Wazam New Materials

603186.SH | Zhejiang Wazam New Materials Co., Ltd. | 26 October 2026

Qualified low-loss materials, a cyclical price-cost spread, and paid capacity execution

Private company research. CNY unless stated. Forecasts and ceilings are model estimates; disclosed source gaps and engineering proxies remain part of the analysis.

Wazam is a qualified materials supplier benefiting from higher low-loss content in AI and networking boards. Its near-term earnings also contain an unusually strong FR4 price-cost spread. The model separates the qualified-product ramp from the commodity margin cycle and prices both forward.

Model snapshot

Measure	Model interpretation
Analytical score / classification	40/60, rounded Base 67 / Watchlist
Selected method	20x forward-four-quarter attributable adjusted operating profit
Q4 2027 ceiling CNY/share	230
M7: conditional versus weighted	60% probability of at least 6x the estimated 0.32M benchmark; weighted 2027 shipments 1.4895M, approximately 4.65x
Industry normalization	Substantial 2028 reset in 75% of probability mass

Coverage boundary: Oct 23 Q3 public editorial summary, with the underlying transcript/audio unverified; Sep 8 H1 notice/results, with full Q&A missing. Sep 23 Citi conference evidence is supplementary and only its original first page of nine was reviewed. No second complete earnings-call read is claimed.

01 Qualified low-loss materials and CCL pricing

Wazam is a qualified materials supplier benefiting from higher low-loss content in AI and networking boards. Its near-term earnings also contain an unusually strong FR4 price-cost spread. The model separates the qualified-product ramp from the commodity margin cycle and prices both forward.

The active model uses 80 coherent joint outcomes. M7 shipments reach at least six times a stated 2026 benchmark in 60% of the probability mass, while substantial industry normalization in 2028 carries 75%. Manufacturing, working capital, taxes and equity issuance are calculated in each outcome before per-share values are combined.

The analytical score is 40/60, rounded to 67% and classified Watchlist. Qualification and process control create barriers, but the business faces capable Asian competitors and a material capacity response. It does not merit a monopoly score.

The Q4 2027 ceiling is approximately CNY230 under the selected 20x forward-four-quarter attributable operating-profit method. That quarter values Q4 2027 through Q3 2028. Later ceilings fall as legacy margins normalize despite continued growth in qualified-product revenue. This is a model estimate, not company guidance.

Analytical scorecard

Category	Score	Maximum	Reason
Core Thesis	12	20	6-18 month qualification and difficult dielectric processing matter; not a sole-source physics choke point, with multiple capable Asian suppliers.
Cycle Stage	8	10	M7/M8 adoption starts from a low base, while FR4 scarcity margins are already near a cyclical peak.
TAM Expansion	8	10	High-speed low-loss substrates span AI servers/networking and plausible physical/edge AI. Explicit 50% adjacent and 20% remote adoption weights, with finite capacity displacement.
Catalysts	4	5	2026Q4 profitability, early-2027 line trial and 2027 qualified M7 scaling are dated, but delivery and placement are not assured.
Macro	8	10	AI-board layer/content growth and domestic substitution; export and domestic competition constrain capture.
Alpha	4	5	Native-language filing/grade/unit reconciliation reveals opportunity and normalization that broad highgrade labels obscure. Public bank coverage limits exclusivity.
Risks	-4	0	Working-capital absorption, pending equity, material availability, yield/qualification, competitive 2028 supply and policy exposure.

Total 40/60; rounded analytical Base 67%. Initial Excel Base 67%. Watchlist. The score is not a scenario probability.

Fourteen forward-four-quarter ceilings

Quarter	Exact F4 window	Ceiling CNY/share	Weighted parent OP, CNY M	Shares M: diagnostic only

02 Latest results and cash conversion

Q3 2026 revenue was CNY2,649.865M and gross profit CNY955.580M, a 36.0615% gross margin. Parent net profit was CNY627.026M, with only CNY0.193M difference from profit excluding nonrecurring items. The acceleration is chiefly operating, rather than a large Q3 asset gain.

Cash conversion is a separate issue. Q3 operating cash flow was CNY181.850M and cash capital expenditure CNY54.629M. Trade working capital rose by approximately CNY624.891M. Receivables grew about CNY1,049.961M while supplier bills increased approximately CNY823.837M. Supplier financing supports the growth but leaves a financing and collection dependency.

September cash and cash equivalents were CNY361.747M. Monetary funds were CNY554.084M. The composition of the CNY192.337M difference is not disclosed in the short Q3 report. The model starts from cash equivalents and does not treat the unexplained difference as spendable cash.

FY2025 parent net profit was CNY276.713M, versus CNY65.671M excluding nonrecurring items. This makes a simple trailing-profit multiple a poor operating anchor. Q1, Q2 and Q3 2026 are shown separately using exact reported/derived periods.

FY2025 cash capital expenditure was not transcribed into this source dataset. That is a coverage limitation, not a statement that the filing did not disclose it and not a zero. Q2 = H1 - Q1; Q3 = nine months - H1. Do not add overlapping FY/H1/9M periods.

Quarter-specific Q3 D&A and SBC are not disclosed in the short Q3 report. Forecast depreciation is an explicit model input, not a fabricated Q3 reported D&A value.

03 Source coverage and limitations

The original Q3, H1 and revised FY2025 filings, the September financing response and the local research collection form the source base. Chinese-language issuer sources establish total financial results, capacity definitions, customer and supplier concentration, project costs and manufacturing constraints.

The October 23 Q3 management-attributed public editorial summary is available and was read in full as publicly displayed. Its underlying verbatim transcript, speaker-labelled Q&A and audio remain unverified. The preceding H1 earnings-specific record is the September 8 network interaction: its notice and financial results are available, but the full Q&A body was not retrieved.

The September 23 Citi industrial-conference note is supplementary management evidence. Its original first public page was visually reviewed. The remaining eight of nine pages are gated. Its public AI summary is separately labelled and does not count as an independent confirmation or as a second complete earnings call.

Missing call bodies lower source confidence. They do not prevent the credible forward claims from receiving explicit probabilities and bounded company economics. No table calls the product split or future source interpretations reported segment actuals.

Management evidence: exact chronology

Date	Record	Available	Missing / limitation
2026-10-23	latest earnings-specific Q3 management-attributed public editorial summary	full publicly visible summary/preview preserved	underlying full verbatim transcript, speaker-labelled Q&A/audio unverified
2026-09-08	preceding formal H1 earnings network text-interaction meeting	official notice and issuer H1 results preserved	full Q&A interaction body not retrieved; no complete second earnings call claimed
2026-09-23	supplementary management industrial conference / Citi broker note	original public first-page preview visually read, public AI summary separately tagged	remaining 8 of 9 original pages gated; this is not relabelled as the second earnings call
2026-03-31	older FY2025 network meeting	official notice	full interaction body not retrieved

04 Where Wazam earns revenue

The main business converts resin, glass fabric and copper foil into copper-clad laminate and externally sold prepreg. The issuer includes external prepreg in its capacity statistics at four prepreg sheets to one CCL-equivalent board. Thermal metal-based boards share production resources. These are not additional independent capacity pools.

Low-loss materials support higher-speed electrical signalling on demanding PCBs. Higher grades require appropriate glass, resin and foil, as well as thickness control, cleanliness, process repeatability and customer qualification. High average selling prices require more expensive materials and production control.

H2/H3 is the issuer broad highgrade classification. It includes products beyond AI and M7, including RF, BT, thermal and HDI applications. Catalogue product digits do not automatically establish market M-tiers. Wazam reported H1 H2/H3 sales of 8.1374M equivalent boards and revenue CNY988.869M; this is 37.54% of CCL plus thermal revenue and 33.41% of consolidated revenue.

The existing business includes functional composites, transport materials and small battery-film activities. CBF dielectric film is a separate technology from loss-making battery aluminum-plastic film. CBF is also a material input rather than a finished HBM package.

Material and revenue map

Inputs / platform	Output	Customer process	Application / scope
Resin + glass fabric + copper foil	CCL + externally sold prepreg	Qualified PCB manufacturing	AI / networking / servers; specific RF, BT, thermal and HDI grades
Dielectric-film platform	CBF / CBF-RCC	Embedded components / packaging verification	Incremental commercialization above existing pilot baseline
Separate battery-film platform	Aluminum-plastic film	Battery encapsulation	Distinct from CBF; small current activity

05 Cycle stage and the addressable opportunity

The two relevant curves have different timing. Low-loss AI material adoption is still expanding from a small premium-product base. FR4 profitability is already elevated. The active model therefore combines premium shipment growth with falling legacy margins after the 2027 window.

The issuer cites a 2025 global CCL market of USD18.676B and Wazam overall share of 2.5%. Total CCL, special CCL and AI-CCL are overlapping scopes. The forecast uses company capacity, accepted production, product mix and ASP. It does not add these market totals or assume automatic market-share gains.

The material platform can serve data centers and networking today, and potentially more high-speed content in physical/edge AI, vehicles, industrial systems and remote computing. Framework adoption priors are 50% for the incremental physical/edge path and 20% for the more remote path. Their unit endpoints are small, explicit and capacity constrained. Existing non-AI applications remain in the baseline.

These additional applications replace other production inside the same finite factory. The model does not multiply global AI spending, customer chip units and Wazam material shipments as independent revenue drivers.

06 Capacity that can deliver qualified material

Existing CCL nameplate is 42.06M equivalent boards annually. H1 broad highgrade design capacity was 7.77M for six months, or 15.54M annualized, with reported utilization of 105.13%. A total-factory volume estimate is insufficient to establish premium output.

The normal, delayed and stress outcomes start with 15.54M times 1.0513 utilization, with 15% reserved for non-AI highgrade applications. That leaves 13.8866M annual AI-usable equivalents before new lines. Existing premium M7 capacity of 0.30M equivalents per quarter is a LOW model proxy, rather than a disclosed H3 capacity.

Only the strong 25% state prices the later 2.8M-per-month switchable wording as a broader existing-line reclassification. It phases toward 33.6M annual broad switchable capacity times 65% AI usability. The interpretation conflicts with the September statement that feasible conversions had been exhausted. It requires CNY50M additional qualification/retrofit cash and CNY5M quarterly support at full phase. It creates no additional total factory capacity.

New-line accepted qualified availability reaches 90% by the end of 2027 and 95% in 2028. A separate premium allocation limits M7 and M9. M9 requires a paid new line, after M7 consumes the available premium capacity. Other AI demand has its own requested amount and receives only remaining qualified throughput.

The quantity input is the annualized commissioned/effective capacity applied in each quarter. It is a model timing proxy, not an exact dated equipment-acceptance fact. Accepted-output availability and incremental rework/scrap cost are distinct assumptions.

The October summary literal greater-than-20% total-capacity headline is not reproduced. In Q4 2027 the strong and normal incremental nameplate proxies are 6M and 3.9M, about 14.27% and 9.27% of the original 42.06M. Qualified AI throughput can grow faster. The detailed overlapping components are priced once; no extra 20% sales volume is added.

Each joint outcome: binding unit checks

C conditional capacity and accepted production

Model estimates / LOW engineering proxies. Shown joint outcome: C_CBF_P2_P3_REF. Rated nameplate is not the effective-throughput cap: modest utilization above 100% is an explicit LOW model proxy, informed by reported H1 highgrade utilization of 105.13%. Qualified-AI and premium output caps still bind before weighting.

07 M7 growth and the sixfold hypothesis

Citi first-page management commentary describes 2027 M7 shipments at least six times a 2026 level exceeding 300,000 sheets, subject to the customer ramp. The source does not disclose a precise final FY2026 volume. The model uses an explicit 0.32M physical-sheet benchmark, which remains a Root estimate.

The strong and normal paths deliver 2.10M and 1.92M physical M7 sheets in 2027. Together they carry 60% probability. The delayed and stress paths deliver 0.90M and 0.45M. The probability-weighted result is 1.4895M, about 4.65 times the stated benchmark. This is not sixfold growth in total company revenue.

The source ASP bracket is CNY600-700 per physical sheet. The initial proxy uses CNY650, explicit future case pricing and a separate physical-sheet-to-CCL-equivalent capacity mapping. Half/double mapping diagnostics preserve the Q3 total financial calibration and assumed per-physical-sheet margin. They do not silently introduce a new margin shock.

Normal Q2 2027 M7 demand of 0.40M sheets leaves only 3,125 equivalent boards below the default premium limit. This is a tightly feasible model endpoint, not evidence of sourced spare capacity. Acceptance, physical mapping and current premium throughput are important revision tests.

The Ascend chip forecast and M7 board forecast express the same customer hypothesis. They are not multiplied together. Source pricing and mix claims also sit within the same finite volume and cost build.

M7 benchmark and conditional 2027 outcomes

The no-increment control retains the declared baseline M7 path. Qualified capacity can allocate some freed throughput to other requested AI demand, so incremental M7 need not displace only legacy output. OP and cash deltas use the approved nonadditive control; they include shared manufacturing, operating and funding effects.

08 Price, material costs and operating profit

The reported Q3 total revenue and gross profit are the calibration anchors. Product quantities, the 93% CCL revenue share and 35% AI share within CCL are LOW proxy assumptions. The residual legacy ASP and margin are solved so the product build reconciles exactly to the reported totals.

The resulting Q3 legacy proxy ASP is about CNY199.20 per equivalent board and its gross margin about 35.37%. Other AI and M7 reference margins are 40% and 45%. The broader H2/H3 issuer margins were much lower in H1 and are not substituted by these narrow premium assumptions.

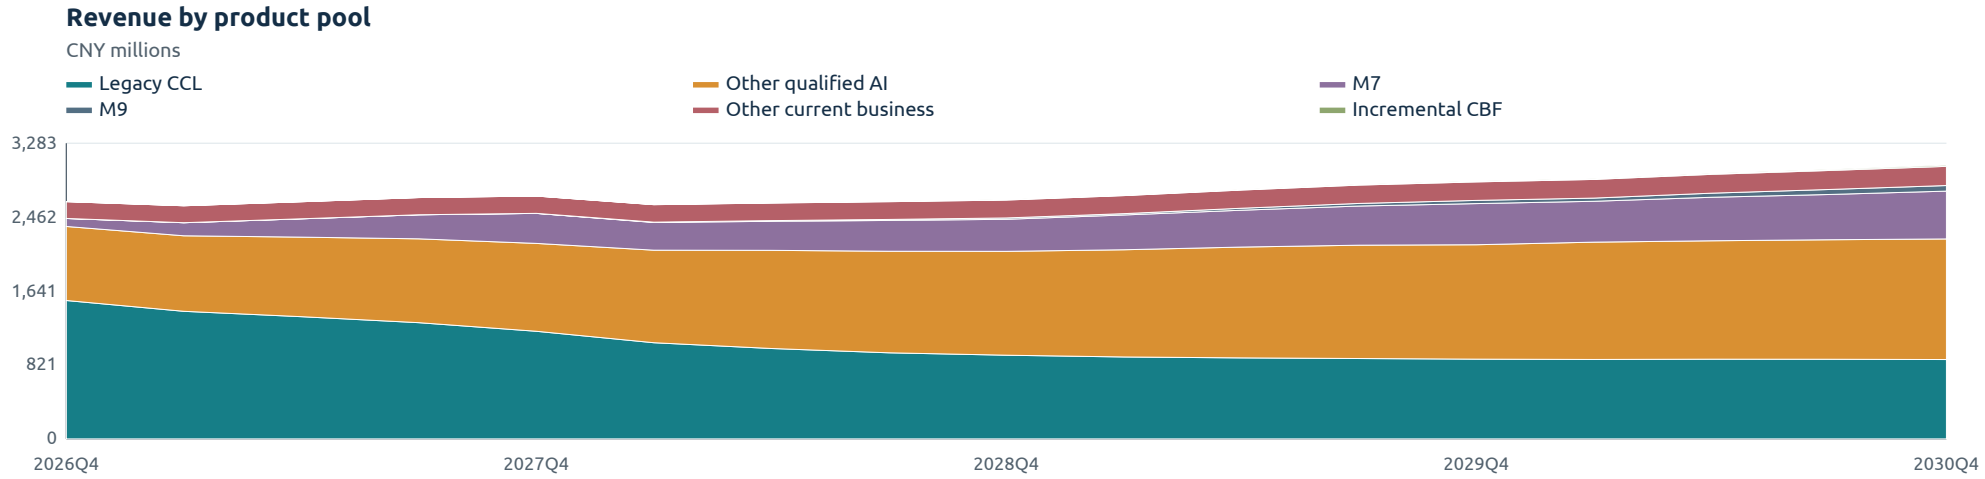

H1 procurement averages were CNY106.13/kg for copper foil, CNY6.26/m for glass fabric and CNY26.78/kg for resin. Their changes include grade and purchase mix. The forecast separates raw-price movement, higher-grade material intensity, wage inflation, fixed factory overhead, depreciation and ramp-related direct costs.

Future selling and administration each use a 1.6% revenue rate with absolute floors. Base R&D uses the greater of CNY120M per quarter, inflated, or 5.2% of revenue. The incremental CBF program adds CNY2M quarterly from 2028 even if commercialization fails. Surcharges, credit loss and inventory-loss provisions are separate.

The source warns that normal FR4 gross margins are closer to 10-15%, while the company describes longer-run consolidated ambitions around 20-25% depending on conditions. The active 2028 reset is explicit. Monthly price-hike commentary is not compounded indefinitely.

The September financing response contains conflicting FY2025 H2/H3 margin tables: page74 states 9.68%/11.46%, while page113 states 14.55%/11.64%. Both are retained. The latter reconciles better with the stated blended CCL margin, but that is an analytical reconciliation rather than an issuer correction.

Revenue and product mix

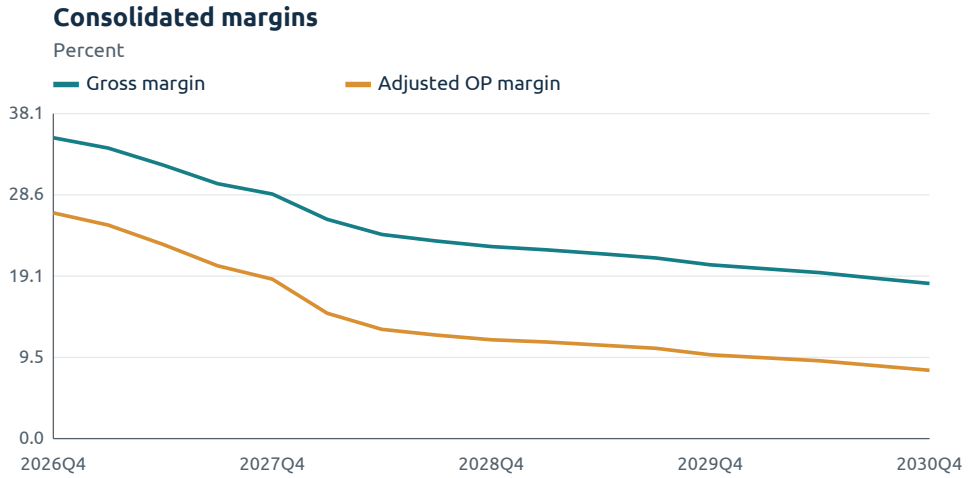

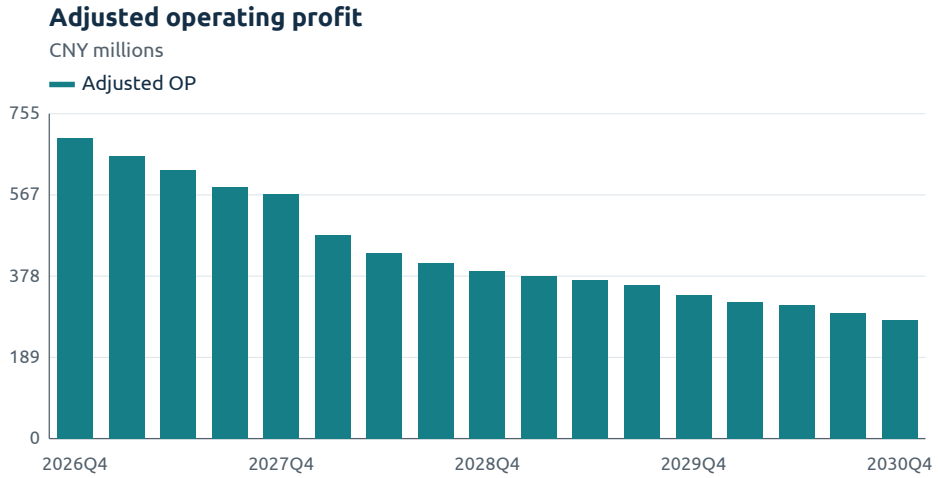

Model estimates. Product decomposition is LOW confidence; all future totals and mix come from the approved outcome calculations.

Gross profit to operating profit

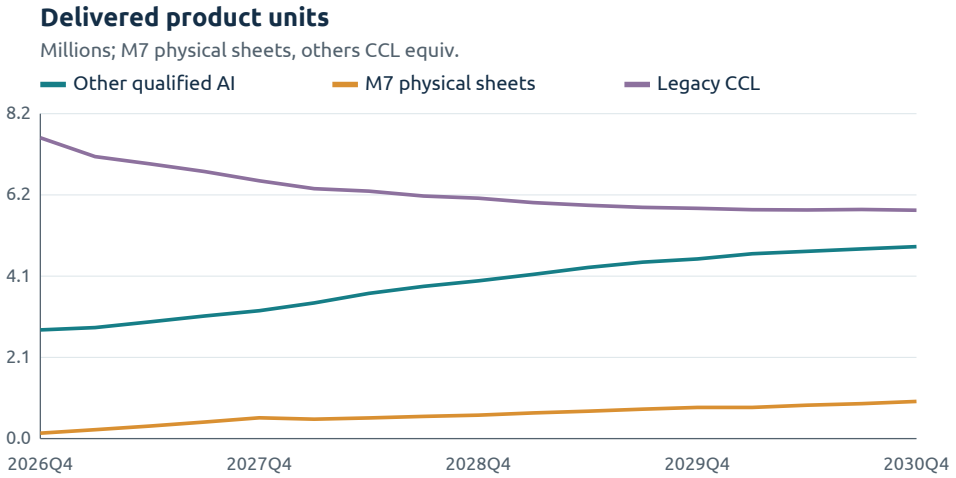

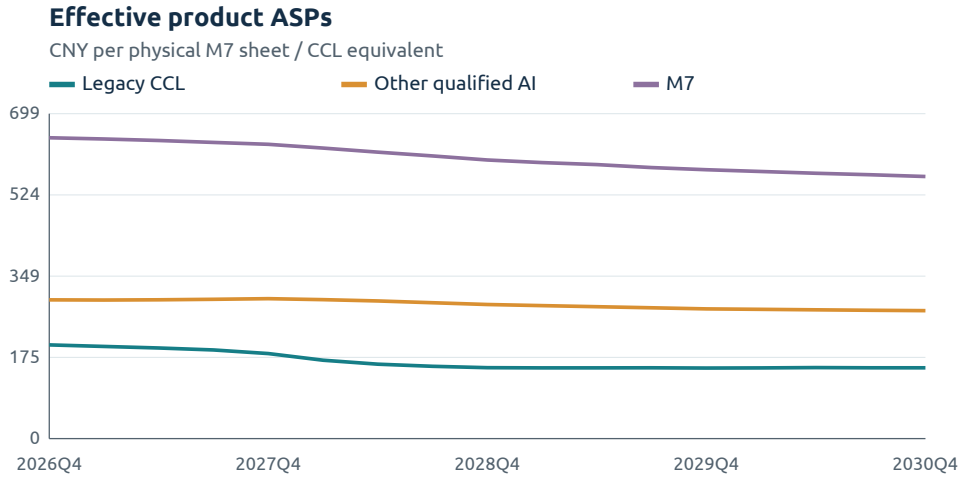

Q4 2027 probability-weighted node bridge. Finance and income tax are outside adjusted OP; no current market price enters this chart.

Numbers behind GP-to-OP waterfall

Component	CNY millions
Gross profit	824.768
Selling	-47.035
Administration	-50.0958
R&D	-151.4111
Surcharges	-8.6283
Credit loss	-9.4372
Inventory loss	-2.6963
VAT credit	8.3251
Grant amort.	3.9861
Cash grants	0.85
Adjusted OP	568.6254

Delivered units and effective ASPs

Effective ASP equals probability-weighted product revenue divided by probability-weighted delivered units. M7 is measured in physical sheets; other products use CCL equivalents. The active physical mapping is a LOW proxy.

Numbers behind units and ASPs

Quarter	Other-AI M equiv	M7 physical M	Legacy M equiv	Legacy effective ASP	Other-AI effective ASP	M7 effective ASP

09 Source pricing, supplier costs and the conditional price event

The supplied UBS China CCL Sector images dated 12 October 2026 contain a forward monthly FR4 pricing curve. The lower row is RMB per sheet before tax; it is not Wazam realized ASP. The upper HKD including-tax row is not substituted into the company model. The source July-August profit observation overlaps the already calibrated actual quarter and Citi evidence, so it creates no second historical earnings increment.

The model retains four macro groups and introduces one correlated conditional price event, producing 80 coherent joint outcomes. The conditional event weights are 40% in S, 35% in N, 25% in D and 10% in C, for a 30% marginal probability. Qualification, M9, film and physical/remote application factors retain their own dependence. The source event can occur with a delayed factory ramp; it is not restricted to the strongest operating state.

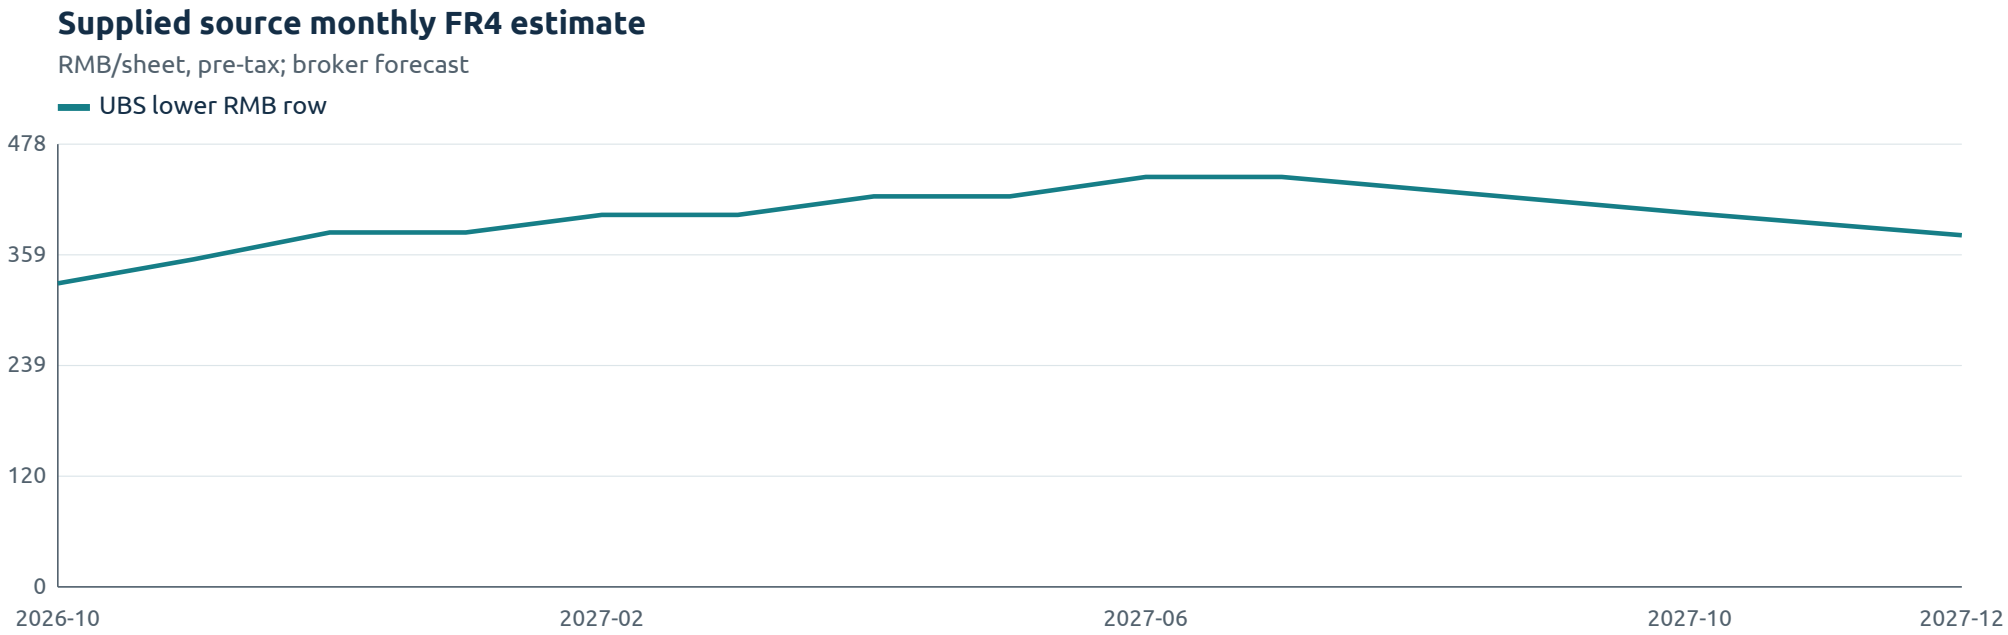

A LOW eligible share of three quarters of legacy output receives a 65% follower transfer of the source relative selling-price change. Supplier input-cost transfer is separately set to 100% of the benchmark-implied incremental common material floor. A follower selling-price discount does not establish an equivalent procurement discount for a downstream materials buyer. The normal-state December calibration includes fixed manufacturing costs on both sides, avoids a future depressed-margin anchor and gives no below-December deflation credit.

The common material shock reaches legacy and qualified AI material costs once through the shared raw-input owner. Each macro keeps its higher existing cost. It is not added a second time as an AI premium, nor is it an observed Wazam input-price index. Selling, administration, R&D, working capital, cash interest, finite bank access and potential equity issuance follow the existing conditional calculation law.

The source window supplies no independent 2028 price forecast. Known late-2027 points can carry through the selected lag, but the direct new price and raw-input paths return to reference from Q2 2028. Cash, collection, debt and financing effects can persist. Only zero event probability removes the event; zero output beta holds the December price vintage and zero eligible share can retain a supplier-cost stress.

Three supplied pages are reproduced privately with original fingerprints. The full UBS report, complete disclosures and original report URL were not supplied. PTFE qualification and product claims assigned to Shengyi are not treated as Wazam M9 sales or an additional Wazam market award.

Monthly source pricing and its scope

UBS China CCL Sector, 12 October 2026, supplied printed page 3. These are source estimates, not Wazam realized ASP. The upper HKD including-VAT row is not mixed into this curve.

Exact values behind the monthly source curve

Month	RMB/sheet pre-tax	Relative to December 2026	Company price mapping	Input-cost mapping	Common raw floor

Calibration assumptions: metadata, not duplicate editable array owners

Assumption	Selected value
legacy_FR4_eligible_fraction_LOW	0.75
follower_relative_price_transfer_LOW	0.65
input_cost_transfer_LOW	1.0
gross_margin_change_per_relative_ASP_change_LOW	0.2
recognition_lag_months_LOW	1.5
input_cost_lag_months_LOW	1.5

December calibration vintage and cost bridge

Item	Exact value / meaning
Dec_vintage_common_raw_floor	1.02
Dec_vintage_legacy_price_CNY_proxy	203.1794759951275
Dec_vintage_legacy_GM_proxy	0.35355009495724843
Dec_vintage_legacy_fixed_unit_cost_proxy	9.737654931385435
Dec_vintage_legacy_variable_unit_cost_proxy	121.60769803230077

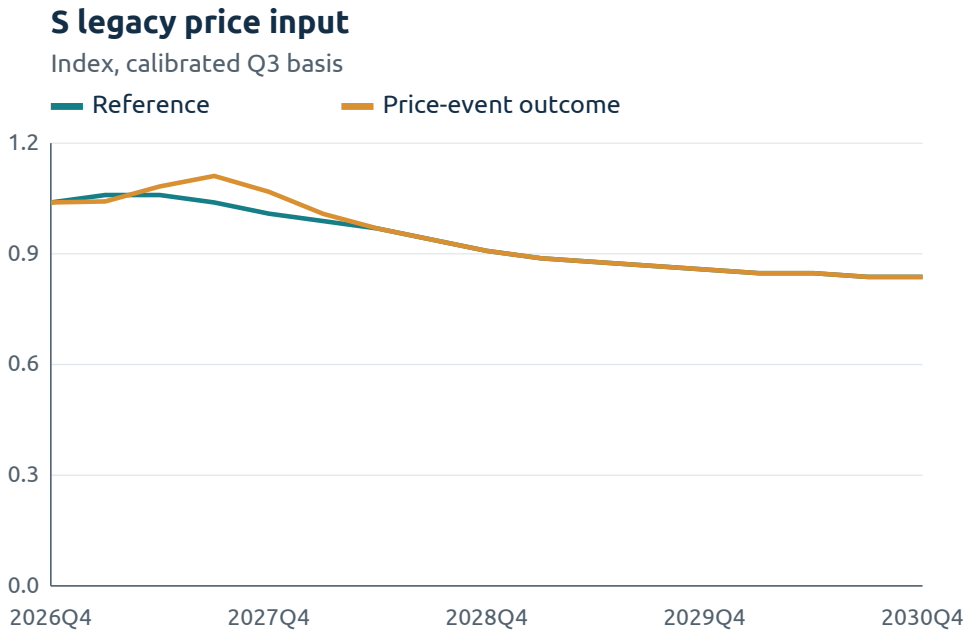

The cost bridge uses one normal-state December vintage. The same fixed cost per unit is included on both sides of the cost difference and cancels. Incremental raw input uses the uninflated variable-cost coefficient times material share. A negative source price change creates no below-December raw deflation credit. Each macro keeps the greater of its reference raw input and the common floor; there is no second AI premium.

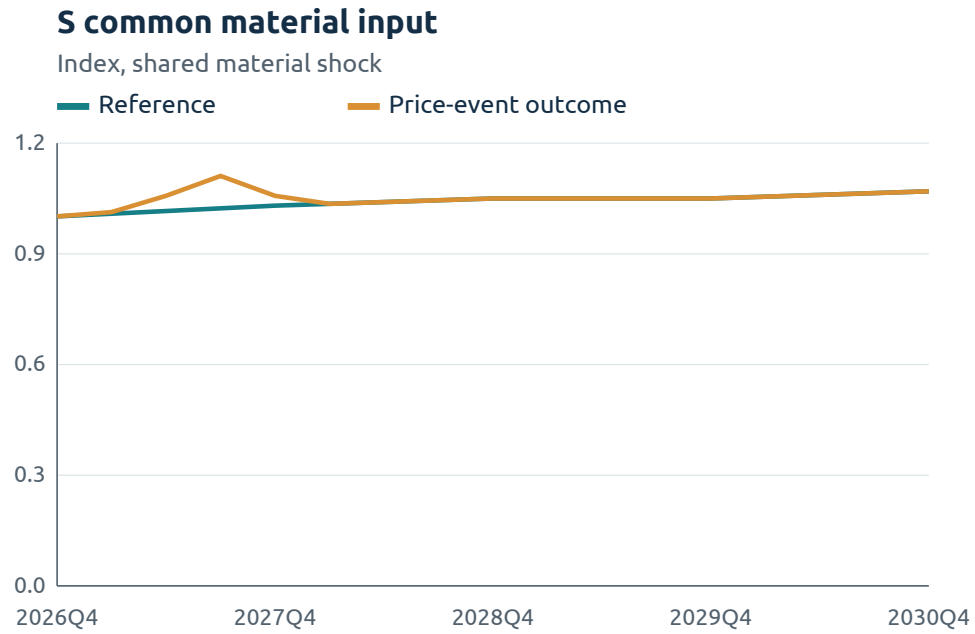

Price and cost equations: complete interpretation

Step	Equation / boundary
Source relative price	r(m) = source_RMB(m) / source_RMB(December 2026) - 1
Conditional source output price	P(m) = P_December x (1 + output_transfer x r(m))
Cost calibration price change	c(m) = input_cost_transfer x r(m)
Upward margin elasticity	GM(m) = GM_December + 0.2 x c(m), for positive c(m)
Same-vintage unit-cost increment	dC(m) = max(0, P_December x (1+c(m)) x (1-GM(m)) - P_December x (1-GM_December))
Common material floor	raw_floor(m) = raw_December + dC(m) / (base_legacy_variable_cost x material_share)

Step	Equation / boundary
Company raw input	raw_conditional(m) = max(reference_raw(m), raw_floor(m))
Fractional recognition lag	Interpolate the adjacent integer-month lags by their fractional weights; average the three source months for the quarter. Unknown source months use the original reference price/raw input.
Eligible output blending	legacy_price_selected = (1-eligible_fraction) x reference_price + eligible_fraction x lagged_source_endpoint
After the source window	The direct new price/raw input is absent from 2028Q2 onward. Cash, NWC, interest and funding consequences may persist.

S canonical price and cost paths

Only zero event probability removes the new event. Zero output beta holds the December price vintage rather than restoring the old declining path. Zero eligible share can retain an input-cost stress. These are separate diagnostics, not interchangeable no-event controls.

Returned from the field: raise FR4 CCL price forecasts

We conducted several field trips/meetings across APAC PCB/CCL supply chain (here, here) in Sep. After KBL raised FR4 CCL prices again by 10-20% at end-Aug and SYT started another round of hikes in Sep, we believe FR4 CCL prices (pre-tax) are now likely >Rmb340 now. Supply-side, we expect limited new capacity from either E-glass or CCL to come online in 2027; we forecast E-glass fabric prices to increase another 10-15% in Oct (after +10-15% in Sep with industry inventory at near-zero) to Rmb15+ by YE26. We see even tier-1 vendors like ITEQ operating below full UTR due to upstream shortages despite robust demand. Demand-side, our talks with PCB companies reaffirm supply security is prioritized over cost and end-customers have accepted price hikes since July, favouring CCL upcycle sustainability. PCB/CCL players across mainland China and Taiwan are expecting DD% QoQ CCL ASP hikes in Q3/Q426F that are likely to last through 1H27F. We now forecast FR4 ASP to reach Rmb383/443 by YE26/1H27E.

PTFE adds a further wallet share lever for Shengyi from Rubin Ultra

We expect the switch-tray PCB in a potential VR300 NVL576 NPO/CPO form factor to adopt a 32L PTFE-hybrid design with PTFE on 8-10 signal layers and M8/M9 on core layers. We believe SYT's VR200 switch CCL wallet share to be on par with EMC, even though EMC led allocation for the 44L compute-tray midplane. We think SYT's proprietary PTFE solution, which has passed end-customer qualification and is currently undergoing testing with PCB vendors, positions it for further share gains from VR300 onward. Although the team-up of EMC & Taiflex could become a second source PTFE supplier, we expect SYT to win the lion's share in 2027/28E, as it already has sufficient flexible CCL capacity (partly fungible for PTFE) in place to cover NVL576 demand, per our estimates. We expect the Kyber backplane to also adopt a similar PTFE-hybrid solution with volumes more in 2028/29E; our NVL576 and Kyber backplane PTFE scenario analysis points to Rmb137mn/Rmb2,635mn incremental earnings potential in 2027/28E for SYT, or 1%/16% upside to our conservative base case.

CPO/NPO: de-spec concerns overdone, CCL content value upside remains

We believe near-term risk of potential CCL de-spec in a full scale-up CPO solution is limited. We expect NPO as the mainstream solution in the next 2-3 years while inter-rack NPO scale-up in a potential NVL576 form factor would drive incremental CCL content and spec upgrades through: 1) more switch trays for inter-rack connectivity (18x per NVL576 Oberon NVL72 vs. 9x per NVL72 in VR200); 2) larger board area to accommodate NPO/CPO engines, while signals routing from NPO engine to switch ASIC still go through PCB; and 3) larger/higher-spec NPO module PCB vs. pluggables and with tighter warpage/thermal requirements. Even with CPO, despite the ASIC-to-engine traces shortening, connectors/vias and other high-speed links would still require M6-M8 CCL. Ultimately, we reiterate our view that multiple scale-up architectures (cable cartridge/Kyber backplane/NPO/CPO) will coexist in the longer term.

Valuation: reiterate KBL/SYT as top picks, raise PTs to HK$75/Rmb209

We raise KBL and SYT '27/'28E earnings by 31%/11% and 9%/2% respectively and keep '26E largely unchanged; we lift our KBL/SYT PTs to HK$75/Rmb209 from HK$66/Rmb192 mainly to reflect earnings upside from higher FR4 CCL price forecasts, with PTFE contribution not yet in our base case. We continue to believe SYT has the "best of both worlds", with FR4 driving near-term earnings while AI CCL at Nvidia keeps ramping and ASIC breakthrough as an upside. For KBL, we model CCL GPM >45% in 2H26E and 44% in '27E despite some new capacity ramping. Our EPS forecasts of KBL/SYT imply 8.4x/23.7x '27E P/E, which looks attractive given high visibility on near-term growth, while AI CCL materials (glass fabric/copper foil for KBL, PTFE for SYT) expand TAM.

UBS Research THESIS MAP

MOST FAVORED

Shengyi Tech (SYT), Kingboard Laminates (KBL)

LEAST FAVORED

PIVOTAL QUESTIONS

Q: Is the market underappreciating the current conventional CCL upcycle?

Yes. We believe the market is overlooking the sustainability of this upcycle and pricing in an approaching peak. We think this cycle could be more extended than past cycles due to structural S/D drivers as well as upstream material tightness, with AI crowding out conventional supply and adding incremental demand while near-term supply responses remain limited. We forecast an industry electronic fabric S/D gap of over 10% through 2027E as effective capacity is bottlenecked by Toyota's loom equipment while peers reallocate capacity towards AI/speciality fabric. A conventional CCL upcycle is likely to benefit KBL and SYT, as it remains the primary earnings driver for both.

Q: How does the potential NVL576 and Kyber backplane adoption shift the AI CCL outlook?

We continue to see AI CCL content value increases in the near term as networking/interconnect demands surges from increasing compute domain sizes: 1) inter-rack optical NPO/CPO scale-up architectures NVL576 from VR300 and; 2) Kyber backplane in NVL144/288 from Feynman. We expect both form factors could likely adopt a PTFE-hybrid CCL solution with SYT as the main supplier; given 1) accumulated flexible/PTFE CCL know-how; 2) ample flexible/PTFE CCL capacity; 3) only CCL maker with both PTFE manufacturing capability and proven track record in rigid M8+ AI CCL.

Q: What is the earnings impact and what is mispriced?

For our top picks, we raise 2027/28E earnings by 31%/11% for KBL and 9%/2% for SYT. We believe the market is not fully pricing in: 1) SYT's leverage to the conventional CCL upcycle, with segment revenue rising 69%/75% in 2026/27E alongside GPM expansion, also helped by a greater AI CCL mix as PTFE know-how supports wallet share gains; 2) KBL's leverage to a stronger-than-expected conventional CCL upcycle while margins expand from cost advantages vs. peers; and 3) the adoption of PTFE in VR300 NVL576 switch boards and Kyber backplane, which we expect could lift SYT earnings by 1%/16% in 2027/28E compared to our current base case earnings estimates.

WHAT'S PRICED IN?

Wind CCL sector index has fallen as much as 46% in July from its June all-time peak but recovered 30% from the trough as of Oct 1st. We see market pessimism specifically among AI CCL names given potential later Kyber backplane timeline alongside concerns on CCL despec from CPO/NPO optical scale-up alternatives in the longer term.

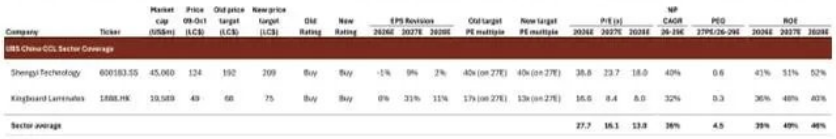

UBS VIEW

We continue to favour CCL/upstream names. Our top picks are KBL (Buy) and SYT (Buy), we believe valuations are undemanding and investor concerns are overdone as inter-rack scale-up solutions such as NVL576 NPO/CPO architectures could drive incremental CCL/PCB content value while suppliers with specialty materials know-how such as PTFE for SYT are well positioned to capture wallet share gains and earnings upside, which we see as not fully priced in. We expect KBL and SYT to benefit from a more sustainable conventional CCL upcycle through 2027, while emerging AI exposure (specialty fabric for KBL; AI CCL & PTFE for SYT) delivers the next leg of growth.

EVIDENCE

1) UBS forecasts top 12 hyperscalers' capex to increase 97%/45% YoY in 2026/27E; 2) KBL has hiked FR-4 CCL prices multiple times YTD, with monthly hikes since March; 3) E-glass fabric has seen monthly price hikes YTD, with prices now at historical highs >Rmb13/meter; 4) UBS forecasts the number of ex-Nvidia accelerator units to increase 49%/98% YoY in 2026/27E versus Nvidia GPU (SIP) units of 17%/36%.

FR4 CCL: RAISING PRICE FORECAST; NO RELIEF BEFORE 2H27

Pricing and margin have further room to grow

From our talks with supply chain players, we highlight both CCL/PCB suppliers expect FR4 to continue rising month over month into YE26 and mostly likely sustain into at least 1H27. **KBL** issued another price hike notice on 28 Aug (FR4 +10%, thin-cloth prepreg +20%) and expects ASP of >Rmb340/sheet pre-tax in Sep. **SYT** followed closely although at a slightly slower pace given its concentration of large customers and pointed out current FR4 CCL GPM is >30% and would likely surpass certain M4/M6 CCL products if hikes persist.

According to management, **ITEQ** raised ASP by c.10%/c.30% in Q126/Q226, and expects c.20-30% hikes in each of Q326/Q426F with hikes continuing into 1H27F, supporting our view that industry pricing could remain firm into 2027. ITEQ management expects c.2-3ppt of GM gain per 10% ASP increase, in-line with our expectation that GPM of KBL/SYT will further improve in FY27.

Tier-2/3 vendors like **Nanya New Material (NNM)**, **Goldenmax** and **Wazam New Material** have been enjoying UTR uplifts thanks to order spill-over from tier-1 players. On pricing, we see ASP hikes trailing leaders at slightly smaller magnitudes (e.g. if KBL +10%, Nanya +5-8%); their profitability also improved dramatically: **NNM**'s overall CCL GPM rose to 15% in 1H26 vs. 7% in 1H25 and indicated FR4 GPM at 35-40% in Sep. **Wazam** achieved NPM of 21% in Jul/Aug from only 8% in Q226, generating Rmb356mn net profit in 2 months vs. Rmb173mn in 6 months of 1H26.

Therefore, we raise our FR4 CCL price forecasts to Rmb383/sheet by Dec-26E and Rmb443/sheet by Jun-27E. Per our industry studies, M2/M4 CCL now sell at Rmb300-400/sheet, close to FR4, while M6 is c.60% more expensive at c.Rmb500-600. We see this level marking the ceiling for FR4 pricing before downstream demand weakens meaningfully.

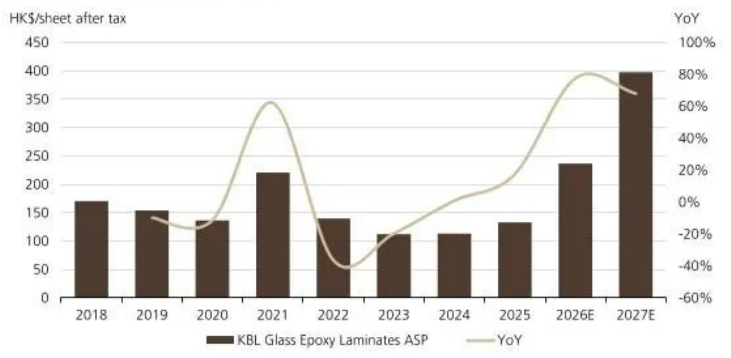

We estimate a c.2ppt GPM expansion from every c.10% CCL ASP increase, all else equal, which factors in inflating raw material costs in 2027E. KBL notes new pricing usually reflects on P&L at a 1-2 months lag given order shipping and lead times.

10 M9 and incremental CBF commercialization

The M9 prototype for a leading US GPU platform is a specific forward clue, rather than an established customer allocation. Commercial conversion carries 15% marginal probability, conditional on the strong qualified-material state. Revenue starts in 2028 and must fit paid new premium capacity.

The M9 endpoint uses 1.5 times other-AI ASP and 1.65 times its variable unit cost, with quality, ramp and selling/R&D costs. Each delivered unit displaces legacy production. Relative industry ASP indices inform technical complexity; they are not literal CNY-per-sheet prices.

H1 already described CBF-RCC small orders, CPU/GPU/PMIC verification and a batch-capable independent line. The added option concerns incremental glass/embedded commercialization above that undisaggregated pilot baseline. Its marginal success probability is 25%, and the full success/failure cash paths are retained.

The CBF endpoint uses CNY50M additional 2028 sales, CNY90M in 2029 and CNY160M in 2030 if successful, with a 40% margin proxy. The trial/R&D cost continues on failure. Near-term expected profit can be small or negative. There is no large finished-package or immediate Japanese ABF replacement assumption.

Conditional optionality and framework unit endpoints

Quarter	M9 requested M equiv	CBF revenue if qualified CNY M	Phase2 extra M equiv	Phase3 extra M equiv
2026Q4	0	0	0	0
2027Q1	0	0	0.05	0
2027Q2	0	0	0.05	0
2027Q3	0	0	0.05	0
2027Q4	0	0	0.05	0
2028Q1	0.05	5	0.1	0.015
2028Q2	0.1	10	0.1	0.015
2028Q3	0.15	15	0.1	0.015
2028Q4	0.2	20	0.1	0.015
2029Q1	0.2	15	0.2	0.03
2029Q2	0.3	20	0.2	0.03
2029Q3	0.4	25	0.2	0.03
2029Q4	0.5	30	0.2	0.03
2030Q1	0.5	25	0.3	0.06
2030Q2	0.65	35	0.3	0.06
2030Q3	0.8	45	0.3	0.06
2030Q4	0.9	55	0.3	0.06

Marginal probabilities: M9 15%; incremental CBF 25%; physical/edge demand 50%; remote applications 20%. M9 conversion occurs only within the strong state. CBF conditional success is S40/N30/D15/C5%, with trial R&D continuing on failure. Each endpoint shares the qualified-capacity constraints.

11 Working capital, capital spending and dilution

The cash model begins with CNY361.747M cash equivalents and approximately CNY1.170B interest-bearing borrowings. Receivables, bills, inventory, prepayments and supplier payables use separately stated day assumptions. Reported net receivables are used, so credit/inventory provisions are not added back a second time on top of net working capital.

Supplier bills remain operating working capital. They are not also counted as interest-bearing debt. Additional bill collateral above the starting bill balance consumes cash separately. The unexplained monetary-funds difference is not released as a hidden funding source.

Official project investment is CNY1.00401B, including CNY120M initial working capital. The fixed construction/equipment portion is CNY884.01M. Proposed proceeds are CNY1B for the project and CNY200M general working capital, together CNY1.2B. The initial project working capital is handled in the explicit NWC forecast and is not added again as capital expenditure.

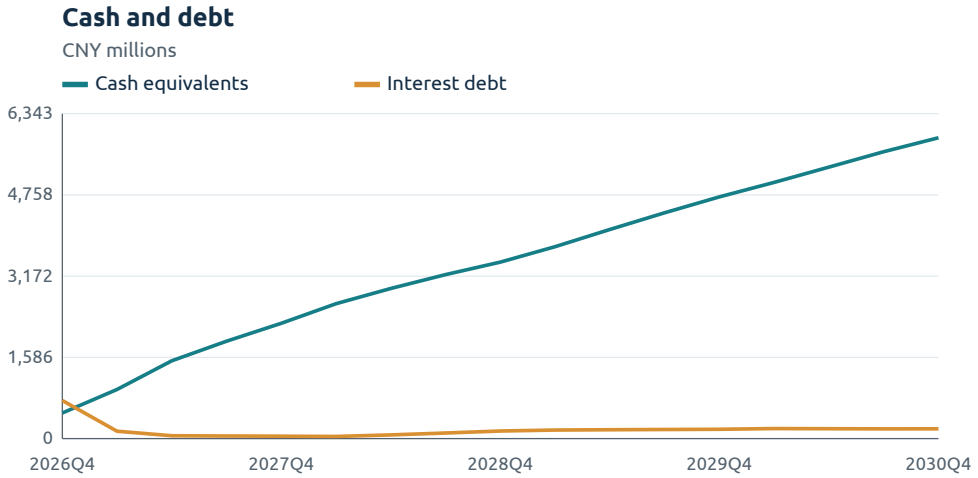

The existing-factory upgrade midpoint of CNY350M is a newer management-summary estimate. A 75% shared-cost assumption produces CNY971.51M fixed cash spending before the separate strong-state requalification. Full/no-overlap sensitivities are retained. The October CNY1.5B wording remains unresolved.

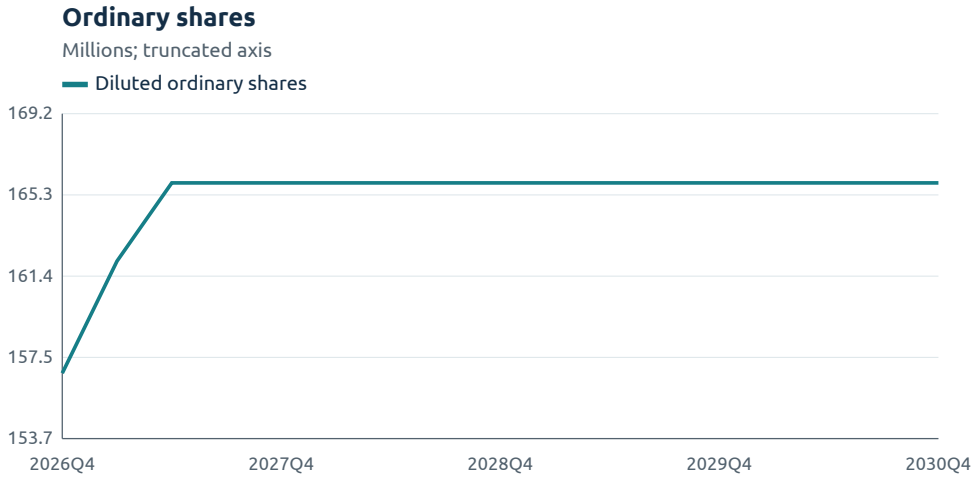

The placement is pending. Scenario issue prices of CNY160/120/80/55 and quarterly timing are assumptions, not the current quotation or a committed transaction. Actual proceeds are bounded by CNY1.2B gross and the remaining 47.037155M new-share authorization. Lower prices reduce feasible proceeds if the share cap binds; they do not create uncapped equity.

There is no further dilution or cash receipt from the old convertible: it has already converted, leaving 156.790518M existing ordinary shares. The future share path includes the explicitly modeled placement. No new SBC issuance is assumed; H1 share-payment disclosures were not applicable and Q3 details are not published.

Accessible bank headroom of CNY2.5B, a CNY250M cash floor and a CNY500M cash-sweep threshold are model controls. H1 unused bank lines of about CNY3.505B are not cash. Any unfilled funding shortfall is a failure, rather than an unexplained balancing item. No future dividend or buyback cash outflow is modeled.

Cash, financing and ordinary shares

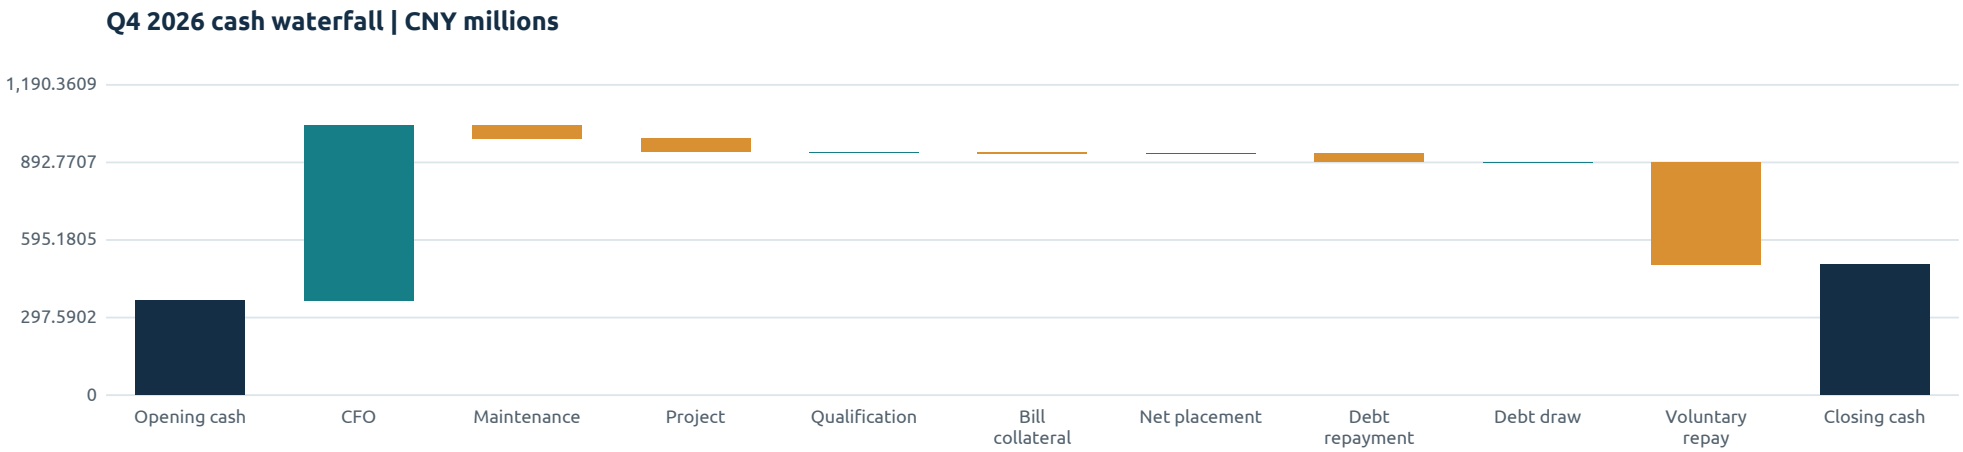

Model estimates. Cash equivalents and interest-bearing debt are separate from operating supplier bills.

C_CBF_P2_P3_REF	2028Q2	250	510.309	256.3638	3,416.5193	0

Zero shortfall is tested outcome by outcome. All model cash components, statutory and R&D tax controls, and ordinary-share issuance caps are supplied in the derivation appendix.

12 Taxes and the per-share ceiling

H1 recognized CNY10.7457M additional production VAT credits and CNY21.5534M R&D tax benefit. VAT credit equals 5% of eligible deductible input VAT under the current policy, rather than 5% of revenue or COGS. The source does not disclose the entire eligible input-base split.

The model removes estimated H1 capital-input VAT before calibrating the COGS-linked eligible base. It then adds future maintenance, project and qualification equipment input VAT separately. Equipment mix and eligibility remain LOW proxy assumptions. Credits stop after Q4 2027 under the current December31,2027 expiry; no extension is modeled.

R&D is expensed once in operating profit. Its additional tax deduction uses eligible fractions and a separate 15% or 25% R&D tax rate by state. These differ from the statutory entity-mix rates of 15.5%, 16%, 17.5% and 20%. Taxes cannot become an automatic cash refund, and unmapped loss-DTA balances are not used as a free consolidated cash shield.

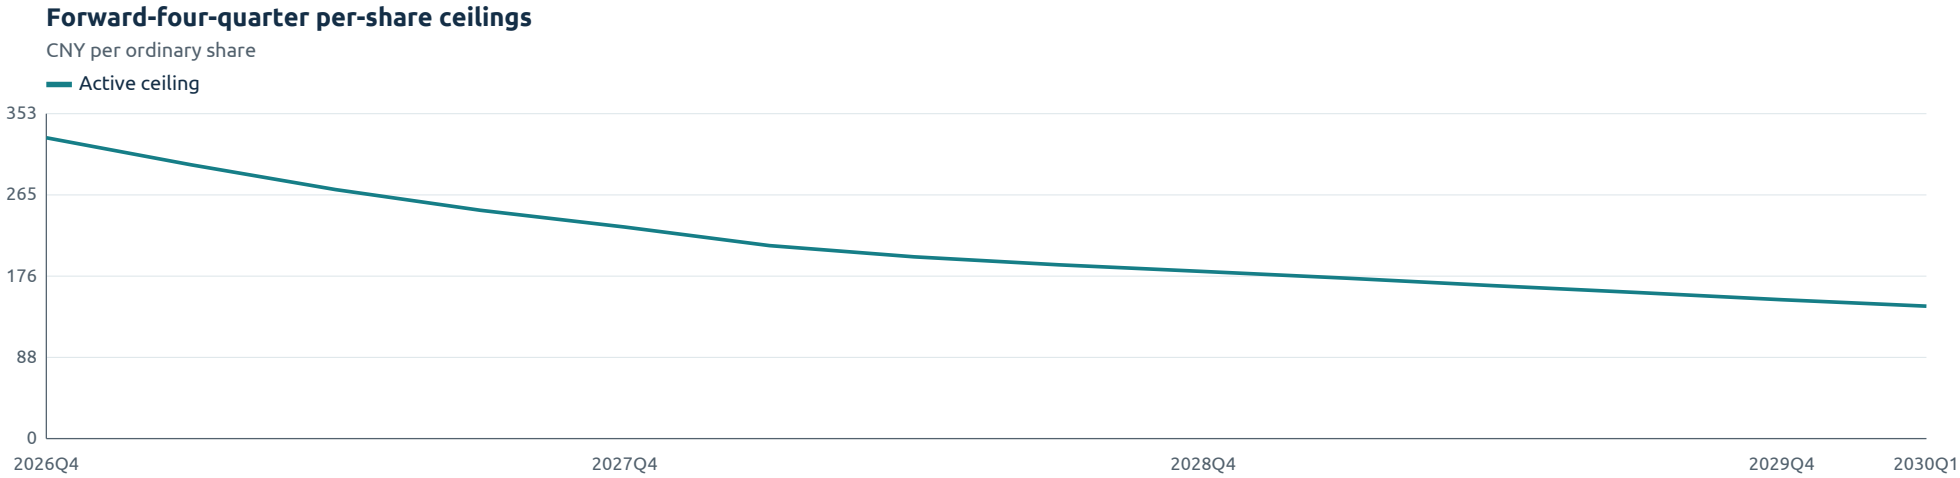

The selected method capitalizes forward-four-quarter attributable adjusted operating profit at 20x. Adjusted OP is before financing and income tax and includes modeled recurring VAT and grants. Government asset-grant amortization is removed again from cash flow because it is noncash.

Each joint outcome uses the ceiling quarter plus the next three quarters and its starting-quarter diluted shares. Negative OP capitalization receives a zero lower bound before probabilities are applied. This is the defined operating-profit method floor, not a sourced liquidation value or a claim of bankruptcy.

The active ceiling is the sum of outcome probabilities times those bounded per-share calculations. A weighted-average share count is only a diagnostic. Dividing a weighted OP by that average would lose the financing correlation. The analytical Base score is not an operating probability and is not multiplied into these ceilings.

No separate cash/NAV premium or EV-to-equity net-debt deduction is added to this selected method. Cash, debt, taxes and funding remain explicit economic/risk bridges. The current selected method is unchanged; no valuation-method or multiple change is made.

Per-share forward-four-quarter ceilings

Model estimates, CNY/share. Each point is the probability-weighted sum of 80 bounded outcome capitalizations; no quote or upside is used.

Fourteen forward-four-quarter ceilings

Quarter	Exact F4 window	Ceiling CNY/share	Weighted parent OP, CNY M	Shares M: diagnostic only
2026Q4	2026Q4 / 2027Q1 / 2027Q2 / 2027Q3	326.5442	2,559.952	156.7905

Defined calculation semantics

Node	Definition
qualified factory yield	Qualified accepted production availability versus new nameplate. It constrains deliverable qualified throughput, not a second material scrap-loss charge.
yield ramp extra cost	Separate actual raw material rework/scrap/operator burden per delivered unit during ramp. It is a cash-cost intensity proxy, not sold-unit utilization.
M7 sixfold reference	0.32M2026physicalsheetbenchmark is a Root proxy consistent with source exceeding0.3Mannual context, not a reported gradeactual. N2027.28/.40/.54/.70=1.92M=6x, S2.1M>6x; total success mass60%. CurrentQ3productsplit is estimated, never a historicalpublishedforecast.
eligible input VAT proxy	H1realizedcredit/5%=214.9139874M implied eligibleinputVAT. Subtract estimatedH1cashcapex×84%equipment×13%VAT×80%eligibility, divide remaining byreportedH1COGS. Future add separately maintenance+project+qualification cashcapex×sameequipmenttaxfactor. No5%revenue/COGS shortcut, no capital-input doublecount. The source does not disclose this tax-base split; all equipment/eligibility factors are LOW proxy assumptions.
actual blank vs arithmetic zero	Source investment/FV blanks remain source blanks per actual-value semantics and original PDFs. Arithmetic additive zero used for reconciliation must never be labelled a reported numericzero or written into a historical forecast display.

Node	Definition
live joint probabilities	Eighty coherent outcomes: macro × conditional M9 × conditional CBF × Phase2 × Phase3 × conditional FR4 price/cost event; event controls are constructed from one canonical owner group, never applied again to the final ceiling.
RD tax rate	Extra deduction tax-rate input is15%S/N/D,25%C, distinct from statutory entitymix effective rates15.5/16/17.5/20%. No additionalincome-taxrefund or unmappedlossDTA cashshield.

13 Relationships in the covered universe

Elite Material (2383.TW) is an existing covered CCL competitor. The issuer-cited 2024 special-CCL market shares place EMC at 22.1% and Wazam at 1.0%. Wazam can gain qualified business without being the market leader. Competitor scale and capacity response are part of the normalization counter.

NVIDIA and Broadcom are covered platform exposures whose AI/networking systems can increase demand for qualified board materials. Their universe inclusion does not establish that they place direct orders with Wazam. The current source does not identify a confirmed US GPU volume award.

Master membership is coverage, not proof of a portfolio position. No ownership or allocation claim is inferred. Nanya Technology (2408.TW) is a DRAM company and is not substituted for Nanya CCL in the competitor discussion.

Covered relationships - no ownership inference

Ticker	Company	Relationship boundary
2383.TW	Elite Material	Coverage verified; no holding inferred from workbook membership.
NVDA	NVIDIA Corporation	Coverage verified; no holding inferred from workbook membership.
AVGO	Broadcom Inc	Coverage verified; no holding inferred from workbook membership.

14 Tests that change the model

The closest physical test is the existing-factory trial around March-April2027 and subsequent accepted premium output. The normal sixfold endpoint has little Q2 premium headroom. A delayed acceptance or different physical-sheet basis reduces shipments, adds support costs and changes the event probability.

Quarterly realized ASP versus same-grade material cost tests the scarcity contribution. The model distinguishes scarce thin/high-end cloth from restarting low-end fabric. Easing qualified supply and competitor commissioning can compress FR4 margin even while AI demand grows.

Placement proceeds, issue price, capex paid, receivable collections, bill collateral and bank-line access test funding. A high accounting profit does not substitute for collection or spendable cash.

M9 qualification and incremental CBF invoice evidence test optional revenue. A prototype, catalog model number or backup qualification alone is insufficient to adopt the full commercial endpoint, but current clues already carry bounded active probabilities.

The main residual source gaps are the unavailable earnings interaction bodies, product-grade volume/margin disclosure, the physical-sheet mapping, current stable premium throughput, project overlap and the unexplained cash-equivalent gap. These remain visible in the confidence and sensitivity tables.

13 evidence-driven revision tests

Event / source date	Timing / outcome	Raise, reduce or remove test
E01_M7_QUALIFIED_RAMP | Source: 2026-09-23	2027 physicalM7shipments at least1.92M (six times the explicitly selected0.32M2026Rootproxy, consistent with the source exceeding0.3Mannual context), subject qualification/materials/newline. S2.1M/N1.92M/D0.9M/C0.45M. The0.32Mbenchmark is not a reportedgradeactual.	Raise only on quantified qualified shipments/material allocations/accepted line outputs; reduce if 2027H1 premium output misses, independent end-customer volumes disappoint or qualification slips. First2027results test annualrunrate.
E02_OTHER_LOW_LOSS_MIX | Source: 2026-09-23 /2026-10-23	AI/server/network low-loss mix grows inside total sold boards. It is not the entire issuer H2/H3 pool.	Reconcile AI/customer/program category and denominator in next results; raise on recurringgrade-qualifiedinvoice mix, reduce on mix/ASP/yield miss.
E03_SCARCITY_PRICE_PASS_THROUGH | Source: 2026-08-20 /2026-09-23 /2026-10-23	Q4 price realization remains strong while short qualified supply and longerleadtime support new/repriceableorders; monthly10% is not compounded indefinitely.	Track sequential realizedASP/inputprice spread andorderleadtime. Falling2116/1080/qualifiedfabric leadtime or competitors restarting lowendcloth reduces premium; rawcost rise without passthrough also reduces OP.
E04_NORMALIZATION_COUNTER | Source: 2026-09-23 /2026-10-23	Material2028 industry-normalization occurs in N/D/C75%; S25% retains pricing longer but also erodes later.	Raise/reset probability onqualified2028competitors, cloth availability andinvoiceprices; reduce if persistent shortages/new content offsets competitivesupply with realized unitmargins.
E05_NEW_QUALIFIED_CAPACITY_AND_FUNDING | Source: 2026-09-15 /2026-10-23	New qualifiedline reaches early2027 output in S/N60%, delayed2028 in D25%, deferredbeyondwindow in C15%. Newtotalincrement capped12Mannual.	TrialMar-Apr27 and next two reportingperiods: paidcommissionedqualifiedoutput, actualcashcapex, placementpricing/proceeds andqualifiedcloth. Delay reduces timeline/p, not changehistoric forecasts.

Event / source date	Timing / outcome	Raise, reduce or remove test
E06_EXISTING_SWITCHABLE_SCOPE | Source: 2026-09-23 /2026-10-23	Later2.8M/monthswitchable means broader existing-line output can become AI-usable; only S25% realizes the conditional reclassification byEOY27.	Raise on detailedsameunitproduction/qualifiedyield/lineclassification reconciliation; remove if laterreleaseconfirms2.8M merelytheoreticalswitching or incompatiblePP/area basis.
E07_M9_US_PROTOTYPE | Source: 2026-09-23	Prototype converts to incremental commercial M9 low-loss boardvolume from2028,15%marginal probability. It is not an existingNvidiaaward.	Customer/PCBqualification progression, sampledvsinvoicedvolume andM9compatiblefactoryacceptance. Remove/defer on18monthqualificationmiss or productrejection; do notwaitforannouncement beforepricingcurrentproxy.
E08_CBF_INCREMENTAL_EMBEDDED_OPTION | Source: 2026H1 /2026-10-23	Incrementalglass/embeddedCBFcommercialrevenue above existing undisaggregatedpilotbase scales2028-30;25%marginal success.	Incrementalinvoices, customerprocessadoption/yield/costandnewlinequalification; reduceon persistentbackup-onlyorders or failureof2-3yearvalidation.
E09_RAW_INPUT_AND_YIELD_COST | Source: 2026H1 /2026-09-15	Materials/qualitycosts remain elevated in S/N/D85%through2027, ease in C15%; newqualifiedramp adds scrap/rework/directlabor.	Procurementspread, glassallocation, productionyield andrealizedunitcost; adjustweights/costs if actualsame-gradeBOMevidence arrives.
E10_PHASE2_ADJACENT_APPLICATIONS | Source: frameworkv8 /2026-10-25Root	Physical/edgeAI low-loss board applications become incremental non-datacenterdemand in2027-30.	Highspeededge/ADASindustrialcustomerqualificationandinvoicedboardcontent, not vagueAIdeviceunitheadlines.
E11_PHASE3_REMOTE_APPLICATIONS | Source: frameworkv8 /2026-10-25Root	Incrementalspace/defense/ubiquitouscompute-related low-loss board demand becomes addressablefrom2028.	Specificqualification/boardcontent/customerprogram evidence; removestandaloneincrementifshownalreadyinside baseAI/customerunits.
E12_VAT_AND_TAX_BRIDGE | Source: 2026H1 /2023VAT43expires2027-12-31	EligiblemanufacturinginputVATcredits continue through2027Q4 undercurrentlaw, thenstop; additionalRDtaxdeduction is eligibleexpense, notsecondbookexpense.	Eligibleannualmanufacturerlist, invoicedinputVAT/exportmix, 2027lawexpiry and2028extensiononlyonnewpolicy. ReconcileactualRD/taxentitybenefits, no sourcearithmeticeligiblebaseinvention.
E13_UBS_FR4_LAGGED_PRICE_COST_DURATION | Source: 2026-10-12	A defined portion of Wazam legacy CCL pricing follows the supplied FR4 curve, while input inflation follows the full transferred supplier-cost floor. Recognize the existing source months with1-2month lags.	Testsame-gradeWazamrealizedASP,inputpurchasebasket,pricinglag,collectionsandsupplierterms; reduceforqualifiedfabricrelief/loomcapacity,customerpushbackorworsepass-through;removeforcontradictedbenchmark/companyscope. Noautomatic2028extension.

Derivation appendix A: shared inputs and units

Every monetary forecast node below is CNY millions, volume is millions of CCL equivalents unless marked physical M7 sheets, and shares are millions. ASP is CNY per sheet/equivalent. The following complete shared parameter table contains both source anchors and declared model proxies. Product-grade economics and forward physical/engineering inputs are LOW estimates unless explicitly reported.

Joint probability is the product of six displayed factors. The conditional price-event probability is applied once, after resolving the macro state. Source attribution is not multiplied into the joint probability again. Case inputs are derived read-only selections of the canonical arrays.

Construct each case from its macro driver arrays, then set macro_state to its S/N/D/C label and Phase2_realized / Phase3_realized to the displayed flags. Set CBF_commercial_probability to1 if CBF is qualified and0 otherwise: the macro CBF percentage is the success prior, not another revenue multiplier after the outcome has been resolved. Set m9_units to the17-quarter M9 endpoint when its flag is true, and to zero otherwise. Retain the displayed conditional probabilities separately as weight factors. QUARTERS and DAYS are the complete calendar above; DISPLAY is the14 ceiling quarters. Active sw is the empty control dictionary.

Evidence and economic probability ledger

Event	Source attribution p	Economic outcome p	Rationale / dependence
E01_M7_QUALIFIED_RAMP	0.95	0.6	Specific attributable management forecast supports a50-60% starting band. Sep actual acceleration is real, but customer chip forecast is not a CCL order and glass, yield and 2027 line acceptance can still fail. M7 is inside AI-CCL revenue and shares a single finite qualified capacity pool. Ascend0.7-0.8M to 3M chip forecast is the same hypothesis; no second4× multiplier. Lower D/C outcomes retain smaller increments; the60% threshold event is not the probability of every positive increment.
E02_OTHER_LOW_LOSS_MIX	0.9	0.6	Named-management mix targets carry60% strong/normal outcomes; delayed and credit-stress paths retain smaller mix. Source categories conflict and currentQ3split is undisclosed. M7/M9 are separate within the same finite pool; broad H2/H3 nonAI reserve protects existing RF/BT/thermal demand. Target revenue shares are checks, not extra sales added on top of units.
E03_SCARCITY_PRICE_PASS_THROUGH	0.95	0.6	Q3actual36.0615%GM and27.8%cleanOP support realizedprofit. Only60%states assume stronger continuation; delayed25% and stress15% explicitly price early reversals. Backlog800M/4.41Mboards is shortturn, already in capacity/pricepath, not extra annualbookedrevenue. Jul-Aug360MNI is combined and predates Q3actual; no additive profit.
E04_NORMALIZATION_COUNTER	0.95	0.75	Currentwindfall pricing is not structural monopoly rent. Peercapacity, lowendclothrestart and sourceexplicitnormalization are real counters. S remains a bounded counterexample. AI mix is not an independent margin bonus after productrevenue/costs. CurrentFR4 and highgrade margins are separate; no all-company40% extrapolation.
E05_NEW_QUALIFIED_CAPACITY_AND_FUNDING	0.95	0.6	Specificmanagementequipment/trialhint plusofficialfunding/land/equipmentdetail warrants60%; fullplantbyearly27is not assumed. Two officialconstructionyears remain N/D reference. Early6M/12Mcapacity is a phased part of the ultimate12M, not extra on top of official12M. Upgrade350M scope75%overlapsfixedproject; full/nooverlapdiagnostics retained. Oct15亿元 wording is unresolved, not another1.5Bfreeplant. Placementpricesare Rootproxies, not currentquote or committed58.11.
E06_EXISTING_SWITCHABLE_SCOPE	0.8	0.25	Publicsummaryscope is more weakly established thanfilings and conflicts with Sept all-feasibleconversionsdone. Price bounded25% hypothesis instead of confirmationveto or unconditional33.6MqualifiedAI. Sourcehigher-current-switchabledefinition is not stablehighestH3 qualification. Cannot reuse rejected M7/M9 demand as extra otherAI orders: otherAIrequestedvolume is separately capped and unchanged whenpremium rejects occur.
E07_M9_US_PROTOTYPE	0.95	0.15	Specificprototypeclaim authenticattributedsource, but qualification6-18months,newstablefactory, importedinputs/competition andendcustomerallocation make15% appropriatefor the muchlargerforwardvolume. M9volume is carved from common boardcapacity and not added as industryTAM or as a second Nvidiachipmultiplier. IndustryASPINDEXM9~850 is notCNY850sheet.

Event	Source attribution p	Economic outcome p	Rationale / dependence
E08_CBF_INCREMENTAL_EMBEDDED_OPTION	0.9	0.25	CurrentCPU/GPU/PMICverificationandbatch-capablelineimprovecredibility; JapaneseABFincumbency/customerqualification/cost-of-switching constraincapture andprofit for2-5years. CBFdielectricfilm is distinctfrom loss-makingbatteryAlplasticfilm and not finishedHBMsubstrate. NoinstantreplacementofJapanABF orexistingpilotdoublecount.
E09_RAW_INPUT_AND_YIELD_COST	0.99	0.85	H1procurementshowsfoil106.13/kg,glass6.26/m,resin26.78/kg; mix/gradechangesalsomatter. No officialpergradeBOM/yield ispublished. Foilprocessingfeeexcludes coppermetal; BofArelativeASPINDEXnotliteralcurrency. Procurementaverageinflation not puremarketindex. no_yield_ramp_cost is a separate nonadditive diagnostic.
E10_PHASE2_ADJACENT_APPLICATIONS	1	0.5	50%frameworkphase2confidenceprior is notobservedfrequency. Wazam alreadyservesautomotive/networking; only incrementalhighspeedcontentabove currentlegacy/baseAIpoolispriced. Not an additional automotive/robot TAM revenuepool on top of finiteboardproduction. Ifcapacitybinds, someincrementiszero because it displacesotherqualifieddemand.
E11_PHASE3_REMOTE_APPLICATIONS	1	0.2	20%frameworkphase3confidenceprior; no namedspaceorquantumprogramvolume isclaimed. Not industrysatellitecapex×genericcapture plusCCLvolumeagain. Remoteallocationcan becrowdedout byhigherpriorityM7/M9.
E12_VAT_AND_TAX_BRIDGE	0.99	1	H1actualbenefitsverified and currentpolicydated; continuationofentityeligibility/inputtaxbase is an explicit Root workingassumption, sensitivity0 is shown. No2028extension isassumed. This100%conditionalworkingassumption is not a claimofnewyearlistconfirmation. VATcreditnotalsoinsideGP. RDordinaryexpensealreadyinOP; extra deduction onlytax. ExistinglossDTAentitymapunknown, so noautomaticcashshield. no_RD_tax_benefit separatelyshowsNI/cash,zeroOP-ceilingeffect is legitimate.
E13_UBS_FR4_LAGGED_PRICE_COST_DURATION	0.95	0.3	One credible, specific forward source with uncertain company grade/mix/realization; stronger macro demand supports the event more than stress. This is a Root judgment, not a measured frequency. SourceJulyAug356moverlapsCiti360m/Q3actual. Newforecastprice/costtimingisconditionallyjointwith macro, notperfectlycorrelatedwithfactorysuccess. Allmaterialcostschargeonce throughMAX(oldraw,newcommonfloor); no secondAIpremium or25/35/25/15/30%probabilitydoublecount.

The complete 17-quarter M9, CBF, physical/edge and remote application endpoints appear in section 09. Combine those endpoints with the outcome flags above; do not multiply an already-resolved success volume by its event probability again.

Derivation appendix D: exact calculation law

The following lossless Python-equivalent scalar templates operate on the complete parameters, calendar, macro arrays, endpoints and 80 outcome factors above. Active controls use sw={}. No workbook is needed to discover a missing financial rule. Values are calculated for each outcome first, including funding, tax and shares; only then are outputs probability weighted.

The complete approved pure operating law is reproduced below, followed by the source-month calibration and case-selection recipes. This is displayed source code, not a second evaluator. Date-vintage benchmark values, calibration assumptions and all canonical arrays are printed in the source-price chapter.

Equation-template line numbers identify original logical lines. A continuation begins with a vertical bar; join its text directly to the preceding segment without the label. No characters or calculation tokens are omitted.

Derivation appendix E: complete conditional F4 derivations

All 80 outcomes and all 14 windows. Each row shows the four individual parent-OP terms, their F4 sum, starting-quarter shares, the unfloored capitalization, the zero floor, joint probability and weighted contribution. No weighted-average share denominator is substituted. Exact stored financial values are preserved in the audit and machine-readable companions.

2026Q4 | 2026Q4 / 2027Q1 / 2027Q2 / 2027Q3

Four quarterly terms and exact F4 OP sum

Complete conditional operating and cash schedules

All 80 outcomes and all 17 quarters. Full formula templates, canonical input paths and six joint factors are supplied above. Display values are rounded; the exact financial objects remain in the original-named Model and formula companions.

Annual operating and cash cross-checks

2027-2030 are complete four-quarter calendar years. The 2026 operating schedule begins in Q4 and is never labelled a full-year forecast. Flow amounts are annual sums; cash, debt and shares are year-end stocks. AI CCL revenue share is the reported model annual revenue ratio; ai_share is a requested other-AI unit mix before capacity, not realized AI revenue share.

All conditional and weighted annual cross-checks

Units: prepreg, CCL equivalents and physical sheets

The issuer uses a CCL-equivalent reporting convention for external prepreg. A physical M7 sheet remains a separate unit whose conversion to that reporting convention is not established.

Factual verification and model treatment

Item	Fact / selected value	Interpretation / limit
Issuer reporting unit	4 prepreg sheets = 1 CCL equivalent	This source convention does not establish an M7 physical-sheet conversion.
Active physical mapping	1 physical M7 sheet = 1 CCL equivalent	Explicit LOW model proxy, rather than a reported product fact.
Unit diagnostics	0.5x and 2x physical-sheet mappings	The sensitivities recalibrate reported total revenue and gross profit while preserving the assumed physical M7 margin.

Unit conversion changes capacity displacement. It does not create an additional order or a second revenue opportunity.

Capacity: official envelope and explicit model proxies

Broad high-grade capacity, AI-usable throughput and stable premium production are different constraints. The September filing retains limits on converting existing lines to the highest-grade stable output.

Factual verification and model treatment

Item	Fact / selected value	Interpretation / limit
Official high-grade base	15.54M annual design; observed H1 utilization 105.13%	Broad company-grade capacity is not a reported M7 or M9 order allocation.
Existing AI envelope	15.54 x 1.0513 x 85% = 13.8866217M annually	The 85% AI allocation is a LOW model proxy.
Existing premium limit	0.30M CCL equivalents per quarter	LOW model proxy; no claim of disclosed stable M7 capacity.
New paid project	At most 12M incremental annual nameplate	Qualified output and premium allocation must also pass their separate model limits.
Strong-state conversion	33.6M x 65% = 21.84M AI-usable annually	S-only hypothesis reclassifies existing switchable scope; it adds no total factory capacity.
Conversion economics	CNY50M qualification cash and CNY5M quarterly support	These costs price the strong-state conversion hypothesis; September manufacturing limits remain a source gap.

These are bounded conditional model treatments. Existing converted lines are not assumed to become unrestricted M9 production.

FY2025 margins: project-discussion grade table

The project discussion reports the following FY2025 gross margins for company grades H2 and H3. These broad grade labels are distinct from named M7 and M9 products.

Factual verification and model treatment

Item	Fact / selected value	Interpretation / limit
Company grade H2	FY2025 gross margin: 9.68%	Value in the issuer project-discussion table, PDF page 74.
Company grade H3	FY2025 gross margin: 11.46%	Value in the same issuer table.
Preserved discrepancy	PDF page 113 gives a different FY2025 H2/H3 pair	Both source tables are retained; no issuer reconciliation is assumed.

A historical grade margin is not substituted for the current company-wide gross margin or applied across every portfolio company.

Source: issuer financing response, 15 September 2026, PDF page 74. https://static.cninfo.com.cn/finalpage/2026-09-15/1225563420.PDF

Paired source comparison: PDF pages 74 and 113 of the same filing. Both original source records remain in the private intake archive.

FY2025 margins: business table and current calibration

The business-margin table gives a second FY2025 H2/H3 pair. Its disagreement with page 74 remains explicit. Current-quarter calibration instead starts from reported consolidated totals and a separately identified LOW product split.

Factual verification and model treatment

Item	Fact / selected value	Interpretation / limit
Company grade H2	FY2025 gross margin: 14.55%	Issuer business-margin table; differs from page 74.
Company grade H3	FY2025 gross margin: 11.64%	Issuer business-margin table; differs from page 74.
Q3 2026 revenue	CNY2649.865M	Reported consolidated revenue, rounded here; complete precision remains in the derivation tables.
Q3 2026 gross profit	CNY955.580M	Reported consolidated gross profit, rounded here.
Residual legacy margin	35.36612%	LOW calibrated residual after the explicit product split; not a reported company-grade margin.

The current residual does not force either historical H2/H3 table into a universal margin assumption.

Source: issuer financing response, 15 September 2026, PDF page 113. https://static.cninfo.com.cn/finalpage/2026-09-15/1225563420.PDF

Paired source comparison: PDF pages 74 and 113 of the same filing. Both original source records remain in the private intake archive.

Current Q3 totals: issuer results, 23 October 2026. https://static.cninfo.com.cn/finalpage/2026-10-23/1225615477.PDF The product split and legacy residual are model estimates, not reported grade results.

Project budget, funding and overlap treatment

Project investment, fundraising and working capital have different denominators. The model keeps those amounts separate and treats the later October scope description as unresolved.

Factual verification and model treatment

Item	Fact / selected value	Interpretation / limit
Official project total	CNY1004.01M = CNY884.01M fixed + CNY120M initial working capital	Project budget in the September issuer response.
Proposed fundraising	CNY1200M = CNY1000M project + CNY200M general working capital	Use-of-proceeds scope is distinct from total project investment.
Selected fixed envelope	CNY971.51M = CNY884.01M + CNY350M x 25%	Only the non-overlapping 25% of the existing-site upgrade proxy is added.
Working-capital bridge	The project includes CNY120M initial working capital	It is not charged again as extra capex on top of explicit working capital.
Later scope gap	October CNY1500M wording remains unresolved	No automatic additional free capacity or duplicative investment increment.

The fixed envelope is a model treatment, not a revised issuer project budget. Funding timing and dilution remain conditional.

Source: issuer financing response, 15 September 2026, PDF page 78. https://static.cninfo.com.cn/finalpage/2026-09-15/1225563420.PDF

Later scope wording: public management-attributed summary, 23 October 2026. https://reportify.cn/transcripts/1311163484196704256 The underlying verbatim call/audio remains unverified.

Supplementary conference evidence: scope and model use

A public preview of a September 23, 2026 Citi conference note provides supplementary management-attributed information. Only the first original page was accessible; the other eight pages were gated, and no original audio was verified. This is not a second earnings call.

Source scope and model treatment

Signal	Source claim / context	Model treatment
M7 ramp	More than 300k physical sheets in 2026 and a claim of at least sixfold 2027 growth	The model uses an explicit 0.32M benchmark proxy; N 1.92M / S 2.10M support 60% >=6x, weighted 1.4895M.
Commodity margin	Unusually strong FR4 profitability may normalize	Separate macro-state price and material-cost paths; no perpetual current-margin extrapolation.
Advanced materials	M9 sampling/qualification and a rising AI-material mix remain conditional	New paid/qualified capacity, limited p15% M9 and no claimed US GPU award.
Evidence overlap	Conference and later public summary can repeat the same ramp narrative	One economic bridge per outcome; no duplicate revenue increment.
