ShunSin: qualification must turn into profitable receipts

ShunSin can earn a larger packaging and test wallet as AI networks move more data through optical connections. Its technical work with COUPE and its stated CPO production capability give it a route into more complex optical-engine assembly. The shareholder opportunity depends on customers accepting that production at prices and yields that cover factories, engineering and financing.

The current model places a 55% probability on a defined CPO qualification and loading path, then includes the cost of partly committed assets when qualification is late. A separate Vietnam SiP project uses published project economics with an explicit China-production transfer adjustment. The selected Q4 2027 ceiling is about TWD 71 per share under the existing 20x operating-profit method.

Snapshot	Current research state
Research date and cutoff	21 October 2026, early Toronto. Full actual financials through June; monthly sales through September.
Identity	ShunSin Technology Holdings Limited; TWSE6451; listed 26 January 2015; Cayman-incorporated semiconductor packaging group.
Status and classification	Covered; holding status is not asserted. Competitive packaging beneficiary with a potential qualification bottleneck; no proven permanent sole-source chokepoint.
Analytical score	44 /60 =73%; Watchlist
Protected Excel Base	82; retained separately from the analytical score
Dated price snapshot	About TWD 353 at 20 October 2026 regular close in Taiwan. Exact quote remains in the numeric record.
Shares snapshot	About 118 million currently issued. About 122 million Q2 diluted weighted shares are a historical measure. The forward proxy is described separately.
Current capitalization	An independently reconciled current outstanding-share market capitalization was not obtained; no forecast-share product is presented as reported capitalization.
Selected earnings window	Q4 2027 through Q3 2028; operating profit about TWD 421 million
Calendar 2027 cross-check	Operating profit about TWD 212 million across Q1 through Q4 2027; a different window from the active valuation.
Valuation convention	20x consolidated operating profit divided by the starting-quarter forward share proxy; TWD throughout; no FX conversion.

Amounts and percentages in newly written reader copy are rounded to whole numbers. Exact inputs and arithmetic remain in the model. Rounded components may not sum to rounded totals. Original source exhibits retain their original language and precision. LOW means limited confidence in the proxy; it does not mean a guaranteed conservative outcome.

Where the company captures value

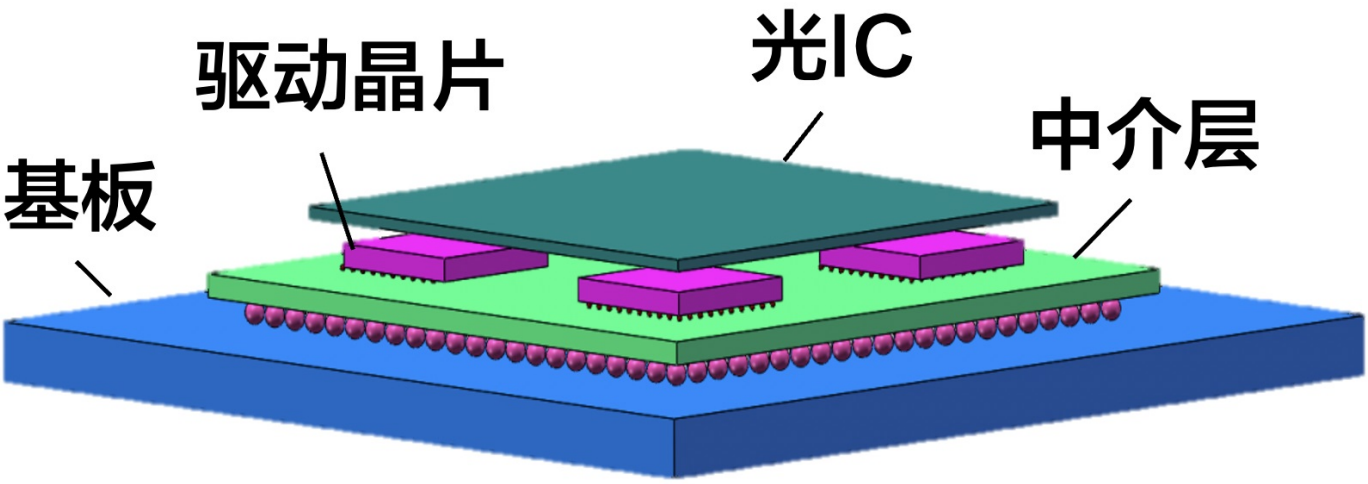

Figure S-A. ShunSin original CPO product page and original diagram. Undated issuer illustration: driving chips, interposer and optical integrated circuits. Capability diagram; no orders, pricing or forecast amounts.

Co-packaging brings optical and electronic elements close together. Precision attachment, coupling, testing, thermal behavior and production yield matter as connections become faster and more complex. A qualified assembler can capture a service wallet through repeat production and process execution. That wallet is smaller than the complete switch, AI server or data center.

The issuer describes capability for roughly 51-terabit and 102-terabit CPO platforms and reports cooperation on the back-end optical engine for TSMC COUPE. These are useful signs of technical relevance. Binding customer unit orders, recognized service revenue per engine, qualified capacity and product margins remain undisclosed in the sources reviewed. Issuer annual report; June management interview.

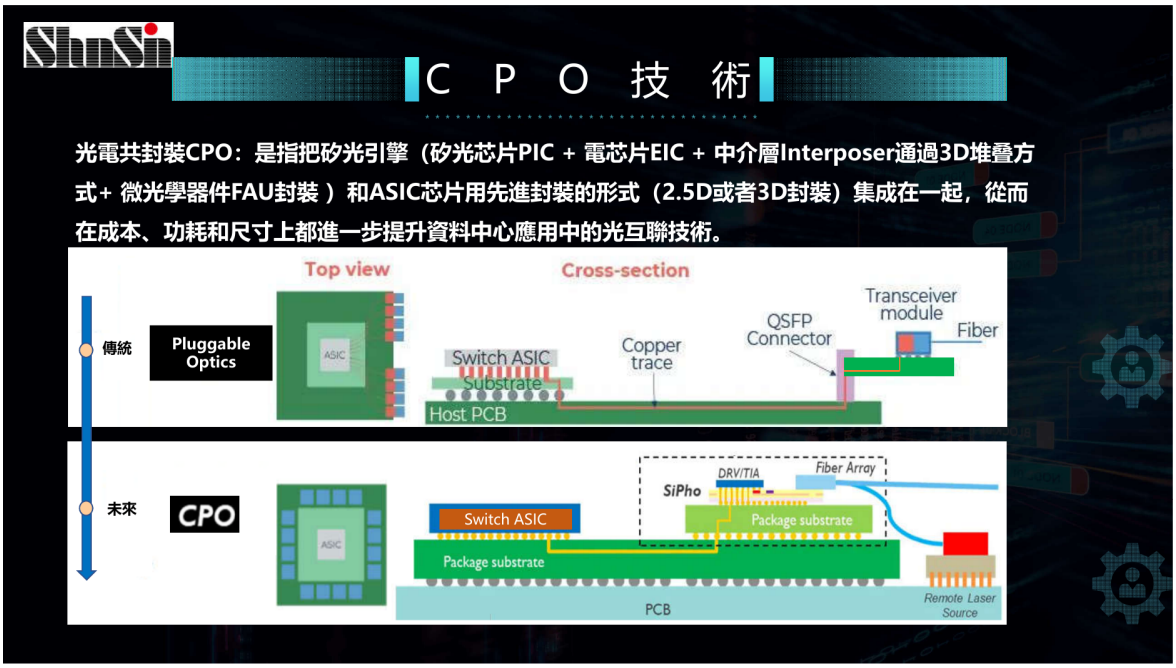

Figure S-B. ShunSin September 2024 investor deck, PDF page 16. Original comparison of optical co-packaging structures. English reading: optical and electronic chips, interposer and fiber coupling are distinct process steps. The source does not establish a vendor-specific engine count or assembly fee.

Pluggable optics and CPO can coexist for different reach, serviceability and deployment needs. Faster pluggables also raise assembly complexity. A broad optical market forecast therefore supports a research direction while product architecture and accepted customer production determine the company receipts.

SHUNSIN / 21 OCTOBER 2026 / FRAMEWORK 8.0

Supercycle, S-curve and adjacent markets

The current business combines established optical modules with SiP and sensors. CPO assembly is in an early qualification and production-ramp phase. The Vietnam SiP project is a geographic capacity and manufacturing-cost transition. The group spans several curves; an early CPO program does not make all legacy sales an early-stage monopoly.

Expansion lens	Engineering route	Current model treatment
Phase 1: current AI networks	More data and faster links increase packaging, alignment, testing and yield requirements.	Planning weight 100% for the application, while the exact ShunSin CPO outcome uses 55% probability and bounded company receipts.
Phase 2: physical AI and edge	Sensors, wireless modules and compact systems can support robots, automotive and industrial devices.	Framework planning weight 50%; opportunities remain within the same SiP/sensor and optics vectors. No separate generic robot revenue pool.

Expansion lens	Engineering route	Current model treatment
Phase 3: emerging applications	Optical switching, specialized sensing, satellite filters and heterogeneous integration can widen the technical wallet.	Framework planning weight 20%; no unsupported quantum, space or glass-panel revenue addition. Specific accepted programs must enter the existing company bridge.

年集團將持續擴大越南製造規模，開發超小型 BAW 濾波器 DPS 製程，啟動建立晶圓 RDL（重佈線）、Bumping（凸塊）等先進製程建置，穩固未來海外市場訂單。

光學模組：穩步提升光收發模組業務規模，並同步建構「從封測製程、光器件到整機交付的一站式製造與服務能力」。越南廠將持續提升自動化與製程良率、導入精益與數位化管理以擴大量產效率與交期競爭力，承接主力產品之量產與快速交付；中山廠將繼續專注於新型光學產品項目，包含 102.4T CPO 等新產品的研發與 NPI。在產品與能力佈局上，除持續擴大 800G/1.6T/3.2T 模組外，將積極開發 WSS/ROADM/EDFA/OCS 等無源/有源子系統與模組產品，並拓展相干（Coherent）模組之製造服務，提升高階產品組合與客戶黏著度；同時推進 4D Sensor 之模組化開發，擴展至機器人等新應用場景。製程端將以 Post-wafer 服務為延伸，串聯封裝、光學耦合、模組組裝、測試驗證與可靠度能力，強化從 IC/晶圓後段處理→光器件/光引擎整合→光模組量產→系統級測試與售後的完整供應鏈覆蓋，為客戶提供更短交期、更高良率與更低整體製造成本之整體解決方案。

感測器：2025 年光源感測器產品總出貨量超 8.7 億顆，繼續保持行業領先地位；封裝技術持續向系統化、複雜化、功能多樣化發展，應用領域從智慧手機、平板電腦拓展至穿戴式裝置、無人機、掃地機、智慧家電、機器人以及汽車電子等領域，預計 2026 年國產化趨勢將使得感測器產品滲透率進一步加大。集團將通過提升自動化程度、提供封測 Turnkey 服務、中國及越南兩地製造等方式，繼續深耕感測器領域，擴大市場份額。

汽車電子模組：2025 年持續量產供應車載激光雷達感測器於中國大陸新能源車用市場。2026 年隨著激光雷達成本下探，駕艙應用與補盲需求的增加，大面陣式激光雷達感測器需求將持續增加，集團將配合客戶開發相應高可靠性材料及製程，爭取機會。

測試設備與測試服務：依託自研測試設備，尋找國內外客戶開拓測試服務業務(CP&FT 測試(RF 射頻測試/MCU/光學產品測試/MEMS 產品測試))。並透過與集團內部設計公司保持著良好合作關係，藉此進一步擴大晶片測試的生產規模，保持低成本、高良率的競爭優勢，擴大量產服務規模，專攻測試技術研發，並擴展業務來源。測試設備開發方面，初期則採用代理各類先進測試儀表及提供測試解決方案，加以自身的技術優勢，建立與各設計公司業務往來關係。

金屬導線架封裝：本集團在金屬導線架封裝領域，2026 年將以技術提升、封裝形式創新及成本優化為核心，推動氮化鎵與碳化矽等先進封裝，導入 TO247、TOLL 及 TOLT 等新型封裝以拓展第三代半導體市場；同時提升台灣與中國材料供應佔比並優化導線架工藝，以降低成本、縮短交期並提升產能，藉此強化競爭力。

2. 中、長期計畫

本集團主要優勢在於擁有豐富模組製造經驗，於高密度封裝、超小型封裝、陶瓷和散熱等方面建立技術優勢，未來研發方向將繼續建立本集團既有之技術優勢，從產業鏈及產品複雜度進行延伸，未來研發方向包括新型雙面封裝模組(Double Side Molding Ball Grid Array)、應用光學感應器、生物感測器、高速光纖收發模組、共封裝光學(Co-package)、光引擎封裝、4D sensor 模組、汽車電子、多排引腳 QFN(Multi-raw QFN)、多晶片高堆疊封裝(Multi Chip Package; Multi Stack Die Package)、高功率電源管理 IC 及 3D 感測前端模組等。

測試服務方面，定位“以中高階晶圓及成品測試為核心，積極拓展工業級、車規級及高算力產品測試”的發展策略，聚焦 MEMS 感測器（壓力感測器、加速度計、陀螺

74

Figure S-C. FY2025 annual-report package, PDF page 79. Original local-language process roadmap, including optical engines, CPO, SiP and advanced processes. English reading: a technology pipeline across several facilities. Development and NPI entries are not accepted high-volume orders.

More process steps can expand the service wallet while making good-unit capacity harder to produce. Alignment, rework, test time and lower yield can offset a higher nominal service price. The model includes a

mature manufacturing margin and explicit fixed costs rather than adding a second scarcity-pricing uplift. Current source evidence does not establish an independent price premium to stack onto the CPO proxy.

Latest actuals and what remains unreported

TWD million unless stated	Q1 2026 actual	Q2 2026 actual	H1 2026 actual
Revenue	1,553	2,015	3,569

Figure S-D. MOPS issuer financial statements, approved 26 August 2026, PDF page 8. Original Mandarin consolidated income statement; source units TWDthousands and EPS in TWD. The table above translates the selected values into readable units. June-quarter profit is actual; September-quarter profit remains unreceived.

Q2 other gains include about TWD 192 million of investment fair-value gains. Those gains are excluded from the operating-profit bridge. H1 operating loss and weak cash generation remain relevant despite the recovery in the June quarter. The company does not provide a current disclosed CPO segment margin.

Monthly telemetry and the near-quarter anchor

2026 month	Revenue, TWD million	Status
2026-01	616	Reported monthly
2026-02	364	Reported monthly
2026-03	573	Reported monthly
2026-04	641	Reported monthly
2026-05	624	Reported monthly
2026-06	750	Reported monthly
2026-07	777	Reported monthly
2026-08	692	Reported monthly
2026-09	717	Reported monthly

Near-period model boundary	TWD million / qualification
Q3 sales	2,186; July through September reported monthly total
Q3 GP / operating profit	Unknown as reported actuals; modeled below from calibrated costs
Q4 legacy sales	2,300; LOW model estimate before the NEW Vietnam project
FY2026 legacy reference	8,054; H1 financial actual plus Q3 monthly actual plus Q4 legacy estimate
Q4 weighted new Vietnam receipts	176 before removal of displaced China receipts
Q4 displaced China SiP receipts	88 removed from the legacy reference
Q4 total after transfer treatment	2,388; legacy less transfer plus weighted new project
FY2026 modeled total	8,142 after the transfer adjustment; about 8% growth
June management goal	Double-digit revenue growth in 2026, with greater growth in 2027; qualitative goal, not a numeric formal guidance range

The September sales quarter is about TWD 2186 million. The month-to-month path contains both growth and volatility, and cannot establish a particular CPO customer, service fee or quarterly operating margin. Source: TWSE issuer profile, generated 21 October, PDF page 4.

The full-year model is slightly below the June qualitative double-digit goal. The documented reason is the now-reported Q3 sales path and uncertain timing of new-project commercial receipts. The Q4 estimate retains growth without assuming an unreported sharp acceptance step. This is an explicit analytical divergence for the approved current case; the goal remains visible and a stronger Q4 shipment result would update the estimate.

Ten-percent growth illustration	TWD million, rounded
FY2026 sales needed for exactly 10% growth	8,285
Q4 total sales needed after actual H1/Q3	2,531
Current modeled Q4 total sales	2,388
Additional Q4 sales needed for the illustration	143

The 10% illustration is arithmetic for reading the qualitative double-digit aspiration, not a newly asserted company guidance range. The current divergence was explicitly approved on 21 October using the later sales evidence; it is not presented as a newer management downgrade. No active forecast is added from this illustration.

Monthly Q2 sales sum differs from the financial filing by TWD 2000. The financial P&L controls the Q2 profit calibration; monthly telemetry controls the September-quarter sales actual. The small source difference is retained rather than forced to reconcile.

SHUNSIN / 21 OCTOBER 2026 / FRAMEWORK 8.0

The newest two management events: completeness

Official event	What was read	What is still missing
21 November 2025 investor conference	All 17 official slides, including 9M2025 mix and technology roadmap.	Spoken prepared remarks and Q&A; the final Q&A title slide contains no answers.
24 September 2024 investor conference	All 17 official slides, including CPO architecture and process positioning. MOPS upload dated 25 September.	Spoken prepared remarks and Q&A; no full call transcript or audio obtained.

The issuer notices link to replay pages that redirect to registration and terms. No form was submitted and no audio or transcript was captured. The official TWSE and issuer indices did not identify a newer 2026 investor call at the review cutoff. These decks are the newest two located official management presentations, with a genuine spoken-content gap. TWSE event index; latest issuer notice; prior issuer notice.

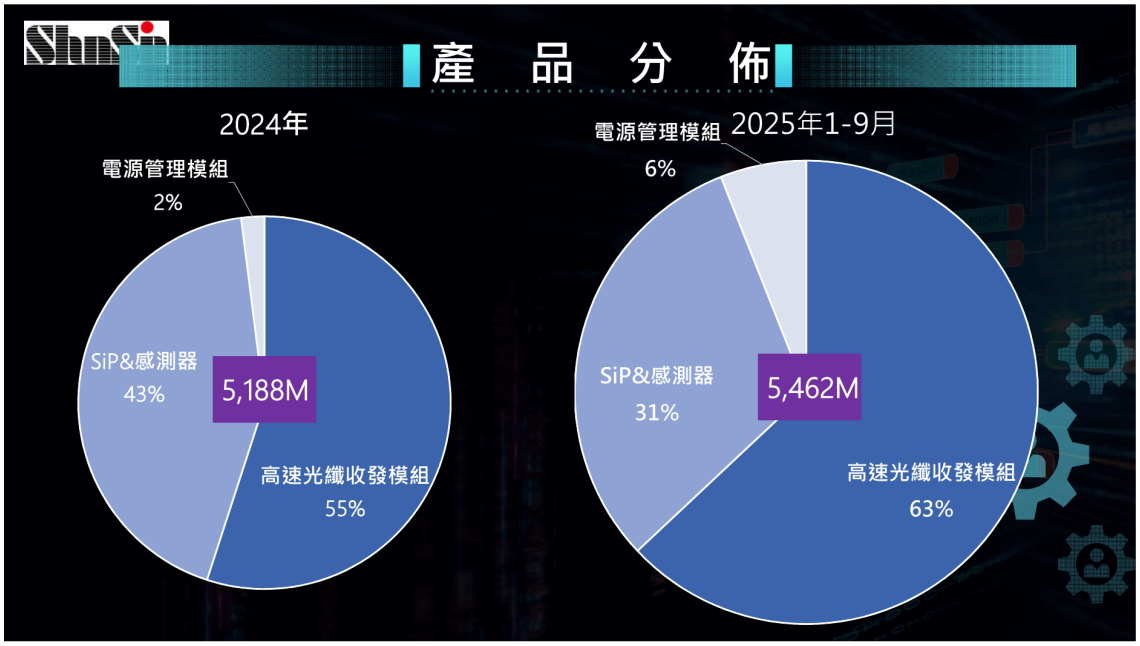

Figure S-E. November 2025 issuer presentation, PDF page 6. Original 9M2025 mix: optical 63%, SiP31%, power 6%. This period differs from the FY2025 annual mix used by the model. It is not a second revenue pool.

The June 2026 AGM interview supplies newer direct management comments on COUPE, capex and Vietnam timing. It does not substitute for a full earnings-call Q&A. The August regulatory filings and September monthly sales are independently usable even while the replay gap remains.

SHUNSIN / 21 OCTOBER 2026 / FRAMEWORK 8.0

Mandarin source packet and calibration

Vector / confidence	Primary source and known scope	Transmission into the model
Legacy optics / LOW allocation	S1 exact group Q2 costs; S3 FY2025 optical mix about 62%. No current product P&L.	Use the annual mix as a proxy and solve optical GP as the residual after the explicit SiP allocation. Group Q2 GP/opex match the filing.
Legacy SiP and sensors / LOW allocation	S3 FY2025 mix about 38%; China and Vietnam manufacturing evidence.	Use a 15% rounded reader margin proxy, preserve exact underlying 145-per 1000 assumption and retained factory costs.
New CPO / LOW economics	S3 production capability; S14 COUPE/capex comments; S8 phased Bumping/RDL investment.	Bounded productive-asset allocation, loading, sales turns, qualification probability and full fixed/variable cost bridge.
New Vietnam SiP / source project, LOW transfer/timing	S3 published project revenue/GP/OP, delayed spend and planned ramp.	Weight two timing states; remove half the receipts from legacy China demand and retain manufacturing/opex costs.

Source ladder: issuer financial filings and exchange data establish actuals; issuer management presentations establish capability and plans; a direct Mandarin management interview supplies newer commercial context. Repeated media accounts of the same underlying order claim are one signal. No broker target or broad module TAM is used as company sales.

The exact latest reported June-quarter group GP is TWD 339 million and opex TWD 287 million. The product allocation sums to those values. The annualized reference is a planning path rather than reported segment guidance. New CPO overlaps legacy optics, and new Vietnam overlaps China SiP; both removals occur before the new vectors are added.

SHUNSIN / 21 OCTOBER 2026 / FRAMEWORK 8.0

Factories, geography and profit ownership

Figure S-F. November 2025 issuer deck, PDF page 13. Original plant/capability map. English reading: different China/Vietnam locations serve optical and SiP processes. A location or new plant label does not establish identical product economics or wholly incremental demand.

Foxconn Far East held about 56% at June-end and HonHai is the ultimate parent. Related-party sales were only about 2% of H1 revenue. Parent-group AI manufacturing ambition cannot be treated as a matching ShunSin sales award. Source: Q2 filing, PDF pages 44-45.

Profit-capture boundary	Current evidence
Optical subsidiary	ShunYun Zhongshan is about 78% owned; minority shareholders own the remainder. Its subsidiaries include optical production in Vietnam.

Profit-capture boundary	Current evidence
ShunSin Vietnam	Fully owned SiP operation; the new funded SiP project belongs to this distinct capacity discussion.
Current entity result	H1 ShunSin Vietnam net loss about TWD66 million is already consolidated; it is not a separately reported operating loss for the new project.
Valuation boundary	The existing consolidated operating-profit method is retained. Exact future parent capture cannot be derived by deducting the minority percentage from every group profit dollar.

H1 group NCI net earnings were about TWD 7 million; Q2 NCI net earnings rounded to zero with a small actual loss. Those are net-income attribution figures across current entities. The model includes a separately labeled 10% capture-leakage diagnostic, while preserving the sanctioned consolidated OP basis.

SHUNSIN / 21 OCTOBER 2026 / FRAMEWORK 8.0

CPO: capital must become accepted company receipts

Management described total capital expenditure of TWD 4-5 billion through 2027, mainly CPO automated lines and advanced packaging. The model takes the TWD 4500 million midpoint and assigns 30%, or TWD 1350 million, to a qualified CPO productive-asset cohort. Both the allocation and its throughput are LOW assumptions. The entire announced budget is not treated as CPO revenue. Direct June management interview.

CPO driver	Current modeled value / scope
Capital program reference	TWD 4500 million midpoint; mixed CPO and advanced-packaging scope
CPO productive-asset allocation	30%; TWD 1350 million; no extra addition of the separate Vietnam/RDL budgets
Accepted sales at full loading	TWD 140 sales per TWD100 of new gross productive assets; TWD 1890 million annually
Annual accepted loading	50% in 2027;75% in 2028;90% in 2029 and 2030
Joint qualification/timing probability	55%; applies to the exact asset allocation, customer acceptance and loading path
Existing optics overlap	20% of weighted CPO receipts removes legacy optical receipts first
Mature gross margin	30% after modeled manufacturing costs and depreciation; not an issuer reported CPO margin
Additional engineering/support	5% of weighted CPO receipts, outside manufacturing costs

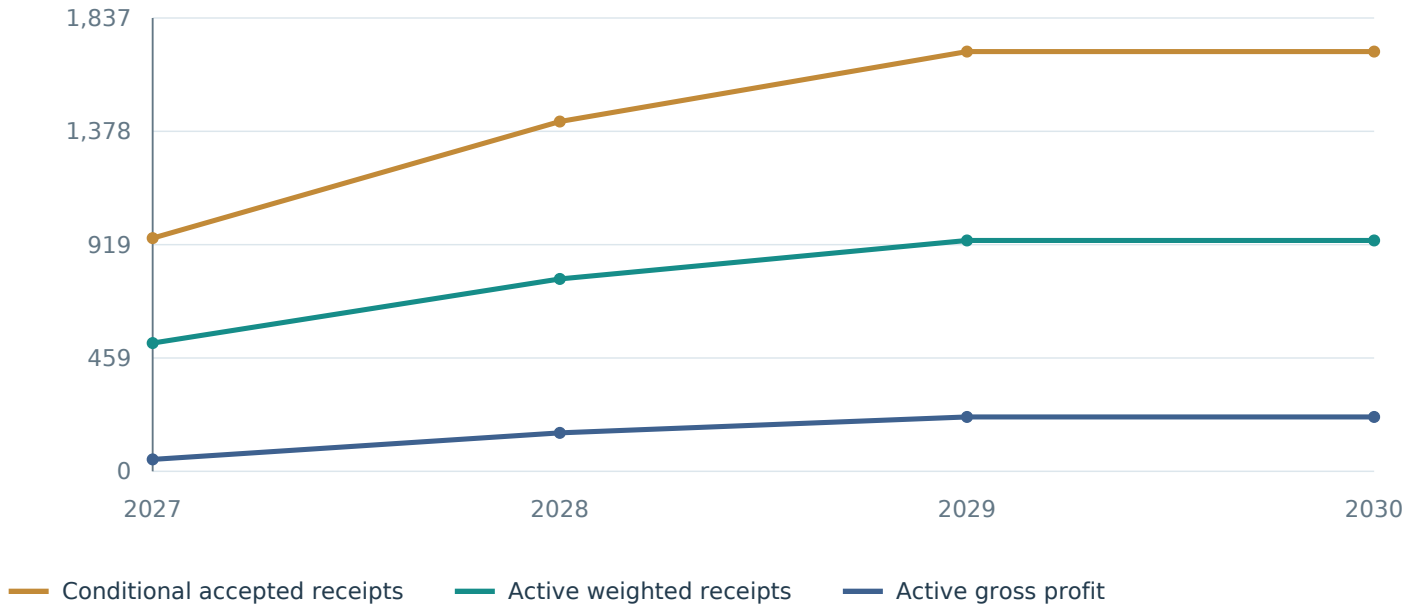

The reported group PPE turnover was 137% in 2025 and 111% in 2024; H1 annualized sales were about 116% of average net PPE. Those denominators include depreciated factories and legacy assets. The modeled 140% on NEW gross CPO productive assets is a different measure and requires efficient loading and a higher-value process mix. It remains a bounded proxy, with lower and higher turns tested. Annual report, PDF page 92; Q2 balance sheet, PDF page 7.

The service-recognition boundary matters: the proxy estimates company accepted receipts, without asserting the unverified number of cabinets, engines per cabinet, service fee or vendor share. A server rack, switch, engine and assembled module can have different billing units. No complete module selling price is assigned to an assembly-only service.

CPO operating driver and the fixed-cost burden

CPO: conditional receipts, weighted receipts and gross profit

TWD millions per calendar year

All observations are LOW model outputs.55% qualification probability is applied once. Gross profit retains fixed manufacturing costs in success and part of those costs in failure.

Year	Loading	Conditional receipts	Active receipts	Active GP	Support opex
2027	50%	945	520	48	26
2028	75%	1,418	780	156	39
2029	90%	1,701	936	220	47
2030	90%	1,701	936	220	47

Full annual CPO manufacturing cost	TWD million / method
Equipment assets	70% of 1350;7-year life

Full annual CPO manufacturing cost	TWD million / method
Building assets	30% of 1350;20-year life
Depreciation	About 155 per year
Fixed factory staff / reliability	60 per year
Total full fixed manufacturing	About 215 per year
Variable manufacturing cost	About 59% of accepted receipts, solved to 30% gross margin at full loading
Late/failed qualification state	No accepted CPO receipts; half the full fixed manufacturing burden remains
Expected fixed cost	About 167 per year in the active weighted case

At low loading, the same fixed assets absorb fewer receipts. The model therefore does not give the first production cohort a free 30% margin. The full-cost success and failed/late outcomes are evaluated coherently, then weighted. The amount of committed failure cost, asset mix, lives and staff cost remain analytical assumptions.

The issuer reports straight-line machinery and test lives of 1-10 years, and buildings 21-40 years. The model uses 7 years for equipment and 20 years for the building proxy; the latter is slightly shorter and more conservative than the issuer building range. Depreciation is already in manufacturing costs and is not deducted again from OP. FY2025 financial filing, PDF page 20.

充實營運資金	2025 年第一季	102,049	102,049	—	—	—	—	—	—	—
合計		2,850,698	291,245	189,196	619,847	634,588	499,471	259,282	290,051	67,018

5.預計產生之效益

(1)建置廠房及購買機器設備

本公司本次計畫總金額 2,850,698 仟元，其中 2,110,374 仟元用以建置廠房，638,275 仟元用於購買機器設備，實際募集資金高於發行總面額之 102,049 仟元用以充實營運資金。本公司長年耕耘於系統模組封裝(System in Package，以下簡稱 SiP)領域，有鑑於國際局勢變化，為分散地緣政治風險，將主要位於中國生產之系統模組封裝產能進行分散，另因考量中國人力成本升高，為適當降低生產成本以增進公司競爭力等因素，規劃越南子公司 Shunsin Technology (Vietnam) Company Limited(以下簡稱訊芯越南)興建廠房及購置機器設備，以擴充本集團於越南之 SiP 產品生產，預計 2026 年第二季建廠完成後開始進行試車，2026 年第四季正式投入生產。本次計畫規劃於訊芯越南建置廠房及購買機器設備，其預計可能產生之效益如下：

單位：仟顆/新台幣仟元

年度	項目	生產量	銷售量	營業收入	營業毛利	營業淨利
2026	SiP 產品	83,434	83,434	234,097	(1,084)	(52,167)
2027	SiP 產品	504,778	504,778	1,589,444	293,173	160,140
2028	SiP 產品	908,600	908,600	2,842,907	666,073	438,641
2029	SiP 產品	908,600	908,600	2,842,907	666,073	438,641
2030	SiP 產品	908,600	908,600	2,842,907	666,073	438,641
2031	SiP 產品	908,600	908,600	2,842,907	666,073	438,641
2032	SiP 產品	908,600	908,600	2,842,907	666,073	438,641

(2)充實營運資金

本次募集資金計畫中之 102,049 仟元用於充實營運資金，以支應營運規模成長所需之營運週轉金，可降低對銀行之依存度，若以本公司短期借款加權平均借款利率約 2.23%設算，預計 2025 年度及其以後各年度分別約可節省 1,896 仟元及 2,276 仟元之利息支出，預計可提升本公司資金靈活度且強化財務結構，有利於本公司未來整體營運發展。

53

Figure S-G. FY2025 issuer annual-report package, PDF page 58. Original funded SiP project forecast. Units are thousand units and TWDthousands; the English table below converts monetary values to TWDmillions. The purpose includes diversifying China capacity and lowering labor cost. This is a conditional SiP project plan.

Conditional published project	2026	2027	2028 onward
Units, million	83	505	909

Conditional published project	2026	2027	2028 onward
Revenue, TWD million	234	1,589	2,843
Gross profit	-1 neg	293	666
Project opex, GP less OP	51	133	227
Operating profit	-52 neg	160	439

The project budget is about TWD 2851 million: factory 2110 million, equipment 638 million and working capital 102 million. It was financed largely by the 2025 convertible issuance. The production plan includes startup losses before mature output. These GP and OP forecasts already include project costs; another full depreciation or support deduction would duplicate costs.

Some production replaces capacity previously in China. The active model removes 50% of project receipts from legacy SiP, then adds the full project vector. It retains the old factory fixed costs rather than assuming a closure or automatic cost-saving event. The transfer fraction is LOW; the source does not quantify it.

Vietnam: timing, transfer and utilization

(二)執行情形與效益分析：

1.執行情形

單位：新台幣仟元

計畫項目	執行情形		截至 2026 年第一季止
建置廠房	支用金額	預定	1,940,815
		實際(註)	898,896
	執行進度(%)	預定	91.97
		實際	42.60
購買機器設備	支用金額	預定	191,483
		實際	67,568
	執行進度(%)	預定	30.00
		實際	10.59
充實營運資金	支用金額	預定	102,049
		實際	102,049
	執行進度(%)	預定	100.00
		實際	100.00
合計	支用金額	預定	2,234,347
		實際	1,068,513
	執行進度(%)	預定	78.38
		實際	37.49

註：實際支用金額係以台灣銀行公告之越南盾兌換新台幣平均匯率計算

2. 進度超前或落後原因

(1)建置廠房

截至 2026 年第一季止，本公司建置廠房預定資金執行進度為 91.97%，實際執行進度 42.60%，建置廠房資金運用計畫進度落後主係因政府部門施工審核作業時間較長使工程進度延宕，本公司已於 2025 年 4 月初取得工程建照許可並開始動工，現依計畫項目執行主體結構建置，以及機電及消防等工程，建築之室內外裝修工程亦已開始進行，然因部分工程品質未達標準使驗收作業有所延遲，以及受到當地政府行政區重組影響，前期行政流程尚不明確，使承包商延後請款作業，工程進度均依原計畫推進。經評估，本公司建置廠房計畫項目執行進度落後之原因尚屬合理，嗣後將持續注意工程進度，應無重大異常之情事。

(2)購買機器設備

截至 2026 年第一季止，本公司購買機器設備預定資金執行進度為 30.00%，實際執行進度 10.59%，購買機器設備資金運用計畫進度落後主係受廠房建置進度延宕所影響，使購買機器設備之計畫隨之延後所致。經評估，本公司購買機器設備計畫項目執行進度落後之原因尚屬合理，嗣後將持續注意廠房建置工程進度，應無重大異常之情事。

(3)充實營運資金

本公司充實營運資金已依計畫進度執行完畢，執行進度 100.00%，應無重大異常之情事。

54

Figure S-H. Issuer annual-report package, PDF page 59. Original planned versus actual project spend through Q1 2026: about 78% planned versus 37% actual. English reading: permitting, engineering acceptance and local administrative/payment timing delayed spending. A payment lag is not identical to a revenue delay.

Construction began in April 2025. The narrative planned trials in Q2 2026 and formal production in Q4. A funding table uses Q3 for factory completion, an internal timeline difference that remains unresolved. The source reports no project benefits through Q1. The June management interview expects benefits toward

year-end and more volume benefits in 2027. A separately confirmed commercial start was not obtained from the current full filing.

Timing state	Weight	Receipts and cost treatment
Planned annual ramp	75%	Published 2026 project occurs in Q4. 2027 uses the published 2027 endpoint;2028 onward uses the published mature endpoint.
One-year annual-ramp delay	25%	Q4 2026 carries about TWD52 million preoperating cost without project receipts.2027 uses the 2026 annual startup endpoint, with receipts in Q3/Q4 and fixed costs throughout the year.2028 uses 2027 endpoint; mature output follows.

This is an annual-ramp timing model, not a literal four-quarter shift of each original quarter. The two states assume eventual project delivery; they do not prove commercial success. The 70% utilization diagnostic scales receipts and variable manufacturing down while retaining fixed factory and project opex. It exposes weak demand or yield that a timing-only split could hide.

Calendar year	Weighted project sales	Weighted project GP	Project opex	Legacy SiP receipts removed
2027	1,251	220	113	625
2028	2,530	573	204	1,265
2029	2,843	666	227	1,421
2030	2,843	666	227	1,421

There is no reliable source allocation between new-project overhead and expenses already in the consolidated legacy base. The active case retains both sets of costs. A separate diagnostic allows half the project opex to overlap the existing base. This potential cost duplication is explicit and can be resolved by a more detailed company allocation.

SHUNSIN / 21 OCTOBER 2026 / FRAMEWORK 8.0

Bumping/RDL investment and cash constraints

The August board approved up to USD 65 million for Bumping/RDL processes and related facilities at ShunSin Vietnam, phased by construction, procurement and operational needs. The announcement supplies no CPO-only allocation, unit capacity, yield, start date or revenue. It is not a second accepted-receipt award. Official board announcement.

Same investment chain	Consolidated scope
Board investment authorization	Up to USD65 million; flexible execution within the ceiling.
Equipment procurement and resale	Parent procures machinery and resells to the fully owned Vietnam subsidiary at cost plus necessary expenses; no intercompany gain.
Capital through HongKong	USD 65 million moves through the intermediate entity into Vietnam; the two steps are not USD130 million of economic investment.

Same investment chain	Consolidated scope
Budget overlap	Relationship to the mixed TWD4-5 billion capex program and older SiP project is not fully reconciled. The model does not add these headlines together.

Sources: investment authorization, equipment transfer and capital contribution, all 26 August 2026. The lack of a clean overlap schedule affects confidence; it does not make the underlying technical investment irrelevant.

June 2026 financial constraint	TWD million, rounded
Cash	5,101
Deposits over three months, separate from cash	3,340
Short bank debt	5,823
Long bank debt including current	2,477
H1 operating cash flow	30
H1 cash PPE spending	758
Unpaid signed PPE commitments, group scope	1,104
Inventory	1,598
Contract assets / liabilities	1,090 / 28

H1 cash flow covered little of cash capex. Deposits, borrowing access and capital structure matter to execution. Signed PPE commitments are group-wide and cannot all be labeled CPO. Contract assets and liabilities describe accounting positions, without establishing an equivalent firm order backlog. Q2 filing, PDF pages 7,10 and 46.

Reported payroll, SBC and depreciation stay in costs

十一、重大之期後事項

本公司之第二次無擔保可轉換公司債已符合發行及轉換辦法第二十一條之提前贖回條件，故於民國一一五年七月決議行使債券贖回權，轉換公司債收回基準日訂於民國一一五年九月十一日。

十二、其　　他

(一)員工福利、折舊、折耗及攤銷費用功能別彙總如下：

功能別 / 性質別	115年4月至6月			114年4月至6月

攤銷費用	11	1,833	1,844	10	801	811

功能別 / 性質別	115年1月至6月			114年1月至6月		
	屬於營業成本者	屬於營業費用者	合計	屬於營業成本者	屬於營業費用者	合計
員工福利費用						
薪資費用	432,717	292,282	724,999	340,571	250,894	591,465
勞健保費用	28,868	14,325	43,193	18,011	10,492	28,503
退休金費用	27,960	20,867	48,827	24,781	16,774	41,555
其他員工福利費用	14,141	14,159	28,300	12,016	12,602	24,618
折舊費用(註)	327,184	56,371	383,555	256,420	96,710	353,130
攤銷費用	23	3,629	3,652	19	1,409	1,428

註：投資性不動產民國一一五年四月一日至六月三十日及一月一日至六月三十日產生之折舊費用分別為2,454千元及4,911千元，帳列其他利益及損失項下。民國一一四年一月一日至六月三十日無前述事項。

(二)營運之季節性：

合併公司之營運不受季節性或週期性因素影響。

Figure S-I. MOPS Q2 filing, PDF page 47. Original subsequent-event and employee/depreciation cost table, source units TWDthousands. English reading: payroll and depreciation are real costs, and the subsequent redemption schedule is separate from current issued shares.

H1 2026 cost measure	TWD million	Treatment
Salary	725	About 433 inCOGS and 292 inopex
Labor insurance / pension	43 / 49	Retained as ordinary employee costs
Share-based compensation	22	Already included in IFRS operating costs; no addback
Operating depreciation	384	About 327 inCOGS and 56 inopex
Investment-property depreciation	5	Nonoperating; distinct from manufacturing depreciation
H1 amortization	4	Retained in the cost basis
Cash PPE capex / PPE additions	758 / 747	Different measures; no assumption of same timing

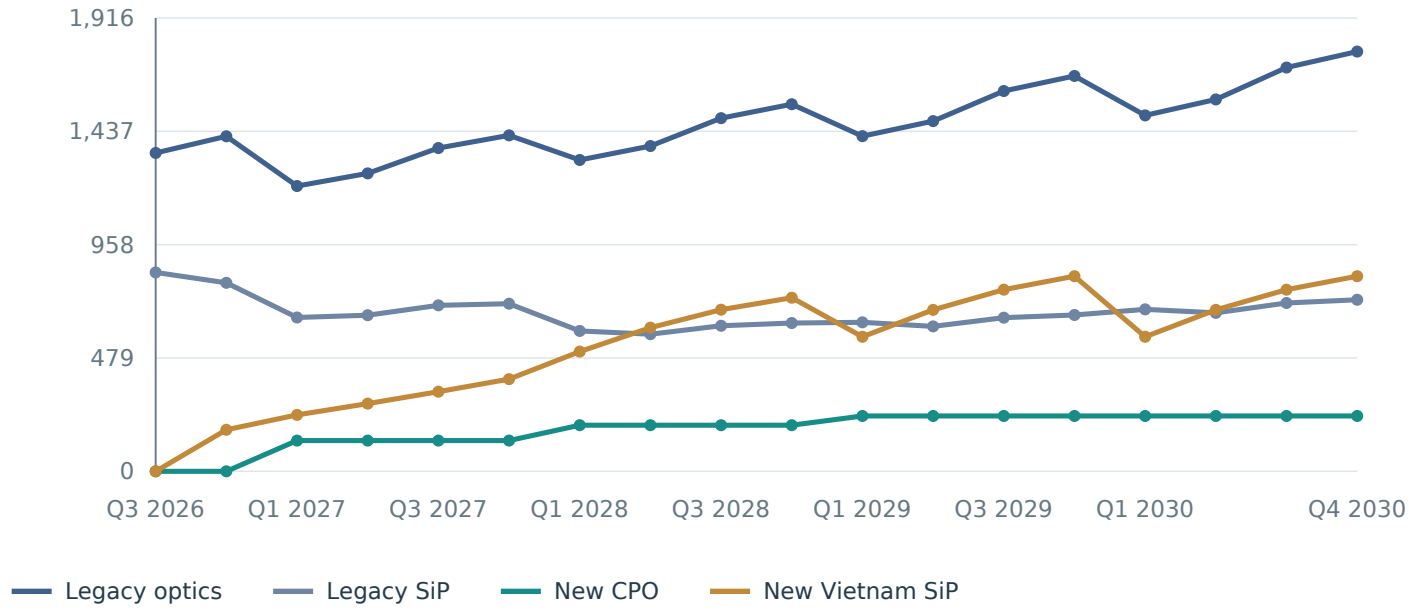

The legacy calibration starts from full IFRS group GP and opex. It therefore carries current payroll, SBC and ordinary depreciation. The future fixed-factory and opex growth are LOW aggregate cost assumptions rather than a forecast of each compensation program. No investment gain, interest income or tax item is used to manufacture operating profit.

SHUNSIN / 21 OCTOBER 2026 / FRAMEWORK 8.0

The four-vector quarterly revenue model

Quarterly company receipts by operating vector

TWD millions per quarter

Q3 2026 total sales are reported monthly actual; product split is LOW. Every later quarter and product amount is Model. New-vector receipts are added only after their overlap is removed from legacy.

Quarter	Legacy optics	Legacy SiP	New CPO	New Vietnam	Total
Q3 2026	1,345	840	0	0	2,186
Q4 2026	1,416	797	0	176	2,388
Q1 2027	1,205	650	130	238	2,224
Q2 2027	1,259	660	130	286	2,335
Q3 2027	1,366	701	130	336	2,534
Q4 2027	1,420	708	130	390	2,647
Q1 2028	1,316	593	195	506	2,610
Q2 2028	1,374	579	195	607	2,756
Q3 2028	1,492	615	195	683	2,985
Q4 2028	1,551	627	195	734	3,106
Q1 2029	1,416	630	234	569	2,848
Q2 2029	1,480	612	234	682	3,008
Q3 2029	1,607	649	234	768	3,258
Q4 2029	1,671	661	234	824	3,390
Q1 2030	1,504	684	234	569	2,991
Q2 2030	1,571	670	234	682	3,157
Q3 2030	1,706	711	234	768	3,419
Q4 2030	1,774	725	234	824	3,557

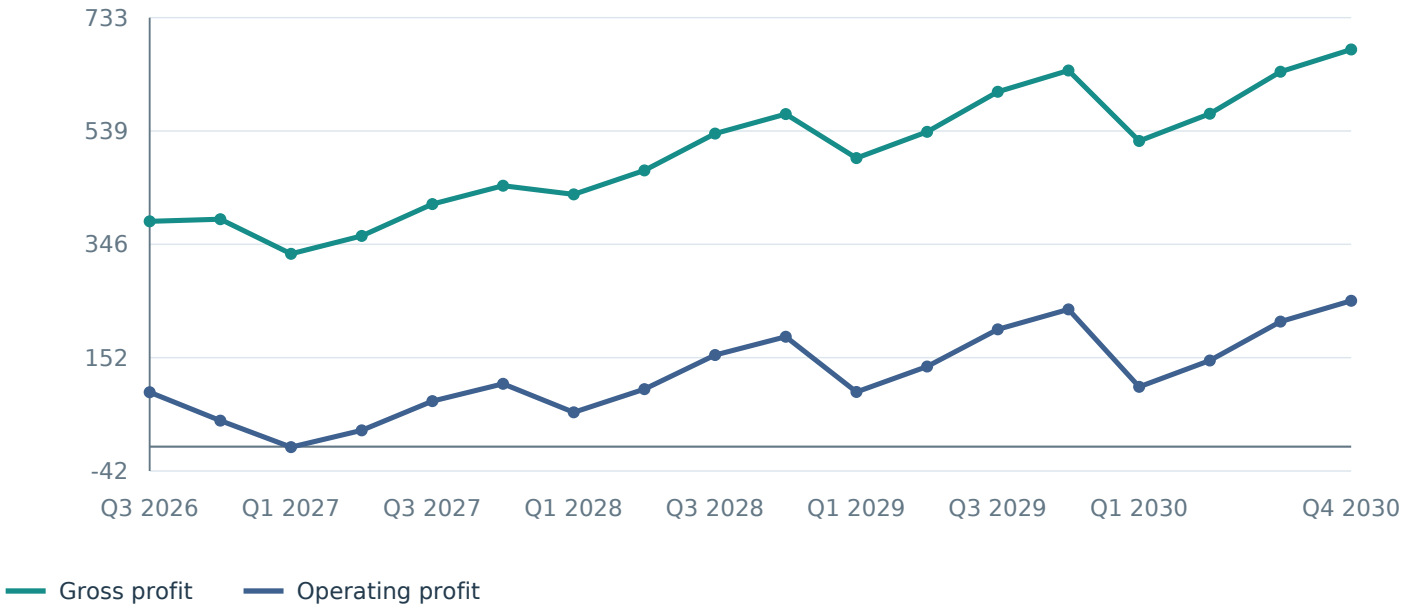

The reference legacy path is the FY2026 planning anchor, growing 8%,10%,8% and 6% in 2027-2030. Quarterly reference sales use 23%,24%,26% and 27% seasonal weights. These are LOW accepted-receipt assumptions, not a mechanical pass-through from globalAI capex.

FY2025 product mix supplies the proxy split: about 62% optical and 38% SiP/sensors. Current product mix is not disclosed. The newer program vectors use separate production and timing economics. Total receipts equal legacy reference less displaced optical and SiP sales plus the new CPO and Vietnam vectors.

Margins and profit: full costs determine the result

Group gross profit and operating profit

TWD millions per quarter

All plotted profits are models; September-quarter actual profit has not been received. IFRS-style operating cost basis keeps ordinary payroll/SBC and depreciation. The first quarter has actual sales only. Both margin ratios are in the table below.

Quarter	Sales	GP	Opex	OP	GM	OP margin
Q3 2026	2,186	385	292	93	18%	4%
Q4 2026	2,388	389	344	44	16%	2%
Q1 2027	2,224	329	330	-1 neg	15%	0%
Q2 2027	2,335	360	332	28	15%	1%
Q3 2027	2,534	414	337	78	16%	3%
Q4 2027	2,647	446	338	107	17%	4%
Q1 2028	2,610	431	372	59	17%	2%
Q2 2028	2,756	472	374	98	17%	4%
Q3 2028	2,985	535	378	157	18%	5%
Q4 2028	3,106	568	380	188	18%	6%
Q1 2029	2,848	493	400	93	17%	3%

Quarter	Sales	GP	Opex	OP	GM	OP margin
Q2 2029	3,008	538	401	137	18%	5%
Q3 2029	3,258	606	406	200	19%	6%
Q4 2029	3,390	643	408	235	19%	7%
Q1 2030	2,991	522	420	102	17%	3%
Q2 2030	3,157	569	422	147	18%	5%
Q3 2030	3,419	641	427	214	19%	6%
Q4 2030	3,557	679	429	249	19%	7%

Legacy product variable manufacturing costs are 75% for optics and 70% for SiP under the LOW decomposition. Each product also retains a fixed factory residual calibrated to Q2. Fixed factory costs grow 4% annually; fixed group opex grows 6%, with 3% variable opex on retained legacy receipts. These allocations reproduce reported Q2 group GP/opex, without claiming issuer segment margins.

New CPO pays its full success-state fixed manufacturing burden, with part retained in the failed/late state. Vietnam uses published GP/OP endpoints and explicit underutilization costs. Company OP is the sum of product gross profits less legacy opex, CPO support and Vietnam project opex. A larger top line does not automatically produce a high operating margin.

All 18 operating quarters and recognition drivers

Quarter	Status	Sales	OP	OP margin	Main driver	Confidence
Q3 2026	Sales actual; OP Model	2,186	93	4%	Monthly sales; costs modeled	LOW costs/mix
Q4 2026	Model	2,388	44	2%	Legacy / Vietnam	LOW
Q1 2027	Model	2,224	-1 neg	0%	CPO / SiP ramp	LOW
Q2 2027	Model	2,335	28	1%	CPO / SiP ramp	LOW
Q3 2027	Model	2,534	78	3%	CPO / SiP ramp	LOW
Q4 2027	Model	2,647	107	4%	CPO / SiP ramp	LOW
Q1 2028	Model	2,610	59	2%	CPO / SiP ramp	LOW
Q2 2028	Model	2,756	98	4%	CPO / SiP ramp	LOW
Q3 2028	Model	2,985	157	5%	CPO / SiP ramp	LOW
Q4 2028	Model	3,106	188	6%	CPO / SiP ramp	LOW
Q1 2029	Model	2,848	93	3%	CPO / SiP ramp	LOW
Q2 2029	Model	3,008	137	5%	CPO / SiP ramp	LOW
Q3 2029	Model	3,258	200	6%	CPO / SiP ramp	LOW
Q4 2029	Model	3,390	235	7%	CPO / SiP ramp	LOW
Q1 2030	Model	2,991	102	3%	CPO / SiP ramp	LOW
Q2 2030	Model	3,157	147	5%	CPO / SiP ramp	LOW
Q3 2030	Model	3,419	214	6%	CPO / SiP ramp	LOW
Q4 2030	Model	3,557	249	7%	CPO / SiP ramp	LOW

Revenue and OP are TWD millions. Sales recognition follows accepted company production or service receipts. There is no direct capex-to-booking identity. The next four to six quarters carry the most useful operational tests; estimates toward 2030 are more dependent on customer allocation, competition, asset productivity and retained costs. Negative profit is marked neg.

Legacy optics: complete manufacturing cost path

Quarter	Receipts	Variable COGS	Fixed factory	GP	GM
Q3 2026	1,345	1,009	83	253	19%

Q3 2030	711	498	141	73	10%
Q4 2030	725	507	141	77	11%

TWD millions; all product values are model allocations. Receipts less variable manufacturing and fixed factory costs equal gross profit. Legacy costs are calibrated to exact Q2 group GP; transferred receipts remove variable cost while fixed factories remain.

Qualified CPO packaging: complete manufacturing cost path

Quarter	Receipts	Variable COGS	Fixed factory	GP	GM
Q3 2026	0	0	0	0	Unknown
Q4 2026	0	0	0	0	Unknown
Q1 2027	130	76	42	12	9%

Q4 2029	234	137	42	55	24%
Q1 2030	234	137	42	55	24%
Q2 2030	234	137	42	55	24%
Q3 2030	234	137	42	55	24%
Q4 2030	234	137	42	55	24%

TWD millions; all product values are model allocations. Receipts less variable manufacturing and fixed factory costs equal gross profit. CPO fixed costs are probability-weighted coherent success/failure costs, not a second deduction after gross profit. The 5% engineering/support allowance is in group opex.

New Vietnam SiP: complete manufacturing cost path

Quarter	Receipts	Variable COGS	Fixed factory	GP	GM
Q3 2026	0	0	0	0	Unknown
Q4 2026	176	123	53	-1 neg	0%
Q1 2027	238	167	39	33	14%
Q2 2027	286	200	39	47	16%
Q3 2027	336	236	39	62	18%
Q4 2027	390	273	39	78	20%
Q1 2028	506	354	47	105	21%
Q2 2028	607	425	47	136	22%
Q3 2028	683	478	47	158	23%
Q4 2028	734	513	47	174	24%
Q1 2029	569	398	47	124	22%
Q2 2029	682	478	47	158	23%
Q3 2029	768	537	47	184	24%
Q4 2029	824	577	47	201	24%
Q1 2030	569	398	47	124	22%
Q2 2030	682	478	47	158	23%
Q3 2030	768	537	47	184	24%
Q4 2030	824	577	47	201	24%

TWD millions; all product values are model allocations. Receipts less variable manufacturing and fixed factory costs equal gross profit. Published Vietnam project GP determines the fixed-factory residual after 70% variable manufacturing. Published GP minus OP determines project opex; no extra full project depreciation is added.

Annual cross-check and the active earnings window

Calendar year	Sales	GP	Opex	OP	OP margin
2027	9,740	1,550	1,338	212	2%
2028	11,457	2,006	1,505	501	4%
2029	12,504	2,280	1,615	665	5%
2030	13,124	2,410	1,698	712	5%

Annual vector, TWD million	2027 receipts / GP	2028 receipts / GP	2029 receipts / GP	2030 receipts / GP
Legacy optics	5,250 / 966	5,733 / 1,073	6,173 / 1,168	6,555 / 1,249
Legacy SiP/sensors	2,719 / 316	2,414 / 205	2,552 / 225	2,790 / 275
New qualified CPO	520 / 48	780 / 156	936 / 220	936 / 220
New Vietnam SiP	1,251 / 220	2,530 / 573	2,843 / 666	2,843 / 666

Calendar 2027 OP is about TWD 212 million. The selected Q4 2027 ceiling prices the different four-quarter window Q4 2027 through Q3 2028, with about TWD 421 million OP. Annual results are a cross-check and do not replace the exact rolling window.

Active four-quarter contribution	TWD million, rounded
Legacy optics receipts / GP	5,602 / 1,043
Legacy SiP receipts / GP	2,496 / 234
New CPO receipts / GP	715 / 129
New Vietnam receipts / GP	2,186 / 477
Legacy opex	1,246
CPO support opex	36
Vietnam project opex	181
Consolidated operating profit	421

加權平均流通在外股數	122,239	106,174	108,689	106,174
稀釋每股盈餘(虧損)(單位：新台幣元)	$ 0.65	(0.59)	(0.72)	(1.64)

合併公司轉換公司債及員工酬勞於民國一一五年一月一日至六月三十日、一一四年四月一日至六月三十日及一月一日至六月三十日係潛在普通股，惟因具反稀釋作用，故未納入報導期間稀釋每股虧損計算。

Figure S-J. June 2026 issuer filing, PDF page 32. Original basic/diluted weighted EPS denominator and compensation disclosures. Historical weighted claims are distinct from currently issued ordinary shares and the forward starting-quarter proxy.

Share measure	Million shares, rounded	Scope
June-end issued	114	Rounded financial-note issued count
Q2 weighted basic	111	Actual quarter-average EPS denominator
Q2 weighted diluted	122	Includes historical potential convertible shares; not current remaining claims
October issued floor	118	Official paid capital TWD1178536010 divided by TWD10 par value
2027 starting-quarter proxy	118	Latest issued floor; model financing proxy
2028 /2029 /2030 proxies	119 /120 /122	Latest floor plus original future financing increments of 1 /2 /4 million

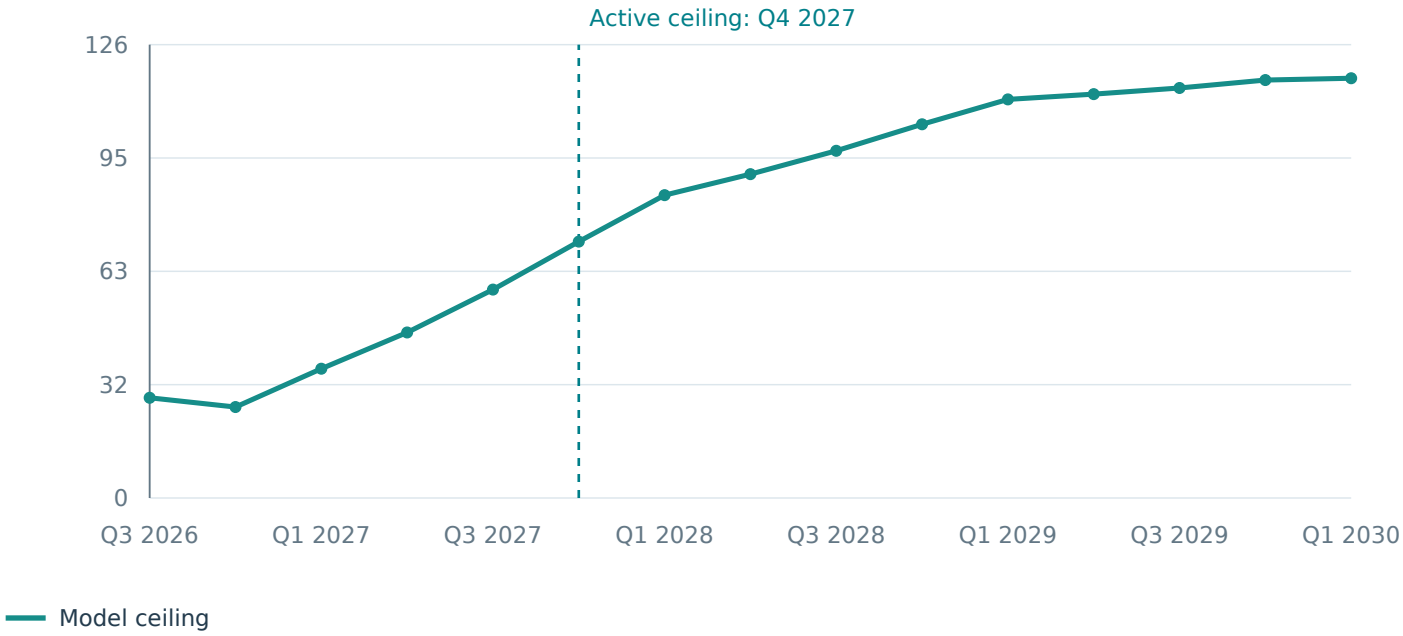

Bond 64512 was called for early redemption and ceased trading inSeptember. The June remaining face and the historical weighted conversion shares are not added again over October issued shares. Exact final redeemed cash versus converted face remains unreconciled in the located sources. A122-million historical diluted-denominator sensitivity is shown separately.

The valuation remains 20x forward-four-quarter consolidated operating profit divided by the starting-quarter forward share proxy. It does not switch to EBITDA, EPS, EV or a different minority-adjusted earnings basis. No new debt or liquidity headline is added as company profit. Numerical share counts retain full precision behind the rounded display.

Quarterly ceiling path under the existing method

Fifteen rolling quarterly ceilings

TWD per ordinary share

Current active horizon Q4 2027 is highlighted. All points are model estimates, using 20x forward-four-quarter consolidated OP and the starting-quarter share proxy. No market-price or analyst-target overlay.

Ceiling quarter	Window start	Window end	F4 OP	Shares	Ceiling
Q3 2026	Q3 2026	Q2 2027	164	118	28
Q4 2026	Q4 2026	Q3 2027	149	118	25
Q1 2027	Q1 2027	Q4 2027	212	118	36
Q2 2027	Q2 2027	Q1 2028	272	118	46
Q3 2027	Q3 2027	Q2 2028	342	118	58
Q4 2027	Q4 2027	Q3 2028	421	118	71
Q1 2028	Q1 2028	Q4 2028	501	119	84
Q2 2028	Q2 2028	Q1 2029	536	119	90
Q3 2028	Q3 2028	Q2 2029	575	119	97
Q4 2028	Q4 2028	Q3 2029	619	119	104
Q1 2029	Q1 2029	Q4 2029	665	120	111

Ceiling quarter	Window start	Window end	F4 OP	Shares	Ceiling
Q2 2029	Q2 2029	Q1 2030	674	120	112
Q3 2029	Q3 2029	Q2 2030	684	120	114
Q4 2029	Q4 2029	Q3 2030	698	120	116
Q1 2030	Q1 2030	Q4 2030	712	122	117

The active quarter is selected using the Toronto calendar: Q4 2027 during October through December 2026. Future quarter selection changes which existing window is displayed; a calendar roll is not an economic forecast upgrade. More distant windows depend increasingly on successful CPO acceptance and project utilization.

SHUNSIN / 21 OCTOBER 2026 / FRAMEWORK 8.0

All 15 earnings windows and constituent chains

Ceiling quarter	Exact four-quarter window	F4 OP	Multiple	Shares	Ceiling TWD
Q3 2026	Q3 2026 through Q2 2027	164	20	118	28
Q4 2026	Q4 2026 through Q3 2027	149	20	118	25
Q1 2027	Q1 2027 through Q4 2027	212	20	118	36
Q2 2027	Q2 2027 through Q1 2028	272	20	118	46
Q3 2027	Q3 2027 through Q2 2028	342	20	118	58
Q4 2027	Q4 2027 through Q3 2028	421	20	118	71
Q1 2028	Q1 2028 through Q4 2028	501	20	119	84
Q2 2028	Q2 2028 through Q1 2029	536	20	119	90
Q3 2028	Q3 2028 through Q2 2029	575	20	119	97
Q4 2028	Q4 2028 through Q3 2029	619	20	119	104
Q1 2029	Q1 2029 through Q4 2029	665	20	120	111
Q2 2029	Q2 2029 through Q1 2030	674	20	120	112
Q3 2029	Q3 2029 through Q2 2030	684	20	120	114
Q4 2029	Q4 2029 through Q3 2030	698	20	120	116
Q1 2030	Q1 2030 through Q4 2030	712	20	122	117

The next table lists each constituent quarterly OP term. Displayed terms, totals and shares are rounded independently; the equals sign describes the exact model calculation, not an assertion that rounded components reproduce the exact result. No calculation rounds before valuation.

Ceiling quarter	Four constituent OP terms, TWD million	Exact-chain meaning, rounded display
Q3 2026	93 + 44 + (-1) + 28	164 x 20 /118 = 28 TWD
Q4 2026	44 + (-1) + 28 + 78	149 x 20 /118 = 25 TWD
Q1 2027	(-1) + 28 + 78 + 107	212 x 20 /118 = 36 TWD
Q2 2027	28 + 78 + 107 + 59	272 x 20 /118 = 46 TWD
Q3 2027	78 + 107 + 59 + 98	342 x 20 /118 = 58 TWD
Q4 2027	107 + 59 + 98 + 157	421 x 20 /118 = 71 TWD
Q1 2028	59 + 98 + 157 + 188	501 x 20 /119 = 84 TWD
Q2 2028	98 + 157 + 188 + 93	536 x 20 /119 = 90 TWD
Q3 2028	157 + 188 + 93 + 137	575 x 20 /119 = 97 TWD
Q4 2028	188 + 93 + 137 + 200	619 x 20 /119 = 104 TWD
Q1 2029	93 + 137 + 200 + 235	665 x 20 /120 = 111 TWD
Q2 2029	137 + 200 + 235 + 102	674 x 20 /120 = 112 TWD
Q3 2029	200 + 235 + 102 + 147	684 x 20 /120 = 114 TWD
Q4 2029	235 + 102 + 147 + 214	698 x 20 /120 = 116 TWD
Q1 2030	102 + 147 + 214 + 249	712 x 20 /122 = 117 TWD

FX/unit factor is 1 throughout; operating currency and share-price currency are TWD. Risk factor is 1 and no probability or Base score is applied again to the final ceiling. The four-quarter terms already contain probability-weighted operations and costs.

Rule 16b ledger: exact active contribution and overlap

Hypothesis / source / timing	Probability and rationale	Reference / conditional / overlap
CPO capital-to-accepted-receipts; June 2026 management and 2026 filings; production from 2027	55% joint qualification and loading judgment: technical capability and investment support a real path, while customer economics remain undisclosed.	Reference is legacy optics. Conditional full-loading receipt capacity TWD1890 million annually, with 50/75/90/90% loading;20% weighted receipt overlap removed first.
New Vietnam SiP project; FY2025 AGM package, current filing; Q4 2026 onward	75% planned annual ramp /25% annual-ramp delay. Funded plan supports execution; permits and acceptance delayed spend.	Published project endpoints include costs. Half weighted receipts replace China SiP; no assumption all project sales are new. Timing does not establish ultimate commercial success.

Active Q4 2027-Q3 2028 item	CPO	Vietnam SiP
Weighted new receipts	715	2,186
Manufacturing costs	586	1,708
New-vector gross profit	129	477
Extra support / project opex	36	181
Displaced legacy receipts	143	1,093
Legacy contribution forgone after variable costs/opex	31	295
Net contribution versus same core without each new program	62	1

TWD millions. The net-contribution comparison retains the same legacy fixed factories and opex. CPO success/failure fixed costs remain in its vector. The Vietnam program can deliver new activity while legacy displacement and duplicated overhead reduce its net increment. These are explicit economic consequences rather than a second generic margin uplift.

Quarterly transmission is visible in every product-cost table: CPO receipts, variable manufacturing, fixed cost, support and optical overlap; Vietnam timing-state receipts, fixed manufacturing, project opex and China-transfer overlap. Probabilities apply to coherent operating outcomes, not the final share value. The analytical score is separate.

Other signals: justified zero separate increments

Signal / outcome probability	What was attempted	Current disposition and next test
Q2 actual financials /100%	Exact reportedGP/opex calibration and P&L bridge.	Already implemented in legacy anchor; no separate actuals revenue increment. Next test: Q3 profit/cost release.
Q3 monthly actual sales /100%	Sum July-September company monthly receipts.	Actual 2186M sales anchor; profit remains unknown. No extra layer over the anchor.
Cabinet/engine/service-fee claim /20% exact-outcome judgment	Cabinets times engines times service fee times vendor share.	Cabinet versus switch, billing unit and vendor allocation unresolved. Active CPO capital/loading proxy prices the shared opportunity; no second correlated order addition. Next test: matched recognized company unit economics.
USD 65M RDL plan /60% commercial-path judgment	Investment-to-qualified-capacity-to-company-sales route.	Potentially overlaps the active capital program and Vietnam budgets; no separately bounded receipt cohort. Next test: reconciled project allocation and accepted production.
Convertible redemption /100% current event	Current paid capital and historical claims reconciled by scope.	Latest issued floor used; no old bond claims added twice. Final cash/conversion reconciliation remains open.
SpaceX/AI breadth /35% matched supplier-outcome judgment	AI spending times compatible CPO adoption and ShunSin wallet/capture.	No named award or matched billing unit. Shared capacity/qualification hypothesis already captures opportunity; no independent second SpaceX capex-to-sales addition.

The stated probabilities describe exact economic outcomes, rather than authenticity of every quote. A zero separate increment is justified by already-modeled or correlated economics and failed unit matching, not by a blanket requirement for an official contract. New independent supplier allocation or a distinct nonoverlapping receipt cohort can change the active inputs.

Sensitivities: what would change the active ceiling

Single-input diagnostic	Q4 2027 ceiling, TWD	Q1 2030 ceiling, TWD
No new CPO qualification, committed halfcost retained	43	78
All CPO qualified at stated ramp	95	149
CPO turnover 110%	66	110
CPO turnover 137%	71	116
CPO turnover 180%	79	126
CPO capex allocation 15 pct	64	105
CPO capex allocation 45 pct	79	129
CPO mature GP20 pct	59	102
CPO mature GP40 pct	84	132
No failed-state fixed commitment	80	125
All failed-state fixed commitment	63	109
No CPO overlap	77	124
Half CPO overlap	63	107
Vietnam all on time	74	117
Vietnam all one-year annual delay	62	117
Vietnam 70 pct utilization, fixed costs retained	53	94
Vietnam all new demand	121	180
Vietnam all transferred demand	21	54
Half project opex already in groupbase	87	136
10 pct more forward shares	65	106
Historical 122-million diluted denominator diagnostic	69	Not specified
10 pct consolidatedprofit leakage diagnostic	64	Not specified

Every row is a separate diagnostic using the existing 20x/start-quarter method and all other inputs held fixed, except the explicitly stated historical-share or capture comparison. They are not alternative active forecasts. The finite one-input results are not a joint probability interval and do not bound all possible combinations of demand, price, timing, cost and issuance.

Low accepted loading or slower qualification keeps factory costs while reducing receipts. Larger qualified wallets, higher mature margins or better overhead reuse raise profit. Source data do not statistically measure those probabilities. The next operational disclosures should narrow the company-specific ranges rather than force a target toward the market quote.

Competition, substitutions and cross-book watches

Qualified process knowledge and customer production experience create switching friction. Competitors can add equipment, win the next design or offer a different architecture. The annual report names Fabrinet and PCL in optics, and ASE Korea, Amkor Korea, JCET and Lingsen in SiP. The active classification does not assert sole sourcing. Issuer competitive discussion, PDF pages 75-76.

Paired watch	Company-specific distinction
ShunSin and Fabrinet /AAOI	Compare accepted assembly volumes, mix and margin. A full module manufacturer revenue dollar and a packaging service dollar are different wallets.
ShunSin and Amkor /ASE /JCET	Track advanced-packaging qualification, geography and accepted customer programs. More industry capacity can relieve a temporary bottleneck.
ShunSin and TSMC	COUPE process cooperation supports technical relevance. Foundry platform deployment does not set the assembler fee, vendor share or parent-attributable profit.
ShunSin and Marvell /Broadcom /NVIDIA	Roadmaps influence switch/optical requirements. Each generation needs a matched adopted topology and supplier qualification.
ShunSin and Coherent /Lumentum	Light sources, optical engines and back-end assembly occupy different layers; shared architecture demand must not become several duplicate company receipt pools.

No new-company admission or model row follows from this comparison. It identifies the evidence that could strengthen or weaken ShunSin capture, and which existing company inputs may need review if a customer allocation changes.

The analytical score and five risk classes

Category	Points	Max	Evidence
Core thesis	17	20	Named COUPE capability and precision packaging qualification; binding units, exclusivity and sole sourcing remain unproven.
Cycle stage	7	10	Q2 OP recovers and Q3 sales grow; H1 loss, project timing and qualification costs remain.
TAM expansion	8	10	CPO and advanced SiP expand the service wallet; capture and recognized billing remain uncertain.
Catalysts	5	5	Q3 financials, CPO acceptance, Vietnam production, tool qualification and margin evidence.
Macro	9	10	AI bandwidth and supply diversification support demand; racks are not a matched company receipt unit.
Alpha	3	5	Mandarin primary project, cost and capital facts clarify capture; unknown units/ASP limit precision.
Risks	-5	0	Five risk classes below, one negative point each.
Total	44	60	44 /60 rounds to 73%; analytical Watchlist band.

Risk class	Score	Failure mechanism / evidence
Qualification and yield	-1	Customer acceptance, alignment/test time, lower good-unit yield or rework can delay sales and consume margin.
Timing, utilization and relocation	-1	Vietnam spend delays, transfer overlap and low loading can retain two factory cost bases while demand shifts.
Finance, cash and issuance	-1	Weak operating cash flow against capital spending can increase funding cost or dilution; current issued shares already rose.
Competition and allocation	-1	Alternative suppliers, pluggables or a different CPO architecture can reduce the available service wallet and price.
Minority, geography and concentration	-1	Optical minority ownership, multi-country manufacturing and concentrated customer receivables can limit parent capture.

The protected Excel Base remains 82. It is an owner-controlled portfolio input and is not rewritten to the current analytical 73. The 44-point score is independently summed; it is not a probability applied to project revenue or the final ceiling. Taiwan receives no automatic geographic penalty. Current supplier facts, capture uncertainty and the five risks drive the analytical assessment.

Evidence that would raise or reduce the active case

Next evidence	Positive transmission	Counter or reduction test
Q3 full financials	Validate sales, mix, margin and ordinary costs; replace the model with reported GP/OP.	Lower group margin, cash conversion or higher operating costs reduce the calibrated path.
Qualified CPO accepted receipts	Match customer/product scope, service billing and loaded productive assets; improve probability, loading or turns only where supported.	Delayed acceptance, weaker yields, lower fees or a competitor award reduce receipt capacity and can retain fixed costs.
Vietnam new-project commercial start	Verify timely production and distinguish relocated China receipts from genuinely incremental programs.	Further delay or partial utilization changes timing and mature outcomes; no automatic eventual-success assumption.
Project-specific cost disclosure	Resolve transfer overhead, depreciation lives and staff overlap; remove duplicated costs only with matched scope.	Higher startup costs, retained idle plants or more support reduce profit.
Financing and share reconciliation	Confirm redeemed cash/conversion split and future funding schedule.	New issuance, higher interest burden or tighter liquidity changes inputs within the same method.
Independent customer/platform evidence	Raise or reduce the exact defined outcome based on independent supplier allocation and production scope.	Reposts and broadAI budgets do not independently confirm a company quantity.

Pre-commitment: probabilities change with the exact outcome, not with source enthusiasm alone. Confirmed small shipments do not prove the entire mature sales endpoint. Independent scope-matched evidence can raise weight before official revenue; timing misses, inferior yields and lost allocations can lower it. The model retains a single active case and visible diagnostics.

SHUNSIN / 21 OCTOBER 2026 / FRAMEWORK 8.0

Source register, completeness and reproducibility

The source register identifies originals used in this report. Figures preserve the original pixels and local language; adjacent tables and prose provide selected English translations. Every new plotted observation comes from the frozen model rather than a visual reconstruction. Source originals, media hashes and exact financial units remain preserved in the research packet.

ID	Original / period / read scope
S1	2026Q2 and H1 IFRS consolidated financial statements; 2026-08-26. All substantive pages 3-50 read; cover/contents extracted. Auditor report, P&L, balance sheet, cash flow and all notes reviewed.

ID	Original / period / read scope
S2	2026Q1 IFRS consolidated financial statements; 2026-05-13. Full extraction; targeted P&L, cash flow and dilution comparison. Not every narrative note reread.
S3	FY2025 annual report and 2026 AGM operating/project package; date not independently fixed. Full extraction; business, project economics, competition, R&D, financial/risk sections read. Governance tables not exhaustively reread.
S4	9M2025 investor conference slides; 2025-11-21. All 17 slides read; final Q&A title slide contains no spoken answers.
S5	H1/Q2 2024 investor conference slides; 2024-09-24. All 17 slides read. Event Sep 24; MOPS upload Sep 25. Final Q&A title slide is not a transcript.
S6	Identity, current capital, monthly revenue through Sep 2026, close through Oct 20; 2026-10-21. All 5 pages extracted; financial, capital, monthly revenue and price fields reviewed.
S7	Company identity/current capital/latest filing and conference index; 2026-10-21. Full structured response reviewed. October 14 English Q2 posting is a translation/publication date, not a new fiscal quarter.
S8	Up to USD 65M Vietnam Bumping/RDL investment; 2026-08-26. Full announcement read; 17:18:23 Taiwan time.
S9	Related-party equipment procurement and resale; 2026-08-26. Full announcement read; cost-only transfer to consolidated subsidiary, same USD 65M scope.
S10	USD 65M capital contribution through HK into Vietnam; 2026-08-26. Full announcement read; intermediate and final capital flows are not additive investment demand.
S11	CPO packaging capability diagram; date not independently fixed. Product page and original diagram inspected; undated, no units/orders/ASP.
S12	CPO layers/assembly diagram; date not independently fixed. Original image viewed; no inferred financial quantities.
S13	HonHai Q1 2026 presentation; CPO switch timeline; 2026-05-14. Full extraction; targeted slide 16. File URL May 21; event May 14. Does not verify ShunSin 50K units.
S14	AGM management comments on COUPE, capex and Vietnam; 2026-06-26. Article read; direct management statements, 16:54 Taiwan. Not a full call transcript or regulatory forecast.
S16	Latest located official investor event; 2025-11-21. Notice and replay link read; replay redirects to registration/terms, no transcript/audio acquired.
S17	Second latest located official investor event; 2024-09-24. Notice and replay link read; replay redirects to registration/terms, no transcript/audio acquired.
S18	FY2025 IFRS consolidated statements; 2026-03-11. Full extraction; financial totals crosschecked against annual report. Current interim S1 controls current inputs.

Annual-report dating caveat: the cover states April 2026 printing, while interior pages include May board actions. It is treated as the FY2025 AGM annual-report package available by the June AGM, rather than claiming every interior fact was published on the cover date. Newest official full statements remain Q2/H1; the financial source date is distinct from later English posting.

Material remaining gap	Effect on interpretation
Newest two spoken prepared remarks/Q&A	Full slides are available; registration prevents a complete spoken call review.
Q3 profit	Only monthly revenue is actual; GP/OP are not fabricated as reported.
CPO orders, service ASP and yield	Capital/turn/qualification proxy is LOW, with explicit costs and alternatives.
China-to-Vietnam transferred share and overhead	Transfer and cost overlap remain model judgments.
Final convertible settlement	Current issued shares are known; final redemption cash versus conversion split is open.
Capex program reconciliation	USD 65M RDL, mixed capex program and SiP project can overlap; budgets are not added together.

Snapshot:6451TW_ShunSin_DeepDive; model SHA256 cd586cad00db4b99874175075ee773985a41e8a8acaa150770f1bba066c95bc7. The exact 18-quarter/four-vector model and 15 rolling chains are independently reconstructed with Decimal arithmetic. This report is bound to that model hash and the same-source chart tables. Live price-dependent upside and ranking remain in the portfolio workbook.
