JCET Group | Packaging content, qualification and cash

Qualified packaging and richer process content can increase operating profit as compute and automotive demand grows. Current conversion is visible; capital intensity, customer qualification and funding determine how much of that demand becomes retained profit.

JCET sells packaging, interconnect and testing services. More qualified packages and more process/test content per package can grow its profit faster than final device volumes. Existing XDFOI, wafer-level, power FCLGA and conventional memory capabilities provide routes into AI infrastructure, automotive and domestic substitution. Q3 conversion strengthens this mechanism: 9M computing sales grew 54% and reached 30.9% of receipts; automotive grew 30%. Customer qualification, good-unit output, pricing versus materials/depreciation, and continuing R&D are the economic bridge to shareholder returns.

JCET has meaningful qualified manufacturing scale and customer integration. ASE, Amkor, other Chinese OSATs and foundry/IDM packaging provide alternatives. Its classification is BENEFICIARY / Watchlist. Family ASPs, good-unit yields, specific high-end capacity, customer contract allocations and several project economics are undisclosed. CPO is in system validation. The memory proposal specifies NAND/DRAM wirebond and flip-chip routes; no HBM stack award is assumed. Korea/Singapore plants require their own die/customer/end-use eligibility; their location alone gives no universal licensing exemption. BIS list evidence is specific to an advanced-logic attestation route, not a finding that every JCET sale is prohibited.

Deposit redemptions are investing flows rather than recurring operating receipts. Receipt construction and the current quarterly path

All amounts in the financial law are CNY billions unless explicitly stated. Q3 total revenue is exact. Computing/auto allocations use rounded 9M mix less rounded H1 mix; other 3 applications allocate the residual in H1 relative shares. Every application allocation is LOW. Five disjoint wallets are computing, communications, consumer, automotive and industrial/medical. A captured basket index of 1 describes Q3 equivalent packages; it is not a measured chip quantity or disclosed ASP. Forecast core receipts = annualized actual basket x separately serialized equivalent-volume x content/price index x normalized quarter shape.

The receipt bridge consolidates the four September projects, automotive and Microelectronics ramps, Shanghai advanced project and CPO within the application baskets. HPC, power, memory and test can occupy the same computing or turnkey invoice. Internal Microelectronics process work is consolidated once. Separately named Shanghai and CPO invoices deduct 20% and 30% replacement respectively. These are LOW estimates of displaced legacy receipts, with the core basket excluding the separately named future net invoices.

T005 | Q3 application calibration (CNY B)

Application	Allocated Q3 receipts	Derivation
Computing	3.686576	Rounded 9M less H1 mix
Automotive	1.330091	Rounded 9M less H1 mix
Communications	2.986245	Residual allocated in H1 relative mix
Consumer	2.528500	Residual allocated in H1 relative mix
Industrial / medical	0.893694	Residual allocated in H1 relative mix

Five disjoint application baskets reconcile to group receipts. Computing includes compute, memory, interconnect and power; each underlying invoice is consolidated once.

Joint outcomes, qualification and incremental receipts

45% qualified core: continuing qualified HPC/content/auto conversion, 6.5B gross placement in Q2 2027 and a finite dated bank schedule. 20% stronger HPC + CPO: higher eligible volume/content, earlier placement and more capital, with conditional CPO conversion. 10% selective CPO/legacy pressure: CPO succeeds in a narrower market while legacy growth is weaker and financing/working cash is later. 25% capital rationed/delayed conversion: less investment, slower usable capacity and lower receipts, with a smaller finite bank schedule and placement in Q2 2028. These joint LOW judgments sum to 1; funding/qualification correlations are included. They are not separate additive uplifts or a blanket company discount applied again to reported receipts.

CPO-positive branches sum 30%; prospective gross pools 0.25/0.5/1.5/3B in 2027-30 start only H2 2027, with eligible-quarter weights normalized. Shanghai has zero receipts through 2028, allowing the planned H2 2028 building completion and later tool/customer qualification. Its Core + Strong eligibility sums 65% by 2029; the delayed branch adds 25 points by 2030, totaling 90%. These dates/probabilities/pools are analyst scenarios, not company orders. New Shanghai initial 100% parent allocation assumes no outside equity cash; future JV terms are open and require separate sensitivity.

Productive-capital capacity caps demand before receipts. The LOW governor uses current 92% utilization, 4% annual legacy physical retirement, 65% of commissioned capital for growth, 2.5 annual receipts per growth-capital and half the estimated content uplift on legacy output. Tools, buildings and initial CIP move to usable capacity on separate lags; the governor is not proof of product qualification. The unproductive 15% opening CIP produces no sales or depreciation. Merchant OSAT market estimates are a capture fence with scope gaps, not sales added to the model. The strongest case reaches about 22.7% of the modeled broad market; this is a demanding upper outcome with explicit competition risk.

传统封装业务产能利用率目前接近满载状态，预计下半年仍将维持这一水平。公司毛利率改善主要来自三方面驱动：一是产能利用率处于高位，规模效应得以体现；二是公司持续加强运营基本功、强化成本管控，通过智能制造及精益生产不断降低成本；三是封测环节价值日益得到客户与行业认同，封测环节的价值贡献与价值创造正得到更好体现。展望下半年，毛利率有望在上半年的较好表现基础上继续提升：一方面国内工厂持续满产，另一方面海外星科金朋工厂下半年将进入相对旺季，并持续加速向数据中心等高附加值业务转型，产品结构进一步优化，整体盈利水平与毛利率有望持续改善。

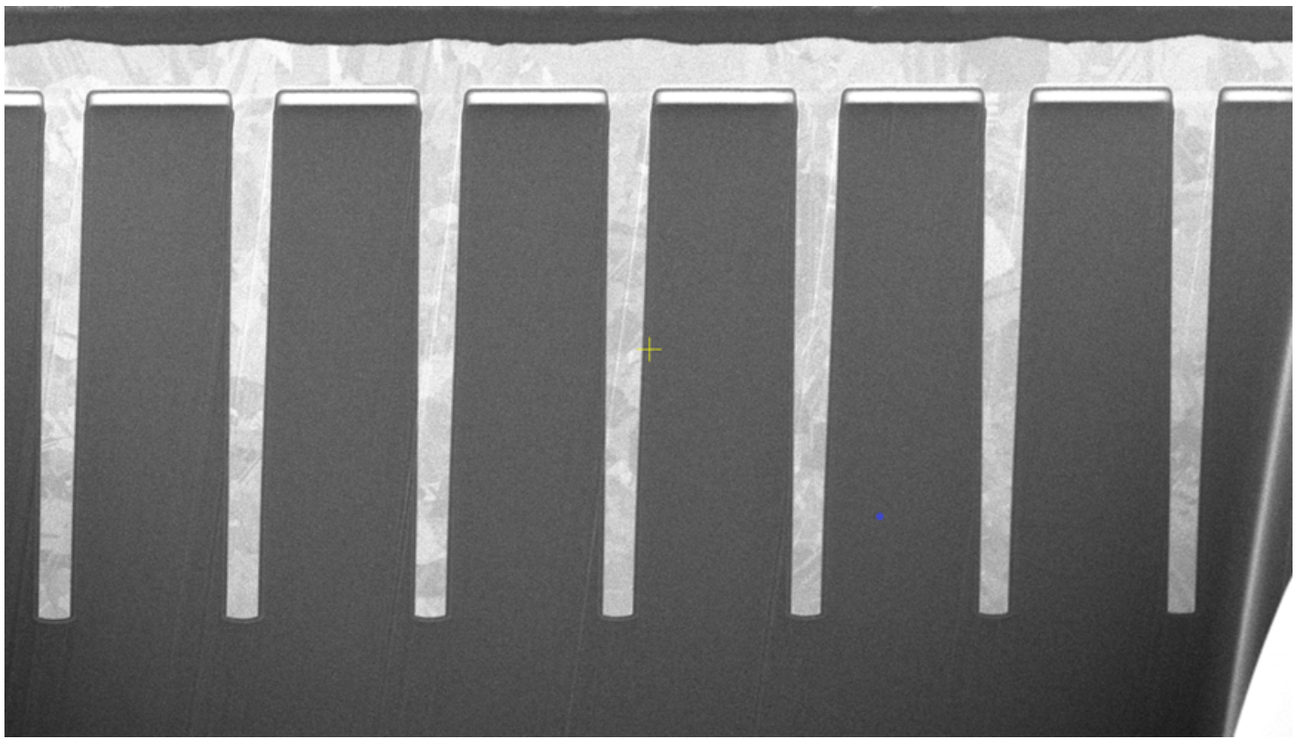

12. 公司最近几个季度运营效率提升显著，请问下半年及明年研发以及销售管理费用的指引如何？

销管费用方面，二季度环比一季度已有所下降。展望全年，临港工厂与长电微工厂产能爬坡态势良好，公司将持续加强销管费用管控；随着下半年营收规模增长，预计销管费用率下半年有望低于上半年。研发方面，公司持续加强投入，近年来研发费用率保持在 5%以上，并呈逐步攀升趋势，研发费用率逐步提升具备确定性，且后期转化效果较好。公司研发重点聚焦玻璃基板面板级封装、光电合封（CPO）、多芯片异质异构集成等前沿高价值领域；随着先进封装战略深化，研发将持续加码，成果转化亦具备更高可预见性。

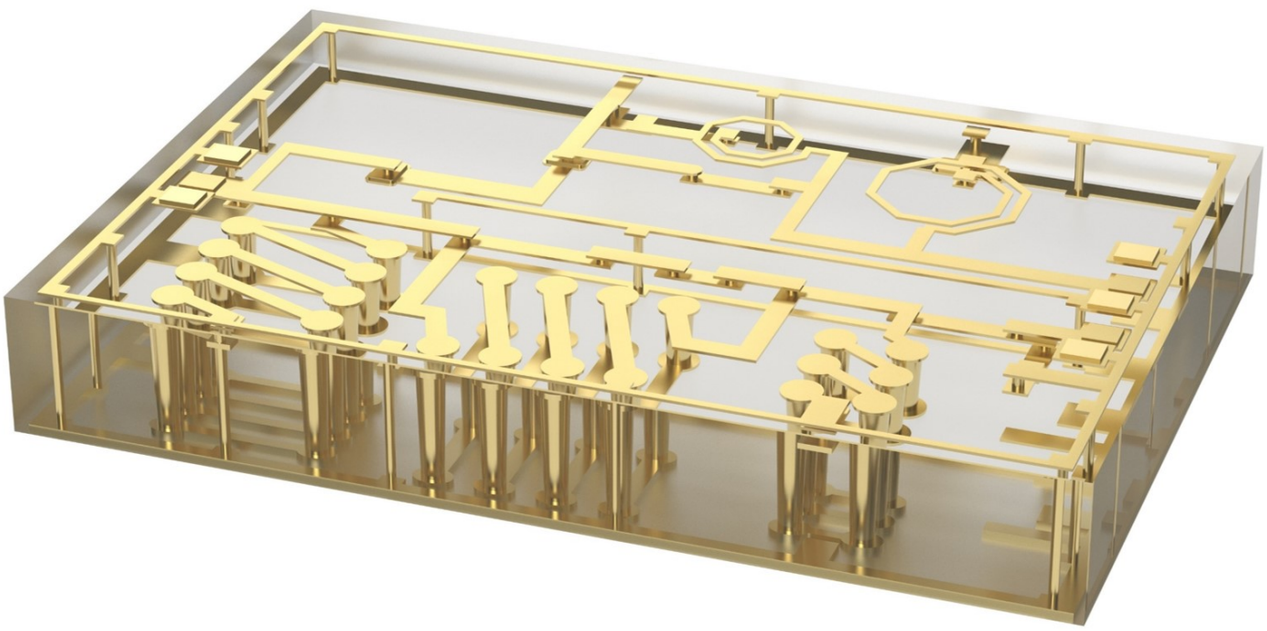

13. 公司在 CPO 光电共封装封测技术是否已实现量产并产生实际业绩收入？长电科技当前 CPO 封测业务的在手订单情况如何？预计 2026 年全年 CPO 业务能贡献多少营收？公司作为目前全球前 3 的封测企业，长电科技是否具备矽品精密同类的 CPO 光电共封装封测技术？

尊敬的投资者，您好！公司在 CPO（光电共封装）领域已完成与全球头部封测企业同等级别的技术布局，已与多家头部客户开展多年深度联合研发；近半年来公司在提升可靠性、优化成本结构方面取得显著突破，同时重点推进 CPO 光电测试能力建设。当前客户产品仍处于算力中心系统验证阶段，尚未实现大规模量产及实际业绩贡献，未来营收贡献需视客户验证进度及上量节奏而定，公司将持续把握 AI 算力基础设施带来的长期增长机遇。感谢您的关注与支持。

Usable capital, recurring costs and finite asset lives

Variable manufacturing contributions, shared factory cash costs and function cash costs calibrate exactly to Q3 aggregate GP/core OP. Future application contributions and function allocation are LOW; H1 unallocated D&A residual is an arithmetic proxy, not a reported COGS figure. FY25 materials 68.65% refers to the packaging/test cost-analysis denominator, not total company operating expense.

Ordinary R&D must cover LOW 5.3/5.4/5.5/5.6% of receipts in 2027-30. Management describes above 5% and a gradually rising intention, without these numerical guides. Any floor increment is cash engineering charged once. Selling/admin, launch support, surtaxes, credit/inventory losses and ordinary SBC remain charged. SBC follows the attrition-adjusted issuer expense schedule; Q4 source-period allocation is LOW and the already expensed Q3 amount is never added again.

Legacy and new PPE, investment property, deferred expense, software/technology, land and ROU have separate finite stocks/charges. New tool/building lives 7/20 years and 3% residuals are within source ranges but are LOW blended choices. New software/ROU use 5-years. Legacy components follow source-calibrated remaining charges capped at carrying value; land/software allocations to Q3 use H1 weights as LOW. New leases add both asset and liability; principal and interest cash are separate. A zero-addition path cannot create negative assets or perpetual deferred amortization. New gross received-investment paths 2027-30 are 17.5/18.5/20/21B Core; 20/21.5/23/24.5B Strong; 11.5/12/13/13.5B Selective; 6.5/6.8/7.2/7.5B Delayed. They include named projects and software. They are asset-receipt plans, not a restatement of the cash budget.

3. 先进封装长电微工厂预期达到盈亏平衡的时点，同时和新设立的高端先进封测工厂的定位差异？

公司高端先进封装业务由多个工厂协同完成，长电微承担其中部分工序，其余环节由其他工厂配合生产，当前长电微仍处于产能爬坡阶段；从今年上半年的经营情况来看，今年上半年其亏损收窄已较为明显。随着明年市场对高端先进封装需求继续增长，公司产能持续释放，长电微盈利改善趋势明确；与新设立的临港高端先进封装工厂相比，两者定位存在差异，长电微启动较早，配套工厂内部协作已顺利展开；临港工厂尚在建设中，产品定位与技术路线亦有所不同。临港工厂一方面承接长电微产能扩大的需求，另一方面面向 2028 年及以后市场所需的新工艺技术与产能，将同步布局更高集成度、更高带宽、更大尺寸的先进封装需求，形成差异化布局。

4. 全球 AI 先进封装需求旺盛，公司在产能端是否已经做好充足准备？如何看待自身在国内及全球 AI 先进封装领域的行业地位？

公司今年正积极扩充产能，明年将有更大规模产能释放。面向 AI 的封装需求旺盛，国内及海外工厂均需进一步扩充先进封装产能。从行业特征看，AI 需求具有显著的持续性与结构性特点，下半年需求将大于上半年，明年对产能的需求较今年更为显著，未来几年先进封装产能预计处于紧平衡状态。面对这一形势，公司正加快推进涵盖存储、算力、电力相关平台的技术导入，随着相关技术逐步量产落地，将更快、更好地满足客户对整体平台产品的需求。

5. 韩国工厂在 AI 及数据中心领域已取得明显进展，请公司领导展望一下韩国工厂后续发展。

韩国工厂面向 AI 的转型升级是公司近两年的重大战略，目前已取得积极进展。面向 AI 基础设施应用，公司一方面有序调整产能与资本开支导向，另一方面推进韩国两家工厂资源整合，通过腾笼换鸟释放产能空间，向高附加值产品集中。经过一年多努力，部分国际大厂乃至此前并非韩国工厂主要客户的 AI 头部企业，因先进封装产能溢出及整体需求扩张，亦导入韩国工厂高端先进封装业务，相关成果将在今年下半年至明后年明显释放。这将推动韩国工厂下游市场从通信

Working cash, financing and obligations beyond the forecast

Source totalAP10.62073864566B stays exact. Capital share uses FY25 equipment AP ratio 29.442797422% as LOW. An alternative capital share also changes operating AP, DPO and starting WC, so no liability disappears. Gross invoices, old/new AP, supplier advances, receipt/commitment queues and vendor cash reconcile on the same VAT basis. Opening capital advances use a LOW H1-composition allocation of Q3 other-noncurrent assets, apply once against invoices and yield no fresh cash. New advances are paid on dated orders, then carried/applied against recognized invoices. Unused amounts remain assets and catch up later. The 10B opening unreceived-order model envelope is LOW, not an updated signed-contract disclosure. Dated H1 signed 5.774B is a source reference, not an extra invoice.

A net operating cash working-capital proxy calibrates to source net AR/inventory. Ordinary credit/inventory charges stay in OP, with no separate provision cash addback. Fully reserved writeoffs produce no fictitious cash. FX/reclass adjustment is zero unless explicitly stressed. Capital AP cannot also fund operating DPO. Future capital VAT uses 13% on LOW 85% eligible base, against source 6/9/13% item rates. Only paid new-invoice credits enter a LOW 2/3-quarter realization/offset queue, capped by recognized new credit stock. Opening VAT supplies no funding. Cash income tax uses LOW 19%, not the 8% book ETR or the all-tax CF line. No future grant receipts are required. The modeled interest-paid operating cash bridge is custom; it is not represented as statutory Chinese CFO.

No quantified unused committed bank facility was found. All new loan tranches are finite dated LOW assumptions with rates, fees and 5-year maturities. They are not confirmed facilities or an automatic cash-balancing draw. Existing short debt has explicit finite September gross repayment/refinancing through the horizon, with its final next maturity still outstanding. Annual MTN coupons pay Jun 1/Dec 26; the first 2030 year 5 put is paid, with the 2031 second put and later loans retained in the terminal obligation disclosure. Gross peak debt by outcome is about 38.34/37.34/30.34/21.56B. The 20x pre-finance OP convention does not itself subtract this debt; liquidity and financing quality remain central risks.

SASAC approval is in principle: gross raise<=6.5B and new shares<=127.877237M; other approvals/market pricing remain. LOW 51CNY gives 127.450980M modeled shares, within the source cap. The issue price/date are not facts. All fees reduce cash; proceeds never increase OP. No option exercise cash or unpriced extra-equity proceeds finance the case. The modeled gross-share path is 1810M H2 2026, 1950M in 2027, 1960/1970/1980M later. These are ceiling-quarter gross proxies, not reported issued shares or historical weighted EPS shares.

The exact mixed current/noncurrent liabilities are preserved with LOW bank, coupon, lease, acquisition, deposit and residual allocation. Sandisk's three future 37.44M USD installments are an interpretation subject to prior adjustments. Opening measurement FX/discount is kept separate from future payment FX/rate; changes have a NONCASH PV remeasurement, without rewriting opening source splits. PV accretion never becomes a second cash coupon. Customer deposits and the unclassified other-liability residual have separate finite cash outflows.

Parent OP deducts outside claims on disjoint entity receipt/contribution/cost pools. Auto reported 55% holding is a LOW allocation anchor; 57.89% is paid-in/ voting and no universal future profit right is confirmed. Sandisk 80% applies only to estimated legacy memory receipts, excluding separately allocated Shanghai/CPO. All entity revenues, contributions and charges reconcile to a wholly owned residual; 100% consolidated capex is funded. Outside losses are not new cash; positive outside profit has a separate modeled cash distribution.

Beyond the displayed horizon, the second 2.4B CNY MTN put is in 2031 and the remaining short-bank refinancing has its next maturity in September 2031. Later modeled loan maturities remain payable. Outstanding capital AP, leases, unfinished construction and unreceived orders retain their economic claims. No horizon-end debt forgiveness is assumed.

Current operating-profit ceilings and downside tests

The valuation uses 20 times recurring parent pre-finance operating profit for the ceiling quarter and the next three quarters, multiplied by 1,000 and divided by ceiling-quarter modeled gross shares in millions. All 15 windows contain four quarters; the final priced Q1 2030 window covers calendar 2030. Q4 2027 covers Q4 2027-Q3 2028: 6.043495895907535B CNY x 20 x 1,000 / 1,950M modeled gross shares = CNY 61.98457329135933. The corresponding case ceilings are CNY 70.180904, 104.993441, 45.703021 and 19.336706. Later windows depend on funded qualification and later earnings. Cash balances serve the liquidity analysis; valuation uses operating profit and the share convention.

All four positive-weight baseline paths exceed the LOW 0.5B CNY minimum liquidity floor, with closing-cash minima of 2.743147/2.018240/1.140513/2.098488B. Removing future VAT realization and adding 0.5B working cash makes two paths negative and another below the floor. That stress requires lower or retimed investment and receipts, or additional finite capital. An unfunded positive-weight path blocks every modeled ceiling. Zero-weight support does not contaminate expected value. Invalid probabilities, domains, caps, dates and asset allocations block pricing. Arithmetic consistency cannot resolve missing customer, capacity or financing evidence.

Each point uses the ceiling quarter plus the next three quarters of recurring parent pre-finance OP, 20x, 1,000unit factor and that ceiling quarter's modeled gross shares. These are model estimates; no market quote is used.

Competitive capture, analytical score and dated tests

Core 14/20: qualified global platform, with competitive and capture limits. Cycle 9/10: stronger current conversion and mix, with legacy/ramp costs. TAM9/10: richer eligible packaging/test content, constrained merchant capture. Catalysts 4/5: Oct 27 results meeting, Nov 10vote, financing/tools/qualification, AutoWLP2027 and later Shanghai acceptance. None is guaranteed profitable sales. Macro 8/10: AI/domestic demand versus trade and equipment eligibility. Alpha 3/5: mix/returns can be underappreciated, but the strategic theme is known and the price depends on LOW inputs. Probability weighting, source limits and current evidence register

Expected economics are the sum of probability times each full case, after its receipts, recurring costs, capital timing and outside claims. Shared share and multiple conventions make the weighted case ceilings reconcile to the ceiling on expected forward-four profit. No second event probability or protected Base multiplier is applied.

T105 | Cash-support gate and data roles

Control	Current meaning
Positive-weight cash support	Every positive-probability path must retain the 0.5B CNY liquidity floor; unfunded support blocks ceilings
Zero-weight support	Does not contaminate expected value
Reported actuals	Exact current source aggregate balances and statements
LOW allocations	Application receipts, entity costs/profit, capital/AP/VAT and future cash assumptions
Diagnostic market fence	Broad merchant OSAT scope; not an extra sales input
Protected Base 70	Separate portfolio control; no multiplication of financial outputs

Remaining source gaps include family ASPs, qualified good-unit yields and throughput, customer contract allocations, project annual sales capacity/IRRs, the underlying paid market studies and several competitor original downloads. The January component validation, later system validation, pilot-line construction and actual volume-production stages stay distinct. Confidential customer relationships may exist; missing public disclosure limits precision rather than proving absence.
