# Forecam Optics | precision-optics recovery and qualification

Forecam Optics / Fujian Forecam Optics Co., Ltd. (福光股份, 688010.SH). Research date: 24 October 2026. Active framework: 8.0. Latest reported actual: H1 2026, released 29 August. Newest earnings-cycle written management records: 14 October and 20/21 May 2026. Full spoken transcripts and replay were not obtained.

Competitive precision-optics recovery and qualification; early commercial expansion. The company has integrated precision-optics capabilities and real new-product production. Its present evidence supports an ecosystem beneficiary with unproven bottleneck pricing. Qualification barriers and a broad optical toolset do not establish an exclusive or unavoidable supplier position.

The selected operating-profit method does not support a positive earnings-based valuation. The Q4 2027 window is Q4 2027 through Q3 2028: parent economic core OP -42.383190 CNY million, at 20.00 times and 162.455232 million diluted planning shares, gives a signed diagnostic of -5.217830 CNY per share. This is a loss diagnostic, not a prediction of a negative tradable share price.

**CONCLUSION | Current analytical decision**

| Item | Selected outcome |
|---|---|
| Classification | Competitive precision optics; recovery and qualification |
| Analytical points | 31 |
| Scoring denominator | 60 |
| Analytical Base | 52 |
| Rating | Fail |
| Protected Excel Base | 52 |
| Active forward period | Q4 2027–Q3 2028 |
| Latest actual | H1 2026; Q3 2026 is a completed-quarter model estimate |

The analytical score and protected workbook Base are separately identified.

The useful upside hypothesis is conversion of qualified precision optics into accepted external shipments, better product mix and fixed-cost absorption. The near-term constraint is the combination of weak lens economics, qualification timing, recurring operating costs, capital spending and refinancing. Optical-communication production is credible; customer, ASP, architecture, speed and component wallet remain undisclosed. Current component sales stay inside the reference business rather than becoming a second AI revenue line.

# Engineering relevance, commercial stage and TAM expansion

The relevant demand chains are photonics, physical sensing, aerospace and defense. Forecam sells optical elements, lenses and electro-optic systems. It does not disclose a semiconductor deposition-tool, InP substrate or silicon-photonics foundry business. The company-specific S-curve is early commercial expansion across several applications, while the consolidated operating base remains loss-making. A numeric share of peak penetration cannot be established from disclosed data.

## PHASES | Three phases: engineering path and company wallet

| Phase / framework lens | Physics and demonstrated link | Company capture boundary | Current transmission |
|---|---|---|---|
| 1 · Current optical interconnect / 100% phase lens | Separately listed manufacturing capabilities include aspheric glass, flat optics and microlens arrays. The issuer also reports unspecified new optical-communication products passed customer validation and entered mass production. | No disclosed datacenter customer, speed, architecture, ASP or per-module content. Global module dollars are not Forecam sales. | Existing components in reference; incremental qualified external precision capacity only in P03. |
| 2 · Physical AI, vehicle and edge / 50% phase lens | Vehicle lenses, lidar and HUD, civil UAV, machine vision and compact projection have reported designation/batch evidence. | Designations are not unit orders. Projection is a consolidated subset; new vehicle output must exclude the existing reference. | P02 fresh accepted lens shipments; projection subset changes minority allocation, not a new additive group revenue line. |
| 3 · Space, defense and AR / 20% phase lens | Existing special optics and telescope deliveries support adjacency toward higher integration, laser communication and payload systems. | Some systems are samples or development. The payload R&D plan funds a capability path; it is not a named constellation award. | P01 accepted additional programme equivalents; R&D expense is modeled separately and persists when commercial weight is zero. |

Framework phase-confidence lenses organize engineering adjacency. They are not commercial success probabilities and are not multiplied into the model again. Analyst commercial outcome weights are 50%, 55% and 65% in the ledger.

## SECTOR_BOUNDARY | Market size as context, not captured receipts

| Market boundary | CY2026E | CY2027E | CY2028E | Source and limitation |
|---|---|---|---|---|
| Global optical module / transceiver revenue, US$bn | 67.7 | 131.4 | 148.5 | Framework 8.0 DB1: dated September 7 Goldman forecast via supplied/public summaries; original full research note not inspected. CPO inclusion is not precisely established. |

These are dated sector estimates, not actuals or Forecam guidance. Do not add component, laser, foundry or CPO pools to the module total without non-overlapping scope. No module-TAM share is assumed here.

### STAGE_MAP | Different stages require different recognition tests

| Application | As of H126: issuer evidence | What is established | What is not established |
|---|---|---|---|
| Optical communication | Unspecified new optical-communication products passed customer validation and entered mass production. Aspheric/flat/MLA manufacturing capabilities are listed separately. | Production status within optical components. | Customer/ASP/architecture, backlog and separately recognized optical-comm revenue. |
| Metrology | 1500mm system delivered and accepted. | An accepted system milestone. | Repeat annual demand, recurring system sales or semiconductor customer receipts. |
| Large aperture / space | 510mm system sample; two laser-communication models developed; telescope batch supply; rocket scalable product sample. | Several engineering stages, with batch and sample status distinguished. | A single common customer, constellation programme or SpaceX award. |
| Vehicles | 23 new designations; lidar and HUD batch production. | Qualification and selected commercial production. | All-designation mass production or monetary backlog. |
| Projection | Sub-0.05cc projection engine batch-delivered; individual M211/M223 projects still listed in R&D at June 30. | Commercial product family and separate model-development status. | Large AI-device revenue or an undisclosed volume commitment. |

Source: H1 2026 report pp14–15 and 22. Delivery, acceptance, sample, development and batch production remain separate stage labels.

（5）高能激光领域，新产品实现小批量交付，有效提升光斑的聚焦质量、能量分布以及光学系统的抗损伤阈值，推动新型号高能激光装备的研发及量产。

（6）同轴抛物面加工口径突破 500mm，离轴抛物面加工口径突破 450mm，可应用于机载、舰载、车载等场景。

4、全场景布局

（1）针对国际知名企业的工业机器人项目需求，成功研制多款高性能镜头，可实现不同物距下广角、窄角全面覆盖。

（2）车载业务：有效提升车载镜头的耐刮擦程度，产品顺利通过客户验证，达到行业先进水平；新一代高性价比超高清 ADAS 镜头完成研制。

（3）民用红外业务：红外镜头持续迭代升级，适用于 8μm 像元机芯的系列红外镜头完成研制，无锗化系列红外镜头完成研制；面向市场主流需求，小型轻量化硫系玻璃模压红外镜头工艺进一步优化，稳定大规模生产，工艺业内领先；完成轻量化中波制冷系列红外镜头的研制。

（4）光学元件业务：应用领域拓展至光通信，具备玻璃非球面、玻璃平片、微透镜阵列等精密元器件生产能力；研发超低反工艺，达到行业先进水平，相关产品已批量应用于运动相机等领域。

（5）投影光机业务：依托自研 MicroLED 光路与超微型光机技术，成功开发两款高性价比 MicroLED 投影灯，具备像素级精准控光能力，支持动态迎宾动画、自定义图案等多元内容投射，可用于 AI 机器人、投影音响、汽车迎宾灯等场景；推出浸没式 LCD 液冷散热投影光机，可有效提升亮度并延长使用寿命，重新定义 LCD 投影散热方式，拓展低成本 LCD 投影光机应用领域。

（6）德国梅耶镜头业务：完成大光圈数码相机整机设计，使用百年梅耶品牌在专业摄影领域的影响力，筹划终端电子消费品业务；复活传统经典 APO Makro plasmat 105mm 镜头，并提升成像效果；品牌首颗微单镜头完成研制，传承梅耶独特影像美学；完成新款电影镜头的光学设计，配套光学元件已批量供应。

**（二）夯实基本面，布局新兴赛道**

报告期内，公司加大定制产品业务力度，持续开发无人系统、航天领域等新技术、新产品，提升规模化与标准化生产能力，定制产品营业收入同比增长 22.11%。光学元件产品，积极跟进市场发展趋势，推出更多差异化、具有竞争力的新产品，营业收入同比增长 13.96%；同时，深化新兴产业布局，成功开发应用于光通信领域的产品，通过客户验证并实现量产。机器视觉镜头、车载镜头、AR 及车载投影光机等业务营业收入进一步增加，民用无人机光电载荷实现批量出货；车载业务进一步补齐产品线，深化客户合作，成功导入头部核心客户；新增 23 个定点项目，订单储备量大幅提升；多款车载激光雷达镜头通过头部主流客户验证，并批量生产；HUD 镜头实现批量化生产；新款车载红外产品完成小批量生产；全球最小体积（小于 0.05cc）投影光机完成批量交付；新一代高清手机投影光机实现量产。

**（三）深化精益制造，提升运营效率**

报告期内，公司以精益制造为抓手，系统推进运营效率提升行动。通过聚焦镜头组装、镜片冷加工、镀膜及精密调校等核心环节，构建全员参与、全流程覆盖的精益管理体系，将精益理念深度融入生产运营各环节。同时以成本管控为导向，推动精益运营，提升成本控制能力。

**非企业会计准则财务指标变动情况分析及展望**

□适用 √不适用

**报告期内公司经营情况的重大变化，以及报告期内发生的对公司经营情况有重大影响和预计未来会有重大影响的事项**

□适用 √不适用

**三、 报告期内核心竞争力分析**

**（一）核心竞争力分析**

√适用 □不适用

（1）“军民融合”的发展平台

FIG_OPTICAL_COMM | H1 2026 issuer report, p15 | optical-communication production, vehicle designation and projection stages. The issuer reports unspecified new optical-communication products passed customer validation and entered mass production. Elsewhere on the same page it separately lists glass-aspheric, flat-optic and microlens-array manufacturing capabilities. It does not identify which of those product types are the qualified optical-communication products. The page also reports 23 vehicle designations and batch products, without a customer or optical-communication sales amount. Source: IND-H126 | 2026-08-29 | page 15 | reported qualification / mass production | https://big5.sse.com.cn/site/cht/www.sse.com.cn/disclosure/listedinfo/announcement/c/new/2026-08-29/688010_20260829_WAF5.pdf

非定制产品方面，生管部门根据营销部门的需求预估与库存状况，制定相应的生产计划并组织生产。光学镜头产品生产流程大致分为光学镜片加工和镜头组装，公司依据生产加工特性以及下游客户需求，在生产计划上实施“镜片生产月计划”和“镜头组装周计划”。

3、销售模式

公司销售产品主要采用直销的模式，部分产品采用代理销售模式。

定制产品方面，公司与中国科学院及各大集团下属科研院所、企业等直接洽谈合作，部分新品开发项目通过竞标获取订单。新品项目定价方面，定制产品采用审价、协商定价相结合模式，综合考虑技术复杂程度、实验等要求对项目的影响，与交易对方协商后最终确定。

非定制产品方面，公司营销部门负责跟踪现有客户的产品需求，主要通过与客户直接进行商务洽谈的方式获取销售订单。公司从产品研发阶段开始与客户深度合作，拥有从产品规划、产品开发项目管理、产品设计研发、产品生产制造、产品售后服务的完整业务体系，业务具有较高客户粘性和市场竞争力。

部分产品通过第三方代理销售。

新增重要非主营业务情况

## 二、 经营情况的讨论与分析

2026 年是“十五五”规划开局之年，也是新质生产力从战略构想迈向全面落地的关键一年。2026 年上半年，公司坚持科技创新引领，统筹推进传统主业升级与新兴赛道突破，同时以精益制造为抓手，持续提升综合管理效能，有力保障公司持续稳定发展。

报告期内，公司实现营业收入 26,127.84 万元，同比下降 12.54%，主要系非定制光学镜头中的安防产品境外销售收入较上年同期减少所致；归母净利润实现-1,295.33 万元，较上年同期减亏 1,581.90 万元；息税折旧摊销前利润实现 4,406.08 万元，同比增长 27.14%。主要工作如下：

### （一）立足科技创新，推动高质量发展

报告期内，公司立足核心技术，继续保持高强度研发投入，巩固技术优势，研发费用同比增长 10.64%，研发费用率达 14.21%，较去年同期上升 2.97 个百分点。2026 年上半年新增授权专利 70 项，较去年同期上升 70.73%，其中发明专利 19 项，较去年同期上升 11.76%；截止 2026 年 6 月 30 日公司拥有 1,094 项专利及软件著作权，其中发明专利 625 项。

1、国家重点研发项目

（1）A 研发项目，成功完成验收工作。

（2）L 研发项目，完成多款新型号方案设计，进行样品试制。

2、航天领域

（1）产品应用于“神舟二十三号”载人飞船。

（2）优化新一代地基望远镜的光学设计，探测光谱范围提升 50%、重量减轻 20%、环境适应性更强，有效提升探测能力及星像质量，达到世界先进水平，已实现批量交付，协助我国建立自主天球时空基准，服务航天、深空探测、空间碎片观测等任务。

（3）优化箭载镜头设计并提升制造工艺，实现可大批量、规模化生产的高性价比方案的样机交付。

（4）成功研制 2 款激光通讯光学新型号产品，提高产品性能及可靠性。

3、高端装备领域

（1）完成多款离轴三反三光连续变焦镜头设计并投产，完成 510mm 共口径双波段光学系统设计并交付样机，可应用于机载、星载、激光通讯等领域。

（2）大口径 1500mm 轴差基准传递及标校系统研制项目完成交付验收工作，突破 1500mm 口径平晶的高精度面形测量技术，面形精度（RMS）优于 λ/50，打破 1500mm 口径光学系统“光-机-电-算”多学科深度耦合的系统集成壁垒，打通“设计-加工-检测-装调”全链路工艺，达到全国领先水平。

（3）升级重点无人机光电载荷方案，完成新型号的小批量交付，提升探测距离。

（4）成功研制无人车光电载荷产品，实现小批量交付。

FIG_METROLOGY | H1 2026 issuer report, p14 | accepted metrology versus samples and developed models. The 1500mm metrology system was delivered and accepted. Other large-aperture, rocket and laser-communication items have sample or development status. These milestones cannot be assigned the same revenue-recognition stage. Source: IND-H126 | 2026-08-29 | page 14 | accepted / batch / sample / developed, differentiated | https://big5.sse.com.cn/site/cht/www.sse.com.cn/disclosure/listedinfo/announcement/c/new/2026-08-29/688010_20260829_WAF5.pdf

The enabling technology is precision surface generation, molding, coatings, assembly and testing. Reported best-case surface specifications demonstrate capability; they do not establish production yield, qualified throughput, lead-time scarcity premiums or EUV optical-system qualification. Institutes and vertically integrated payload manufacturers remain alternatives. No documented customer competition for scarce slots or accepted price increase supports a scarcity-premium revenue vector.

| 序号 | 技术名称 | 技术先进性理由及依据 | 核心技术在公司现有产品的应用情况 | 技术来源 |
|---|---|---|---|---|
| | | 高倍数以及小型化变焦镜头的样机交付。在高变倍比、长焦距、超高清的变焦镜头领域，公司与国外企业处于同一技术水平，领先于国内同行业企业。 | 角安防监控镜头、大光圈安防监控镜头。<br>3、红外镜头。 | |
| 3 | 多光谱共口径镜头的研制生产技术 | 衡量该核心技术的关键指标在共口径镜头的光谱范围、最大口径和焦距等，目前公司基于该技术开发的多光谱共口径镜头最大口径可提升至 510mm，最长焦距达 2600mm，光谱范围涵盖可见光到中波红外。公司已完成共口径三光谱连续变焦镜头的研制，完成大通光、高分辨率情况下的不同光谱成像完全一致的镜头研制，突破离轴三反光学系统的设计、加工及装调技术。公司该项核心技术处于国际先进水平。 | 1、定制产品，主要应用于光电吊舱系列镜头、舰载工程系列镜头。<br>2、红外镜头。<br>3、车载镜头。<br>4、高清安防监控镜头、大广角安防监控镜头、大光圈安防监控镜头。 | 自主研发 |
| 4 | 小型化定变焦非球面镜头的设计及自动化生产技术 | 小型化定变焦非球面镜头采用自动化生产技术可以大幅提升镜头生产效率和精度，公司该项技术处于国内先进水平。 | 1、定制产品，主要应用于空间飞行器系列镜头、弹载系列镜头、火箭专用系列镜头、红外探测系列镜头。<br>2、高清安防监控镜头。<br>3、红外镜头。<br>4、车载镜头。 | 自主研发 |
| 5 | 精密及超精密光学加工技术 | 光学元件加工技术的关键指标在镜片表面形状误差和表面粗糙度，镀膜的关键指标在反射率，漂移量，均匀性等。<br>目前公司加工的球面镜片、非球面镜片、二元曲面、离轴面、不规则透镜（包括红外材料、紫外材料、玻璃材料、塑胶压铸材料等）形状误差可达 0.06μm，表面粗糙度最佳达到 Ra<0.7nm，加工面型精度 RMS 最佳可达 2nm，处于国内先进水平。<br>公司的模具制造技术对于镜片面型精度最佳达到 PV<0.05μm，粗糙度达到 Ra<2nm，处于国内领先水平。<br>镀膜工艺可使锗、硅材料在中波红外范围内平均反射率小于 0.3%，处于国内领先水平。 | 1、定制产品。<br>2、红外镜头、车载镜头、安防监控镜头、机器视觉镜头、投影光机等。 | 自主研发 |

（2）报告期内获得授权的相关发明专利情况：

| 序号 | 名称 | 申请号或专利号 | 核心技术方向 |
|---|---|---|---|
| 1 | 一种大靶面摄照两用超高清连续变焦镜头 | 2025100304645 | 复杂变焦光学系统设计技术 |
| 2 | 一种光阑可控的红外镜头及其工作方法 | 202211657583.6 | 小型化定变焦非球面镜头的设计及自动化生产技术 |
| 3 | 一种微透镜阵列与红外探测器 | 202311613595.3 | 精密及超精密光学加工技术 |

FIG_TECH | H1 2026 report, p17 | disclosed optical process capabilities. Examples include RMS 2nm, roughness Ra below 0.7nm, form accuracy 0.06um and mold/film specifications. These are technical capability claims; qualified output, yield and customer economics are not disclosed. Source: IND-H126 | 2026-08-29 | page 17 | reported best capability; no throughput claim | https://big5.sse.com.cn/site/cht/www.sse.com.cn/disclosure/listedinfo/announcement/c/new/2026-08-29/688010_20260829_WAF5.pdf

Lithography remains an unresolved application boundary. In the May written earnings record, question 16 asked directly about products and progress; management replied with its broad product list and a reference to periodic filings. That answer defines no new current-period lithography programme, and it is not a categorical denial. A 12 November 2024 unattributed industry-chain repost is retained as a research alert, not an issuer fact. Its historical period, quantity and source pedigree do not anchor a distinct 2026 incremental outcome. Attempting a bounded unit proxy cannot supply those missing anchors without inventing sales.

The model already admits generically qualified new external precision output through P03. It therefore carries no additional separately mapped lithography receipt outcome from the noncommittal reply or the unattributed historical alert. Absence of an official award alone is not the reason. An attributable current trial, roadmap or customer-volume signal would be translated into a bounded economic outcome and an explicit probability before official confirmation. No additional mapped SpaceX receipt outcome is established here.

FIG_LITHO_REPLY | May 20/21 written issuer earnings record, p5 | direct lithography question and noncommittal reply. Question 16 asks for products and progress in lithography. The reply lists special, security, vehicle, infrared, machine-vision and projection products and refers readers to periodic reports. It supplies no customer, project amount or validation milestone. Source: IND-MAYQA | 2026-05-21 | page 5 | written management reply; programme unconfirmed | https://file.finance.sina.com.cn/cn/diaoyan/jgdy/2026/2026-05/2026-05-26/10182396_1.pdf

# Latest actuals and the management record

FY2025 and H1 2026 are the controlling annual and interim anchors. The issuer announcement inventory did not provide a Q3 2026 report, preliminary result or numerical H2/FY sales/profit guidance as of this research date. Q3 is therefore a completed-quarter model estimate. The latest standalone quarter directly available is Q1 2026; H1-minus-Q1 revenue for Q2 is 151.534831 CNY million.

### ACTUAL_PNL | Reported consolidated P&L and sanctioned core bridge

Source: FY2025 pp120–121, H126 pp63–64, Q126 pp10–11. Standalone Q2 values are the financial source handoff's already-derived H1-minus-Q1 actuals, not a new display-side calculation. Blank source cells remain blank/null; they are not assertions of zero. Core OP = revenue − COGS − operating taxes − selling − administration − R&D. Reversing finance/other/investment/FV/provisions/disposal produces reported OP; actual reconciliation residuals are retained in the selected model.

Investment income and other/noncore items materially change the reported earnings presentation. A reported parent net result is not the recurring parent economic core OP used in the forward valuation. The model retains this sanctioned profit basis rather than importing net income, EPS or project IRR as an alternative valuation method.

### MANAGEMENT_SCOPE | Newest two earnings-cycle written records

| Date / cycle | Preserved coverage | Substantive message | Completeness limit |
|---|---|---|---|
| 14 October 2026 · H126 | 2 pages; all 3 written answers read. | Custom/non-custom development; space/laser communication/UAV/sensing; lidar/smart driving; intended AR and vehicle-projection batch production; Meyer camera extension. | Issuer-authored original via Sina mirror. No full spoken transcript, replay or whole submitted-question corpus. No quantified revenue, ASP or backlog. |
| 20/21 May 2026 · FY25 + Q126 | 5 pages; all 16 numbered written answers read. | Existing product and business plans; direct lithography question answered with broad product list and periodic-report reference. | Combined phone/visit/network written record; not the complete underlying spoken event. Calendar / publication dates are distinguished. |

The 16 September institutional-visit record is supplementary, not a substitute for the newest two earnings-cycle records. Primary roadshow host access failed with a connection reset; source completeness is stated rather than inferred.

| **日期** | 2026年10月14日 |

FIG_OCT14 | October 14 H1 2026 written earnings record, p2 | management plans and application scope. Management discusses space, laser communication, UAV and sensing, vehicle lidar/smart driving, pushing AR/vehicle projection batch production and the Meyer camera route. These are qualitative plans; no shipment or financial forecast is supplied. Source: FIN-OCTQA | 2026-10-14 | page 2 | written plans / intentions; no new numerical guidance | https://file.finance.sina.com.cn/211.154.219.97:9494/MRGG/CNSESH_STOCK/2026/2026-10/2026-10-14/12641599.PDF

# China Data Packet: evidence to model variables

### CHINA_PACKET | Source ladder, calibration and causal variables

| Vector | Native source / ladder | Demand, margin or timing variable | Model transmission | Confidence |
|---|---|---|---|---|
| Existing custom optics | H126 business section; FY25/H125 segment data · Level 1 | Programme qualification and accepted special optics; strongly seasonal mix. | H126 product revenue calibrated with reported historical seasonal share; later reference growth is LOW. | HIGH actuals / LOW future mix and seasonality. |
| Lenses / vehicles | H126 pp15,24; FY25 p40 · Level 1 | New designation conversion versus weak security demand and plastic substitution. | P02 fresh unit equivalents × historical basket ASP proxy × ramp × overlap × probability. | HIGH designation statement / LOW units, ASP transfer and capture. |
| Components / optical communication | H126 pp15,17 and September project · Level 1 | Qualification, optical processing and new capacity; no customer wallet disclosed. | Existing component reference plus P03 commissioned, external, non-overlap increment. | HIGH production statement / LOW turnover and capture. |
| Payload systems | H126 p14; September feasibility and Oct9 approval · Level 1 | Existing optics to integrated payload research; near-term expense before accepted programmes. | P01 conditional equivalent programmes; full R&D budget separate, selected half incremental. | HIGH approved budget / LOW conversion economics. |
| Manufacturing economics | FY25 pp41–42; H126 cost and asset notes · Level 1 | Material/labor/factory allocation, fixed absorption, depreciation and cost indices. | H126 calibration; 75% factory fixed and 75% functional D&A are LOW proxies. | HIGH totals / LOW functional split. |
| Market boundary | Framework DB1; LightCounting public material · contextual | Global module demand and architectures, not an issuer customer order. | No direct market-share multiplication into Forecam receipts. | Dated forecast / unquantified company wallet. |
| Timing / cash | H126 acceptance, cash and debt notes; Sept projects · Level 1 | Acceptance after qualified production, capex before ramp, finite assets and loan maturities. | Quarterly commissioning / recognition / WC / reserve / debt bridge. | HIGH reported dates and balances / LOW cash classification, renewals and interim schedule. |

Level 1 filings and issuer-authored originals control company facts. Mirrors are transport hosts, not independent corroboration. Level 2 industry evidence informs boundaries; unverified Level 3/4 claims do not become issuer facts. Missing named-customer capex and wallet prevent a claimed customer-capex calibration; the explicit Plan-B proxy is used.

**ACTUAL_SEGMENTS | Reported product anchors before projections**

| CNY million | FY2025 revenue | H1 2026 revenue | H1 2026 COGS | Source scope |
|---|---|---|---|---|
| Custom products | 197.481624 | 55.663264 | 40.314201 | Main-business category |
| Non-custom lenses | 355.478498 | 152.896251 | 135.667582 | Main-business category |
| Main components | 101.092407 | 46.909165 | 42.109837 | Main-business category |
| Other business | 22.103651 | 5.809747 | 5.464588 | Other business; kept separate |

Main components and other business are tracked separately. Do not use the broader components-plus-other subtotal as a second revenue line. Source segments reconcile to group revenue; not every end application is separately reported.

Demand is converted to revenue only after the addressable optical product, qualified supplier position, usable output, external/non-overlap share and recognition stage are specified. The data do not reveal stable product-level ASPs, new-line units per year, tool counts, yield, named optical-communication customers or a monetary new-designation backlog. Those gaps lower confidence; they do not silently become company sales equal to an industry TAM.

# Manufacturing, acceptance and competitive cost constraints

The business combines optical design, molds and mechanical parts, injection/cold processing, molding, ultra-precision machining, coatings, assembly and testing. Custom products are order-driven and involve supplier qualification. The reported planning cadence distinguishes monthly lens production and weekly assembly. Line installation, qualified process output, customer shipment and customer acceptance are separate events.

| | | |
|---|---|---|
| 一体机镜头 |  | 高解像力设计及红外校正技术，高速、持久保持清晰 |

（2）车载、红外、机器视觉镜头、投影光机、摄影镜头

| 产品名称 | 产品图示 | 产品介绍 |
|---|---|---|
| 车载镜头 |  | 广泛应用于 ADAS（智能驾驶辅助系统）、疲劳监控、行驶记录等 |
| 红外热成像镜头 |  | 广泛应用于工业测温、电力检测、安防监控、车载辅助驾驶系统等 |
| 机器视觉镜头 |  | 广泛应用于生产加工、装备检测、流水化作业等智能识别感应监测设备等 |
| 投影光机 |  | 广泛应用于激光电视、智能家用投影、AR、可穿戴设备等 |
| 摄影镜头 |  | 传承德国梅耶光学的独特影像美学，具有大光圈、高分辨率和独特散景成像风格 |

（3）光学元件

| 产品名称 | 产品图示 | 产品介绍 |
|---|---|---|
| | | |

FIG_PRODUCT_SCOPE | H1 2026 report, p12 | non-custom applications and product boundaries. Vehicle, infrared, machine-vision and projection products explain what is sold. End applications can overlap reported accounting categories and should not be added as independent revenue segments. Source: IND-H126 | 2026-08-29 | page 12 | reported existing products | https://big5.sse.com.cn/site/cht/www.sse.com.cn/disclosure/listedinfo/announcement/c/new/2026-08-29/688010_20260829_WAF5.pdf

（3）企业有权自主决定所交易商品的价格；
（4）其他相关事实和情况。
2. 各业务类型收入具体确认方法
（1）内销收入
对于定制产品，公司在产品发往客户指定地点，经客户签收取得验收合格单（交接单）时确认收入；对于非定制产品，公司在产品发往客户指定地点，经客户签收后确认收入，合同约定交易双方需进行对账确认的，根据对账单信息确认收入。
（2）外销收入
公司在产品发出，完成出口报关手续并取得报关单据时确认收入。

**(2) 同类业务采用不同经营模式涉及不同收入确认方式及计量方法**
□适用 √不适用

**35、合同成本**
√适用 □不适用
合同成本包括取得合同发生的增量成本及合同履约成本。
为取得合同发生的增量成本是指本公司不取得合同就不会发生的成本(如销售佣金等)。该成本预期能够收回的，本公司将其作为合同取得成本确认为一项资产。本公司为取得合同发生的、除预期能够收回的增量成本之外的其他支出于发生时计入当期损益。
为履行合同发生的成本，不适用存货、固定资产或无形资产等相关准则的规范范围的，且同时满足下列条件的，本公司将其作为合同履约成本确认为一项资产：
（1）该成本与一份当前或预期取得的合同直接相关，包括直接人工、直接材料、制造费用（或类似费用）、明确由客户承担的成本以及仅因该合同而发生的其他成本；
（2）该成本增加了企业未来用于履行履约义务的资源；
（3）该成本预期能够收回。
合同取得成本确认的资产和合同履约成本确认的资产采用与该资产相关的商品或服务收入确认相同的基础进行摊销，计入当期损益。
与合同成本有关的资产，其账面价值高于下列两项差额的，本公司对超出部分计提减值准备，并确认为资产减值损失：
（1）企业因转让与该资产相关的商品预期能够取得的剩余对价；
（2）为转让该相关商品估计将要发生的成本。
以前期间减值的因素之后发生变化，使得（1）减（2）的差额高于该资产账面价值的，应当转回原已计提的资产减值准备，并计入当期损益，但转回后的资产账面价值不应超过假定不计提减值准备情况下该资产在转回日的账面价值。

**36、政府补助**
√适用 □不适用
1. 政府补助的类型
政府补助，是指公司从政府无偿取得的货币性资产或非货币性资产，包括与资产相关的政府补助和与收益相关的政府补助。
与资产相关的政府补助，是指公司取得的、用于购建或以其他方式形成长期资产的政府补助。
与收益相关的政府补助，是指除与资产相关的政府补助之外的政府补助。
2. 政府补助的确认原则和确认时点
政府补助的确认原则：
（1）公司能够满足政府补助所附条件；
（2）公司能够收到政府补助。
政府补助同时满足上述条件时才能予以确认。
3. 政府补助的计量
（1）政府补助为货币性资产的，公司按照收到或应收的金额计量；

FIG_RECOGNITION | H1 2026 report, p99 | revenue recognition and customer acceptance. Custom domestic products use customer acceptance/handover conditions; non-custom receipt/reconciliation and export customs conditions differ. A commissioning or sample milestone is not recognized revenue. Source: IND-H126 | 2026-08-29 | page 99 | reported accounting policy | https://big5.sse.com.cn/site/cht/www.sse.com.cn/disclosure/listedinfo/announcement/c/new/2026-08-29/688010_20260829_WAF5.pdf

### UNIT_BASKETS | FY2025 observed production, sales and inventory baskets

| Category | Production · 10k sets | Sales · 10k sets | Inventory · 10k sets | Interpretation |
|---|---|---|---|---|
| Custom products | 26.52 | 23.34 | 1.80 | Heterogeneous systems/lens basket; not space-only. |
| Lenses | 2,132.39 | 2,055.86 | 388.58 | Multiple specifications, internal use and purchases matter. |
| Components | 7,195.05 | 6,209.17 | 777.61 | Not equivalent to externally sold optical-comm assemblies. |

FY2025 p40. These are observed mixed-model baskets, not nameplate capacity or standardized output. Do not add stock inventory to new capacity, or infer a stable automotive ASP from an aggregate lens basket.

公司定制产品收入增长 34.93%，主要原因系业务回暖及拓展产品布局。定制产品成本增长 41.63%，主要原因系受收入增长影响。

### (2). 产销量情况分析表

√适用 □不适用

| 主要产品 | 单位 | 生产量 | 销售量 | 库存量 | 生产量比上年增减（%） | 销售量比上年增减（%） | 库存量比上年增减（%） |
|---|---|---|---|---|---|---|---|
| 定制产品 | 万套 | 26.52 | 23.34 | 1.80 | 1,077.07 | 828.37 | 359.05 |
| 非定制光学镜头 | 万套 | 2,132.39 | 2,055.86 | 388.58 | 45.66 | 78.27 | 24.82 |
| 光学元件及其他 | 万套 | 7,195.05 | 6,209.17 | 777.61 | 21.25 | 25.80 | -17.29 |

注：上表“光学元件及其他”存在公司生产领用、对外采购等情形，所列产量、销量及库存量系按本期销售的产品型号归集，因此，本期期初库存量与上期期末库存量不一致。上表“定制产品”中的半成品部分存在公司生产领用、对外采购等情形，所列产量、销量及库存量系按本期销售的产品型号归集，因此，本期期初库存量与上期期末库存量不一致。

产销量情况说明
1、定制产品产销量及库存同步上升，主要原因系业务回暖及拓展产品布局；
2、非定制光学镜头生产量、销售量、库存量上升，主要原因系产品结构变化。

### (3). 重大采购合同、重大销售合同的履行情况

□适用 √不适用

FIG_UNITS | FY2025 report, p40 | original unit baskets and internal-use / purchased-product qualifications. Production, sales and inventory are in ten-thousand sets across mixed products. The footnotes qualify comparability. The table is a historical throughput observation, not new-line capacity. Source: IND-FY25 | 2026-04-28 | page 40 | reported historical flow / stock | https://big5.sse.com.cn/site/cht/www.sse.com.cn/disclosure/listedinfo/announcement/c/new/2026-04-28/688010_20260428_JROT.pdf

FIG_COST_BUCKETS | FY2025 report, p41 | material, direct-labor and manufacturing expense buckets. The source manufacturing-expense bucket is not disclosed as entirely fixed. Allocation parameters change with product mix and labor hours, as explained on the following source page. The model’s fixed split is a hypothesis. Source: IND-FY25 | 2026-04-28 | page 41 | reported cost totals; functional fixed split undisclosed | https://big5.sse.com.cn/site/cht/www.sse.com.cn/disclosure/listedinfo/announcement/c/new/2026-04-28/688010_20260428_JROT.pdf

Performance has economic tradeoffs. The issuer describes glass advantages in optical/environmental performance alongside higher costs, cheaper plastic competition and slower security-product upgrading. Fixed depreciation and amortization pressure persists while demand and utilization vary. The forward model tests cost composition and material inflation rather than assuming every new application earns a premium margin.

要求高；在安防、车载、物联网、人工智能等民用领域，光学技术升级节奏相对较快，光学镜头高清化、网络化、智能化趋势十分明显。报告期内，公司持续研发投入，积极承担国家重大科研项目，践行两用技术融合机制，但仍然存在因研发投资不足、技术方向偏差、技术难度加大等原因而导致研发失败的风险。

3、技术未能形成产品或实现产业化风险

科技成果产业化并最终服务于经济社会发展的需求、提升国家综合实力和人民生活水平是其意义所在。空间观测、航天领域是特殊的经济领域，具有极强的政治属性，国家采购计划、技术指标等发生变化将给科研技术成果的应用带来很多不确定性。该领域的科研难度大、技术复杂度高，产业化周期较长，可能发生产业化过程中科研方向改变、新技术替代带来的风险。民用光学产品的应用领域不断拓展，产品技术不断升级，市场需求面临较大的不确定性，企业的前瞻性技术成果可能面临无法适应新的市场需求的情况，或者竞争对手抢先推出更先进、更具竞争力的技术和产品，或出现其他替代产品和技术，从而使公司的技术成果面临产业化失败的风险。

4、依赖核心技术人员的风险

公司所处的光学镜头行业属于技术密集型行业，综合应用了光学、机械和电子等多学科技术，镜头设计、生产工艺以及精密加工等技术水平的高低直接影响光学镜头的成像质量，是行业内企业的核心竞争点。公司核心技术人员掌握了公司大量的关键技术，这些核心技术人员一旦流失，则有可能出现公司核心技术失密或知识产权被他人侵权等情况，将对公司的行业影响力和长期发展造成重要影响，进而影响公司的正常生产经营。

（二）经营风险

1、市场风险

光学镜头产品应用广泛，在不同应用领域呈现不同的行业竞争特点。在安防监控领域，光学镜头是高度市场化行业，近年来，国产品牌企业把握趋势，在民用领域强劲发力，纷纷加大研发力度，光学设计和加工能力快速提升，市场竞争逐步加剧。随着国内镜头企业整体技术水平和产品质量的不断提升，公司未来面临的竞争压力也可能有所增加，从而影响公司的盈利水平。

公司的核心技术主要来源于定制产品研发及转化，因此，公司选择的技术及产品路线为以玻璃镜片为主的光学镜头及系统。以玻璃镜片为主的镜头与以塑胶镜片为主的镜头相比，在同等参数下性能更高，环境适应性更强，适用范围更广，但生产难度大，技术要求高，成本较高。

在安防领域，公司认为超高清、深度智能化是长期的发展趋势，以玻璃镜片为主的镜头在超高清产品中将更具有竞争优势。但近年来，安防市场对于光学镜头技术升级、迭代的需求放缓，高端镜头产品的市场需求的增长速度不如预期，同时，安防镜头市场竞争进一步加剧，市场对高性价比产品的需求规模进一步扩大，以塑胶镜片为主的镜头的成本优势明显。因此，公司在保持并增强原有技术优势的同时，为满足现阶段市场需求，调整产品结构，向客户提供高性价比的光学镜头，以保持并提升市场占有率。如后续技术及产品发展方向与公司预期存在重大差异，或未来公司的市场开拓、产品结构调整无法达到预期效果，则将对公司业绩产生不良影响。

2、丧失主要经营资质的风险

公司是专业从事特种及民用光学镜头、光电系统、光学元组件等产品科研生产的高新技术企业，相关业务资质是公司重要的经营资质。若公司在生产经营过程中，发生重大泄密事件、关键设备设施严重破损等事项，均可能导致公司丧失资质，进而严重影响公司经营业绩。

3、规模扩大导致的经营管理风险

随着募集资金投资项目的建成，公司的生产、研发规模将迅速扩大，员工人数、业务规模和管理部门的扩张将会提高公司的管理运营难度，在生产管理、技术研发、市场营销、日常运营等方面难度也随之加大，公司存在因规模扩大导致的经营管理风险。

4、毛利率下滑的风险

若后续公司境外销售收入占比下降、定制产品销售收入占比下降或非定制光学镜头产品的收入规模未有效放大，则可能造成公司的整体毛利率下滑，对公司业绩产生不良影响。

5、固定成本上升的风险

公司成本费用中的折旧及摊销费用占比较高。此类固定成本具有支出刚性特征，若未来公司营业收入规模未能实现有效突破，将导致单位固定成本分摊压力加剧，成本费用端的刚性支出将侵蚀经营利润空间，导致利润端承压，出现利润下滑的风险。

（三）财务风险

FIG_COMPETITION | H1 2026 report, p24 | substitution, demand and depreciation constraints. Glass performance does not eliminate low-cost plastic alternatives. The company flags slower security upgrades and depreciation/amortization burden; these constrain margins and utilization. Source: IND-H126 | 2026-08-29 | page 24 | reported risk / competitive constraint | https://big5.sse.com.cn/site/cht/www.sse.com.cn/disclosure/listedinfo/announcement/c/new/2026-08-29/688010_20260829_WAF5.pdf

Top-five FY2025 customers represented 31.60% of sales, with the largest at 10.39%; names are not disclosed in the source table. Historical product relationships or a shared end-market do not establish a present optical-communication customer award. No monetary backlog or qualified new-line output was obtained. Personnel expansion and technical specifications are capability evidence, not accepted-order quantities.

R&D staffing and payroll are not identical to expensed research. The H126 personnel-cost note states that trial products sold can transfer labor costs into inventory/COGS. The selected expense bridge therefore uses the reported R&D expense and explicit project increment; it does not deduct all research payroll a second time.

# Approved precision project: capacity, commissioning and overlap

The shareholder meeting on 9 October approved the manufacturing and payload-research changes; the result was published on 10 October. The precision manufacturing project is planned for a twelve-month build at Mawei/Fuqing sites. Its full budget and the existing IPO-proceeds allocation are different scopes, not conflicting totals.

**PRECISION_BUDGET | Precision project: full budget versus approved existing-proceeds allocation**

| CNY million | Full project | IPO allocation | Meaning |
|---|---|---|---|
| Equipment | 59.5500 | 53.2500 | Physical investment |
| Fit-out | 3.1740 | 2.7860 | Physical investment |
| Seed working-capital envelope | 24.3176 | 24.3176 | Budget envelope, not another subtraction from the modeled WC stock |
| Total | 87.0416 | 80.3536 | Full total includes working capital |
| Budget difference · arithmetic inference | 6.6880 | Not a second project | Full budget less allocated existing IPO proceeds; requires other company funding if the full plan is executed. Not a claim of cash already paid or completed self-funding. |

September 18 feasibility p9 and allocation pp2–3; proposed allocation approved at the October 9 shareholder meeting. Full physical spend is CNY62.724M; allocation-funded physical spend is CNY56.036M. Existing IPO resources are already inside opening financial resources; neither allocation creates new cash.

# 第三章 投资总额以及使用计划

## 一、投资总额及投资比例

本项目预计总投资 8,704.16 万元，含装修工程 317.4 万元，机器设备 5,955.00 万元，铺底流动资金 2,431.76 万元。

| 序号 | 项目 | 投资金额（万元） | 占资金总量占比（%） |
|---|---|---|---|
| 1 | 装修工程 | 317.40 | 3.65% |
| 2 | 机器设备 | 5,955.00 | 68.42% |
| 3 | 铺底流动资金 | 2,431.76 | 27.94% |
| 项目总投资 | | 8,704.16 | 100.00% |

## 二、资金投资使用计划

本项目建设期预计 12 个月，资金投资进度如下：

图表-项目投资进度安排

单位：万元

| | 资金金额 | T1 | T2 |
|---|---|---|---|
| 土建工程 | 317.40 | 317.40 | - |
| 机器设备 | 5,955.00 | 3,900.00 | 2,055.00 |
| 铺底资金 | 2,431.76 | - | 2,431.76 |
| 合计 | 8,704.16 | 4,217.40 | 4,486.76 |

FIG_PRECISION_BUDGET | September 18 precision feasibility, p9 | original full-project budget. Total CNY87.0416M comprises equipment CNY59.55M, fit-out CNY3.174M and working capital CNY24.3176M. The source does not disclose annual output units, tool counts, yields or an annual revenue table. Source: IND-PRECISION | 2026-09-18 | page 9 | approved planned investment; not orders | https://big5.sse.com.cn/site/cht/www.sse.com.cn/disclosure/listedinfo/announcement/c/new/2026-09-18/688010_20260918_II69.pdf

署了募集资金专户监管协议，对募集资金的存放和使用情况进行监管。

**（二）剩余募集资金的基本情况**

公司于 2022 年 12 月 5 日召开第三届董事会第十四次会议及第三届监事会第十四次会议、2022 年 12 月 15 日召开 2022 年第二次临时股东大会，审议通过了《关于终止部分募投项目并将剩余募集资金用于新投资项目的议案》，同意公司终止募投项目“全光谱精密镜头智能制造基地项目（一期）”，并将剩余募集资金 16,663.85 万元（含现金管理收益及利息净额）中的 9,537 万元用于新投资项目“精密镜头产业化基地技改整合项目”，7,126.85 万元继续留存于募集资金专户（详见公司 2022-077 号公告）。

截至 2026 年 6 月 30 日，公司募集资金余额为 18,383.94 万元（包含现金管理收益、利息收入扣除手续费支出后的净额，已终止募投项目“全光谱精密镜头智能制造基地项目（一期）”的剩余募集资金 7,126.85 万元以及尚未明确投资方向的超募资金 7,410.37 万元）（详见公司 2026-034 号公告）。

**（三）本次拟使用的部分剩余募集资金的基本情况**

为提高募集资金使用效率，公司拟分别将 8,035.36 万元、3,000.00 万元剩余募集资金用于投资建设精密光学元件项目、空天镜头研发项目。

**二、本次部分剩余募集资金使用计划的具体情况**

**（一）使用计划概述**

为提升公司精密光学元件制造能力，充分发挥募集资金的使用效率，根据公司实际情况及经营发展需要，公司拟使用部分剩余募集资金 8,035.36 万元用于投资建设精密光学元件项目。公司将通过设立募集资金专户管理的方式实施本项目。

为把握低空经济、航天、高端工业及消费光学国产替代的发展机遇，提升公司高端光学镜头研发能力，进一步布局系统级产品，充分发挥募集资金的使用效率，根据公司实际情况及经营发展需要，公司拟使用部分剩余募集资金 3,000.00 万元用于空天镜头研发项目。公司将通过设立募集资金专户管理的方式实施本项目。

**（二）项目基本情况**

**1、多领域精密光学元件产业化项目**

精密光学元件项目计划总投资为 8,704.16 万元，拟使用 8,035.36 万元剩余募集资金。其中，装修工程 278.60 万元，机器设备 5,325.00 万元，铺底流动资金 2,431.76 万元。项目基本信息如下：

FIG_PRECISION_ALLOCATION | September 18 proceeds-allocation filing, p2 | funding scope differs from full project scope. Existing IPO proceeds proposed for the precision project total CNY80.3536M. The CNY6.688M difference from the full project budget is an arithmetic funding requirement if the full plan is executed; it is not evidence of cash already paid or completed self-funding. No double-counted project or new cash inflow follows. Source: IND-FUNDS | 2026-09-18 | page 2 | approved proceeds reallocation | https://big5.sse.com.cn/site/cht/www.sse.com.cn/disclosure/listedinfo/announcement/c/new/2026-09-18/688010_20260918_MK57.pdf

## 第四章 建设规模与进度计划

本项目预计 12 个月建设实施完成，分为项目筹备、工程实施、设备订货及招标、设备安装调试、陆续投产各阶段。各阶段具体实施进度的计划如下表：

图表-项目实施进度安排

| 项目实施内容 | 第一年 | | 第二年 | | | |
|---|---|---|---|---|---|---|
| | Q3 | Q4 | Q1 | Q2 | Q3 | Q4 |
| 项目筹备 | | | | | | |
| 工程实施 | | | | | | |
| 人员招聘与培训 | | | | | | |
| 设备订货及招标 | | | | | | |
| 设备安装调试 | | | | | | |
| 陆续投产 | | | | | | |

FIG_PRECISION_TIMING | September 18 precision feasibility, p10 | twelve-month schedule and phased commissioning. The schedule uses project-relative first/second-year quarters, not explicit calendar revenue guidance. Construction, installation and commissioning are distinct from customer qualification and acceptance. Source: IND-PRECISION | 2026-09-18 | page 10 | planned relative schedule | https://big5.sse.com.cn/site/cht/www.sse.com.cn/disclosure/listedinfo/announcement/c/new/2026-09-18/688010_20260918_II69.pdf

The source pretax IRR of 15.78% and payback of 7.32 years are management feasibility outputs. They are not inverted into an unsupported sales forecast. The model instead uses a LOW corporate asset-turnover proxy: full physical investment times FY2025 group revenue divided by FY2025 net PPE. The resulting annual revenue-capacity proxy is 60.483033 CNY million before the external/non-overlap fraction, ramp, probability and qualified installed-capacity limit.

### PRECISION_CAPACITY_DERIVATION | Selected precision capacity and variable-cost bridge

| Metric / scope | Selected value | Units | Calculation / source |
|---|---|---|---|
| src.precision.physical_capex | 62.724000 | CNY M | Sep18 full equipment59.55M+fitout3.174M |
| FY2025 current consolidated revenue | 676.156181 | CNY M | FY2025 consolidated income statement PDF p120 |
| src.FY25.net_PPE | 701.208555 | CNY M | FY2025 consolidated balance sheet; H126 comparative p27 |
| LOW corporate net-PPE turnover proxy; no disclosed physical-unit capacity | 60.483033 | CNY M | (src.precision.physical_capex x (src.FY2025.revenue.current / src.FY25.net_PPE)) |
| programme.P03.incremental_external_fraction | 0.700000 | fraction | Analyst assumption; LOW confidence |
| programme.P03.probability | 0.650000 | fraction | Analyst assumption; LOW confidence |
| cal.components.variable_ratio | 0.573821 | fraction | ((src.product.components.H126_C - (cal.components.fixed_factory_quarter x const.two)) / src.product.components.H126_R) |
| Current calibrated component variable cost benchmark; no automatic newplant margin premium | 1.000000 | multiple | Analyst assumption; LOW confidence |
| programme.P03.variable_cost_ratio | 0.573821 | fraction | (cal.components.variable_ratio x programme.P03.variable_cost_index) |

The capacity proxy is a corporate asset-turnover calibration, not disclosed physical capacity. Variable cost uses the current H126-calibrated main-component benchmark times index 1; no new-plant margin premium is assumed.

Existing optical-communication production is already in the component reference. P03 admits only new externally sold precision-component output, excluding replacement, internal consumption and reference overlap. Its 70.00% fresh fraction is a LOW analyst choice. Capex, installed assets, depreciation and factory cash costs are incurred independently of the commercial success weight.

### PRECISION_PATH_p1 | New precision capital, commissioning and commercial conversion

| Quarter | Status | Physical capex | CIP closing | Installed cost | Installed fraction |
|---|---|---|---|---|---|
| Q3 2026 | Model | 0.000 | 0.000 | 0.000 | 0.000 |
| Q4 2026 | Model | 12.545 | 12.545 | 0.000 | 0.000 |
| Q1 2027 | Model | 15.681 | 28.226 | 0.000 | 0.000 |
| Q2 2027 | Model | 15.681 | 43.907 | 0.000 | 0.000 |
| Q3 2027 | Model | 18.817 | 62.724 | 0.000 | 0.000 |
| Q4 2027 | Model | 0.000 | 0.000 | 62.724 | 1.000 |
| Q1 2028 | Model | 0.000 | 0.000 | 62.724 | 1.000 |
| Q2 2028 | Model | 0.000 | 0.000 | 62.724 | 1.000 |
| Q3 2028 | Model | 0.000 | 0.000 | 62.724 | 1.000 |
| Q4 2028 | Model | 0.000 | 0.000 | 62.724 | 1.000 |
| Q1 2029 | Conditional diagnostic; funding unavailable | 0.000 | 0.000 | 62.724 | 1.000 |
| Q2 2029 | Conditional diagnostic; funding unavailable | 0.000 | 0.000 | 62.724 | 1.000 |
| Q3 2029 | Conditional diagnostic; funding unavailable | 0.000 | 0.000 | 62.724 | 1.000 |
| Q4 2029 | Conditional diagnostic; funding unavailable | 0.000 | 0.000 | 62.724 | 1.000 |
| Q1 2030 | Conditional diagnostic; funding unavailable | 0.000 | 0.000 | 62.724 | 1.000 |
| Q2 2030 | Conditional diagnostic; funding unavailable | 0.000 | 0.000 | 62.724 | 1.000 |
| Q3 2030 | Conditional diagnostic; funding unavailable | 0.000 | 0.000 | 62.724 | 1.000 |
| Q4 2030 | Conditional diagnostic; funding unavailable | 0.000 | 0.000 | 62.724 | 1.000 |

CNY millions except installed fraction. Physical investment and cash factory costs are not probability-discounted sales; revenue is limited by commissioned qualified capacity. Selected LOW turnover/utilization/capture proxies are disclosed separately.

## PRECISION_PATH_p2 | New precision capital, commissioning and commercial conversion (continued)

| Quarter | Status | New PPE available | New D&A | New PPE closing | New factory cash costs |

| Q3 2030 | Conditional diagnostic; funding unavailable | 6.880 |
| Q4 2030 | Conditional diagnostic; funding unavailable | 6.880 |

CNY millions except installed fraction. Physical investment and cash factory costs are not probability-discounted sales; revenue is limited by commissioned qualified capacity. Selected LOW turnover/utilization/capture proxies are disclosed separately.

# Payload research and the full commercial-outcome ledger

The payload project is CNY30M of R&D expense over twenty-four months, not a new fixed-asset project. The source subprojects are UAV optics CNY9M, space-payload optics CNY13.5M and large-aperture research CNY7.5M. The CNY2M equipment-expense research category is inside that budget. Existing class-100 cleanroom resources do not eliminate the integration and verification work required to move from components toward payload systems.

# 第三章 资金使用计划

本项目由福建福光股份有限公司与福建福光天瞳光学有限公司共同实施，总投资 3,000 万元，全部为研发费用化支出，不涉及固定资产购置。以下按资金使用总表、各子项目资金使用明细及各费用科目测算进行阐述。

项目整体研发周期为 24 个月，三个子项目同步启动、分步验收，资金投入随研发进度有序释放。

## 一、资金使用计划

| 项目名称 | 研发投入（万元） |
|---|---|
| 无人机光电载荷研发 | 900.00 |
| 航天光电载荷研发 | 1,350.00 |
| 大光圈高性能镜头研发 | 750.00 |
| 合计 | 3,000.00 |

## 二、各子项目资金使用明细

**2.1 子项目一：无人机光电载荷**

| 科目 | 项目经费（万元） | 经费支出定义 |
|---|---|---|
| 直接材料费 | 240 | 在项目研究开发过程中消耗的各种原材料、辅助材料等低值易耗品的采购及运输、装卸、整理等费用。 |
| 人工费 | 410 | 包括项目工作人员工资、五险一金和福利费等。 |
| 中间费用 | 235 | 包括折旧及长期待摊费、无形资产摊销费、租赁费、中间试验费、产品试制模具开发与制造、工艺装备开发与制造、样品、样机费、仪器设备维护费、委托科研试制费用。 |
| 其他费用 | 15 | 包括燃料动力费、验收费、新产品设计费、工艺规程制定费、技术图纸资料费、资料翻译费、差旅费、设计软件费以及其他费用（股权支付费等）。 |
| 合计 | 900 | - |

FIG_PAYLOAD_RD | September 18 payload feasibility, p11 | research allocation and expense treatment. CNY30M is allocated across UAV, space payload and large-aperture R&D. It is fully expensed, with no separate new fixed-asset investment. Costs may partly replace existing research resources. Source: IND-AERORD | 2026-09-18 | page 11 | approved R&D plan; no awarded sales | https://big5.sse.com.cn/site/cht/www.sse.com.cn/disclosure/listedinfo/announcement/c/new/2026-09-18/688010_20260918_ZEA0.pdf

**2.2 子项目二：航天光电载荷**

| 科目 | 项目经费（万元） | 经费支出定义 |
|---|---|---|
| 直接材料费 | 360 | 在项目研究开发过程中消耗的各种原材料、辅助材料等低值易耗品的采购及运输、装卸、整理等费用。 |
| 人工费 | 615 | 包括项目工作人员工资、五险一金和福利费等。 |
| 中间费用 | 350 | 包括折旧及长期待摊费、无形资产摊销费、租赁费、中间试验费、产品试制模具开发与制造、工艺装备开发与制造、样品、样机费、仪器设备维护费、委托科研试制费用。 |
| 其他费用 | 25 | 包括燃料动力费、验收费、新产品设计费、工艺规程制定费、技术图纸资料费、资料翻译费、差旅费、设计软件费以及其他费用（股权支付费等）。 |
| 合计 | 1350 | - |

**2.3 子项目三：大光圈高性能镜头**

| 科目 | 项目经费（万元） | 经费支出定义 |
|---|---|---|
| 直接材料费 | 200 | 在项目研究开发过程中消耗的各种原材料、辅助材料等低值易耗品的采购及运输、装卸、整理等费用。 |
| 设备费 | 200 | 研究、开发项目过程中所发生的仪器、设备、样机购置和自行试制，以及对现有仪器设备进行升级改造和租赁外单位仪器设备而发生的费用。 |
| 人工费 | 300 | 包括项目工作人员工资、五险一金和福利费等。 |
| 其他费用 | 50 | 包括新产品设计费、工艺规程制定费、技术图纸资料费、资料翻译费、差旅费、设计软件费以及其他费用（股权支付费等）。 |
| 合计 | 750 | - |

FIG_PAYLOAD_COST | September 18 payload feasibility, p12 | labor, material and other research-cost detail. Labor/material allocations and the equipment-expense category are research-cost inputs. They are not capacity investment to be capitalized again or proof of a customer contract. Source: IND-AERORD | 2026-09-18 | page 12 | planned research expense | https://big5.sse.com.cn/site/cht/www.sse.com.cn/disclosure/listedinfo/announcement/c/new/2026-09-18/688010_20260918_ZEA0.pdf

The model selects half of the budget as incremental and half as reallocation of existing R&D. The full allocation and incremental charge are both shown by quarter below. This split is LOW; expense persists if the commercial outcome weight falls to zero. Existing custom products include more than space: the June issuer risk announcement cited aerospace sales at 3.48% with an unspecified denominator period. It cannot be mapped to all custom revenue or treated as a current-period space backlog.

### PROGRAMME_F4 | Incremental commercial-outcome hypotheses and forward OP contribution

| Outcome | Probability | Conditional F4 parent OP M | Weighted F4 parent OP M | Boundary |
|---|---|---|---|---|
| FC-P01 | 50.00% | 15.604557 | 7.802278 | Additional accepted UAV/space payload equivalents above continuing custom reference. |
| FC-P02 | 55.00% | 4.906751 | 2.698713 | Fresh lens shipments from vehicle designations after existing reference removal. |
| FC-P03 | 65.00% | 9.017710 | 5.861511 | Incremental external precision capacity; optical communication is one slice. |

F4 is Q4 2027–Q3 2028. The commercial weight is applied once. Costs that occur irrespective of sales are not probability-discounted. Related issuer documents share a dependence/overlap group.

FC-P01 | Additional accepted UAV/space high-performance payload programme equivalents above continuing existing custom reference. No SpaceX award is asserted.

### RULE16B_0 | Selected outcome ledger

| Field | Analyst selection / canonical bridge |
|---|---|
| Date | H126 / 18 September / 14 October 2026 |
| Source group | Same issuer: accepted/small-batch custom optics, payload R&D plan and written management plans; not independent confirmations. |
| Probability | 50.00% |
| Rationale | Specific plans and related accepted/small-batch products support a bounded conversion hypothesis; new programme scale and order amounts are undisclosed. Analyst subjective weight set before calculation. |
| Reference | Continuing custom reference with source-calibrated seasonality. Custom optics includes terrestrial/defense and other systems, not space alone. |
| Conditional | FY2027–2030 programme equivalents 2, 4, 6, 8; annual sales per programme 12.000 CNYM is an analyst equivalent, not a contract price. Variable costs 55.00%; support 1.00%. |
| Increment | Conditional sales are additional accepted programme-equivalent sales above the reference; incremental R&D expense is owned separately. |
| Weighted | Probability applies once to incremental sales / associated contribution; selected F4 parent OP increment 7.802278 CNYM. |
| Quarter cells | q{t}.P01_increment → custom revenue/material/labor/variable factory → custom GP → group core OP → parent economic OP → exact rolling F4. Calendar recognition uses the custom seasonal weights. |
| Overlap | One P01 overlap group. No repeated H126, R&D and October-plan revenue additions. Existing custom reference excludes these new programme equivalents; project costs persist at zero weight. |
| Triggers | By H1 2027, absence of evidence of annual custom recovery halves the weight; move delayed acceptance beyond the window. Confidentiality alone is not the sole veto. |

Probabilities are subjective analyst judgments; related issuer records share an overlap group. Economic endpoints are labeled proxies unless directly reported.

FC-P02 | Fresh accepted lens shipments from the designations after existing H126/reference coverage is removed.

### RULE16B_1 | Selected outcome ledger

| Field | Analyst selection / canonical bridge |
|---|---|
| Date | H126, reported 29 August 2026 |
| Source group | Same issuer: 23 automotive designations plus lidar/HUD qualification/batch production. |
| Probability | 55.00% |
| Rationale | Specific qualification and batch evidence support conversion; this is not the probability that all designations reach large-volume output. |
| Reference | Existing lenses reference includes current automotive production and weak security exposure. |
| Conditional | 23 designations × 0.100 million basket-equivalent units/year × 17.290988 CNY/basket × ramp × 50.00% fresh fraction. ASP is the heterogeneous FY25 lens revenue/sales basket, not quoted automotive ASP. |
| Increment | FY2027–2030 ramps 50.00%, 80.00%, 95.00%, 100.00%; no additional H126 recognition. Variable cost 62.00%; support 1.00%. |
| Weighted | One selected outcome weight; selected F4 parent OP increment 2.698713 CNYM. |
| Quarter cells | q{t}.P02_increment → lenses revenue and explicit variable costs → GP → group/parent core OP → exact rolling F4. Non-custom seasonality controls timing. |
| Overlap | Fresh fraction removes current automotive/reference coverage; no duplicate designation, lidar and HUD additive revenue. No module, memory or WFE TAM multiplication. |
| Triggers | If accepted shipments / automotive scale fail two successive updates, halve the weight; separately test basket ASP transfer, unit volume, mix and costs. |

Probabilities are subjective analyst judgments; related issuer records share an overlap group. Economic endpoints are labeled proxies unless directly reported.

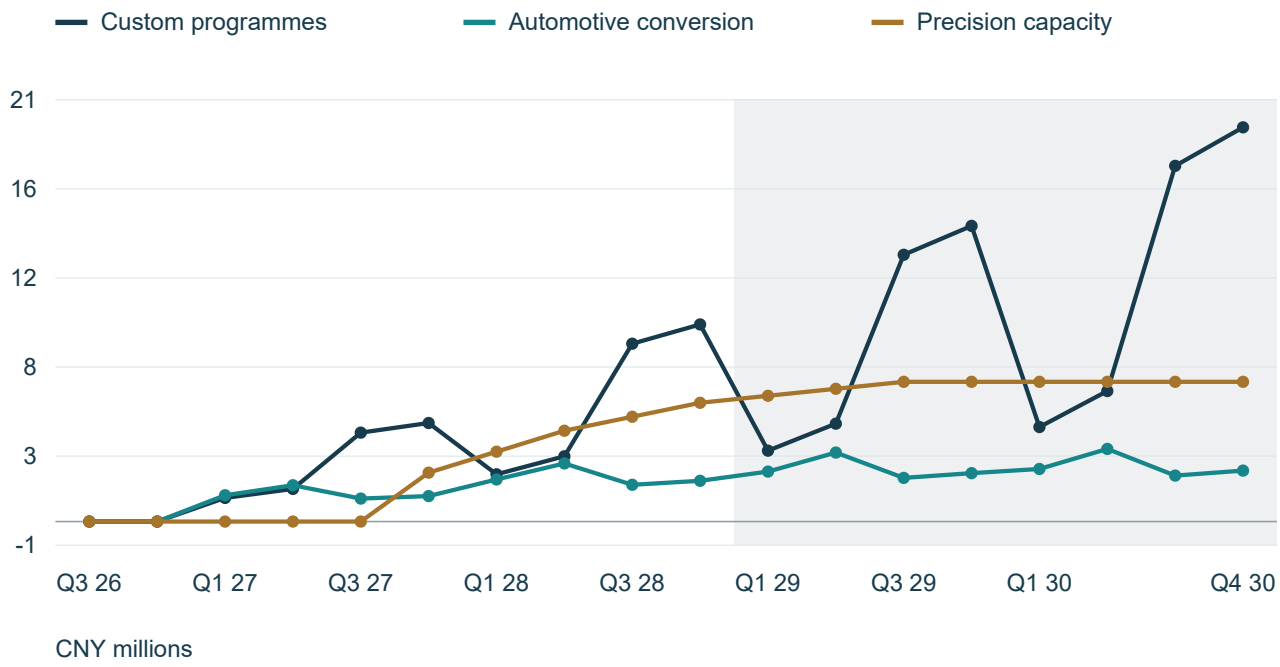

FC-P03 | New externally sold precision-component capacity after the planned build; remove existing, replacement and internal-consumption overlap.

### RULE16B_2 | Selected outcome ledger

| Field | Analyst selection / canonical bridge |
|---|---|
| Date | H126 / 18 September / 9–10 October 2026 |
| Source group | Same issuer: current optical-comm production, precision feasibility and shareholder approval. |
| Probability | 65.00% |
| Rationale | Approved funded construction and existing production support a ramp hypothesis. Qualified new output, timing and sales are uncertain; construction is not orders. |
| Reference | Current main-components reference already contains optical-communication production. New precision capacity may serve multiple applications. |
| Conditional | Annual revenue capacity 60.483033 CNYM × 70.00% external/fresh fraction × scheduled ramp, limited by commissioned capacity. Source does not disclose output units or a customer wallet. |
| Increment | Variable cost 0.573821 of new sales = current calibrated component benchmark × cost index 1.000; support 1.50%. New D&A and factory cash costs are separate expense lines charged in full. |
| Weighted | Commercial weight once; selected F4 parent OP increment 5.861511 CNYM. |
| Quarter cells | q{t}.project_physical_capex → CIP/installed fraction → q{t}.P03_increment → components revenue/costs/GP → group/parent OP. Cash capex, D&A and cash factory costs remain independent of sales weight. |
| Overlap | Single new-capacity group; no optical-comm reference replay, IRR reversal, seed-WC second subtraction or IPO cash addition. |
| Triggers | A two-quarter delay moves commissioning, D&A and sales; persistent weak acceptance lowers the weight. Verify installation, qualified external shipments and component margin before treating physical capacity as realized sales. |

Probabilities are subjective analyst judgments; related issuer records share an overlap group. Economic endpoints are labeled proxies unless directly reported.

## Incremental accepted-sales conversion

V_DRIVER | Probability-weighted company increments after reference overlap; no external module TAM is booked as company receipts. Model projections; gray shading marks funding unavailable. Later positive operating quantities are conditional diagnostics, not funded realization or an available positive valuation.

### V_DRIVER_data1 | Incremental accepted-sales conversion - plotted values

Complete selected quarterly paths. The conditional new amount is incremental over the reference. Rows with Model cash screen? No are conditional diagnostics, not funded sales realizations or available positive forward values. The cash screen uses selected cash, reserves and refinancing assumptions; Yes does not mean committed company liquidity.

**FC-P03_OP_PATH | FC-P03 · incremental OP and cost persistence**

| Quarter | Model cash screen? | Conditional group OPM | Weighted group OPM | Fixed cash costs persist at zero weight |
|---|---|---|---|---|
| Q3 2026 | Yes | 0.000000 | 0.000000 | Yes |

| Q1 2030 | No | 4.007871 | 2.605116 | Yes |
| Q2 2030 | No | 4.007871 | 2.605116 | Yes |
| Q3 2030 | No | 4.007871 | 2.605116 | Yes |
| Q4 2030 | No | 4.007871 | 2.605116 | Yes |

These are incremental commercial contributions, not total group OP or independent total-project forecasts. Model cash screen? No marks a conditional diagnostic. The cash screen uses selected cash, reserves and refinancing assumptions; Yes does not mean committed company liquidity.

# Revenue calibration and explicit product economics

Each product reference uses its H1 2026 actual and the prior comparable first-half share of FY2025 sales, then applies separately declared future growth assumptions. This is a Plan-B seasonal calibration, not management guidance. It preserves observed historical mix while admitting that quarter-level product seasonality and future reference growth are LOW. The current half-year anchor is not replaced with stale consensus.

## REFERENCE_CALIBRATION | Reference-year and cost calibration

| Metric / scope | Selected value | Units | Calculation / source |
|---|---|---|---|
| derived.H1_Q1_fraction | 0.420025 | fraction | (src.Q12026.revenue.current / src.H12026.revenue.current) |
| derived.H2_Q3_fraction | 0.474315 | fraction | (derived.Q325_revenue / derived.H225_revenue) |
| cal.custom.reference_2026 | 241.146232 | CNY M | (src.product.custom.H126_R x (src.product.custom.FY25_R / src.product.custom.H125_R)) |
| cal.custom.h1share | 0.230828 | fraction | (src.product.custom.H125_R / src.product.custom.FY25_R) |
| cal.lenses.reference_2026 | 271.220412 | CNY M | (src.product.lenses.H126_R x (src.product.lenses.FY25_R / src.product.lenses.H125_R)) |
| cal.lenses.h1share | 0.563734 | fraction | (src.product.lenses.H125_R / src.product.lenses.FY25_R) |
| cal.components.reference_2026 | 108.119940 | CNY M | (src.product.components.H126_R x (src.product.components.FY25_R / src.product.components.H125_R)) |
| cal.components.h1share | 0.433862 | fraction | (src.product.components.H125_R / src.product.components.FY25_R) |
| cal.other.reference_2026 | 11.619494 | CNY M | (src.product.other.H126_R x const.two) |
| cal.other.h1share | 0.500000 | fraction | (const.one / const.two) |
| cal.custom.fixed_factory_quarter | 4.180327 | CNY M | ((src.product.custom.FY25_factory x assumption.factory_fixed_fraction) / const.four) |
| cal.custom.variable_ratio | 0.574051 | fraction | ((src.product.custom.H126_C - (cal.custom.fixed_factory_quarter x const.two)) / src.product.custom.H126_R) |
| cal.lenses.fixed_factory_quarter | 16.156407 | CNY M | ((src.product.lenses.FY25_factory x assumption.factory_fixed_fraction) / const.four) |
| cal.lenses.variable_ratio | 0.675980 | fraction | ((src.product.lenses.H126_C - (cal.lenses.fixed_factory_quarter x const.two)) / src.product.lenses.H126_R) |
| cal.components.fixed_factory_quarter | 7.596187 | CNY M | ((src.product.components.FY25_factory x assumption.factory_fixed_fraction) / const.four) |
| cal.components.variable_ratio | 0.573821 | fraction | ((src.product.components.H126_C - (cal.components.fixed_factory_quarter x const.two)) / src.product.components.H126_R) |

Historical half-year/quarter shares are proxy timing controls. Fixed factory share is assumed, then H126 variable cost is calibrated after removing the assumed fixed half-year cost; the source never says all manufacturing expense is fixed.

## GROWTH_PROXIES | Continuing product-reference growth · LOW

| Product | FY2027 | FY2028 | FY2029 | FY2030 |
|---|---|---|---|---|
| Custom optics | 10.00% | 10.00% | 8.00% | 6.00% |
| Lenses | 0.00% | 3.00% | 3.00% | 3.00% |
| Components | 5.00% | 5.00% | 5.00% | 5.00% |
| Other | 0.00% | 0.00% | 0.00% | 0.00% |

Selected reference-growth controls; not issuer numerical guidance. Programme increments are additional sales above this reference.

### COST_SPLITS | Cost allocation versus causal cost indices

| Product | FY25 material M | FY25 labor M | FY25 factory M | Material index | Labor index | Variable factory index |
|---|---|---|---|---|---|---|
| Custom | 83.057297 | 18.551318 | 22.295078 | 1.000 | 1.000 | 1.000 |
| Lenses | 182.447746 | 47.144064 | 86.167502 | 1.000 | 1.000 | 1.000 |
| Components | 15.057977 | 24.564960 | 40.512999 | 1.000 | 1.000 | 1.000 |

FY25 cost weights allocate calibrated variable costs across material/labor/factory expense lines. Allocation weights alone do not change total earnings. The explicit cost indices are separate causal levers, as the material-cost sensitivity demonstrates.

### OPERATING_COST_CONTROLS | Operating-cost controls and calibration

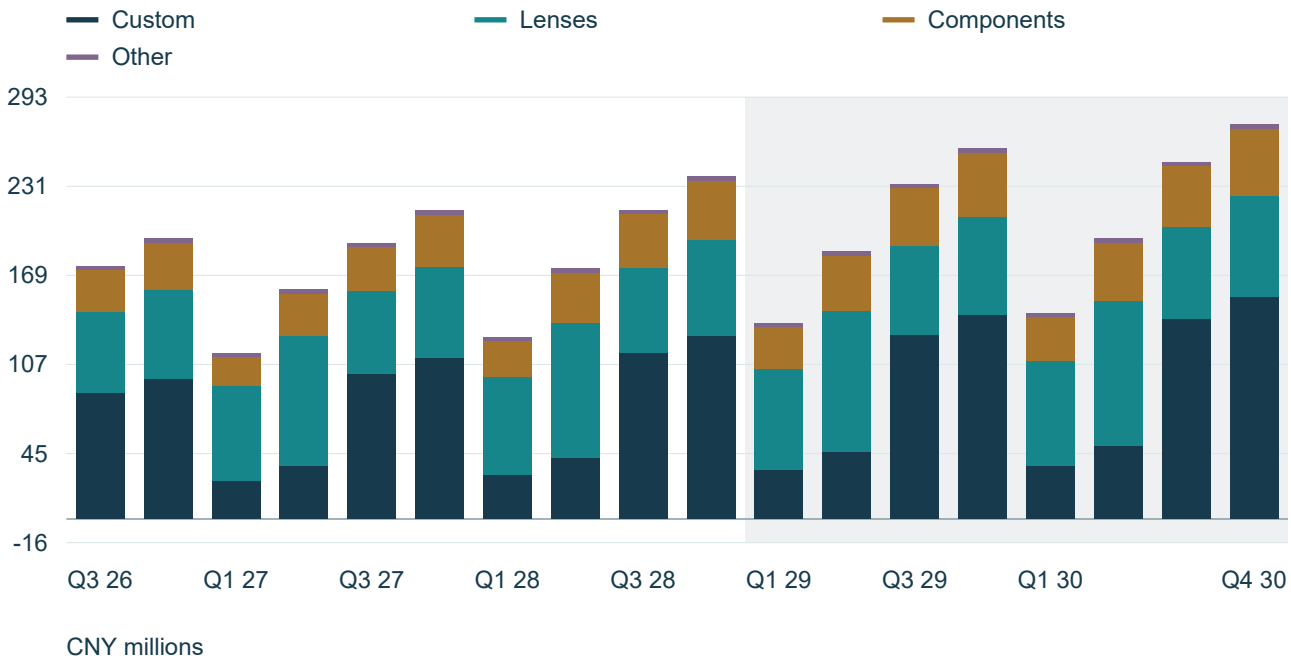

| Control | Selected value | Units | Confidence and boundary |
|---|---|---|---|
| Manufacturing bucket fixed share | 0.75 | fraction | LOW functional split; not a disclosed all-fixed expense bucket. |
| Annual fixed-factory cost inflation | 0.02 | fraction/year | LOW future cost assumption. |
| Annual administration inflation | 0.03 | fraction/year | LOW future cost assumption. |
| Annual continuing R&D inflation | 0.05 | fraction/year | LOW; separate from incremental payload-research expense. |
| Selling cost / revenue calibration | 0.026670051888606754 | fraction | Reported H126 ratio; transferring it forward is LOW. |
| H126 property / land tax | 1.52299663 | CNY million / half-year | Reported source amount; treated as the fixed source tax anchor. |
| Variable operating-tax / revenue calibration | 0.005855356610108004 | fraction | Source-calibrated residual after fixed tax; forward transfer is LOW. |
| Payload-research incremental share | 0.5 | fraction | LOW overlap hypothesis; balance reallocates existing research. |
| Payload-research allocation duration | 8 | quarters | Selected quarterly allocation of the source 24-month plan. |
| Existing D&A change allocated to manufacturing | 0.75 | fraction | LOW functional allocation; remaining change follows operating expense. |
| New precision factory cash cost / physical investment | 0.02 | fraction/year | LOW cost burden independent of commercial success weight. |

Historical selling and operating-tax ratios calibrate the model; future inflation, research overlap and functional allocations remain analyst hypotheses. Product cost weights allocate costs, while separate cost indices change earnings. Values shown as fractions retain their exact selected numerical scale.

The model treats 75.00% of the source manufacturing bucket as fixed and allocates 75.00% of changes in existing-book D&A to manufacturing. Both are LOW proxies because the source functional split is unallocated. The

remaining D&A change follows operating expense. Existing D&A is already in H126-calibrated costs; only the selected change is transmitted, preventing a second full deduction.

### Revenue and product mix

V_REVENUE | Selected product reference plus non-overlapping probability-weighted increments; categories reconcile to total revenue. Model projections; gray shading marks funding unavailable. Later positive operating quantities are conditional diagnostics, not funded realization or an available positive valuation.

### V_REVENUE_data1 | Revenue and product mix - plotted values

| Quarter | Custom | Lenses | Components | Other |

Other business is not reclassified as additional external optical-communication revenue.

# Gross profit to group and parent economic operating profit

Group recurring core OP equals the sum of product gross profits less selling, administration, R&D, operating taxes and programme support. R&D includes only the selected incremental payload-research amount above the continuing research reference. Finance, investment/other income and provisions stay outside the sanctioned core metric; their risks are displayed separately. This is an analytical operating basis, not a future reported income-statement identity.

## Group and parent economic operating profit

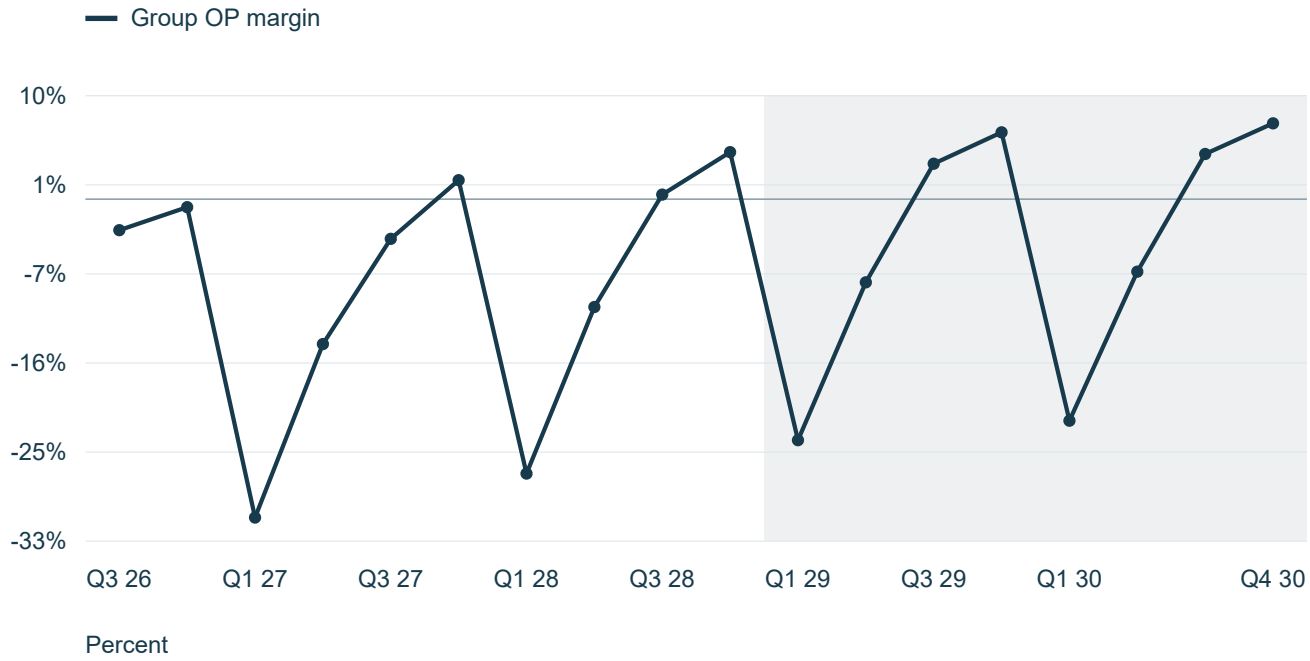

V_PROFIT | Group recurring core OP and separate minority allocation use the selected sanctioned profit basis. Model projections; gray shading marks funding unavailable. Later positive operating quantities are conditional diagnostics, not funded realization or an available positive valuation.

### V_PROFIT_data1 | Group and parent economic operating profit - plotted values

| Quarter | Group core OP | Parent economic OP |
|---|---|---|
| Q3 2026 | -5.342 | -3.780 |
| Q4 2026 | -1.527 | -0.017 |
| Q1 2027 | -36.005 | -34.607 |
| Q2 2027 | -22.626 | -21.497 |
| Q3 2027 | -7.443 | -5.955 |
| Q4 2027 | 3.990 | 5.410 |
| Q1 2028 | -33.961 | -32.681 |
| Q2 2028 | -18.402 | -17.460 |
| Q3 2028 | 0.957 | 2.348 |
| Q4 2028 | 10.957 | 12.265 |
| Q1 2029 | -32.103 | -30.968 |

| Q2 2030 | Conditional diagnostic; funding unavailable | -7.10% |
| Q3 2030 | Conditional diagnostic; funding unavailable | 4.42% |
| Q4 2030 | Conditional diagnostic; funding unavailable | 7.42% |

Recurring core operating metric, with separate minority economic allocation. Reported noncore/finance/tax effects are reconciled in the actual anchor. Unfunded later periods are conditional diagnostics.

The projection subsidiary is already consolidated within group sales. It must not be added again as a stand-alone new group revenue stream. A separate main-business revenue subset and rounded reported subsidiary OP calibrate an economic core-OP proxy for the minority claim. Main-business profit scope and finance/noncore detail are incomplete; this is neither subsidiary net income nor the legal-parent income statement.

| q5.opex | 50.258017 | CNY M | (q5.selling + q5.administration + q5.RD + q5.operating_taxes + q5.programme_support + (q5.existing_DA_delta x (const.one - assumption.DA_change_manufacturing_fraction))) |
| q5.group_core_OP | 3.989787 | CNY M | (q5.GP - q5.opex) |
| q5.minority_core_claim | -1.420405 | CNY M | (q5.projection_core_OP_proxy x src.projection_minority_fraction) |
| q5.parent_core_OP | 5.410193 | CNY M | (q5.group_core_OP - q5.minority_core_claim) |

Exact selected expressions show how the active-quarter result is built. No display-side arithmetic or blended-margin override is used.

# Finite asset books and cohort expense

Existing asset books are finite, with depreciation/amortization capped by remaining modeled balances rather than repeating a perpetual expense forever. PPE, intangible, tooling prepayments, other prepayments and right-of-use assets each retain old-book run-off and separate new cohorts. Asset additions and cash payments are tracked separately. Source remaining lives and functional allocations are incomplete, so the selected lives and renewal assumptions are LOW.

### ASSET_OPEN | Opening books, first-half expense and selected new-cohort life

| Asset book | H126 closing M | H126 D&A M | New cohort life · quarters | Boundary |
|---|---|---|---|---|
| Property, plant & equipment | 680.816970 | 42.678678 | 40 | Maintenance cohorts separate from new precision project. |
| Intangible assets | 35.724268 | 1.461532 | 20 | Selected renewal, not a disclosed remaining source life. |
| Tooling prepayments | 32.005517 | 12.656015 | 6 | Accrual additions; cash classification overlaps are uncertain. |
| Other prepayments | 22.502504 | 2.312769 | 20 | Separate finite cohort. |
| Right-of-use assets | 20.590331 | 3.551404 | 12 | Capacity renewal and lease liability are separate from bank debt. |

New PPE uses the selected residual fraction; old books run off at their source expense rate until exhausted. No assumption that the entire unallocated source D&A is factory cost.

### ASSET_CONTROLS | Maintenance, allocation, residual and prepayment controls

| Metric / scope | Selected value | Units | Calculation / source |
|---|---|---|---|
| cal.existing_quarter_DA | 31.330200 | CNY M | ((src.H126.DA.PPE + src.H126.DA.intangible + src.H126.DA.tooling_prepaid + src.H126.DA.other_prepaid + src.H126.DA.ROU) / const.two) |
| src.H126.cash_capex | 8.122152 | CNY M | H126 consolidated cashflow p68 |
| assumption.maintenance_PPE_fraction | 0.900000 | fraction | Analyst assumption; LOW confidence |
| assumption.PPE_residual_fraction | 0.050000 | fraction | Analyst assumption; LOW confidence |
| Functional allocation LOW proxy; note residual is unallocated, not disclosed factory PL | 0.750000 | fraction | Analyst assumption; LOW confidence |
| src.H126.tooling_additions | 9.060570 | CNY M | H126 p134 prepaid tooling additions, accrual basis; cash classification unresolved |
| src.H126.other_prepaid_additions | 0.574041 | CNY M | H126 p134-135 total additions9.63461104 minus tooling9.06056979 |
| Conservative cash proxy: all prepaid additions cash incremental to cashcapex; 0-1 overlap sensitivity; not a reconciled historical cash classification | 1.000000 | fraction | Analyst assumption; LOW confidence |
| assumption.lease_capacity_renewal_fraction | 1.000000 | fraction | Analyst assumption; LOW confidence |

Prepaid-asset additions are accrual values. Treating their cash as fully non-overlapping is conservative; the full-overlap sensitivity sets their incremental cash to zero. This is not an exact CFO reconciliation.

### ASSET_PPE_p1 | Finite PPE book and expense

| Quarter | Status | Old-book closing | New-book closing | Additions | Depreciation / amortization |
|---|---|---|---|---|---|

The source-calibrated expense is already embedded in operating costs. The change is allocated once under a LOW functional proxy, while new precision D&A is a separate commissioning-based expense line.

# Cash, working capital, debt and availability

The first cash question is availability after earmarks and commitments, not the gross cash headline. Opening cash equivalents plus structured principal are 488.302123 CNY million. Existing IPO earmarks are a reserve within those resources, not a new financing inflow. General cash also reflects external subscription and construction reserves under the selected model.

## ACTUAL_CASHFLOW | Reported cash-flow anchor

| CNY yuan | FY2025 actual | H1 2026 actual | Q1 2026 actual |

| cash.opening_WC | 713.205690 | CNY M | ((src.H126.WC.AR + src.H126.WC.bills + src.H126.WC.financing_bills + src.H126.WC.inventory + src.H126.WC.prepayment) - (src.H126.WC.AP + src.H126.WC.customer_advance)) |
| cash.opening_TTM | 638.702080 | CNY M | ((src.FY2025.revenue.current - src.H12026.revenue.comparative) + src.H12026.revenue.current) |
| cash.WC_intensity | 1.116648 | multiple | (cash.opening_WC / cash.opening_TTM) |

Working capital = receivables + bills + financing bills + inventory + prepayments − payables − customer advances. The selected TTM ratio is a stock-intensity proxy, not physical inventory age or collection days.

Future operating WC follows that TTM revenue ratio. Revenue growth can consume cash before earnings improve. Full source SBC is added back under the source cash reconciliation, while capitalization and timing remain incompletely allocated. The entire share-dilution path does not create any hypothetical equity proceeds. Tax recoverability and legal-parent/subsidiary upstreaming are not established by consolidated liquidity. Reported H1 2026 operating cash flow already includes CNY31.6688 million of temporary-receipt returns; closing cash reflects that historical outflow, which is not charged again in the forward build. Restricted cash of CNY1.15639696 million is already excluded from the cash-equivalent opening anchor and is not deducted a second time.

Conditional cash classification, renewal and borrowing assumptions remain LOW where not separately disclosed. Earmarked proceeds are inside opening resources; no duplicate seed working-capital subtraction or hypothetical equity cash credit. The availability state is this model cash screen under assumptions, rather than a committed financing facility.

Conditional cash classification, renewal and borrowing assumptions remain LOW where not separately disclosed. Earmarked proceeds are inside opening resources; no duplicate seed working-capital subtraction or hypothetical equity cash credit. The availability state is this model cash screen under assumptions, rather than a committed financing facility.

The selected proxy first requires additional funding in Q1 2029: general cash is -106.418368 CNY million. The selected baseline minimum is -127.236015 CNY million in Q2 2029. Dilution changes the denominator; it does not generate cash.

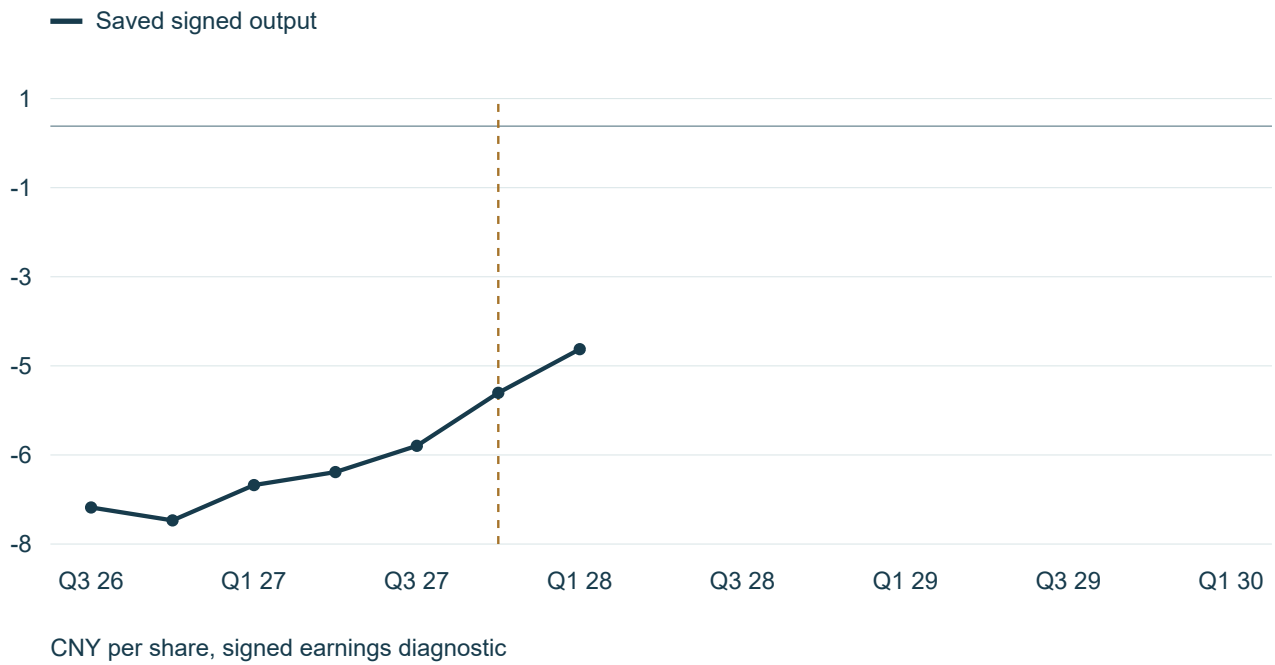

Funding unavailability is a state, not zero value and not a financed positive projection. Valuation windows starting Q2 2028 reach the Q1 2029 cash gap and are unavailable. Later operating/cash quantities are retained as explicitly conditional raw diagnostics so the missing financing cannot be hidden by a favorable long-run margin.

# Complete rolling-forward-four-quarter valuation

The sanctioned method is preserved: current quarter plus the next three quarters of parent economic core pre-financing OP, multiplied by the selected 20x multiple and divided by start-quarter diluted planning shares. Currency is CNY, money is CNY million and shares are million; the unit factor is 1. Exact operands, denominator and availability are shown for every ceiling quarter.

The active Q4 2027 diagnostic is negative because the selected four-quarter OP is negative. It provides no positive earnings support. It is not a target implying a tradable price below zero. Missing saved outputs in funding-limited windows remain unavailable and never become a forward positive value.

### Funding-guarded signed valuation path

V_CEILING | Negative earnings outputs are not tradable negative share-price forecasts. Missing values are unavailable because funding/window support is absent. Raw conditional arithmetic appears only in the complete diagnostic table. Selected sanctioned method; exact forward-four-quarter windows shown below.

# Sensitivity, provisions and funding risk diagnostics

The no-increment control and full commercial-weight case both remain loss-making. Their signed Q4 2027 diagnostics are -7.232232 and -3.596890 CNY per share. A higher outcome weight does not manufacture a positive earnings case, and fixed project cash costs persist under zero commercial weight.

### SENSITIVITIES | Selected sensitivity results · Q4 2027 window

| Model change | F4 parent OP M | Raw signed metric CNY | Model cash screen? | Minimum general cash M |
|---|---|---|---|---|
| All commercial weights zero | -58.745693 | -7.232232 | Yes | -128.601335 |

| Planning shares +10% | -42.383190 | -4.743482 | Yes | -127.236015 |

Independent changes from the selected baseline; not a menu of simultaneously additive changes. Raw negative metrics are earnings diagnostics. A larger denominator reduces the magnitude of a negative diagnostic without improving earnings or funding. The rounded reported-OP and NET-anchor minority cases expose scope sensitivity rather than relabeling source facts. The cash screen uses selected cash, reserves and refinancing assumptions; Yes does not mean committed company liquidity.

Recurring inventory and credit provisions are material even though the sanctioned core metric excludes them. The model captures expense stress separately from replacement cash and extra working capital. A noncash impairment is not itself a cash payment. The replacement fraction and additional WC stock are LOW stresses, not reported forecast losses or a claimed thirty-day collection statistic.

### RISK_CONTROLS | Provision / cash stress controls

| Control | analyst selected value | Interpretation |
|---|---|---|
| Inventory expense rate | 0.035679230023744395 | Diagnostic expense recurrence |

These risk diagnostics are not the active basis or an exact future CFO statement. Expense and cash are tracked separately. Do not subtract a noncash provision again as cash.

# Summing score and five distinct risk classes

### SCORECARD | Current analytical score

| Category | Points | Maximum | Evidence |
|---|---|---|---|
| Core thesis | 12 | 20 | Integrated high precision optics and qualifications; durable monopoly not demonstrated. |
| Cycle stage | 4 | 10 | Some new-product volume, weak security sales and persistent core losses. |
| TAM expansion | 8 | 10 | Space/UAV,vehicle,IR,projection,optical communication and precision components have credible engineering adjacency; capacity/capture bound revenue. |
| Catalysts | 3 | 5 | Approved twelve-month manufacturing and twenty-four-month R&D programs; results/acceptance tests. |
| Macro | 6 | 10 | Domestic high-end optics demand alongside export weakness and substitution. |
| Alpha | 3 | 5 | Native-language issuer notes distinguish volume production, samples, investment gains and funding. |
| Risks | -5 | 0 | Five distinct risk classes: demand/pricing; conversion/qualification; fixed-cost/obsolescence; refinancing/collection; disclosure/minority/accounting. |
| Total | 31 | 60 | Analytical Base 52 / Fail; protected Excel Base 52. |

31 / 60 = analytical Base 52, Fail. Protected Excel Base remains 52. Each of the five risk classes contributes one risk point, totaling −5; nested symptoms do not create duplicate risk penalties.

**FIVE_RISKS | Risk score decomposition**

| Risk class | Scored points | Operating consequence | Dated evidence / test |
|---|---|---|---|
| Demand / pricing | −1 | Weak security upgrades, lower-cost plastic alternatives, mixed-model ASP transfer and customer concentration limit sales/pricing. | H126 risk section; next results: product mix and realized gross margin. |
| Conversion / qualification | −1 | Designations, samples, R&D and factory approval may not turn into accepted external shipments on time. | FY2026/H1 2027: accepted orders, shipment and customer-acceptance evidence; apply P01/P02/P03 counters. |
| Fixed cost / obsolescence | −1 | D&A, tooling, research and new-factory costs precede sales; capability may not earn utilization or a price premium. | FY2026/H1 2027: actual asset additions, finite-book run-off, D&A, component costs and project commissioning. |
| Refinancing / collection | −1 | Uncommitted short roll, incomplete interim installments and high WC intensity can require funding despite gross cash. | Q1 2028 maturities onward; first modeled general-cash gap Q1 2029. Verify renewal commitment and cash collections. |
| Disclosure / minority / accounting | −1 | Anonymous customers, incomplete application wallet, provision recurrence and projection-subset/OP proxies can misstate captured economics. | Each filing: source segment reconciliation, subsidiary main/total scope, minority economic claim and expense/cash separation. |

One point per distinct class, using the selected model. No unverified governance accusation or insider-selling penalty is introduced.

The score recognizes meaningful engineering adjacency without awarding an unproven monopoly. TAM expansion scores well because the same optical capabilities can serve several applications. The lower core/cycle assessments reflect competitive capture, weak current operating economics and conversion risk; the source does not establish scarcity pricing or unavoidable customer dependence.

# Cross-watches and current supply-chain boundaries

**CROSS_WATCHES | Paired causal watches, with non-additive boundaries**

| Paired watch | Shared driver | Company-specific test | Boundary |
|---|---|---|---|
| Forecam lenses / MLAs ↔ optical module / engine makers | Higher optical link density and tighter optical coupling. | Does accepted component shipment/mix rise with qualified output and margins? | The module price is not a lens ASP. No current common-customer award is established. |
| Forecam optical elements ↔ CW lasers / InP / silicon photonics | Same optical-interconnect demand can pull different layers. | Identify the actual optical bill-of-materials socket and external customer, if disclosed. | No automatic InP scarcity, laser content or foundry revenue is attributed to Forecam. Architectures may substitute or change component content. |
| Forecam payload optics ↔ institutes / integrated satellite-payload makers | Space, defense and high-performance sensing programmes. | Does component capability progress through integration, environmental verification and repeat acceptance? | Institutes/integrated makers are alternatives or possible partners; no exclusivity or SpaceX award is asserted. |
| Forecam automotive / projection ↔ lidar / HUD / compact-imaging integrators | Sensing and optical-display adoption. | Separate fresh designation output, accepted shipments, ASP/mix and projection minority claim. | One end-market does not make the same customer, double consolidated sales or eliminate plastic alternatives. |

These are current layer-level cross-watches. They do not update other companies, assert portfolio holdings or infer synchronous company receipts from a shared industry TAM.

Architecture is a counter as well as a demand signal. Beam-shaping and coupling needs can expand while packaging, integration and supplier choice change the merchant optical wallet. The relevant test is the company’s captured qualified optical content and accepted margin, rather than the aggregate growth rate of transceivers, satellites or AI devices.

# Dated catalysts, falsification and probability revision

**TRIGGERS | What changes the model and when**

| Window / event | Measure | Supportive observation | Counter / action |
|---|---|---|---|
| Next Q3 2026 filing, when released | Reported quarter versus completed-quarter estimate. | Actual segment revenue, costs, cash and recognized acceptance replace model estimates. | Re-anchor rather than treating Q3 model as actual; no fabricated issuer release date. |
| FY2026 report / next written earnings record | Revenue mix, component margin, custom acceptance and cash. | Evidence of optical-comm external mix and qualified production with actual economic contribution. | No quantified wallet means maintain bounded capture; avoid repeating current sales as new increments. |
| H1 2027 | Custom programme recovery / accepted output. | Repeat acceptance and annual custom recovery consistent with P01 equivalents. | No recovery evidence: halve P01 weight under the stated probability ledger; move delayed revenue beyond its window. |
| Two successive issuer updates | Automotive accepted shipments / scale. | Fresh designation conversion beyond reference, with supportable ASP/cost mix. | Failure to show accepted shipments/scale: halve P02 weight; designation count alone is insufficient. |
| Twelve-month precision build / Q4 2027 model ramp | Installed tools, commissioning, qualified external production. | Qualified usable capacity and customer acceptance validate P03 timing and fresh fraction. | Two-quarter delay shifts commissioning/D&A/sales; physical completion is not revenue. |
| Twenty-four-month payload research execution | Actual R&D spend, resources and integration tests. | Cost allocation and system qualification evidence support the incremental/reallocated split. | Higher incremental cost worsens OP/cash even before sales; no capitalization of the expensed R&D budget. |
| 2028–2029 disclosed term maturities; Q1 2029 first model gap | Refinancing, principal schedule, collections and reserve availability. | Committed renewal or disclosed funding can change the availability state through a reviewed model update. | 100% short roll is uncommitted; absent new funding, later forward windows remain unavailable. |
| Every report | Provision expense, inventory/receivables, subsidiary scope and minority allocation. | Evidence narrows source/accounting gaps and permits better causal calibration. | Do not turn noncash impairment into cash or rounded reported OP into core/NI fact. |

Dates describe source-relative or selected-model windows. They are not invented issuer reporting appointments. Probability changes and economic assumptions are reassessed when evidence changes; the present artifact retains selected current outcomes.

# Source completeness and model limits

Authenticity of an issuer statement and certainty of a future outcome are different confidence dimensions. Native filings and issuer-authored records support the reported facts. Future programme units, basket-ASP calibration, capture, reference seasonality, cost splits, ramps and funding assumptions remain LOW analyst hypotheses. The original source figures retain their units and stage qualifications; the limitations below identify what the available evidence cannot establish.

H1 2026 is latest actual; Q3 2026 is a completed-quarter model estimate. No numerical H2/FY sales or profit guide was obtained.

| |
|---|
| Newest October14 and May20/21 issuer written earnings records were read in full; original issuer-authored PDFs preserved through a mirror. Full spoken transcripts/audio/video and the entire primary-host question corpus were not obtained. |
| Programme-equivalent counts, output per automotive designation, historical basket ASP as future calibration, capture, overlap, probability, seasonal product allocation, cost split and ramps are LOW analyst hypotheses, not orders or issuer guidance. |
| Seventy-five percent fixed manufacturing and seventy-five percent functional D&A allocation are proxies. Reported manufacturing fees include mix/allocation changes; unallocated D&A is not a disclosed factory P&L. |
| Core valuation excludes finance/investment/other income and provisions as sanctioned. Recurring inventory/credit provisions remain material; captured expense/replacement/collection stresses do not silently change that basis. |
| Finite source asset books and renewal assumptions are economic proxies, including six-quarter new tooling and twelve-quarter renewed lease lives; source remaining asset lives and complete functional accounting allocation are unavailable. |
| Prepaid additions are accrual amounts. Their cash classification versus reported capital cash payments is unreconciled. Full incremental cash treatment is conservative; overlap sensitivity is shown. The modeled cash path is not an exact future reported CFO reconciliation. |
| Net working-capital stock follows a TTM revenue ratio. It does not prove physical inventory age, gross allowances, tax recoverability or legal-parent/subsidiary upstreaming. Full SBC cash addback follows the source cash reconciliation while capitalization/timing remain incompletely allocated. |
| Short bank loans are assumed rolled, without a committed undrawn facility. Term-loan final dates are disclosed; intervening installments beyond next12months remain incomplete. Source debt carrying-principal difference0.22553972M is retained rather than guessed paidinterest. |
| No financing or equity proceeds are invented from the protected dilution allowance. The cash proxy first requires additional funding in Q1 2029; valuation windows reaching that gap remain unavailable. Raw signed diagnostics are retained separately. |
| Projection subsidiary core OP is a proxy using rounded reported subsidiary OP and main-business scope; finance/noncore detail and the definition of main-business profit are unavailable. It is a subset of group sales and is not the legal-parent income statement or net profit. |
| Planning shares and20x rolling-current-plus-next3 parent coreOP method are preserved. Numeric negative diagnostics are not predictions of negative tradable share prices; unavailable is distinct from zero. |
| H126 exSBC headline differs from full accruedSBC; FY25 R&D SBC notes differ by2470yuan; source minority note differs0.02yuan. Source differences remain disclosed; no full nativeExcel verification is asserted. |

| IND-UNVERIFIED-LITHO | 2024-11-12 | Unattributed 2024 lithography repost · research alert | https://caifuhao.eastmoney.com/news/20241112051252307832710 | Historical secondary alert; no named original speaker or established source pedigree. Not an issuer fact or a mapped incremental 2026 receipt outcome. |

Issuer-authored originals and research alerts retain distinct source status. Mirror hosts are identified separately from the document author. The English reading beside each original figure preserves its relevant units, stage and qualifications.

Additional gaps: no annual new-line output units, installed tool count/yield, optical-communication ASP/customer/architecture/wallet, monetary new-designation backlog or explicit project revenue schedule; no disclosed temporary-scarcity price premium; no verified lithography or SpaceX award. These gaps constrain company capture and timing rather than licensing an unrelated TAM allocation. Current technical products and accepted systems remain valid evidence within their exact reported stage.
