source refs/3/bytes	1,508

Use the exact delayed H quote and asynchronous A quote snapshots with observation times. Combined observed class market capitalization is A shares times the A price plus H shares times the H price translated at the retained FX snapshot. All shares times the H price is only an H-price-equivalent benchmark. Keep price comparisons out of the operating thesis.

Funding dependency and limits of aggregate group cash

All12 active conditional paths satisfy bounded aggregate model cash/physical tests. Constrained paths require no new bank draw. Funded redemption paths need up to817.335593m cumulative new draws; accelerated paths up to2446.694539m against modeled3000m cap. These are UNCOMMITTED financing assumptions, not proof the October raise alone funds every path. Group cash is not proof of segregated offshore liquidity or transfer permissions. A50%higher tax-float target raises worst modeled draw to2934.596986m; removing new borrowing produces23 failure rows and2437.595m maximum gap. Unfunded stresses remain invalid funded forecast diagnostics.

Operating profit and cash conversion

Weighted2027 revenue17414.989413m and economic OP3607.744659m generate only184.167207m CFO before financing interest because deltaNWC3779.866157m includes218.524619m added tax-float assets. Cash conversion risk is central; do not describe OP as cash earnings. Annual stock values are never summed; only flows/deltas are additive.

Unused award authority - joint share and SBC sensitivity

Diagnostic grants all unusedH15.347518m andAreserve0.999612m at the same retained dates and FV proxies, with joint share/SBC propagation and no exercise cash. Q42027 drops to229.809833059HKD; F4economicOP4272.709279m. It is deliberately early/maximal, not an actual award or baseline grant. Current potential diluted award basis remains401.003891m/436.987232m.

coverage change

Initial coverage and new model admission. There is no earlier published CIG forecast or target in the validated master to revise. The H and A listings are the same issuer; this report values the H share using total issuer potential diluted A+H shares.

thesis

The central opportunity is conversion of installed optical capacity into accepted shipments of 800G and 1.6T products, followed by a conditional NPO transition. The latest retained management records state that annual optical nameplate capacity of at least six million pieces had already been achieved by early September. The October financing plan targets an additional ten million annual pieces by the end of 2027. Neither nameplate capacity nor a financing allocation is recognized revenue, backlog or customer acceptance.

CIG combines customer qualification, silicon-photonics module design, packaging, testing and an international manufacturing footprint. Its COLO arrangements retain key materials, equipment and process control while partners provide manufacturing resources. This supports an operating beneficiary thesis. The evidence does not establish ownership of an upstream laser or PIC wafer-fabrication monopoly, exclusive customer contracts or all of the economics of the ML&S venture.

The principal model change from the latest reported business mix is a much larger optical contribution. The model explicitly pays for materials, yield losses, labor, test, processing, warranty, fixed factory resources, depreciation, incremental research, selling and administration, stock compensation and minority participation. Rising shipments therefore do not flow through at a pure contribution margin. Mature product price erosion eventually overtakes the ramp; the model's later operating-profit and ceiling decline is intentional.

The active forecast is a single probability-weighted result assembled from twelve coherent conditional paths. Execution, product mix, pricing and input-cost conditions move together in three regimes. NPO and bond conversion are conditional branches within each regime. Operating profit is calculated in each path, its own diluted shares and rolling window are applied, and only then are valuations weighted. The analytical score is not multiplied into that result a second time.

alpha

The capacity evidence is stronger than a distant aspiration: management moved from an annual capacity target to reporting early achievement of at least six million pieces. The next question is accepted throughput and product mix. The model applies a qualification-throughput conversion and explicit funding-to-service timing rather than booking all nameplate as shipped units.

NPO can lift the value of the same bandwidth wallet, but it can also displace pluggable 1.6T orders and consume test resources. The model removes the earmarked pluggable wallet before adding successful NPO packages. A failed transition loses that earmarked wallet, and no separate ELSFP, laser, PIC or full joint-venture revenue layer is added to the same opportunity.

Gross proceeds are not free equity value. The model preserves the convertible's full face-value cash reserve through the pre-maturity quarters, pays redemption in non-conversion paths, and includes all currently granted gross potential A options and H awards. New borrowing is bounded and explicitly uncommitted. Working capital includes inventory, customer and supplier cash timing, prepayments and a separately disclosed recoverable/prepaid-tax stock proxy.

case tree

case tree

Field / exact source path	Approved value
execution probabilities/constrained	0.3
execution probabilities/funded ramp	0.55
execution probabilities/accelerated	0.15
conditional NPO success probabilities/constrained	0.25
conditional NPO success probabilities/funded ramp	0.6
conditional NPO success probabilities/accelerated	0.8
conditional CB conversion probabilities/constrained	0.1
conditional CB conversion probabilities/funded ramp	0.4
conditional CB conversion probabilities/accelerated	0.7
NPO marginal probability	0.525
CB conversion marginal probability	0.355
selection rationale	Issuer-reported current capacity and financed expansion support a funded central ramp, while DSP/material constraints, qualification, customer concentration, working capital and product-price erosion retain substantial constrained probability. NPO remains a customer-dependent architecture transition, with stronger conversion probability in better operating outcomes. CB conversion is a conditional capital outcome, never inferred circularly from this report's own ceiling.

Field / exact source path	Approved value
positive catalysts/0	Accepted 1.6T shipments and mix conversion as qualified capacity enters service
positive catalysts/1	Additional optical capacity funded, installed and commissioned on the stated timetable
positive catalysts/2	Commercial NPO packages taking a bounded share of the existing bandwidth wallet
negative catalysts/0	Qualification delays or DSP, CW laser, PIC and other material shortages
negative catalysts/1	Faster 800G price erosion or weaker material-cost reduction
negative catalysts/2	Cash tied up in inventory and recoverable tax balances, bank renewal failure or bond redemption pressure
overlap	Capacity, shipments, speed mix, 800G pricing and material cost share one execution regime; no separate additive success weights. NPO displaces the existing 1.6T wallet. JV, upstream laser/PIC, ELSFP and generic industry demand signals do not add independent full revenue wallets.

initial score rationale

initial score rationale

Field / exact source path	Approved value
Core Thesis 13 of 20	Qualified optical module and manufacturing capability, evidenced scale-up and process control; incomplete evidence of durable exclusivity, proprietary upstream capture or customer economics limits conviction.
Cycle Stage 8 of 10	A rapid capacity and product-speed ramp is under way, with meaningful acceptance and working-capital execution still ahead.
TAM Expansion 7 of 10	Higher-speed modules and potential NPO expand the addressable bandwidth wallet. Industry and management unit forecasts have different scopes and are not added together.
Catalysts 4 of 5	Capacity commissioning, 1.6T acceptance and NPO qualification provide observable milestones; the newest quarter's results remain scheduled rather than published.
Macro 9 of 10	AI interconnect investment is a supportive demand setting, tempered by export, cross-border sourcing and customer concentration risks.
Alpha 3 of 5	The useful analytical differences are early achieved capacity, explicit displacement and resource accounting, and the financing/dilution bridge. Incomplete product disclosure and low-confidence unit economics prevent a stronger score.

Field / exact source path	Approved value
Risks minus 4	Pricing, supply, qualification, minority economics, gross potential awards, recoverable tax float, uncommitted bank funding and bond maturity remain material.
sum out of 60	40
rounded percent	67
classification	Watchlist / beneficiary
Initial Base (percent)	67%
position	Unspecified; leave the new portfolio-position cell physically blank.

valuation explanation

Apply 20 times rolling four-quarter recurring pre-finance group operating profit after a modeled positive minority-participation charge, divided by that path's maximum diluted A+H share count over the window and CNY per HKD. This economic participation measure is not a reported legal attributable-operating-profit line or net income. Do not add cash or apply Base again. The weighted operating-profit total cannot be divided by an invented actual weighted share count to reproduce the ceiling.

what would change the model

New results separating optical revenue, shipment speeds, units, gross margin and working-capital conversion would replace low-confidence Plan B inputs.

Verified capacity in service and accepted shipment evidence would update throughput and commissioning timing; stated nameplate alone would not establish sales.

Customer qualification, NPO commercial terms and actual resource requirements would update conditional probability, wallet capture, displacement and package costs together.

Award fair values, confirmed cancellations, exercised shares, bond settlement/conversion and facility documents would update compensation, dilution and financing without altering already-published historical forecast displays.

source and estimate boundary

Latest actual financial statements are H1 2026. Q3 results are scheduled for October 30; the model's Q3 reconstruction is not an actual result or a historical forecast vintage.

The two newest earnings-related interactions are the complete retained May 15 and August 25 written network question-and-answer records. They are not claimed as complete spoken recordings. September visit and industry-event records are supplemental.

H1 product/speed/units/margin splits, full joint-venture rights, unutilized committed bank lines and the full trust deed's normal-maturity USD fixing remain specifically unverified. Model proxies are labeled and tested; those gaps are not silently treated as confirmations.

The H1 other-current-asset balance is a mix of recoverable input VAT, prepaid income tax and Japanese consumption-tax credits. Its modeled forward stock is an empirical cash-float proxy tied to inventory and uncommissioned investment; it is not a statutory tax-rate model or an additional gross refund inflow.

SBC uses disclosed grant quantities, dates and vesting terms with explicit fair-value proxies. Cumulative share-payment capital reserve is not current-period expense. The small difference between period note expense and administrative expense remains disclosed.

Factory versus expense depreciation and legal-entity minority profit allocation contain explicit proxies. Unallocated source depreciation is not represented as issuer-disclosed optical COGS.

preservation

Q3 2026 and earlier published Excel forecasts and their original rolling windows remain immutable. CIG has no previous published historical forecast, so its historical display cells are physically blank.

Latest reported accounts and disclosure completeness

FACT - The latest retained financial result is the unaudited half-year report. Revenue and profit increased, while operating cash flow remained negative. Group profit and profit attributable to shareholders differ because the consolidated minority result is a loss.

Sources: issuer_H1_2026_A_report PDF 11,12,63,64,66,67

FACT - Reported PRC operating profit includes finance expense and other income. It is a reported accounting subtotal; any recurring or attributable operating-profit measure requires a separate reconciliation.

Sources: issuer_H1_2026_A_report PDF 63,64,134,135

FACT - Cash and cash equivalents equal reported money funds at the half-year date. The report separately identifies money held overseas. Foreign-currency monetary balances are a different disclosure and do not establish where the cash is held.

Sources: issuer_H1_2026_A_report PDF 97,139,140

FACT

Source claim	Value / unit	Period / status
cash_and_cash_equivalents	3443747212.84 CNY	2026-06-30; reported
overseas_money_funds	271570765.63 CNY	2026-06-30; reported

FACT - The half-year financing cash flow already contains the earlier equity placing. The later October placing and bond issue are separate dated financing events and are not additional half-year cash.

preview boundary	The published half-year actuals supersede the earlier half-year preview; no preview is substituted for current actuals.

The two latest written earnings interactions

FACT - The annual-results interaction was held as an online written exchange at the Shanghai Stock Exchange roadshow platform. The half-year interaction was held at Value Online. Complete official written question-and-answer records are retained; they are not evidence of a complete spoken recording or audio transcript.

Sources: issuer_IR_20260515_published20260518 PDF 2,3,4,5,6,7; issuer_IR_20260825_published20260826 PDF 2,3,4,5,6,7

FACT

Source claim	Value / unit	Period / status
annual_results_interaction_date	2026-05-15 date	; reported
annual_results_interaction_time	15:00-16:30 local clock	; reported
annual_written_questions	17 questions	; reported
half_year_interaction_date	2026-08-25 date	; reported
half_year_interaction_time	16:00-17:00 local clock	; reported
half_year_written_questions	13 questions	; reported

FACT - In May, management described strong high-speed optical demand, high utilization and small-batch supply of the next speed generation. It declined to give company order guidance or identify confidential customers. Supply agreements, directed investment and inventory preparation were described as responses to continuing component shortages.

Sources: issuer_IR_20260515_published20260518 PDF 2,3,4,5

GUIDANCE - In August, management retained its year-end expansion objective, described a further ramp in the following year and discussed product development and customer qualification. These were plans and expectations, subject to demand, supply, certification and execution risks, rather than guaranteed shipments.

Sources: issuer_IR_20260825_published20260826 PDF 4,5,6,7

GUIDANCE

Source claim	Value / unit	Period / status
year_end_2026_annual_optical_capacity_goal	at least 6000000 optical units/year	end 2026; management plan

FACT - The August response said the new Zhejiang facility was still ramping and carried relatively high fixed costs. It also described tighter silicon-photonic chips, continuous-wave sources and DSP supply, strategic inventory and supplier negotiations. It did not quantify product-level support expense, yields or future gross margins.

Sources: issuer_IR_20260825_published20260826 PDF 4,5

FACT - The two later September records are management supplements from a site visit and an industry-event interaction. They update capacity, product readiness, supply and pricing commentary; they do not replace the two earnings-interaction records.

Products, technology and manufacturing scope

FACT - CIG combines broadband, wireless and photonics products. The optical business purchases optical devices, integrated circuits, structures and circuit boards, manufactures to customer specifications and sells through direct and indirect channels to equipment makers, operators and data-center customers. This is broader than a pure assembly-fee description.

Sources: HKEX_FY2025_A_report_pub20260331 PDF 14; HKEX_IPO_PROSPECTUS_EN_20251020 PDF 20,236

FACT - The catalog presents pluggable modules, near-packaged optics and external light sources. Internal Ethernet interfaces, lanes, lasers and aggregate bandwidth describe a device; they are not additional sold modules. Catalog availability does not establish customer acceptance, production volume or revenue.

Sources: CIG_PRODUCT_79999 Catalog item79999; complete public response; CIG_PRODUCT_79979 Catalog item79979; CIG_PRODUCT_79972 Catalog item79972; CIG_PRODUCT_79971 Catalog item79971

FACT - The CO-LO model divides responsibilities. CIG supplies design, key materials, core machinery, process and overall management; partners supply premises, labor, basic machinery and local operating support. Domestic processing fees are recorded in manufacturing overhead, while overseas arrangements supply raw materials and purchase finished goods, recorded in raw-material cost.

Sources: HKEX_IPO_PROSPECTUS_EN_20251020 PDF 236

FACT - The prospectus identifies a domestic customer-supplied-material arrangement for Customer D. That exception is not identified as the overseas high-speed optical business and cannot establish the title, pricing or gross-versus-net treatment of every optical module.

Sources: HKEX_IPO_PROSPECTUS_EN_20251020 PDF 29,82

FACT - Revenue recognition follows delivery and acceptance conditions: domestic products are dispatched and accepted; cross-border products reach the designated delivery point with the specified shipping documentation. These conditions do not by themselves establish ownership of customer-supplied chips.

Sources: issuer_H1_2026_A_report PDF 91,92; HKEX_FY2025_A_report_pub20260331 PDF 129

FACT - The Factory II announcement describes cleanroom laser and silicon-photonic-chip packaging and testing. It supports a backend capability claim, not ownership of a wafer fabrication plant or a measured yield, qualified output or capacity by product.

Sources: CIG_FACTORY_II_20260303 Issuer article, 2026-03-03

FACT - CIG and ML&S announced a joint venture headquartered in Dallas, combining Mexican volume manufacturing with Swiss advanced-packaging and backend engineering. The announced initial investment includes equipment. The retained announcement does not disclose exact legal ownership, governance, consolidation treatment or profit rights.

Sources: CIG_MLS_JV_20260313 Issuer article published2026-03-13; dateline2026-03-12

FACT

Source claim	Value / unit	Period / status
JV_initial_investment_including_equipment	56000000 USD	announced March 2026; reported

GUIDANCE - Management described customer testing, custom NPO development and planned samples and small shipments. Qualification and material supply remain conditions for commercial scale. A product demonstration or test is not a purchase order.

Sources: issuer_IR_20260909 PDF 3; issuer_IR_20260907 PDF 4,6

GUIDANCE

Source claim	Value / unit	Period / status
1.6T_customer_tests	3 customers	September 2026; management statement
NPO_sampling_window	H2 2026 period	; management plan
NPO_small_shipment_window	Q1 2027 period	; management hope
NPO_larger_scale_window	after Q2-Q3 2027 period	; management expectation

GUIDANCE - Thin-film lithium niobate is being developed with partners. Management described a longer-reach first version followed by a higher-speed roadmap, while acknowledging that complete integrated solutions are required. This is development commentary, not evidence of current mass production or wafer ownership.

Sources: issuer_IR_20260907 PDF 5; issuer_IR_20260909 PDF 4

GUIDANCE

Source claim	Value / unit	Period / status
first_TFLN_version_reach	10-15 km	; reported
first_TFLN_version_timing	end 2026 period	; management expectation

UNKNOWN - No complete current overseas bill of materials, customer-consigned PIC or DSP title schedule, transfer-price agreement, per-product yield or gross-versus-net revenue bridge was obtained. The confidential customer names raised in investor questions were not confirmed by management.

Sources: issuer_H1_2026_A_report PDF 91,92,132,157; issuer_IR_20260907 PDF 5,6; HKEX_IPO_PROSPECTUS_EN_20251020 PDF 29,82,236

A dated capacity timeline

FACT - Capacity disclosures changed over time. The earlier current capacity, the later achieved annualized level and the subsequent incremental expansion plan refer to different dates and statuses. They must not be summed as independent installed plants.

Sources: issuer_IR_20260515_published20260518 PDF 2; issuer_IR_20260909 PDF 3; CIG_20261008_Placing_CB_Terms_EN PDF 25,26

GUIDANCE - The later expansion program covers Jiashan, Malaysia, Mexico and the United States, including laser and silicon-photonic packaging and testing. Site construction and the global expansion envelope may overlap; the disclosed documents do not allocate all new capacity or investment by legal economic ownership.

Sources: CIG_20261008_Placing_CB_Terms_EN PDF 25,26; CIG_MLS_JV_20260313 Geographic manufacturing and engineering plan

GUIDANCE - Mexico was being prepared for further optical expansion to serve North American customers. The earnings interaction described preparatory activity and a targeted early-year expansion milestone; it did not report a fully accepted annual production run rate.

Sources: issuer_IR_20260825_published20260826 PDF 5; issuer_IR_20260907 PDF 4

GUIDANCE

Source claim	Value / unit	Period / status
Mexico_target_expansion_milestone	early 2027 period	; management target

FACT - The undated corporate website also carries a monthly production headline for the broad product portfolio. Its product scope differs from the dated annual optical disclosures and it cannot be annualized into optical capacity.

Sources: CIG_COMPANY Current company page, observed2026-10-26

FACT

Field / exact source path	Approved value
4/scope	Incremental end-2027 plan; subsequent financing completion does not establish that it is already commissioned.

Capital, financing, awards and currencies

FACT - The H security and the A security are share classes of the same issuer. Total economic issued capital includes both classes; the issued H count or public H float alone is not the group denominator. The classes generally are not fungible, and their quoted prices may differ.

Sources: CIG_20261014_Placing_CB_Completion_EN PDF 4; HKEX_IPO_PROSPECTUS_EN_20251020 PDF 320

FACT - The October placing and convertible-bond issue were completed on separate dates. Net proceeds and their currencies are reported below. Intended spending is a plan, not evidence that the proceeds have already been spent or that all related capacity has been commissioned.

Sources: CIG_20261014_Placing_CB_Completion_EN PDF 2,3

FACT

Source claim	Value / unit	Period / status
placing_completed	2026-10-12 date	; reported
CB_issue_completed	2026-10-14 date	; reported
placing_net_proceeds	1929.84 HKD million	; reported
CB_net_proceeds	4605.52 HKD million	; reported
combined_net_proceeds	6535.36 HKD million	; reported

GUIDANCE - The disclosed use-of-proceeds envelope allocates the majority to capacity, a further portion to upstream deployment and the balance to general corporate and working-capital uses. The targeted spending windows differ. None of these allocations establishes the ownership percentage or profit capture of a joint venture.

Sources: CIG_20261008_Placing_CB_Terms_EN PDF 25,26,27

GUIDANCE

Source claim	Value / unit	Period / status
capacity_allocation	55 percent	; reported
capacity_budget	3594.45 HKD million	; reported

Source claim	Value / unit	Period / status
capacity_spend_window	mid 2028 period	; intended completion
upstream_allocation	30 percent	; reported
upstream_budget	1960.61 HKD million	; reported
upstream_spend_window	end 2027 period	; intended completion
general_and_WC_allocation	15 percent	; reported
general_and_WC_budget	980.30 HKD million	; reported
general_and_WC_window	end 2027 period	; intended completion

FACT - The bond is a renminbi-denominated, US-dollar-settled zero-coupon unsecured issue. Its initial conversion price and call-trigger translation reference are contract terms, not a general forecasting exchange rate. Full initial conversion is conditional dilution rather than current issued capital.

FACT

Source claim	Value / unit	Period / status
bond_principal	3960000000 CNY	; reported
coupon	0 percent	; reported
issue_price	100 percent of principal	; reported
printed_maturity_date	2027-10-12 date	; reported
initial_conversion_price	128.82 HKD/H share	; reported
issuer_optional_call_trigger_translation_reference	0.8543 CNY per HKD	; Fixed translation reference in the issuer optional-call share-price trigger; not normal-maturity USD fixing.

UNKNOWN - The retained announcement prints a maturity date preceding the anniversary of the subsequently completed issue. Full Trust Deed terms and the precise normal-maturity US-dollar payment fixing were not retained. The source dates are preserved without inventing a settlement convention.

Sources: CIG_20261008_Placing_CB_Terms_EN PDF 13,14,17; CIG_20261014_Placing_CB_Completion_EN PDF 2

FACT - The monthly return reports current A-option grants separately from an ungranted reserve and the H incentive scheme pool. Some earlier A options are noted for future cancellation; the reported outstanding count is retained until cancellation is evidenced. No A restricted-share grant was made at the June grant.

Sources: CIG_20260930_Monthly_Return_EN PDF 3,4; issuer_H1_2026_A_report PDF 40

FACT

Source claim	Value / unit	Period / status
2024_options_marked_for_future_cancellation_part1	454700 options	; reported
2024_options_marked_for_future_cancellation_part2	618 options	; reported

FACT - The current retained adjusted strike for the earlier A-option plan comes from the September adjustment notice. The newer A-option strike is the dated June grant figure; no later adjustment for that grant was identified in the retained targeted notices.

Sources: CIG_20260911_A_Option_Price_Adjustment_1_TC PDF 5,6; issuer_H1_2026_A_report PDF 40,154

FACT

Source claim	Value / unit	Period / status
2024_current_retained_strike	28.8148 CNY/option	; reported
2026_dated_grant_strike	113.71 CNY/option	; reported

FACT - The earlier A plan has two equal exercise windows following the initial waiting period. The newer initial grant uses three tranches, while its reserved grant has two equal tranches. Exercise remains subject to each plan’ s service and performance conditions.

Sources: HKEX_IPO_PROSPECTUS_EN_20251020 PDF 607; issuer_H1_2026_A_report PDF 154

FACT

Source claim	Value / unit	Period / status
2024_max_term	36 months	; reported
2024_exercise_tranches	['50', '50'] percent	; reported
2024_exercise_windows	['12-24', '24-36'] months after grant	; reported
2026_max_term	48 months	; reported
2026_initial_tranches	['30', '30', '40'] percent	; reported
2026_reserved_tranches	['50', '50'] percent	; reported

FACT - The August H award is to be satisfied by newly issued H shares after vesting. Its grant-date market price is disclosed; it is not a separately reported aggregate accounting fair value. Individual performance affects vesting, and failed tranches lapse.

Sources: CIG_20260824_H_Grant_EN PDF 1,2,3,5

FACT

Source claim	Value / unit	Period / status
H_award_grant_date	2026-08-24 date	; reported
H_grant_date_close	89.85 HKD/H share	; reported
H_award_purchase_price	0 HKD/share	; reported
H_vesting_tranches	['35', '35', '30'] percent	; reported
H_vesting_dates	first, second and third grant anniversaries dates	; reported
minimum_vesting_period	12 months	; reported

FACT - The share-based payment note distinguishes cumulative equity-settled capital reserve from expense in the current half-year. The period total in that note differs slightly from the amount included in administration costs. Both are retained; no automatic addback or continuing expense rate is selected.

Sources: issuer_H1_2026_A_report PDF 133,155

FACT

Source claim	Value / unit	Period / status
cumulative_equity_settled_SBC_capital_reserve	83468073.67 CNY	; reported
H1_period_equity_settled_SBC_note_total	2083933.36 CNY	H1 2026; reported
H1_admin_SBC_expense	2084646.48 CNY	H1 2026; reported
unreconciled_period_expense_difference	713.12 CNY	; arithmetic difference; explanation unavailable

FACT - The retained monthly and next-day returns report no treasury shares. The disclosed dividend is cash, with a dated currency-conversion rate; it is not evidence of a scrip issue. Historical IPO greenshoe and cornerstone-lockup information remains dated history rather than a new lockup attached to the current placing.

Sources: CIG_20260930_Monthly_Return_EN PDF 2,6; CIG_20261012_Next_Day_Return_EN PDF 2,3; CIG_20260901_Interim_Dividend_Update_EN PDF 1,2,3; HKEX_IPO_PROSPECTUS_EN_20251020 PDF 399; CIG_20251110_Full_Greenshoe_Exercise_EN PDF 1,2

FACT - Financial statements are presented in renminbi; the H security trades in Hong Kong dollars, and management describes substantial direct US-dollar overseas settlement. Reported finance expense contains foreign-exchange effects as well as net interest. A currency quote, a bond call-trigger translation reference and the dividend conversion rate are distinct facts.

award unknowns

Field / exact source path	Approved value
0	Current grant-specific A-option accounting fair value and complete numeric valuation inputs are not established by the retained note; the option-count-times-strike amount is not independently established fair value.

Field / exact source path	Approved value
1	The H grant announcement discloses a market price but no separate aggregate IFRS grant-date fair value.
2	Potential dilution depends on exercise, vesting, performance, cancellation and bond terms; no fully diluted forecast denominator is selected in these factual blocks.

Historical product disclosure and presentation bridge

FACT - The prospectus provides historical product-line revenue, gross profit, margin, volume and average selling prices. It is a dated historical product table, not a current speed mix or a substitute for the missing latest half-year split.

Sources: HKEX_IPO_PROSPECTUS_EN_20251020 PDF 15,17,198,199,333,334

FACT - The prospectus and the PRC comparative statements use different displayed totals and cost classifications. Other-business revenue and cost explain the total-versus-main-business difference; adding the PRC inventory impairment to main-business cost reproduces the prospectus cost and gross profit at its rounding precision. This is an arithmetic compatibility bridge, not a separately disclosed reclassification schedule.

Sources: issuer_H1_2026_A_report PDF 132,135; HKEX_IPO_PROSPECTUS_EN_20251020 PDF 15,198,332,333

FACT - Reported product volumes are rounded in thousands. Dividing rounded line revenue by rounded volume need not reproduce the separately printed average selling price. No finer exact volume is solved from that difference, and no speed allocation is supplied by the historical line total.

Sources: HKEX_IPO_PROSPECTUS_EN_20251020 PDF 15,17,198,199,333,334

FACT - The annual report also discloses optical revenue, cost and physical production and sales for the full year. That line includes multiple speeds; it cannot be carried forward as a current high-speed shipment mix.

Chinese-source market, demand, margin, timing and risk evidence

FACT - The Chinese-source packet maps issuer disclosures to five questions: market size, demand, margin, timing and risk. It preserves the issuer’ s attribution and the limits of each source. No independent China-only market total, probability or financial forecast is selected.

Sources: issuer_IR_20260907 PDF 2,3,4,5,6,7; issuer_IR_20260909 PDF 2,3,4; issuer_H1_2026_A_report PDF 15,17,63,66,132; CIG_20261008_Placing_CB_Terms_EN PDF 25,26,27

China source five variable packet

Field / exact source path	Approved value
0/variable	TAM
0/classification	GUIDANCE
0/paragraph	In the Chinese site-visit record, management attributed global high-speed market forecasts to third-party research and industry expectations. These are global unit forecasts, not a China end-demand total or accepted company orders. The speed-specific estimate is a subset of the broader market, not an extra pool.

1/unknowns/0	Accepted shipment volumes by speed and customer, firm backlog, identifiable customer capex wallets and exact utilization are not disclosed.
1/overlap control	A customer threshold is not booked volume; tests and catalog SKUs are not orders.
2/variable	Margin
2/classification	FACT
2/paragraph	Current consolidated revenue and gross profit are reported, but the current optical gross margin is not. Management linked improved profit to optical mix, described core-component tightness and procurement preparation, and discussed cost reductions offsetting pricing pressure. The disclosed high-speed quote is a dated management indication for one product class, not group average selling price.

2/unknowns/0	No current optical external revenue or cost partition, speed-specific gross margin, product-level support expense or overseas component-title price bridge.
2/unknowns/1	VAT, Incoterms and gross-versus-net scope of the management price indication are not specified.
2/overlap control	Do not multiply every optical unit by one speed quote; historical product gross profit and impairment classification must be kept consistent.
3/variable	Timing
3/classification	GUIDANCE

Field / exact source path	Approved value
3/paragraph	Management-reported attained annual capacity, an opportunity-level year-end expansion and the later additional-capacity financing plan have different dates and evidential status. NPO samples and hoped-for initial shipments still depend on customer and supply readiness. Financing completion is evidence of funding, not completion of equipment installation or qualification.

Field / exact source path	Approved value
3/source refs/2/PDF pages/0	2
3/source refs/2/PDF pages/1	3
3/unknowns/0	Commissioning by site and speed, actual yield, customer acceptance, ramp utilization and legal attribution of every new line are not disclosed.
3/overlap control	The October incremental plan is not current installed output; Mexico and partner-site plans may sit within the global envelope.
4/variable	Risk
4/classification	FACT
4/paragraph	The Chinese records identify supply shortages, price and lead-time uncertainty, long qualification cycles, customer confidentiality and execution risk. Current cash generation was negative despite reported profit, while traditional broadband and wireless demand and input costs also affected the consolidated result. No unquantified banking capacity or undisclosed joint-venture profit entitlement is assumed.

4/source refs/3/anchor	Ownership and investment scope
4/unknowns/0	Quantified unused committed facilities; current overseas component title and allocation; exact ML&S economic rights; precise conversion or maturity settlement FX mechanics.
4/overlap control	Revenue growth, capacity and cash funding are separate constraints; a global optical-demand narrative does not remove traditional-business or working-capital risks.

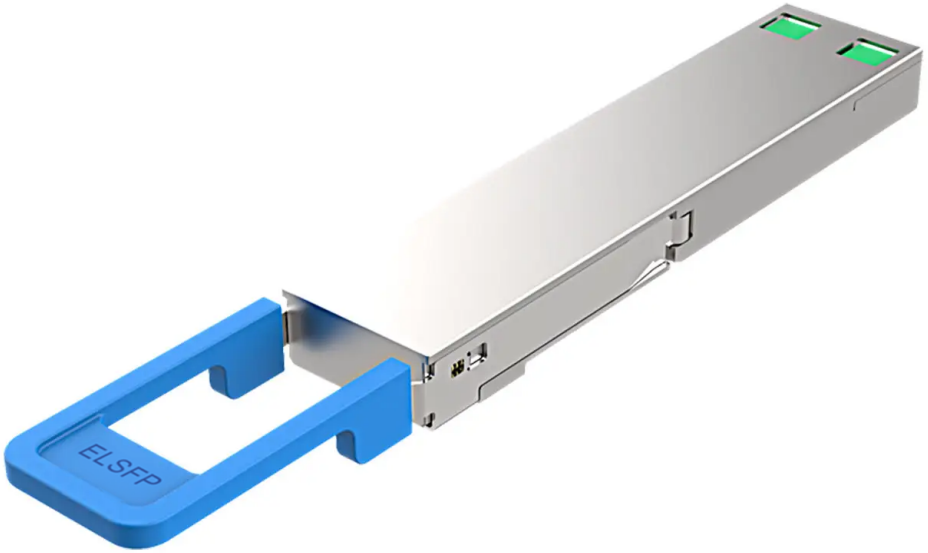

Original-source exhibit captions

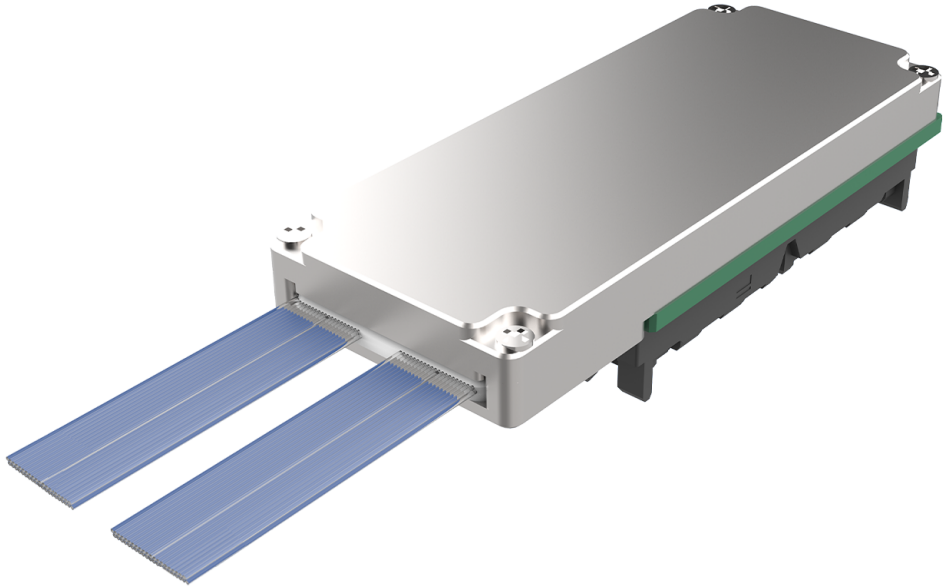

800G OSFP 2xDR4 catalog image: two 400GbE interfaces belong to one physical module. The stated reach is 500m; the image is not shipment or qualification evidence. Source: CIG_PRODUCT_79999

1.6T OSFP 2xFR4 catalog image: two 800GbE interfaces belong to one physical module, with a stated reach of 2km. Catalog specifications do not establish current volume. Source: CIG_PRODUCT_79979

ELSFP external-light-source catalog image. Eight 1311nm lasers and the stated +20dBm output per fibre describe one source package, not eight complete transceivers. Source: CIG_PRODUCT_79971

6.4T NPO catalog image. The 32×200G lanes, four 1.6TbE interfaces and 500m reach describe one package. The dated written records describe development and customer work, not proven mass revenue. Source: CIG_PRODUCT_79972

Issuer Factory II opening image, dated March 3, 2026. The accompanying article describes laser and silicon-photonic-chip packaging and testing; it does not establish wafer fabrication ownership or manufacturing yield. Source: CIG_FACTORY_II_20260303

Issuer-labeled China manufacturing-footprint illustration. Retain the small original at thumbnail scale; an architectural illustration does not prove commissioned capacity. Source: CIG_MANUFACTURING

Issuer-labeled Mexico manufacturing-site image with partner branding. Retain the small original at thumbnail scale; the image does not establish subsidiary ownership or commissioning of a particular high-speed line. Source: CIG_MANUFACTURING

MODEL - Stress and unused-authority sensitivities

MODEL - Stress diagnostics change one stated control or coherent scoped operator. A funding failure is conditional operating arithmetic and is not an active funded ceiling. All33 summaries are retained. The unused-authority case jointly propagates shares and SBC at the stated dates and fair-value proxies; it is separate from current awarded shares and is not an actual grant.

Stress: demand_minus20
