Longsys: storage engineering meets a powerful, costly memory cycle

Longsys captures value by combining purchased memory wafers with controllers, firmware, packaging, testing and customer qualification. More AI processing at devices and in servers can increase the value of these capabilities. The investment case depends on turning those capabilities into recurring product profit while funding expensive inventory.

Current research snapshot	Assessment
Company / listing	Longsys Electronics / Shenzhen 301308.SZ
Coverage	Covered; holding status is not asserted
Latest full accounts	Calendar H1 2026; published 11 August
Latest operating update	Unaudited nine-month preliminary results; 15 October
Selected valuation quarter	Q4 2027; earnings window Q4 2027 through Q3 2028
Model ceiling / convention	CNY 773 per share / 20x forward four-quarter core OP
Analytical score / Excel Base	65 / 100 analytical; protected Excel Base 67
Dated market quote	CNY 245; 20 October 2026 Shanghai close
Model share denominator	464 million; gross issued shares plus all awards
Primary source and model confidence	Reported totals HIGH; preliminary conversion and forward product/cost allocations LOW

The strongest source-supported opportunity is a wider role in embedded and enterprise storage, supported by scaled mSSD and UFS products and named processor partnerships. A controller benchmark creates value only when it improves accepted products, cost, customer retention or paid volume. The forward model includes a bounded partner-adoption allowance after substantial overlap and full associated manufacturing and development costs.

The largest uncertainty is how much of current profit reflects favorable inventory timing. Management uses month-end weighted-average inventory cost and says memory price increases are slowing. Higher replacement costs, slower customer price increases and working-capital needs can reduce profit even while revenue grows.

Reader-facing financial amounts, shares, prices and percentages are rounded to whole numbers. CNY millions are used unless a different unit is stated. The linked model and workbook retain exact values; independently rounded rows can differ from their displayed totals. OP means the explicitly reconstructed core operating profit defined below.

Where Longsys earns its margin

The company buys DRAM and NAND supply and adds product-level engineering: controller design, firmware, package integration, testing, qualification and route to market. It serves embedded, SSD, mobile and memory-module applications, alongside Lexar-branded products and its Brazilian Zilia business. Wafers remain a critical upstream input.

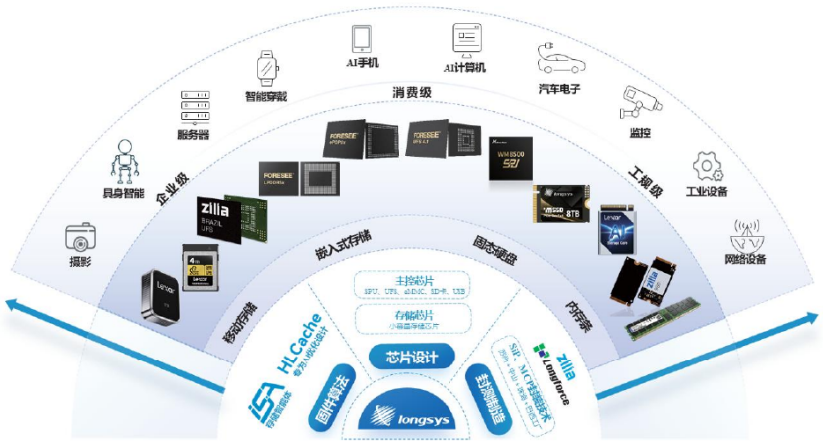

Capability	Economic capture	Limit / competing route
Controller and firmware	Better endurance, latency, form factor or system compatibility can win qualified product volume and retain a margin.	Internal technology does not establish external royalty income; upstream wafer economics still matter.
Packaging and testing	Smaller integrated products and qualification can reduce customer integration work and support differentiated pricing.	The company provides no quantified recurring mSSD cost saving or proprietary yield advantage.
Customer qualification	An accepted embedded or enterprise design can support a longer product relationship.	Acceptance, procurement allocation, cash collection and replacement products determine realized profit.
Wafer procurement / inventory	Earlier lower-cost inventory can generate substantial profit as selling prices rise.	The same mechanism can reverse when replacement costs rise or selling prices fall.
Brand and geographic routes	Lexar and Zilia extend distribution and customer access.	Brand, geography and enterprise classifications overlap the analytical product rows.

更广泛范围内的普及以及在众多实际场景中的落地应用，开辟了全新的发展路径。根据 IDC 预测，2026 年全球智能眼镜市场出货量预计将突破 2,368.7 万台，其中中国智能眼镜市场出货量将突破 491.5 万台，市场正式迈入规模化增长新阶段。

（二）主营业务

公司主要业务为存储器和主控芯片的研发设计、封装测试、技术支持与存储器销售。公司通过覆盖芯片设计（主控芯片及存储芯片）、固件算法开发、存储器设计、封装测试等存储关键环节的全栈式技术能力，为市场提供消费级、企业级、车规级、工规级存储器以及行业存储软硬件应用解决方案。

公司主要业务与核心竞争力

公司拥有行业类存储品牌 FORESEE、海外行业类存储品牌 Zilia 和国际高端消费类存储品牌 Lexar（雷克沙）。公司产品广泛应用于端侧 AI 设备、AI 服务器、数据中心、汽车电子、物联网、安防监控、工业控制等领域，以及个人消费类存储市场。

Original issuer exhibit. 2026-08-11; PDF page 15. Issuer product and capability map. Product architecture map. It demonstrates the company's scope; it provides no awarded market share or forward shipment quantity. Source: original document. Original language and numerical precision are preserved.

The bottleneck and the company-specific alpha

Memory supply, power efficiency, usable capacity and qualified storage performance can limit AI deployment. Longsys can benefit when a customer needs a working storage product that combines scarce wafers with controller, firmware and package expertise. That is a product-specific qualification opportunity; wafer producers retain important control over supply and cost.

The research edge is to separate sustainable integration profit from inventory gains and to measure how much future product adoption is already inside the reference forecast. The model therefore values a fading gross-margin path, preserves ordinary stock compensation, and permits only a small shared partner residual. Growth in general AI spending carries no separate Longsys revenue allocation without a qualified product, procurement share and delivery date.

Market inference to test	Evidence required for excess company profit	Current model treatment
More memory capacity per AI endpoint	Qualified Embedded / SSD products, accepted units and gross profit after wafer and support costs.	Reference growth plus a bounded shared partner residual.
Controller / HLC technical leadership	Repeatable customer performance, billings, durable cost saving or commercial terms.	No standalone software royalty or lab-performance revenue multiplier.
Tight memory supply	Reliable allocation at affordable replacement cost and customer pass-through.	Strong cycle score, explicit margin fade and price / volume stress tests.
Higher enterprise mix	Durable enterprise billings, mix and margin net of qualification costs.	Reference product demand; no independent addition of overlapping enterprise and product revenue.
Large external AI capital budgets	Longsys-specific supplier eligibility and accepted shipments.	No additional SpaceX order or share assumption.

公司产品的功能及主要应用

芯片产品	主要产品	功能介绍	主要应用
主控芯片	高性能主控芯片	负责存储器内部 NAND 闪存颗粒的数据管理，并与 CPU 进行数据通信	端侧 AI 存储器、高端存储器
	SPU 芯片	除 NAND 闪存颗粒的数据管理基础功能外，还具备存内数据压缩和温冷数据智能调度能力，可大幅提升大模型在端侧 AI 的部署能力	端侧 AI 存储器
存储芯片	SLC NAND 等特定型态存储芯片	作为存储器的高性能存储介质载体，提供高可靠性支撑	高可靠性存储器
存储器产品	**主要产品**	**主要应用**	
芯片级存储器	嵌入式存储	AI 手机、智能穿戴、智能汽车等	
模组级存储器	固态硬盘	AI 服务器、AI PC、数据中心等	
	移动存储	个人消费类存储、智能汽车等	
	内存条	AI 服务器、AI PC、数据中心等	

1、芯片产品

（1）主控芯片

主控芯片是存储器的核心器件，其与配套固件算法一起，负责 NAND 闪存颗粒的数据管理，以及与 CPU 进行数据通信，实现数据管理、坏块管理、数据纠错、寿命均衡、垃圾回收等功能，直接关系到存储器的性能、可靠性和稳定性。进入 AI 大模型时代，“内存墙”的物理限制与高昂的内存成本，已成为大模型在端侧 AI 广泛应用的重要阻碍。在公司与产业生态伙伴共同推动下，主控芯片的系统定位正经历深刻重塑，从数据读写控制单元，演进为弥合算力与内存物理落差的智能中枢。

公司已推出采用同等先进制程的 SPU（Storage Processing Unit，存储处理单元）芯片，该芯片集成存储控制引擎与智能处理引擎。根据公司内部测试，SPU 芯片的 NAND I/O 可达 4800MT/s，高于市场采用 6-12nm 制程的部分 PCIe 5.0 SSD 主控芯片，并支持 128TB 的 SSD 单盘最大容量。SPU 芯片搭配公司独有的存储智能软件架构，能够大幅提升端侧 AI 大模型的模型规模上限。基于与 AMD 的联合调优，在 AI 移动工作站及 AI PC 平台的测试数据显示，搭载公司智能软硬件架构的设备，相比传统存储方案，AI PC 端模型规模提高约 3.2 倍，内存利用效率提升约 200%，这一技术将为 AI PC 在普通个人用户的大规模推广奠定重要的存储技术底座。

公司依托自研 UFS 主控与紫光展锐联合调优，在紫光展锐平台的实测数据显示，4GB DDR 搭载公司智能软硬件架构技术后，终端响应时间接近 6GB/8GB DDR 正常配置水平，在保障端侧 AI 设备体验和器件使用寿命的前提下，能够大幅优化终端 DRAM 容量需求，降低 BOM 成本。

Original issuer exhibit. 2026-08-11; PDF page 17. Controller and product capabilities. Product and controller capability descriptions. A controller addressing large capacity is not proof of a shipped drive, a customer order or a licensing contract. Source: original document. Original language and numerical precision are preserved.

Competition, customer power and substitutability

Competition exists at several layers. Integrated wafer suppliers can sell complete storage products and control scarce DRAM or NAND output. Other controller and module providers compete on price, firmware, qualification and service. Customers can qualify alternative modules or redesign around standard form factors. The degree of switching cost differs by embedded, enterprise and consumer application.

Competitive force	Practical effect	Evidence that would strengthen the moat
Upstream DRAM / NAND producers	Wafer allocation and replacement cost can absorb downstream price gains.	Durable supply terms, resilient gross profit after inventory turnover and no allocation-driven missed deliveries.
Controller / module alternatives	Competing firmware and package options limit assumed monopoly economics.	Repeat design wins, customer retention and measurable net performance or cost advantage.
Large OEM procurement	Volume can be concentrated; OEMs negotiate pricing and qualify substitutes.	Commercial allocation and acceptance evidence with disciplined receivable collection.
Enterprise qualification	Reliability and firmware support can make qualification valuable.	Sustained enterprise gross profit and manageable ongoing engineering costs.
Consumer demand and channel inventory	High memory prices can constrain device demand or create dealer inventory risk.	Sell-through and collections rather than only channel shipments.

No numerical competitor market-share estimate is inserted: the recovered primary packet does not disclose sufficiently comparable current shares or supplier-specific capacity. This limits confidence in long-range product allocation and pricing power.

301308.SZ / LONGSYS / 21 OCTOBER 2026

Latest actual accounts: powerful earnings, heavy inventory funding

The latest complete financial statements cover January through June 2026. The headline accounting profit includes finance costs and noncore gains. The model reconstructs a separate core profit from revenue, manufacturing cost and ordinary operating charges.

H1 2026 metric	CNY million	Scope
Revenue	24,088	Reported consolidated
Manufacturing / purchased product cost	9,900	Reported COGS

H1 2026 metric	CNY million	Scope
Gross profit	14,189	Revenue less COGS; gross margin 59%
Core operating charges	2,086	Selling, admin, R&D, tax surcharges and impairment
Reconstructed core OP	12,102	Analytical convention; finance and noncore credits excluded
Reported statutory OP	12,731	Issuer accounting subtotal
Attributable net profit	10,577	After tax and minority interests
Deducted attributable net profit	10,047	Issuer nonrecurring-item adjusted after-tax measure
Operating cash flow	-3,151	Reported cash flow; negative despite large profit
Inventory / cash	25,777 / 3,109	Balances at 30 June

Original issuer exhibit. 2026-08-11; PDF page 81. Reported income statement. Reported income-statement amounts are CNY yuan. The reader-facing reconciliation converts them to CNY millions; statutory OP and reconstructed core OP have different scopes. Source: original document. Original language and numerical precision are preserved.

A transparent core-profit and cash bridge

H1 2026 bridge	CNY million	Treatment
Gross profit	14,189	Starting point
Selling	611	Deducted
Administration	436	Deducted
Research and development	851	Deducted
Tax surcharges	57	Deducted
Credit impairment	4	Deducted
Inventory / asset impairment	127	Deducted
Reconstructed core OP	12,102	Ordinary stock compensation remains in these costs
Finance expense	438	Deducted to reconcile to statutory OP
Other income	448	Added in statutory OP; includes Brazil PADIS tax-credit income
Investment loss	80	Deducted in statutory OP
Fair-value gain	672	Added in statutory OP
Asset-disposal gain	27	Added in statutory OP
Reported statutory OP	12,731	Accounting result

H1 stock compensation was about CNY 147 million: manufacturing 4, R&D 70, administration 35 and selling 39. These charges are retained. Adding them back again would overstate core profit.

Finance expense included about CNY 265 million of foreign-exchange losses and 181 million of interest expense, partly offset by interest income. The inherited 20x core-OP convention excludes finance; debt and cash requirements still matter to the thesis and risk score. No silent switch to net income or enterprise-value methodology is made.

The October preliminary update and its exact limits

The 15 October filing is an unaudited preliminary result, not the full Q3 financial report. Its original table uses units of ten thousand CNY. The report below converts those bounds to CNY millions; it uses the issuer's explicit Q3 range rather than manufacturing precision from rounded nine-month endpoints.

Preliminary issuer measure	Low CNY million	High CNY million	Status
Nine-month revenue	38,000	40,000	Preliminary
Nine-month attributable net profit	14,000	14,900	Preliminary
Nine-month deducted attributable net profit	13,800	14,800	Preliminary
Explicit Q3 revenue	13,900	15,900	Preliminary; midpoint 14,900
Explicit Q3 deducted attributable net profit	3,753	4,753	Preliminary; midpoint 4,253
Q3 core OP / gross profit	Not reported	Not reported	Requires labeled model conversion

证券代码：301308　　证券简称：江波龙　　公告编号：2026-117

深圳市江波龙电子股份有限公司

2026 年前三季度业绩预告

本公司及董事会全体成员保证信息披露的内容真实、准确、完整，没有虚假记载、误导性陈述或重大遗漏。

一、本期业绩预计情况

1、业绩预告期间：2026 年 1 月 1 日至 2026 年 9 月 30 日

2、业绩预告情况：预计净利润为正值且属于同向上升情形

单位：万元

项　目	本报告期				上年同期
归属于上市公司股东的净利润		1,400,000	～	1,490,000	71,263.31
	比上年同期增长	1,864.55%	～	1,990.84%	
扣除非经常性损益后的净利润		1,380,000	～	1,480,000	47,877.36
	比上年同期增长	2,782.36%	～	2,991.23%	
营业收入		3,800,000	～	4,000,000	1,673,433.20

注:本表格中的“万元”均指“人民币万元”。

二、与会计师事务所沟通情况

本次业绩预告数据是公司财务部门初步核算的结果，未经会计师事务所审计。

三、业绩变动原因说明

1、2026 年前三季度，公司实现的营业收入和净利润同比明显增长。其中，2026 年第三季度（7 月-9 月），公司实现营业收入为 139 亿元至 159 亿元（同比增长 112.76%至 145.35%）；实现归属于上市公司股东的扣除非经常性损益的净利润 37.53 亿元至 47.53 亿元（同比增长 740.33%至 964.26%）。

Original issuer exhibit. 2026-10-15; PDF page 1. Unaudited nine-month preliminary ranges. Original nine-month and quarterly ranges, with the original ten-thousand-CNY unit label. Source: original document. Original language and numerical precision are preserved.

The company says memory supply and demand remain tight, but DRAM and NAND price increases narrowed materially and incremental pricing profit slowed. Q3 operating cash flow was positive and liabilities were below half of assets at quarter-end. The filing does not give the Q3 cash-flow amount or a complete new balance sheet.

2、2026 年第三季度，公司各项经营指标健康度进一步提升，尤其在存储晶圆价格高位的大环境下，实现第三季度经营性现金流量净额转正的重大跨越，并且实现期末资产负债率低于 50 %。

3、2026 年第三季度，全球存储器市场供需格局总体仍然偏紧，但受前期较高价格基数影响，DRAM 和 NAND Flash 价格涨幅较前期明显收窄，存储价格上涨对公司盈利的边际贡献显著趋缓，存储行业正在从消费类价格周期转向 AI 驱动技术周期。在此背景下，公司以自研芯片、自研软件架构为技术引领，寻求差异化发展路径，大客户、高端客户及全球化客户占比持续提升，产品与客户结构进一步优化，驱动公司 2026 年第三季度盈利能力仍保持在历史较高水平。

4、报告期内，公司产品与技术创新不断取得突破。UFS 4.1、mSSD、ePOP5x 等高端新产品已在众多知名大客户处实现规模化商业应用，国际品牌 Lexar、Zilia 等全球化业务保持高速增长。公司持续深化端侧 AI 技术布局，相关技术合作范围进一步拓展至 AMD、高通、紫光展锐、全球领先 CPU 厂商等更多全球知名企业。

四、其他相关说明

本次业绩预告数据是公司财务部门初步核算的结果，未经审计机构审计。2026 年前三季度业绩的具体数据将在公司《2026 年三季度报告》中详细披露，敬请广大投资者谨慎决策，注意投资风险。

五、备查文件

1、董事会关于本期业绩预告的情况说明；

2、深交所要求的其他文件。

特此公告。

深圳市江波龙电子股份有限公司董事会

2026 年 10 月 15 日

Original issuer exhibit. 2026-10-15; PDF page 2. Pricing/cash-flow and commercial progress. Management pricing, commercial progress and cash-flow language. Positive cash flow is a qualitative update; an amount is not supplied. Source: original document. Original language and numerical precision are preserved.

Q3 is a compound estimate, not an observed operating-profit quarter

The model converts the Q3 deducted net-profit midpoint using the H1 ratio of reconstructed core OP to deducted attributable net profit. The ratio is about 120%. The result is an estimated CNY 5,123 million of Q3 core OP. Adding modeled core operating charges of CNY 1,157 million gives estimated gross profit of CNY 6,280 million, or about 42% of sales.

H1 net-to-core reconciliation	CNY million	Sign from deducted NP to core OP
Deducted attributable NP	10,047	Starting point
Tax	2,012	Add
Minority profit	141	Add
Finance expense	438	Add
Net recurring noncore reconciliation residual	536	Subtract
Reconstructed core OP	12,102	Analytical result
Ratio applied to Q3 midpoint	120%	LOW conversion; exact ratio retained in model

This conversion compounds several uncertainties: the Q3 tax rate, finance and FX charges, minority share, noncore credits and expense mix can differ from H1. The residual is a reconciliation term, not a forecast of a specific Q3 income item. Both preliminary endpoints and a Q4 gross-margin stress are shown in the diagnostic section. The selected Q4 2027 valuation window excludes Q3 and Q4 2026; this does not make their cash and cycle signals irrelevant.

Q4 2026 retains the inferred Q3 blended margin with the modeled relative product spreads. It is an assumption, not guidance. The 29 October board meeting is the next scheduled opportunity for full Q3 accounts to replace this compound estimate.

301308.SZ / LONGSYS / 21 OCTOBER 2026

Inventory accounting explains both the opportunity and the risk

In the September management record, the company states that it uses month-end weighted-average inventory cost. Earlier low-cost wafers therefore run through earnings at a different time from replacement purchases. Strong selling prices can lift current gross profit while cash is committed to more expensive future inventory.

The risk is asymmetric during a turn: selling prices can stop rising before high-cost inventory has cleared. Supply contracts or strategic relationships support access, but the disclosed records do not provide a fixed wafer-price guarantee or a quantified allocation. Revenue growth alone cannot establish a lasting margin.

投资者关系活动主要内容介绍	**1、存储价格上涨，存货当中的低价晶圆大量消耗后，公司盈利能力将如何变化？** 答：公司采用月末一次加权平均法确定发出存货的实际成本，存储晶圆价格上涨的影响已动态反映在实际营业成本中。与此同时，存储价格增长反映的是行业供需关系及产业景气度改善，而非单一的成本变动。 从存储器行业的历史经营情况看，企业的长期盈利能力既取决于技术实力、产业链协同能力等综合竞争优势，也与高端客户占比密切相关。具备领先技术能力、多元化产品矩阵及完善产业链布局的企业，能够更好满足大客户对产品性能、兼容适配、可靠性及稳定供货等方面的综合要求，从而持续提升高端客户占比。通常而言，高端客户占比较高的企业，具有更强的盈利能力和相对明显的弱周期特征。 在 AI 发展浪潮下，公司坚定执行全面拥抱端侧 AI 的发展战略，前期重点投入的主控芯片、企业级存储、mSSD 等产品已陆续取得实质性商业进展，并持续深化与全球知名客户的合作和导入，不断提升高端客户收入占比，为公司业务增长及盈利能力提升提供支撑。近期，公司还推出了 HLC（高级缓存技术）、AIDIMM、AILPGBA 等全面适配端侧 AI 的新技术、新产品。随着相关产品逐步导入市场并实现更广泛的规模化应用，公司高端、高壁垒、高附加值产品的收入占比有望进一步提升，持续优化产品结构和盈利结构。 **2、HLC 技术是如何实现存储的更高效利用的？HLC 技术的研发与商业化进展情况如何？如何看待 HLC 技术的市场空间？** 答：HLC 技术基于公司自研高性能主控芯片、专属固件与系统级架构的协同配合，让 SSD 或 UFS 存储设备承接

Original issuer exhibit. 2026-09-22; PDF page 3. Weighted-average inventory cost and differentiation. Published management Q&A includes the inventory-cost method. This is a condensed issuer record, not a recovered audio transcript. Source: original document. Original language and numerical precision are preserved.

Balance / cash item at 30 June	CNY million	Interpretation
Net inventory	25,777	About 60% of total assets
Raw-material inventory	14,370	Large wafer-cost and availability exposure
Inventory allowance	97	Accounting provision; no assumed full liquidation value

Balance / cash item at 30 June	CNY million	Interpretation
Receivables / prepayments	4,358 / 1,226	Collection and supply commitments consume cash
H1 operating cash flow	-3,151	Actual cash strain before the later Q3 qualitative improvement
Capital-asset cash spend	368	H1 actual; separate from wafer purchases

Commercial evidence: strong scale, overlapping reporting categories

H1 enterprise revenue was about CNY 2,140 million, Lexar revenue about CNY 3,966 million and Zilia external revenue about CNY 3,950 million. These are useful indicators of customer and geographic reach. They overlap product families and cannot be added to Embedded, SSD, Mobile and DIMM revenue as independent pools.

Reported H1 view	CNY million	What it establishes
Enterprise	2,140	Commercial scale; the company reports about 209% year-over-year growth
Lexar	3,966	Brand scale; about 85% growth
Zilia external	3,950	Brazilian operation scale; about 185% growth
Overseas	17,017	Geographic sales, not an extra product segment
Domestic	7,071	Geographic sales
Direct / dealer sales	13,944 / 10,145	Channel view of the same consolidated revenue
Remaining obligations expected in 2026	1,330	Disclosed obligation amount; no disclosed 2027 or 2028 balance

The issuer reports a single operating segment. All five forward product rows are analytical allocations with LOW confidence. Future volumes, product margins, unit selling prices, installed capacity and commercial customer allocations are not given as issuer guidance.

mSSD and UFS: qualified products with measurable commercial potential

The H1 report and September management records support scaled mSSD applications with leading PC OEMs and continued UFS progress. System-in-package integration can help a customer fit storage into a smaller area and simplify its assembly. The evidence supports an operating product opportunity.

Net economics require the final product price, wafer and controller costs, packaging yield, qualification support and acceptance timing. The company supplies no sufficiently quantified recurring mSSD saving to add a separate cost benefit. Existing scale already supports the reference product path; a new residual must represent genuinely additional customer use.

	技术能力、产品矩阵及产业链布局等多方面优势，能够更好满足大客户对产品性能、兼容适配、可靠性及稳定供货等方面的综合要求，高端客户占比较高，并具有更强的盈利能力和相对明显的弱周期特征。 在 AI 发展浪潮下，公司全面拥抱端侧 AI，前期重点投入的主控芯片、企业级存储、mSSD 等产品已陆续取得实质性商业进展，并持续深化与全球知名客户的合作和导入，不断提升高端客户收入占比，为公司业务增长及盈利能力提升提供支撑。近期，公司还推出了 HLC（高级缓存技术）、AIDIMM、AILPBGA 等端侧 AI 存储的新技术、新产品。随着相关产品逐步导入市场并实现更广泛的规模化应用，公司高端、高壁垒、高附加值产品的收入占比有望进一步提升，持续优化产品结构和盈利结构。 **3、mSSD 产品的导入情况如何？** 答：公司 mSSD（Micro SSD）产品通过 SiP（System in Package）封装技术，将主控芯片、存储芯片（Die）、无源元件（电阻、电容等）等不同功能的集成电路集成在一个封装体内，实现 20×30×2.0 mm 的产品体积，尺寸远小于传统 PCBA SSD。mSSD 产品性能满足 PCIe 的高标准，并通过简化传统 PCBA SSD 的复杂生产流程，具备明显的综合成本优势。 mSSD 高度契合了 AI PC 对极致性能与紧凑形态的苛刻要求，公司正着力推动 mSSD 成为新一代产品标准，目前已在多家全球头部 PC 厂商实现规模化商业应用。 **4、如何看待存储价格未来变化趋势？** 答：结合第三方机构公布的信息来看，AI 在云端和端侧落地，是较为明确的产业趋势，并将带来巨大的存储需求增量；受过往周期影响，海外原厂仍维持相对审慎的 NAND 资本开支计划，更多通过技术升级实现相对温和的 NAND 供

Original issuer exhibit. 2026-09-29; PDF page 3. mSSD commercialization and future mix. mSSD commercial and integration discussion. The model assigns no unreported unit saving, yield uplift or licensing stream. Source: original document. Original language and numerical precision are preserved.

HLC, AIDIMM and platform partnerships: useful breadcrumbs with boundaries

HLC shifts suitable warm or cold data from DRAM toward NAND. Management cites partner tests and describes work with AMD, Qualcomm and other platform providers. This can make a memory configuration useful for a wider range of AI workloads, but the economic result depends on accepted product volume and customer value.

AIDIMM and related source comparisons include internal test conditions and a historical HBM2 comparison. These do not establish interchangeability with current HBM or a right to capture an HBM supplier's economics. The April formal briefing says the company has no HBM development plan and SOCAMM had not generated material revenue at that time.

注：以上产品中 HBM2 参数基于公开资料整理；HBM2E、DDR5 SODIMM、DDR5 UDIMM 参数均摘自 SK 海力士官网公开数据（https://product.skhynix.com/products/dram/dram.go）。公司的 AIDIMM、AILPGBA 的数据均出自公司内部测试数据，仅供参考，因实际使用环境不同可能存在一定偏差。

在企业级存储领域，公司已推出最大容量为 256GB 的 DDR5 RDIMM 产品，企业级 DDR5 内存条涵盖从 16GB 至 256GB 主流全容量系列，完成了 AMD Threadripper PRO 9000WX 系列兼容性认证，加深了与 AMD 和 Intel AVL 官方认证合作，并在鲲鹏、海光、飞腾等多个国产 CPU 平台实现服务器兼容性验证，适用于电信、金融、互联网等各类场景。针对目前 AI 加速落地情况，公司积极抓住存储行业新的发展趋势，已点亮 SOCAMM 产品，结合 MRDIMM、LPCAMM2、CAMM2、CXL2.0 内存拓展模块补齐未来产品版图，提供持续的服务客户能力。

公司 SOCAMM 产品采用 LPDDR5X 技术，提供 128 位 I/O 位宽，并集成存储控制器与内存单元，根据公司内部评估数据，SOCAMM 的带宽、延迟、功耗显著优于 DDR5 RDIMM，能大幅加速 AI 训练和推理任务的数据吞吐。公司 SOCAMM 产品支持高密度服务器部署，单模块可达 128GB，满足大模型训练需求，依托于 LPDDR5X 的低电压特性，SOCAMM 产品将显著降低数据中心能耗，并结合近 CPU 布局，全面突破传统 RDIMM 的带宽、延迟瓶颈及高温痛点。基于 SOCAMM 的明显优势，相关产品在未来 AI 服务器及 AI 的应用上有望得到广泛的应用。

公司完成了 8800/12800 系列 MRDIMM 产品的开发验证，可以实现最高至 256GB MRDIMM 产品。根据行业数据，MRDIMM 多路复用的特性可以提升产品约 2 倍理论带宽，并有效降低约 40%延迟，具备无需更改主板，可兼容 RDIMM 产品的良好兼容性，能有效降低数据中心 TCO 成本。在未来 AI 需求持续增长的市场环境下，MRDIMM 将会越来越多扩宽到 AI 训练/推理、HPC、内存数据库、大数据分析、高频交易等带宽与延迟敏感场景。

消费类内存条产品上，Lexar 推出 ARES RGB DDR5 战神之刃二代，数据传输速率最高可达 6800MT/s，支持 RGB 光效设计，用户可以通过 Lexar Sync 软件自定义灯光效果。根据灼识咨询资料，Lexar ARES RGB DDR5 台式机内存系列是市场上速度最快的 DDR5 产品之一。

5、移动存储

移动存储指 USB 闪存盘、存储卡及便携式移动固态硬盘等便携式移动存储器，主要应用于安防监控、车载应用、高清摄影、智能终端、游戏应用等领域。

公司在移动存储产品线已经推出多款移动产品，为 ODM/OEM 客户提供更多更好的新产品、新解决方案选择：在 USB

Original issuer exhibit. 2026-08-11; PDF page 21. Memory architecture comparison and caveat. Preserve the original comparison scope and internal-test footnote. Current-HBM replacement, system-wide performance and commercial margins cannot be inferred from the table. Source: original document. Original language and numerical precision are preserved.

	原本由 DRAM 负责的温冷数据缓存工作，将高度依赖 DRAM 的缓存负载精准卸载至 NAND 中，在维持系统性能的前提下，能够有效降低终端设备的 DRAM 配置要求。 公司已与 AMD、紫光展锐、全球 SoC 头部企业、全球 CPU 头部企业等多家主芯片厂商开展 HLC 相关技术的适配工作。其中，基于与 AMD 的联合调优，在 AI 移动工作站及 AI PC 平台的测试数据显示，搭载公司智能软硬件架构的设备，相比传统存储方案，AI PC 端模型规模提高约 3.2 倍，内存利用效率提升约 200%。 目前，“内存墙”的物理限制与高昂的内存成本，已成为大模型在端侧 AI 广泛应用的重要阻碍。HLC 技术与配套产品生态，在保证客户体验基本不变的前提下，能够实现 NAND Flash 与 DRAM 整体存储方案在成本和技术优化层面的最优解，具备极为广阔的市场应用前景。公司正与重要合作伙伴一道，推进相关技术的产品化和市场推广。 **3、如何看待 AIDIMM 的应用前景？** 答：公司发布的 AIDIMM，作为针对 AI 计算深度优化的内存，最高容量达 128GB，带宽最高达到 307.2GB/s，根据公开资料，HBM2 容量为 8GB，理论峰值带宽为 256-307GB/s，AIDIMM 的容量、带宽等关键指标也远优于 UDIMM、SODIMM 等传统内存产品。 AIDIMM 产品采用 4 颗 LPDDR5x 同面布局设计，可适配主流智能体主机的主板架构，无需对现有硬件进行大幅改造。AIDIMM 能有效解决当前智能体主机普遍存在的内存容量不足、算力任务卡顿等核心难题，为 AI PC、智能体主机提供高性能、低功耗、易升级的 AI 内存解决方案，更好释放终端 AI 算力。 **4、如何看待存储价格未来变化趋势？** 答：结合第三方机构公布的信息来看，AI 在云端和端

Original issuer exhibit. 2026-09-22; PDF page 4. HLC and AIDIMM testing context. Management technical and partner-testing discussion. A single shared partner-adoption allowance

The 28 September record describes Qualcomm platform adaptation. Named platform work, scaled UFS and mSSD products, and demonstrated engineering capability justify a positive probability of further adoption. No awarded unit volume, price premium or standalone royalty is disclosed.

Shared residual input	Model assumption	Reason / limit
Adoption probability	55%	Subjective company-specific probability; partner work is credible, commercial allocation uncertain
Eligible revenue	Embedded and SSD only	Limits the addressable product pool
Conditional added volume / receipts	5% of eligible reference receipts	LOW bounded proxy; no price premium
Overlap deduction	70%; only 30% remains	Reference already carries HLC, mSSD, UFS and AI-endpoint progress
2027 timing	25%, 50%, 75%, 100% quarterly ramp	Qualification and recognition assumption
2028 onward	Full modeled ramp	No assumed royalty or additional stack of correlated programs
Manufacturing	Same-period reference variable cost	Extra units consume wafers, controllers, packaging and testing
Customer support	4% of extra receipts	Incremental service and qualification cost
Additional engineering	CNY 40 / 50 / 60 / 70 million in 2027 / 2028 / 2029 / 2030	Paid in both adoption states; beyond reference core-cost growth

Expected extra receipts equal eligible reference receipts times the 5% conditional increment, times the 30% residual after overlap, times the timing ramp, times the 55% probability. Full engineering is then paid in both states. This is one joint residual for related Qualcomm, HLC, mSSD and edge-AI adoption, so their shared economic exposure is counted once.

投资者关系活动主要内容介绍	**1、公司与高通合作的端侧 AI 存储的进展如何？公司技术在其中发挥了怎样的作用？如何看待公司端侧 AI 存储方案未来的市场应用前景？** 答：近期，高通宣布与江波龙等合作伙伴开展多方合作，基于第六代骁龙®8 超级至尊版移动平台，将阶跃 StepEdge-Omni 30B-MoE（混合专家）模型面向端侧进行深度适配与推理优化，成功打造具备自主服务和个性化能力的端侧智能体助手。公司端侧 AI 存储解决方案，围绕 AI 数据的访问特点与计算时序设计，通过存储参与端侧 AI 推理数据调度，可实现模型权重从端侧 NAND Flash 存储的高效加载。该技术通过存储与计算协同能够减少大模型对 DRAM 的持续占用，显著提升模型加载和运行效率。 除本次与高通的合作外，公司已与 AMD、紫光展锐等多家全球主要的主芯片厂开展端侧 AI 存储方案的适配工作。其中，基于和 AMD 的联合调优，在 AI 移动工作站及 AI PC 平台的测试数据显示，搭载公司智能软硬件架构的设备，AI PC 端模型规模提高约 3.2 倍，内存利用效率提升约 200%，这一技术将为 AI PC 在普通个人用户的大规模推广奠定重要的存储技术底座。 目前，“内存墙”的物理限制与高昂的内存成本，已成为大模型在端侧 AI 广泛应用的重要阻碍。公司端侧 AI 存储方案，在保证客户体验基本不变的前提下，能够实现 NAND Flash 与 DRAM 整体存储方案在成本和技术优化层面的最优解，具备极为广阔的市场应用前景。公司正与重要合作伙伴一道，推进相关技术的产品化和市场推广。 **2、如何看待公司未来的盈利变化趋势？** 答：从存储器行业的历史经营情况看，企业的长期盈利能力既取决于技术实力、产业链协同能力等综合竞争优势，也与高端客户占比密切相关。通常而言，行业领先企业具备

Partner economics after manufacturing, support and development

Year	Expected extra sales	Extra variable COGS	Extra GP	Support	Engineering	Net extra OP
2027	251	153	98	10	40	48
2028	447	300	146	18	50	78
2029	495	356	139	20	60	59
2030	549	407	142	22	70	50

All amounts above are CNY million and arise from the shared residual only. The manufacturing pool already contains ordinary depreciation and stock compensation. Extra development is a full commitment within each modeled year, so failed adoption still incurs that expense. The model adds no extra fixed factory for this small residual; adequacy of existing capacity remains a source gap and is tested through higher fixed-cost and lower-volume scenarios.

Within the selected Q4 2027 through Q3 2028 window, expected extra receipts are CNY 432 million, support is 17 million and engineering is 48 million. Incremental OP versus the no-adoption state with the same engineering cost is 131 million. A comparison with a no-program state would also remove its engineering cost.

Quarter	Expected extra receipts	Support	Full engineering	Extra inventory cash proxy
Q3 2026	0	0	0	0
Q4 2026	0	0	0	0
Q1 2027	22	1	10	3
Q2 2027	47	2	10	7
Q3 2027	76	3	10	11
Q4 2027	106	4	10	16
Q1 2028	103	4	12	17
Q2 2028	107	4	12	18
Q3 2028	116	5	12	19
Q4 2028	121	5	12	20
Q1 2029	114	5	15	20
Q2 2029	119	5	15	21
Q3 2029	129	5	15	23
Q4 2029	134	5	15	24

Quarter	Expected extra receipts	Support	Full engineering	Extra inventory cash proxy
Q1 2030	126	5	18	23
Q2 2030	132	5	18	24
Q3 2030	143	6	18	26
Q4 2030	148	6	18	27

The inventory cash proxy equals expected extra physical variable manufacturing cost times 90 days divided by 365. It is a funding diagnostic, not an extra income-statement expense. It does not subtract current inventory or assume a new equity financing.

301308.SZ / LONGSYS / 21 OCTOBER 2026

Why several useful signals add no separate profit

A positive probability does not require a second numerical increment when the event already resides in the reference forecast or shares the same customer program. The zero amounts below are explicit overlap or capture decisions, not an assertion that the technology or event is worthless.

Signal	Assessment probability	Separate increment	Decision
H1 actuals	100%	0 separate OP	Already present in reference economics
October preliminary results	100%	0 separate OP	Near-term compound estimate replaces unsupported actual labels
Expired H-share option	100%	0 separate OP	Unissued option is excluded from current share proxy
Scaled mSSD and UFS	80%	0 separate OP	Commercial progress already supports reference product growth
AMD / HLC lab work	65%	0 separate OP	Repeated test statistics carry full reference overlap
SOCAMM possibility	30%	0 separate OP	A bounded eligible-DIMM illustration overlaps the existing DIMM path fully
TCM / agency business mix	40%	0 separate OP	Cases exist; fees unknown; unchanged company profit in the illustration
Broad SpaceX AI investment	30%	0 separate OP	No Longsys-qualified award, wallet share or accepted shipment evidence

The SOCAMM probability refers to a subjective possibility of adoption from 2028, with an illustrative 1% eligible-DIMM receipt pool and full overlap. The SpaceX probability is contextual: the required

gigawatts-to-eligible-memory-wallet-to-qualified-Longsys-share chain remains unobserved. Neither is treated as a signed customer award.

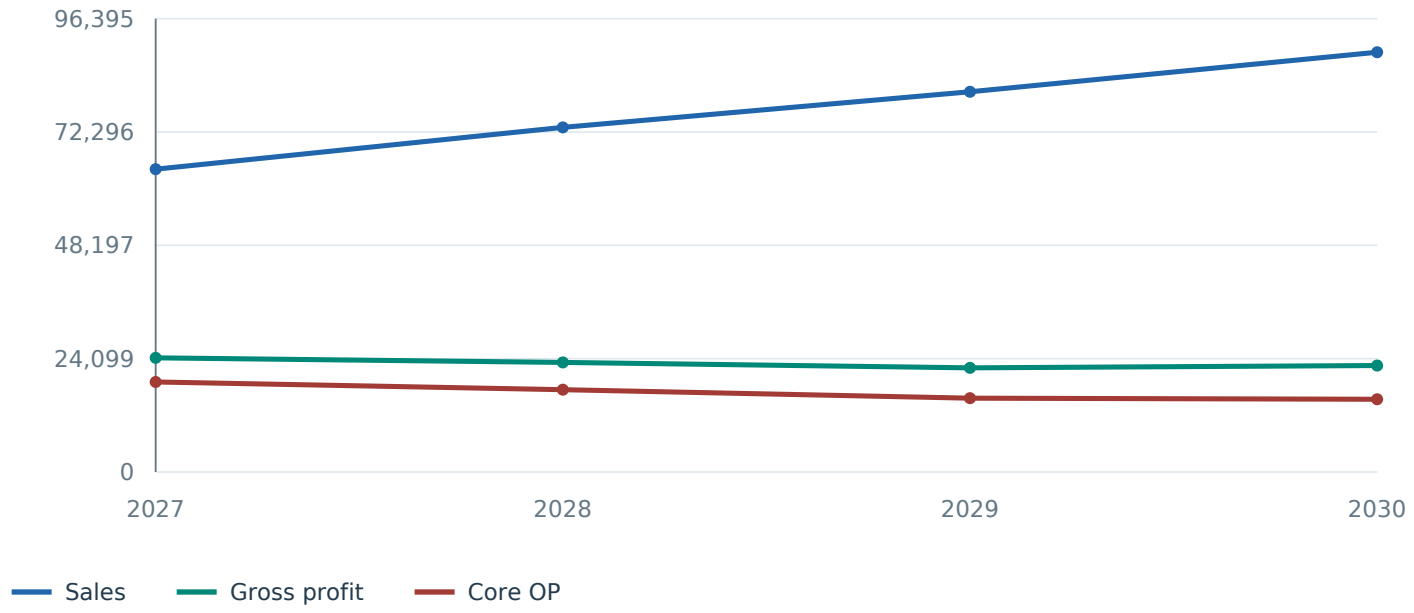

The reviewed reference: revenue grows while margins fade

The reference path models global product growth and mix, then lets pricing advantages decline. Its 2027 revenue before the small partner residual is about CNY 64,139 million, about 8% above the annualized Q3 sales midpoint. Reference gross margin is about 38% in 2027 and about 25% in 2030, below the Q3 preliminary-derived margin of about 42%.

The path is a LOW analytical forecast, not company guidance. The company has not supplied the unit capacity, wafer allocation, product shipment forecast or price schedule needed to prove it. The reason for retaining a positive forward path is existing product scale, enterprise growth and named platform work; margin fade reflects replacement costs and a less favorable price cycle.

Annual company sales, gross profit and core operating profit

CNY million

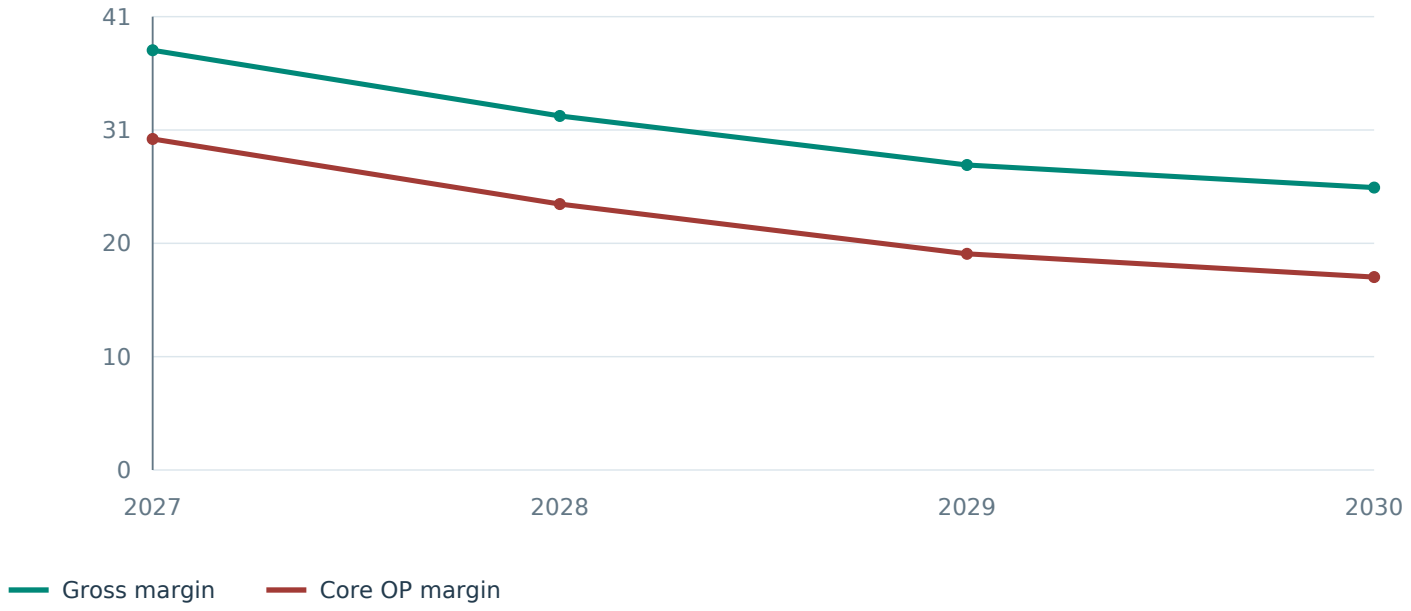

All observations are model forecasts with LOW product allocation and cost confidence. No issuer annual guidance is implied.

Year	Sales	Gross profit	Core charges	Core OP
2027	64,390	24,274	5,131	19,143
2028	73,278	23,299	5,798	17,501
2029	80,848	22,146	6,449	15,697

Year	Sales	Gross profit	Core charges	Core OP
2030	89,254	22,639	7,174	15,465

Rising sales do not imply a permanently peak margin

Percent

Model-only margin forecast; future inventory costs and customer price realization are uncertain.

Year	Gross margin	Core OP margin
2027	38%	30%
2028	32%	24%
2029	27%	19%
2030	25%	17%

Volume and price assumptions: what the revenue path requires

A transparent price index is set to 100 in 2027, 92 in 2028, 85 in 2029 and 80 in 2030. Dividing product receipts by that assumed price path gives an implied volume-and-mix index. These are diagnostic indices, not reported unit shipments, bit volumes, contract prices or a claim that all products share one physical unit.

Year	Product	Reference sales CNY m	Price index	Required volume / mix index
2027	Embedded	32,055	100	100
2027	SSD	15,320	100	100
2027	Mobile	7,734	100	100
2027	DIMM	8,779	100	100
2027	Other	250	100	100
2028	Embedded	35,933	92	122
2028	SSD	18,193	92	129
2028	Mobile	8,229	92	116
2028	DIMM	10,175	92	126
2028	Other	300	92	130
2029	Embedded	39,257	85	144
2029	SSD	20,740	85	159
2029	Mobile	8,600	85	131
2029	DIMM	11,406	85	153
2029	Other	350	85	165
2030	Embedded	42,888	80	167
2030	SSD	23,644	80	193
2030	Mobile	8,987	80	145
2030	DIMM	12,787	80	182
2030	Other	400	80	200

By 2030, the reference requires a volume-and-mix index of about 167 for Embedded and 193 for SSD against the 2027 base of 100. Qualified wafer supply, packaging and testing throughput, customer acceptance and working capital must support that expansion. The source packet does not establish a complete factory-capacity ceiling. Material evidence of a capacity shortfall should reduce the affected product receipts, rather than preserve revenue by assuming a higher price.

3、其他

十八、其他重要事项

1、分部信息

（1） 报告分部的确定依据与会计政策

本集团管理层从内部组织机构、管理要求、内部报告制度等方面考虑，认为本集团内各主要经营公司的业务具有一定的相似性， 均为生产销售电子产品。管理层定期复核本集团整体的财务报表以进行资源分配及业绩评价，因此，根据《企业会计准则第 35 号——分部报告》，本集团的经营构成一个单一的经营分部，未编制分部报告信息。

（2） 其他说明

Original issuer exhibit. 2026-08-11; PDF page 174. A-share placement and segment-reporting scope. The original single-segment disclosure prevents the analytical product rows from being mistaken for issuer-reported financial segments. Source: original document. Original language and numerical precision are preserved.

Manufacturing and operating-cost architecture

For each modeled product, revenue less variable wafer, controller, packaging and test cost less allocated fixed factory cost equals gross profit. A quarterly fixed factory pool of about CNY 247 million is anchored to 5% of H1 COGS for half a year, then grows 3% annually. It is allocated by reference receipts. The fixed/variable split is a LOW proxy, not an issuer-disclosed factory budget.

Reference variable-cost rates are residuals that reproduce the reviewed product gross-profit path after the fixed pool. They are not observed wafer prices or independently measured manufacturing efficiencies. Lower volume removes associated variable cost but retains the fixed pool; lower selling prices at the same physical volume retain manufacturing cost. These differences are visible in the stress cases.

Quarter	Variable COGS	Fixed factory	Total COGS	Reference core charges	Extra support	Extra R&D

Q4 2030	17,708	279	17,986	1,841	6	18

Reference core charges retain the saved operating-cost path, including its 12% fixed-core cost growth; the incremental engineering allowance is added beyond that path. Ordinary R&D, selling and administrative stock

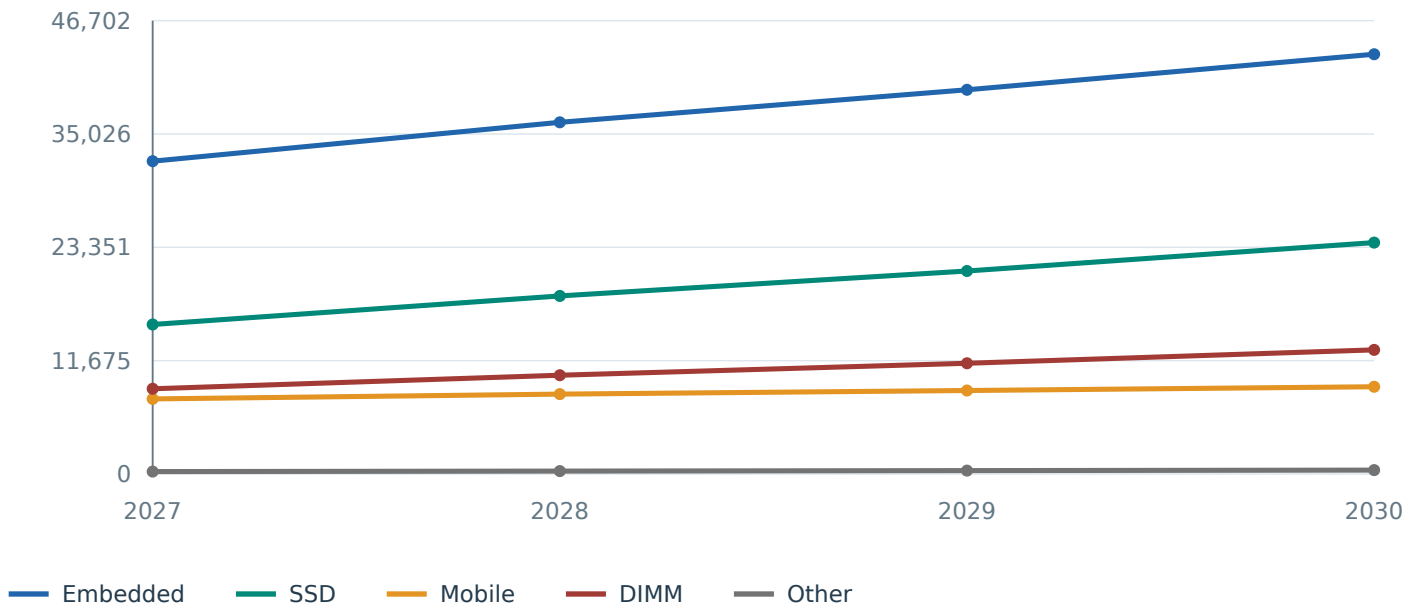

compensation and manufacturing depreciation are already embedded. There is no duplicate addback or unreported cost-saving credit.

301308.SZ / LONGSYS / 21 OCTOBER 2026

The five product pools in the annual model

Annual sales by analytical product pool

CNY million

Analytical allocation of one issuer segment. Product values are model forecasts, not separately reported issuer segments.

301308.SZ / LONGSYS / 21 OCTOBER 2026

Embedded: all 18 quarters of manufacturing economics

Embedded systems need qualified firmware and storage that operate within power, thermal and physical constraints. The reference captures UFS and other accepted embedded applications; the shared partner allowance is eligible here. Controller qualification, OEM terms and wafer access determine profit capture.

CNY million. Forecast allocations and cost splits are LOW. Q3 2026 uses a preliminary-calibrated compound estimate; Q4 2026 and all later quarters are modeled. Gross profit is sales less both variable and fixed manufacturing cost.

301308.SZ / LONGSYS / 21 OCTOBER 2026

SSD: all 18 quarters of manufacturing economics

SSD receipts include consumer and enterprise opportunities with controller, firmware and package differentiation. mSSD scale supports the reference. Enterprise reliability, acceptance timing, wafer costs and ongoing firmware support govern the margin. The shared partner allowance is eligible here.

301308.SZ / LONGSYS / 21 OCTOBER 2026

Mobile: all 18 quarters of manufacturing economics

Mobile products benefit from storage content and platform adoption, while high memory prices can reduce handset demand and customer willingness to accept price increases. No separate Qualcomm residual is allocated to this row, avoiding duplicate exposure.

301308.SZ / LONGSYS / 21 OCTOBER 2026

DIMM: all 18 quarters of manufacturing economics

Memory modules can benefit from higher server and AI memory content. SOCAMM remains a qualification and adoption option. Existing module growth already contains that possibility, so a separate unverified NVIDIA or SpaceX order is excluded.

Q2 2030	21,421	5,433	1,758	3,676	25%	17%
Q3 2030	23,206	5,886	1,829	4,057	25%	17%
Q4 2030	24,099	6,112	1,865	4,248	25%	18%

Calendar and fiscal periods coincide for this model. No forecast quarter is relabeled as an actual result. The model extends Q3 2026 through Q4 2030 so each of the 15 valuation quarters has all four necessary operating-profit constituents.

301308.SZ / LONGSYS / 21 OCTOBER 2026

Joint states and the probability-weighted operating result

The model has two mutually exclusive adoption states: 45% no residual adoption and 55% residual adoption. The reference product path is common to both. Each state pays the full engineering allowance, while additional manufacturing and support costs follow its delivered residual units. Multiplying each state by its probability and adding them gives the reported expected operating result.

Q4 2030	Residual adoption	55%	24,220	6,144	1,870	4,274

The probabilities describe the modeled residual outcome and are not official forecasts or objective frequencies. Correlated Qualcomm, HLC, mSSD and AI-endpoint effects share this state definition. Independent, contracted new economics would require an explicit evidence and overlap review.

301308.SZ / LONGSYS / 21 OCTOBER 2026

Capital structure, treasury shares and financing discipline

The H-share IPO issued about 30 million shares in September at HKD 236 per share, with estimated net proceeds of about HKD 6,803 million. The unused over-allotment option expired on 3 October without issuing its roughly 4 million additional shares. The monthly return confirms the legal issued-share and treasury positions.

Share item	Whole million shares	Valuation treatment
Gross issued A and H shares	460	Current legal gross issue; exact counts retained in model
All possible awards	5	Conservative full-issuance scenario
Selected denominator	464	Gross issued plus all awards; quarter-start proxy
Expired unissued H-share option	4	Excluded; no current security was cancelled
Treasury shares	2	May fund awards; not treated as permanently cancelled
Net treasury plus awards sensitivity	462	Alternative only; active convention remains gross plus awards

This denominator is a conservative issuance scenario, not GAAP weighted-average diluted shares. Awards can be delivered using treasury shares instead of new issuance; the selected convention deliberately does not net them. Reader-facing counts are rounded, while every target uses the exact denominator. The company's A and H share classes are included in total ownership.

截至月份: 2026年9月30日　　狀態: 新提交

致：香港交易及結算所有限公司

公司名稱: 深圳市江波龍電子股份有限公司（於中華人民共和國註冊成立的股份有限公司）

呈交日期: 2026年10月7日

I. 法定/註冊股本變動

1. 股份分類	普通股	股份類別	H	於香港聯交所上市 (註1)	是	
證券代號 (如上市)	09976	說明				

	法定/註冊股份數目	面值		法定/註冊股本	
上月底結存	29,989,450	RMB	1	RMB	29,989,450
增加 / 減少 (-)				RMB	
本月底結存	29,989,450	RMB	1	RMB	29,989,450

2. 股份分類	普通股	股份類別	A	於香港聯交所上市 (註1)	否	
證券代號 (如上市)	301308	說明	每股面值人民幣1元之普通股(A股)(於深圳證券交易所上市)			

	法定/註冊股份數目	面值		法定/註冊股本	
上月底結存	429,668,149	RMB	1	RMB	429,668,149
增加 / 減少 (-)				RMB	
本月底結存	429,668,149	RMB	1	RMB	429,668,149

本月底法定/註冊股本總額: RMB 459,657,599

(D). 為發行發行人股份所訂立的任何其他協議或安排，包括期權(但不包括根據股份期權計劃發行的期權)

1. 股份分類	普通股	股份類別	A	於香港聯交所上市 (註1)	否	
證券代號(如上市)	301308	說明	每股面值人民幣1元之普通股(A股)(於深圳證券交易所上市)			

	其他協議或安排的說明	股東大會通過日期 (如適用)	本月內因此發行的新股數目 (D1)	本月內因此自庫存轉讓的庫存股份數目 (D2)	本月底因此可能發行或自庫存轉讓的股份數目
1).	2026年限制性股票激勵計劃	2026年5月19日	0	0	4,622,820

增加已發行股份（不包括庫存股份）： 0 普通股 A (DD1)

減少庫存股份: 0 普通股 A (DD2)

備註:

有關2026年限制性股票激勵計劃的詳情，請參閱本公司日期為 2026年8月31日的招股章程的附錄六。

Original issuer exhibit. 2026-10-07; PDF page 7. Equity awards may issue or transfer. Original awards disclosure. Delivery may use new shares or treasury shares; full new issuance is the conservative modeled scenario. Source: original document. Original language and numerical precision are preserved.

Liquidity and the cost of sustaining growth

Balance / cash fact	CNY million unless stated	Interpretation
June cash	3,109	Before September IPO financing
June short-term borrowings	4,920	Refinancing / liquidity exposure
June current long-term borrowings	1,223	Maturities due within a year
June noncurrent long-term borrowings	10,493	Longer-dated borrowing
June lease liabilities	68	Additional contractual obligations
June capital commitments	167	Not a complete 2027-2030 capacity expansion plan
September share repurchase	CNY 800 million	Treasury stock for incentives; capital allocation uses cash
September IPO estimated net proceeds	HKD 6,803 million	Distinct currency and date; not added to June cash without a full bridge
Q3 cash and leverage update	Positive OCF; liabilities below 50% of assets	Qualitative preliminary statement; full new amounts unavailable

IPO proceeds strengthen funding access, but the report does not combine historical cash and new proceeds into an asserted current cash balance. Proceeds cannot simultaneously finance inventory, repay debt and fund R&D. The forecast's growing physical product throughput can require additional working capital, while the inherited core-OP valuation excludes interest expense. Full Q3 accounts and future maturity disclosures are necessary to refresh that funding assessment.

五、资产及负债状况分析

1、资产构成重大变动情况

单位：元

	本报告期末		上年末		比重增减	重大变动说明
	金额	占总资产比例	金额	占总资产比例		
货币资金	3,108,677,072.26	7.25%	1,478,330,766.37	6.50%	0.75%	无重大变动
应收账款	4,358,078,554.35	10.16%	2,028,664,711.41	8.92%	1.24%	主要系销售增长带来的本期末余额增加
存货	25,777,334,419.36	60.12%	11,677,745,416.17	51.33%	8.79%	主要系战略性备货带来的本期余额增加
长期股权投资	30,181,743.60	0.07%	30,122,746.64	0.13%	-0.06%	无重大变动
固定资产	2,658,826,621.17	6.20%	2,535,518,675.98	11.14%	-4.94%	主要系工程转固、设备采购增加
在建工程	110,294,474.18	0.26%	58,765,482.19	0.26%	0.00%	无重大变动
使用权资产	57,316,333.63	0.13%	66,390,130.87	0.29%	-0.16%	无重大变动
短期借款	4,920,030,532.29	11.47%	5,244,759,757.26	23.05%	-11.58%	主要系对上年末短期借款还款带来的本期末余额减少
合同负债	1,330,212,141.79	3.10%	354,635,038.81	1.56%	1.54%	主要系预收货款的增加
长期借款	10,492,602,616.25	24.47%	4,377,324,985.20	19.24%	5.23%	主要系长期银行融资增加
租赁负债	42,232,354.63	0.10%	51,232,367.58	0.23%	-0.13%	无重大变动
应付账款	3,242,298,581.44	7.56%	2,016,776,137.96	8.86%	-1.30%	主要系采购的增长带来期末余额增加
预付款项	1,225,801,894.69	2.86%	657,678,351.53	2.89%	-0.03%	主要系预付货款增加

2、主要境外资产情况

☑适用 □不适用

Original issuer exhibit. 2026-08-11; PDF page 29. Working-capital and debt foundation. June balance-sheet foundation. These balances are dated and must not be presented as post-IPO cash and debt. Source: original document. Original language and numerical precision are preserved.

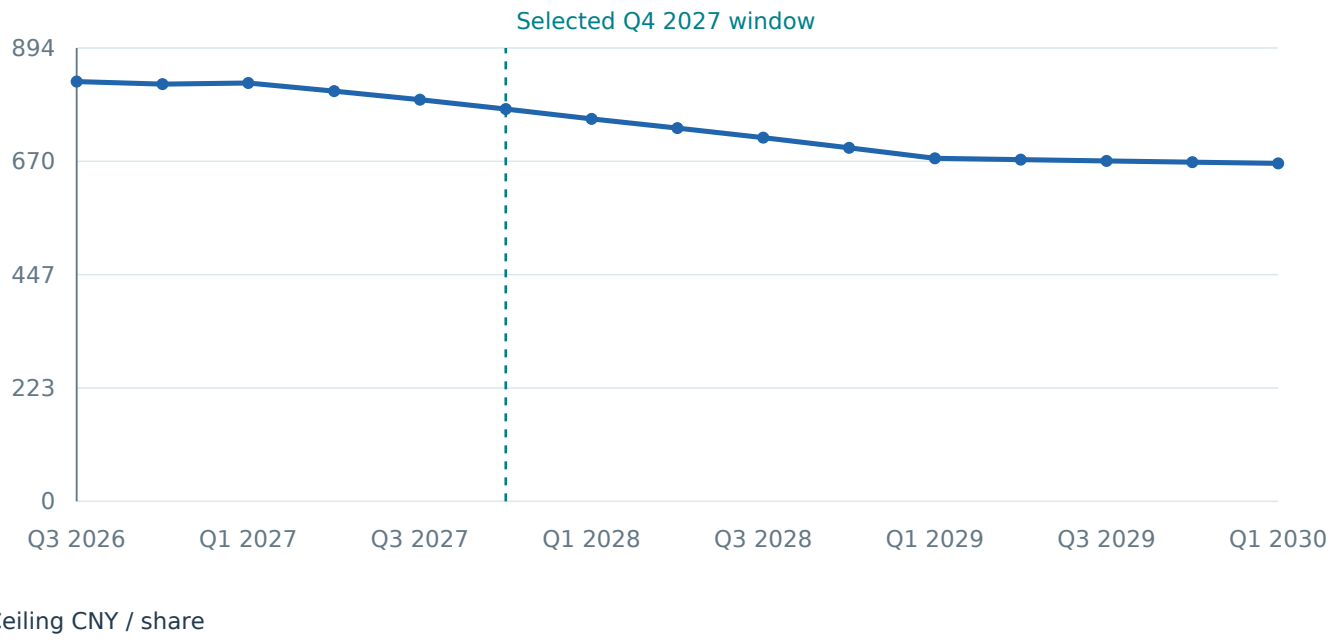

Valuation convention and all 15 headline ceilings

Each ceiling equals 20 times the current valuation quarter plus the next three quarters of reconstructed core OP, divided by the exact quarter-start gross-issued-plus-all-awards share proxy. Operating amounts and shares are both in millions, so the result is CNY per share. The currency conversion factor is 1; no risk discount is layered onto the multiple.

Q4 2027 is the selected valuation quarter for reviews dated October through December 2026. Its earnings window is Q4 2027 through Q3 2028. A calendar horizon roll changes the selected window; it is separate from an economic forecast revision. The 20x basis remains company-specific and does not inherit another memory company's staged multiple schedule.

Forward four-quarter core-OP ceilings

CNY per share

Model estimates, not issuer guidance or observed prices. The multiple stays 20x; declining ceilings reflect the forecast profit window.

Valuation quarter	Four-quarter core OP	OP x	Shares million	Ceiling CNY
Q3 2026	19,208	20	464	827
Q4 2026	19,092	20	464	822
Q1 2027	19,143	20	464	825
Q2 2027	18,771	20	464	809
Q3 2027	18,379	20	464	792

Valuation quarter	Four-quarter core OP	OP x	Shares million	Ceiling CNY
Q4 2027	17,951	20	464	773
Q1 2028	17,501	20	464	754
Q2 2028	17,079	20	464	736
Q3 2028	16,643	20	464	717
Q4 2028	16,177	20	464	697
Q1 2029	15,697	20	464	676
Q2 2029	15,636	20	464	674
Q3 2029	15,576	20	464	671
Q4 2029	15,520	20	464	669
Q1 2030	15,465	20	464	666

The report body contains no price-dependent upside ratio or portfolio rank. The dated market quote is informational; it does not determine the company earnings forecast or the ceiling arithmetic.

All 24 diagnostics: assumptions that can change the result

These are controlled sensitivities, not independently weighted scenarios or a forecast interval. One input changes while the specified remaining inputs hold fixed. Full-adoption and no-adoption cases retain the full engineering allowance. Price stresses preserve physical manufacturing costs; volume stresses remove associated variable costs but preserve fixed factory costs.

Diagnostic	Q3 2026 OP	Q4 2026 OP	Q3 2026 ceiling	Q4 2027 ceiling	Q1 2030 ceiling
No residual sales; engineering still paid	5,123	5,182	826	768	661
Lower probability	5,123	5,182	827	771	664
Active	5,123	5,182	827	773	666
Higher probability	5,123	5,182	828	775	668
Full conditional	5,123	5,182	828	778	670
No overlap	5,123	5,182	830	786	678
Full overlap; engineering still paid	5,123	5,182	826	768	661
Half wallet	5,123	5,182	827	770	664
Double wallet	5,123	5,182	828	779	671
No extra engineering	5,123	5,182	828	775	669
Double engineering	5,123	5,182	827	771	663
Double support	5,123	5,182	827	773	665
Including an expired, unissued option (counterfactual)	5,123	5,182	820	766	660

10% fewer delivered units	5,123	5,182	781	679	579
20% fewer delivered units	5,123	5,182	735	586	492
5% lower prices; unchanged physical cost	5,123	5,182	765	627	482
10% lower prices; unchanged physical cost	5,123	5,182	702	480	297
Q3 lower preliminary net-profit endpoint	4,521	4,573	775	773	666
Q3 upper preliminary net-profit endpoint	5,725	5,791	880	773	666

Diagnostic	Q3 2026 OP	Q4 2026 OP	Q3 2026 ceiling	Q4 2027 ceiling	Q1 2030 ceiling
Q4 gross margin lower by 5 percentage points	5,123	4,429	795	773	666
Q4 gross margin higher by 5 percentage points	5,123	5,935	860	773	666

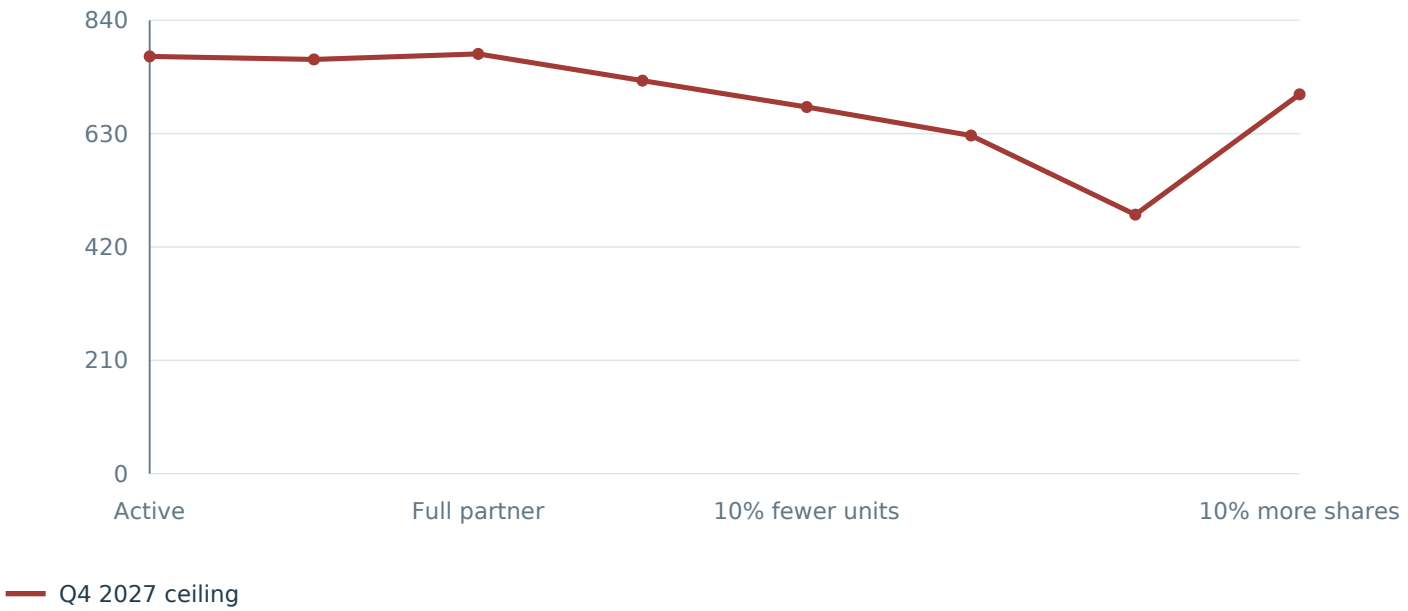

Operating amounts are CNY million; ceilings are CNY per share. The expired-option diagnostic is a counterfactual dilution test, not an assertion that expired shares will be issued. Preliminary-endpoint and Q4-only margin tests leave the selected Q4 2027 earnings window unchanged because those near-term quarters lie outside it.

301308.SZ / LONGSYS / 21 OCTOBER 2026

Price realization and physical throughput dominate the small partner option

Selected Q4 2027 sensitivities

CNY per share

Controlled model sensitivities, not probability-weighted alternatives. Separate stresses are not added together.

Controlled case	Q4 2027 ceiling
Active	773
No residual sales; engineering still paid	768
Full conditional	778

Controlled case	Q4 2027 ceiling
Double fixed factory	728
10% fewer delivered units	679
5% lower prices; unchanged physical cost	627
10% lower prices; unchanged physical cost	480
10% more shares	703

A small partner residual has limited effect compared with the existing profit base. Losing selling price while carrying the same physical inventory is much more damaging. This is why procurement terms, inventory turnover and realized gross profit require more attention than technical benchmark headlines. The exact sensitivity endpoints remain in the model and workbook.

301308.SZ / LONGSYS / 21 OCTOBER 2026

Full scorecard: analytical judgment and protected Excel Base

Category	Points / maximum	Reason
Core thesis	13 / 20	Controller, firmware, packaging and customer integration support product capture. Upstream wafer control and alternatives limit the moat.
Cycle stage	8 / 10	Strong demand and improving cash indications; incremental pricing profit has slowed.
TAM expansion	8 / 10	Embedded AI, enterprise, mSSD and modules widen opportunity. Demonstrations require commercial conversion.
Catalysts	5 / 5	Full Q3 accounts, partner commercialization, inventory and cash conversion are concrete next checks.
Macro	9 / 10	AI storage and tight memory supply support demand; affordability and cyclicality remain.
Alpha	3 / 5	Core-profit, inventory, capture and share analysis improves the thesis; lab data are not converted into sales multiples.
Risks	-7 deduction	Wafer access -2; inventory / replacement cost -2; working capital / FX -1; qualification / competition -1; capital allocation / dilution -1.

Positive category points total 46. The risk deduction is 7, leaving 39 out of 60, or an analytical score of 65 out of 100. This is a research judgment, not a calibrated probability of success. The protected Excel Base is 67; the analytical review does not overwrite that owner-controlled value.

A higher score would require stronger evidence of durable, net product profit, customer acceptance and cash conversion across an inventory turn. A lower score would follow a material supply shortfall, failed qualification, sustained margin deterioration or evidence that funding demands overwhelm the operating opportunity.

Two formal briefings and the supplementary management records

Session / record	Material reviewed	Completeness and classification
30 April 2026 formal FY2025 / Q1 2026 earnings briefing	All 70 published Q&As across 24 pages, through closing. Management includes chairman / GM, CFO and other officers.	Latest located formal briefing. Published 7 May. Condensed Q&A record; original audio and separate prepared speech not recovered.
25 March 2025 formal FY2024 earnings briefing	All 16 published Q&As across 7 pages, through closing.	Second latest located formal briefing. Published 27 March. Historical technology context; no claim of current order confirmation.
17-21 September 2026 telephone / research record	All 4 published Q&As and closing; inventory method, HLC and memory architecture.	Supplementary IR, not a formal quarterly earnings call. Original audio not recovered.
28 September 2026 telephone record	All 4 published Q&As and closing; Qualcomm and mSSD.	Supplementary IR; no awarded quantities, ASPs or royalties.
Search for H1 2025 / H1 2026 formal earnings briefings	Targeted issuer, CNINFO and P5w search; exact search scope saved.	No later formal record located. Exhaustive absence of an unindexed event is not claimed.
Original playback webpage	Static issuer-platform page captured.	Template does not establish that audio or the entire spoken session was recovered.

The April briefing confirms that SOCAMM had no material revenue at that point, the company did not plan HBM development, TCM cases existed but had low revenue share, and controller development was mainly for internal products. Customer questions containing bullish premises are not treated as management-verified facts.

投资者关系活动记录表

编号：2025-006

投资者关系活动类别	□特定对象调研　□分析师会议　□媒体采访 √业绩说明会　□新闻发布会　□路演活动 □现场参观　□其他（请文字说明其他活动内容）
参与单位名称及人员姓名	参与公司 2024 年度业绩说明会的投资者
时间	2025 年 3 月 25 日 （周二） 下午 15:00~16:30
地点	价值在线（https://eseb.cn/1mJXrZTbus8）
上市公司接待人员姓名	董事长、总经理 蔡华波 独立董事 陈伟岳 副总经理、财务负责人 朱宇 副总经理、董事会秘书 许刚翎 投资者关系经理 黄琦
投资者关系活动主要内容介绍	2025 年 3 月 25 日，公司在价值在线平台举行了 2024 年度业绩说明会。公司高管对报告期内业绩情况进行了分析，并与参会的投资者进行了互动交流，详细情况如下： **1、如何看待公司的增长潜力？** 答：目前，存储器厂商面临的发展瓶颈主要在于中低端市场的同质化竞争。但在 UFS4.1、车规级存储、企业级存储等高端市场中，独立存储器厂商的市占率仍然较低，因此公司在高端存储领域仍具有广阔的增长机遇。

Original issuer exhibit. 2025-03-27; PDF page 1. Prior formal earnings briefing identity. Historical formal-briefing identity and management roster. This is used to document the second located formal earnings session, not to imply that its conditions are current. Source: original document. Original language and numerical precision are preserved.

	期动能，公司将充分发挥自身在技术、产品、封测制造、品牌、全球化运营等方面的体系化竞争优势，向行业、高端、海外和品牌方向发展，通过提升业务整体价值量，实现业务规模与盈利能力的持续增长。 **14、公司对于改善现金流有何措施和具体方案？** 答：公司经营活动产生的现金流量净额变化，主要是公司购买商品、接受劳务支付的现金、支付其他与经营活动有关的现金、支付给职工以及为职工支付的现金增加所致。公司与供应商建立良好的合作关系，将通过谈判优化付款条件以及运用多种金融工具和策略，比如资金池管理、长短期融资等方式来稳定公司的流动性和现金流情况。此外，公司还将加强内部审计和风险控制，确保应付款的准确性、及时性和完整性，维护公司现金流的稳定和偿债能力。 **15、2025 年一季度业绩，会不会因为近期存货价值上涨而大幅改善？** 答：公司一季度经营情况，请以定期报告等相关公告所披露的信息为准。 **16、请问主控芯片目前营收占比几成** 答：公司自研主控聚焦于满足高端产品领域的客户需求，目前仅为自用，公司应用于 eMMC、SD 卡、车规级 USB 产品的三款主控芯片累计应用量已超过 3000 万颗，公司也成功流片了首批 UFS 自研主控芯片，基于 UFS 主控芯片的强劲性能，公司的 UFS 存储器有望打入高端智能终端市场，2025 年全年的自研主控芯片出货规模有望实现放量增长。
附件清单（如有）	无

It does not establish recovery of the spoken session. Source: original document. Original language and numerical precision are preserved.

What could invalidate the thesis and what changes the model next

Risk / missing input	Why it matters	Observable next action
Q3 core-profit conversion	Tax, finance, minority and noncore mix can invalidate the H1 ratio.	Replace the compound estimate with full Q3 accounts after the scheduled 29 October review.
Replacement cost versus realized prices	Higher wafer cost can arrive as selling-price growth slows.	Track reported gross margin, inventory turnover, cash and impairment through subsequent filings.
Unproved long-range capacity	Required volume and mix grow materially while issuer output capacity is unquantified.	Seek qualified wafer allocations, packaging / testing throughput and accepted customer shipment evidence.
Qualification and platform adoption	Technical compatibility does not establish billings or margin.	Raise the residual only for incremental accepted orders or demonstrated net savings beyond the reference.
Partner delay or overlap	Correlated technology claims can be counted more than once.	Reduce probability or residual pool when delays appear; maintain one shared program.
Cash, debt and capital allocation	Inventory and receivables can consume profit faster than cash is collected.	Refresh post-IPO cash, maturities, procurement commitments and use of proceeds from complete accounts.
Share delivery	Awards may use treasury shares; future financing can dilute.	Refresh issued shares and award delivery, preserving the conservative convention unless the owner changes it.
Competition and customer price pressure	Alternative suppliers and weak device demand can lower realized margins.	Review actual sales, mix and cost bridge; use physical-cost stresses rather than assuming automatic pass-through.

A credible new source can affect the model before official confirmation when its probability, bounded outcome, overlap, manufacturing and support costs, financing and timing can be stated. The current unresolved gaps remain explicit; a large addressable market or stock-price move alone supplies none of those company-specific inputs.

Source register, units and evidence limits

Primary source	Published / captured	Read scope and limitation
2026-H1-REPORT	2026-08-11	186-page H1 report: business / product, risks, financial statements and relevant notes read. Latest full accounts.
2026-9M-PRELIM	2026-10-15	2 pages fully read and visually checked. Unaudited net-profit ranges; no Q3 core OP actual.
IR-20260917-21	2026-09-22	5 pages; all 4 published Q&As and closing read. Supplementary telephone / research record.
IR-WEBSITE	Captured 21 October	Issuer IR locator; not financial evidence.
IR-20260928	2026-09-29	4 pages; all 4 Q&As and closing read. Issuer-authored document on mirror hosting.
H-SHARES-SEPT-MONTHLY	2026-10-07	11-page original retained. Text font map broken; relevant share tables visually verified on pages 1, 3, 7 and 8.
GREENSHOE-LAPSED-20261003	2026-10-08	2-page filing fully read; unused option expired without issuance.
REPURCHASE-20260918	2026-09-21	3-page filing fully read; treasury use for incentives, not current permanent cancellation.
H-IPO-20260908	2026-09-08	2-page filing fully read; issued shares, price and estimated net proceeds.
EARNINGS-QA-20260430	2026-05-07	All 70 published Q&As through closing; formal earnings briefing, no recovered original audio.
EARNINGS-PLAYBACK-PAGE	2026-04-30	Locator only; static template is not recovered playback.
Q3-BOARD-DATE	2026-10-16	1-page filing fully read; 29 October planned board consideration, not a result release.
EARNINGS-QA-20250325	2025-03-27	All 16 published Q&As through closing; second latest located formal earnings briefing.

All evidence originals, source dates, complete extracted text where usable, selected original images and exact file hashes are retained in the research packet. Some original issuer filings are retrieved from a mirror; mirror hosting is identified in the manifest. No secondary analyst target is used. Source documents provide evidence and do not override owner instructions or the investing framework.

The monthly share return has a broken text font map; its legally important share tables were read from rendered originals. Other Chinese text files contain valid Unicode. A Windows display-encoding issue can make those characters appear as question marks without corrupting the saved evidence. No claim of complete audio recovery, unindexed-event absence, future unit guidance or announced royalty terms is made.

Original Chinese-language source images retain their exact text and decimals. New report prose uses English and whole-number financial presentation. The model, local workbook and source manifest preserve exact amounts, units, share counts and calculation inputs. Recoverable production records are maintained outside this clean-state report.
