638.75	3,916,372,410.56
客户存款和同业存放款项净增加额		
向中央银行借款净增加额		
向其他金融机构拆入资金净增加额		
收到原保险合同保费取得的现金		
收到再保业务现金净额		
保户储金及投资款净增加额		
收取利息、手续费及佣金的现金		
拆入资金净增加额		
回购业务资金净增加额		
代理买卖证券收到的现金净额		
收到的税费返还	51,151,330.49	8,104,983.64
收到其他与经营活动有关的现金	232,646,971.53	177,398,287.71
经营活动现金流入小计	5,697,206,940.77	4,101,875,681.91
购买商品、接受劳务支付的现金	2,385,274,202.49	1,344,795,485.14
客户贷款及垫款净增加额		
存放中央银行和同业款项净增加额		
支付原保险合同赔付款项的现金		
拆出资金净增加额		
支付利息、手续费及佣金的现金		
支付保单红利的现金		
支付给职工以及为职工支付的现金	1,262,473,571.28	1,068,410,466.19
支付的各项税费	566,813,209.20	450,523,274.93
支付其他与经营活动有关的现金	185,326,362.89	110,437,030.81
经营活动现金流出小计	4,399,887,345.86	2,974,166,257.07
经营活动产生的现金流量净额	1,297,319,594.91	1,127,709,424.84
二、投资活动产生的现金流量：		
收回投资收到的现金	69,242,208,141.78	100,066,180,000.00
取得投资收益收到的现金	94,907,574.01	57,961,789.67
处置固定资产、无形资产和其他长期资产收回的现金净额	3,691,947.60	3,343,260.00

Primary issuer exhibit 15: H1_2026, original PDF page 42. Full original page retained.

处置子公司及其他营业单位收到的现金净额		
收到其他与投资活动有关的现金		
投资活动现金流入小计	69,340,807,663.39	100,127,485,049.67
购建固定资产、无形资产和其他长期资产支付的现金	476,370,998.61	207,166,653.60
投资支付的现金	68,544,397,186.42	98,547,716,398.37
质押贷款净增加额		
取得子公司及其他营业单位支付的现金净额		
支付其他与投资活动有关的现金	62,601.65	90,555.18
投资活动现金流出小计	69,020,830,786.68	98,754,973,607.15
投资活动产生的现金流量净额	319,976,876.71	1,372,511,442.52
三、筹资活动产生的现金流量：		
吸收投资收到的现金		
其中：子公司吸收少数股东投资收到的现金		
取得借款收到的现金	110,677,420.00	30,000,000.00
收到其他与筹资活动有关的现金		
筹资活动现金流入小计	110,677,420.00	30,000,000.00
偿还债务支付的现金	25,000.00	
分配股利、利润或偿付利息支付的现金	860,966,881.81	726,376,656.98
其中：子公司支付给少数股东的股利、利润		
支付其他与筹资活动有关的现金	9,835,074.51	176,730,262.73
筹资活动现金流出小计	870,826,956.32	903,106,919.71
筹资活动产生的现金流量净额	-760,149,536.32	-873,106,919.71
四、汇率变动对现金及现金等价物的影响	-62,063,639.72	13,689,684.97
五、现金及现金等价物净增加额	795,083,295.58	1,640,803,632.62
加：期初现金及现金等价物余额	2,285,396,444.48	1,140,258,197.52
六、期末现金及现金等价物余额	3,080,479,740.06	2,781,061,830.14

6、母公司现金流量表

单位：元

项目	2026 年半年度	2025 年半年度
一、经营活动产生的现金流量：		
销售商品、提供劳务收到的现金	3,631,335,147.56	2,900,210,843.71
收到的税费返还		
收到其他与经营活动有关的现金	1,224,099,091.37	628,361,335.83
经营活动现金流入小计	4,855,434,238.93	3,528,572,179.54
购买商品、接受劳务支付的现金	2,028,138,665.30	1,212,339,949.95
支付给职工以及为职工支付的现金	402,365,597.14	367,929,062.74
支付的各项税费	219,695,312.48	164,415,588.74
支付其他与经营活动有关的现金	968,829,538.36	710,386,659.83
经营活动现金流出小计	3,619,029,113.28	2,455,071,261.26
经营活动产生的现金流量净额	1,236,405,125.65	1,073,500,918.28
二、投资活动产生的现金流量：		
收回投资收到的现金	50,955,900,000.00	54,158,650,000.00
取得投资收益收到的现金	75,186,184.78	18,042,036.48
处置固定资产、无形资产和其他长期资产收回的现金净额	56,783,770.00	161,329,754.43
处置子公司及其他营业单位收到的		

Primary issuer exhibit 16: H1_2026, original PDF page 43. Full original page retained.

第三节 管理层讨论与分析

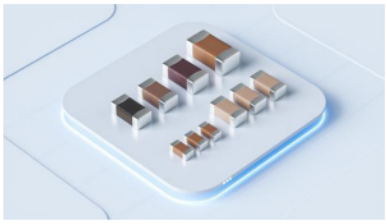

一、报告期内公司从事的主要业务

（一）公司经营范围和主要业务

本公司主要从事电子元件及其基础材料的研发、生产和销售。公司产品主要包括电子及陶瓷材料、电子元件、通信器件等，主要应用于通信、数据中心、消费电子、汽车电子、半导体制造及封装、新能源、智能工业控制等领域。报告期内，公司的主营业务未发生重大变化。

（二）报告期内主要经营情况

2026 年上半年，以人工智能为核心的新一轮技术革命持续深化渗透，正全方位重塑产业发展格局，为高端制造企业带来明确的结构性发展机遇。与此同时，全球宏观经济环境面临多重挑战，持续影响全球产业链的稳定运行与格局重构。面对机遇与挑战并存的外部环境，公司始终保持战略定力，坚持以市场和客户需求为导向，持续强化垂直整合能力与智能制造水平，依托在电子元件及其基础材料领域的长期技术积累，协同推进各业务板块健康发展，构建兼具稳定性与成长性的业务布局。

报告期内，受益于电子元件及光通信行业需求的增长，公司主营业务产品需求不断提升。其中，公司 MLCC 产品受益于客户认可度提升以及行业景气度提升，部分规格产品价格修复至原有合理价值，销售量和销售额同比有较大幅度增长。

同时由于全球数据中心建设进程加快，光器件市场需求持续增加，公司插芯及套筒等相关光通信产品销售同比增长。报告期内，公司实现营业收入 642,333.18 万元，比上年同期增长 54.82%；营业利润 222,677.22 万元，比上年同期增长 56.05%；归属于母公司所有者的净利润 193,211.82 万元，比上年同期增长 56.18%。

报告期内，公司向香港联交所递交了发行境外股票（H 股）并在香港联交所主板挂牌上市的申请，并于 2026 年 7 月 9 日在香港联交所主板成功挂牌上市。公司本次合计发行 80,221,200 股 H 股（部分行使超额配股权后）。本次发行的募集资金将投资于公司在境外新建扩建项目及自动化建设、技术迭代与材料创新，以及补充运营资金。未来，公司将依托 A+H 国际化资本运作平台，进一步推动市场开拓、技术研发和产能布局，全面提升公司技术实力和全球服务能力。

二、核心竞争力分析

1、技术优势

证券代码：300408　　证券简称：三环集团　　公告编号：2026-55

潮州三环（集团）股份有限公司
关于募集资金 2026 年半年度存放、管理与使用情况的专项报告

本公司及董事会全体成员保证信息披露的内容真实、准确、完整，没有虚假记载、误导性陈述或重大遗漏。

一、募集资金基本情况

（一）募集资金金额及到账时间

经中国证券监督管理委员会《关于同意潮州三环（集团）股份有限公司向特定对象发行股票注册的批复》（证监许可〔2021〕3291 号）同意，公司向特定对象发行人民币普通股（A 股）99,591,419 股，每股发行价格为人民币 39.16 元，募集资金总额为人民币 3,899,999,968.04 元，扣除发行费用（不含增值税）人民币 20,188,293.64 元后的募集资金净额为 3,879,811,674.40 元。上述募集资金已于 2021 年 11 月 25 日存入公司募集资金专户中。立信会计师事务所(特殊普通合伙)已于 2021 年 11 月 29 日对本次募集资金到位情况进行了审验，并出具了“信会师报字[2021]第 ZC10468 号”《验资报告》。

（二）募集资金使用金额及结余情况

截至 2026 年 6 月 30 日，公司募集资金使用金额及结余情况如下：

单位：人民币元

项目	金额
募集资金净额	3,879,811,674.40
加：利息收入	102,112,844.39
加：理财收益	271,692,705.93
减：募集资金投资项目使用	2,007,166,619.34

Primary issuer exhibit 31: Raised_funds_H1_2026, original PDF page 1. Full original page retained.
https://static.cninfo.com.cn/finalpage/2026-08-28/1225516994.PDF

项目	金额
其中：以募集资金置换预先投入自筹资金的金额	13,169,730.21
减：银行手续费	102,317.42
减：理财产品	1,619,200,000.00
减：定期存款/可转让大额存单	530,000,000.00
减：募集资金投资项目结项补充流动资金	10,866,456.01
减：存出投资款余额	1,810,868.63
减：购买可转让大额存单支付转让方利息	1,834,272.64
截至 2026 年 6 月 30 日募集资金专户余额	82,636,690.68

二、募集资金存放和管理情况

（一）募集资金的管理情况

为规范募集资金的管理和使用，公司按照《中华人民共和国公司法》《中华人民共和国证券法》《深圳证券交易所创业板股票上市规则》《深圳证券交易所上市公司自律监管指引第 2 号——创业板上市公司规范运作》等法律、法规及规范性文件的规定，结合公司实际情况，制定了《募集资金管理制度》。根据公司《募集资金管理制度》，公司对募集资金实行专户存储，募集资金项目支出执行严格的审批程序。

2021 年 12 月，公司组织保荐机构中国银河证券股份有限公司与中国建设银行股份有限公司潮州市分行、中国银行股份有限公司潮州分行、中国工商银行股份有限公司潮州分行、交通银行股份有限公司潮州分行、中国民生银行股份有限公司广州分行签订《募集资金三方监管协议》，明确了各方的权利和义务。

公司于 2023 年 8 月 29 日召开第十一届董事会第二次会议、第十一届监事会第二次会议，审议通过了《关于新增募集资金投资项目专用账户的议案》，同意公司在中国工商银行股份有限公司潮州分行、交通银行股份有限公司潮州分行新增设立募集资金专户，新设立募集资金专户用于募集资金投资项目“深圳三环研发基地建设项目”募集资金的存储。

2023 年 9 月，公司组织保荐机构中国银河证券股份有限公司与中国工商银行股份有限公司潮州分行、交通银行股份有限公司潮州分行签订《募集资金三方

如上市發行人購回股份而須根據《主板上市規則》第10.06(4)(a)條 / 《GEM上市規則》第13.13(1) 條作出披露，則亦須填妥第二章節。

購回報告

第二章節					
1. 股份分類	普通股	股份類別	A	於香港聯交所上市	否
證券代號 (如上市)	300408	說明	A 股 (於深圳證券交易所上市)		

A. 購回報告

交易日	購回股份數目	購回方式 (註1)	每股購回價或每股最高購回價 (元)	每股最低購回價 (元)	付出的價格總額 (元)
1). 2026年10月16日	2,394,100	於其他證券交易所進行 深圳證券交易所	RMB 98.76	RMB 96.18	RMB 233,152,338

合共購回股份總數	2,394,100	合共付出的價格總額 (元)	RMB 233,152,338
購回股份（擬註銷）數目			
購回股份（擬持作庫存股份）數目	2,394,100		

B. 在本交易所作主要上市的發行人的其他資料

1).	購回授權的決議獲通過的日期		
2).	發行人可根據購回授權購回股份的總數		
3).	根據購回授權在本交易所或其他證券交易所購回股份的數目	(a)	
4).	佔購回授權的決議獲通過當日的已發行股份（不包括庫存股份）數目的百分比 (a) x 100 / 購回授權的決議獲通過當日的已發行股份（不包括庫存股份）數目		%
5).	在A部所述的股份購回後再進行任何新股發行或庫存股份再出售或轉讓所適用的暫止期 (註 2)	截至	

我們確認，上文A部所述於另一家證券交易所進行的購股活動，是根據當地有關在該證券交易所購回股份的適用規則進行。

https://static.cninfo.com.cn/finalpage/2026-10-20/1225611819.PDF

確認 不適用

第一章節註釋：

1. 請填上根據《主板上市規則》第13.25A條 / 《GEM上市規則》第17.27A條刊發的上一份「翌日披露報表」或根據《主板上市規則》第13.25B條 / 《GEM上市規則》第17.27B條刊發的上一份「月報表」（以較後者為準）的期終結存日期。

2. 請列出所有根據《主板上市規則》第13.25A條 / 《GEM上市規則》第17.27A條須披露的已發行股份或庫存股份變動，連同有關的變動日期。每個類別須獨立披露，並提供充足資料，以便使用者可在上市發行人的「月報表」內識別有關類別。例如：因多次根據同一股份期權計劃行使股份期權或多次根據同一可換股票據進行換股而多次發行的股份，必須綜合計算，在同一個類別下披露。然而，若因根據兩項股份期權計劃行使股份期權或根據兩項可換股票據進行換股而進行的發行，則必須分開兩個類別披露。

3. 上市發行人已發行股份（不包括庫存股份）數目變動的百分比將參照該份「翌日披露報表」所披露的已發行股份（不包括庫存股份）的期初結存計算。

4. 在購回/贖回股份的情況下，「每股發行/出售價」應理解為「每股購回價」或「每股贖回價」。

   若股份曾以超過一個每股價格發行/出售/購回/贖回，則須提供每股成交量加權平均價格。

5. 期終結存日期為最後一宗披露的相關事件的日期。

6. 就購回/贖回股份而言，若有關事件經已發生，則須作出相關披露（受《主板上市規則》第10.06(4)(a)，13.25A及13.31條 / 《GEM上市規則》第13.13(1)，17.27A及17.35條的規定所規限），即使該等購回/贖回股份尚未被註銷。

   若購回/贖回股份將於期終結存日期之後購回/贖回結算完成之時予以註銷，則該等購回/贖回股份仍屬A部所述期終結存當日的已發行股份的一部分。該等購回/贖回股份的詳情應在B部作出披露。

7. (i) 至 (viii) 項為確認內容的建議格式。上市發行人可按個別情況就不適用的項目予以修訂。

8. 在此「相同」指：

   - 證券的面值相同，須繳或繳足的股款亦相同；
   - 證券有權領取同一期間內按同一息率計算的股息／利息，下次派息時每單位應獲派發的股息／利息額亦完全相同（總額及淨額）；及
   - 證券附有相同權益，如不受限制的轉讓、出席會議及於會上投票，並在所有其他方面享有同等權益。

如上市發行人購回股份而須根據《主板上市規則》第10.06(4)(a)條 / 《GEM上市規則》第13.13(1) 條作出披露，則亦須填妥第二章節。

購回報告

第二章節					
1. 股份分類	普通股	股份類別	A	於香港聯交所上市	否
證券代號 (如上市)	300408	說明	A 股 (於深圳證券交易所上市)		

A. 購回報告

交易日	購回股份數目	購回方式 (註1)	每股購回價或每股最高購回價 (元)	每股最低購回價 (元)	付出的價格總額 (元)
1). 2026年10月19日	2,657,100	於其他證券交易所進行 深圳證券交易所	RMB 95.78	RMB 89.85	RMB 249,306,724.78

合共購回股份總數	2,657,100	合共付出的價格總額 (元)	RMB 249,306,724.78
購回股份（擬註銷）數目			
購回股份（擬持作庫存股份）數目	2,657,100		

B. 在本交易所作主要上市的發行人的其他資料

1).	購回授權的決議獲通過的日期		
2).	發行人可根據購回授權購回股份的總數		
3).	根據購回授權在本交易所或其他證券交易所購回股份的數目	(a)	
4).	佔購回授權的決議獲通過當日的已發行股份（不包括庫存股份）數目的百分比 (a) x 100 / 購回授權的決議獲通過當日的已發行股份（不包括庫存股份）數目		%
5).	在A部所述的股份購回後再進行任何新股發行或庫存股份再出售或轉讓所適用的暫止期 (註 2)	截至	

我們確認，上文A部所述於另一家證券交易所進行的購股活動，是根據當地有關在該證券交易所購回股份的適用規則進行。

Electronic and Ceramic Materials

We offer a broad range of electronic materials, which are specialized substances engineered for their distinct electrical, thermal, magnetic and optical properties, customizable for various electronic components. Our major products include ceramic substrates (including alumina ceramic substrates and aluminum nitride ceramic substrates), electronic pastes, ceramic rods and metallized ceramics. We also offer SOFC electrolyte sheets, which are made of ceramic materials.

Together, these products form a supply system of foundation materials that serve electronic component manufacturing and new-energy fuel cell applications. As core upstream materials, our electronic and ceramic materials are deployed across key use cases in electronic component manufacturing and energy transition. By aligning product design with downstream application requirements and addressing specific pain points, we have built a durable competitive position while providing critical material support for the upgrading of the global electronics industry and the implementation of new-energy strategies.

Ceramic Substrates

Our ceramic substrates are base materials made of ceramic compounds, including alumina and aluminum nitride, used to mount other materials to produce electronic components. Our substrates feature high flexural strength, electrical insulation, dielectric strength and temperature resistance, as well as low coefficient of thermal expansion and dielectric loss.

Our alumina ceramic substrates are primarily used as the base material for chip resistors, with broad applications across various electronic circuits. They are also used for LED, high voltage focusing potentiometer, small potentiometer, crystal oscillator, thick film integrated circuit, as well as direct bonded/electroplated copper substrate for power electronics, all critical components for applications such as electric vehicles ("**EVs**") and industrial automation equipment.

Our alumina ceramic substrates combine high insulation, high-temperature resistance and tight dimensional tolerances, helping to resolve stability constraints of base materials amid ongoing miniaturization and higher power density trends in electronic components. They address urgent needs for high-performance foundational materials in end markets such as consumer electronics and industrial control.

Capacity / product exhibit 1: CCTC_final_prospectus_20260630, original PDF page 154.
https://www1.hkexnews.hk/listedco/listconews/sehk/2026/0630/2026063000323.pdf

Our aluminum nitride ceramic substrates are used as the base material for high power electronics modules such as automotive-grade high-power LED, high-power insulated-gate bipolar transistors for EVs, high-voltage power metal–oxide–semiconductor field-effect transistors, radio frequency ("**RF**") power loads, and lead resistors. Focusing on the thermal bottlenecks of high-power devices, aluminum nitride ceramic substrates deliver efficient heat management for applications including new energy vehicles and high-end industrial control equipment, aligning with the migration of power electronics toward higher integration and power density. Due to ceramic materials possessing high compressive strength, high mechanical strength and good temperature resistance, ceramic substrates can withstand temperatures ranging from 25 to 1000℃ and voltages ranging from 15 to 20 Kv/mm, making them suitable for high-power and high-voltage applications.

Electronic Pastes

Our electronic paste products primarily include resistive pastes, mask pastes, conductor pastes and G2 encapsulated pastes, which are mainly applied to ceramic substrates for the manufacturing of chip resistors.

- Resistive paste is a key material used in the production of thick film resistors, such as chip resistors and cylindrical resistors. Thick film resistors are essential components for various electronic circuits and manufactured by screen-printing the resistive paste uniformly onto ceramic substrates. Our resistive pastes feature excellent storage stability and consistent performance.

- Mask paste is used in the screen-printing process of thick film resistors to provide effective masking and protection. It demonstrates good water-washability and complies with environmental standards.

- Conductor paste is applied to both the front and back electrodes of chip resistors. It offers low sheet resistance and good storage stability.

- G2 encapsulated paste is specifically developed for chip resistors to provide protective encapsulation of the resistive element. It also features low sheet resistance and stable storage properties.

Engineered for excellent electrical conductivity and process compatibility, our electronic pastes are designed to improve print uniformity and durability of electrodes in precision components, supporting fine-pitch, high-yield and scalable manufacturing of electronic components.

Capacity / product exhibit 2: CCTC_final_prospectus_20260630, original PDF page 155.
https://www1.hkexnews.hk/listedco/listconews/sehk/2026/0630/2026063000323.pdf

SOFC Electrolyte Sheets

We provide ceramic electrolyte sheets for SOFC. The SOFC electrolyte sheets are a ceramic functional component fabricated from doped ceramic powders combined with specific organic additives and processed into defined shapes and dimensions. As a critical material of SOFCs, the primary function of the electrolyte sheet is to facilitate the transport of oxygen ions between the cathode and anode, while effectively isolating the fuel from the oxidant.

According to Frost & Sullivan, the continued advancement and commercialization of SOFC technology are expected to drive increasing demand for high-performance electrolyte sheets. Our electrolyte sheets target the core challenges of sustaining ionic conductivity and structural stability at elevated temperatures, providing key material support for the commercialization of SOFC technology amid the global energy transition and the increasing hydrogen utilization.

SOFCs operate at elevated temperatures, which present significant challenges to material stability. Our electrolyte sheet products are engineered to address these challenges and offer a long service life, along with the following key advantages: excellent chemical stability at high temperatures, high mechanical strength, ionic conductivity, strong resistance to aging, as well as high dimensional accuracy and surface flatness. These attributes contribute to the reliable and efficient operation of SOFCs in demanding applications.

Other Major Electronic and Ceramic Materials

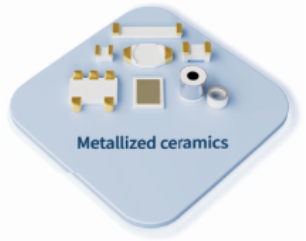

Ceramic Rods

Our ceramic rods are available in cylindrical and tubular forms, and are primarily used in the manufacturing of carbon film resistors, metal film resistors, metal oxide film resistors, glass glaze resistors, wire-wound resistors, and cement resistors. These ceramic rods serve as the base material for the deposition of conductive films or the winding of resistance wires.

Our ceramic rods are characterized by high mechanical strength, excellent electrical insulation properties, and precise dimensional control, with strict quality standards applied to surface appearance and defect minimization.

Metallized Ceramics

Our metallized ceramic products include alumina ceramics, zirconia ceramics, and steatite ceramics, and can be metallized with materials such as silver, silver-palladium, molybdenum-manganese, and tungsten. The metallized surface can be further electroplated with nickel, tin, or gold to ensure excellent solderability. Products can be custom-designed and manufactured based on specific customer requirements.

Capacity / product exhibit 3: CCTC_final_prospectus_20260630, original PDF page 156.
https://www1.hkexnews.hk/listedco/listconews/sehk/2026/0630/2026063000323.pdf

Given the need for precise signal transmission, ceramic ferrules must meet extremely high standards of concentricity and dimensional accuracy. As a critical component, the performance of the ceramic ferrule directly affects the overall reliability and efficiency of optical devices.

Our ceramic ferrules are manufactured to sub-micron precision, with tolerances of less than 1μm. They offer a range of performance advantages, including high concentricity and dimensional accuracy, low insertion loss, excellent mechanical strength, wear and aging resistance and long operational lifespan.

Our products are deeply aligned with three core deployment scenarios — FTTH, 5G telecom base stations and data centers — providing precision alignment, signal integrity and high-reliability interconnects for both current and next-generation telecom and AI infrastructure.

In FTTH deployments, ceramic ferrules and sleeves provide high-precision alignment that minimizes insertion loss at subscriber access points for residential and commercial broadband, supporting the ongoing upgrade in access bandwidth.

In 5G telecom base station environments, our optical connection components deliver consistent environmental adaptability and signal stability to support high-density site rollouts and long-reach optical links amid continuous 5G build-out and technology iterations.

In data centers, MT ferrules with short jumpers and ceramic ferrules enable low-latency, high-reliability optical connectivity for high-density, high-bandwidth architectures driven by accelerating compute demand.

PKGs

Manufactured in small, low-profile form factors, our PKGs are primarily designed as the "case" that protects resonators and oscillators, while enabling surface-mount integration onto a printed circuit board ("**PCB**").

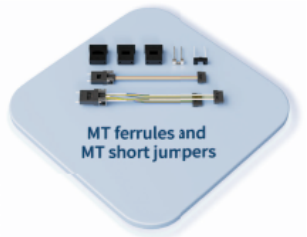

By leveraging PKGs, we are extending into the crystal device packaging domain, addressing stringent needs for hermeticity and stability in resonator and oscillator packaging. This helps mitigate reliance on imported core packaging materials in the domestic crystal industry, aligns with device miniaturization and rising precision timing requirements, and opens growth opportunities in semiconductor packaging.

These packages provide a stable platform for mounting resonators and oscillators, offering reliable protection against mechanical damage and environmental factors such as moisture and corrosive gases, thereby ensuring hermetic sealing. In addition, the metal bonding pads on the ceramic base enable reliable electrical connections between internal components and external circuitry, supporting miniaturization, ultra-thin profiles and high assembly efficiency.

Resonators and oscillators are frequency control components, which are used in all electronic devices that require precise timing or frequency control. We also offer PKGs for surface acoustic wave ("**SAW**") filters, commonly used in RF applications. These components are primarily used in smartphones, wireless communication, GPS, Bluetooth, automotive electronics and other related applications. For example, a single smartphone contains several different types of resonators, oscillators and filters to manage its various functions.

Capacity / product exhibit 4: CCTC_final_prospectus_20260630, original PDF page 160.
https://www1.hkexnews.hk/listedco/listconews/sehk/2026/0630/2026063000323.pdf

MT Ferrules and MT Short Jumpers

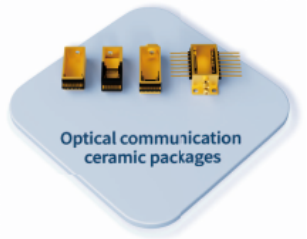

We offer a full range of MT ferrules in various specifications and models, along with corresponding guide pins, which are customizable to meet customer-specific requirements. These components are primarily used in multi-fiber push-on/pull-off ("**MPO**") and multi-fiber termination push-on ("**MTP**") connectors, as well as in high-speed optical module assemblies.

MPO and MTP connectors are high-density fiber optic connector systems widely used in modern optical communication networks. They are designed to enable the simultaneous connection of multiple optical fibers, such as 12 fibers, within a single compact interface, significantly increasing data transmission capacity while reducing space and installation complexity.

The mating accuracy of these connectors is determined by the positional accuracy of the MT ferrules and the outer diameter precision of the guide pins. These factors are critical in ensuring low insertion loss and consistent optical performance in high-density, high-bandwidth applications, such as data centers, telecom networks and high-speed computing environments.

In addition, we offer MT short jumpers primarily used for multi-channel optical interconnects between the external optical interface of optical transceiver modules and the internal optical chips. By providing multiple parallel transmission channels at a fixed per-channel data rate, they increase the overall transmission rate of the transceiver module.

Optical Communication Ceramic Packages

Optical communication ceramic packages are key components used in optical device modules that house critical optoelectronic components, such as laser diodes and photodetectors. Engineered for precise opto-mechanical alignment and long-term reliability under extreme temperature, humidity, corrosion and vibration, these packages support the migration toward higher-rate, higher-density optical modules in telecom and AI and data center networks.

Our products provide mechanical support and optical alignment, and are engineered to withstand high temperatures, high humidity, corrosion and vibration, ensuring stable performance under extreme conditions and over long operating lifespans. They are widely adopted in long-haul optical transceivers, tunable laser modules and optical amplifiers, including applications in next-generation optical transceivers.

Capacity / product exhibit 5: CCTC_final_prospectus_20260630, original PDF page 161.
https://www1.hkexnews.hk/listedco/listconews/sehk/2026/0630/2026063000323.pdf

The table below sets out production volume, production capacity and utilization rate for the years indicated:

	Year ended December 31,								
	2023			2024			2025		
	Production Volume[1]	Production Capacity[2]	Utilization Rate[3]	Production Volume[1]	Production Capacity[2]	Utilization Rate[3]	Production Volume[1]	Production Capacity[2]	Utilization Rate[3]
	'000 Units[1]	'000 Units[1]	%	'000 Units[1]	'000 Units[1]	%	'000 Units[1]	'000 Units[1]	%
Electronic and ceramic materials	2,712	4,257	63.7	2,606	3,683	70.7	2,050	2,438	84.1
Electronic components	24,119	30,897	78.1	36,030	39,541	91.1	51,933	58,055	89.5
Telecom components	1,433	2,100	68.2	2,142	2,376	90.1	2,242	2,386	94.0
Equipment components	8	12	72.0	9	12	73.6	8	12	71.1

Notes:

(1) One unit denotes ten thousand pieces or one kilogram.

(2) Production capacity is based on the optimal hourly production rate of various machines operating 24 hours a day for 264 days for a year (not including time spent on production line upgrade or adjustment).

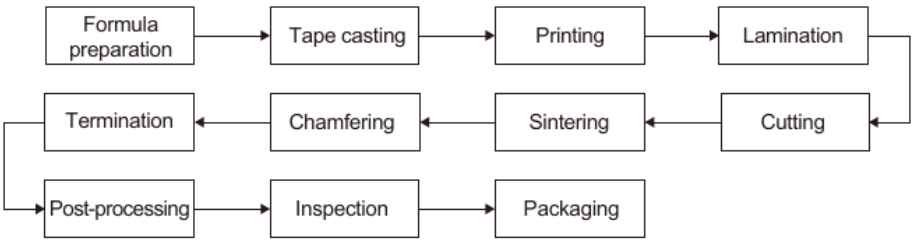

(3) Utilization rate is calculated as production volume divided by the production capacity for the same year.

The production capacity of our electronic and ceramic materials decreased from 2023 to 2025, primarily due to the scaling down of our ceramic rods, which has a lower selling price, large sales volume and generates lower revenue, as well as the retirement of obsolete equipment. As a result, our utilization rate for electronic and ceramic materials increased over the same period.

Production Processes

Our production process involves the coordination of raw materials and accessories, manufacturing, assembly, testing and packaging. We adhere to established manufacturing practices and processes across our facilities, which ensure consistency, quality and efficiency in our operations. By standardizing these practices, we can optimize the use of our production facilities and resources. As a result, we are able to better ensure inter-batch quality consistency of our products and exercise improved cost control, thereby enhancing our competitive edge. The following diagrams illustrate the major manufacturing procedures for the representative products of ours:

MLCCs

Capacity / product exhibit 6: CCTC_final_prospectus_20260630, original PDF page 170. https://www1.hkexnews.hk/listedco/listconews/sehk/2026/0630/2026063000323.pdf Capacity uses heterogeneous thousand Units, with one Unit=10,000 pieces OR1 kg; optimal schedule 24h×264 days; footnotes retained.

YEAR-TO-YEAR COMPARISON OF RESULTS OF OPERATIONS

Year ended December 31, 2025 Compared to Year ended December 31, 2024

Revenue

	Year ended December 31,		
	2024	2025	% Change
	(in RMB thousands, except for percentages)		
Electronic and ceramic materials	1,677,233	1,959,378	16.8%
Electronic components	2,298,159	3,308,090	43.9%
Telecom components	2,305,985	2,594,310	12.5%
Equipment components	536,825	601,753	12.1%
Other products	447,931	404,996	(9.6)%
Total	**7,266,133**	**8,868,527**	**22.1%**

	Year ended December 31,			
	2024		2025	
	Sales volume	Average selling price	Sales volume	Average selling price
	'000 Units[(1)]	*RMB/Unit[(1)]*	*'000 Units [(1)]*	*RMB/Unit[(1)]*
Electronic and ceramic materials	2,444	686.4	2,293	854.4
Electronic components	33,703	68.2	48,765	67.8
Telecom components	1,966	1,172.7	2,233	1,161.9
Equipment components	9	62,249.1	8	76,336.5

Note:

(1) One unit denotes ten thousand pieces or kilograms.

Our revenue increased by 22.1% from RMB7,266.1 million in 2024 to RMB8,868.5 million in 2025, primarily due to increases in revenue from the sales of electronic and ceramic materials, electronic components and telecom components.

Electronic and Ceramic Materials

Our revenue from sales of electronic and ceramic materials increased by 16.8% from RMB1,677.2 million in 2024 to RMB1,959.4 million in 2025, primarily due to the increase in average selling price from RMB686.4 per unit to RMB854.4 per unit, which in turn reflects an increase in price of raw materials and a change in our product mix whereby resulted in revenue contribution from certain higher-value materials increased due to strong demand. Raw material prices increased mainly in high-purity ceramic and metal powders and specialty additives used in higher-spec formulations, and we adjusted pricing to reflect these input changes. The mix upgrade was driven by customer programs that required tighter tolerances and enhanced reliability specifications for materials used in advanced packaging and power electronics, which carry higher value but are manufactured in smaller batches with stricter process controls. The increase in our average selling price offset a slight decrease in our sales volume from 2.4 million units to 2.3 million units, which was due to overall weaker downstream demand.

Electronic Components

Our revenue from sales of electronic components increased by 43.9% from RMB2,298.2 million in 2024 to RMB3,308.1 million in 2025, primarily due to the increase in sales volume from 33.7 million units to 48.8 million units, reflecting stronger downstream demand for MLCCs in consumer electronics, home appliances, AI and data centers, and automotive electronics, as well

Capacity / product exhibit 7: CCTC_final_prospectus_20260630, original PDF page 216.
https://www1.hkexnews.hk/listedco/listconews/sehk/2026/0630/2026063000323.pdf

as customers' increased preference for localized products amid geopolitical and policy factors. The volume increase reflected multi-end-market momentum: in consumer electronics and home appliances, customers resumed replenishment after prior destocking; in AI and data centers, we benefited from higher content per server driven by power management and decoupling needs; and in automotive electronics, platform upgrades and penetration of electrified and intelligent features increased the number of MLCCs per vehicle. We also broadened our offering in certain case sizes and reliability grades, which expanded accessible demand and supported the higher shipment run-rate.

Telecom Components

Our revenue from sales of telecom components increased by 12.5% from RMB2,306.0 million in 2024 to RMB2,594.3 million in 2025, primarily due to the increase in sales volume from 2.0 million units to 2.2 million units. Growth was supported by continued build-out of high-speed optical links for data centers and backbone networks, where demand for ceramic ferrules and PKG products with low insertion loss and high concentricity tolerance remained firm.

Equipment Components

Our revenue from sales of equipment components increased by 12.1% from RMB536.8 million in 2024 to RMB601.8 million in 2025, primarily due to the increase in average selling price from RMB62,249.1 per unit to RMB76,336.5 per unit, while sales volume remained stable.

Other Products

Our revenue from sales of other products decreased by 9.6% from RMB447.9 million in 2024 to RMB405.0 million in 2025, primarily due to decrease in sales volume of our ceramic appearance parts attributable to completion of a customized product project in 2024.

Cost of Sales

	Year ended December 31,		
	2024	2025	% Change
	(in RMB thousands, except for percentages)		
Cost of raw materials	2,485,940	3,315,229	33.4%
Cost of labor	879,762	955,389	8.6%
Cost of manufacturing	819,646	912,813	11.4%
Others[(1)]	105,523	142,314	34.9%
Total	**4,290,871**	**5,325,745**	**24.1%**
as % of total revenue	*59.1*	*60.1*	

Note:

(1) Mainly including taxes and surcharges and impairment losses on inventories.

Our cost of sales increased by 24.1% from RMB4,290.9 million in 2024 to RMB5,325.7 million in 2025, which was generally in line with the increase in our sales volume.

Capacity / product exhibit 8: CCTC_final_prospectus_20260630, original PDF page 217.
https://www1.hkexnews.hk/listedco/listconews/sehk/2026/0630/2026063000323.pdf

Gross Profit and Gross Margin

	Year ended December 31,			
	2024		2025	
	Gross profit	Gross margin	Gross profit	Gross margin
	(in RMB thousands, except for percentages)			
Electronic and ceramic materials	661,649	39.4%	717,526	36.6%
Electronic components	1,000,328	43.5%	1,366,350	41.3%
Telecom components	977,356	42.4%	1,106,117	42.6%
Equipment components	319,317	59.5%	347,463	57.7%
Other products	16,612	3.7%	5,326	1.3%
Total/Overall	**2,975,262**	**40.9%**	**3,542,782**	**39.9%**

Our gross profit increased by 19.1% from RMB2,975.3 million in 2024 to RMB3,542.8 million in 2025, primarily due to increases in gross profit from sales of electronic components and telecom components. Our gross margin remained stable at 40.9% and 39.9%, respectively, reflecting the combined effects of scale benefits in components and a modest margin contraction in electronic and ceramic materials.

Electronic and Ceramic Materials

Our gross profit from sales of electronic and ceramic materials increased by 8.4% from RMB661.6 million in 2024 to RMB717.5 million in 2025, primarily due to an increase in revenue.

Gross margin from sales of electronic and ceramic materials decreased slightly from 39.4% in 2024 to 36.6% in 2025 primarily as a result of higher raw materials price and an increase in revenue contribution from lower value materials. The margin movement mainly reflected higher input costs for key raw materials, including metal powders, which rose during the period and were only partially offset by pricing adjustments. In addition, a change in product mix also contributed to the change in gross margin. For details of the margin profile of our electronic and ceramic materials, see "— Significant Factors Affecting Our Results of Operations — Product Mix and Pricing."

Electronic Components

Our gross profit from sales of electronic components increased by 36.6% from RMB1,000.3 million in 2024 to RMB1,366.4 million in 2025, primarily due to an increase in revenue, partially offset by a decrease in gross margin from 43.5% in 2024 to 41.3% in 2025, which was due to a decrease in average selling price driven by change of specifications with an increased contribution from smaller-sized products that are priced at relatively lower levels.

During the period, shipments to consumer electronics and home appliances recovered alongside strong growth in AI and data center and automotive applications. Higher sales volumes reduced the per-unit allocation of fixed costs, supporting gross profit growth. This was offset by the change product specification mix, with an increased proportion of smaller-sized products priced at a relatively lower levels, resulting in a decrease in the gross margin.

Telecom Components

Our gross profit from sales of telecom components increased by 13.2% from RMB977.4 million in 2024 to RMB1,106.1 million in 2025, primarily due to increases in revenue and gross margin from 42.4% to 42.6%. The increase in gross margin was due to the increased sales volume which improved our economies of scale.

Capacity / product exhibit 9: CCTC_final_prospectus_20260630, original PDF page 218.
https://www1.hkexnews.hk/listedco/listconews/sehk/2026/0630/2026063000323.pdf

FUTURE PLANS

For a detailed description of our future plans, see "Business — Our Strategies."

USE OF PROCEEDS

Assuming the maximum Offer Price of HK$100.30 per Offer Share, we estimate that we will receive net proceeds of approximately HK$7,045.9 million from the Global Offering after deducting the underwriting commissions and other estimated expenses in connection with the Global Offering (assuming the Over-allotment Option is not exercised). We intend to use our proceeds for the purposes and in the amounts set forth below.

- Approximately 41.2% or HK$2,900.1 million will be invested in new constructions and expansions overseas, as well as in automation, to increase capacity, improve efficiency, and enhance supply resilience. Key initiatives include the following projects in Thailand and Germany, which will support customers' demand, shorten lead times, and strengthen our global service network. We expect site preparation and main equipment ordering to commence within 6−12 months after commencement, installation and pilot runs within 12−24 months thereafter, and commercial ramp-up generally within 24−48 months, subject to permitting and utilities readiness. We expect the projects to commence construction by the end of 2026. These project expansions are estimated to add 36,696 million unit production capacity in aggregate.

  - ***Fuel cell project expansion***: approximately 16.6% or HK$1,166.8 million will fund land acquisition, plant construction, equipment purchases, recruitment, materials purchases, and initial R&D and operating expenses in Thailand. Proceeds will be used to (i) acquire suitable land parcels that we are currently identifying at an appropriate time based on our actual operational requirements and development progress; (ii) construct new production facilities with an estimated total gross floor area of approximately 43,000 sq.m., which will primarily house specialized workshops for production processes such as tape casting and sintering; (iii) build dedicated lines for electronic and ceramic materials and key ceramic/metallic components, with phased installation of automated forming, sintering, machining and testing systems; (iv) acquire engineering and renovation materials as well as ancillary equipment, such as color steel plates and elevators; and (v) fund initial operating expenses. Civil works and utility fit-out are expected to begin within 6 months after commencement, core equipment delivery within 12−24 months, and pilot production within 24−48 months, followed by staged ramp-up.

    This project expansion intends to address our customers' strong demand in clean energy applications: (i) addressing the power supply demand in high-energy consumption scenarios: The accelerated development of high-energy consumption applications, such as data centers and AI computing clusters, has created power demands that traditional electricity systems struggle to meet. According to Frost & Sullivan, the core driver of global core electronic ceramic material market growth comes from the continuous expansion of downstream electronic product demand, iterative demand in new energy products, and technological innovation, particularly fueled by the development of industries such as automotive electronics, AI and data centers, and consumer electronics. Looking forward, the global market is expected to increase from RMB27.8 billion in 2026 to RMB43.1 billion in 2030, representing a CAGR of 11.6%. As one of the preferred solutions for distributed power generation, SOFCs are experiencing continuous growth in demand for related materials. Our SOFC electrolyte sheets are supplied to fuel cell enterprises, who have a strong demand for both supply

Capacity / product exhibit 10: CCTC_final_prospectus_20260630, original PDF page 258.
https://www1.hkexnews.hk/listedco/listconews/sehk/2026/0630/2026063000323.pdf

chain stability and performance upgrades to the materials they procure; (ii) Indispensable demand driven by the global energy transition: There is a trend of replacement of traditional energy with clean, creating demand for efficient, low-carbon power solutions in applications including distributed power generation and energy storage. With its high energy conversion efficiency, fuel flexibility and low emission characteristics, SOFC has emerged as one of the core technological pathways and the market demand for its critical material, the SOFC electrolyte sheets is consequently expanding; and (iii) Overseas market demand for stable supply: The expansion of the our production base in Thailand is a direct response to the needs of international customers. This strategic move will reduce logistics costs and shorten delivery lead times, aligning with the global fuel cell industry's demand for a stable and reliable supply of core materials.

- ***High precision piezo microdispensing system project expansion***: approximately 10.8% or HK$760.6 million will be used to expand our German piezo microdispensing system operations. Investments cover land acquisition, facilities, equipment, recruitment, materials, and initial R&D and operating expenses. Proceeds will be used to (i) acquire suitable land parcels that we are currently identifying at an appropriate time based on our actual operational requirements and development progress; (ii) construct new production facilities with an estimated total gross floor area of approximately 6,000 sq.m., which will primarily house workshops for production and assembly processes, as well as warehousing space; (iii) procure and upgrade production and assembly equipment and procure ancillary equipment as well as spend on equipment maintenance; and (iv) fund operating expenses including repair and refurbishment as well as administrative costs. We plan to add precision assembly equipment, calibration and metrology systems, and reliability labs, with facility upgrade and expansion works targeted to complete within 6-24 months after Listing.

  This expansion is intended to address strong interest from industrial, electronics and life-science customers for higher-throughput, higher-precision dispensing solutions: (i) advancements in industrial automation: The ongoing transition towards automation and high-end applications in intelligent industrial control, marked by the widespread adoption of industrial robots and smart sensors, has significantly elevated the requirements for precision, efficiency and stability in dispensing processes. According to Frost & Sullivan, the global ceramic equipment components market expanded from RMB39.8 billion in 2021 to RMB55.6 billion in 2025, representing a CAGR of 8.7% during this period. By 2030, the global market is projected to reach RMB98.6 billion, with a CAGR of approximately 11.9% from 2026 to 2030. Piezo microdispensing systems, with their sub-nanoliter dispensing capabilities and high wear resistance, have become core equipment for precision manufacturing in key industries such as electronics, semiconductors and automotive; (ii) Demand from niche applications across multiple sectors: Strong demand for high-throughput, high-precision dispensing solutions is emerging from various specialized applications, including the application of lubricating grease for safety switches and the dispensing of conductive paste for thermocouples in the consumer electronics industry, the chip underfill process in the semiconductor industry, and micro-volume material handling in the medical and pharmaceutical sectors. We have already developed industry-specific customized solutions, serving a customer base covering enterprises across these diverse industries; and (iii) Demand for localized services in the European market: The expansion of the production base in German is intended to strengthen service responsiveness for the European

Capacity / product exhibit 11: CCTC_final_prospectus_20260630, original PDF page 259.
https://www1.hkexnews.hk/listedco/listconews/sehk/2026/0630/2026063000323.pdf

market. This initiative will cater to the precision manufacturing requirements of international clients in automotive electronics and industrial automation, while also satisfying their demand for local technical support and equipment maintenance. This enhanced local presence is expected to increase customer loyalty and retention.

- ***Data-center-related electronic components project construction:*** approximately 7.3% or HK$512.6 million will fund a new production line in Thailand for electronic components serving data center applications. Uses of funds include land, facilities, equipment, talent, materials, and initial R&D and operating expenses. Proceeds will be used to (i) acquire suitable land parcels that we are currently identifying at an appropriate time based on our actual operational requirements and development progress; (ii) construct new production facilities with an estimated total gross floor area of approximately 20,000 sq.m., which will primarily house workshops for production processes including sintering, testing, and taping and packaging; (iii) procure machinery and equipment primarily includes printing and stacking equipment and inspection and packaging equipment; and (iv) acquire engineering and renovation materials as well as ancillary equipment, such as color steel plates and elevators. We expect to install sintering equipment, testing equipment, packaging equipment, with construction commencement targeted within 12−24 months after commencement, pilot within 24−48 months and mass production thereafter, to support server and data-center demand growth and shorten lead times to Southeast Asia and North America.

  This project construction is intended to satisfy customers' needs: (i) Expansion of computing infrastructure: As AI data centers evolve towards higher power densities, leading to a substantial increase in power density per rack, there is a corresponding surge in demand for electronic components crucial for heat dissipation and power supply stability; (ii) Demand for supporting core components: As AI data centers expand in scale and adopt higher power densities, the increasing power of computing equipment presents significant challenges for heat dissipation and power supply, leading to a markedly increased demand for our electronic components; and (iii) Need for optimized regional delivery efficiency: The Thailand production base will shorten delivery lead times to the Southeast Asian and North American markets, aligning with the requirement for rapid supply chain responsiveness in global data center construction. This proximity reduces customer inventory costs and operational risks, which is consistent with the prevailing trend towards regionalized supply chain layouts. According to Frost & Sullivan, the development of the electronics manufacturing industry has driven rising demand for core ceramic electronic components. From 2021 to 2025, the global market size of core ceramic electronic components increased from RMB162.2 billion to RMB182.1 billion, representing a CAGR of 2.9%.

- ***Telecom components project expansion:*** approximately 6.5% or HK$460.1 million will support capacity additions for ceramic ferrules and sleeves, optical communication ceramic packages and other telecom components in Thailand. Investments cover land acquisition, facilities, equipment, staffing, materials, and initial R&D and operating expenses. Proceeds will be used to (i) acquire suitable land parcels that we are currently identifying at an appropriate time based on our actual operational requirements and development progress; (ii) construct new production facilities with an estimated total gross floor area of approximately 10,000 sq.m.; (iii) procure machinery and equipment primarily includes grinding equipment and cutting equipment; (iv) acquire engineering and renovation

Capacity / product exhibit 12: CCTC_final_prospectus_20260630, original PDF page 260.
https://www1.hkexnews.hk/listedco/listconews/sehk/2026/0630/2026063000323.pdf

materials as well as ancillary equipment, such as color steel plates and elevators. We plan to deploy precision molding, grinding, inspection and packaging lines, with construction start within 12−24 months after commencement and commercial ramp-up within 24−48 months. Localizing production in Thailand is expected to deepen our telecom market presence by (i) leveraging Thailand's strategic location to enhance our proximity to emerging 5G and data center markets in Southeast and South Asia, thereby significantly shortening delivery lead times and enabling rapid responsiveness to regional customer demands and technical adaptation requirements, particularly for 5G infrastructure deployment; (ii) providing localized supply chain solutions to deepen strategic ties with global tier-one customers that reduce their inventory costs and operational risks and establishing integrated technical support teams in Thailand; (iii) optimizing supply chain resilience to mitigate global market risks through capacity synergy and complementarity with our domestic production bases; and (iv) strengthening our cost leadership by reducing logistics expenses and optimizing regional procurement through our localized presence in Thailand, which will allow us to capture regional market trends and develop differentiated products, thereby consolidating our global market position and capturing further share in emerging markets.

This project expansion is intended to satisfy customers' needs: (i) Demand for enhanced performance in high-end applications: The requirement for high-density, high-bandwidth connectivity in AI and data centers is driving the evolution of communication components towards miniaturization, lower signal loss and higher consistency. Our telecom components are suitable for the demands of high-speed optical modules and have been integrated into the supply chains of multiple equipment manufacturers, who have expressed clear demand for both production capacity expansion and further performance optimization; (ii) Demand for deployment of 5G/6G infrastructure: The global number of 5G/6G base stations is projected to significantly increase, while the proliferation of gigabit broadband is propelling the upgrade of optical communication networks. This trend elevates the requirements for signal transmission stability and high-speed interconnection, resulting in sustained demand growth for our telecom components; (iii) Demand from communications network construction in emerging markets: The accelerated deployment of 5G infrastructure in regions like Southeast Asia and South Asia has created an urgent need for localized supply chains. The expansion of the production base in Thailand enables closer proximity to these regional markets, allowing for a rapid response to the component needs of customers in emerging markets for their 5G rollouts and shortening delivery lead times. According to Frost & Sullivan, the global core ceramic telecom components market grew from RMB34.9 billion in 2021 to RMB48.3 billion in 2025, with a CAGR of 8.4%. By 2030, the global market size for core ceramic telecom components is expected to reach RMB75.9 billion, with a CAGR of 9.2% from 2026 to 2030.

- Approximately 48.8% or HK$3,441.2 million will be allocated to technology iteration and materials innovation to reinforce our integrated technology moat, support globalization, and advance domestic substitution in critical links.
  - ***Core business technology iteration and product performance optimization:*** approximately 34.2% or HK$2,408.9 million will fund upgrades in our products to meet higher-end application requirements and strengthen multi-category portfolio supply coordination. Proceeds will be used to (i) upgrade cleanrooms, laboratories and supporting office areas; (ii) procure core R&D raw materials

Capacity / product exhibit 13: CCTC_final_prospectus_20260630, original PDF page 261.
https://www1.hkexnews.hk/listedco/listconews/sehk/2026/0630/2026063000323.pdf

(such as ceramic and metal powders); (iii) acquire key laboratory and pilot equipment (including characterization/analysis, mixing and classification equipment); (iv) recruit around 400 specialized R&D talents with backgrounds in ceramics, micro-fabrication and reliability engineering; and (v) fund operating expenses such as patent, testing and travel. We will build pilot capabilities around MLCC, optical communication packages, chip inductors and precision ceramic components to support iterative trials and accelerate product performance upgrades.

The implementation of these upgrade plans is expected to span from 2026 to 2030 and will be carried out in phases: (i) In the first phase in 2026, within six to 12 months following the Listing, we plan to commence the upgrading and renovation of our cleanrooms, laboratories and ancillary office areas, establish the procurement framework for core R&D raw materials and initiate the tendering process for the selection of key laboratory and pilot production equipment; in parallel, we plan to launch the recruitment of R&D talent. (ii) In the second phase from 2027 to 2028, within 12 to 24 months following the Listing, we plan to complete the installation, commissioning and acceptance of laboratory and pilot production equipment and establish pilot production capabilities for upgraded core products; we further plan to complete the recruitment of our specialist R&D talents, commence technical iteration and product performance optimization for our core product lines and complete the formulation, process optimization and iterative testing. (iii) In the third phase from 2029 to 2030, we plan to complete customer qualification and volume production ramp-up, continuously optimize product performance and yield rates and enhance our ability to deliver a synergistic and diversified multi-category product portfolio; we further plan to complete our patent filing arrangements and participate in the formulation of relevant industry standards.

- ***Frontier materials innovation and application expansion:*** approximately 14.6% or HK$1,032.3 million will be invested in foundational breakthroughs in new and functional materials and in extending their use to emerging scenarios. Proceeds will be used to support procurement of specialty raw materials for materials R&D, investment in required experimental equipment (including characterization, mixing and classification units) and recruitment of around 200 researchers, as well as related operating expenses. Programs will focus on materials as the backbone for downstream product iteration and new business incubation.

  The implementation of this plan is expected to span from 2026 to 2030 and will be carried out in phases. (i) In the first phase in 2026, within six to 12 months following the Listing, we plan to commence the planning and construction of our materials R&D laboratory, establish the procurement framework for specialised R&D raw materials and initiate the selection and procurement of dedicated laboratory equipment for materials research; in parallel, we plan to launch the recruitment of R&D personnel. (ii) In the second phase from 2027 to 2028, within 12 to 24 months following the Listing, we plan to complete the installation, commissioning and acceptance of dedicated laboratory equipment for materials research and establish a comprehensive platform for the characterization, analysis and validation of materials; we further plan to complete the recruitment of R&D talents, commence foundational research on novel and functional materials and complete laboratory validation and small-scale trial testing of core material formulations. (iii) In the third phase from 2029 to 2030, we plan to complete the pilot-scale scale-up and volume production process validation of our

Capacity / product exhibit 14: CCTC_final_prospectus_20260630, original PDF page 262.
https://www1.hkexnews.hk/listedco/listconews/sehk/2026/0630/2026063000323.pdf

materials and achieve stable and compliant material performance; in parallel, we plan to advance the exploration of application scenarios and customer qualification of our materials in emerging fields and complete the commercialization and industrial deployment of our innovative materials.

- Approximately 10.0% or HK$704.6 million will be used for working capital and other general corporate purposes, including day-to-day operations and general corporate expenditures.

The additional net proceeds that we would receive if the Over-allotment Option were exercised in full would be HK$1,062.8 million. In the event that the Offer Price is fixed at a lower level compared to the maximum Offer Price stated in this Prospectus, the net proceeds from the Global Offering will be allocated to the above purposes on a pro rata basis.

In the event that certain parts of our development plans are hindered due to factors such as changes in government policies or force majeure events, our directors will carefully evaluate the situation and may reallocate the net proceeds from the Global Offering. Should there be any significant changes to the intended use of proceeds, we will make appropriate disclosures in accordance with the Hong Kong Listing Rules.

To the extent that the net proceeds of the Global Offering are not immediately used for the above purposes or if we are unable to effect any part of our future development plans as intended, we will only deposit such funds in short-term interest-bearing accounts at licensed commercial banks and/or other authorized financial institutions (as defined under the Securities and Futures Ordinance or applicable laws and regulations in other jurisdiction). In such event, we will comply with the appropriate disclosure requirements under the Hong Kong Listing Rules.

特别提示

本公司特别提醒投资者注意以下风险扼要提示，并仔细阅读本募集说明书“第七节 与本次发行相关的风险因素”：

一、募集资金投资项目新增产能无法消化、相关产品单价持续下滑的风险

本次募集资金投资项目包括高容量系列多层片式陶瓷电容器扩产项目等，上述项目全部达产后，公司 MLCC 将新增产能 3,000 亿只/年，较原产能存在一定幅度增加。尽管公司系基于相关产品市场需求持续扩大、国产替代进程不断深化以及现有产能无法满足当前和未来市场需求的背景下，为把握供应链切入的历史性机遇而启动建设上述项目。并且，公司亦已具备实施上述项目所需的相关技术储备以及人才、营销等资源。但是，若未来公司所处行业产业政策、市场环境、公司与下游客户的合作关系等发生重大不利变化或出现其他不可预见事项，将导致公司面临上述项目新增产能无法消化或相关产品单价持续下滑的风险，进而对相关项目预期效益的实现产生不利影响。具体如下：

（一）新增产能规模较大，存在无法消化的风险。本次募集资金投资项目高容量系列多层片式陶瓷电容器扩产项目与前次募集资金投资项目 5G 通信用高品质多层片式陶瓷电容器扩产技术改造项目新增的 MLCC 年产能合计为 5,400.00 亿只，假设 2021 年公司 MLCC 全年销量为 2021 年 1-6 月的 2 倍，则上述新增产能为公司 2021 年全年 MLCC 销量的 5.19 倍。由于新增产能规模较大，公司需及时扩大销售规模，保持较高的产能利用率水平，才能覆盖新增资产所产生的折旧费用及其他各项运营成本，从而实现经济效益的提升。反之，若发生重大不利变化或出现其他不可预见事项，导致公司无法及时消化上述产能，将对相关项目预期效益的实现以及公司业绩产生不利影响。

（二）本次募集资金投资项目产品将面临行业领先企业的竞争，可能影响新增产能的消化。目前，高容量 MLCC 基本由日本、韩国企业供应。本次募集资金投资项目实施后，公司高容量 MLCC 产能将得到提升。因此，公司有望逐渐获

Capacity / product exhibit 16: CCTC_MLCC_financing_20210908, original PDF page 2.
https://static.cninfo.com.cn/finalpage/2021-09-08/1210983207.PDF

苏州市和南充市为依托，建立起了以华南、华东和华中为主要市场覆盖区域的销售据点，并在此基础上将国内销售网络延伸到全国绝大部分行政区域，保证了公司产品的及时送达，实现了快速的客户需求响应。目前公司在国内各主要省市及全球二十多个国家建立了销售网络，销售渠道畅通。

4、项目建设规划

（1）实施主体

本项目实施主体为公司全资子公司南充三环。

（2）投资金额及明细

本项目总投资金额为 410,202.92 万元，拟使用募集资金 375,000.00 万元，全部用于资本性支出，具体投资规划如下：

单位：万元

序号	项目	投资总额	拟使用募集资金
1	建设投资	379,620.00	375,000.00
2	铺底流动资金	30,582.92	-
合计		**410,202.92**	**375,000.00**

（3）项目的实施准备和进展情况、预计实施时间、整体进度安排

截至本募集说明书出具日，项目尚处于建设阶段，正有序推进中。本项目将采用边建设边投产的方式进行，建设期为三年。本项目建设投资共计 379,620.00 万元，其中计划第一年投入 75,924.00 万元，达到设计产能 20%；第二年投入 151,848.00 万元，达到设计产能 60%；第三年投入 151,848.00 万元，达到设计产能 100%。项目整体进度安排如下：

序号	项目	1-6 月	7-12 月	13-18 月	19-24 月	25-30 月	31-36 月
1	前期准备工作（立项、设计等）						
2	工程、设备等采购、厂房及公用工程建设、人员招聘与培训等						
3	设备分批安装调试、试运转、试产、产能爬坡						

5、项目预期效益

Capacity / product exhibit 17: CCTC_MLCC_financing_20210908, original PDF page 49.
https://static.cninfo.com.cn/finalpage/2021-09-08/1210983207.PDF

项目实施完成后，全部达产年预计可实现销售收入 225,000.00 万元，项目投资财务内部收益率（税后）为 21.04%，静态投资回收期（税后）为 6.36 年，经济效益良好。

6、项目备案或审批情况

（1）项目备案

本项目已完成备案，备案号为“川投资备【2105-511303-07-02-893621】JXQB-0128 号”。

（2）环评手续

南充三环已取得本项目涉及的环评批复，批文号为“南高环审[2021]11 号”。

（3）用地情况

本项目拟在南充三环现有厂区建设，无新增用地需求，南充三环已通过出让方式取得上述工业用地。

（二）深圳三环研发基地建设项目

1、项目概况

本项目拟通过全资子公司深圳三环实施，拟在深圳市新建研发基地，同时购置精密测试、分析仪器等先进设备，引进、集聚新能源、先进陶瓷材料等行业一流人才，重点提升公司在固体氧化物燃料电池制备技术及产品、多层片式陶瓷电容器制备技术及产品等领域的研发实力，从而进一步增强公司主营业务竞争力，助力公司打造具有国际影响力的“先进材料专家”技术品牌。

2、项目必要性

（1）吸引国内外一流人才，完善区位布局

公司所属行业为技术密集型产业，需要招聘大量高端人才以巩固、提高自身研发实力以及突破技术壁垒。目前，公司主要生产、研发基地位于广东省潮州市、四川省南充市，而深圳市作为粤港澳大湾区的中心城市之一，在制度、对外经济交流、经济的市场化和国际化、公共管理等方面均达到先进水平，有利于吸引更

Capacity / product exhibit 18: CCTC_MLCC_financing_20210908, original PDF page 50.
https://static.cninfo.com.cn/finalpage/2021-09-08/1210983207.PDF

多层片式陶瓷电容器扩产技术改造项目新增的 MLCC 年产能合计为 5,400.00 亿只，假设 2021 年公司 MLCC 全年销量为 2021 年 1-6 月的 2 倍，则上述新增产能为公司 2021 年全年 MLCC 销量的 5.19 倍。由于新增产能规模较大，公司需及时扩大销售规模，保持较高的产能利用率水平，才能覆盖新增资产所产生的折旧费用及其他各项运营成本，从而实现经济效益的提升。反之，若发生重大不利变化或出现其他不可预见事项，导致公司无法及时消化上述产能，将对相关项目预期效益的实现以及公司业绩产生不利影响。

2、本次募集资金投资项目产品将面临行业领先企业的竞争，可能影响新增产能的消化。目前，高容量 MLCC 基本由日本、韩国企业供应。本次募集资金投资项目实施后，公司高容量 MLCC 产能将得到提升。因此，公司有望逐渐获得国际龙头部分市场份额，但亦将面对行业领先企业的竞争，并且存在由于未能有效应对市场竞争而造成新增产能无法消化的风险。

3、本次募集资金投资项目实施过程中，由于生产工艺相对复杂，产能提升、客户认证等亦需要一定时间，若项目无法按计划推进或满足客户对产能、产品规格等需求，将导致项目产能无法按计划释放或达到预计目标，产品竞争力被削弱，进而不利于本项目新增产能的消化及项目预期效益的实现。

4、本次募集资金投资项目产品未来存在销售单价持续下滑的风险。报告期内，受 MLCC 市场供求变化、国产替代进程深化、公司产能扩张及产品结构调整的影响，公司 MLCC 平均销售单价呈下降趋势，其中 2019 年、2020 年、2021 年 1-6 月 MLCC 平均销售单价分别较上一年下降 58.35%、22.99%、13.50%。未来几年，随着 MLCC 的产能增加，新增的下游需求逐渐得到满足，未来不排除 MLCC 存在销售单价持续下滑的风险，从而对公司经营业绩及本次募集资金投资项目预期效益的实现造成不利影响。

十六、募集资金投资项目新增折旧对公司经营业绩产生影响的风险

根据效益测算数据，公司前次募集资金投资项目、本次募集资金投资项目全部达产后，当年将分别新增折旧费 2.06 亿元、3.57 亿元，占 2020 年公司营业收入加上预计全部达产年新增营业收入的比例分别为 3.54%、5.72%，占 2020

Capacity / product exhibit 19: CCTC_MLCC_financing_20210908, original PDF page 68.

MT Ferrule Performance

US Conec manufactures durable, composite, Polyphenylene Sulfide (PPS) based thermoplastic ferrules available with up to 72 fiber holes that terminate 125 micrometer optical fiber. The ferrules are used in conjunction with US Conec's industry hailed, MTP® brand, MPO type connectors; however, they are also suitable for custom designed passive or active fiber coupling packages. US Conec offers MT ferrules in multiple performance grades tailored to specific application and fiber count requirements. Both singlemode and multimode ferrules.

Features:

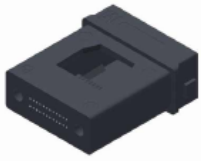

- High density; fiber pitch: 0.25mm
- Extremely low hygroscopic material for exceptional environmental stability
- Mold marks to indicate fiber type and ferrule grade
- Pre-angled SM
- MM MT Elite® optimized for 10G, 40G, 100G and 400G applications
- SM MT Elite® PA meets IEC 61755-3-31 Grade B requirements

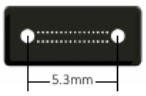

24 Fiber, Multimode MT Ferrule

MT-16 Ferrules

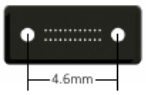

US Conec continued innovation in multi-fiber connectivity led to the now standardized MT-16 format common in emerging 400G Tx/Rx link designs. US Conec's full line of MT-16 products bring the same industry leading multi-fiber performance on traditional MTs to the higher density MT-16 format.

MT-16 Ferrule

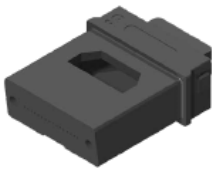

2 x 16 Fiber Ferrule

2 x 12 Fiber Ferrule

Pre-Angled SM APC MT and MT-16 Ferrules

Singlemode APC ferrules from US Conec are offered with the 8° angle pre-molded into the ferrule endface. These pre-angled ferrules eliminate a polishing step in addition to the need for supporting multiple polishing jigs for SM production lines. The end result in more throughput, less capital investment and superior performance.

16 Fiber, Pre-Angled Singlemode MT-16 Ferrule

Increasing Demand for Capacitors in AI Servers

Trends in AI Servers

・Processing capabilities of AI servers continue to increase
⇒**Leading to a rise in the number of AI accelerators**

・AI servers consume a large amount of power instantaneously.
To maintain stable operation, it is necessary to temporarily store this required power, **resulting in an increase in the number of capacitors within AI accelerators.**

The total number of capacitors installed in AI servers is on the rise.

■ **Review of the Number of Installed Capacitors**

<Average Number>

Medium-Term Direction 2027	AI Servers ※Baseboard	10,000 ～ 20,000
Review	AI Servers ※Baseboard	**15,000 ～ 25,000**

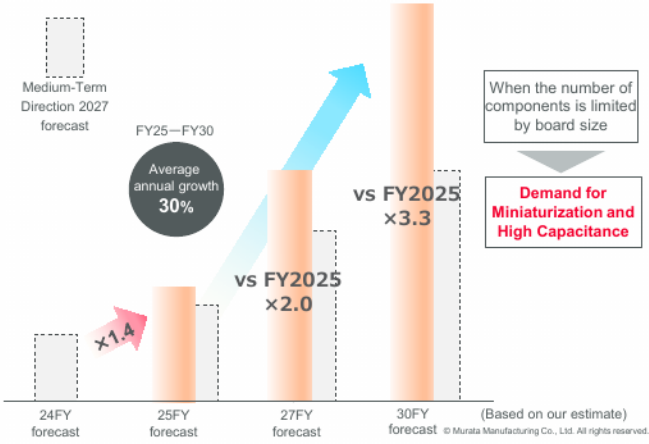

Key Changes Since the Announcement of Medium-Term Direction 2027

<Key Changes>

・AI server total unit forecast : **No change**

・Number of installed capacitors : **Increase**

■ **Estimated number of capacitors demand for servers**

IV. USE OF PROCEEDS

1. Use of Proceeds from the H Share Listing

The 71,364,300 H Shares issued by the Company (before the exercise of the over-allotment option) were successfully listed on the Main Board of the Hong Kong Stock Exchange on the Listing Date. In addition, the over-allotment option set out in the Prospectus was partially exercised by the sole overall coordinator (for itself and on behalf of the international underwriters) on August 5, 2026 in respect of a total of 8,856,900 H Shares, which were listed and traded on the Main Board of the Hong Kong Stock Exchange on August 10, 2026. After deducting underwriting commissions, listing expenses and other fees, the net proceeds from the global offering amounted to approximately HK$7,925.3 million, which will be used in accordance with the purposes set out in the Prospectus.

As the H Shares had not yet been listed on the Hong Kong Stock Exchange during the Reporting Period, there were no details of the use of proceeds from the global offering during the Reporting Period. As at the date of this announcement, there has been no change in the intended use of net proceeds disclosed in the "Future Plans and Use of Proceeds" section of the Prospectus.

Actual net H-share proceeds: issuer English H1 results announcement dated August 27, 2026, original PDF page 19. Approximately HKD 7,925.3M net after fees. Issuer-authored source retrieved from a FinancialFilings CDN mirror; official HKEX-host retrieval location remains unverified. Actual net CNY settlement and FX dates are undisclosed. Original SHA256: 0d7315a969daaa860a6ea6937af84fe30ae790114e407ab91421d55fd730f1e2. https://cdn.financialreports.eu/financialreports/media/filings/55396/2026/RNS/55396_rns_2026-08-27_a193e81e-85fe-48e0-9e78-7816e0435a4d.pdf

Complete conditional outcome: weak timely

This complete weak demand / timely qualification outcome has joint weight 11%. Its accepted receipts, paid manufacturing, research, support, finite assets, working capital and claims are computed before the common probability weighting. All values below retain the same native units and share convention.

The four product vectors are exclusive external-sales wallets. Deferred opportunity is an unserved annual market opportunity rather than a contracted order book. Finite accounting assets and paid qualified receipt capacity are separate concepts. The model capitalizes no development research.

The Q2, Q3 and Q4 2030 starting windows require one, two and three additional 2031 quarters respectively. Their four-quarter ceilings remain incomplete. The model shows the available 2030 operating results and does not supply invented tail earnings.

Complete conditional outcome: weak delayed

This complete weak demand / delayed qualification outcome has joint weight 9%. Its accepted receipts, paid manufacturing, research, support, finite assets, working capital and claims are computed before the common probability weighting. All values below retain the same native units and share convention.

The four product vectors are exclusive external-sales wallets. Deferred opportunity is an unserved annual market opportunity rather than a contracted order book. Finite accounting assets and paid qualified receipt capacity are separate concepts. The model capitalizes no development research.

Complete conditional outcome: central timely

This complete central demand / timely qualification outcome has joint weight 38.5%. Its accepted receipts, paid manufacturing, research, support, finite assets, working capital and claims are computed before the common probability weighting. All values below retain the same native units and share convention.

The four product vectors are exclusive external-sales wallets. Deferred opportunity is an unserved annual market opportunity rather than a contracted order book. Finite accounting assets and paid qualified receipt capacity are separate concepts. The model capitalizes no development research.

Complete conditional outcome: central delayed

This complete central demand / delayed qualification outcome has joint weight 16.5%. Its accepted receipts, paid manufacturing, research, support, finite assets, working capital and claims are computed before the common probability weighting. All values below retain the same native units and share convention.

The four product vectors are exclusive external-sales wallets. Deferred opportunity is an unserved annual market opportunity rather than a contracted order book. Finite accounting assets and paid qualified receipt capacity are separate concepts. The model capitalizes no development research.

The Q2, Q3 and Q4 2030 starting windows require one, two and three additional 2031 quarters respectively. Their four-quarter ceilings remain incomplete. The model shows the available 2030 operating results and does not supply invented tail earnings.

Complete conditional outcome: strong timely

This complete strong demand / timely qualification outcome has joint weight 20%. Its accepted receipts, paid manufacturing, research, support, finite assets, working capital and claims are computed before the common probability weighting. All values below retain the same native units and share convention.

The four product vectors are exclusive external-sales wallets. Deferred opportunity is an unserved annual market opportunity rather than a contracted order book. Finite accounting assets and paid qualified receipt capacity are separate concepts. The model capitalizes no development research.

Complete conditional outcome: strong delayed

This complete strong demand / delayed qualification outcome has joint weight 5%. Its accepted receipts, paid manufacturing, research, support, finite assets, working capital and claims are computed before the common probability weighting. All values below retain the same native units and share convention.

The four product vectors are exclusive external-sales wallets. Deferred opportunity is an unserved annual market opportunity rather than a contracted order book. Finite accounting assets and paid qualified receipt capacity are separate concepts. The model capitalizes no development research.
