Piotech (688072.SH)

Piotech participates in the qualification of deposition recipes and advanced bonding processes across Chinese memory and logic fabs. Its installed chamber base, repeated process learning and field support create switching costs at individual process steps. The investment case depends on converting qualified processes into accepted external tools, maintaining their economics and retaining the resulting profit for the parent shareholder. Broad exposure to semiconductor investment does not establish exclusive control of a bottleneck.

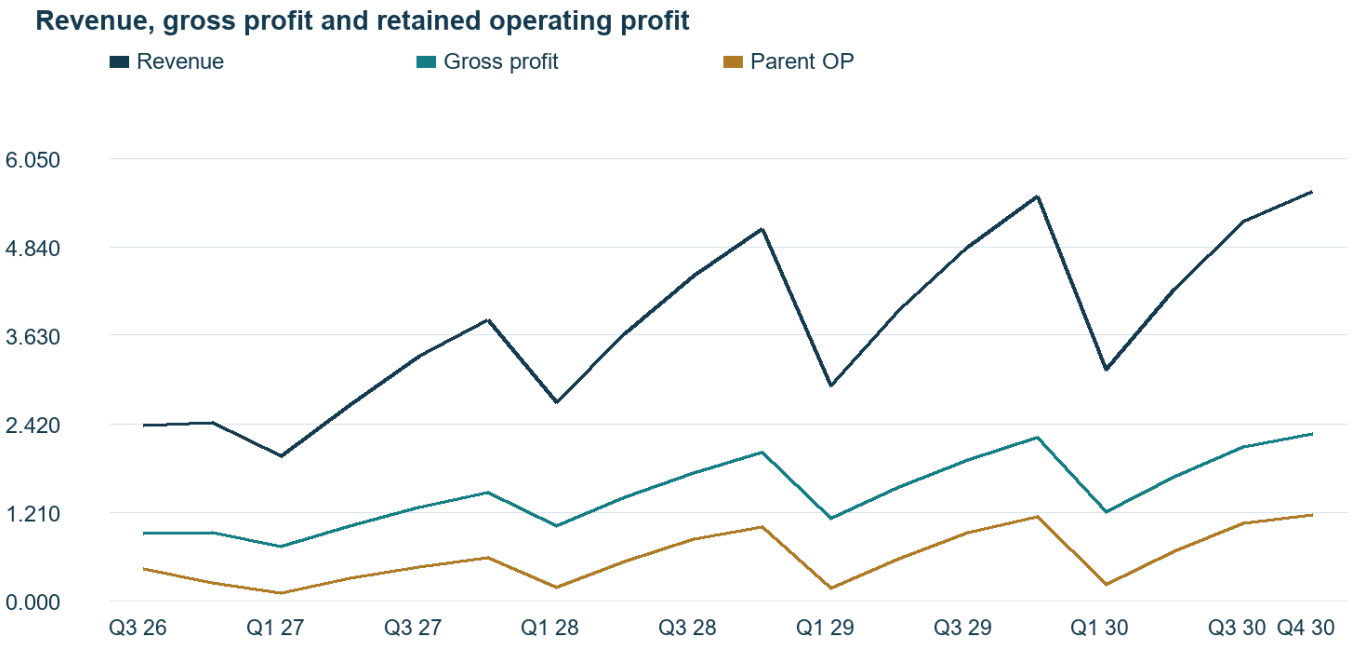

The current model estimates a CNY 138.496559 per-share operating-profit ceiling for the Q4 2027 starting window. It combines 36 complete conditional paths, each valued on its own Q4 2027–Q3 2028 recurring prefinance parent operating profit and starting-quarter gross shares, before weighting those prices. The weighted forward parent profit is CNY 2.163704208141054 billion. That profit divided by an average share count is only a diagnostic approximation; it is not the selected valuation calculation.

The principal analytical edge is the reconciliation between published growth and shareholder economics. Qualified domestic films and bonding can expand, while ordinary awards, full research spending, inventory acceptance, project cash and conditional transaction issuance absorb substantial resources. Investment fair-value income and hypothetical acquisition pro forma earnings do not establish recurring parent operating profit. The resulting assessment remains Watchlist: analytical Base 68 and a separately preserved Excel Base 72.

No verified dated quote is available. The report offers no current-price return, entry range or excess-return claim. Cash tests whether each operating path can be financed; the sanctioned 20-times prefinance operating-profit method does not add cash to value. Current estimates and LOW assumptions remain conditional, without a claim that market participants have ignored all these public disclosures.

T_current · Current operating-profit valuation and separate score conventions

A process supplier with a demanding conversion cycle

Piotech develops, manufactures and supports semiconductor equipment for thin-film deposition and three-dimensional integration. Its established business spans PECVD, ALD, SACVD, HDPCVD and inorganic Flowable CVD. Bonding, preparation and related metrology add further process steps. The company sells chiefly through direct customer engagement, tenders where relevant and joint process development. Those relationships connect equipment design to a fab's specific materials, dimensions, integration sequence and production requirements.

Evidence classification: HIGH management. Piotech H1 2026 report | 2026-08-21 | physical PDF pages 36, 37, 38, 42, 43, 44 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF

The strongest commercial evidence is repeated use of a qualified process at scale. A product announcement creates a candidate process; a demo, an order and a shipment show progressively greater engagement; written customer acceptance establishes the equipment sale under the disclosed recognition policy. Collection follows its own contract timetable. This sequence makes the conversion of customer demand into accepted equipment and cash the central test of the business.

Evidence classification: LOW model. Piotech H1 2026 report | 2026-08-21 | physical PDF pages 37 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF; Placement accountant inquiry reply | 2025-12-30 | physical PDF pages 36 | https://static.cninfo.com.cn/finalpage/2025-12-30/1224906285.PDF

PECVD is the largest disclosed product anchor: the FY2025 report gives approximately CNY 5.142B of PECVD revenue, alongside approximately CNY 301M of ALD revenue and CNY 136M of hybrid-bonding revenue. These are rounded family disclosures. The exact equipment revenue table is broader, and the remaining equipment amount is not separately reported as an exact gap-fill segment. H1 2026 remains the latest published actual reporting period identified as of October 23.

Evidence classification: HIGH actual. Piotech FY2025 annual report | 2026-04-28 | physical PDF pages 12, 13, 58 | https://static.cninfo.com.cn/finalpage/2026-04-28/1225222226.PDF; Primary inventory and management-record completeness register | 2026-10-23

The business can gain from more complex films, additional qualified recipes and repeat tools on existing customer lines. Each route also consumes process-engineering effort, customer-line time, assembly and test resources, spare parts and field support. Sustainable economic progress therefore requires both wider qualified use and a manageable cost of bringing each new process into production. An expanding product catalogue alone cannot establish that result.

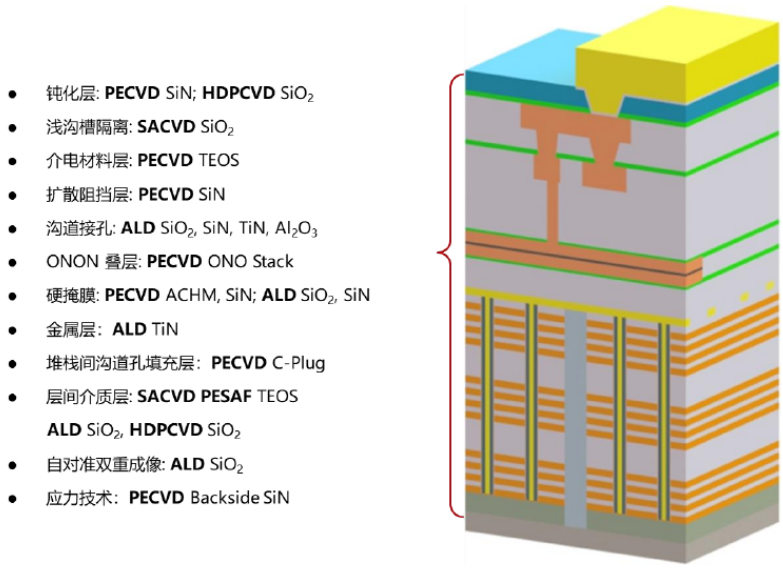

Evidence classification: LOW model. Piotech H1 2026 report | 2026-08-21 | physical PDF pages 37, 38, 44, 50 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF; Official July 8 FY2025/Q1 2026 written management records | 2026-07-08 | management record 2472461, 35220 | https://roadshow.sseinfo.com/activityDetails/39902

What the platforms and process steps actually represent

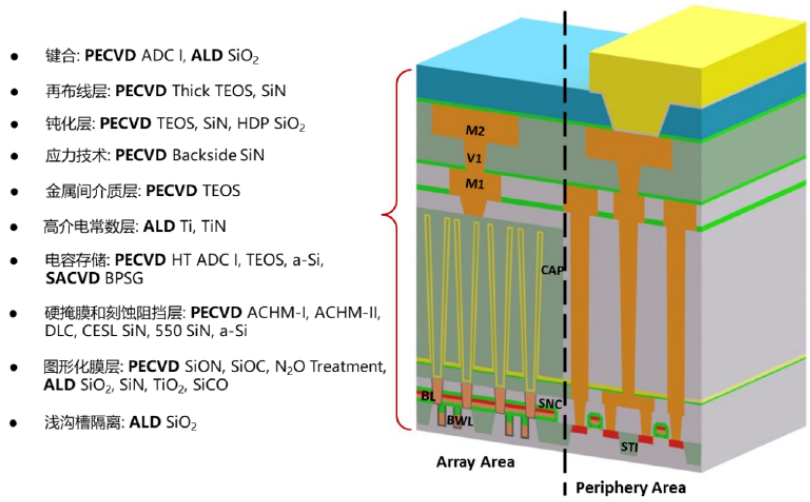

PECVD deposits films through plasma-assisted chemical reactions. ALD builds films through repeated surface-reaction cycles. SACVD, HDPCVD and inorganic Flowable CVD address different deposition and gap-fill requirements. A single memory or logic device uses several such operations, so increasing process complexity can create more opportunities for qualified equipment. The applicable recipe, material and integration step determine which supplier can participate.

Evidence classification: HIGH management. Piotech H1 2026 report | 2026-08-21 | physical PDF pages 19, 20, 21, 22, 38, 40, 42 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF

V03 · The upper diagram maps NAND operations such as ONO stacks, hard masks, channel-related films, TiN and dielectric filling to distinct tool types. The lower diagram maps DRAM films and separates array from peripheral structures. The drawing describes process applications; it supplies no customer tool count, Piotech award or equipment price. Source: https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF | 2026-08-21 | Physical PDF page 22 | Stage: Issuer process-application illustration, published August 21, 2026; product qualification varies by recipe.

A platform can carry multiple reaction chambers and each chamber can contain multiple deposition stations. The NF-300M glossary describes up to four six-station chambers and simultaneous processing of up to24 wafers. That is a configuration and simultaneous-slot description. A throughput estimate would additionally need recipe duration, handling time, cleaning intervals, yield and operating hours. Cumulative chambers, stations, wafers processed and physical systems should retain their own units throughout the analysis.

Evidence classification: HIGH management. Piotech H1 2026 report | 2026-08-21 | physical PDF pages 12, 13, 38 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF

第二节　公司简介和主要财务指标

一、 公司基本情况

公司的中文名称	拓荆科技股份有限公司
公司的中文简称	拓荆科技
公司的外文名称	Piotech Inc.
公司的外文名称缩写	Piotech
公司的法定代表人	刘静
公司注册地址	辽宁省沈阳市浑南区全运路109-3号（109-3号）14层
公司注册地址的历史变更情况	2024年12月31日，公司注册地址由“辽宁省沈阳市浑南区水家900号”变更为“辽宁省沈阳市浑南区全运路

V29 · NF-300M joins two quadrilateral transfer platforms, accommodates up to four chambers and six deposition stations per chamber, and can process up to24 wafers simultaneously. The table also shows other platform layouts. The source provides no wafers-per-hour or annual output conversion. Source: https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF | 2026-08-21 | Physical PDF page 13 | Stage: Issuer platform definition; simultaneous capacity rather than annual accepted systems.

Piotech reports a cumulative delivered base of more than 3,800 reaction chambers, including more than 480 advanced pX/Supra-D chambers, applications across roughly 100 production lines and about 600M wafer passes. Management also describes average equipment uptime above 90%. These figures support an argument for

accumulated production experience. They are cumulative or operating metrics, with undisclosed configuration and customer mix, and cannot establish annual manufacturing output or acceptance for every new recipe.

Evidence classification: HIGH management. Piotech H1 2026 report | 2026-08-21 | physical PDF pages 38, 50 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF; Official July 8 FY2025/Q1 2026 written management records | 2026-07-08 | management record 2472461 | https://roadshow.sseinfo.com/activityDetails/39902

Commercial product map

S03-T1 · Commercial product map

Product or process	Latest primary commercial evidence	Boundary
PECVD Stack, ACHM, OPN, SiB and Bianca	Established industrialized applications; repeated customer orders and expanding production use.	The established recipes form the commercial base. Newly configured recipes still need their own qualification.
Low-k PF-300L, nX and kX	New tools shipped to customers for advanced-process requirements.	Shipment does not establish written acceptance, repeat volume or a disclosed margin.
PE-ALD	Multiple SiO2/SiN/SiCO-related processes have production deployment, validation and batch-order evidence.	Cumulative shipped reaction chambers are different from annual accepted physical systems.
Thermal ALD	Family commercialization and orders coexist with new-recipe development; first TiN tool passed customer verification.	AlN, Al2O3, LaO and TiON have recipe-specific stages; family commercialization does not confer acceptance on all of them.
SACVD / PESAF	Multiple tools passed different customer verifications; repeat batch orders and industrialized use.	No exact standalone family revenue or current accepted-system count is supplied.
HDPCVD USG/FSG	Industrialized applications, orders, shipments and continued customer verification.	Commercial scope is process-specific; new capacity still requires funded readiness.
Inorganic Flowable CVD, PF-300T Flora	Multiple customer verifications, advanced-logic industrialized applications, orders and shipments.	Its SiO2 dielectric process is separate from the October amorphous-carbon launch.

Latest primary portfolio evidence: H1 report published August 21, supplemented by the July 8 and October 8 written management answers. No future revenue or probability is selected here.

截至报告期末，公司 ALD 设备量产规模持续增长，是集成电路领域量产型 ALD 设备的领军企业。

（3）SACVD 系列产品研发及产业化进展情况

公司 SACVD 系列产品主要类型如下：

产品系列	主要产品型号	主要薄膜工艺
SACVD	PF-300T SA	SA BPSG、SA TEOS 等介质薄膜材料
	PF-300T SAF PF-300T Plus PESAF	SAF（包括 PESAF）等介质薄膜材料

报告期内，公司 SACVD 系列产品持续保持产品竞争优势，获得客户批量订单、批量出货及通过客户验证。公司推出的 PESAF 薄膜工艺设备已多台通过不同客户验证，进一步扩大量产应用规模，并获得客户的复购批量订单，满足先进存储领域应用需求。

（4）HDPCVD 系列产品研发及产业化进展情况

公司 HDPCVD 系列产品主要类型如下：

产品系列	主要产品型号	主要薄膜工艺
HDPCVD	TS-300S Hesper	USG、FSG、PSG 等介质薄膜材料

报告期内，公司 HDPCVD 持续获得客户批量订单、出货及通过客户验证。截至报告期末，公司 HDPCVD USG、FSG 薄膜工艺设备均已实现产业化，并持续扩大量产规模。

（5）Flowable CVD 系列产品研发及产业化进展情况

公司 Flowable CVD 系列产品主要类型如下：

产品系列	主要产品型号	主要薄膜工艺
Flowable CVD	PF-300T Flora	SiO_2 等介质薄膜材料

截至报告期末，公司自主研发的 Flowable CVD 产品已有多台通过客户验证，在先进逻辑领域实现了产业化应用。报告期内，公司持续获得订单并出货。

（6）三维集成领域系列产品研发及产业化进展情况

报告期内，公司持续拓展应用于三维集成设备，包括先进键合产品及配套的量检测产品，主要产品如下：

V06 · The source identifies SACVD PF-300T SA/SAF/PESAF, HDPCVD TS-300S Hesper and Flowable CVD PF-300T Flora. PESAF has multi-customer verification and repeat-order evidence; HDPCVD USG/FSG and Flora SiO2 have industrialized applications. “Flowable” refers to distinct material systems across the portfolio. Source: https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF | 2026-08-21 | Physical PDF page 42 | Stage: Issuer H1 commercial-stage statements, as of June 30 and published August 21, 2026.

The July 8 answer reports more than 140 ALD reaction chambers shipped cumulatively by the end of 2025. It does not supply a current ALD accepted-system count. Likewise, the reported hybrid-bonding revenue does not identify a current mix of placement bonders, preparation systems, metrology or wafer-to-wafer configurations. Product-level accepted units, current ASPs and recipe-specific margins remain material information gaps.

Evidence classification: HIGH management. Official July 8 FY2025/Q1 2026 written management records | 2026-07-08 | management record 2472462 | https://roadshow.sseinfo.com/activityDetails/39902; Piotech FY2025 annual report | 2026-04-28 | physical PDF pages 13, 58, 59 | https://static.cninfo.com.cn/finalpage/2026-04-28/1225222226.PDF

The useful expansion path is a process that moves from validation into reproducible production and then wins repeat orders. This can improve customer coverage and reduce the engineering cost per accepted tool. The opposite path is equally consequential: a tool can remain installed or repeatedly modified without producing timely acceptance, collections or repeat volume. The commercial-stage map should therefore be revised when those observable outcomes change.

Evidence classification: LOW model. Piotech H1 2026 report | 2026-08-21 | physical PDF pages 37, 38, 40, 42 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF; Official July 8 FY2025/Q1 2026 written management records | 2026-07-08 | management record 35220 | https://roadshow.sseinfo.com/activityDetails/39902; Official October 8 H1 2026 written management records | 2026-10-08 | management record 2524533 | https://roadshow.sseinfo.com/activityDetails/41534

Flowable Carbon widens a recipe opportunity

Piotech’s homepage notice dated October 19 states that NF-300M Flowable Carbon was launched at the October 14 exhibition opening. The visible issuer summary describes an amorphous-carbon thin-film deposition technology. This is a carbon-film process on a named platform. The inorganic PF-300T Flora SiO2 process in the H1 report has a separate material purpose and commercial history.

Evidence classification: HIGH management. Issuer homepage launch notice | 2026-10-19 | https://piotech.cn/; Piotech H1 2026 report | 2026-08-21 | physical PDF pages 42 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF

The underlying issuer-linked article returned an environment-verification page. Its full technical and commercial body was not available for review. The accessible primary record does not establish aspect-ratio performance, film-stress results, recipe cycle time, customer qualification, accepted tool count, order value or ASP. Secondary product names are insufficient to fill those gaps. The launch can support a bounded hypothesis about future process capture, while its realization and timing remain uncertain.

Evidence classification: LOW model. Issuer homepage launch notice | 2026-10-19 | https://piotech.cn/; Issuer-linked Flowable Carbon article verification response | 2026-10-19 | https://mp.weixin.qq.com/s/YnLribyX_vpvWyna_pz3ug

Carbon-film adoption draws from the relevant customer patterning and deposition budget. Existing carbon hard-mask equipment and other qualified processes may be displaced, retained or used alongside the new recipe. A sound company bridge must identify that substitution and the incremental qualified tool content, then charge development, trial, assembly and customer support before acceptance. The NF-300M platform’s existing presence also means the launch cannot create an entire second platform market by itself.

Evidence classification: LOW model. Piotech H1 2026 report | 2026-08-21 | physical PDF pages 13, 22, 38 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF; Issuer homepage launch notice | 2026-10-19 | https://piotech.cn/

Bonding contains several distinct supplier positions

Piotech’s H1 product table separates wafer-to-wafer hybrid bonding, wafer-to-wafer fusion bonding, die-to-wafer preparation, die-to-wafer hybrid bonding, die-to-wafer fusion bonding and supporting inspection. Dione300/200 wafer-to-wafer hybrid products are industrialized. The faster Dione300eX remains in customer validation, while Dione300FeX fusion tools have been shipped for verification. Propus die preparation is industrialized and has orders and shipments.

Evidence classification: HIGH management. Piotech H1 2026 report | 2026-08-21 | physical PDF pages 43, 44 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF

产品系列	主要产品型号	主要应用

① 晶圆对晶圆混合键合产品

公司晶圆对晶圆混合键合产品是公司最早推出的混合键合产品，已实现产业化，可实现百纳米级晶圆混合键合，其关键技术指标、产能指标与设备开机率均达到国际同类产品量产水平。报告期内，公司持续拓展晶圆对晶圆混合键合产品的应用领域，获得客户订单并出货。

报告期内，公司研发的新一代高速高精度晶圆对晶圆混合键合产品 Dione 300 eX 在客户端验证进展顺利。该产品采用更先进的对准技术，拥有更高的对准精度、键合精度和设备产能，可达到国际同类产品最先进水平。

② 晶圆对晶圆熔融键合产品

公司研制的晶圆对晶圆熔融键合产品 Dione 300F eX，可实现载片晶圆和器件晶圆低应力熔融键合，具备优异的产能表现。截至报告期末，该产品已出货至不同客户验证。

③ 芯片对晶圆键合前表面预处理产品

V07 · Dione is the wafer-to-wafer family; Propus prepares die and wafer surfaces; Pleione covers die-to-wafer bonding; Crux measures alignment and Ascella measures bond strength. The accompanying text distinguishes established Dione applications from validation of the faster and fusion variants. Source: https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF | 2026-08-21 | Physical PDF page 43 | Stage: Issuer model taxonomy and commercial-stage statements, H1 2026.

Pleione300 die-to-wafer hybrid placement and bonding was still undergoing customer verification in the H1 report. The source separately says die-to-wafer fusion products had been developed and had customer orders. Crux alignment metrology and Ascella bond-strength inspection had industrialized applications; Lyra laser release had development and order evidence; Volans void-repair equipment remained in development. October 8 management described broad application coverage and more than ten bonding-related products, without upgrading every model to accepted mass production.

Evidence classification: HIGH management. Piotech H1 2026 report | 2026-08-21 | physical PDF pages 43, 44 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF; Official October 8 H1 2026 written management records | 2026-10-08 | management record 2524568, 2524531 | https://roadshow.sseinfo.com/activityDetails/41534

公司推出的芯片对晶圆键合前表面预处理产品 Propus 已实现产业化，可以在芯片对晶圆混合键合前实现晶圆及切割好的芯片的表面活化和清洗，具备高产能的特点。报告期内，该产品持续获得不同客户订单并出货。

④ 芯片对晶圆混合键合产品

公司研制的芯片对晶圆混合键合产品 Pleione，可以实现芯片顺序拾取并精准键合到晶圆上，精度可达百纳米级，具有高精度、高产能、低污染的特点。截至本报告期末，该产品正在客户端进行验证，公司同时进一步提升其量产性能指标。

⑤ 芯片对晶圆熔融键合产品

芯片对晶圆熔融键合技术可以支撑先进封装的前沿应用。与传统键合方法不同，该技术无需键合介质或粘合剂，而是在室温下直接键合；同时，还能筛选已知合格芯片（Known Good Die），从而大幅提升良率。报告期内，公司已完成该产品的研制，并获得不同客户订单。

⑥ 键合套准精度量测产品

公司自主研发的键合套准精度量测产品可以实现混合键合后的键合精度量测，具有超高精度、超高产能和无盲区量测三大特点，并有效兼容晶圆对晶圆和芯片对晶圆混合键合量测场景。该产品已通过客户验证，实现产业化应用。报告期内，公司持续拓展该产品的应用，获得新客户订单。

⑦ 键合强度检测产品

公司研制的键合强度检测产品可以实现晶圆键合后的强度检测。截至报告期末，该产品已通过客户验证，实现产业化应用。

⑧ 永久键合后晶圆激光剥离产品

报告期内，公司已完成晶圆级永久键合后晶圆激光剥离产品的研制，并获得客户订单。晶圆激光剥离技术能有效克服临时键合技术中有机胶残留和耐温性差的问题，帮助客户有效优化工艺成本和前道兼容性。

⑨ 键合界面空洞修复产品

公司自主研发的高精度键合界面空洞修复设备可实现晶圆对晶圆、芯片对晶圆键合工艺中产生的界面空洞缺陷修复。报告期内，该产品开发进展顺利。

3、 供应链保障方面

在供应链建设方面，公司建立了完善的供应链管理体系，吸纳积累全球半导体行业内的优质供应链资源，关键零部件采用“多源采购”模式，并与核心供应商建立长期战略合作关系，确保关键部件的及时稳定供应。在此基础上，公司与供应商构建了协同创新机制，在开展新产品、新

V30 · Propus has industrialized applications and shipments. Pleione hybrid is explicitly in customer verification. Die-to-wafer fusion has customer orders. The page also distinguishes commercial inspection, laser-release orders and continuing void-repair development. Source: https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF | 2026-08-21 | Physical PDF page 44 | Stage: Issuer H1 product-specific stages; an order is not a disclosed accepted-sale amount.

Global evidence supports commercial demand for hybrid bonding while preserving alternative process routes. Besi’s October 22 release reports23 customer adopters, cumulative unit demand above 215 systems and year-to-date hybrid-bonding orders more than twice FY2025. It also reports a memory customer ordering both

hybrid and TC Next equipment. That combination supports an active technology market and continued coexistence of processes. It does not establish Piotech customer access, share or annual tool receipts.

Richard W. Blickman, President and Chief Executive Officer of Besi, commented:
"Besi reported strong third quarter and year to date 2026 results as favorable order momentum continued for both our traditional and wafer level assembly systems. For the quarter, revenue of € 283.4 million increased by 13.4% and 113.6% versus Q2-26 and Q3-25, respectively. Year over year revenue growth was primarily due to increased demand for computing end markets with strength in hybrid bonding, photonics and datacenter applications.

Similarly, orders of € 342.6 million increased by € 49.7 million, or 17.0%, vs. Q2-26 and € 167.9 million, or 96.1%, vs. Q3-25, primarily due to increased orders for hybrid bonding, datacenter and AI related mainstream computing applications including power management. Besi's orders for the last twelve months increased to € 1.2 billion as the expansion of digital infrastructure capacity significantly increased demand for Besi's advanced packaging portfolio.

We can report significant progress this quarter and this year on our wafer level assembly agenda. Year to date, hybrid bonding orders have more than doubled versus fiscal 2025 as orders for HBM applications increased, more logic chiplet programs entered production, co-packaged optics use cases expanded faster than anticipated and edge AI device production began. To date in 2026, hybrid bonding customer adoption grew to 23 customers and total cumulative unit demand exceeded 215 systems. In Q3-26, orders were received from customers for logic, co-packaged optics and memory end markets. Of note, we received orders for both hybrid bonding and TC Next systems from a leading memory customer as they focus on the development of current and next generation HBM device structures.

Favorable order momentum in the first nine months of this year should continue in Q4-26 as the multi year AI capacity build-out progresses. We see strong demand continuing for datacenter and photonics applications from Asian subcontractors and market share gains in our addressable markets, particularly for Besi's flip chip and multi module die attach systems. Our results also indicate ongoing hybrid bonding capacity expansion planned by the leading industry players for logic, CPO and edge AI devices. Severe memory shortages this year have extended the use of lower stack heights in current HBM production beyond prior expectations. However, the need for higher power, energy efficient performance, bandwidth, interconnect density and speed has only increased interest in the use of hybrid bonding for HBM as the year has progressed. We anticipate that hybrid bonding will be adopted in a range of stack heights over the next two years and in new, innovative stacks combining HBM, custom advanced-logic base dies and the direct bonding of DRAM onto accelerator chips by the end of the decade.

Our competitive position in wafer level assembly is very strong, further underscored by the progress we have made this year and our inclusion recently as an Innovation Partner at Applied Material's EPIC Center showcasing both Besi's hybrid bonding and TC Next solutions. We do not view ASML as a hybrid bonding competitor contrary to recent analyst reports. To the best of our knowledge, ASML is interested in a roadmap for 3D transistor stacking inside the chip over the next decade and not in competing with Besi in

V22 · Besi reports23 hybrid-bonding customers and cumulative demand above 215 systems, alongside orders for both hybrid and thermocompression equipment from a memory customer. The source discusses extended use of lower HBM stack heights and future adoption. Cumulative demand and booked orders retain different timing from delivered or accepted systems. Source: https://www.besi.com/fileadmin/user_upload/PR_Q3-2026.pdf | 2026-10-22 | Physical PDF page 2 | Stage: Competitor management disclosure dated October 22, 2026; global evidence rather than a Piotech award.

Preparation equipment also has its own supplier boundary. EVG's D2W preparation flyer connects activation and cleaning to third-party pick-and-place equipment. A line can therefore buy preparation from one supplier and placement from another. Piotech's opportunity should be assessed step by step, with qualified line attachment, configuration and price for each actual supplier position. The broad2.5D/3D packaging-market value cited by management describes packaged output, rather than a directly spendable bonder market.

Evidence classification: LOW model. EVG320 D2W preparation flyer | 2026-01 | physical PDF pages 1 | https://www.evgroup.com/fileadmin/media/products/bonding/Die_to_Wafer_bonding_systems/evg320d2w/EVG320_D2W_Flyer_26_01.pdf; Official October 8 H1 2026 written management records | 2026-10-08 | management record 2524568 | https://roadshow.sseinfo.com/activityDetails/41534; Piotech H1 2026 report | 2026-08-21 | physical PDF pages 43, 44 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF

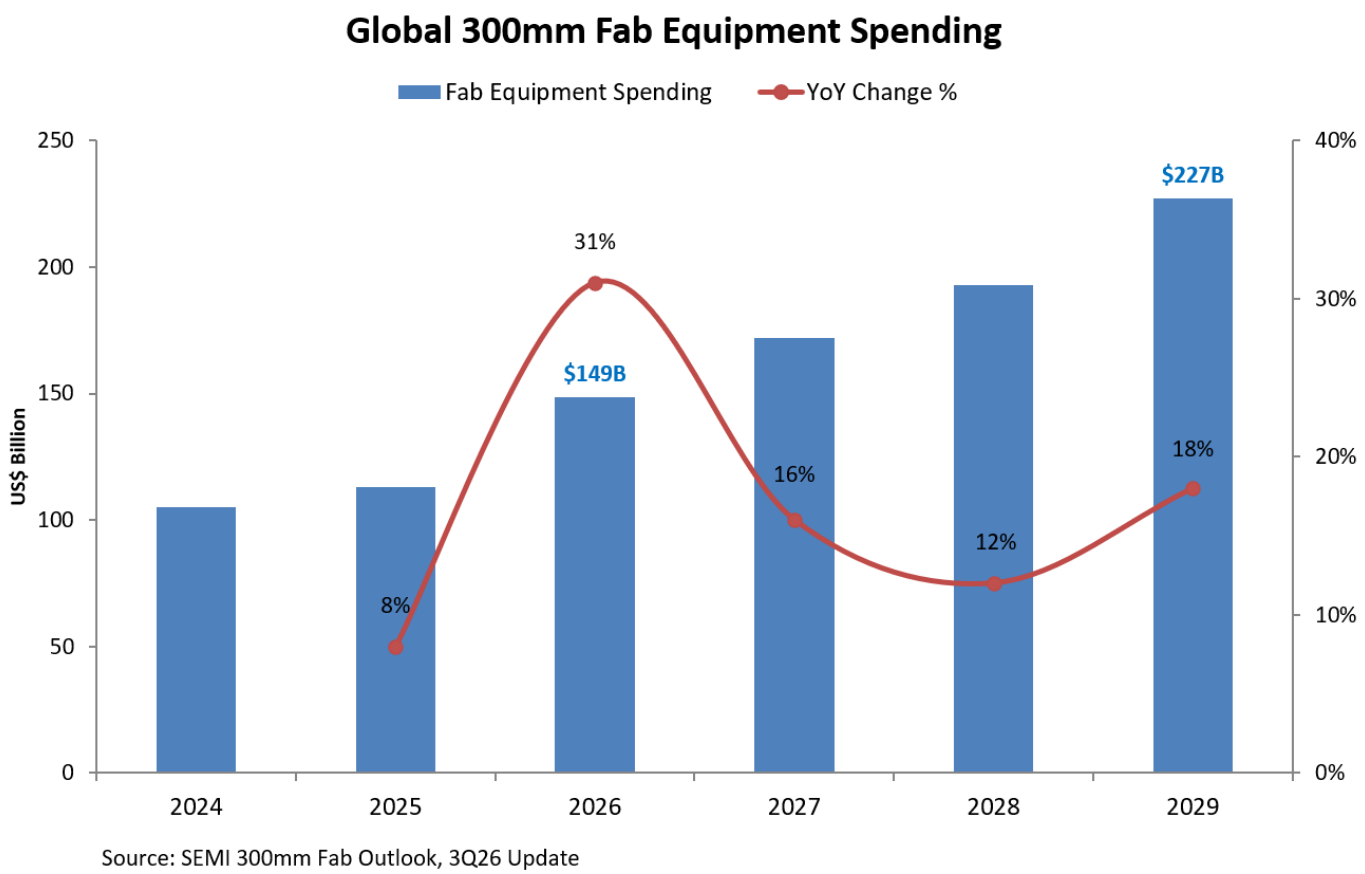

The demand boundary is customer process spending

In the July 8 written answer, the chairman cites SEMI's 2025 China mainland thin-film equipment market at approximately USD 9.3B. He gives PECVD33%, ALD11% and addressed SACVD/HDPCVD/Flowable categories6%, totaling about 50% of thin-film spending or USD 4.65B. These are management-cited industry estimates for a defined historical market. The same answer's approximate20% comparison uses whole-company FY2025 revenue against covered process spending, with no detailed recipe, localization or currency reconciliation. It should remain an approximate management comparison.

Evidence classification: HIGH management. Official July 8 FY2025/Q1 2026 written management records | 2026-07-08 | management record 2472463 | https://roadshow.sseinfo.com/activityDetails/39902

The dated SEMI public release provides a separate global context:300mm front-end fab-equipment spending is forecast at USD 149B in 2026 and USD 227B in 2029. Its geographic and equipment scope differs from China's covered thin-film processes. Construction spending is also a separate series. A larger global total cannot be added to the Chinese process wallet or assigned to Piotech without a customer, equipment-type and capture bridge.

Evidence classification: HIGH management. SEMI 3Q26 300mm fab outlook release | 2026-10-14 | https://www.semi.org.cn/site/semi/article/db55440125d449ab9738043c496407cd.html

V40 · The original SEMI chart labels USD 149B for2026 and USD 227B for2029, with global annual growth rates. It is front-end fab-equipment spending across regions and processes. Construction, company revenue and Piotech's eligible Chinese deposition wallet have separate boundaries. Source: https://www.semi.org.cn/site//file/2026-10/8a162842cb004e28927ff2ef1ec976d5@wm.png | 2026-10-14 | Original source chart asset | Stage: SEMI forecast, Chinese release October 14, 2026; future industry estimates rather than actual Piotech receipts.

Customer spending gives a useful second boundary. SMIC reported FY2025 capital expenditure of USD 8.1B and described FY2026 spending as roughly flat, subject to the external environment. Its later official Q1 discussion preserves that broad condition. CXMT's H1 cash-flow statement reports CNY 21.5944B of payments for fixed assets, intangibles and other long-lived assets, compared with CNY 24.1148B in the prior H1. The two companies' measures have different currencies, timing and accounting definitions, and neither amount is a Piotech order budget. The flat-spending outlook is management guidance; the stated historical amounts are reported actuals.

Evidence classification: HIGH management. SMIC FY2025/Q4 release | 2026-02-10 | physical PDF pages 2 | https://www.hkexnews.hk/listedco/listconews/sehk/2026/0210/2026021000518.pdf; SMIC official Q1 management Q&A | 2026-05-19 | https://dataclouds.cninfo.com.cn/shgonggao/investor/2026/20260519/f6f4912a969de4edf7fb0ae9f048c1c4.pdf; CXMT H1 2026 report | 2026-08-29 | physical PDF pages 71 | https://static.cninfo.com.cn/finalpage/2026-08-29/1225529543.PDF

项目	附注	2026年半年度	2025年半年度
一、经营活动产生的现金流量：			

V24 · The consolidated cash-flow row shows CNY 21,594,402,172.50 paid for fixed assets, intangibles and other long-lived assets in H1 2026, versus CNY 24,114,772,125.68 in H1 2025. Other large investing cash-flow rows include financial movements and must not be relabelled fab capex. This is customer cash spending across asset categories. Source: https://static.cninfo.com.cn/finalpage/2026-08-29/1225529543.PDF | 2026-08-29 | Physical PDF page 71 | Stage: CXMT reported H1 actual, published August 29, 2026; no supplier allocation or future budget implied.

CXMT’s October 17 preliminary release attributes strong performance to DRAM prices, utilization, output and capacity development. A stronger customer balance sheet and demand environment can improve the willingness to invest. The release does not quantify a new annual deposition-tool budget or a Piotech award. Annual primary budgets for YMTC and the remaining Chinese fab pool were not recovered, so any such values need explicit LOW estimation and timing limits.

Evidence classification: HIGH management. CXMT nine-month preliminary release | 2026-10-17 | https://static.cninfo.com.cn/finalpage/2026-10-17/1225609860.PDF

The required causal chain is customer capital spending, tool-addressable spending, eligible process content, local qualified availability, Piotech capture, production and written acceptance. A customer budget view and an industry-process view describe overlapping invoices and should constrain each other. Domestic substitution can increase supplier access while cleanroom readiness, complementary tools, internal investment approvals and process-validation schedules delay actual purchases. Those dependencies belong inside the company bridge rather than appearing as an automatic industry-growth multiplier.

Evidence classification: LOW model. Piotech H1 2026 report | 2026-08-21 | physical PDF pages 37 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF; Official July 8 FY2025/Q1 2026 written management records | 2026-07-08 | management record 2472463 | https://roadshow.sseinfo.com/activityDetails/39902; SMIC official Q1 management Q&A | 2026-05-19 | https://dataclouds.cninfo.com.cn/shgonggao/investor/2026/20260519/f6f4912a969de4edf7fb0ae9f048c1c4.pdf

China-wide WFE forecasts carried in the supplied research framework remain PriorSecondary context. A fresh public primary annual China WFE series was not recovered from the current SEMI release, and the full paid process database is unavailable. Future localization rates, company capture, process intensity and acceptance fractions are not issuer disclosures. They require separate LOW model owners and numerical sensitivity rather than presentation as known market share.

Evidence classification: PriorSecondary. SEMI 3Q26 300mm fab outlook release | 2026-10-14 | https://www.semi.org.cn/site/semi/article/db55440125d449ab9738043c496407cd.html; Official July 8 FY2025/Q1 2026 written management records | 2026-07-08 | management record 2472463 | https://roadshow.sseinfo.com/activityDetails/39902

Customer access becomes a moat through production learning

Piotech reports FY2025 top-five customer sales concentration of 79.15%, with major customer identities largely anonymized. Deep integration with a small number of fabs can support repeat orders, joint development and coordinated qualification. It also concentrates order timing, bargaining power, capital-plan changes and acceptance decisions. A larger installed base does not eliminate the influence of a few customers on quarterly receipts and cash.

Evidence classification: HIGH actual. Piotech FY2025 annual report | 2026-04-28 | physical PDF pages 59 | https://static.cninfo.com.cn/finalpage/2026-04-28/1225222226.PDF; Piotech H1 2026 report | 2026-08-21 | physical PDF pages 37 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF

Management’s commercial argument emphasizes process performance, production stability and customer cost of ownership. In July it describes average uptime above 90% and the ability to co-develop process iterations with customers. These are relevant reasons for repeat selection. They remain issuer operating claims, without a public recipe-by-recipe competitive yield study, customer-specific pricing schedule or independently measured switching-cost series.

Evidence classification: HIGH management. Official July 8 FY2025/Q1 2026 written management records | 2026-07-08 | management record 2472461 | https://roadshow.sseinfo.com/activityDetails/39902; Piotech H1 2026 report | 2026-08-21 | physical PDF pages 50 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF

The qualification loop is also a source of expense. In a July answer, management says some urgently requested new tools were delivered before completing internal testing, creating higher customer-validation costs. It attributes later margin recovery to advanced products entering larger-scale production. This is concrete evidence that production learning can improve economics, and that urgency can transfer engineering work to the customer site. The timing and paid resource burden matter alongside the eventual recipe opportunity.

Evidence classification: HIGH management. Official July 8 FY2025/Q1 2026 written management records | 2026-07-08 | management record 35220 | https://roadshow.sseinfo.com/activityDetails/39902

The strongest evidence for a durable position would combine stable production metrics, repeated customer purchases of the same qualified process, broader adoption across independent lines and acceptable validation and collection periods. A caution signal would be persistent installed-but-unaccepted stock, repeated modification work or new-tool volume with weak collections. The disclosed installed-base statistics support the starting position; they do not supply the future economics of each additional recipe.

Evidence classification: LOW model. Piotech H1 2026 report | 2026-08-21 | physical PDF pages 37, 38, 50 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF; Placement accountant inquiry reply | 2025-12-30 | physical PDF pages 36 | https://static.cninfo.com.cn/finalpage/2025-12-30/1224906285.PDF; Official October 8 H1 2026 written management records | 2026-10-08 | management record 2524533 | https://roadshow.sseinfo.com/activityDetails/41534

Assembly capability and accepted output use different clocks

On October 8 management states that the existing Shenyang and Shanghai industrial bases can achieve annual capacity above 700 tools and meet current requirements. The answer does not disclose its product mix, shift pattern, annual acceptance denominator or engineering maximum. FY2025 reported316 systems produced,250 sold and 391 in inventory, mainly issued goods. These heterogeneous physical counts describe a different vintage and function from the current capability statement. Dividing316 by 700 would not produce a source-certified current utilization rate.

Evidence classification: HIGH management. Official October 8 H1 2026 written management records | 2026-10-08 | management record 2524519, 2524533 | https://roadshow.sseinfo.com/activityDetails/41534; Piotech FY2025 annual report | 2026-04-28 | physical PDF pages 59 | https://static.cninfo.com.cn/finalpage/2026-04-28/1225222226.PDF

报告期内，公司销售模式以直销为主，通过与潜在客户商务谈判、公开招投标、合作开发等方式获取客户订单。经过多年沉淀，公司已与国内半导体芯片制造厂商建立了长期可持续的深度战略合作关系。

公司标准化销售流程一般包括市场调查与技术推介、获取客户工艺需求、公司内部工艺方案研讨、定制化报价、招投标全流程管理（如需）、商务谈判、合同评审、销售订单（或 Demo 订单）的签订、设备生产与交付、客户端产品安装与调试、分阶段工艺测试、客户验收、合同回款等步骤。

通常，公司设备在客户端完成安装与调试后，需配合客户在其生产线上完成多轮工艺匹配与稳定性验证。客户完成设备相关测试并出具验收文件后，公司据此确认该设备的销售收入。此外，公司提供覆盖产品全生命周期的售后服务。

报告期内，公司主要经营模式未发生重大变化。

二、 经营情况的讨论与分析

报告期内，公司积极把握半导体技术迭代升级、下游应用需求扩张与国产替代的发展机遇，充分发挥公司在产品方面的技术创新迭代快、性能优异、覆盖面广、量产规模大等竞争优势，以及在研发团队、技术储备、客户资源及售后服务等方面的深厚积淀，坚持自主创新，构建了较为完善的薄膜沉积设备、三维集成设备的产品矩阵，并快速提升公司产品在先进存储、先进逻辑芯片制造领域的覆盖面及量产规模。同时，持续强化公司运营管理，促进公司高质量、稳健、快速的发展，在经营业绩、产品研发、市场销售等诸多方面取得了优异成果，进一步促进公司综合实力的提升。

1、 主要经营情况

报告期内，随着公司 PECVD、ALD、SACVD、HDPCVD、Flowable CVD 等薄膜沉积设备及三维集成设备产品的持续性技术突破与规模化量产应用，公司在先进制程领域的产品核心竞争力显著提升，业务规模实现大幅增长。报告期内，公司实现营业收入 291,286.43 万元，同比增长 49.06%；实现归属于上市公司股东的净利润 134,275.40 万元，同比增长 1,324.10%；实现归属于上市公司股东的扣除非经常性损益的净利润 36,733.50 万元，同比增长 861.92%。

截至 2026 年 6 月 30 日，公司总资产 2,531,214.98 万元，较 2025 年年末增长 27.69%；归属于上市公司股东的净资产 1,271,569.96 万元，较 2025 年年末增长 92.37%。公司资产质量良好，财务状况稳健。

2、 公司产品研发及产业化进展情况

V04 · The disclosed sequence runs from customer requirements and quotation through contract or demo order, manufacture, delivery, installation and tuning, staged process matching and stability testing, written customer acceptance and contractual collection. The company also supports the equipment through its operating life. Source: https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF | 2026-08-21 | Physical PDF page 37 | Stage: Issuer recognition and commercial process, H1 2026. An installed tool or backlog item has not necessarily become an accepted sale.

The placement inquiry reply defines a standard project tool as a quadrilateral platform with three production dual-station chambers. Its feasibility schedule uses300 standard units of capacity in the earlier phase and 600 in a later phase, with outputs75,135,219,330 and 450 as utilization ramps. The assumed CNY 20M ex-VAT price is a project reference. It differs from a heterogeneous physical system and from a current quoted ASP for every film or bonding product.

V11 · Operating years T+5 to T+9 show capacity300/300/300/600/600 standards and utilization25%/45%/73%/55%/75%, yielding75/135/219/330/450 output. The table assumes100% production-to-sales on a rolling basis, CNY 20M ex-VAT per standard and a 40.90% gross margin before separately shown additional depreciation. These are feasibility assumptions. Source: https://static.cninfo.com.cn/finalpage/2025-12-30/1224906285.PDF | 2025-12-30 | Physical PDF page 33 | Stage: Issuer project estimate dated December 30, 2025; physical PDF page33, printed page32. It is not a current sales contract.

The same reply gives a historical mean acceptance period of about one year. Its100% production-to-sales assumption relies on rolling sales of tools produced in different periods. A newly built factory therefore needs equipment installation, trial work, staff, suppliers and customer qualification before it can sustain accepted receipts.

Existing issued-goods stock may support sales above current production for a period, while new products require their own qualified tools and cannot be created by relabelling legacy inventory.

Evidence classification: HIGH management. Placement accountant inquiry reply | 2025-12-30 | physical PDF pages 36, 37 | https://static.cninfo.com.cn/finalpage/2025-12-30/1224906285.PDF; Piotech H1 2026 report | 2026-08-21 | physical PDF pages 37 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF

The source dates retain a real timing range. H1 operating discussion and the October 8 answer expect Shenyang second factory use in 2028. The H1 project-funding table lists April 2029 as the usable date for the same industrial-base project, in both the prior-IPO and new-placement rows. The June prospectus describes a five-year programme beginning in 2024. These are dated operating and project milestones, with no public reconciliation of the different usable-date descriptions.

Evidence classification: HIGH management. Piotech H1 2026 report | 2026-08-21 | physical PDF pages 46, 95, 96 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF; Official October 8 H1 2026 written management records | 2026-10-08 | management record 2524519 | https://roadshow.sseinfo.com/activityDetails/41534; Placement registration prospectus | 2026-06-09 | physical PDF pages 80, 81 | https://static.cninfo.com.cn/finalpage/2026-06-09/1225357243.PDF

Translating the feasibility T schedule from the stated 2024 programme start gives a 2029 first operating reference and a later 600-standard phase. This is a LOW analytical calendar mapping, rather than a delivery guarantee. The physical output, customer acceptance and collection schedule still needs a separately supported bridge.

Evidence classification: LOW model. Placement registration prospectus | 2026-06-09 | physical PDF pages 80, 81 | https://static.cninfo.com.cn/finalpage/2026-06-09/1225357243.PDF; Placement accountant inquiry reply | 2025-12-30 | physical PDF pages 33, 36, 37 | https://static.cninfo.com.cn/finalpage/2025-12-30/1224906285.PDF

V31 · The old IPO and new placement rows both name the high-end semiconductor-equipment industrial-base project and list April 2029. The frontier R&D centre lists September 2028. Values are in CNY 10,000. The page should be read alongside management's 2028-use expectation, preserving both milestone definitions. Source: https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF | 2026-08-21 | Physical PDF page 95 | Stage: H1 2026 project table, published August 21, 2026. Source timing conflict remains unresolved.

The enlarged industrial-base budget is CNY 1.7683011B and includes the earlier project; it is not an additional project of that size on top of the prior plan. Factory construction and equipment, initial working capital and contingency are separate uses. The frontier R&D centre includes research staff, testing and consumables as well as equipment and software. Permitted use of designated proceeds, actual expenditure and remaining project obligations must be traced to those uses. Building area and funding availability alone establish no accepted-tool output.

Evidence classification: HIGH management. Placement registration prospectus | 2026-06-09 | physical PDF pages 75, 76, 80, 81 | https://static.cninfo.com.cn/finalpage/2026-06-09/1225357243.PDF; Piotech H1 2026 report | 2026-08-21 | physical PDF pages 95, 96 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF

The resource cost of widening process coverage

The FY2025 equipment cost-of-sales table attributes95.31% to direct materials,1.51% to direct labor and 3.18% to manufacturing overhead. This decomposition covers equipment COGS. It does not encompass all research, selling, administration, stock compensation, depreciation or cash needed for inventories. H1 reports856 R&D personnel,41.78% of headcount, and describes continuing customer support and process development. These resources must remain visible when new recipes and installed tools expand.

Evidence classification: HIGH actual. Piotech FY2025 annual report | 2026-04-28 | physical PDF pages 59 | https://static.cninfo.com.cn/finalpage/2026-04-28/1225222226.PDF; Piotech H1 2026 report | 2026-08-21 | physical PDF pages 47, 48, 49, 50 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF

A qualification-led launch can require trial tools, engineering changes, customer consumables, site staff and prolonged inventory funding before acceptance. A stable repeat process may spread some of that effort across more tools, while different materials or tolerances can require fresh work. The July cost explanation provides evidence for both learning benefits and paid execution risk. Applying a mature-family margin to every new process would skip this transition.

Evidence classification: LOW model. Official July 8 FY2025/Q1 2026 written management records | 2026-07-08 | management record 35220 | https://roadshow.sseinfo.com/activityDetails/39902; Piotech H1 2026 report | 2026-08-21 | physical PDF pages 37, 38, 44 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF

Other business is described as mainly equipment-related spare-parts sales. The source also discusses technical services and support over the equipment life. It does not disclose a precise split of parts, services and other categories or establish a contracted maintenance annuity. Its reported aggregate COGS ratio is a full-cost source measure; any conversion into future cash materials, labor or depreciation requires a separately labelled model mapping.

Evidence classification: HIGH management. Piotech H1 2026 report | 2026-08-21 | physical PDF pages 36, 37, 190 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF

Supply resilience depends on qualified alternatives, not simply the number of suppliers. On October 8 the chairman says key components use multiple sources and that the company has not experienced a current material impact. That assessment is relevant operating evidence. Parts substitutions may still need requalification, changes to assembly or field procedures, and working-capital commitments. Faster delivery or a scarce qualified slot can create pricing opportunities, while expediting, parts and support costs can absorb part of that benefit.

Evidence classification: LOW model. Official October 8 H1 2026 written management records | 2026-10-08 | management record 2524567 | https://roadshow.sseinfo.com/activityDetails/41534; Piotech H1 2026 report | 2026-08-21 | physical PDF pages 44, 45 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF

Competition is recipe-specific and already present

NAURA’s H1 report describes IC deposition coverage across PVD, PECVD, HDPCVD, LPCVD, tube CVD and several ALD configurations. It reports production deployment and new tube-ALD deliveries to memory customers. AMEC describes accepted and repeated metal-CVD/ALD process business, with separate progress in tungsten, gate materials and metal-silicide integration. These sources rule out a blanket assumption of exclusive access to Chinese deposition demand. The specific materials and process steps determine the intensity of overlap.

Evidence classification: HIGH management. NAURA H1 2026 report | 2026-08-26 | physical PDF pages 12 | https://disc.static.szse.cn/disc/disk03/finalpage/2026-08-26/5b947dae-f3ad-4009-8874-248e9abff0fd.PDF; AMEC H1 2026 report | 2026-08-20 | physical PDF pages 16, 17 | https://static.cninfo.com.cn/finalpage/2026-08-20/1225482884.PDF

⑤Bevel 刻蚀设备

专注于晶圆边缘处理，采用定向等离子体轰击技术消除晶圆边缘缺陷，可有效避免后续互连、封装环节出现互连断裂、漏电等问题，是保障晶圆整体良率的重要配套装备。公司 Bevel 刻蚀设备已实现 12 英寸晶圆制造全场景覆盖，报告期内新一代产品进一步优化缺陷控制能力，获得逻辑及存储领域头部客户批量订单，进入量产应用阶段。

⑥IBE 刻蚀设备（离子束刻蚀设备）

基于物理轰击原理产生高能离子束直接刻蚀晶圆表面，刻蚀过程不受化学反应限制，具有极高的刻蚀精度、方向性与均匀性，适用于 MEMS 器件、光电子器件等高精度加工场景。公司 IBE 刻蚀设备已在化合物半导体、光电子领域实现批量供货，核心技术指标对标国际同类产品。

（2）薄膜沉积设备

薄膜沉积设备是半导体制造的核心工艺设备，与刻蚀设备协同支撑器件结构构建，通过物理、化学或电化学方法在晶圆表面沉积多层均匀薄膜，形成器件所需的导电层、绝缘层、介质层及有源层等关键结构，直接影响芯片制造的良率与性能上限。根据权威机构数据，薄膜沉积设备在全球集成电路设备资本支出中占比约 22.0%，是半导体制造中价值量最高的单一工艺设备品类之一。

公司在薄膜沉积设备领域已形成覆盖物理气相沉积（PVD）、化学气相沉积（CVD）、外延生长（EPI）、原子层沉积（ALD）、电化学电镀（ECP）及金属有机化学气相沉积（MOCVD）的全系列产品矩阵，可全面适配 12 英寸、8 英寸晶圆制造的多场景工艺需求。报告期内，公司持续推进薄膜沉积设备技术迭代与产品性能升级，新一代 12 英寸高端 PVD 设备、管式原子层沉积设备、碳化硅外延设备等产品工艺指标进一步优化，在先进逻辑、高阶存储、第三代半导体等领域的市场渗透率稳步提升；其中 12 英寸 PVD 设备累计交付量突破千台，技术成熟度与规模化量产能力得到充分验证。按照沉积原理及应用场景，主要产品品类如下：

①PVD

基于真空环境下的物理过程实现薄膜沉积，通过溅射等方式将靶材物质剥离并沉积于晶圆表面，具备膜层附着力强、成分可控性好的特点，广泛应用于金属布线、阻挡层、电极层等工艺场景。公司 PVD 设备已形成 12 英寸、8 英寸全系列产品布局，可覆盖逻辑芯片、存储芯片、先进封装等多领域金属化制程需求，多款产品在国内主流晶圆厂实现批量稳定供货，技术性能达到行业先进水平。报告期内，新一代 12 英寸集成电路金属沉积设备进一步提升颗粒控制与膜层均匀性水平，可适配更高端制程的工艺要求。

②CVD

通过气态前驱体在晶圆表面发生化学反应生成固态薄膜，具备台阶覆盖性优异、膜厚均匀性好的优势，可沉积多种介质膜与半导体薄膜，是介质层、栅极层等结构的核心制备装备。公司已构建包含等离子体增强 CVD（PECVD）、高密度等离子体 CVD（HDPCVD）、低压 CVD（LPCVD）、管式 CVD（Tube CVD）在内的完整产品体系，可实现氧化硅、氮化硅、多晶硅等多种薄膜的高质量沉积，广泛适配逻辑、存储芯片多类工艺场景，多款核心设备在国内头部产线实现规模化应用。

③EPI

属于高精度专用沉积设备，可在单晶衬底表面沿晶格取向生长出匹配度一致的单晶外延层，具备缺陷密度低、组分与厚度调控精准的特点，是先进逻辑芯片、功率器件、光电子器件制造的核心装备。公司外延设备已形成硅基外延与化合物半导体外延双线布局，覆盖常压外延、减压选择性外延等多条技术路线，可满足体硅外延、埋层外延、选择性外延等多样化工艺需求。其中公司减压外延设备适配先进逻辑与存储芯片高阶工艺节点需求，在国内市场份额位居前列，已在国内主流晶圆厂实现大规模稳定供货，是产线核心配套的主流外延装备之一。报告期内，公司减压外延设备订单与交付量持续增长，工艺性能与运行稳定性得到客户充分验证；碳化硅、氮化镓、砷化镓外延设备均实现批量供货，产品工艺良率表现优异，进一步完善了公司在第三代半导体领域的装备布局。

④ALD

基于循环式化学吸附原理实现原子级精度的薄膜生长，通过前驱体交替通入与表面反应逐层成膜，厚度控制精度、台阶覆盖能力显著优于传统沉积设备，是先进制程关键薄膜制备的核心支撑。公司已形成介质 ALD、金属栅极 ALD、管式 ALD 等多品类产品矩阵，可适配高 K 介质层、金属栅极、钝化层等先进制程工艺需求。报告期内，新一代管式 ALD 设备批量交付国内存储厂商，在高深宽比结构薄膜沉积场景表现优异。

V28 · NAURA distinguishes PVD, CVD, EPI and ALD within IC deposition, including PECVD/HDPCVD and dielectric/metal/tube ALD. Its stated production progress is commercial competitive evidence. Photovoltaic equipment elsewhere in the report has a separate application scope. Source: https://disc.static.szse.cn/disc/disk03/finalpage/2026-08-26/5b947dae-f3ad-4009-8874-248e9abff0fd.PDF | 2026-08-26 | Physical PDF page 12 | Stage: Competitor H1 disclosure, published August 26, 2026; product overlap does not establish a measured Piotech share loss.

Competition can affect tool pricing, process co-development and the terms on which customers qualify alternatives. A second qualified source can improve customer bargaining power even when overall domestic tool demand grows. Piotech’s response must be evaluated through production performance, cost of ownership, field execution and repeat orders. The July management reply supports a performance-based commercial strategy; it supplies no current recipe-level price schedule or guaranteed margin floor.

Evidence classification: LOW model. Official July 8 FY2025/Q1 2026 written management records | 2026-07-08 | management record 2472461 | https://roadshow.sseinfo.com/activityDetails/39902; NAURA H1 2026 report | 2026-08-26 | physical PDF pages 12 | https://disc.static.szse.cn/disc/disk03/finalpage/2026-08-26/5b947dae-f3ad-4009-8874-248e9abff0fd.PDF; AMEC H1 2026 report | 2026-08-20 | physical PDF pages 16, 17 | https://static.cninfo.com.cn/finalpage/2026-08-20/1225482884.PDF

In bonding, Besi and EVG illustrate both direct competition and narrower supplier roles. The established global supplier's customer and order base is evidence of technical and commercial competition. EVG's preparation interface shows that a customer need not buy every step from the same vendor. Hybrid bonding and thermocompression can coexist as memory structures and stack heights evolve. Product breadth helps Piotech address more opportunities, while adoption timing and supplier capture remain separate questions.

Evidence classification: LOW model. Besi Q3 2026 release | 2026-10-22 | physical PDF pages 2 | https://www.besi.com/fileadmin/user_upload/PR_Q3-2026.pdf; EVG320 D2W preparation flyer | 2026-01 | physical PDF pages 1 | https://www.evgroup.com/fileadmin/media/products/bonding/Die_to_Wafer_bonding_systems/evg320d2w/EVG320_D2W_Flyer_26_01.pdf; Piotech H1 2026 report | 2026-08-21 | physical PDF pages 43, 44 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF

Export restrictions act on the supply chain as well as customer access

The current BIS Part744 snapshot lists Piotech, Piotech Beijing, Piotech Shanghai, Piotech Chuangyi Shenyang and Piotech Jianke Haining as separate Entity List entries. The entries require a licence for all items subject to the EAR under the cited provisions and carry a presumption-of-denial review policy. The current snapshot is dated October 23, 2026 and cites the December 5, 2024 rule. This is an existing legal constraint rather than a newly announced October 2026 company ban.

Evidence classification: HIGH actual. V39 · The five Piotech-related rows require licences for all items subject to the EAR and state presumption of denial. The published page is Federal Register96843, December 5, 2024. Literal citation placeholders remain in the original PDF; the current BIS snapshot supplies the resolved89FR96836 reference. Source: https://www.govinfo.gov/content/pkg/FR-2024-12-05/pdf/2024-28267.pdf | 2024-12-05 | Physical PDF page 14 | Stage: Existing regulatory entry, with current policy separately checked October 23, 2026. EAR jurisdiction remains an essential limit.

The restriction can affect components, equipment, software or technology within the EAR's jurisdiction. It does not by itself describe every domestically supplied item or prove that all Chinese fab spending stops. It also does not turn every constrained foreign purchase into a Piotech sale. A process may depend on complementary tools, imported components, supplier permissions and customer qualification before domestic substitution can produce an accepted invoice.

Evidence classification: LOW model. BIS current EAR Part744 Entity List snapshot | Dated snapshot scope in source register | https://www.bis.gov/regulations/ear/744; Piotech H1 2026 report | 2026-08-21 | physical PDF pages 37, 44, 45 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF

Management's October 8 statement of multiple sourcing and no current material effect sits alongside the legal record. Future evidence should distinguish sustained production with qualified alternatives from delayed inputs, costly redesign, expediting or slower qualification. The absence of a separately identified Qingdao or anonymized-Q row in the selected list is insufficient to establish an exemption from all applicable controls. Named customer exports similarly require specific evidence before being treated as a durable international revenue base.

Evidence classification: LOW model. BIS current EAR Part744 Entity List snapshot | Dated snapshot scope in source register | https://www.bis.gov/regulations/ear/744; Official October 8 H1 2026 written management records | 2026-10-08 | management record 2524567, 2524529 | https://roadshow.sseinfo.com/activityDetails/41534; Piotech H1 2026 report | 2026-08-21 | physical PDF pages 203, 204 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF

The October 8 answer confirms overseas orders and exports without naming customers or disclosing accepted revenue. The July 8 answer specifically states that Piotech had not entered Micron's or SK Hynix's supply chains at that time. The later broad statement does not establish that either named relationship changed. An overseas opportunity remains a company-specific qualification and commercial-access question.

Evidence classification: HIGH management. Shangji extends the portfolio through a pending transaction

The October 16 acquisition draft proposes acquiring100% of operating company Wuxi Shangji through a direct interest and two holding vehicles. The transaction remains subject to the disclosed approvals, closing conditions and financing arrangements. The target is chiefly a PVD supplier, with dry etch and CVD businesses. Its established applications include MEMS, power, RF, CIS, silicon photonics and advanced packaging. Advanced interconnect and memory applications are described at product-specific stages.

Evidence classification: HIGH actual. Piotech proposed Shangji acquisition draft | 2026-10-16 | physical PDF pages 23, 24, 228, 229, 230, 231, 232, 233, 234 | https://static.cninfo.com.cn/finalpage/2026-10-16/1225607700.PDF

属种子层沉积，具备优异的阶梯覆盖能力，应用于晶圆制造金属互联工艺和存储先进封装金属化工艺的 PVD 设备已发货客户端；成膜质量方面，单片晶圆内部及不同晶圆间的膜厚均匀性表现优异，同时可在较宽范围内精准调控膜层应力，有效抑制晶圆翘曲、保障三维结构稳定性。依托长期沉淀的高深宽比沉积、低温低损伤工艺、应力精准控制等核心技术，无锡尚积技术平台可横向延伸至先进制程铜互连、存储三维堆叠、先进封装 RDL 重布线等用途，在保持特色工艺领域国内领先地位的同时，持续向逻辑芯片、存储芯片等广阔的应用领域拓展，

（2）主要产品

无锡尚积的薄膜沉积设备和刻蚀设备均可以支持硅（Si）、碳化硅（SiC）、砷化镓（GaAs）、氮化镓（GaN）及玻璃等多种常规及特殊晶圆衬底，产品可广泛应用于微机电系统（MEMS）、功率器件、射频器件、先进封装和集成电路等各类半导体领域，下游终端覆盖数据中心、汽车电子、消费电子、物联网和通信等多元场景。

无锡尚积主要产品情况具体如下：

产品类别	目前主要应用领域	竞争优势	代表性产品图示
PVD 设备	MEMS、功率半导体、射频芯片、CMOS、硅光芯片、先进封装、图像传感器	①采用集群模块化真空架构，搭载自研 APS 调度系统，具备多级真空、精准温控、高精度定位等全流程质控能力； ②薄膜均匀性、衬底适配性优异，可实现复杂形貌结构均匀镀膜，设备自动化程度高、客户综合使用成本低； ③覆盖氧化钒（VOx）薄膜、吸气剂（Getter）薄膜、TSV 铜种子层沉积、碳化硅（SiC）背面金属化、氮化钽（TaN）电阻薄膜、金属互联薄膜沉积等多种工艺	
干法刻蚀设备	MEMS、功率器件、射频芯片、化合物半导体、先进封装、硅光芯片	①高真空集群式平台，适配硅、碳化硅、氮化镓、玻璃等多种衬底； ②通过射频分区控制、低频连续脉冲及 ESC 分区精确控制等功能，可实现高精度、高均匀性、高选择比、低损伤等关键刻蚀工艺能力； ③覆盖 TSV 刻蚀、氮化镓（GaN）刻蚀、化合物半导体刻蚀、氧化钒（VOx）刻蚀、玻璃基片光电刻蚀等多种特色或通用工艺	

V18 · The table identifies PVD and dry-etch equipment across specialty devices, compound-semiconductor substrates, advanced packaging and related IC uses. The preceding text describes advanced metal-interconnect/packaging PVD shipments and expansion into broader applications. Shipped applications retain their disclosed stage. Source: https://static.cninfo.com.cn/finalpage/2026-10-16/1225607700.PDF | 2026-10-16 | Physical PDF page 229 | Stage: Pending acquisition draft dated October 16, 2026; physical PDF page229, printed228. Target activity is not yet a closed Piotech contribution.

H1 target revenue was CNY 191.402M. PVD represented approximately 75.35%, with CVD and dry etch separate smaller categories. The draft reports26 PVD systems produced and 13 sold during H1; its average selling-price calculation excludes separately sold chambers. Annualizing production is a historical reference, not a certified factory maximum. A customer or production synergy must therefore show a funded and qualified route to additional accepted tools.

Evidence classification: HIGH actual. Piotech proposed Shangji acquisition draft | 2026-10-16 | physical PDF pages 234, 235, 236 | https://static.cninfo.com.cn/finalpage/2026-10-16/1225607700.PDF

The draft identifies a production-base project of CNY 500.6876M and a frontier R&D project of CNY 651.2926M. Their funding proposal is distinct from Piotech's Shenyang industrial base and existing R&D centre. At the draft date, environmental approvals for the target projects were still in progress, with an expected end-October outcome. The disclosed projects do not provide a public annual tool-output, ASP or operating-versus-capital cost schedule. Their cited earliest revenue period is 2030.

Evidence classification: HIGH management. Piotech proposed Shangji acquisition draft | 2026-10-16 | physical PDF pages 262, 263, 264, 265, 266, 267, 268, 269, 270 | https://static.cninfo.com.cn/finalpage/2026-10-16/1225607700.PDF

（六）募集配套资金用途

1、募集资金具体用途

本次交易中，上市公司拟向不超过 35 名特定对象发行股票募集配套资金，募集资金金额为 182,000.00 万元，不超过拟以发行股份方式购买资产的交易价格的 100%。最终发行数量将在本次重组经上交所审核通过并经中国证监会予以注册后，按照《发行注册管理办法》等的相关规定，根据询价结果最终确定。

本次募集配套资金拟用于无锡尚积募投项目建设、支付本次交易的现金对价及中介机构费用。本次募集资金具体用途如下：

单位：万元

序号	项目名称	实施主体	项目投资金额	拟投入募集资金金额	占募集配套资金比例
1	高端半导体设备生产基地项目	无锡尚积	50,068.76	50,068.76	27.51%
2	高端半导体设备前沿技术研发项目	无锡尚积	65,129.26	60,853.70	33.44%
3	支付现金对价及中介费用	-	71,077.54	71,077.54	39.05%
合计		**-**	**186,275.56**	**182,000.00**	**100.00%**

若本次配套资金募集不足或失败，上市公司将以自筹资金方式解决资金缺口。在本次募集配套资金到位之前，公司若根据实际情况以自筹资金先行支出，在募集配套资金到位后，将使用募集配套资金置换已支出的自筹资金。

2、投资项目的审批、备案程序

截至本报告书签署日，本次交易募集配套资金投资项目涉及批复或备案情况如下：

项目名称	发改备案	环评批复
高端半导体设备生产基地项目	锡新数投备[2026]991 号	审批中，预计于 2026 年 10 月底前取得
高端半导体设备前沿技术研发项目	锡新数投备[2026]991 号	审批中，预计于 2026 年 10 月底前取得

（七）本次募集配套资金的必要性

1、高端半导体设备生产基地项目必要性

（1）本项目是积极响应国家半导体装备发展战略，筑牢半导体产业链根基的必要举措

2026 年 3 月，《中华人民共和国国民经济和社会发展第十五个五年规划纲要

V21 · The table shows production-base investment CNY 500.6876M and R&D investment CNY 651.2926M, with proposed matching proceeds funding only part of the R&D total. Other matching proceeds are allocated to cash consideration and fees. The EIA table says approval is in progress and expected by end-October; proceeds are proposed rather than cash already available. Source: https://static.cninfo.com.cn/finalpage/2026-10-16/1225607700.PDF | 2026-10-16 | Physical PDF page 262 | Stage: Acquisition draft dated October 16, 2026; physical262, printed261. Investment and approval estimates are conditional.

Portfolio breadth can give Piotech another customer entry point and a wider process offering. The economic benefit still depends on transaction completion, financed investment, product qualification and supplier capture. Acquired CVD may overlap the original film wallet; PVD and etch require their own eligible process allocations. The same fab’s complete investment budget cannot be awarded independently to each business. Holding-company investments and purchase accounting also create no operating sale by themselves.

Evidence classification: LOW model. Piotech proposed Shangji acquisition draft | 2026-10-16 | physical PDF pages 228, 229, 262 | https://static.cninfo.com.cn/finalpage/2026-10-16/1225607700.PDF; Official July 8 FY2025/Q1 2026 written management records | 2026-07-08 | management record 2472463 | https://roadshow.sseinfo.com/activityDetails/39902

Ownership determines how process success reaches the parent

The H1 subsidiary table reports JianKe at 53.5719% economic ownership and Qingdao at 40%; the accompanying arrangements give76.9188% and 85% of votes respectively. The anonymized Q company is 51%-owned and described as equipment R&D. Shanghai Yanchi is a 90% investment holding. Parent, Chuangyi, Shanghai and Beijing equipment entities are separately shown as wholly owned. These holdings limit how much subsidiary success can be attributed economically to the listed parent.

Evidence classification: HIGH actual. Piotech H1 2026 report | 2026-08-21 | physical PDF pages 203, 204 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF

十、在其他主体中的权益

1、 在子公司中的权益

(1)企业集团的构成

√适用 □不适用

单位：万元

子公司名称	主要经营地	注册资本	注册地	业务性质	持股比例(%)		取得方式
					直接	间接	
拓荆创益	沈阳	50,000.00 万元	沈阳	半导体专用设备的研发、生产、销售和技术服务	100.00		设立

在子公司的持股比例不同于表决权比例的说明：

V09 · The holdings table identifies wholly owned equipment entities, JianKe53.5719%, Qingdao40% and Q51%. The next page explains voting arrangements for JianKe and Qingdao. The table’s ownership percentages are not customer process shares or a formula assigning every product to a particular subsidiary. Source: https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF | 2026-08-21 | Physical PDF page 203 | Stage: H1 2026 legal structure; economic holdings and voting rights must remain separate.

The source associates the established ALD industrialization project with wholly owned Shanghai. It does not allocate all ALD activity to Qingdao, and it does not disclose Q’s full public identity or a product-by-product subsidiary profit statement. JianKe’s bonding participation is relevant, while the exact cost, support and cash-sharing arrangements still need their own treatment. An ownership assumption should remain bounded by those entity facts.

Evidence classification: HIGH actual. Piotech H1 2026 report | 2026-08-21 | physical PDF pages 95, 96, 97, 203, 204, 205 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF

Consolidation places controlled operations in group statements; parent economic profit depends on beneficial rights. Group cash and parent cash also depend on legal location, permitted uses and distributions. A source minority net loss is not a directly measured pre-finance operating-profit credit or a cash injection from outsiders. The financial bridge must retain the full cost of operating the group and explain any outside-profit or distribution allocation.

Evidence classification: LOW model. Piotech H1 2026 report | 2026-08-21 | physical PDF pages 108, 110, 203, 204, 205 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF

Dated tests of the business thesis

S14-T1 · Dated tests of the business thesis

Business question	Evidence that strengthens the case	Evidence that weakens it
Repeatable core film demand	Additional accepted repeat tools on established Stack, ACHM, PE-ALD or gap-fill processes with stable production performance.	Customer capital-plan delays, prolonged unaccepted stock, heavy rework or collections slipping despite shipments.
Carbon commercialization	Dated customer validation and written acceptance tied specifically to NF-300M Flowable Carbon, with identifiable incremental process content.	Only exhibition visibility or shipments, undisclosed recipe outcomes, or substitution absorbing the entire opportunity.
D2W capture	Pleione-specific customer acceptance and repeat purchases, with separation from Propus and W2W revenue.	Continued validation, a customer choosing another placement supplier, or thermocompression retaining the relevant step.
Factory readiness	Installed and qualified production equipment, paid staffing and materials, demonstrated output and subsequent customer acceptance.	A building milestone without usable tooling, or new capacity with delayed qualification and excess working capital.
Supply resilience	Sustained deliveries using qualified component alternatives, stable reliability and controlled expediting/support cost.	Part restrictions, repeated redesign, supplier concentration or extended customer qualification after substitution.
Acquisition benefit	Approval and funded closing followed by target-specific accepted sales, paid development and non-overlapping process capture.	Funding delay, project cost growth, customer overlap, slower target qualification or unfinished approval milestones.

These are observable business tests. They select no forecast, realization probability, valuation or score.

The central source-supported opportunity is wider qualified use of Piotech’s existing process platform, reinforced by repeat-order learning and a broader application set. The main failure mode is conversion taking more time and paid resources than demand headlines imply. New products and the proposed acquisition can widen the addressable set, while source-stage, shared-budget and ownership boundaries determine what ultimately reaches accepted receipts and parent economics.

Evidence classification: LOW model. Piotech H1 2026 report | 2026-08-21 | physical PDF pages 37, 38, 42, 43, 44, 203, 204 | https://static.cninfo.com.cn/finalpage/2026-08-21/1225486631.PDF; Official July 8 FY2025/Q1 2026 written management records | 2026-07-08 | management record 35220 | https://roadshow.sseinfo.com/activityDetails/39902; Piotech proposed Shangji acquisition draft | 2026-10-16 | physical PDF pages 228, 262 | https://static.cninfo.com.cn/finalpage/2026-10-16/1225607700.PDF

Source status and unresolved evidence

The latest two dedicated management events are October 8, 2026 for H1 results and July 8, 2026 for FY2025/Q1 results. October contains nine answered management questions plus opening and closing host posts. July contains eleven answered management questions, including four answered pre-collected questions, plus opening and closing host posts. Every published written record in those recovered official sets is included. An investor question, a peer growth rate quoted in that question and the company's answer retain separate attribution.

Evidence classification: HIGH actual. Official October 8 H1 2026 written management records | 2026-10-08 | https://roadshow.sseinfo.com/activityDetails/41534; Official July 8 FY2025/Q1 2026 written management records | 2026-07-08 | https://roadshow.sseinfo.com/activityDetails/39902; Primary inventory and management-record completeness register | 2026-10-23

The July event metadata lists an18-minute59-second replay without supplied subtitles. Its audio and video were not reviewed. The published written answers therefore support a complete written-record assessment rather than a full spoken transcript. October is classified as a text event. The reply to the October backlog-growth question directs investors to later announcements; the question's cited88.2% peer growth is not Piotech order guidance.

Evidence classification: HIGH actual. Official July 8 FY2025/Q1 2026 written management records | 2026-07-08 | https://roadshow.sseinfo.com/activityDetails/39902; Official October 8 H1 2026 written management records | 2026-10-08 | management record 2524543 | https://roadshow.sseinfo.com/activityDetails/41534; Primary inventory and management-record completeness register | 2026-10-23

H1 2026, published August 21, is the latest actual financial report identified as of October 23. Q3 actuals were not yet published in the reviewed primary inventories.

Evidence classification: HIGH actual. Primary inventory and management-record completeness register | 2026-10-23

October 29 is an unverified calendar watch date from a secondary locator; a primary appointment-table confirmation was not recovered. It is not an actual-results date or a substitute for reported Q3 figures.

Evidence classification: PriorSecondary. Primary inventory and management-record completeness register | 2026-10-23

The principal remaining gaps are current accepted units and prices by recipe, customer-specific awards, process-level market share and margins, the opening inventory's product mix, a complete engineering EIA and staffing-to-output bridge, the full carbon article, and product-level subsidiary profit and cash allocations. The public SEMI releases do not supply the paid China/process database. Complete source files are retained, with selected business and technical pages used here; no claim is made that every page of each long filing or acquisition document has been assessed.

Financial laws, qualification and shareholder economics

FY2025 revenue was CNY 6.51909487463 billion. Equipment revenue was CNY 6.29553387495 billion; rounded PECVD, ALD and bonding sales were CNY 5.142, 0.301 and 0.136 billion. The CNY 0.71653387495 billion remaining equipment bridge includes undisclosed subcategories and rounding. It is a model classification, with no claim that all of it is one disclosed gap-fill product. The geography/direct-sales table differs by CNY 907,535.41 and that original scope gap remains preserved.

H1 2026 revenue was CNY 2.91286426146 billion, including equipment CNY 2.75408551734 billion and other business CNY 0.15877874412 billion. Q1 revenue was CNY 1.11243177896 billion; subtraction gives Q2 revenue CNY 1.80043248250 billion. June trailing revenue was CNY 7.47781296244 billion. H1 is the latest recovered published actual period as of October 23. No Q3 earnings release was recovered. October 29 remains an unconfirmed secondary calendar watch date.

H1 statutory operating profit of CNY 1.38759081558 billion is reconciled by adding finance costs CNY 0.01712512918 billion and removing other income 0.08977533622, investment income 0.01378553027, equity-asset fair value 0.96273107768, disposal gains 0.00017225761 and current capitalized research 0.07915510637. The result is CNY 0.25909663661 billion of recurring economic prefinance group OP. Ordinary equity compensation, cash-settled awards and impairments remain costs. Parent net income of CNY 1.34275398093 billion is an after-tax measure; the H1 NCI loss is not a prefinance parent-profit credit.

The two latest dedicated management events have complete published written records: July 8 has 13 posts, comprising 11 answered questions and two host posts; October 8 has 11 posts, comprising nine answers and two host posts. The July replay is 18 minutes 59 seconds and was not reviewed. These are complete written-event reads with an explicit audio/video gap, rather than a claim of a complete spoken earnings-call transcript. The October event is text only.

Film receipts begin with two calibrated views of the same eligible process wallet. One uses Chinese fab-equipment expenditure, process share, local supplier eligibility, company capture and acceptance. The other uses film-category spend, localization, company share and recognition. Calibration reconstructs FY2025 film receipts without adding the two views together. Primary customer budgets and management's July China-film estimate bound the opportunity; broad WFE and global 300mm forecasts retain their different scopes.

SMIC's FY2025 capital-expenditure anchor is USD 8.1 billion and management described FY2026 as broadly flat. CXMT's H1 cash expenditure declined from CNY 24.1148 billion to CNY 21.5944 billion; its preliminary sales growth does not create a new equipment budget. Primary current YMTC and other-fab annual budgets were not recovered. Those customer pools, future localization and process-capture coefficients are explicit LOW assumptions, with their full values in the input tables.

PECVD, ALD, the equipment residual, established bonding, new D2W and other business form six organic external vectors. Exports are a bounded increment inside the film opportunity and retain the July statement that Micron/SK Hynix were not customers. The October broad export statement provides no customer-level revenue amount. Other business is modeled as an attachment to accepted equipment, with a separate LOW cash-material coefficient. Its historical full cost ratio is not treated as a pure material or cash coefficient.

Carbon success replaces part of the existing PECVD opportunity within the same budget and manufacturing resources. It adds no second whole-WFE pool. New D2W draws from a separate eligible bonding route and consumes the existing bonding manufacturing resource. Existing broad bonding products, carbon PECVD and D2W retain different qualification clocks. The October carbon launch and a customer validation stage do not establish accepted orders, price or future margins.

After a successful Shangji close, overlapping target CVD receives zero incremental combined-company opportunity upstream of acceptance, production, stock, material purchases, tax and cash. The target's reported actuals and preclose CVD forecast remain preserved. This is an incremental modeling boundary, without a claim that the legal business stops producing CVD. If the closing date is moved into H2 2026, only remaining H2 CVD opportunity is removed; already reported H1 CVD is retained. Full staff, factory, research and project costs remain incurred after overlap adjustment.

Operating paths carry LOW judgment weights of 55% central, 25% slow and 20% fast. They jointly set customer spending, local conversion, recognition, material costs, inventory intensity, qualified manufacturing and programme delays. These are analytical judgments rather than measured frequencies or issuer guidance.

Within central, the probabilities of neither programme, carbon only, D2W only and both are 22.5%, 22.5%, 27.5% and 27.5%. Within slow they are 64%, 16%, 16% and 4%; within fast they are 5%, 15%, 20% and 60%. These give

marginal carbon success 47.5%, D2W success 51.25% and joint success 28.125% across operating paths. Success can still yield no early receipts because qualification, available beginning stock, capture and paid manufacturing constrain realization.

Each of the 12 completed operating/programme paths has three transaction outcomes: 65% full funding/close in Q3 2027, 20% partial funding/later close in Q1 2028, and 15% failure. Multiplying the operating, conditional programme and deal weights produces 36 nonnegative probabilities summing to one. Conditional independence of deal execution from the selected operating path is a LOW simplification; adverse correlation remains uncertain. A separate numerical diagnostic concentrates delay/failure in slow operations while preserving the selected overall operating and deal marginals.

Every path retains its own accepted sales, costs, finite assets, working capital, cash, parent rights, closing date and share issuance. Price is calculated only after those operations. Invalid inputs or an unfunded positive-probability path block the affected expected price. A zero-weight path can remain an observable failed diagnostic without contributing an artificial numeric valuation. A previous funding breach stays latched; later mathematical cash recovery does not authorize an unfunded business plan.

FY2025 production of 316 systems, sales of 250 and inventory of 391 systems describe different events. The source table reports sold units; using sold systems to calibrate accepted-revenue capacity is a LOW modeling proxy. The inventory predominantly consists of shipped equipment awaiting acceptance. Equipment sales divided by 250 gives a CNY 25.1821354998 million historical mixed-system arithmetic proxy. It is not a current uniform tool price. The small historical bonding proxy of CNY 21.433333 million per system is a broad three-system sample, with no assertion that it prices a new Pleione D2W tool.

Management's more-than-700 physical-system capability is represented by a conservative 700-system planning input. The new factory's standard platform represents a three-dual-chamber configuration and has a different unit. The existing physical resource is shared by film and bonding; only the new paid factory increment supplies deposition. The model never converts chamber counts, broad mixed tools and standard platforms into interchangeable reported units.

Four book-cost acceptance queues separate generic deposition, legacy bonding, carbon and D2W. Current acceptance uses qualified beginning stock. Manufacturing replenishes ending issued stock subject to the appropriate resources and programme qualification; a new tool cannot be manufactured and accepted instantly without a beginning-stock or timing bridge. Unused raw/WIP remains on hand. Purchases are nonnegative and reconcile beginning raw stock, manufacture and ending raw stock without a cash refund when target intensity declines.

The material ledger separately carries raw material and each issued queue at its existing material cost basis. Recognized material comes from beginning issued stock. New purchases use the current qualified production mix and current material coefficients, then transfer through weighted-average raw stock into manufactured equipment. A new material-price shock cannot rewrite the cost of previously shipped tools. Other business is purchased as needed. Factory labor, full research, awards and depreciation remain outside this material stock ledger.

The enlarged factory budget of CNY 1.7683011 billion includes the existing project. Construction/equipment is CNY 1.6164808 billion, initial working capital 0.1194906 and contingency 0.0323297. The remaining cash-plan proxy of CNY 1.5415607 billion and the mapping between cumulative funds and opening construction are LOW reconciliations. The 2028 usable-date statement and April 2029 funding-table timing do not establish a single verified commercial start.

Commissioning requires both the planned readiness date and enough actually paid construction under the explicit LOW book-to-cash mapping. Underfunded construction remains CIP with no free productive asset or depreciation. The first actual operating calendar year receives 75 source standard systems times a LOW 50% qualified fraction; the second receives 135 times 80%. Later 219/330/450 source standard outputs retain their project-plan status. Source utilization assumptions are not multiplied a second time. A delayed paid start resets first-year output and qualification even if a programme clock is unchanged.

Full equipment economics include accepted material at carried cost, paid factory floors and current manufacturing overhead, factory depreciation, factory compensation, warranty and inventory provisions. Full group OP then deducts selling/field-support floors, administration, all current research resource use, ordinary compensation, finite capital charges, credit losses, surtax and designated frontier contingency. Fixed obligations survive zero sales.

Selling, administration and research cash floors are derived from source function costs after identified compensation and noncash charges, then grown by explicit LOW rates. Full R&D of CNY 0.42280918358 billion equals expensed R&D 0.34365407721 plus current capitalized R&D 0.07915510637. The forecast economically expenses the complete current resource use. Frontier research is a floor/subset of full R&D, with no automatic second expense. Functional source compensation allocation gaps remain visible.

The full H1 asset-charge scope is CNY 100.90364164 million, including investment property. Cash-flow addbacks of 85.85863788 million plus research-capitalized charges of 12.78383421 million leave a CNY 2.26116955 million scope difference. Forecast opening assets use the ten disclosed finite classes, rather than labeling all charges as factory depreciation. No class depreciates more than its opening book. Other CIP, paid frontier capital and new maintenance have separate finite cohorts and explicit readiness clocks.

Opening development of CNY 0.15576517412 billion was already economically costed in the current-resource convention. Later GAAP amortization has an equal economic reversal, preventing the same research from reducing economic OP again. Opening frontier capital is already inside source PPE/CIP; prior research-project payments do not create a second asset. Future asset and maintenance depreciation requires the corresponding paid vintage.

H1 equity compensation of CNY 75.95379252 million and ordinary cash-settled compensation of CNY 106.68670115 million total CNY 182.64049367 million. The functional residual is an allocation within that full total. No extra buffer is added to expense it again. Cash-SAR fair-value cost remains ordinary; the closing liability of CNY 154.98535426 million is settled on an explicit cash calendar and cannot disappear at a service expiry.

The October first grant of 5.55 million shares has source estimated cost CNY 1.6318526 billion and 2026–2030 cost amounts 0.1853242/0.7293691/0.4065911/0.222986/0.0875822 billion. The calendar is retained in full. The ungranted 0.95 million reserve is costed at full scope under a conservative policy matching its existing gross-share allowance. Replacement awards supporting the protected 1.5 million annual gross-share expansion receive their own future cost cohorts. No duplicate award shares are added to the native denominator.

Family gross-profit display allocations are LOW analytical splits of already-incurred total costs. At zero receipts any unabsorbed factory cost remains in a separate bridge; it does not vanish through division by zero. Acquired PVD, etch, CVD and other activity remain distinct from organic ALD/PECVD. Group gross profit less group operating expenses reproduces group OP, and group OP less positive outside claims reproduces parent OP. Changing a display allocation cannot change cash, full OP or the operating-profit ceiling.

The pending transaction obtains 100% of the operating target through 82.97% direct shares and two holding-company interests of 11.54% and 5.49%. The holding companies have no operating business. Cash consideration is CNY 672.47539981 million and share consideration CNY 1.82752460019 billion at CNY 383.22 per share. Flooring each seller's actual leg gives exactly 4,768,850 purchase shares; flooring aggregate consideration would produce 15 too many shares.

Matching financing is capped at CNY 1.82 billion, with an auction floor of 80% of its applicable future 20-day benchmark and a share cap of 30% of actual capital before that issuance. The modeled future references and auction prices are LOW conditional inputs. The legal issuance-cap denominator uses actual issued capital plus purchase shares, separately from the native valuation's gross-forward proxy. Failure of matching fundraising does not remove the cash-price obligation within the contractual 60-working-day term.

The full state uses CNY 1.82 billion and a LOW CNY 400 price: 4.55 million matching shares. The partial state uses CNY 1.2 billion at LOW CNY 300: 4 million matching shares. Whole shares determine actual received proceeds. Purchase price and the rounded CNY 38.3 million transaction-fee budget have first priority; only the remainder is restricted project cash. Acquisition proceeds do not become an unrestricted organic funding subsidy.

The announced uses comprise CNY 500.6876 million factory, 608.537 million matching-funded R&D and 710.7754 million price/fees. The full target R&D programme is CNY 651.2926 million, with CNY 42.7556 million own funding. The full modeled state pays that whole programme; the partial state stages project cash to the actual remaining pool. Project R&D has an explicit LOW 60% current-expense/40% capital split, retaining all cash. A failed state pays a LOW 20% of the rounded fee budget once.

Target H1 revenue of CNY 191.40202781 million and gross profit 78.8929412 million produce ordinary prefinance OP of CNY 18.10406174 million after actual ordinary resource costs. PVD represented CNY 144.21947787 million of sales, CVD 15.41929204, etch 13.85840707 and other equipment 3.74623438. Target revenue promises of CNY 350/450/610 million for 2026–2028 anchor bounded desired sales; they are not recognized revenue, profit guarantees or valuation floors. Compensation is assessed after 2028; performance-compensation parties cover 68.58% of transaction consideration, rather than a guaranteed fraction of revenue or profit. No compensation receipt is booked.

Target current assets, gross inventory, notes, advances, warranty, VAT, cash taxes, lease cash, compensation and four finite asset classes follow the audited target. Existing cash enters once at the closing-quarter ending balance; subsequent operating/capital cash enters from the next quarter. Hypothetical PPA inventory and finite PPE/intangible charges apply only after close. Goodwill of CNY 1.81363174691 billion receives no amortization, and the published PPA scope is still provisional.

The earliest new-project sales assumption is 2030 and is constrained by paid readiness plus the same eligible PVD wallet. LOW first-tool count, ASP and qualified fraction are visible in the input ledger. Source documents do not disclose a full annual tool-output/price plan for this factory. New project assets and profits cannot appear merely because a matching raise was announced. Fixed staff, research and factory costs remain after CVD overlap is removed.

Bonding activity is attributed through JianKe's disclosed outside ownership. Its profit pool uses the same recognized legacy/D2W material costs as the group, together with allocated factory, support and research obligations. Only positive operating profit incurs an outside claim. No loss creates a parent cash subsidy. Small Qingdao and another venture allocations are LOW bounded within-film reserves because product-level entity attribution is undisclosed.

Actual future distributions to outside owners are zero in the selected model; unknown payout timing is not manufactured as a historical fact. A separate prudential cash reserve accumulates 50% of prior positive outside profit, reducing available liquidity. The reserve is not described as a legal dividend or a source-verified entity cash split. A second general minority-cash haircut is explicitly prudential and is not an ownership multiplier applied to all group profit.

Each native starting-quarter gross share owner remains separate: 305 million in Q3/Q4 2026, 306.5 in 2027, 308 in 2028, 309.5 in 2029 and 311 in 2030. Shares are owned by each of the 18 original quarter cells, rather than replaced by five independent annual owners. Only effective closed-transaction purchase and matching shares are added. The starting ceiling quarter's denominator is used across its own forward-four-quarter profit window, preserving the sanctioned share convention.

June cash equivalents of CNY 7.41370018416 billion include CNY 4.71176648104 billion designated project-use cash and CNY 0.00338754623 billion foreign restricted cash. The opening usable group bridge is CNY 2.69854615689 billion. Legal parent monetary funds of CNY 5.28140243903 billion have a different scope. This group bridge does not claim a legal parent unrestricted balance or an invented transfer prohibition.

The June net placement of CNY 4.55825235188 billion is already in opening cash. Designated factory, frontier research and working-capital pools release against actual eligible cash costs, subtracting supplier/payroll credit and avoiding a second factory-WC payment. The approved CNY 230.65426257 million reimbursement is an internal release once on the LOW assumed execution clock; execution was not independently confirmed. The August CNY 190.68606016 million actual subscription enters once, with its shares already in the baseline. The October CNY 102.0149088 million dividend leaves once.

Direct operating cash starts with material PURCHASES and cash-type factory and operating resource accruals. Supplier credit and ordinary payroll/AP timing flow through the separate gross non-inventory working-capital change, so these resource charges are not described as already settled payments. SAR settlements, warranty settlements, cash taxes and VAT follow their own cash calendars. Inventory movements already operate through purchases and do not re-enter as another NWC cash deduction. Opening allowance writeoffs are finite and cannot exceed their old cohort. No accounting provision produces a fictional supplier refund or liquidation receipt.

Original trade bills retain the two source last-bank-date bands: CNY 0.23542284046 billion in Q3 and 0.82491610808 in Q4. Ending total trade-bill credit is the greater of unmatured old bills and the LOW projected total stock. Adding both would borrow the original balance twice. Renewal is an uncommitted LOW working-capital assumption with explicit stress results.

Bank, lease and equity-financing cash obligations retain their full disclosed interest-inclusive amounts, with no automatic refinancing or duplicate interest charge. Exact payment dates inside the disclosed maturity buckets are unavailable. The selected quarter allocation is LOW. In particular, the CNY 4.12228337 million noncurrent lease obligation belongs to the source's one-to-three-year bucket, while the funding model reserves its cash evenly over the first twelve forecast quarters. That conservatively brings CNY 1.37409445667 million into the first year; it does not assert a contractual early-payment date, prepayment right or verified legal settlement. Modeled remaining bank/lease obligations track remaining contractual cash, rather than statutory carrying debt. Additional rate stress is separate. The mapping of capital AP to project budgets is uncertain; the selected 50% incremental reserve is LOW, with zero/full overlap tests. Detailed daily sequencing and cash-transfer ability remain incomplete, so quarter-end funding alone does not certify intraquarter liquidity.

A separate timing bound moves all CNY 1.22863550623 billion of first-year bank/current-liability contractual cash into the first forecast quarter, keeping total cash owed and operating profit unchanged. Across all 36 conditional cases, the lowest modeled usable funding buffer is CNY 460.804225412 million. Combining that timing bound with no projected trade-bill renewal lowers the minimum to CNY 59.1222242322 million. No positive-probability case breaches the modeled funding test, so the active ceiling remains CNY 138.4965590128. The narrow buffer under the combined stress underscores the importance of actual payment and collection dates. The existing frontloaded noncurrent lease reserve is already included and is not added twice. These are funding diagnostics, with no probability assigned and no additional value added.

The source statement that CNY 5.1473 million placement fees had not been deducted from the special account does not prove that the group had not paid them. A possible settlement earmark is contained inside the already restricted residual. There is no additional free-cash payment or OP expense from that ambiguous wording. Zero/double possible-earmark tests do not change ceilings when the existing restriction is ample.

Optional structured deposits of up to CNY 1.06 billion, including CNY 500 million frozen, and potential future award subscription cash of up to CNY 2.1645 billion are not relied on for funding. Locked equity investments are excluded from baseline finance. Numerical optional-event bounds, dates and judgment probabilities are shown separately. Under this prefinance-OP valuation, additional cash has zero direct value add and changes a selected ceiling only if it resolves a genuine funded-path constraint.

The chairman's October 16 CNY 200–300 million buyback remains an unapproved, unexecuted proposal. A LOW 60% chance of execution is recorded, while the funding model conservatively reserves the full CNY 300 million. It books no actual repurchase, cancellation or per-share uplift. The ungranted award reserve likewise retains full cost/gross-share scope without relying on a favorable non-grant outcome. These conservative bounds avoid probability-blended cash that an individual funded path could not use.

For each coherent leaf and each of the 15 starting quarters, forward OP is the sum of that starting quarter and the next three quarters of recurring prefinance parent economic OP. Conditional price equals 20 times that sum in CNY billion times 1,000 divided by the same starting-quarter native gross shares plus effective transaction issuance. Expected price is the sum of those 36 prices times their joint probabilities. Every quantity is available in the complete conditional ratio tables and linked model.

Positive-weight funding validity, asset lives, binary qualifications, whole-share terms, source balance consistency and probability sums are executable gates. Invalid states return BLOCKED for the affected expected ceiling. A mathematically positive later cash balance cannot erase an earlier financing breach. Protected Excel Base, holdings and the undated quote are excluded from the economic and validity dependency paths.

Expected revenue, gross profit, group expenses and outside claims are display projections of the already-completed conditional paths. They explain the expected parent-profit bridge and supply native summary rows. Gross profit manufacturing allocations alter only presentation of costs already charged in full. The weighted mean-share field is marked diagnostic, preserving the ratio-before-weighting valuation method.

Useful evidence would show repeat customer acceptance and cash conversion of higher-value film recipes, qualified rather than merely launched carbon and D2W tools, and the timing of full-cost factory utilization. These changes can raise eligible receipts and retained OP, with actual support and capital costs carried alongside them. A stronger financial release must be evaluated against ordinary research, compensation, parent rights and issued shares rather than headline reported profit alone.

Near-term tests include the next published financial release, accepted tool/customer disclosure, the ordinary award-cost calendar, approvals and matching-financing terms for Shangji, and collections relative to inventory and customer advances. The new factory's 2029/2030 production contribution is a later execution test. Neither a launch announcement nor an aspirational project output is counted as an accomplished catalyst.

The six score categories total 44 points: Core 15/20, Cycle 8/10, TAM 8/10, Catalysts 4/5, Macro 6/10 and Alpha 3/5. Three distinct one-point deductions cover qualified supply/regulatory access, concentrated customer/acceptance execution and corporate funding/integration. Net 41/60 equals 68.3333%, rounded to analytical Base 68. Known modeled awards and dilution receive no second automatic risk penalty. The separate protected Excel Base remains 72.

The strongest contrary evidence is broad recipe competition, the absence of a sole-source platform monopoly, 79.15% top-five customer concentration, large unaccepted inventory and reliance on LOW capture/localization assumptions. Current Entity List restrictions constrain EAR-covered inputs to named entities; they are existing restrictions, with no claim of a newly imposed October ban. Management's supply-continuity assessment remains a dated statement rather than a perpetual exemption.

Completeness gaps include unreviewed July audio/video; no recovered Q3 report or primary appointment confirmation; no primary current YMTC/other-fab full budgets; undisclosed recipe-level selling prices, margins and awards; uncertain inventory mix and legal-entity cash distribution; LOW project-cash/asset commissioning mapping; unverified reimbursement execution and trade-credit renewal; pending acquisition approvals and auction prices; and provisional PPA/new-project output assumptions. Original failed retrieval attempts, source dates and scope differences remain retained with the source register. No official confirmation requirement suppresses numerical analysis; uncertainty is represented through explicit conditional economics and disclosed bounds.

Financial stresses, correlations and optional liquidity

T_stresses · All nine selected financial stresses

Stress	Q4 2027 CNY/share	Minimum available cash CNY B	Blocked windows	Additional funding CNY B
No projected trade-bill renewal	138.50	0.673440	0	0.000000

Current analytical scorecard and separate protected Base

T_score_categories · Six analytical categories - current Framework 8

Category	Points	Maximum	Supporting evidence	Limiting evidence
Core Thesis	15	20	Qualified front-end film processes, cumulative production use and repeat customer development create meaningful qualification and process-learning barriers. More than3800 cumulative chambers,100lines and600Mwafer passes are issuer operating evidence, not annualoutput.	NAURA, AMEC and global incumbents compete in specific recipes; no sole-source or architecture-independent company monopoly is established. Broad700physicaltool capability is not proof of a current factory chokepoint.
Cycle Stage	8	10	Repeat advanced-film adoption and improving qualified product breadth support a commercial growth phase. H1actual2.91286426146Brevenue is higher than priorH1; management connects later margin recovery with larger-scale advanced products.	Customer budgets, validation and collections remain cyclical; issued inventory and unusually high advances make sales conversion uneven. The score does not treat a question's peer88.2%growth as company guidance.
Expanded TAM	8	10	Physics of film deposition, materials integration and bonding extends across memory, logic, mature-node power/RF/MEMS and advanced packaging. Existing ALD/gap-fill and bonding commercialization establish engineering routes beyond one product.	Recipe and regional access constrain the addressable wallet. Carbon and D2W are bounded conditional captures within overlapping budgets; targetPVD/etch comes through a pending transaction. No generic robotics/quantum spend is added.
Catalysts	4	5	Next financial disclosures, repeat-tool acceptance and customer qualification, continued bonding progress and transaction approvals provide observable6-18month tests.	October29 is only an unconfirmed secondary calendar watch date. Carbon launch is not an accepted order, and a2029factory is outside the main near-term catalyst window.
Macro Tailwinds	6	10	Chinese fab investment, local supplier qualification and process complexity support long-run domestic tool demand. Management-cited ChinafilmUSD9.3B and specific customercapex disclosures bound the process wallet.	H1customer cashcapex is not a blanket acceleration, primary YMTC/other budgets are absent, and global300mm forecasts have different scope. No undifferentiated entire-WFE multiplier is credited.
Alpha	3	5	Chinese original filings and detailed equipment, compensation, funding and seller-leg share records reveal distinctions obscured by headline reported profit and capacity figures. InvestmentFV, fullR&D, award calendars and conditional dilution matter to parent recurring profit/share.	The sources are public and recipe-level prices/shares/customer awards remain incomplete. This is analytical reconciliation rather than exclusive information or proof that the market ignores every item.

T_score_risks · Three distinct risk deductions

Risk class	Deduction	Current evidence
Regulatory and qualified supply access	1	Named EntityList restrictions and qualified imported-input dependency can require redesign or delay production; current multisourcing/no material effect is management's operating assessment.
Concentrated customer and acceptance execution	1	Topfive79.15%concentration, unaccepted equipment, collections and field-validation obligations concentrate operational execution risk. Inventory/advance cash is already modeled, not treated as extra profit.
Corporate funding and integration execution	1	Approvals, future auction terms, integration and unknown project scope can change parent economic participation. Known award costs and issued shares are included in the model and are not themselves a second score penalty.

T_score_normalization · Score arithmetic and protected convention

Measure	Points / Base
Category points	44
Risk deduction	3
Net points	41
Maximum points	60
Current analytical Base	68
Protected Excel Base	72

The selected category total is 44 points. Three distinct one-point deductions leave 41/60, or approximately 68.3333%, rounded to analytical Base 68. The protected Excel Base 72 is a separate preserved input. Modeled ordinary compensation and dilution receive no second automatic risk deduction.

Reproducing schedules and source statements

Appendix A - Product economics and cost attribution

All forecast values are model estimates in CNY billion. 2026 covers Q3-Q4 only. Family gross-profit allocations divide costs already charged to total operating profit. Separate unabsorbed factory losses remain charged at zero receipts. The complete conditional graph preserves every calculation and coefficient.

Appendix D - Complete conditional valuation and funding support

These36 complete conditional paths combine the12 operating/programme paths with the three transaction outcomes. Each price is20 times its own forward-four-quarter parent OP times1,000 divided by its own starting-quarter gross shares. Prices are then weighted by joint probabilities. Mean shares are a display diagnostic. The four quarters, costs, parent rights and cash are evaluated before the ratio or weighting.

A04_probabilities · All36 mutually exclusive joint weights

Appendix E - Current coefficient owners and source domains

Every current economic/native denominator/source calibration input is reproduced below with exact value, source classification, unit and role. The display-only undated quote is omitted; the protected Base is shown separately in the score table. Pure decoder metadata is not a financial coefficient. Full original source descriptions and the complete graph remain in the self-contained JSON model.

Appendix F - Actual source financial statements

The following tables preserve reported units, periods and original cells from the full source statements. Null/blank source cells remain unavailable rather than zero. All-null regulatory rows with no economic numeric cell are omitted from display; the complete unfiltered original tables remain embedded in the JSON source ledger/core. Chinese labels use an embedded CJK font; key line items are also explained in the English actuals and financial-law sections.
