AMZN | CURRENT FRAMEWORK | USD MILLION UNLESS LABELED

Amazon: paid growth and the cost of capacity

Amazon combines a large shopping audience, a delivery network and a major cloud platform. More transactions create advertising opportunities and subscription value; more accepted cloud capacity creates paid software, storage and compute usage. The investment opportunity depends on keeping enough of that revenue after merchandise, delivery, manufacturing, wages, power, depreciation and customer financing.

The model values the Q4 2027 window at **$269 per share**, using about **$147 billion** of operating earnings from Q4 2027 through Q3 2028, a **20x** multiple and about **10,921 million** starting-quarter diluted shares including conditional acquisition dilution. This is a conditional operating-profit valuation. No current market quote or price-dependent return is assumed.

The potential advantage comes from advertising and higher-value retail services growing faster than physical activity, alongside accepted AWS workloads that use custom chips and a broad software stack. The model already assumes strong demand. Better adoption must create additional paid usage or retained profit beyond that envelope, while paying the capital and support costs.

Funding is the largest constraint. The selected spending and collection path reaches a funding need of about **$242 billion in Q4 2030**, before some later debt principal and award-settlement items. That balance describes future financing needs under these assumptions; it does not describe actual October cash or inevitable insolvency. The valuation depends on financing, capacity and share outcomes being achievable.

Selected horizon	Earnings quarters	Operating profit	Multiple	Starting shares, million	Value/share
Q4 2027	Q4 2027-Q3 2028	146,953	20x	10,921	269

As of October 21, 2026. All forward figures are analytical estimates. Financial tables use whole USD millions; source exhibits preserve their original labels. Exact calculations remain in the linked analytical model.

AMZN | CURRENT FRAMEWORK | USD MILLION UNLESS LABELED

Reported earnings and the recurring cost anchor

The latest reported period is calendar Q2 2026, ended June 30. Amazon reported $200,606 million of revenue and $27,461 million of GAAP operating profit. Q3 results are scheduled for October 29 and remain future evidence. The company guides to Q3 revenue of $197-202 billion and operating profit of $22,500-26,500 million. The model estimates Q3 operating profit of $26,696 million, about $196 million above the upper end; that estimate is deliberately distinct from guidance. A29 A28

USD million	Reported Q2	Recurring comparison	Treatment
Revenue	200,606	200,606	No sales adjustment
Cost of sales	95,778	96,418	Restore 640 tariff refund
Derived gross profit	104,828	104,188	Reported sales less consolidated cost

USD million	Reported Q2	Recurring comparison	Treatment
Non-COGS operating expense	77,367	77,918	Restore 551 energy-contract gain
Operating profit	27,461	26,270	Only the two identified operating benefits removed

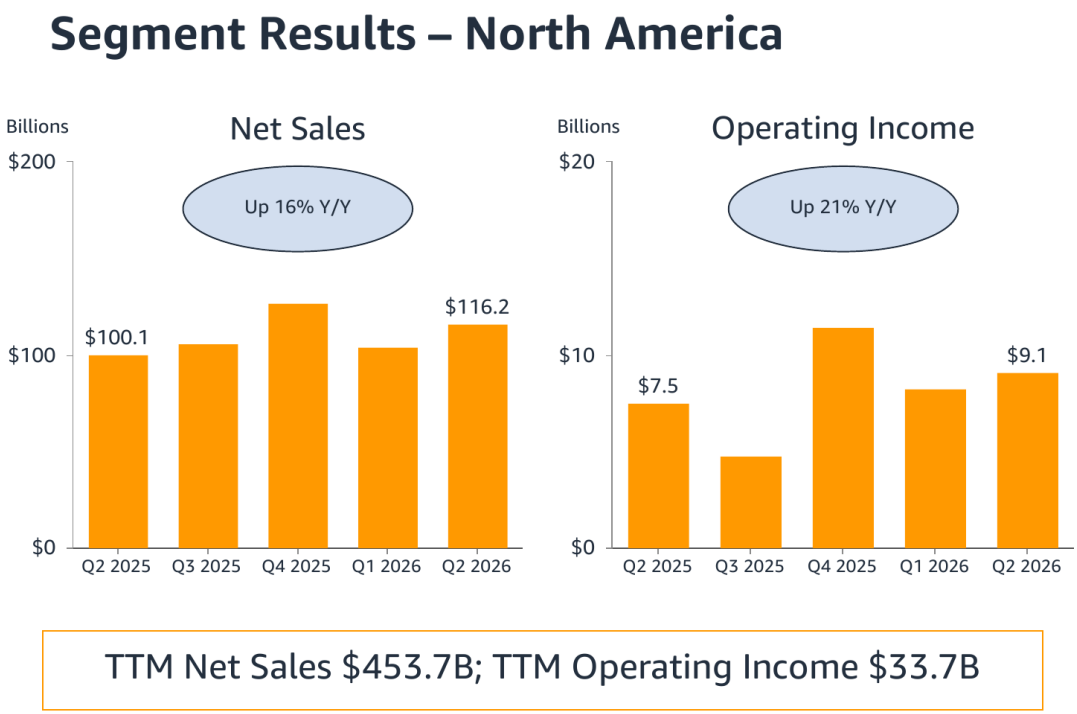

The filing describes the tariff benefit as primarily North America and the energy gain as primarily AWS. The group adjustment of $1,191 million is exact; assigning the full benefits to Retail cost of sales and AWS operating expense is a LOW analytical allocation. Investment gains below operating profit never enter this valuation. Ordinary employee pay, stock compensation, research, selling and support costs remain included. A29

Reported segment	Sales	All operating costs	Operating profit	Owned PPE D&A
North America	116,177	107,054	9,123	4,500
International	42,197	40,480	1,717	1,293
AWS	42,232	25,611	16,621	8,076

AMZN | CURRENT FRAMEWORK | USD MILLION UNLESS LABELED

North America: traffic, delivery and advertising

North America and International already include advertising, subscriptions and seller services. Product revenue groups divide those same sales; they are never added on top of geographic sales. Inventory placement, consolidated delivery, fewer touches and robotics can improve cost per purchase, while faster delivery, fresh food, fuel and smaller baskets can absorb those gains. A29 A14 A15

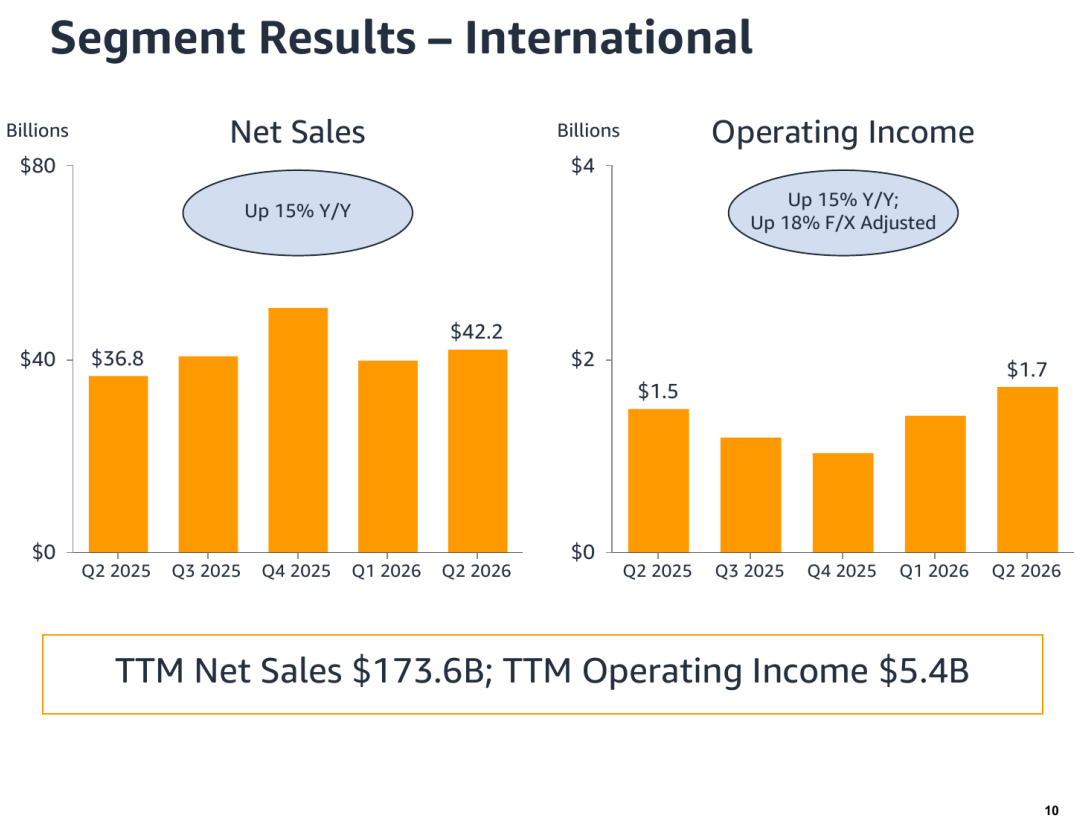

Original A09, 2026-07-30, page 9. North America sales and GAAP operating income, in the source chart units. Q2 includes the tariff refund described as primarily North America. Source financial figures retain their original units and decimal labels. A09

AMZN | CURRENT FRAMEWORK | USD MILLION UNLESS LABELED

International: growth still carries local costs

International produced $1,717 million of Q2 operating profit on $42,197 million of sales. Higher density and paid services help, while currencies, local delivery networks, regulation and product mix can constrain the retained margin. The forecast uses a combined retail cost bridge and does not invent separate product operating profits.

Original A09, 2026-07-30, page 10. International sales and GAAP operating income. Geographic sales already include advertising, subscriptions and seller services. Source financial figures retain their original units and decimal labels. A09

AMZN | CURRENT FRAMEWORK | USD MILLION UNLESS LABELED

Retail profit capture: mix and physical activity

Advertising grew faster than paid units in Q2: ads rose 26%, compared with 17% paid-unit growth. That supports a higher-value sales mix. The model raises advertising from about 13% of combined Retail sales to 20% by 2030. Those future mix shares are LOW assumptions, rather than issuer guidance. The other five product groups divide the remaining sales in proportion to Q2 non-advertising revenue. A29

Cost of sales is calibrated to the exact group account. An analytical AWS assignment of $6,335 million leaves $90,083 million of normalized Retail cost of sales. Raw cost rates across the six product groups are scaled together to that total. Amazon does not disclose product or AWS gross margins; every product gross-profit observation below is a LOW analytical allocation.

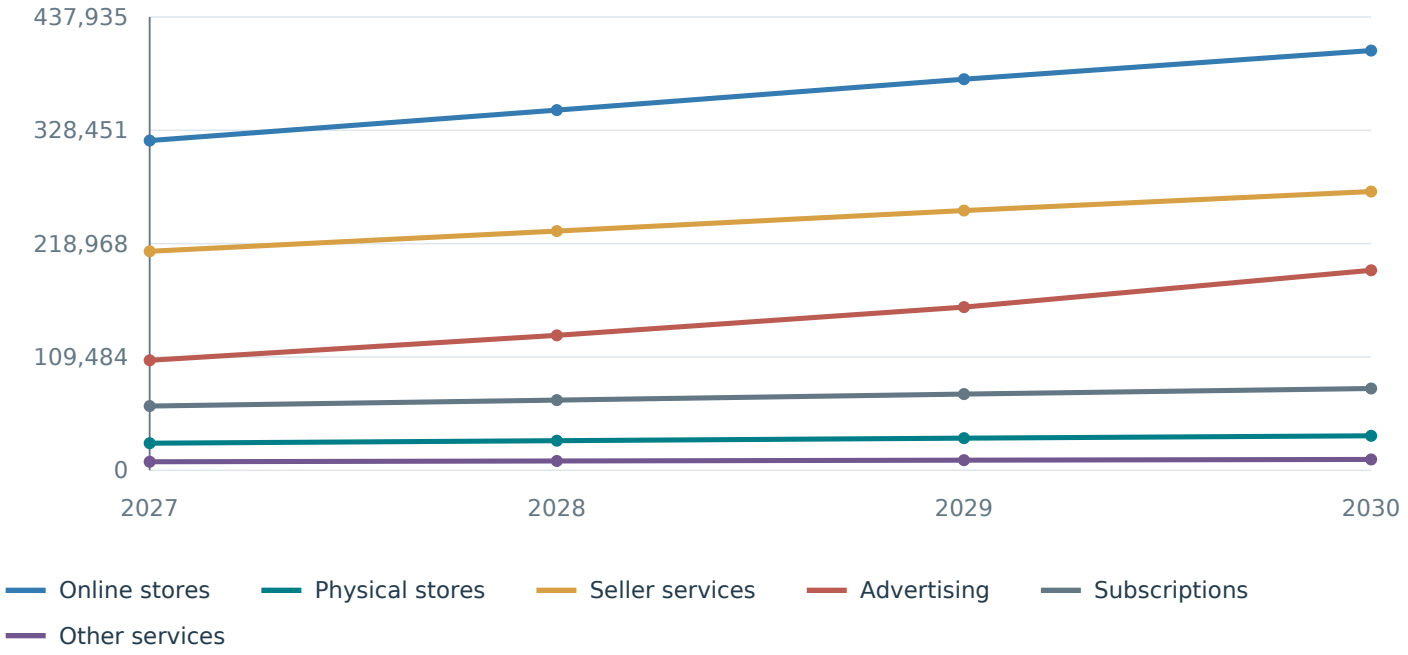

Cost calibration, Q2	USD million	Scope
Consolidated reported cost of sales	95,778	Source actual
Tariff normalization	640	Source amount; Retail allocation LOW
Analytical AWS cost assignment	6,335	15% of AWS revenue, LOW
Normalized Retail cost of sales	90,083	Exact residual under that assignment

Cost calibration, Q2	USD million	Scope
Retail recurring operating profit	10,200	Group benefit fixed; segment allocation LOW
Retail non-D&A operating expense	52,298	Ordinary shared overhead retained
Retail owned PPE D&A	5,793	Already inside operating costs

Annual ordinary selling-price inflation is 200 basis points, variable inputs rise 250 basis points and fixed costs rise 300 basis points. Product cost of sales is 85% variable with price-adjusted activity and 15% fixed. Shared non-D&A Retail overhead is 80% variable and 20% fixed; activity weights are 75% non-advertising and 25% advertising. All Retail PPE depreciation is included once in operating expense. These are explicit cost-allocation proxies, and the model grants no separate free robotics margin uplift.

Annual retail revenue by product

USD million | full calendar years | model

Model revenue mix; six products divide the same Retail revenue pool. Product cost and margin assignments are analytical, not reported.

Period	Online stores	Physical stores	Seller services	Advertising	Subscriptions	Other services
2027	318,557	26,206	211,581	106,285	62,099	8,272
2028	347,979	28,626	231,123	130,400	67,835	9,036
2029	377,829	31,082	250,949	157,675	73,654	9,812
2030	405,495	33,358	269,325	193,245	79,047	10,530

Wages and contractor rates are paid costs

The September announcements cover different employee and contractor pools. Their probabilities qualify the recurring forward run rate and accounting scope; they do not imply that implemented raises might go unpaid. The model deducts only the residual beyond ordinary wage inflation and existing rates. A34 A39 A46

Program	Source budget/year	Forward treatment	2027 net annual cost
Core operations	1,500	80% recurring recognition x 50% residual	600
Whole Foods	230	90% recurring x 50% residual; partial Q4 pay	104
Delivery partners	1,900	70% operating x 50% residual; timing split	665
Combined		Rounded display; exact model retained	1,369

Core pay begins with a partial Q3 2026 period. Whole Foods has partial Q4 pay and 2027 benefits. The Delivery Service Partner source has a 2027 release lead and conflicting current-year wording: the model uses 70% 2027 start and 30% early Q4 2026. DSP technology and other capital remain inside the capital envelope. Residual wages rise 3% from 2028, with no extra 2027 escalation. A separate stress pays every budget as operating expense without overlap.

The seasonal hiring plan covers more than 300,000 jobs across several employment types. It does not establish 300,000 permanent new annual salaries. Healthcare participation and employer expense remain unknown; a $500 million annual expense stress addresses that additional cost. A21

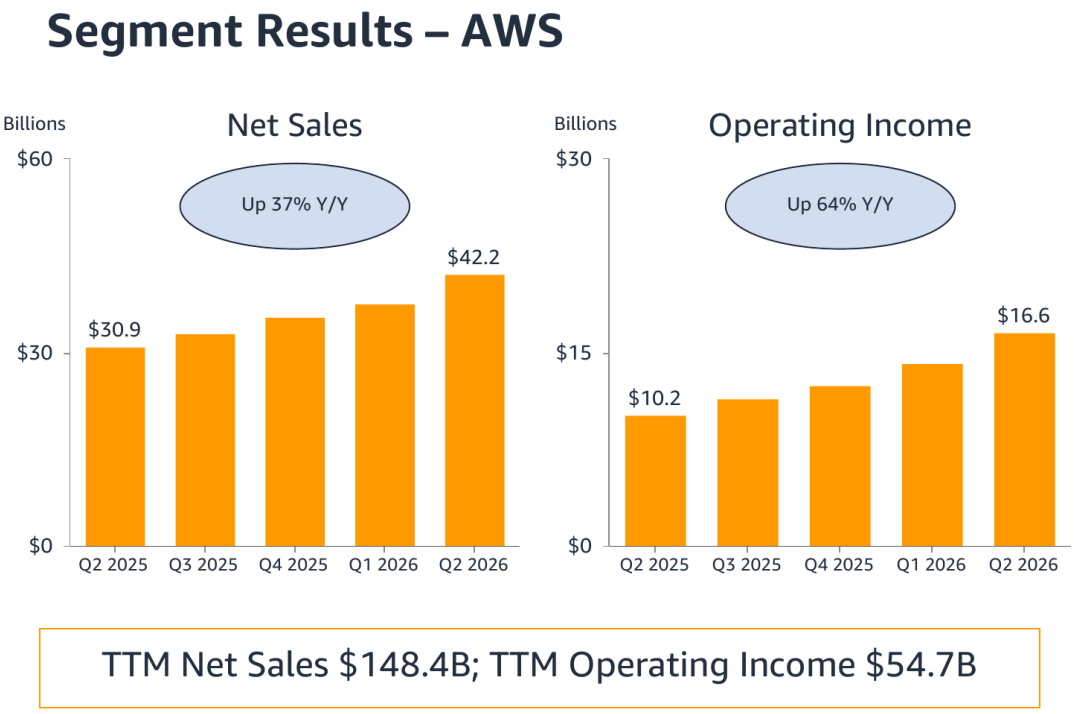

Quarter	Core residual	Whole Foods	DSP	Total residual
Q3 2026	25	0	0	25

AMZN | CURRENT FRAMEWORK | USD MILLION UNLESS LABELED

AWS: paid workloads within a contracted capacity envelope

AWS reported $42,232 million of Q2 revenue and $16,621 million of operating profit, including the primarily AWS energy-contract gain. Custom chips, AI, databases, storage and CPU services share this revenue pool. AI and chip service run rates overlap each other and AWS. Management's hypothetical chip transfer-value comparison is not actual external hardware revenue. A29 A14 A15

11

Original A09, 2026-07-30, page 11. AWS sales and GAAP operating income. Q2 includes the energy-contract gain described as primarily AWS; AI and chip services remain within AWS. Source financial figures retain their original units and decimal labels. A09

Backlog requires consumption and performance

Table of Contents

Digital Video and Music Content

Included in "Other assets" on our consolidated balance sheets are the total capitalized costs of video, which is primarily released content, and music, which as of December 31, 2025 and June 30, 2026 were $21.3 billion. Total video and music expense was $5.1 billion and $6.9 billion in Q2 2025 and Q2 2026, and $10.2 billion and $12.9 billion for the six months ended June 30, 2025 and 2026.

Unearned Revenue

Unearned revenue is recorded when payments are received or due in advance of performing our service obligations and is recognized over the service period. Unearned revenue primarily relates to prepayments of AWS services and Amazon Prime memberships. Our total unearned revenue as of December 31, 2025 was $25.0 billion, of which $15.2 billion was recognized as revenue during the six months ended June 30, 2026. Included in "Other long-term liabilities" on our consolidated balance sheets was $4.4 billion and $4.5 billion of unearned revenue as of December 31, 2025 and June 30, 2026.

Additionally, we have performance obligations, primarily related to AWS, associated with commitments in customer contracts for future services that we expect to fulfill but have not yet been recognized in our financial statements. For contracts with original terms that exceed one year, those commitments not yet recognized were approximately $496 billion as of June 30, 2026. The weighted-average remaining life of our long-term contracts is 6.4 years. The amount and timing of revenue recognition will be driven by customer usage and our performance in accordance with contractual obligations, which can extend beyond the original contractual duration and commitment.

In Q1 2026, AWS and OpenAI Group PBC ("OpenAI") announced an expansion of the existing $38.0 billion multi-year commitment and commercial arrangement with OpenAI by $100.0 billion over 8.0 years, which includes contractual obligations related to the performance of AWS chips.

In Q2 2026, AWS and Anthropic announced an expansion of the strategic collaboration and existing multi-year commitment by more than $100.0 billion over 10.0 years, which includes contractual obligations related to the performance of AWS chips.

Accounting Pronouncements Not Yet Adopted

In November 2024, the FASB issued an ASU amending existing income statement disclosure guidance, primarily requiring more detailed disclosure for expenses. The ASU is effective for annual reporting periods beginning after December 15, 2026, and interim periods within fiscal years beginning after December 15, 2027, with early adoption permitted. The amendments can be applied on either a prospective or retroactive basis. We are currently evaluating the ASU to determine its impact on our disclosures.

Note 2 — FINANCIAL INSTRUMENTS

Cash, Cash Equivalents, Restricted Cash, and Marketable Securities

As of December 31, 2025 and June 30, 2026, our cash, cash equivalents, restricted cash, and marketable securities primarily consisted of cash, AAA-rated money market funds, U.S. government and agency securities, other investment grade securities, and marketable equity securities. Cash equivalents and marketable securities are recorded at fair value. Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. To increase the comparability of fair value measures, the following hierarchy prioritizes the inputs to valuation methodologies used to measure fair value:

Level 1 — Valuations based on quoted prices for identical assets and liabilities in active markets.

Level 2 — Valuations based on observable inputs other than quoted prices included in Level 1, such as quoted prices for identical unrestricted assets in active markets, similar assets and liabilities in active markets, quoted prices for identical or similar assets and liabilities in markets that are not active, or other inputs that are observable or can be corroborated by observable market data.

Level 3 — Valuations based on unobservable inputs reflecting our own assumptions, consistent with reasonably available assumptions made by other market participants. These valuations require significant judgment.

We measure the fair value of money market funds and certain marketable equity securities based on quoted prices in active markets for identical assets or liabilities. Other marketable securities were valued either based on recent trades of unrestricted securities in active markets, securities in inactive markets, or quoted market prices of similar instruments and other significant inputs derived from or corroborated by observable market data.

Original A29, 2026-07-31, page 10. Remaining performance obligations and customer recognition terms. Consumption and performance determine recognized revenue. Source financial figures retain their original units and decimal labels. A29

AWS remaining performance obligations were about $496 billion with a remaining term of roughly six years. OpenAI and Anthropic contracts are components of that total and depend on consumption and performance. They are not additional sales wallets or uniform annual installments. Reserved capacity can precede accepted paid use, and financed customers introduce collection and concentration risk. A29

AMZN | CURRENT FRAMEWORK | USD MILLION UNLESS LABELED

AWS outcomes: acceptance and merchant qualification

The installed quarterly revenue foundation of $42,232 million grows 8% per calendar year. The selected planned sales endpoint has 70% weight; a slower case retains the foundation and realizes half the excess growth at 30% weight. All capital cash, installed depreciation and fixed overhead remain paid in both cases. A separate merchant Trainium qualification case has 35% weight; combining the two choices creates four joint outcomes.

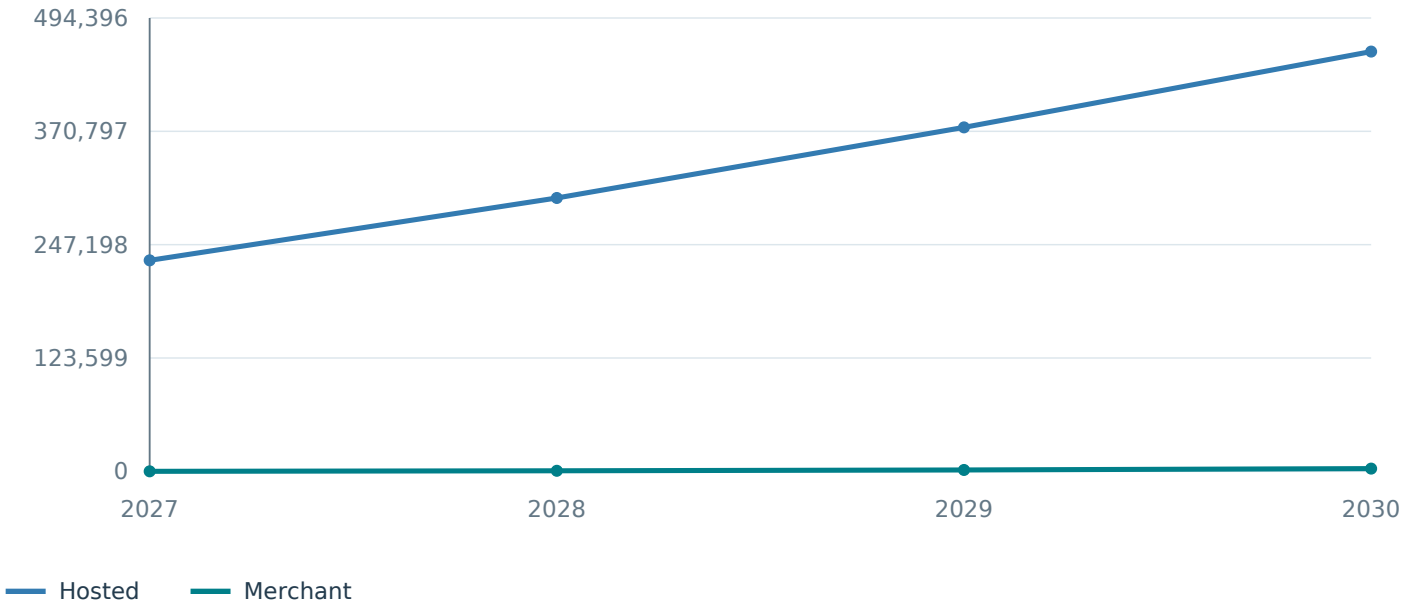

AWS outcome	Joint weight out of 200	Hardware treatment
Planned, hosted only	91	No external merchant sales
Planned, merchant available	49	Full conditional merchant schedule
Slower, hosted only	39	No external merchant sales
Slower, merchant available	21	Half conditional merchant sales

Conditional merchant sales are $2 billion in 2028, $5 billion in 2029 and $10 billion in 2030, with none in 2026-27. Hardware sales sit inside the AWS total and reduce hosted sales in the same state. Manufacturing, memory, packaging and delivery cost 75% of accepted hardware revenue; support and readiness cost 8%. The owned hosting capital budget stays paid. These are LOW endpoints and cost proxies: no source merchant order volume or margin was disclosed. A14

At the Q2 anchor, normalized AWS total costs are $26,162 million. Analytical cost of sales is $6,335 million, operating expense is $19,827 million and owned PPE D&A is $8,076 million. The non-D&A operating-expense base is $11,751 million; total non-D&A costs are $18,086 million. Those two amounts have different scopes. Hosted cost of sales is 80% variable and 20% fixed; ordinary non-D&A overhead is 70% variable and 30% fixed. Fixed cost growth is 5% and 8%, respectively. Owned D&A is added once in operating expense.

Annual AWS hosted and merchant revenue

USD million | full calendar years | model

Probability-weighted outcomes. Merchant sales replace hosted sales within AWS; they are not a second demand pool.

Period	Hosted	Merchant
2027	230,091	0
2028	298,111	595
2029	375,108	1,487
2030	457,774	2,975

AMZN | CURRENT FRAMEWORK | USD MILLION UNLESS LABELED

Finite pricing and TorchNeuron adoption

New agreements can reflect higher component costs, while older agreements can retain fixed or declining unit prices. The model assigns 55% probability to a 4% premium on 10% of new or repriceable hosted sales, with half already in the ordinary reference. The net premium pays a 20% incremental power and support cost. It lasts only through 2027-28. Existing fixed backlog is never repriced wholesale. A14 A29

TorchNeuron makes Trainium easier to use through familiar PyTorch workflows. The October beta is credible early adoption evidence, while skipped tests, CPU fallbacks, unsupported features and customer-specific performance results constrain extrapolation. The model uses 60% adoption on 10% of hosted workloads, 5% conditional paid acceleration and only 25% residual after overlap. Variable serving costs, ordinary overhead and 15% additional support are paid. A20 A38

Engineering costs are $40 million in each of Q4 2026 and Q1 2027, weighted at 60%. Conditional ongoing support is $20 million annually, weighted by duration and 60% cost probability. Q4 2026 has one-third active

duration; the increment expires after 2028. Zero- and full-adoption tests retain the selected fixed readiness budget rather than making preparation free when commercialization fails.

Quarter	Pricing revenue	Pricing net OP	Torch revenue	Torch net OP
Q3 2026	0	0	0	0
Q4 2026	0	0	12	-19
Q1 2027	57	46	39	-6
Q2 2027	61	49	41	19
Q3 2027	65	52	44	21
Q4 2027	70	56	48	22
Q1 2028	74	59	51	24
Q2 2028	79	63	54	26
Q3 2028	84	67	57	28
Q4 2028	90	72	61	30
Q1 2029	0	0	0	0
Q2 2029	0	0	0	0
Q3 2029	0	0	0	0
Q4 2029	0	0	0	0
Q1 2030	0	0	0	0
Q2 2030	0	0	0	0
Q3 2030	0	0	0	0
Q4 2030	0	0	0	0

Forward evidence	Probability	Overlap	Additional revenue / OP	Interpretation
Germany regional program	80%	100%	0 / 0	Existing regional capacity/capital envelope; cross-business total is not all AWS
Indiana exploratory power	25%	100%	0 / 0	Purchased input, shared grid, licensing and timing unresolved
SpaceX industry spending	65%	100%	0 / 0	Industry demand and component pressure; no Amazon purchase order

The Germany and Indiana announcements support a capacity or funding watch. Their full overlap gives zero separate modeled profit, with numerical probabilities and cost context retained. SpaceX spending competes for components and power and does not establish Amazon customer receipts. A22 A17

Capital cash and book assets have different timing

Table of Contents

Property and equipment, net by segment is as follows (in millions):

	December 31, 2025	June 30, 2026
North America	$ 122,043	$ 135,013
International	30,632	32,879
AWS	190,055	263,750
Corporate	14,295	14,404
Consolidated	$ 357,025	$ 446,046

Total net additions to property and equipment include technology infrastructure assets and the effect of non-cash activity such as property and equipment acquired but not yet paid.

Total net additions to property and equipment are as follows (in millions):

	Three Months Ended June 30,		Six Months Ended June 30,	
	2025	2026	2025	2026
North America (1)	$ 11,272	$ 12,139	$ 16,368	$ 23,265
International (1)	2,531	2,540	4,037	4,267
AWS (2)	16,043	48,604	36,507	90,120
Corporate	915	608	1,298	996
Consolidated	$ 30,761	$ 63,891	$ 58,210	$ 118,648

(1) Includes property and equipment added under finance leases of $21 million and $235 million in Q2 2025 and Q2 2026, and $75 million and $472 million for the six months ended June 30, 2025 and 2026.

(2) Includes property and equipment added under finance leases of $916 million and $328 million in Q2 2025 and Q2 2026, and $916 million and $1.7 billion for the six months ended June 30, 2025 and 2026.

Depreciation and amortization expense on property and equipment, including corporate property and equipment, are allocated to all segments based on usage.

Total depreciation and amortization expense, by segment, is as follows (in millions):

	Three Months Ended June 30,		Six Months Ended June 30,	
	2025	2026	2025	2026
North America	$ 3,742	$ 4,500	$ 7,272	$ 8,780
International	1,180	1,293	2,316	2,570
AWS	4,844	8,076	9,234	15,353
Consolidated	$ 9,766	$ 13,869	$ 18,822	$ 26,703

Original A29, 2026-07-31, page 25. Segment PPE assets, additions and owned depreciation. Book additions include different cash, unpaid and lease timing. Source financial figures retain their original units and decimal labels. A29

Q2 net cash capex was $53,076 million, compared with $63,891 million of book PPE additions. First-half values were $96,310 million and $118,648 million. Unpaid equipment, leases and source scopes differ. A simple

cash-plus-unpaid-plus-finance bridge leaves unexplained residuals of $448 million in Q2 and $410 million in H1; no fabricated accounting allocation fills them. A29

The broad cash-flow D&A adjustment of $19,988 million includes content, operating lease assets and other items. Owned PPE depreciation is $13,869 million. The broader adjustment is never added as another equipment cost or another full cash addback. The reported capex plan of about $220 billion already includes the memory inflation estimate; that inflation creates no matching extra accepted capacity.

AMZN | CURRENT FRAMEWORK | USD MILLION UNLESS LABELED

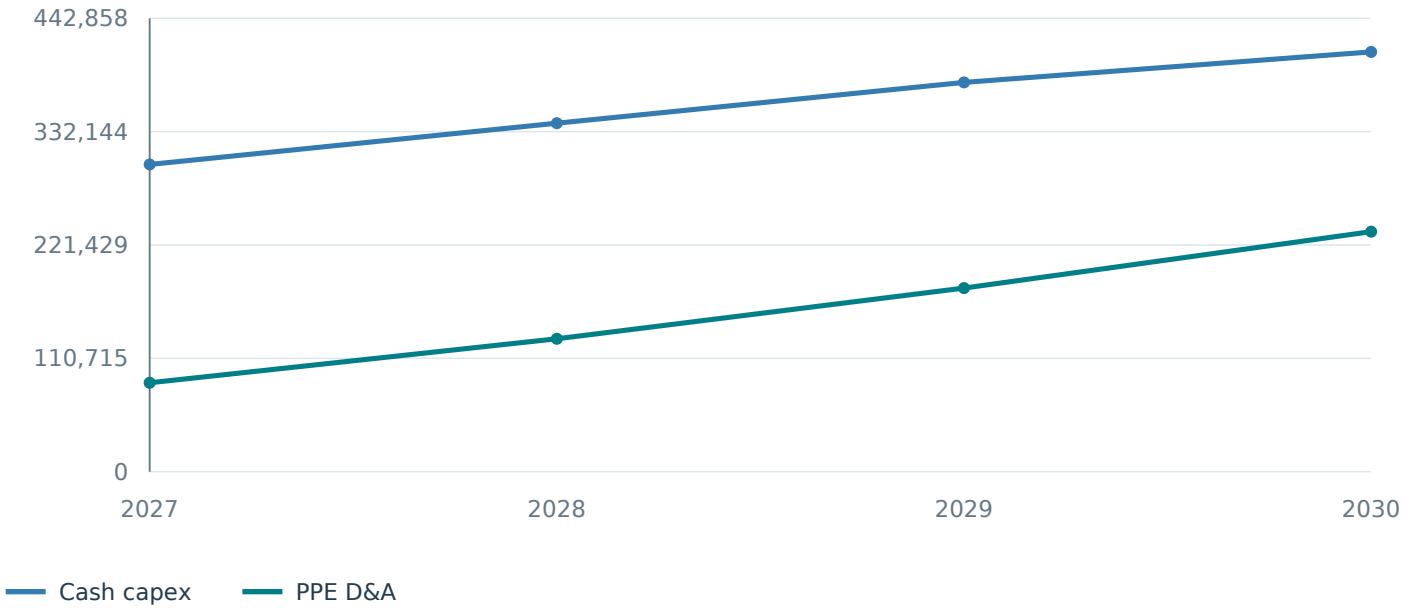

Paid capital and activation assumptions

Organic cash capex is $60 billion and $64 billion in the final two quarters of 2026, followed by LOW annual budgets of $300 billion, $340 billion, $380 billion and $410 billion. These future budgets exclude the conditional acquired perimeter. The allocation is 80% AWS and 20% Retail, with 70% server/network, 25% buildings and 5% land. All cash remains paid under weaker utilization.

Servers use a five-year life and buildings thirty years. The filing reports five- to six-year servers and buildings up to forty years; the selected weighted lives and readiness are analytical. New server slices activate in their cash quarter and the next quarter; buildings activate six and seven quarters later. First ready quarters carry half-quarter depreciation. Land never depreciates. The $20 billion prior-unactivated reserve is a LOW proxy, not a reported CIP balance; both asset classes activate at Q1/Q2 2027 without another cash payment. Existing D&A retires smoothly at 5% annually, without claiming exact asset vintages. A43 A29

Paid capital and owned depreciation

USD million | full calendar years | model

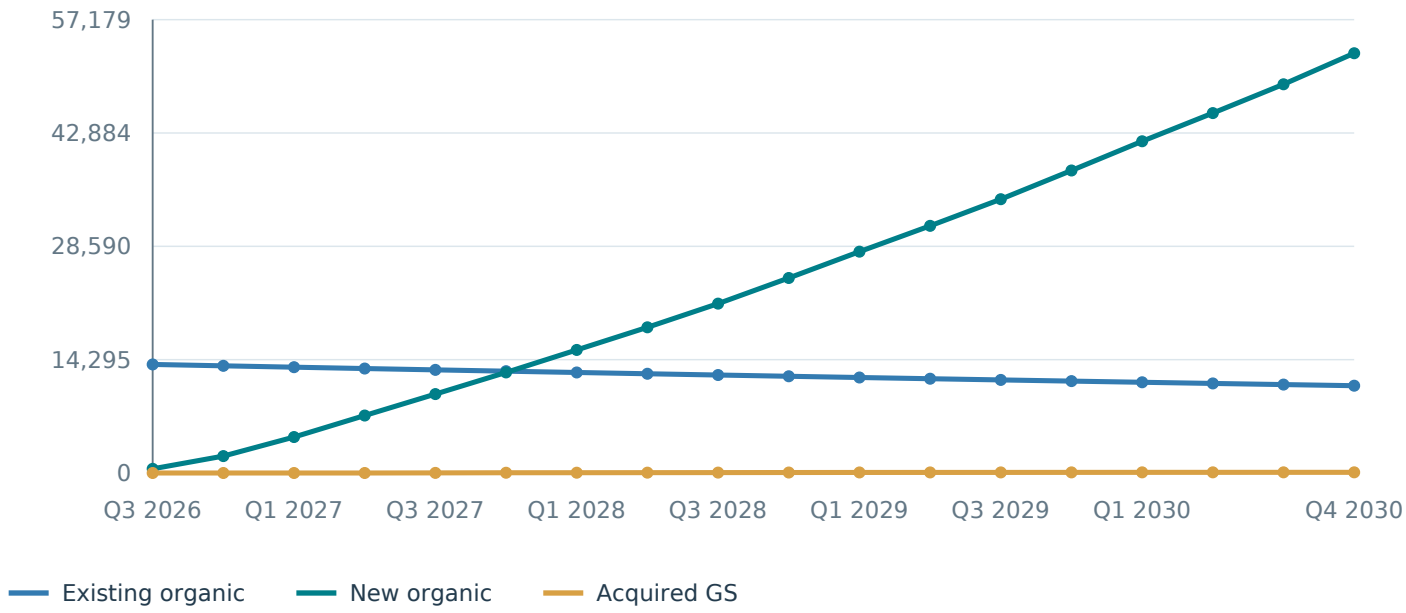

Cash spending precedes book expense. Includes conditional acquired project cash and owned D&A; goodwill and sold hardware inventory receive no invented depreciation.

Period	Cash capex	PPE D&A
2027	300,105	86,835
2028	340,412	129,799
2029	380,270	179,336
2030	410,054	234,443

Quarterly owned depreciation and readiness

USD million per quarter | model

Owned asset depreciation remains an expense regardless of usage; readiness determines when it is recognized, while capital spending follows its separate cash schedule. Source asset class and future cash/book conversion remain LOW.

Globalstar: a conditional acquired operating business

The model includes satellite service and equipment revenue only after conditional ownership. The October 19 issuer release confirms US C3 authorization and expects launches to begin in 2027. Authorization does not establish complete network acceptance, foreign approvals or acquisition transfer approval. Amazon's June actuals remain unmodified. No separate Globalstar stock score, recommendation or portfolio addition is created.

The source April projections were prepared from a January budget and disclosed in August for an independent company. Their annual revenue endpoints of $336 million, $519 million, $680 million, $716 million and $768 million are dated management projections, not current post-close guidance. Cash EBITDA uses prepayment and noncash adjustments. Its projected $255 million for 2027 is never treated as operating profit.

Source Q2 bridge, USD thousand	Amount	Accounting treatment
Recurring comparison OP	5,574	Ordinary license and SBC remain

The derived $29,720 thousand pool combines production costs and separate SBC; calling that entire amount cost of services and adding SBC again would double-count it. The original $851 thousand noncash license expense also remains in ordinary operating costs. Source actual accounting and future analytical allocations are kept distinct.

Primary context: G01 G02 G03 G05 G07

AMZN | CURRENT FRAMEWORK | USD MILLION UNLESS LABELED

Acquired scope: six outcomes and committed costs

Closing assumptions are 70% Q3 2027, 20% Q2 2028 and 10% no close in this horizon. Standalone sales have 60% weight on the dated management endpoints and 40% on a slower network case. Their combination creates six outcomes. The slower case begins from four times Q2 revenue, grows 20% in 2027 and 15% thereafter. Equipment grows 10% annually; services receive the remaining sales.

Close outcome	Business outcome	Joint probability
close Q3 2027	dated management sales endpoint	42%
close Q3 2027	slower network sales	28%
close Q2 2028	dated management sales endpoint	12%
close Q2 2028	slower network sales	8%
no close in horizon	dated management sales endpoint	6%
no close in horizon	slower network sales	4%

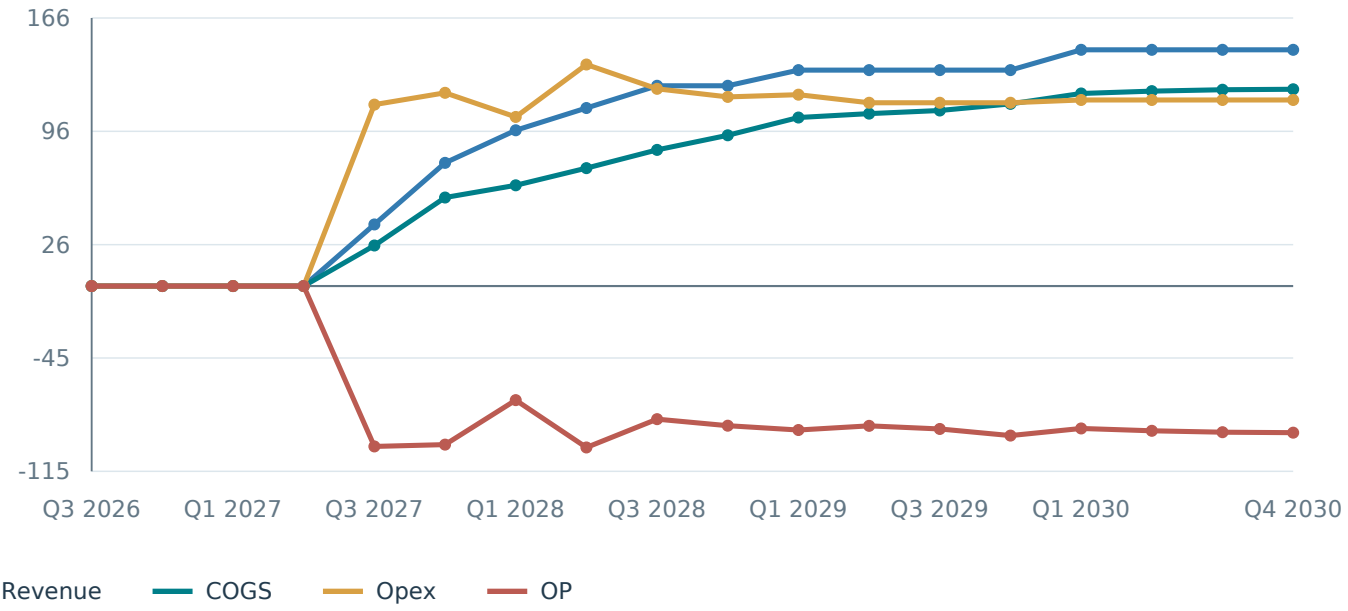

The first owned quarter consolidates half the operating revenue, ordinary costs, depreciation, PPA and share effect. The full net cash consideration and full first integration payment occur in that quarter. Services costs are 30% variable with usage and 70% fixed with 3% annual inflation. Equipment uses 200 basis points of price inflation and 250 basis points of input cost inflation. Ordinary overhead including SBC is 50% variable and 50% fixed. These are LOW cost proxies anchored to reported expense.

June construction assets of about $1,368 million were already spent. High-case opening CIP is half ready in Q4 2027 and half in Q4 2028; the slower business case shifts those opening cohorts four quarters. Space assets use twelve years, ground ten and other assets five. The twelve-year source design/reimbursement term is not a reported accounting-life rule for all C3 assets.

Remaining project cash of $1,200 million is allocated $400 million, $500 million and $300 million in 2027-29, plus $60 million of 2030 maintenance. Future project assets are 85% space and 15% ground and activate two quarters after cash in BOTH business states. Acquisition ownership limits the parent cash paid, while post-close accounts include some pre-close funded assets. The separate network-delay test shifts all readiness, incremental sales and recoupment while original project cash stays paid. Apple's 20% interest creates no extra revenue because the source entity already consolidates the full network subsidiary.

Conditional acquired revenue and paid costs

USD million per quarter | six-state conditional model

Revenue grows while old/new depreciation, provisional PPA and integration can keep operating profit negative. This is a costed conditional perimeter, not source Cash EBITDA.

AMZN | CURRENT FRAMEWORK | USD MILLION UNLESS LABELED

Purchase accounting, closing cash and shares

The model provisions incremental finite intangible assets of $4 billion over ten years and an additional $1 billion PPE fair-value step-up over twelve years. Old book depreciation remains once; only incremental PPA is added. The provision is LOW, with zero/low/high alternatives. It is not a final balanced purchase allocation and does not amortize the entire enterprise value or goodwill.

Integration is a full paid operating expense of $100 million, $50 million, $25 million and $25 million in relative closing quarters. It is not halved with first-quarter operating consolidation or deducted again in cash. The $5,500 million net closing cash budget has a $4,950 million probability-weighted cost. It uses dated common, preferred, debt, Apple and liquidity snapshots. Apple's historical $400 million contribution is not a verified redemption price; final elections and balances can differ.

The acquired cash balance is already netted into the closing budget and is never added again. A finite share proxy combines the dated common/warrant vintage, 60% stock consideration and 321 Amazon shares per 1,000 eligible shares, giving about 26 million conditional new shares. Cashless warrants, award settlements, elections and the measurement price can change the final result. The proxy is neither a final closing register nor a ceiling on every future issuance.

Customer prepayments create future service offsets. The model deducts about $813 million over twelve years from the selected network phase, as a LOW cash-conversion provision outside OP. Reimbursement commitments are not an additional revenue or cash wallet. GS has its own SBC cash addback and growth working capital. PPA tax deductibility is unknown; the no-tax-shield case increases cash tax once without changing operating profit.

AMZN | CURRENT FRAMEWORK | USD MILLION UNLESS LABELED

Funding must support the operating forecast

June cash and marketable securities of $122,988 million are broader than the cash-only $78,213 million measure. The model includes subsequent $25 billion US-dollar note proceeds and $21,300 million OpenAI equity funding once in Q3. Prior June investment payments are already inside starting liquidity. September GBP proceeds were not independently recovered as original bytes and are omitted rather than silently assumed. A29

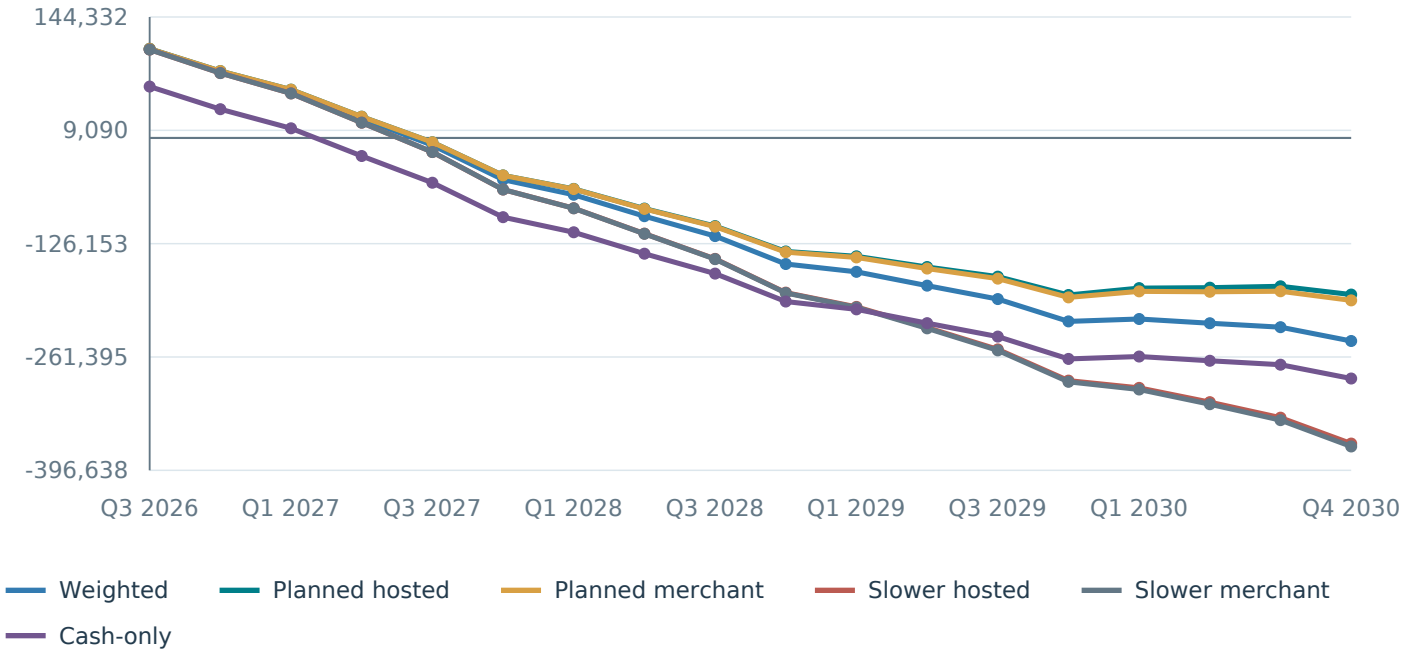

The cash bridge starts with operating profit, adds owned PPE D&A and source noncash SBC, and pays capital, tax, debt service, finance leases, financing obligations and positive sequential growth working capital. Broad content/ROU amortization is not added as another equipment addback. June debt schedules already include principal and interest, so there is no second $871 million interest debit. Cash tax equals 21% x max(0, combined OP - existing quarterly interest proxy - new-note quarterly interest proxy). The existing interest proxy is $1,314 million per quarter. New-note interest uses one-quarter of a $1,375 million annual estimate, a LOW 550-basis-point assumption.

Organic SBC and 8% annualized positive sequential-growth working capital use organic Amazon sales only. GS has separate SBC, working capital, service-prepayment recoupment and PPA amortization cash treatment. Award settlement differences and later-note principal remain incomplete. Unused or expired facilities are not assumed funding; no future investment sale, collateral proceeds, buyback or financing availability is presumed.

The remaining Anthropic investment facility has a 60% probability of the full $15 billion draw, producing $9 billion expected cash paid in Q2 and Q4 2027. That funding creates an investment asset, without incremental AWS revenue or OP. Full funding replaces the expected line with $15 billion; zero funding removes it. The $15 billion GS consideration stress similarly replaces expected consideration. Combined cases use TOTAL full facility funding, TOTAL GS stress consideration and $3 billion annual award cash without stacking base uses.

Quarterly funding paths with conditional acquisition

USD million | illustrative future liquidity, not actual cash

Zero line retained; negative balances are funding requirements. Each AWS outcome includes the same weighted GS sleeve. These incomplete cash schedules are before unallocated later debt and award differences.

Q2 2030	-221,116	-178,679	-183,566	-315,288	-317,731	-265,891
Q3 2030	-225,819	-177,034	-182,937	-333,797	-336,749	-270,594
Q4 2030	-242,305	-186,906	-193,827	-364,705	-368,166	-287,080

The selected path first turns negative in Q3 2027 and reaches about negative $242 billion in Q4 2030. Slower paid conversion and a cash-only opening are more difficult. Capex pacing, collections, asset monetization, debt or equity could address the need, but availability and terms remain unmodeled. Financing that changes capacity or shares must change the operating model explicitly; a 20x OP valuation does not finance the forecast.

GS noncash SBC and intangible amortization are additional, separate cash addbacks, shown in the acquisition tables. Integration is already an operating cash expense. Values are illustrative proxies with exact source and ownership boundaries, rather than a forecast GAAP cash-flow statement.

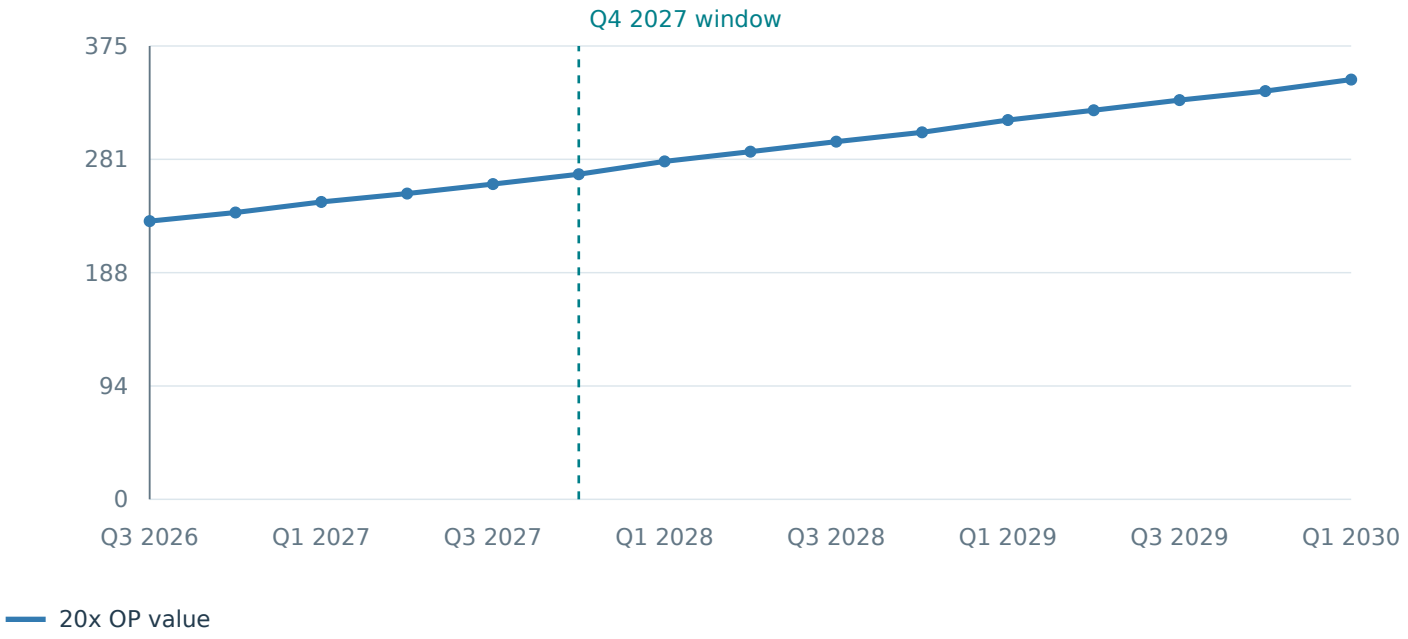

AMZN | CURRENT FRAMEWORK | USD MILLION UNLESS LABELED

The rolling operating-profit valuation

Each valuation quarter uses that quarter and the next three operating-profit observations. Their sum, in USD millions, is multiplied by 20 and divided by starting-quarter diluted shares in millions. The unit scale cancels to USD per share. Organic shares are 10,903 million, already including the Q2 treasury-method award effect; conditional acquisition shares phase in separately. Gross outstanding awards are never added again. There is no investment-stake, cash, debt or enterprise-value addition and no separate risk haircut.

All fifteen valuation windows

USD per share | conditional model values

Each point uses four exact OP quarters and its own starting-quarter share denominator. Q4 2027 is the selected window. No market quote or price-dependent upside is included.

AMZN | CURRENT FRAMEWORK | USD MILLION UNLESS LABELED

Analytical score and the risks that constrain it

Category	Points	Reason
Core thesis	19 / 20	Retail distribution, logistics, advertising and cloud software/custom silicon capture
Cycle stage	9 / 10	Strong demand; acceptance and paid conversion constrain execution
TAM expansion	10 / 10	Broader cloud workloads and paid services; merchant stays within AWS
Catalysts	5 / 5	October 29 earnings, activation, software adoption and new contract economics
Macro	8 / 10	AI demand versus energy, components, rates and large cash needs
Alpha	3 / 5	Separate paid usage, transfer comparisons, cost activation and residual margins
Risk deduction	-5	Capacity/funding/execution -3; competition/customer price -1; regulation/logistics/new businesses -1
Total	49 / 60	Analytical score rounds to 82; protected Excel Base remains 82

Microsoft Azure, Google Cloud and specialists compete on models, software ecosystems, chips, availability and price. Better models can reduce unit compute needs while expanding usage, with uncertain retained pricing. New merchant sales can surrender recurring hosting economics. Retail rivals, discount platforms and advertiser alternatives compete for traffic, service quality and ad budgets. Higher revenue alone does not prove excess return on paid capital.

The thesis strengthens with accepted capacity, durable paid usage, profitable advertising mix and cost-per-activity improvements. It weakens with lower realized prices, delayed paid conversion, more

expensive hardware/power, unproductive capital, labor costs beyond overlap assumptions, customer funding losses or dilution needed to finance the build. These are cash and earnings mechanisms, rather than an additional arbitrary valuation factor.

AMZN | CURRENT FRAMEWORK | USD MILLION UNLESS LABELED

Sensitivity: target anchors and cash requirements

Each case changes only its stated contract. These outcomes are bounded diagnostics, not new probability-weighted forecasts. The first, selected and later values use the same 20x method. Cash-only cases preserve operating profit and targets. Small effects can round to zero here; exact observations remain in the model.

Delaying useful capacity can defer depreciation and raise accounting OP inside a selected window even while paid sales decline and liquidity worsens. That timing effect does not establish improved project economics. The coupled delay retains original cash and paid readiness; later production can move outside the reported horizon.

AMZN | CURRENT FRAMEWORK | USD MILLION UNLESS LABELED

Organic capital cohorts: complete readiness schedule

All 96 organic cohort records are shown below. Future cash budgets and the prior-unactivated reserve are separate origins; reserve cash was paid before the starting balance. Each ready cohort takes half a quarter of straight-line expense on activation and full quarterly expense afterward. Land has no life or depreciation. Exact USD million values remain in the analytical model.

Cohort	Capital	Ready quarter	Life, years	Origin
cash-0-server_network-0	21,000	Q3 2026	5	Q3 2026
cash-0-server_network-1	21,000	Q4 2026	5	Q3 2026

AMZN | CURRENT FRAMEWORK | USD MILLION UNLESS LABELED

Acquired capital cohorts: dated management sales endpoint

All 38 records for this standalone business path. Opening CIP carries no new parent project cash; ownership controls expense consolidation. Future project capital has the same two-quarter lag in both business cases. The lower opening CIP timing and separate network-delay test are distinct.

AMZN | CURRENT FRAMEWORK | USD MILLION UNLESS LABELED

Share convention and equity risk

The active organic denominator is 10,903 million Q2 weighted diluted shares, consisting of 10,769 million basic shares and 134 million treasury-method award effect. Conditional acquired shares are added only at selected ownership phases. The issued-share sensitivity and annual 1%/2% growth tests remain separate from the active convention. Flat organic shares do not guarantee that future awards, cash settlement or financing create no dilution. A29

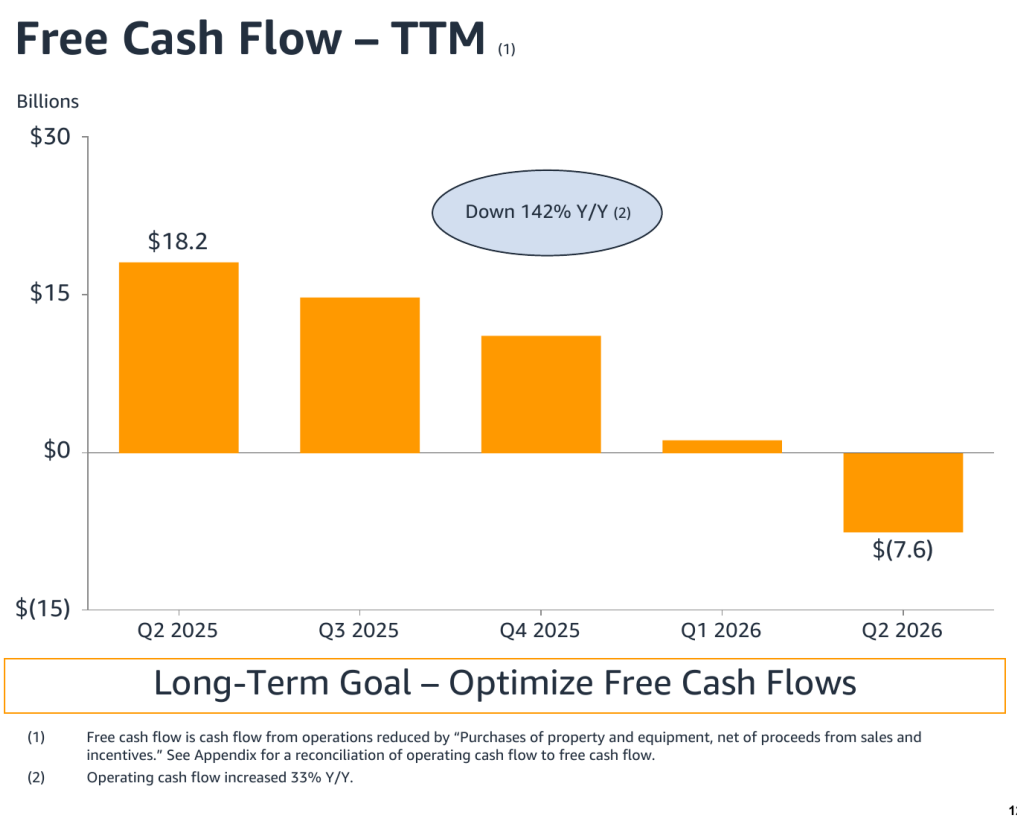

Original A09, 2026-07-30, page 13. Outstanding common shares and gross awards. This measure differs from the treasury-method diluted EPS denominator used in valuation. Source financial figures retain their original units and decimal labels. A09

AMZN | CURRENT FRAMEWORK | USD MILLION UNLESS LABELED

Cash-flow source scope and investment funding

Company-defined trailing free cash flow deducts net cash PPE purchases from operating cash flow. It excludes acquisitions/investments and several financing uses. The model's full funding bridge therefore cannot be read from that source measure alone. Positive customer/vendor timing and tax refunds also affect reported operating cash flow. A29

Original A09, 2026-07-30, page 12. Company-defined trailing free cash flow. Acquisitions, investments and several financing uses sit outside this measure. Source financial figures retain their original units and decimal labels. A09

Original cash-flow reconciliation

Free Cash Flow Reconciliation – TTM

Billions	Q2 2025	Q3 2025	Q4 2025	Q1 2026	Q2 2026
Operating Cash Flow	$121.1	$130.7	$139.5	$148.5	$161.4
Purchases of property and equipment, net of proceeds from sales and incentives	(102.9)	(115.9)	(128.3)	(147.3)	(169.0)
Free Cash Flow	**$18.2**	**$14.8**	**$11.2**	**$1.2**	**$(7.6)**

15

Original A09, 2026-07-30, page 15. Original trailing cash-flow reconciliation. Exact filing values control the model; the source accounting scope is retained. Source financial figures retain their original units and decimal labels. A09

The source reconciliation remains unaltered. Exact filing values control the model, and the separate acquired perimeter, conditional investment funding and source debt schedules retain their distinct scopes.

What would change the thesis

Next evidence	Date or window	Decision relevance
Q3 earnings and filing	October 29, 2026	Paid AWS growth, acceptance, recurring cost/OP and wage recognition
TorchNeuron production adoption	Q4 2026-2028	Paid workload uplift after serving/support/engineering and baseline overlap
Capacity and capital activation	2027-2030	Accepted services versus paid cash, owned D&A and infrastructure readiness
New contract pricing	2027-2028	Realized eligible premium after component/power/support costs
Merchant Trainium	Conditional from 2028	Qualification, unit allocation, displaced hosting and net margin
Globalstar closing and C3 acceptance	Conditional 2027 onward	Transfer/foreign conditions, actual close/PPA/cash/shares and operating service
Financing and collections	Each quarter	Customer facility draws, liquidity, actual debt/award terms and share consequences

Better outcomes require paid service conversion and profit after costs, rather than only larger announced projects. Lower prices, unused installed capacity, longer readiness, weaker retail activity, higher labor/input costs or expensive funding can reduce returns. The next review should update those mechanisms using complete new evidence while keeping the valuation convention and source accounting visible.

Sources and evidence completeness

The newest two management call reproductions, April 29 and July 30, were read through prepared remarks, answered Q&A and closing. They are third-party reproductions of management speech with transcription errors; exact financials and names follow issuer originals. Official audio files are preserved, but were not independently heard. No official complete transcript download or audio-verified transcript is claimed.

The Q2 filing core report was read through its statements, notes, management discussion and risk sections. Extensive credit exhibits were preserved, with principal terms checked, rather than described as a full legal review. Globalstar raw filing PDF/Archives downloads returned Forbidden; accessible official text, SEC structured facts and the October issuer release were retained. Its dated merger projections and partial policy/transaction reads are not a full long-form legal or visual review.

Remaining gaps include exact future AWS merchant units and margin, Cloud customer acceptance/collection, asset vintage and cash/book activation, lease starts, future award cash, later debt principal/coupons, post-September facility status, acquired final PPA/tax basis/closing share register/Apple payment and customer prepayment terms. The report uses labeled bounded estimates and stresses instead of implying these facts are verified.

Acquisition source boundaries

The Globalstar supplement is source context for the acquired perimeter within Amazon. June reported results, source cash/asset policies, the dated deal projections and October US authorization are distinguished from analytical probabilities and LOW future costs. Source files and hashes are retained with original read-scope limitations.

Source context	Evidence boundary
June results and SEC facts	Reported actual and exact cost bridge; accessible primary text and structured SEC data, with raw filing download gaps
Merger terms and April projections	Selected consideration, projections, accounting and closing sections; no claim all legal pages were reviewed
October 19 C3 release	Issuer confirmation of US authorization and expected 2027 launch start
Book and design lives	Older policy and new design/reimbursement term differ; future weighted accounting lives remain analytical
Closing and PPA	No completed transfer, final fair-value allocation, final share register or exact Apple cash consideration at cutoff

ID / date	Primary reference and evidence scope
G01 / 2026-08-06	Q2 Form 10-Q: relevant primary text and SEC facts checked; raw original download unavailable.
G02 / 2026-08-06	Issuer earnings release: relevant reconciliation read in accessible primary text.
G03 / 2026-08-18	Merger information statement: selected terms, projections and accounting sections read; raw original unavailable.
G05 / October 21 capture; Q2 filed August 6	SEC structured financial facts: original downloaded and hashed.
G07 / October 19, 2026, 9:16 am ET	October 19 issuer US C3 authorization release: original downloaded and hashed.
G08 / 2026-02-27	2025 accounting policy: relevant primary text read; full annual download unavailable.
G09 / 2026-08-16	August replacement-satellite launch release: relevant issuer text read.
