VALUATION PANEL

Tiantong Holdings | 600330.SH

Research: 24 October 2026, Toronto. Framework 8.0. Holding status: not recorded. Classification: Materials turnaround / beneficiary. Analytical score: 35/60 = 58%, Fail. Protected Excel Base: 57%.

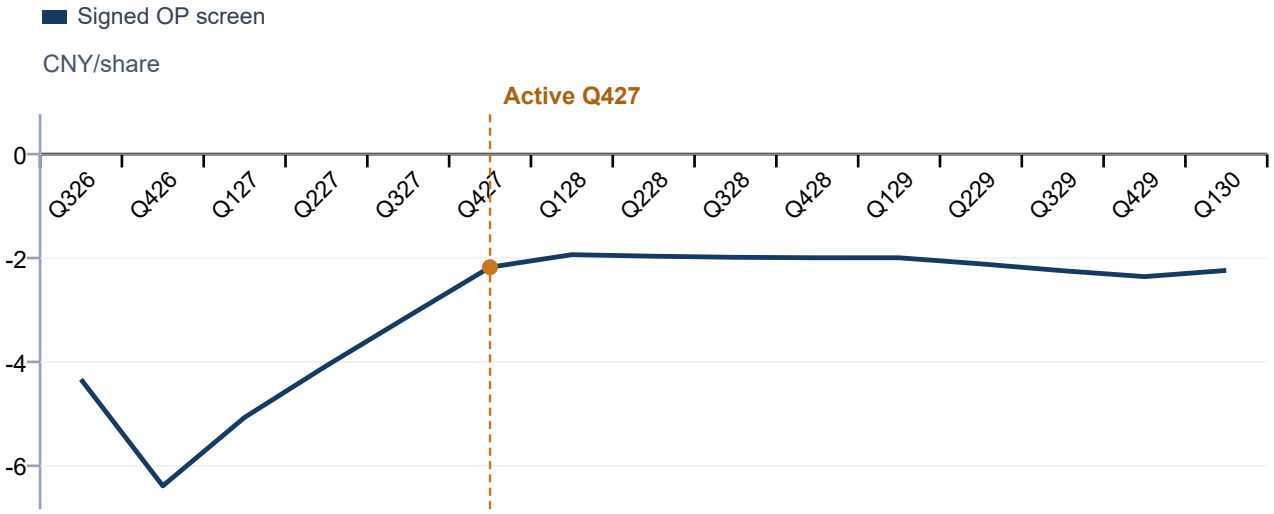

The materials platform offers a credible route into advanced wafers, but the active four-quarter operating earnings remain negative after all specified costs. Under the retained earnings method, a positive earnings-based equity ceiling is unsupported. The signed result below is an operating-earnings diagnostic, not a prediction of a negative stock price or a meaningful equity-upside ratio.

Snapshot / method	Value / interpretation
Saved workbook quote	CNY 23.01; observation date unavailable. This is not a current close.
Reported issued shares	1,233.434416 million at H1 2026
Illustrative snapshot capitalization	28.3813 CNY bn; undated price and H1 share count are a mixed snapshot
Primary method	25 x current plus next three quarters of parent core operating earnings; CNY bn x 1,000 / shares in millions
Active horizon / exact window	Q4 2027 / Q4 2027 through Q3 2028
Forward parent core OP	-0.118132 CNY bn (negative)
Signed 25 x OP screen	-2.176692 CNY; no supported positive earnings-based ceiling
Active starting-quarter shares	1,356.777858 million, including inherited 10% future-finance reserve
Ownership convention	Parent OP = (consolidated core OP + Q) x P - Q - R. P=1, Q=0; R is the preserved absolute minority allocation.
Cash / score treatment	Cash and financing constrain operations; neither cash nor the analytical score is added to, or multiplied into, equity value.

The following pages are continuations of the opening valuation panel. They contain every displayed per-share derivation. The company analysis that follows is price-free.

MODEL FIGURE

F01 | Published historical and current signed earnings path

Q326 preserves its original as-then forecast and rolling earnings; Q426-Q130 use current economics. The line joins different explicitly labeled forecast vintages. Negative observations are not stock-price forecasts. Active horizon: Q427. All observations are forecasts, not reported quarterly actuals.

Model snapshot: C:/Users/i_am_/Documents/Codex/2026-09-09/files-mentioned-by-the-user-v3/work/deepdive_tiantong_20261024/600330.SH/selected_R8a 600330SH_TiantongHoldings_DeepDive_Model.json | Source data and labeled estimates; amounts CNY unless specified.

VALUATION PANEL CONTINUATION

Valuation bridge | same Q427 window

Q427-Q328	Source before	Current	Change
Gross profit	1.350655	0.882108	-0.468548
Full operating expenses	1.006941	0.997239	-0.009702
Parent core operating earnings	0.340714	-0.118132	-0.458846
Signed 25 x OP screen, CNY/share	6.278001	-2.176692	-8.454693

The reset is principally a receipts, capture and gross-profit change. Gross profit falls CNY 468.548 M, while full operating expenses decline CNY 9.702 M. Parent operating earnings fall CNY 458.846 M. It is not an operating-expense increase or a multiple cut. The method, share denominator and minority convention are unchanged in this same-window comparison.

The earlier deterministic outer-year wafer utilization path is replaced by probability-weighted, cash-funded good units and product mix. This is a model re calibration; it does not assert that the issuer reduced a numerical consolidated revenue forecast. No such new forward guidance was located.

Conditional funding / shares	Selected assumption and distinction
Inherited valuation reserve	10% future share reserve from Q127 is already in the source denominator and retained in every outcome. It does not prove a financing has closed.
Conditional cash issue	Supportive-funding state: 10% of existing shares at CNY 12 equivalent, less 3% fees, in Q327. Price, timing and closing are LOW planning assumptions.
Authorized ceiling	Initial H shares <=20% post-issue, equivalent to <=25% new versus old shares; greenshoe <=15% of initial H shares gives <=28.75% versus old at the maximum.
Same-OP share scaling	At fixed earnings, use current screen x 1.10/1.25 or x 1.10/1.2875 for the maximum-size diagnostics; negative signs do not indicate stock returns.
Separate mandate	Do not stack the distinct 20% post-listing general issuance mandate with the initial offer cap.
ESOP transfer	16,513,620 existing treasury shares x CNY 10 = CNY 165.1362 M subscription cash; zero new issued shares.

Q329	1,356.777858	1	0	0.002	Inherited control
Q429	1,356.777858	1	0	0.002	Inherited control
Q130	1,356.777858	1	0	0.003	Inherited control
Q230	1,356.777858	1	0	0.003	Inherited control
Q330	1,356.777858	1	0	0.003	Inherited control
Q430	1,356.777858	1	0	0.003	Inherited control

The source uses an absolute minority allocation rather than a constant minority percentage. Reported after-tax subsidiary/NCI results do not independently disclose future operating ownership allocations. The existing control schedule is retained. Final three quarters have complete operating economics but incomplete forward-four-quarter valuation windows; their rolling outputs remain blank.

Fixed-OP dilution diagnostic	Shares M	Q427 signed screen CNY
Retained 10% reserve	1,356.777858	-2.176692
25% new versus old	1,541.793020	-1.915489
28.75% new versus old	1,588.046811	-1.859698

These are mechanical denominator diagnostics at unchanged operating earnings, not alternate active forecasts or market-return estimates. Conditional funding can also change operations, so a full financing scenario need not move in the same direction as this fixed-OP arithmetic.

Funding price override	F4 revenue B	F4 parent OP B	Signed OP screen CNY	Cash feasible
Conditional H-share offer 6 CNYequivalent	4.1014	-0.083689	-1.542049	Yes
Conditional H-share offer 18 CNYequivalent	4.1036	-0.119143	-2.195327	Yes

Captured funding diagnostics for Q427-Q328. The offer price changes conditional cash proceeds and therefore funded assets, costs and capture; it does not change the inherited share-denominator convention. All other input rules are held constant. Theseare not alternative active forecasts orstock-return predictions. A negative profit-derived screen is not a negative market price.

VALUATION PANEL CONTINUATION

Long-range adoption | Q130 signed earnings diagnostic

2030 adoption assumption	Parent F4 OP B	Multiple	Shares M	Signed screen CNY
Separate 160 k endpoint demand	-0.121511584	25 x	1,356.777858	-2.238973441
Ordinary 70 k demand bound	-0.124685208	25 x	1,356.777858	-2.297450671

This captured long-range sensitivity prices Q130-Q430 with the existing 25 xparent OP method and starting-quarter shares. Onlythe 2030 post-term adoption demand inside the 10% endpoint state reverts to ordinary 70 k/year; all other input rules are held constant and dependent cash/capacity/costsare re calculated by the approved whole model. Both paths are funded. The active Q427 window is unchanged. Both signed results remain negative; neither is a stock-price forecast or a meaningful stock return.

The 160 k endpoint is a separate LOW adoption hypothesis, not confirmed renewal or backlog. Current forecast assumptions and the 15 quarter current path are unchanged. Theprice-free uncertainty section provides the annual and quarterly operating economics.

INVESTMENT THESIS

The company case | readiness before proven capture

Tiantong is a materials and equipment turnaround with an advanced-wafer option. Commissioned equipment and customer validation improve readiness. Qualified product mix, paid deliveries and cash-funded execution determine whether the option becomes meaningful parent operating profit.

Lithium niobate and lithium tantalate serve established piezoelectric applications and can also enable thin-film photonics. Bulk wafers, RF-oriented heterogeneous wafers, optical LNOI/TFLN and complete optical modules are different products and economic layers. A module architecture win is not automatically a wafer supplier order, and a wafer opportunity does not entitle Tiantong to the module bill of materials.

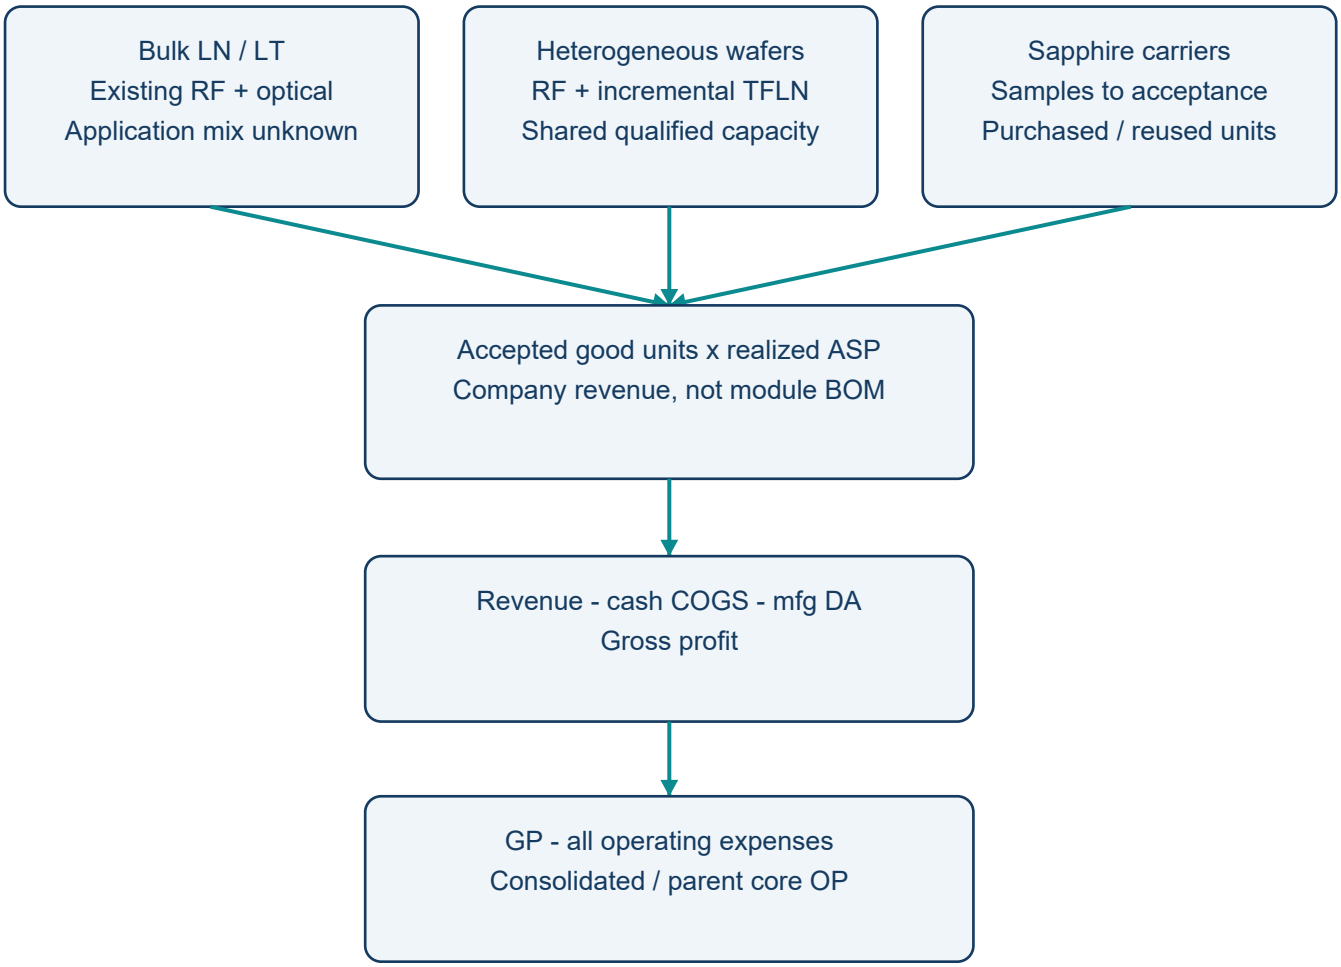

Existing bulk LN crystals and wafers for optical modulators are distinct from the incremental heterogeneous/TFLN optical scenario. The issuer described 8 inch bulk LN production for high-speed electro-optic modulators in May. The model does not assume total company optical activity is zero: its separately named optical vector measures incremental heterogeneous/TFLN wafer capture. Existing bulk applications remain within bulk revenue; their application mix is undisclosed.

Business	Position / model capture	Principal limit
Established materials	Magnetic materials, sapphire and other electronic materials remain the revenue base.	Recovery, input costs, utilization and receivable quality matter more than an AI label.
Bulk piezo	Production capability in conventional LN/LT wafers. Units x realized wafer ASP drive revenue.	Current utilization, saleable yields and product-specific realized ASP are undisclosed.
Heterogeneous wafers	RF and optical good units share funded capacity; qualification and optical mix cap recognition.	The 420 k plan was justified primarily for RF/SAW, not entirely optical-qualified capacity.
Carrier / new magnetic	Carrier samples provide an early option; new magnetic plant needs funded commissioning.	Samples are not orders. New magnetic sales begin only after funded service.
Equipment / other	Established equipment and materials/other/rental are separately calibrated.	Customer acceptance, bad debt and cost absorption can dominate equipment sales.

The company has a credible engineering path, but retrieved evidence does not establish a sole source, a verified yield monopoly, an exclusive InnoLight joint venture or a confirmed Lumentum sampling program. Competitive qualification and commercial execution remain central.

ORIGINAL EXPLANATORY DIAGRAM

F14 | How accepted products become earnings

Cash after taxes and debt service limits funded capacity and timing

Original explanatory diagram of the selected operating mechanism. Qualification and product scope determine good units; prices determine captured revenue; manufacturing costs and depreciation determine GP; full operating costs determine profit. Funding constrains capacity and timing. These quantities are not interchangeable. Equipment, established magnetic and Other receipts follow their separately calibrated vectors.

COMPANY ANALYSIS

Supply chain and the three-phase TAM lens

Phase	Engineering adjacency	Company capture / confidence
1 | AI/data centers now	Optical links and power magnetics; sapphire process carriers may aid advanced packaging.	Revenue still requires accepted wafers/components, capacity and commercial terms. Phase confidence is not a company revenue probability.
2 | Physical AI,2026-2030	Automotive/power electronics, storage, sensing and wider high-speed interconnect use can extend materials demand.	Common material capabilities can serve multiple markets; no unsupported adjacent-market revenue is added.
3 | New compute uses,2027-2035	Photonic sensing, quantum and other electro-optic applications provide a longer-range engineering option.	Keep distant adoption speculative and separate from the active operating window.

The framework phase weights are 100%,50%,20%; they frame TAM breadth and do not multiply the already probability-weighted company model again. The approved TAM score is 8/10. Expansion rests on the physics of electro-optic and piezoelectric materials, magnetic conversion and process substrates, rather than treating every photonic market as accessible revenue.

S-curve	Current evidence	Next measurable test
Established magnetic/sapphire	Operating manufacturing base; cyclical demand and operating absorption.	Cash conversion, accepted deliveries, margins and inventory quality.
Bulk piezo	Production at 4/6/8 inch product sizes;2025 sold 621,838 piezo wafers.	Paid unit growth and actual volume ASP versus the disclosed terminal plan.
Heterogeneous optical	Equipment commissioning and customer sample validation; optical volumes undisclosed.	Qualification acceptance, repeat paid shipments and optical share of shared good capacity.
Temporary sapphire carriers	12 inch samples sent; issuer cites CoWoS/future CoPoS applicability.	Customer qualification, purchased carrier units, replacement/reuse cadence and contribution margin.

COMPANY ANALYSIS

Competitive context | alternatives remain credible

Source / product	What is established	What remains unproved
Tiantong catalogue	LN/LT bulk products and dimensional specifications.	Current wafer yield, good output, optical customer mix and durable cost advantage.
NANOLN / Jinan Jingzheng	Official catalogue offers 3/4/6/8 inch LNOI/LTOI and RF/optical applications.	Competitor market share, capacity, yield, parity and overlap with Tiantong customers.
Sumitomo Metal Mining	Official LT/LN page offers 4/6 inch SAW wafer products.	Relative realized prices, current cost curve and customer switching rates.
Qinghe / CHIPX / trade shows	Specific cooperation and platform capabilities provide readiness evidence.	Exclusive supply, an award amount, paid backlog or independent commercial validation.

Customer qualification, film thickness/uniformity, defects, bonding and repeatability can create switching friction, but a specification sheet alone does not establish a durable bottleneck. Architecture substitution and alternative substrates remain risks. No mandatory 3.2 T architecture or exclusive optical supply is assumed.

Sources: issuer catalogue; NANOLN official products (https://www.nanoln.com/PRODUCTS.html); Sumitomo official LT/LN page (https://www.smm.co.jp/en/business/material/products/lithium/). These sources establish product availability, not industry market shares.

MANAGEMENT EVIDENCE

Newest earnings records | exact scope of the evidence

Event / publication	Record reviewed	Interpretation and limit
6 May /7 May 2026	Issuer four-page published principal-QA summary;19 questions.	Online written interaction, not a spoken call transcript. Full published summary reviewed; no underlying spoken replay located.
27 August /28 August 2026	Issuer three-page published principal-QA summary;6 questions.	Online written interaction. Full published principal questions reviewed; the record is not a verbatim audit of all possible exchanges.
3 September /4 September	Issuer management record, DOCX.	Equipment commissioning/sample validation and legacy receivable discussion; no verified optically qualified volume disclosed.
18 September /21 September	Issuer management record, DOCX.	Planned 1.68 Mbulk+.42 M hetero annual capacity by Dec 2029; no current optical mix/yield/ASP disclosure.
9 October	Full public p5w API answers captured.	12 inch carrier samples; potential TFLNDCI coherent use; no DCI amplifier sales;400 k/3 year question receives non confirming answer.
14 October	Issuer Q&A reproduced by Stockstar.	SDF remains R&D; integrated inductor sales small. Newer record absent from captured p5wlatestpage, so date coverage is qualified.

In the 6 May record, Q8 explicitly denies the InnoLight/Guoying joint-venture rumors and Q9 explicitly denies the Lumentum sampling information. Q12/13 distinguish 8 inch LN single crystal/wafer production from a heterogeneous TFLN line still debugging; Q19 says no confirmed mass production orders from optical module makers as of that event. Later September commissioning/validation evidence is a subsequent readiness stage, not a retroactive order confirmation.

No numerical consolidated forward operating guidance was found. All modeled future prices, product volumes, commercial qualification, bank rollovers and remaining-cost allocations are estimates with LOW confidence unless explicitly source-bound.

Source locations: May record PDF pp 3-4, Q8/Q9, Q12/Q13, Q19; August record PDF pp 2-3, Q4-Q6. The August answers leave future impairments to actual tests and distinguish accounting share-payment expense from cash outflow. They do not issue numerical profitability guidance. These are concise paraphrases of the issuer published written records.

SCORE AND RISKS

A summing score | analytical 58, protected 57

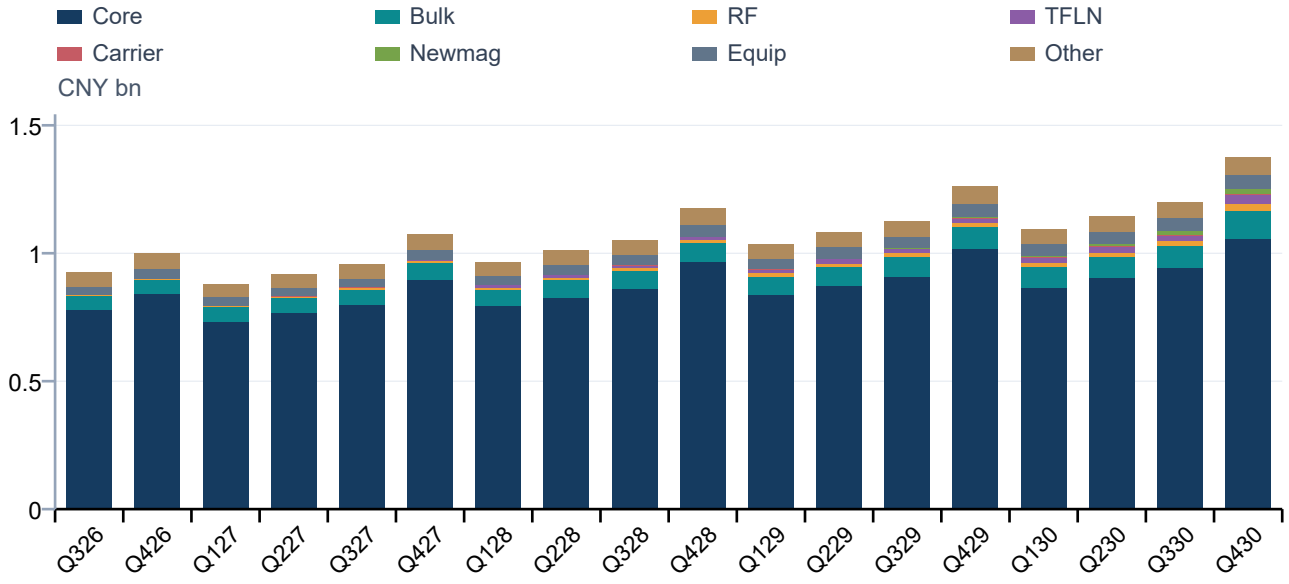

Category	Points	Maximum	Evidence
Core thesis	13	20	Engineering capability and broad material base; no verified exclusive optical bottleneck.
Cycle stage	5	10	Bulk is operating; optical remains qualification; carrier is sampling.
TAM expansion	8	10	Electro-optic, power and process material adjacencies; company capture limited.
Catalysts	3	5	Qualification, repeat orders, cash/funding and project service tests.
Macro	8	10	Data movement, power conversion and semiconductor process demand.
Alpha	3	5	Local primary source, scope, cash and expense archaeology.
Risk deduction	-5	0	Five risk classes at -1 each; permitted range -5 to 0.
Total	35	60	35/60 rounds 58%; Fail band.

The protected portfolio Base remains 57%. The approved timing cap is 65%; 35/60 rounds to 58%, below that cap. Analytical scoring is advisory and has no feedback into operating earnings, cash or the valuation formula. The score applies no blanket adjustment based on geography.

Scored risk class	Point	Economic transmission
Governance and incentive alignment	-1	Related-party controls, employee plan hurdles and dilution/expense alignment.
Legacy PV receivables and inventory	-1	Additional losses, blocked cash and replacement costs.
Qualification, architecture and competition	-1	Optical acceptance, mix, substitution and pricing power.
Funding, earmarking and capital execution	-1	Restricted cash, rollovers, project delays and potential dilution.
Pricing, raw materials and currency competition	-1	Realized wafer ASP, input costs andyen-linked competitor economics.

MODEL FIGURE

F02 | Revenue by causal vector

One probability-weighted current reconstruction, Q326-Q430, all Model/LOW. Q326 here is separate current reconstruction, not frozen published history. TFLN is incremental heterogeneous optical capture; existing bulk LN optical applications are inside Bulk, with mix undisclosed. Beyond Q328 dependency on funding/commercial assumptions increases. Eight vectors reconcile total; not eight reported segments.

AH-9 VECTOR MAP

Revenue sources and accounting boundaries

Vector	Revenue mechanism	Primary anchor / confidence
Established core	Min(demand, funded revenue capacity). H1 core annualized grows 8/8/7/6% in 2027-30.	H1 electronic materials less modeled piezo allocation. Historical subtotal HIGH; allocation/growth/capacity LOW.
Bulk piezo	Min(unit demand, quarter capacity) x ASP.300 CNY reference,2% annual change.	FY2025 units sold 621,838; terminal 1.68 Mplan. Actual unit volume HIGH; current capacity/ASP/cost LOW.
RF heterogeneous	Accepted RF units x 900 CNY. Shared qualified capacity after optical allocation.	RF/SAW project purpose HIGH; current unit demand,900 ASP and 550 cash cost LOW.
Optical heterogeneous	Min(conditional demand, shared good capacity x optical mix) x 2,600 CNY.	Commissioning/samples MED; qualification, mix, volumes, ASP and 1,430 cash cost LOW.
Sapphire carrier	Commercial state units x 2,500 CNY, funded existing core/pilotcap.	12 inch samples MED; purchase/reuse cycle, units/ASP/1,450 cash cost LOW.
New magnetic	14,600 tonnes/year /4 x actual service age utilization x 25,000 CNY/tonne.	Disclosed plan HIGH; timing/funding, ramp/ASP/cost LOW.
Equipment	0.14/0.16/0.18/0.20 B annual 2027-30, quarter season weights.	H1 equipment revenue/cost HIGH; future receipts and calibrated cash cost ratios LOW.
Other including rental	0.22/0.23/0.24/0.25 B annual 2027-30, season weights.	H1 contract Other+explicitrental/residualrentalcost HIGH/derived; futurepath LOW.

Forecast quarters are calendar quarters. Season weights 23/24/25/28% apply to annual demand/revenue where specified. Product costs are modeled in cash terms before the common fixed-cost and depreciation burden. Undisclosed product-specific GAAP margins are not invented.

FULL FINANCIAL DERIVATION

From calibration to operating profit

Historical group cash COGS = group revenue - group GP - allocated manufacturing DA. Ten percent of historical cash COGS becomes fixed factory cash cost; the remaining 90% determines variable cash ratios. H1 period DA is allocated among selling/admin/R&D in proportion to reported expenses, then removed once to solve their cash anchors. The H1 piezo revenue/GP allocation is 100 M/30 M, LOW, rather than reported piezo results.

Layer	Equation / retained cost
Revenue	Sum of 8 causal revenue vectors. No extra revenue from native scaling anchors.
Cash manufacturing	Four fixed factory costs x 1.03^(t/4) + product variable cash costs; bulk/RF/optical/carrier unit costs inflate 1.5% annually.
Gross profit	Revenue - cash COGS - manufacturing DA (80% oftotal DA).
Cash SG&A/R&D	Each cash anchor x(revenue/(H1 revenue/2))^0.75 x 1.03^(t/4).
Incremental support	RF 5% of revenue, optical 8%, new magnetic 4%, plus carrier qualification 1 M/quarter in commercial state.
Full Opex	Cash selling/admin/R&D/support + period DA 20% + SBC + operating tax 1% revenue + new credit loss 2% revenue + inventory reserve + selected legacy writeoff.
Inventory reserve	15 M/quarter through 2027;10 M/quarter from 2028. Conservative cash leak; source inventory carrying is not independently verified good stock.
Consolidated core OP	GP - full Opex. Financing/investment/subsidy income excluded.
Parent core OP	(Consolidated core OP + Q) x P - Q - R, preserving the absolute ownership allocation schedule.

Manufacturing depreciation is already charged in GP and period depreciation in Opex. Neither is deducted twice. Zero revenue does not erase fixed factory cost or depreciable assets: margins display N/M while direct GP losses remain.

Q330	350,546	49,315	20,357	8,572
Q430	419,472	70,747	30,380	13,820

PRINCIPAL DRIVER

Wafer economics | probability and shared capacity

State	Weight	Qualified-sales ratio	Optical mix cap	Demand interpretation
Late/RF only	45%	15% ->50%	0%	RF 16/32/50/70 kannual 2027-30; zero incremental TFLN, not zero existing bulk optical activity.
Qualified ordinary	45%	35% ->80%	25%	RF 32/64/100/140 k; optical 8/24/48/70 kannual.
Qualified endpoint	10%	45% ->90%	60%	Hypothetical 400 k demand 2027-29; receipts capped by qualified capacity, no asserted backlog.

Meaningful optical qualification is assigned 55% by end 2027, supported by commissioning/sample validation and platform cooperation but limited by missing named customers, yields and architecture timing. The 400,000-wafer/three-year endpoint is a 10% unconditional admission nested inside qualification, equivalent to 18.18% conditional on qualification. The issuer response did not confirm or deny that alleged agreement.

Bulk annual demand 2027-30 is 800 k/920 k/1.04 M/1.16 M. Bulk capacity = (900 k+780 k x prior funded piezo fraction)/4. Hetero good quarter capacity = (60 k+360 k x prior funded fraction)/4 x qualified sales ratio. Optical units = min(optical demand, good capacity x state optical mix); RF consumes only the remaining good capacity. Both products thus cannot claim the same wafer twice.

The 300 CNY bulk reference is a LOW model estimate. The issuer mall listed 500 CNY for a black LN retail SKU with 4/6 inch options and zero stock at capture; that is not an 8 inch volume ASP or TFLN price. RF 900 CNY and incremental TFLN 2,600 CNY prices and their unit costs are also LOW. Neither a price list nor a technical specification discloses realized commercial margins.

Production/readiness claims must retain material and diameter:6/8 inch production and 12 inch LN R&Dverification do not establish 12 inch LN mass production. A12 inch sapphire temporary carrier sample is a different material and product. Thepiezo feasibility plan cites 14.63% aftertax IRR and 10.39 year payback; neither is observed company profit, and neither is used as a shortcut to operating margin.

The endpoint demand is 5/15/25/35 k in 2027,30/35/35/40 k in 2028 and 40/45/45/50 k in 2029, totaling 400 k. These are hypothetical demand ceilings, not company orders. The 2030 endpoint 35/35/40/50 k is a separate LOW post-term adoption assumption, not renewal or backlog; the ordinary-qualified reference is 70 k/year. It does not affect the active Q427-Q328 window.

CHIPX, Qinghe and CIOE feed evidence into the single qualification path. They are not additive orders or independent revenue pools. No monopoly/yield/cost advantage claim is adopted from older unsupported narratives.

COMMERCIAL EVIDENCE

Carrier and optical Q&A | what the issuer actually said

9 October public answer	Supported inference	Boundary in the model
12 inch sapphire temporary carriers sent as customer samples; applicable to CoWoS/future CoPoS and ultrathin processing.	A real qualification option exists.	35% commercialization, not an order announcement. Units reflect assumed carrier purchases, not one carrier per HBM wafer start.
TFLN can be used in DCI coherent modules; no product sales in DCI amplifiers.	Potential coherent-module architecture exposure.	Only wafer receipts count; no amplifier sales or full module BOM appropriation.
Investor asks about 400 k/3 yr agreement; issuer refers to public disclosures.	A specific but unverified breadcrumb can receive bounded probability.	10% endpoint nested in qualification; no contracted backlog label or guaranteed 400 k deliveries.

Source: full saved public p5w API payload and individual question URLs. Questions and replies are dated 9 October 2026. Direct JS-only pages alone did not expose the answer body; the API supplied the complete text. October 14 SDF answer was preserved via a secondary mirror and keeps SDF at R&D; it does not confirm the investor proposed Delta long agreement.

CAPITAL EXECUTION

Magnetic project | service before sales

The 24 August board decision,26 August notice plans 14,600 tonnes/year of metal powder-core and MnZn ferrite capacity at LuAn. Total 434.2135 M consists 421.5665 M buildings/equipment and 12.647 M initial working capital. The intended 15 September 2026 start and 36 month construction period are plans; an actual groundbreaking/completion wasnot independently confirmed.

The model permits first service no earlier than Q329 and only after the full PPEplan is funded. Utilization then follows actual service age 10/20/25/35/45/55% for successive quarters. The selected 25,000 CNY/tonne ASP and 60% cash variable cost are LOW; they are not issuer sales forecasts. If funds arrive late, service age and the ramp move later. No magnetic project sales enter the active Q427-Q328 window.

The source 18.36% is described as an expected after-tax investment return rate, not explicitly an IRR. It is neither consolidated OP nor a margin assumption. Markets include datacenters, autos, storage and power electronics; theplant is not wholly AI revenue. New magnetic revenue is separate from the established core base and is not counted twice.

Control	Model treatment
Payment	12 quarter staged PPEdue, subordinate to existing projects and cash reserves.
Initial WC	Paid at first service; not depreciated and tracked separately from ordinary WC.
Depreciation	No new magnetic DA until fully funded commissioning; then 40 quarter life.
Demand/ramp	Actual service age and disclosed nameplate x LOW utilization; no pre-service sales.

Q430	0.0197

CREDIT AND INVENTORY

Legacy losses and litigation | net exposure, not face value

H12026 exposure	Gross B	Allowance B	Net B
Accounts receivable	2.146337	0.628355	1.517982
Inventory	1.738452	0.270281	1.468171
Individually 70%-provided legacy pool	0.498975	0.349282	0.149692

The modeled legacy event pool is rounded down to 140 M inside 149.692 M net carrying. The roughly 470 M Hoshine contract litigation figure is not an additive cash claim available for forecasting. The model neither charges the existing allowance again nor assumes cash recovery from an accounting write-down.

Legacy state	Given supportive funding	Given constrained funding	Economic effect
Additional impairment	20%	35%	35 M/quarter Q426-Q327,140 Mtotal; noncash writeoff reduces carrying.
Carry, no newevent	55%	55%	No newone-off loss or collection; current carrying persists.
Cash resolution	25%	10%	70 M cashin Q227, reduces carrying 70 M; no operating recovery gain.

Funding and collections are correlated through these conditional weights. New trade credit loss remains 2% of revenue and inventory cash reserve 15 M/quarter through 2027,10 M thereafter. Normal WC excludes the initial individually provided legacy carrying; legacy recovery/writeoff does not create an additional normal WC cash release.

合计	431,402,196.34	196,953,194.53				628,355,390.87

Individual allowance/net carrying informs the bounded 140 M event pool. Litigation face value is not incremental net receivable or certain recovery.

Original issuer filing | H12026_report_1225501744.pdf, PDF page 76 | https://static.cninfo.com.cn/finalpage/2026-08-26/1225501744.PDF | published 2026-08-26. Chinese original retained; figures are CNY unless page states CNY 10,000. English interpretation above.

OPERATING COSTS

Share compensation | expense and cash are separate

The revised employee plan disclosed 29 August estimated 235.1539 M total expense using 12 August valuation data and a September transfer assumption, al locating 58.7885 M to 2026 and 176.3654 M to 2027. The actual transfer completed 8 October, confirmation arrived 9 October and notice was published 10 October. That notice supplied no replacement expense table.

The model carries the 235.1539 M expense budget over 10 October 2026-9 October 2027 on a daily planning clock. The actual grant date/fair value and recognition timing remain uncertain; thisis not a new issuer accounting estimate. Full SBC stays in operating earnings. The 165.1362 M employee subscription cash is a separate financing cash receipt and does not offset the expense.

The 12 month lockup and 24 month life begin from the last transfer announcement. The company hurdle is 2026 audited revenue growth of at least 10%, not profit guidance. Individual performance adjustments and employee-financing terms create incentive alignment questions; the source doesnot byitself establish a company liability for employee leverage.

Item	Treatment
Issued shares	Existing treasury transfer; no new issued shares.
SBC	Operating expense in full; noncash addback in CFO, retained in OP.
Employee cash	165.1362 M in Q426, distinct from expense 235.1539 M.
Timing risk	The published older expense allocation is not actual expense after the October transfer.

CASH AND FUNDING

Liquidity | cash restricted by purpose

H1 cash classification	CNY B	Interpretation
Gross cash	1.685861	Includes margins/frozen balances outside CCE.
Cash equivalents	1.516433	Cash-flow statement cash definition.
Excluded margins / frozen	0.169428	Already excluded from CCE; do not exclude again.
CCE restricted by use	1.108384	Includes 1.098935 B raised funds plus other restrictions.
General-use residual	0.408049	Notan Oct 24 balance; temporary raised WC subsequently returned.
Bankdebt / leases	1.159167 /0.040687	Trade bills payable 0.596607 B remain ordinary WC stock, not new funding.

The 13 October notice says 217.969 M temporarily used raised funds had been fully returned by 10 October. H1 outstanding temporary WC was 122.706 M. The 95.263 M difference is assigned to Q326 as a LOW timing proxy before Q426 return. This moves cash between raised/general purposes and creates no new capital. The period timing stress postpones the incremental draw to Q426.

The forecast assumes no undisclosed unused bank facility. Supportive/constrained funding rolls 90%/70% of maturing ST loans; loans mature again four quarters later. Original LT debt repays overthe specified schedule. Annual bank interest 3%/4.5% uses average debt; lease principal/interest are separate. The conditional offer is not completed financing.

Mandatory flows include operations, taxes, bank/lease debt service, old capital payables and raised fund returns. Maintenance uses available positive general cash. Optional projects retain an operating floor and a conservative forward liquidity reserve. Any shortfall is an explicit funding gap; it isnot a free borrowing or cost less delay.

CASH DERIVATION

Working capital and cash conservation

Opening normal-WC component	CNY B	Treatment
Net receivables	1.517982	Less individually provided legacy carrying below
Legacy exclusion	0.149692	Subtract; separately tracked collection/writeoff states
Net inventory	1.468171	Carrying value; not independently verified good inventory
Prepay / contract assets	0.087416	Add operating assets
Receivable finance / notes	0.094474	Add operating receivables
Operating accounts payable	1.010593	Subtract; capital payables removed from operating AP
Trade bills payable	0.596607	Subtract normal trade stock; no extra financing cash
Contract liabilities	0.055662	Subtract operating liability
Opening normal WC	1.355487	Stored model calculation; no independent cash release

Quarterly normal WC = opening normal WC x quarter revenue / (H1 revenue/2), with a separate no-bill-stock-growth stress. Its change is cash investment. Impairment is not collection. Project WC stock can fund only positive ordinary WC investment, capped by stock and the actual increase.

Operating cash = core OP + total DA + SBC + selected legacy writeoff - cash tax - normal WC investment + actual selected legacy collection + project WC stock used. Recurring new-credit/inventory cash-leak provisions are not added back. Bank and lease interest remain separate finance cash flows.

General cash end equals opening general cash plus operating cash, permitted transfers, employee cash and conditional offer cash; less raised-fund return, net debt principal, bank/lease interest, old capital payables, magnetic startup WC, paid maintenance and general-funded project cash. Earmarked cash rolls forward separately with authorized project payments. Total CCE also retains other use-restricted balances.

CASH-PLANNING ASSUMPTIONS

Income tax | loss does not imply zero cash tax

H1 2026 reported item	CNY M	Meaning
Current income-tax expense	7.230403	Accrual; not a disclosed cash payment
Deferred income-tax expense	-58.094748	Credit; not a cash receipt
Total income-tax expense	-50.864345	Current plus deferred
Consolidated pretax result	-337.300407	Loss can coexist with taxable subsidiaries

单位：元 币种：人民币

项目	本期发生额	上期发生额
当期所得税费用	7,230,402.59	10,916,486.61
递延所得税费用	-58,094,747.98	-13,018,932.54
合计	-50,864,345.39	-2,102,445.93

Factual original table excerpt, H12026 report PDF p 120, note 76, published 26 August 2026. Unit CNY. Current income-tax expense is accrual, not actual cash paid; deferred credit supplies no cash.

Cash-tax planning uses the larger of 15% x positive(core OP+SBC) and (H1 current tax expense/2) x quarter revenue/(H1 revenue/2) x floor scale. Scale 1 isactive;0/2 are captured bounds. A separate one-year optional-capital reserve equals H1 current tax expense x 2 xscale. Thefloor and payment timing are LOW estimates, not issuer cash-tax guidance or a bankcovenant.

The source cash flow statement shows 82.47095148 M of all taxes paid; this is not an income-tax payment break down. No deferred tax refund, NOLcashreceipt or financing-interest deduction is assumed. Income tax affects cash, funded capacity and timing; it is not directly deducted again from the retained pre-taxcore OP valuation metric. https://static.cninfo.com.cn/finalpage/2026-08-26/1225501744.PDF

Q230	0.0962	0.0797	0.1119
Q330	0.1080	0.0857	0.3230
Q430	-0.0387	0.2730	0.0000

CAPITAL DERIVATION

Project funding, service and working capital

H1 disclosed plan	Total B	Cumulative B	Remaining B
LuAn high-performance soft magnetic green manufacturing	0.5881	0.5346	0.0535
Sapphire manufacture and processing base	1.7128	1.0255	0.6873
Kaili 25300-ton magnetic materials	0.5626	0.3693	0.1933
Large-size RF piezo wafer	1.4676	0.6252	0.8424
Crystal-growth precision-processing equipment	0.6645	0.2773	0.3873
0.3 GKWh sodium battery	0.1250	0.0480	0.0770

These are staged plans, not asserted noncancellable contracts. Remaining investment composition is not fully disclosed. Historical full project WC and capitalized interest ratios estimate unknown remaining composition, LOW. Piezo 75.7181 M/1,467.6086 M and equipment 114.4049 M/664.5375 M determine WC fractions; sodium WC is a 10% proxy tested at 0/20%. Source sapphire budget contains small conflicting headline/phase sums, retained as source uncertainty.

PPEcash excludes working capital. Already-paid bank interest is capitalized only up to the budget proxy and actual interest; it isnot paid again inside project cash. Initial project WC becomes a separate stock that can fund later positive ordinary WC investment, capped by both stock and cashneed. It has no depreciation and does not fund the same WC twice.

Opening CIP682.54033783 M and long asset prepayments 42.41881824 M enter service with funded project progress without a second cash payment. This service does not add capacity a second time. Opening depreciable net assets 4.802751 B are finite cohorts, notperpetual DA. New ordinary PPE starts depreciation one quarter after payment over 40 quarters; magnetic PPE waits for whole plant commissioning.

CAPITAL DERIVATION

Depreciation service cohorts

Opening asset class	Net carrying B	Quarter DA B
fixed and investment	4.334020	0.129155
ROU	0.037753	0.001185
intangibles	0.244376	0.004619
long deferred	0.186603	0.010933

Each opening class charges no more than its remaining carrying value. Opening CIP and long-asset prepayments are allocated once across equipment, piezo and existing core projects in proportion to remaining plans. Service uses funded progress and a 40 quarter life without a second cash outlay or a second capacity addition.

New ordinary PPE = paid project cash less project WC plus paid maintenance and eligible capitalization of bank interest already paid. It begins DA after one quarter. The magnetic exception waits for the fully funded plant and actual commissioning, no earlier than Q329. Its service-age ramp and DA start together. Manufacturing receives 80% of total DA and period expense 20%, once each.

Optional general capital retains a 50 M floor plus a forward reserve for four quarters of scenario net ST/LT/lease principal, known old capital payables, a one-year bank-interest proxy, the net raised-fund return, seasonal working-capital needs and annualized maintenance. This is a conservative model cash-management policy, not a claim about management commitments.

ORIGINAL FINANCIAL TABLE EXCERPT

E16 | Current project plans

单位：万元

项目名称	建设主体	总投资金额	资金来源	本年度实际投入金额	累计投入金额	项目进度
高性能软磁材料绿色制造项目	天通六安	58,808.60	自有资金和银行借款	4,002.00	53,456.62	91%

ORIGINAL COST-COMPOSITION TABLE

E17 | Equipment project cost composition

序号	项目	金额（万元）	占比
一	**建设投资**	**55,013.26**	**82.78%**
1	建筑工程费	10,356.43	15.58%
2	工程建设其他费用	432.90	0.65%
3	设备购置安装费	42,621.60	64.14%
4	预备费	1,602.33	2.41%
二	**铺底流动资金**	**11,440.49**	**17.22%**
项目总投资		**66,453.75**	**100.00%**

2022 fullplan matches current 664.5375 M total; initial WC 114.4049 M. Remaining composition is estimated proportionally, not separately disclosed.

equipment_original_plan_20220308.pdf | PDF page 18. Factual table excerpt from the original issuer disclosure, retained through a public filing mirror. The source URL, date and hash are in the register; original Chinese labels remain.

RECONSTRUCTED FACTUAL SOURCE TABLE

Historical project budget composition

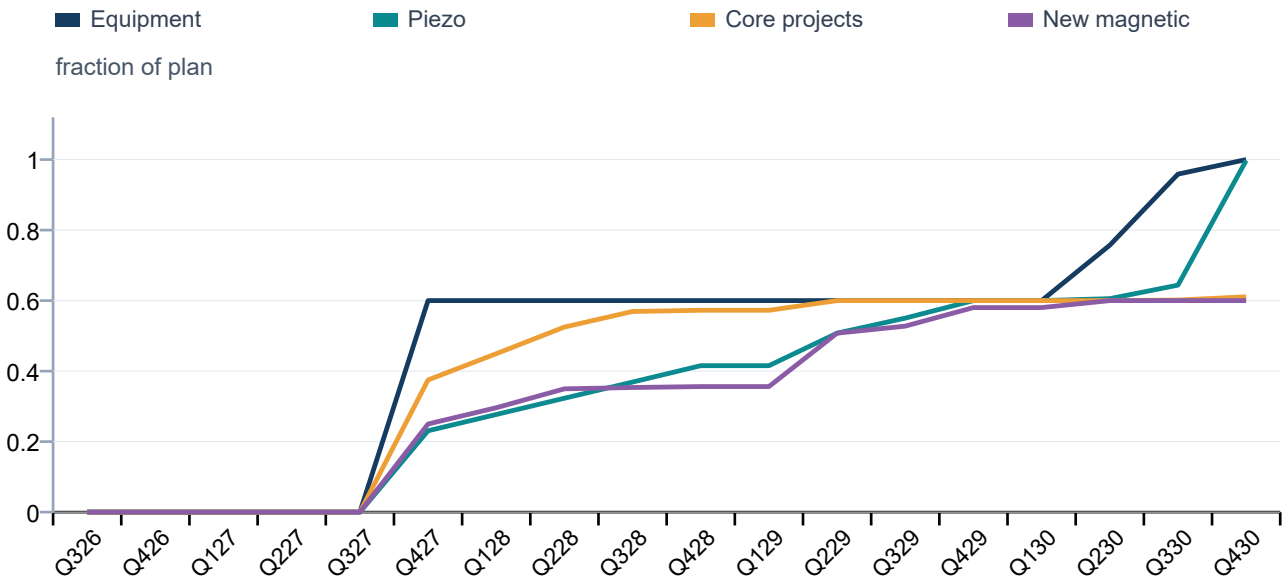

Full historical budget	Total B	Initial WC B	Construction interest B
Piezo	1.467609	0.075718	0
Equipment	0.664538	0.114405	0
Sapphire	1.712822	0.035547	0.023011
Kaili	0.562620	0.031059	0.019000
Existing LuAn	0.588086	0.081561	0
Sodium	0.125000	Not disclosed	Not disclosed

Reconstructed factual table from issuer project disclosures: piezo,30 December 2025, p 4; equipment,8 March 2022, p 18; sapphire,2 March 2022, pp 1 and 3-4; Kaili,22 April 2021, pp 1-2; LuAn,2 March 2022, pp 1 and 3; current H1 sodium aggregate, p 14. Full dates and URLs appear in the source register.

Thetable describes full historical project budgets, not actual remaining classification. Source sapphire headline fixed plus WC is 100 CNY below declared total; phase WC sums differ by 30,000 CNY from headline. Preserve both discrepancies rather than silently re pairing the source. Remaining allocation uses fullplan proportions as LOW proxies; missing sodium WC is not assumed zero.

MODEL FIGURE

F12 | Funded project service progress

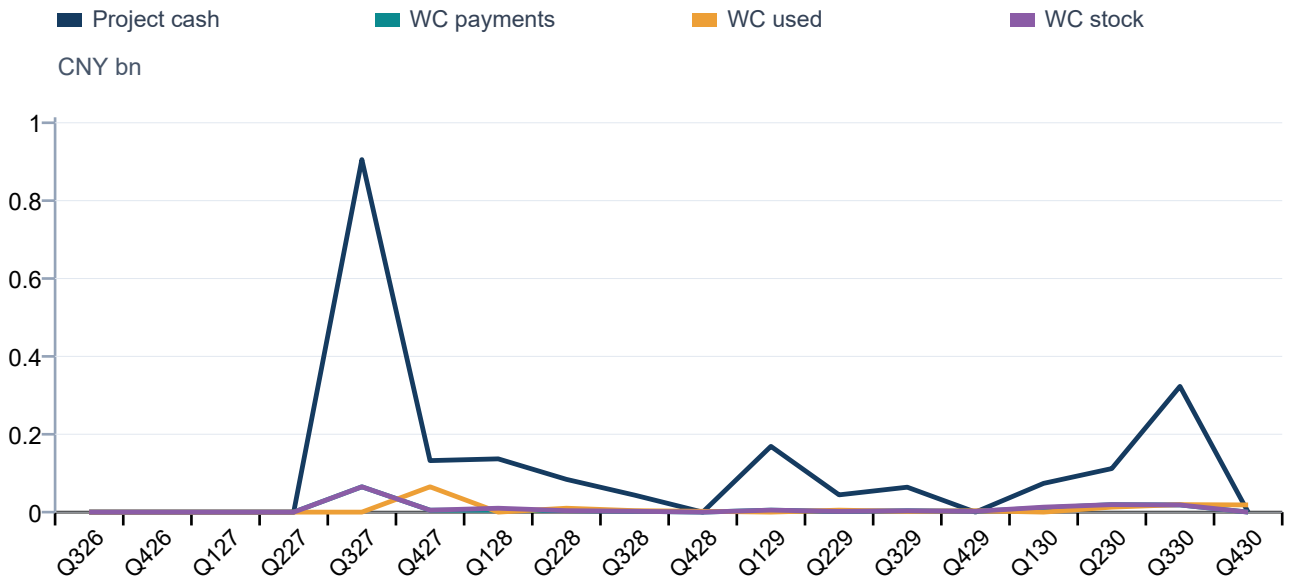

Service progress uses prior paid fraction; payment delay constrains capacity. New magnetic requires full PPE funding and Q329 earliest before output/DA; partial paid fraction is not partial productive plant. Project funding priority is maintenance, equipment, piezo, existing core, new magnetic.

Quarter	Equipment	Piezo	Core projects	New magnetic

RULE 16 B

Probability ledger | one coherent operating forecast

Feature	Probability	Reference / endpoint F4 OP B	Weighted increment B
Meaningful qualification	55%	-0.127111 / -0.116003	0.006110
Unverified 400 kendpoint	10% unconditional	-0.116003 / -0.087300	0.002870
Carrier commercialization	35%	-0.117673 / -0.118983	-0.000459
Supportive funding	60%	-0.003702 / -0.194418	-0.114430

These are active Q427-Q328 operating-earnings contrasts calculated from the approved 36 outcomes, not additive investment returns. Wafer components decompose thethree mutually exclusive states: late +55% x(ordinary qualified-late) +10% x(endpoint-ordinary qualified). Carrier and funding contrasts share interactions and must not be added to the wafer components as a separate forecast. Funding contrast includes its conditional credit distribution.

Source group: September 3/18 issuer commissioning/validation records and October 9 issuer answers. Qinghe, CIOE and secondary CHIPX cooperation corroborate one qualification path; no extra revenue isadded. Missing official contract confirmation alone does not force a zero probability, but neither does investor wording establish backlog.

Carrier 35% reflects sample evidence but missing customer acceptance, paid units, reuse/ replacement duty and ASP. Funding 60% reflects the authorization path but unknown execution/terms and restricted cash. Legacy credit weights depend on funding; no independence assumption is imposed on collections.

Test / timing	Counter and probability discipline
Optical qualification by end 2027	Increase only with accepted repeat paid shipments, defect/quality evidence and cash funding; reduce with qualification delays, architecture substitution or unpaid pilot volume.
Carrier commercial endpoint, 2027 onward	Require customer acceptance, purchased carrier units and replacement/reuse economics; sampling alone cannot establish ramp.
Funding Q327 endpoint	Confirm offer closing, netcash and permitted uses; delay or failed closing constrains project service.
Legacy cash Q227 endpoint	Require actual collection or settlement terms; litigation face value and allowance changes are not cash.

CONDITIONAL OPERATING SUMMARY

Weights are joint probabilities, not independent company scores. Funding is supportive or constrained; wafer states are mutually exclusive; carrier is commercial or not; legacy is loss/carry/cash. Minimum cash and maximum gap span all 18 quarters. Active F4 is Q427-Q328. A statistical confidence interval is not claimed. Weights sum 1.0.

SENSITIVITY DIAGNOSTICS

Bounded uncertainty | captured operating diagnostics 1

Changed input	Revenue B	GP B	Opex B	Parent OP B	Cash feasible
Bulk future selling price half, fixed unit-cost calibration	3.9659	0.7489	0.9751	FUNDING GAP	FUNDING GAP
Bulk future selling price twice, fixed unit-cost calibration	4.3776	1.1544	1.0394	0.112050	Yes
Bulk historical price and cash-unit calibration 500 CNY together	4.2862	0.9714	1.0253	-0.056975	Yes
Bulk historical price and cash-unit calibration 1000 CNY together	4.7429	1.1949	1.0944	FUNDING GAP	FUNDING GAP
Optical selling price 1300 CNY	4.0856	0.8645	0.9930	FUNDING GAP	FUNDING GAP
Optical selling price 5200 CNY	4.1391	0.9175	1.0055	-0.091082	Yes
Optical lowspread 1300 price 1787.5 cash cost	4.0856	0.8597	0.9930	FUNDING GAP	FUNDING GAP
Optical highspread 5200 price 1072.5 cash cost	4.1391	0.9224	1.0056	-0.086181	Yes

Reference: active forecast; window Q427-Q328. Only the listed captured input override changes; dependent volume/cost/cash/capacity economics are re calculated in the saved diagnostic. All other input rules remain unchanged. These are captured model simulations, not alternate active forecasts or statistical confidence bands. No result feeds back into the active forecast.

A half price bulk case and 20% core growth case fail cash feasibility; displayed numeric revenue/GP/Opex alone cannot establish usable earnings while funding is unmet. Changing historical bulk price also changes historically calibrated unit cash cost, so it differs from changing future selling price while holding unit cost calibration fixed. More cash does not automatically improve OP: it may accelerate assets, DA and fixed cost before profitable capture.

SENSITIVITY DIAGNOSTICS

Bounded uncertainty | captured operating diagnostics 9

Changed input	Revenue B	GP B	Opex B	Parent OP B	Cash feasible
Core annual growth 5 pct in 2027 and 2028	3.9426	0.8175	0.9725	-0.157994	Yes

Reference: active forecast; window Q427-Q328. Only the listed captured input override changes; dependent volume/cost/cash/capacity economics are re calculated in the saved diagnostic. All other input rules remain unchanged. These are captured model simulations, not alternate active forecasts or statistical confidence bands. No result feeds back into the active forecast.

A half price bulk case and 20% core growth case fail cash feasibility; displayed numeric revenue/GP/Opex alone cannot establish usable earnings while funding is unmet. Changing historical bulk price also changes historically calibrated unit cash cost, so it differs from changing future selling price while holding unit cost calibration fixed. More cash does not automatically improve OP: it may accelerate assets, DA and fixed cost before profitable capture.

CAPTURED FUNDING DIAGNOSTICS

Tax-payment bounds and essential maintenance

Tax floor scale	Active / bound	18 q weighted tax B	Failed states	Max mandatory gap B	Max unpaid maintenance B
0	Bound	0.007591	0	0.000000	0.000000
1	Active	0.079487	0	0.000000	0.000000
2	Bound	0.158408	12	0.000000	0.021636

At scale 1, all 36 outcomes fund mandatory cash flows and maintenance. At scale 2,12 outcomes cannot pay all essential maintenance under the specified cash, debt and project schedule; maximum unpaid maintenance is CNY 21.635519 M. This is a stress of model scheduling and financing assumptions, not a prediction of company default or insolvency. The stress returns FUNDING GAP despite no mandatory cash shortfall.

Thefloor is MAX with the positive operating-profit cash-tax branch, not added to that branch. The fixed annual reserve protects optional spending and is not a second cash-tax payment. Detailed source/cash review and captured simulations supply these results; the active forecast and probabilities remain unchanged by these bounds.

LONG-RANGE UNCERTAINTY

2030 adoption | ordinary-demand bound

Calendar 2030 measure	Current path	Ordinary 70 k bound	Difference
Revenue CNY B	4.818360	4.800981	-0.017379

All quarters Model; Q326 is a separate current reconstruction, not replacement published history. Stored 36 state outcomes are weighted with unchanged joint probabilities. Units:fraction. Confidence LOW for forward commercial/cash inputs; source bound actual anchors retain original confidence. Detailed formulas and assumptions appear in the relevant preceding sections.

FINANCIAL RECONCILIATION

Annual trajectory | long-range cross-check

Year	Revenue B	GP B	Full Opex B	Parent OP B	CFO B	Capital paid B
2027	3.83149	0.85928	1.13633	-0.27506	0.49467	1.03772
2028	4.20276	0.90927	1.01033	-0.10506	0.48179	0.26460
2029	4.50197	0.98929	1.08959	-0.10830	0.54205	0.27730
2030	4.81836	1.06810	1.17762	-0.12151	0.57421	0.50869

Annuals are arithmetic cross checks of the complete quarterly path. Theyare not independently selected forecasts. Long range 2029-30 relies on qualification, funded service, mix, prices, costs and separate post-term adoption assumptions. An annual aggregate cannot erase period-specific cash constraints or negative early quarter earnings.

Forecast proxies remain explicit estimates even when anchored to a reported amount. Share, multiple and ownership controls are in the opening valuation block.

CATALYSTS AND COUNTERS

Cross-book watches and dated tests

Relationship / watch	Potential transmission	Test / counter
Optical module / silicon photonics chains	Qualified TFLN wafer demand may benefit materials suppliers.	Observe actual wafer receipts, qualification and architecture mix; module headline alone is insufficient.
NANOLN and Sumitomo / competitors	Alternative product availability, pricing and currency-driven competition.	Compare accepted diameter/specification, not unsupported market share or yield claims.
Qinghe / heterogeneous integration	Equipment/process cooperation can aid qualification.	No exclusive order or second revenue pool; require paid shipments.
CHIPX / platform partners	14 October secondary report indicates ecosystem cooperation.	No award amount or participant primary confirmation recovered.
Hoshine / legacy counterparty	Actual collection can improve cash without operating gain.	Court/settlement/receipt evidence; no automatic 470 M recovery.
Magnetic/power demand	Datacenters, automotive, storage and power electronics.	Track funded service and contribution after costs; not all AI.

These are commercial relationships and monitoring links, not ownership assertions or news cored company recommendations. Coverage in the workbook does not establish holding status. The immediate verification priorities are the pending Q3 filing, working-capital/cash quality, optical acceptance, actual ESOP expense, timing/terms of financing and funded project commissioning.

EVIDENCE LIMITS

Source completeness and confidence

Area	Coverage	Retained limit
Actual financials	FY2025 annual: 204 pages; H1 2026: 159 pages; Q1 2026: 15 pages. All text pages extracted.	Some Chinese prose glyphs unreadable; critical financial/source category pages rendered and visually inspected. No claim all pages fully legible.
Latest earnings records	Complete published 4 page/3 page principal QA summaries;19/6 questions.	Online written interaction, not verbatim spoken records; no event audio or replay located.
Management / October answers	September 3/18 full DOCX records; October 9 full API answers; October 14 reply mirror.	API-page coverage is not the entire historic exchange; October 14 is explicitly a secondary mirror.
Guidance	No numerical consolidated forward guidance found.	Product ASP, qualification, volumes, costs, bankrolls and remaining allocations are LOW.
Q32026	No result or preview found by 24 October.	The tentative 27 October release is search-index only; no current issuer announcement was captured.
Web / image bundles	Raw originals, assets, hashes, and event/publication/capture metadata retained.	Some SSE access gates and mirror failures retained; failed-gate pages are not source contents.
Unverified claims	No verified exclusive InnoLightJV, Lumentum sampling,92% yield,25% cost advantage.	Do not convert absence of confirmation into certainty of zero economic opportunity; bounded model probabilities remain explicit.

HIGH confidence attaches to sourced historical amounts within their reported basis; MEDIUM to issuer qualitative capability/status; LOW to forward commercial/cost/cash assumptions and estimated remaining composition. The source register and companion model preserve traceability and calculation precision.
