AEVEX: paid replacement capacity meets acquisition risk

AEVEX combines tactical unmanned systems, mission services and the newly acquired BlackSea maritime business. Its strongest near-term evidence is delivered work and current-year funded demand. The investment question is whether replacement air-system awards and next-generation maritime acceptance can support the paid people, equipment, field support and acquisition amortization required for durable operating profit after the DeepStrike production pulse subsides.

Active horizon: Q4 2027. The native 20x forward-four-quarter operating-profit ceiling is $9.074890 per fully converted economic share. This conditional forecast assumes continued contractual debt availability, access to the modeled consolidated cash and no accelerated debt enforcement. It carries no lender compliance certification, verified waiver or credit rescue. The operating scenario weights and risk score do not separately price a lender-waiver or acceleration cost.

The derived analytical score is 35/60, or 58.333333%, displayed as 58 in the Fail band. The retained workbook Base is separately protected at 62. A temporal tactical qualification advantage supports the thesis classification; the evidence does not establish a permanent monopoly across mission services, future competitive platforms and the maritime portfolio. Holding status is unspecified. The saved $22.17 quote has no verified date and serves only as historical context; no price-dependent return is calculated.

T01 | Current analytical basis

Item	Current basis
Active window	Q4 2027 through Q3 2028
Valued earnings	Whole-company modeled GAAP-style operating profit
Method	20x current quarter plus next three quarters
Share perimeter	Class A plus paired Class B/LLC economic units
Analytical / protected	35/60 (58.333333%, Fail) / protected Excel 62
Cash condition	Debt remains available; modeled cash accessible; no acceleration

The selected distribution contains 15 coherent joint outcomes over 18 forecast quarters, Q3 2026 through Q4 2030. Fifteen complete four-quarter valuation windows are priced. The final three quarters have incomplete windows and retain blank ceilings. All dollar amounts are USD millions unless a table explicitly states dollars per share; share counts are millions of fully converted economic units. Forecast amounts are estimates, not company guidance, except for the explicitly matched legacy H2 source budget.

Evidence, dates and management completeness

The financial anchor is AEVEX's 12 August 2026 Q2 release, presentation and Form 10-Q. The September 8 closing filing controls the acquisition date. The October 21 issuer response supplies management's current GARC position. Two newest available earnings-call texts were read in full, including prepared remarks, Q&A and closing: May 20 and August 12. Their written provider transcripts are Quartr material made available through TradingView. Independent spoken audio verification was not performed. The September 9 management fireside is an additional complete written event, rather than another quarterly earnings report.

T02 | Management source coverage

Source/date	Written coverage	Audio / limitation
Q1 call | 20 May 2026	P001-P114, remarks, Q&A and closing	Audio not independently reviewed
Q2 call | 12 Aug 2026	P001-P122, remarks, Q&A and closing	Audio not independently reviewed
Jefferies event | 9 Sep 2026	All 62 saved written paragraphs	Supplemental event; audio not reviewed
Issuer response | 21 Oct 2026	Complete saved two-page statement	Management response; independent testing absent
Original adverse Bloomberg report	Original URL identified; full text unavailable	Reuters/Barron's references overlap with that report

The source hierarchy favors filed financial statements and legal agreements for reported balances and contractual definitions. Issuer program claims retain their attributed scope. Credible contrary reporting enters the technical-risk assessment even when original full-text access is incomplete. Repetition of an original allegation does not create independent test evidence. The issuer's rebuttal also leaves performance independently unverified. Allegations remain allegations; the report asserts no fraud finding.

Acquired audited statements, pro forma results, final purchase-price allocation, closing adjusted cash and actual delayed-draw use remain unavailable in the retained packet. The initial SEC submissions capture ends September 15. A targeted freshness check did not locate a later acquisition-accounting amendment or Q3 release, and direct-fetch errors are retained. The issuer news endpoint returned a dynamic shell. These retrieval limits do not establish that a newer filing does not exist. The closing 8-K permits an Item 9.01 amendment within 71 days after the filing is required; that period is not measured automatically from closing.

T03 | Confidence and use

Evidence type	Confidence	Model treatment
Reported Q2/H1 group financials	HIGH	Exact calibration and opening balances
Legacy full-year revenue / adjusted EBITDA guide	HIGH for stated guide	H2 residual matched to same perimeter
Program allocation within Q2 group cost	LOW	Explicit calibration proxy
Future staffing, productivity, useful lives and awards	LOW	Paid resource scenarios with stated bounds
Acquired PPA, NWC and closing draw assumptions	LOW	Conditional opening resource and cash bridge
Contractual earnout definitions	Primary terms	Separate legal lot-profit and stock-trigger tests
Future legal compliance and eligible cash	Unresolved	No lender-certified funding claim

Latest actuals and the H2 source-budget bridge

Q2 revenue was $201.791 million, gross profit $47.647 million and GAAP operating profit $15.371 million. The $28.148 million company adjusted EBITDA measure adds back several costs that remain economically relevant. Manufacturing depreciation sits inside cost of sales, corporate depreciation inside SG&A, and separate intangible amortization below gross profit. The forecast retains those locations so depreciation and amortization enter operating profit once.

T04 | Reported financial anchor | USD millions

Metric	Q1 actual	Q2 actual	H1 actual
Revenue	216.693	201.791	418.484
Cost of sales	160.199	154.144	314.343
Gross profit	56.494	47.647	104.141
SG&A	19.412	22.469	41.881
R&D	3.337	5.639	8.976
Separate intangible amortization	4.122	4.168	8.290
Operating profit	29.623	15.371	44.994
Company adjusted EBITDA	36.407	28.148	64.555

Earnings (loss) per share is presented for the period from after the Organizational Transactions, April 17, 2026, to June 30, 2026. All earnings and losses prior to the Organizational Transactions were entirely allocable to the redeemable noncontrolling interests. Refer to Note 13, Earnings per Share, in the accompanying notes for additional details.

See accompanying notes to the unaudited condensed consolidated financial statements.

S08 | AEVEX Form 10-Q, 12 August 2026, PDF p.9. Reported Q2/H1 income statement, USD thousands. The adjacent table converts to millions and keeps GAAP operating profit separate from adjusted EBITDA. Source file: E03_q2_10Q.pdf.

T05 | Q2 adjusted EBITDA reconciliation | USD millions

Bridge	Amount
GAAP operating profit	15.371
Depreciation and amortization	5.478
Share-based compensation	1.731
Secondary-offering costs	2.967
Acquisition costs	2.268
Process costs	0.333
Company adjusted EBITDA	28.148

The segment reconciliation includes Tactical adjusted EBITDA of $29.562 million and Global $3.903 million, with $5.317 million of corporate expense deducted to reach $28.148 million. A segment margin cannot be applied to the entire company while omitting corporate costs. H1 cash-flow SBC of $1.809 million and the adjusted-EBITDA SBC line of $1.731 million have different reported scopes; the forecast's recurring SBC budget is explicit.

GAAP results, these non-GAAP financial measures provide a baseline for analyzing trends in our underlying businesses and can be used by management as a basis for financial, operational and planning decisions. Finally, these measures are often used by analysts and other interested parties to evaluate companies in our industry.

Management recognizes that these non-GAAP financial measures have limitations, including that they may be calculated differently by other companies or may be used under different circumstances or for different purposes, thereby affecting their comparability from company to company. In order to compensate for these and the other limitations discussed below, management does not consider these measures in isolation from or as alternatives to the comparable financial measures determined in accordance with GAAP. Readers should review the reconciliations below and should not rely on any single financial measure to evaluate our business. The reasons we use these non-GAAP financial measures and the reconciliations to their most directly comparable GAAP financial measures follow.

Adjusted EBITDA and Adjusted EBITDA Margin

We define Adjusted EBITDA as net income (loss) before interest income and expense, income tax expense (benefit), depreciation and amortization expense, other income (expense), changes in the fair value of contingent consideration liabilities and derivative liabilities, noncash stock compensation expense, offering costs related to the IPO or Secondary Offering, asset impairments, business acquisition costs, restructuring costs, and gains or losses on debt extinguishments, as well as certain non-recurring items. We define Adjusted EBITDA Margin as Adjusted EBITDA divided by revenue. We believe that Adjusted EBITDA and Adjusted EBITDA Margin are important metrics for management and investors as they remove the impact of items that we do not believe are indicative of our core operating results or the overall health of our company and allow for consistent comparison of our operating results over time and relative to our peers.

The following table presents a reconciliation of net income to Adjusted EBITDA and Adjusted EBITDA Margin for the three and six months ended June 30, 2026 and 2025 (in thousands):

	Three Months Ended June 30,		Six Months Ended June 30,	
	2026	2025	2026	2025
Net income (loss)	$ 6,694	$ (11,830)	$ 27,692	$ (39,152)
Interest expense	3,977	8,378	10,521	15,557
Interest income	(1,106)	(130)	(1,212)	(344)
Provision for income taxes	2,454	42	2,454	82

Change in fair value of derivative liability	3,295	—	5,695	—
Noncash stock compensation	1,731	—	1,731	—
IPO-related costs[1]	—	—	1,475	—
Secondary Offering related costs[2]	2,967	—	2,967	—
Business acquisition costs	2,268	—	2,268	—
Other[3]	333	456	333	1,019
Adjusted EBITDA	$ 28,148	$ 3,628	$ 64,555	$ (9,732)
Total revenue	$ 201,791	$ 101,134	$ 418,484	$ 154,392
Net income (loss) margin	3.3 %	(11.7)%	6.6 %	(25.4)%
Adjusted EBITDA Margin	13.9 %	3.6 %	15.4 %	(6.3)%

[1] Represents non-recurring professional service fees related to the public offering and IPO readiness.

[2] Represents non-recurring professional service fees related to the Secondary Offering.

[3] Other for the three and six months ended June 30, 2026 includes $0.3 million of process improvement costs. Other for the three and six months ended June 30, 2025 primarily includes $0.4 million and $0.9 million, respectively, of legal fees related to the non-recurring Viking legal settlement.

S20 | AEVEX Form 10-Q, 12 August 2026, PDF p.50. Company non-GAAP reconciliation. The forecast values operating profit after ordinary costs and amortization; the reconciliation provides the guide bridge. Source file: E03_q2_10Q.pdf.

The Company defines Segment Adjusted EBITDA as net income (loss) before certain unallocated Corporate expenses, interest income and expense, income tax expense (benefit), depreciation and amortization expense, other income (expense), changes in the fair value of contingent consideration liabilities and derivative liabilities, noncash stock compensation expense, offering costs related to the IPO or Secondary Offering, asset impairments, business acquisition costs, restructuring costs, and gains or losses on debt extinguishments, as well as certain non-recurring items.

Financial information for each reportable segment is as follows for the three and six months ended June 30, 2026:

	Three Months Ended June 30, 2026			Six Months Ended June 30, 2026		
	Tactical Systems	Global Solutions	Total Segments	Tactical Systems	Global Solutions	Total Segments
Total segment revenue	$ 174,220	$ 27,571	$ 201,791	$ 365,017	$ 53,467	$ 418,484
Total segment expenses	144,658	23,668	168,326	296,934	45,363	342,297
Segment Adjusted EBITDA	$ 29,562	$ 3,903	33,465	$ 68,083	$ 8,104	76,187
Less unallocated amounts:						
Corporate[1]			(5,317)			(11,632)
Interest expense			(3,977)			(10,521)
Interest income			1,106			1,212
Depreciation and amortization			(5,478)			(10,787)
Other (expense) income, net			(57)			156
Change in fair value of derivative liability			(3,295)			(5,695)
Noncash stock compensation			(1,731)			(1,731)
IPO related costs			—			(1,475)
Secondary Offering related costs			(2,967)			(2,967)
Business acquisition costs			(2,268)			(2,268)
Other[2]			(333)			(333)
Income before income taxes			$ 9,148			$ 30,146

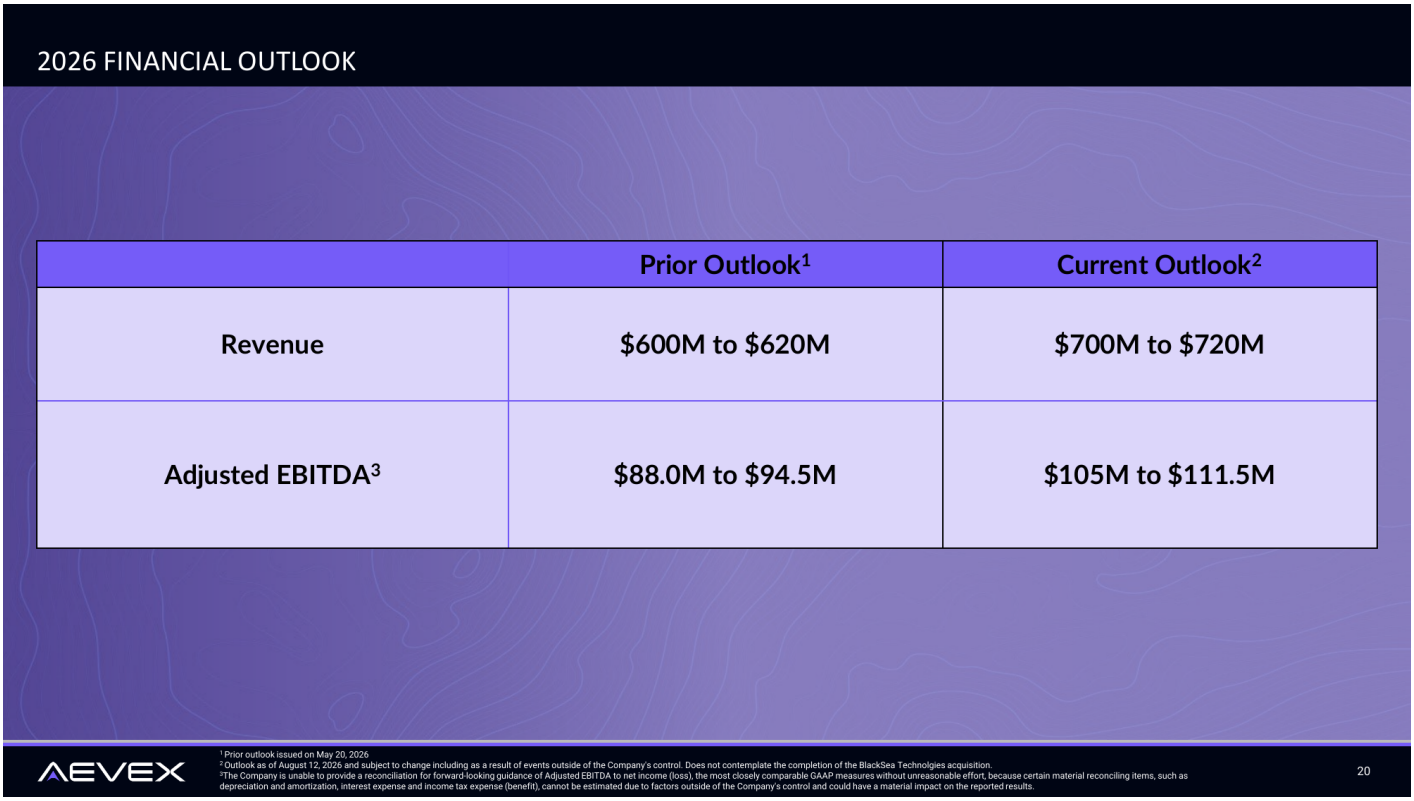

(1) Corporate primarily consists of costs related to executive and staff functions, including the Chief Executive Officer, the Chief Operating Officer, Information Technology, Human Resources, Legal, Finance, Business Development, Corporate Development, and Administration, which benefit the enterprise as a whole.
(2) Other primarily includes $0.3 million of process improvement costs for the three and six months ended June 30, 2026.

Financial information for each reportable segment is as follows for the three and six months ended June 30, 2025:

	Three Months Ended June 30, 2025			Six Months Ended June 30, 2025		
	Tactical Systems	Global Solutions	Total Segments	Tactical Systems	Global Solutions	Total Segments
Total segment revenue	$ 72,100	$ 29,034	$ 101,134	$ 101,551	$ 52,841	$ 154,392

Other[2]			(456)			(1,019)
Loss before income taxes			$ (11,788)			$ (39,070)

S16 | AEVEX Form 10-Q, 12 August 2026, PDF p.33. Segment measures and corporate reconciliation, USD thousands. Corporate costs remain in the full-company model. Source file: E03_q2_10Q.pdf.

The latest guide is $700-720 million of FY2026 legacy revenue and $105-111.5 million of adjusted EBITDA, excluding BlackSea. Subtracting H1 actuals leaves H2 revenue of $281.516-301.516 million and adjusted EBITDA of $40.445-46.945 million. The central pair is $291.516 million and $43.695 million. The latest call places second-half profitability around a 15% adjusted-EBITDA cadence. It also distinguishes accelerated H1 material-receipt revenue from later physical deliveries; those shipments do not earn the same revenue a second time.

S06 | AEVEX Q2 presentation, 12 August 2026, PDF p.20. Full-year legacy guidance excludes BlackSea. H2 figures below subtract the matching reported H1 perimeter; no GAAP operating-profit guidance is asserted. Source file: E02_q2_deck.pdf.

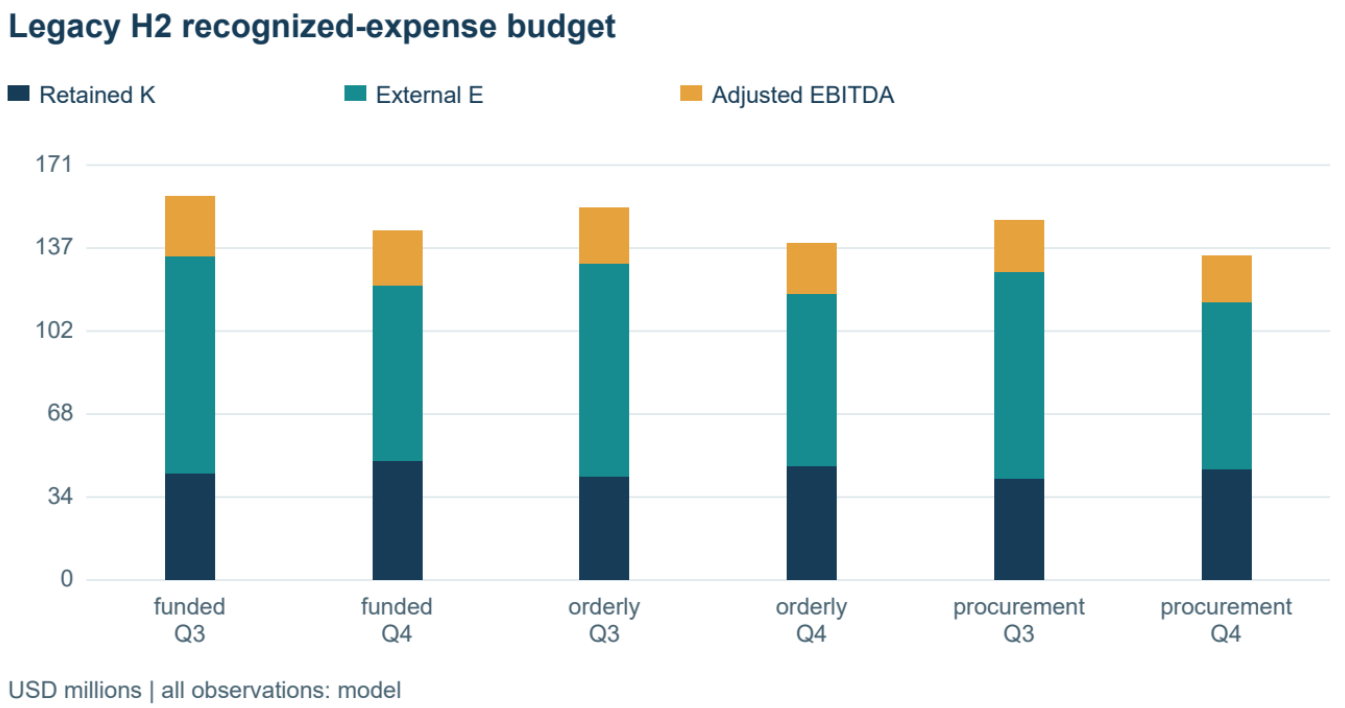

T06 | Same-perimeter legacy guide | USD millions

Case	FY R guide	H1 actual R	H2 R	FY AdjEB	H1 AdjEB	H2 AdjEB
Low	700.000	418.484	281.516	105.000	64.555	40.445
Mid	710.000	418.484	291.516	108.250	64.555	43.695
High	720.000	418.484	301.516	111.500	64.555	46.945

For Q3 and Q4 2026 only, the model derives a positive recognized external-supplies/subcontract expense residual: E = legacy revenue - source adjusted EBITDA - retained recognized nonprocurement cash operating costs. Paid payroll, rent, support, overhead, SG&A and R&D remain explicit in the retained cost basket. Depreciation, SBC and eligible company addbacks follow the adjusted-EBITDA bridge. The residual is a LOW allocation consistent with the source budget. It establishes neither disclosed supplier savings nor cash payments, and no margin credit carries into 2027. Quarter timing follows modeled legacy revenue. Incremental H2 service capacity above internal staffing is paid externally at the selected 0.85 cost per revenue unit.

T07 | Positive H2 recognized-expense allocation

Core	Quarter	Legacy R	AdjEB	Retained K	External E	E / proxy
funded expansion	Q3 2026	158.000	24.600	43.869	89.531	83.93%
funded expansion	Q4 2026	143.516	22.345	48.875	72.296	85.81%
orderly replacement	Q3 2026	153.000	22.933	42.711	87.356	85.07%
orderly replacement	Q4 2026	138.516	20.762	46.662	71.092	88.58%
procurement stress	Q3 2026	148.000	21.263	41.602	85.135	86.26%
procurement stress	Q4 2026	133.516	19.182	45.762	68.572	89.91%

H2 2026 legacy only, excluding BlackSea. The positive external basket is recognized expense derived from the source budget. Supplier cash and 2027 program cost follow separate schedules.

C12-data | Legacy H2 recognized-expense budget | plotted data

Core / quarter	Retained K	External E	Adjusted EBITDA
funded Q3	43.869167	89.530778	24.600054
funded Q4	48.875346	72.295708	22.344946

orderly Q4	46.662282	71.091713	20.762005
procurement Q3	41.602479	85.134573	21.262948
procurement Q4	45.761634	68.572314	19.182052

Defense autonomy, the S-curve and four economic vectors

The relevant supercycle is defense autonomy and distributed mission capability: attritable air systems, ISR/mission integration and autonomous maritime logistics. DeepStrike's existing-program production and recognition are a late pulse. Domestic/allied replacement awards and new maritime platforms sit earlier in qualification and procurement. The group can gain mission relevance while its near-term margin resets. A narrow tactical sole-source position does not confer whole-company monopoly economics.

T08 | TAM expansion lens

Framework phase	Relevance to AEVEX	Economic admission
AI data centers | 100% framework confidence	No supported direct incremental company wallet	No cloud-capex revenue imported
Physical AI | 50% framework confidence	Autonomous mission platforms, sensing and integration	Bounded award requests, trained people and equipment
Ubiquitous compute / defense | 20% framework confidence	Distributed low-cost air/water logistics and mission networks	Qualification, budgets and accepted paid output constrain capture

Today's market includes attritable tactical aircraft, mission services and installed-fleet maritime support. Over three to five years, adjacent uses include autonomous logistics, mine countermeasures, payload integration and modular air/water systems. Distributed unmanned networks could create new mission demand, but the retained evidence supports no separate additive dollar TAM. The qualified pipeline, named campaigns, cumulative contract values and funded/unfunded backlogs overlap. The model admits one bounded company capture path for each economic scope.

T09 | Four-vector revenue ledger

Vector	Source / current anchor	Admission and main constraint	Forecast confidence
DeepStrike	Q2 material-receipt cadence; call P064-P066	H2 runoff, Q1 2027 residue, then zero; no delivery double recognition	LOW program split
Other Tactical	Domestic/allied demand; Tampa; OWA and Specter	Products plus limited services; paid trained FTE and finite equipment	LOW
Global	Reported services; SkyRange up to $92.2m over three years	Bounded service requests; internal/external paid capacity	LOW
Maritime	Sep8 close; installed fleet; Oct21 issuer response	Products and services share one wallet; acceptance and paid resources	LOW

T31 | Legacy annual revenue requests before resource limits | LOW, USD millions

Core / vector	2027	2028	2029	2030
funded expansion / Other Tactical	700	1,050	1,400	1,820
funded expansion / Global	147	170	200	235
orderly replacement / Other Tactical	500	700	925	1,200
orderly replacement / Global	140	160	185	210

NEWS RELEASE

AEVEX to Expand Its Unmanned Aircraft Systems Portfolio With Specter, a Jet-Powered, Modular Autonomous Platform

2026-09-23

Rendering of a jet-powered, modular Specter variant, which will combine AEVEX's mission-proven unmanned aircraft experience with Divergent's digitally enabled manufacturing approach to support rapid adaptation and scalable production.

SOLANA BEACH, Calif.--(BUSINESS WIRE)-- AEVEX Corp. (NYSE: AVEX) today announced Specter, a new jet-powered autonomous platform under development to meet emerging mission needs through modular design, open interfaces, and a manufacturing approach built for scale. Developed in collaboration with advanced manufacturing company, Divergent, Specter will advance AEVEX's leading unmanned systems portfolio with a high-speed, turbojet-powered one-way attack platform built for demanding operational environments.

This press release features multimedia. View the full release here:
https://www.businesswire.com/news/home/20260923715744/en/

Rendering of a jet-powered, modular Specter variant, which will combine AEVEX's mission-proven unmanned aircraft experience with Divergent's digitally enabled manufacturing approach to support rapid adaptation and scalable production.

Designed for contested environments and extended mission profiles, Specter's modular airframe architecture and software-defined capability are intended to support a wide range of payload types and mission effects. The platform will incorporate a turbojet propulsion architecture, enabling both ground-launched and air-launched variants while maintaining flexibility for future mission expansion.

Specter features a modular, swappable nose section designed to accommodate kinetic, non-kinetic, electronic

1

S23 | Issuer release, 23 September 2026, PDF p.1. Specter is under development. The source supports a platform-development opportunity; its text does not establish accepted production orders or a photographed production aircraft. Source file: E18_specter_pdf.pdf.

NEWS RELEASE

AEVEX Selected for Up to $92.2M SkyRange Contract Supporting Department of War Hypersonic Testing

2026-09-16

SOLANA BEACH, Calif.--(BUSINESS WIRE)-- AEVEX Corp. (NYSE: AVEX) announced it has been selected for a contract valued at up to $92.2 million over the next three years to support the Department of War (DoW) Test Resource Management Center (TRMC) SkyRange program.

SkyRange is the DoW's flagship initiative to modernize hypersonic flight test infrastructure. The program replaces fixed and ship-based range assets with high-altitude airborne platforms capable of collecting, relaying, and distributing real-time telemetry data. This airborne-first architecture accelerates range setup, expands test corridor flexibility, and increases test cadence to meet growing hypersonic development requirements.

Under the contract, AEVEX will provide:

- Airborne range integration and engineering services
- Flight operations support across Western U.S. and Pacific test corridors
- Airborne telemetry relay and resilient communications architecture support
- Payload and mission systems integration
- Distributed range networking, instrumentation, and mission data support

Through these capabilities, AEVEX will enable TRMC to increase hypersonic test frequency, enhance data resiliency, and expand the distributed test infrastructure needed to support national defense customers.

"Rapid hypersonic development depends on scalable airborne infrastructure, resilient telemetry architecture, and the ability to collect operational test data at speed," said Mike Jackson, Senior Vice President, Global Solutions at AEVEX. "This award positions AEVEX to deliver critical support to hypersonic test operations and strengthens the next generation of the DoW's test and evaluation enterprise."

1

S24 | Issuer release, 16 September 2026, PDF p.1. SkyRange award is up to $92.2 million over three years. The Global scenario already contains bounded growth from that scope; the headline is not added again. Source file: E19_skyrange_pdf.pdf.

NEWS RELEASE

AEVEX Secures $20.5M in New Awards to Deliver and Advance One-Way Attack Systems

2026-09-09

SOLANA BEACH, Calif.--(BUSINESS WIRE)-- AEVEX Corp. (NYSE: AVEX), a leading provider of advanced unmanned systems and mission technologies, today announced it has secured $20.5M in new awards to deliver and further develop one-way attack (OWA) system capabilities for U.S. government customers.

These awards expand AEVEX's support for operational requirements across high-priority mission areas. Under these efforts, AEVEX will deliver one-way attack systems and provide associated engineering, development, and integration work to advance future capability. The solutions produced will be employed in both operational and training environments to strengthen readiness and reinforce mission preparation.

"AEVEX customers continue to rely on our ability to design, build, and deliver autonomous capabilities with precision, reliability, and speed," said Roger Wells, Chief Executive Officer at AEVEX. "Our one-way attack systems are informed by real-world operational demands and built to perform in contested and dynamic mission environments. We are proud to deliver affordable, scalable capabilities that strengthen warfighter effectiveness and meet the pace required by today's operational tempo."

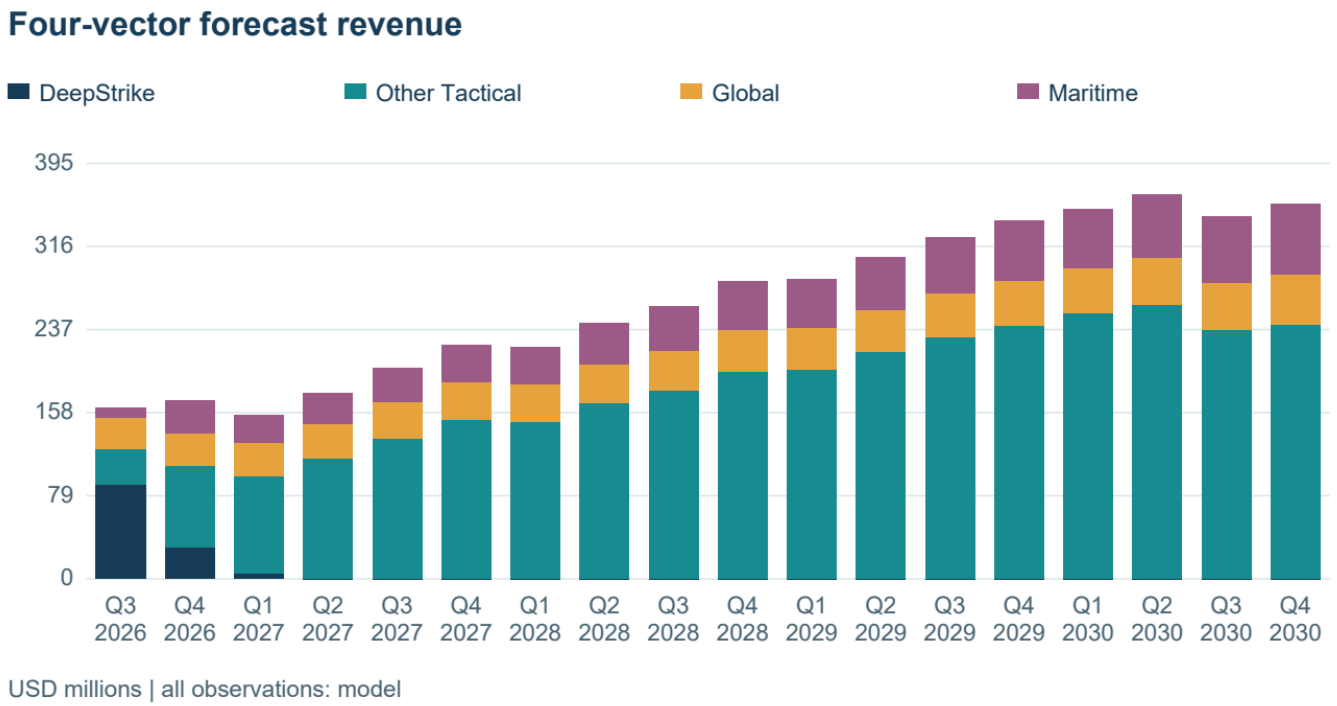

AEVEX's autonomous systems portfolio, mission autonomy software, and modular deployment architecture are engineered to meet evolving defense requirements across air and maritime domains. The company's scalable U.S. manufacturing footprint and integrated development framework allow rapid production, adaptation, and fielding of mission-aligned capabilities for U.S. and allied forces.

AEVEX continues to invest in advanced manufacturing capacity, autonomy technologies, and customer-driven engineering to support growing demand from the Department of War and international partners. These efforts reinforce the company's broader strategy of aligning with defense procurement priorities and expanding delivery of

1

S25 | Issuer release, 9 September 2026, PDF p.1. $20.5 million of OWA delivery and engineering-development awards. These scopes enter the Other Tactical capture envelope once. Source file: E20_sep_awards_pdf.pdf.

Pricing power requires qualified delivery slots and acceptable cost per mission. Fixed-price work can lose money when labor, materials or support outrun contract assumptions. The source does not disclose the future unit ASP or procurement cost of each new platform. The model therefore uses monetary production-work equivalents with explicit paid-resource budgets. Those equivalents do not constitute drone or vessel shipment forecasts.

Model begins Q3 2026. Four non-overlapping revenue vectors; all future program splits and capture are LOW estimates. The first two quarters include post-close Maritime only.

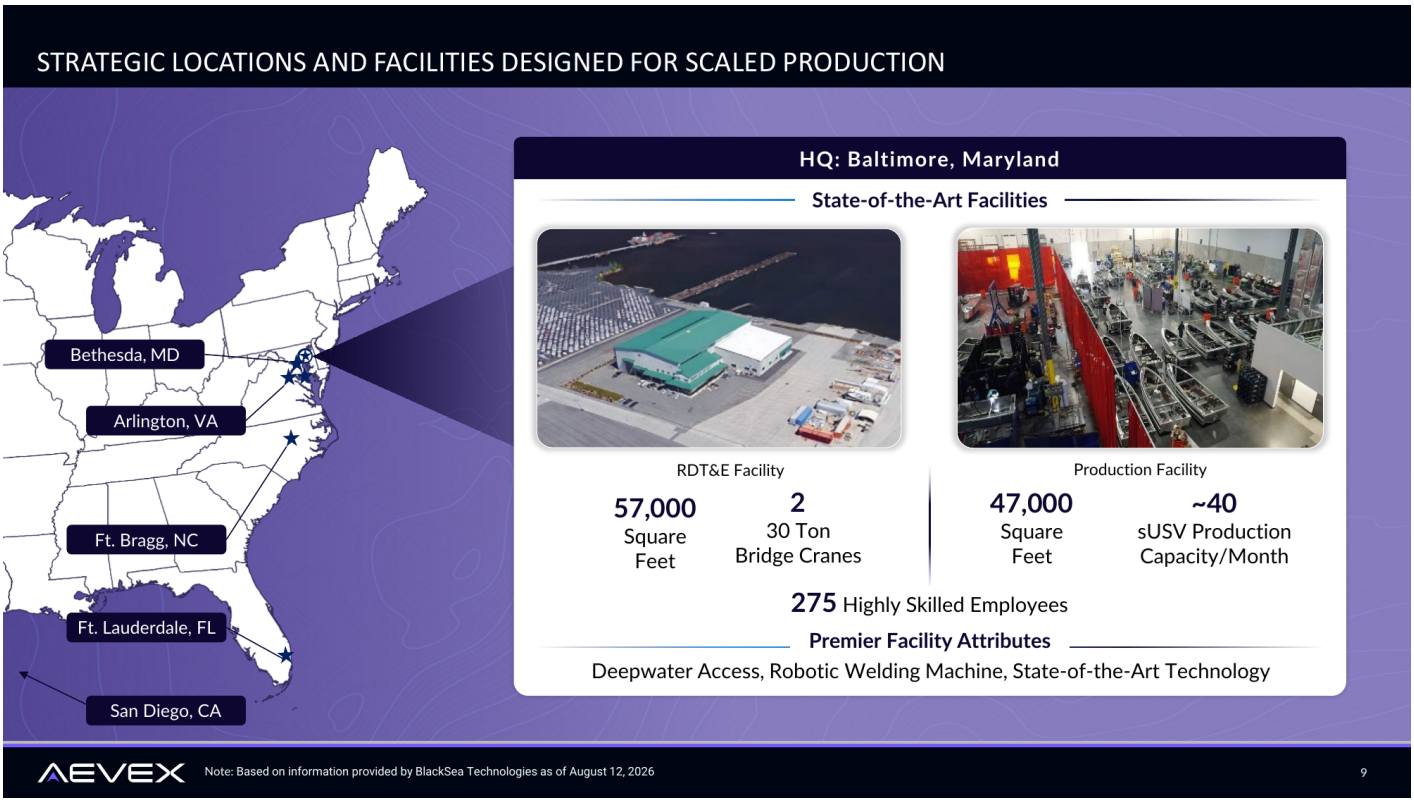

C01-data | Four-vector forecast revenue | plotted data

Demand must pass trained staff and finite equipment

The legacy product calibration uses 274.672 modeled Q2 production FTE, $0.100 million annual fully burdened pay per FTE and $0.250 million quarterly revenue capacity per trained FTE. These are LOW allocations calibrated to the reported product cost total. New employees are paid before a one-quarter training lag is complete. Output is limited by both trained people and commissioned productive equipment. Unfilled demand has bounded retention and can be lost; pipeline does not become an asset or free inventory.

Opening legacy productive PPE is $12.8 million with a 16-quarter remaining life, with $7.27 million of other PPE separately depreciated. Ordinary capex is $2 million per quarter, 70% allocated to production. Tampa fitout is $30 million, $22 million or $12 million across core states, paid 45%/35%/20% over the first three forecast quarters. New assets commission after a quarter and have a finite 20-quarter life. The $8.5 million initial Tampa lease commitment is paid over the modeled term rather than charged again as acquisition capex. Q3 commencement is conservative because the source's July-possession/91-day language is ambiguous.

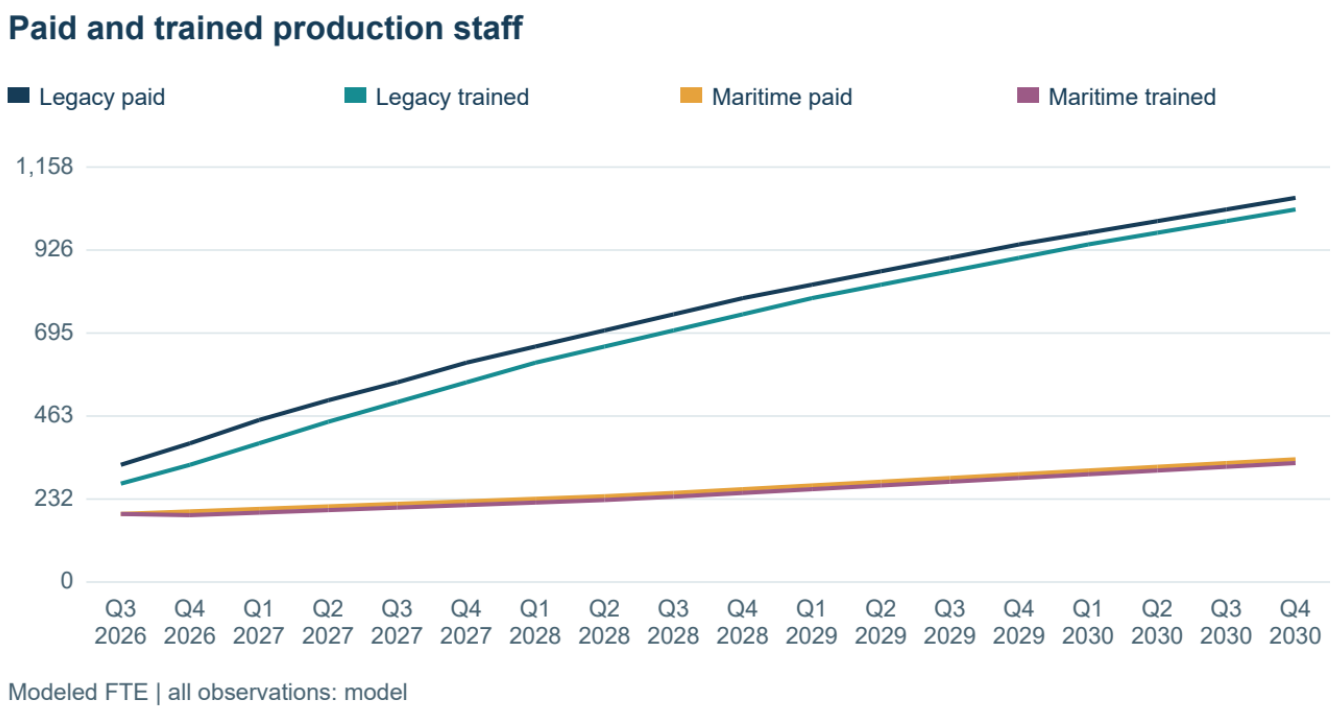

S04 | AEVEX Q2 deck, 12 August 2026, PDF p.9. Issuer factory and headcount context: approximately 47,000 square feet of production, 57,000 square feet of R&D/test, 275 employees and nominal capacity near 40 small USVs per month. These are dated company claims; model output depends on staff, equipment, acceptance and demand. Source file: E02_q2_deck.pdf.

BlackSea's 275-person opening workforce is allocated to 190 production, 40 services and 45 engineering/admin roles. That split, pay rates and future hiring are LOW estimates. Production staff cost $0.09 million annually, service staff $0.15 million and engineering/admin $0.16 million. Engineering/admin pay is allocated 60% to R&D and 40% to SG&A. Product warranty/support costs 5% of revenue in addition to incremental technical remediation. Acquired PPE of $20 million is depreciated separately from intangible amortization; product, service and corporate assets have their own finite books.

T10 | Paid resource assumptions | LOW estimates

Parameter	Legacy	Maritime
Annual production pay per FTE	0.100	0.090
Annual service pay per FTE	0.160	0.150
Opening production FTE	274.672	190.000
Opening service FTE	231.861	40.000
Training / commissioning lag	1 quarter	1 quarter
Ordinary quarterly capex	2.000	0.650
New asset life, quarters	20.000	24.000
Annual pay/fixed-cost inflation	3%	3% shared
Output productivity	2% yearly, capped at 8%	Shared bounded rule
Product material/subcontract rate	56% Other Tactical	50%
Ordinary product support	2% Other Tactical	5%

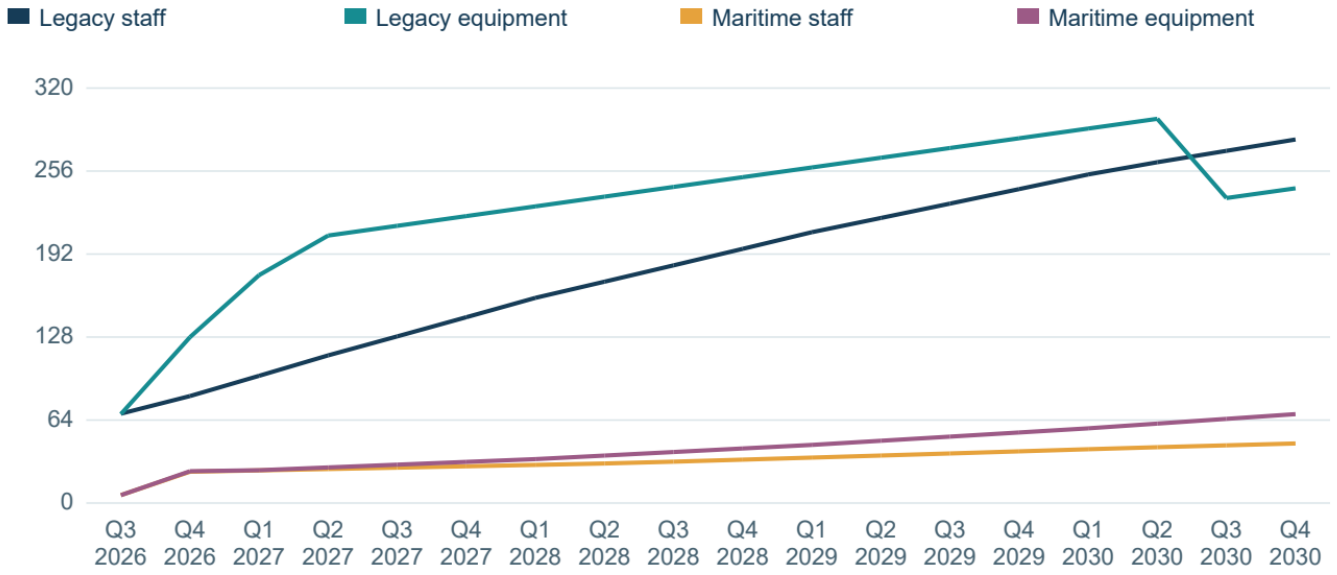

LOW paid-staff proxy, including acquisition post-close resources. Training creates a paid lag. Monetary capacity is shown separately from headcount.

Maritime: fulfilled GARC procurement and contested acceptance

The October 21 issuer statement says no orders were halted and reports 325 GARC units delivered to the Navy during 2025, completing planned vessel procurement. It also says no additional GARC vessel procurement is planned. A modified existing contract totals approximately $350 million through June 2027 for continuing work. That cumulative amount cannot be treated as new remaining backlog. Installed-fleet upgrades, sustainment, SPDS logistics and Chaser/COMET qualification retain separate economic value within the single Maritime vector.

NEWS RELEASE

AEVEX Reaffirms Maritime Systems Strategy and Continued U.S. Navy Investment

2026-10-21

Company highlights continued Navy-funded enhancements, proven operational performance, and transition to next-generation maritime platforms

SOLANA BEACH, Calif.--(BUSINESS WIRE)-- AEVEX Corp. (NYSE: AVEX), a leading U.S. defense technology company, today reaffirmed confidence in its Maritime Systems division and clarified the status of the Global Autonomous Reconnaissance Craft (GARC) program following recent reports, which include factual inaccuracies.

“AEVEX acquired BlackSea for its proven operational capabilities, strong customer relationships and ability to deliver increasingly sophisticated maritime autonomous systems at scale,” said Roger Wells, Chief Executive Officer of AEVEX. “The Navy’s continued investment in the GARC fleet, combined with our transition to next-generation platforms, reinforces the strategy behind this acquisition. We’re focused on executing our multi-domain strategy and delivering capabilities that evolve alongside the missions they support.”

GARC program status

Contrary to reports that the U.S. Navy halted GARC orders because of performance issues, no orders have been halted. The business successfully completed its contractual obligation having delivered 325 GARC units to the Navy in 2025. No additional GARC vessels were planned for procurement as the Navy deploys its existing GARCs across multiple different commands and missions.

AEVEX has since been executing under its existing GARC contract to enhance delivered units with new mission packages, including mine-countermeasure packages that are currently conducting MCM missions in the Strait of Hormuz. This contract has received multiple modifications in 2026, increasing the total contract value to

1

S26 | AEVEX issuer statement, 21 October 2026, PDF p.1. Management response to adverse reporting. Historical deliveries and cumulative modified-contract value carry their stated periods; no incremental $350 million backlog is created. Source file: E21_GARC_statement_pdf.pdf.

The original adverse Bloomberg account raises reliability and procurement concerns. Its full text was inaccessible in the retained source capture; references from Reuters and Barron's trace to that account. They are recorded as overlapping reporting. The issuer denies halted orders and describes continuing investment, while its statement confirms a completed GARC procurement program. The investment problem therefore spans reliability, acceptance of successors and the durability of service revenue. Neither management language nor repeated reporting resolves independent technical qualification.

approximately $350M and extending the period through June 2027.

Proven performance and continued Navy investment

GARC vessels have accumulated more than 25,000 hours of on-water operations with the U.S. Navy and have been deployed across multiple fleets and unmanned task forces, including operations in support of Operation Epic Fury. During the RIMPAC 2026 sinking exercise, it carried out the Navy's first autonomous live-fire strike by a small unmanned surface vessel.

As of today, the Navy continues to operate its GARC fleet. It is also actively funding enhancements, including upgrades, payload integration, and mission-specific capabilities. The Navy has also acknowledged that practical experience gained through GARC deployments is helping accelerate robotic and autonomous systems capabilities.

Advancing the next generation of maritime autonomy

Building on the GARC's operational foundation, AEVEX is advancing the platform's upgraded mission capabilities, while separately progressing next-generation unmanned surface vessels, including Chaser and Comet. The company's open, modular systems architecture lets platforms take on new payloads and mission capabilities, as operational needs change.

The matters raised in the recent report, which include factual inaccuracies, do not impact the Maritime Systems division nor AEVEX's financial performance.

The BlackSea acquisition brings a track record of operational delivery, scaled U.S. manufacturing capabilities, and a significant pipeline of maritime technologies and programs extending into 2027 across multiple customers. AEVEX Maritime Systems' backlog includes services supporting fielded platforms, operations, sustainment, and mission integration. AEVEX also brings its own existing autonomy expertise and experience having delivered more than 9,000 unmanned systems. Together, these strengths position AEVEX Maritime Systems to develop, manufacture, and deploy increasingly advanced autonomous solutions for U.S. defense customers.

AEVEX remains focused on delivering operationally relevant autonomous systems across multiple domains, through continued investment in innovation, U.S.-based manufacturing and close collaboration with warfighters.

S27 | AEVEX issuer statement, 21 October 2026, PDF p.2. Continuing platform and support strategy is attributed to management. The forecast keeps services, technical costs and new-platform acceptance in distinct modeled outcomes. Source file: E21_GARC_statement_pdf.pdf.

S02 | AEVEX acquisition deck, 12 August 2026, PDF p.7. Maritime portfolio and historical operations. The $150 million full-year standalone outlook precedes September closing; the forecast recognizes only the modeled post-close portion. Source file: E02_q2_deck.pdf.

Three maritime states capture the operating range. New-platform acceptance admits rising product and service work with paid hiring, equipment and R&D. Services-led operation preserves fleet support while moderating new production. Technical distress retains a smaller service business, pays remediation and severance, and recognizes a $60 million noncash goodwill impairment in Q4 2027 once. Ordinary 5% product warranty expense remains separate from the additional technical budget. The impairment reduces GAAP-style OP without consuming cash or reducing the amortizable intangible book.

T11 | Maritime annual requests and remediation | LOW

State	2027 R	2028 R	2029 R	2030 R	Q426-Q327 extra technical cost	Q427 impairment
Acceptance	220.000	330.000	450.000	600.000	2 / 1 / 0 / 0	0.000
Services-led	145.000	165.000	185.000	205.000	6 / 4 / 2 / 1	0.000
Technical distress	70.000	55.000	50.000	45.000	12 / 8 / 5 / 2	60.000

Joint probability ledger and overlap decisions

The core weights are 25% funded expansion, 50% orderly replacement and 25% procurement stress. Maritime acceptance is conditional on that environment, with respective acceptance/services/distress mixes of 50/40/10, 30/50/20 and 10/50/40. Marginal Maritime weights are 30% acceptance, 47.5% services and 22.5% distress. The earnout split is then conditional on legal production and the distinct stock trigger. These economic probabilities are judgments selected for the defined outcomes, rather than source-authenticity ratings or analytical-score multipliers.

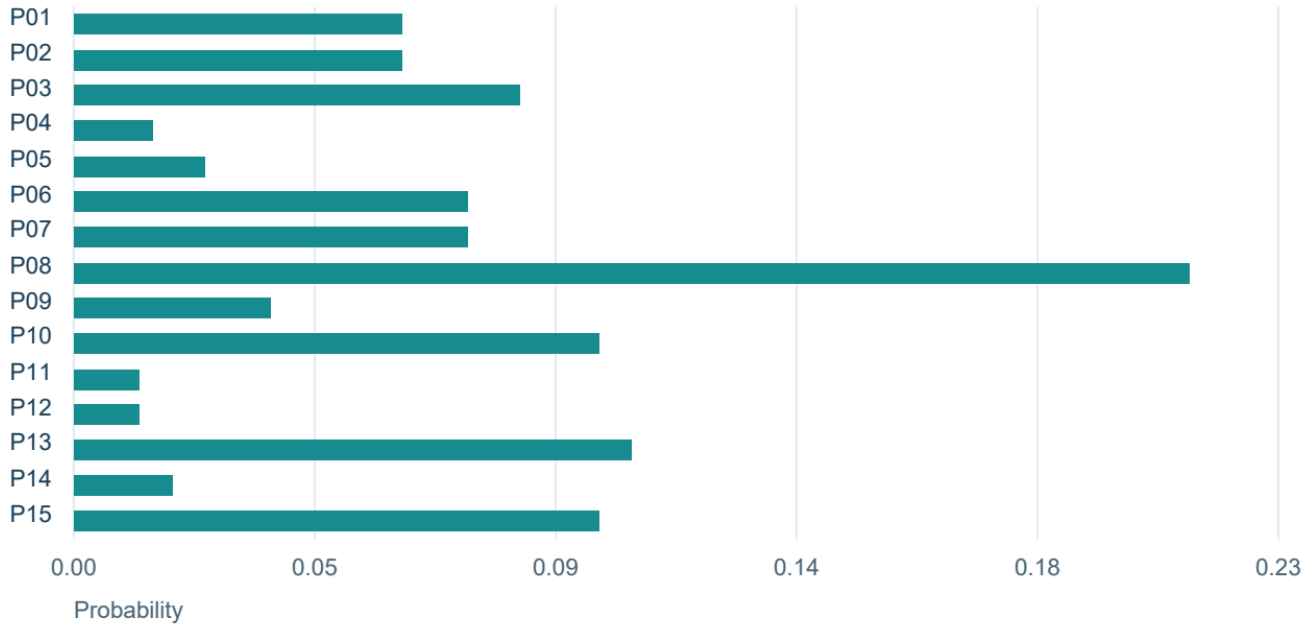

T12 | Conditional probability law

Core	Core p	Acceptance given core	Services given core	Distress given core
funded expansion	25.00%	50.00%	40.00%	10.00%
orderly replacement	50.00%	30.00%	50.00%	20.00%
procurement stress	25.00%	10.00%	50.00%	40.00%

T14 | Rule 16b admission ledger

Evidence / hypothesis	Numerical admission	Overlap control	Dated counter / test
Domestic/allied replacement and Tampa	Core 25/50/25; constrained Other Tactical requests	OWA/Specter and pipeline occupy the same capture envelope	Next release: funded awards, trained output and realized cost
SkyRange / mission services	Global request path; paid service resources	Award up to $92.2m over three years enters once	Track award tasking, recognition and staffing
Fleet support and Chaser/COMET	Conditional 30/47.5/22.5 marginal mix	Cumulative $350m and SPDS scopes already included	Independent qualification, fleet remedy and support tasking
Earnout combined legal/stock event	50% acceptance; 15% services; 0% effective distress	No extra 0.9m reserve or duplicate cash award	Qualified delivered lots and actual 30-day VWAP test
Distress earnout zero	Requested-period production cap $24.643750m < $24.750m	Zero is conditional on LOW product mix and timing	A changed eligible scope or schedule requires re-evaluation
Credit proxy warning	22.5% joint mass; explicit stress diagnostics	No additional rescue or arbitrary whole-profit haircut	Legal certificates, closing draws, eligible cash and consent

From production contribution to full operating profit

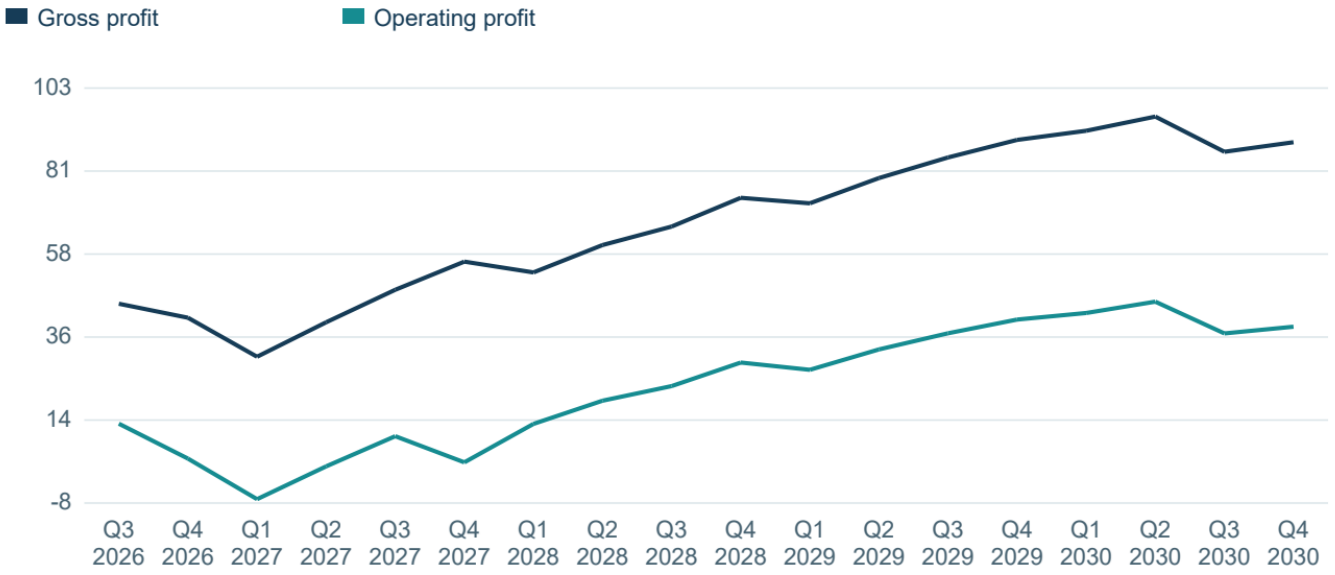

The four-vector revenue model has six operational sublines: DeepStrike, Other Tactical product, Other Tactical services, Global services, Maritime product and Maritime services. Revenue requests encounter paid capacity before income recognition. Product materials/subcontracts, fully burdened labor, variable overhead, fixed factory expense, ordinary warranty/support and manufacturing depreciation enter cost of sales. Service outsourcing, service payroll, travel/support and fixed costs enter the service cost pool. These full production costs determine gross profit.

Below gross profit, legacy cash SG&A starts from a $14.66 million Q2 normalized budget, recurring SBC from $1.731 million and corporate depreciation from $0.510 million. The Q2 secondary/acquisition/process costs total $5.568 million and are removed only for the normalized forecast budget. Ordinary SG&A grows with inflation and incremental revenue. Legacy R&D starts at $5.639 million, grows 5% annually and adds 3% of incremental Other Tactical revenue. Maritime engineering/admin, integration cash SG&A, recurring SBC and new-platform R&D remain paid. Separate intangible amortization and the conditional impairment complete the OP bridge.

T15 | Cost-location equations

Line	Calculation / scope
COGS	Product material + labor + overhead + support + manufacturing DA; service outsourcing + paid service staff + variable/fixed cost; technical remediation
GP	Revenue - COGS
SG&A	Cash SG&A + recurring SBC + corporate DA + integration + applicable severance
R&D	Legacy paid budget + incremental Other Tactical R&D + Maritime engineering/admin allocation + platform R&D
Intangible amortization	Finite legacy book at $4.168m/q plus acquired $240m/48q, with post-close fraction
OP	GP - SG&A - R&D - intangible amortization - goodwill impairment
Cash addbacks	DA and SBC added once; separately adjust warranty/technical payables and tax/member/TRA cash

Gross profit and operating profit

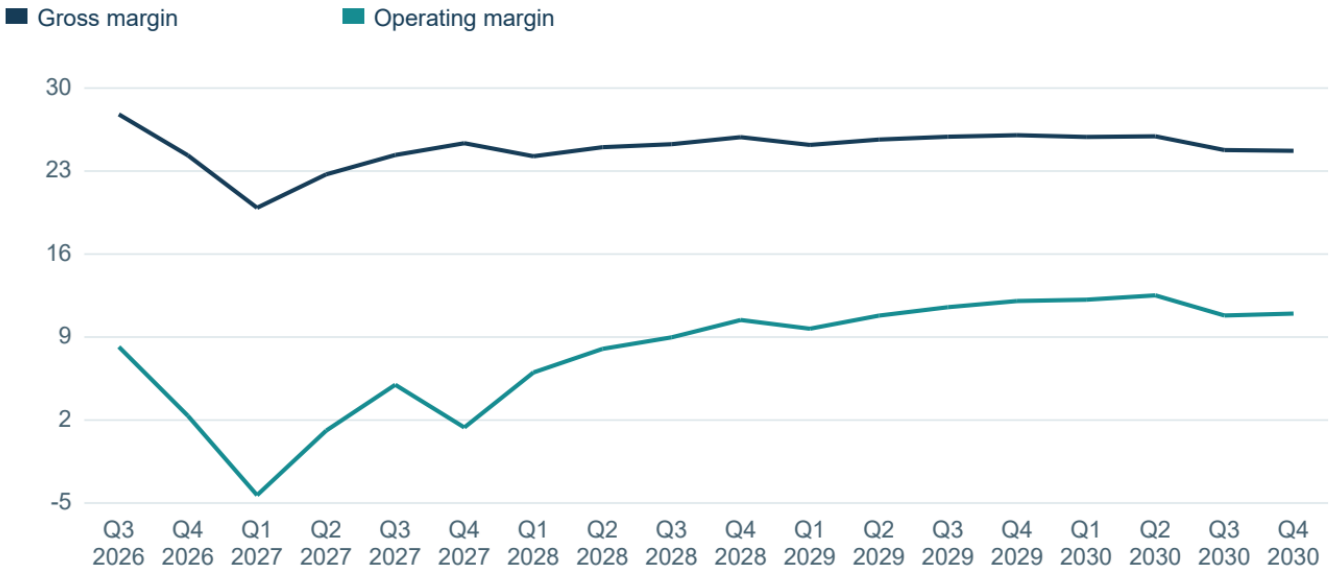

USD millions | all observations: model

Probability-weighted model after full production costs, ordinary operating expenses, recurring amortization and the conditional Q4 2027 goodwill charge. Negative OP remains visible.

The $600 million acquisition consideration consists of $250 million cash, including $245 million to sellers and $5 million escrow, plus $350 million of stock at the contractual $27.50 price, or approximately 12.727273 million shares. Those closing shares are already included in the native starting-share proxy. The acquired opening allocation is $20 million PPE, $240 million intangibles, $315 million residual goodwill and $25 million net working capital, totaling $600 million. These resources are bought within consideration. They are not another cash investment.

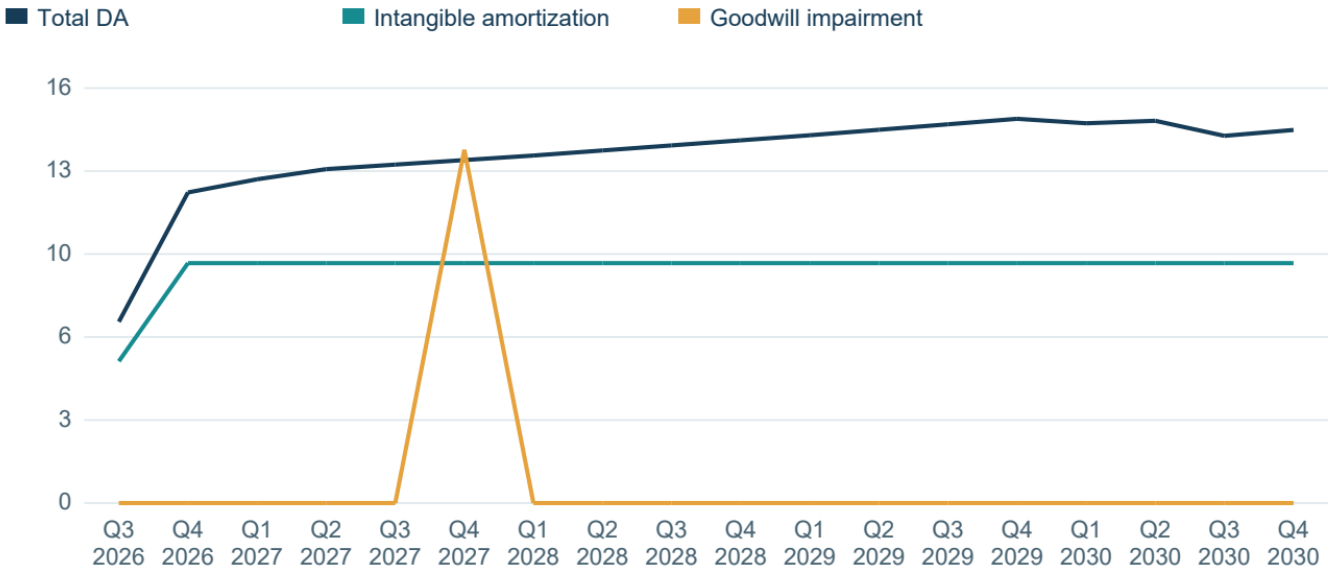

S01 | AEVEX presentation, 12 August 2026, PDF p.5. Pre-close acquisition outlook and consideration. Final September 8 closing adjustments and purchase-price accounting remain unavailable; the accretion presentation excludes purchase-accounting amortization. Source file: E02_q2_deck.pdf.

T16 | Acquisition and opening resource allocation | USD millions

Item	Value	Status
Seller cash	245.000	Contractual initial amount
Escrow cash	5.000	Included in $250m cash bucket
Stock consideration	350.000	Contractual $27.50 price; closing shares already included
Total consideration	600.000	Before unverified closing adjustments
Opening acquired PPE	20.000	LOW allocation; separate DA
Opening acquired intangibles	240.000	LOW allocation; 48-quarter life
Opening acquired goodwill	315.000	LOW residual allocation
Opening acquired NWC	25.000	LOW net opening resource; no second cash payment

The full-quarter acquired intangible charge is $5 million. Q3 2026 uses the selected 23/92-day post-close fraction, producing $1.25 million of acquired amortization. The $20 million acquired PPE book has production/service/corporate allocations with separate remaining lives. The $60 million distress goodwill charge occurs only in Q4 2027. Acquired intangible allocation and useful life are material source gaps, so the sensitivity table varies both without changing total purchase consideration or paying the acquisition twice.

Depreciation, amortization and goodwill charge

USD millions | all observations: model

Total DA includes manufacturing/corporate depreciation and intangible amortization. The separate impairment is an additional noncash GAAP-style OP charge. Series are overlapping cost views and are not stacked.

Cash, restricted scope and conditional debt availability

June 30 cash of $215.238 million precedes the $250 million acquisition payment. Restricted cash of $0.895 million is already outside that amount. The model assumes a $75 million delayed draw at closing, with a $0.1875 million fee reserve. Actual closing cash adjustments and draw statements are unavailable. The IPO/refinancing cash is already reflected in the opening balance and is not added again. The selected paths have no automatic new equity, no new revolver draws and no fictitious customer advance.

S07 | AEVEX Form 10-Q, 12 August 2026, PDF p.8. June balance sheet, USD thousands, before the September acquisition. Reported cash, debt and operating assets anchor the cash bridge; acquired opening allocations remain estimates. Source file: E03_q2_10Q.pdf.

Cash flow starts with OP and adds back DA, SBC and noncash goodwill impairment. It then reflects operating working capital, cash interest and facility fees, a gross tax/member reserve, realized qualifying tax savings, TRA cash and separate warranty/technical settlement timing. Capex, acquisition cash, mandatory principal, optional repayments, capital AP settlement and aircraft-VIE distributions bridge CFO to closing cash. The operating floor is $25 million. Optional quarter-end debt paydown retains a separate $50 million modeled cash reserve after planned uses.

S09 | AEVEX Form 10-Q, 12 August 2026, PDF p.12. H1 cash-flow statement, USD thousands. Reported CFO, capex, SBC and financing distributions constrain the model's cash classifications. Source file: E03_q2_10Q.pdf.

T17 | Opening operating liabilities and separate clocks | USD millions

Reported / modeled bucket	Total	Separate item	Operating remainder
Legacy accrued liabilities	23.164	1.1 incentive + 1.0 warranty proxy	21.064
Legacy AP	30.729	0.211 capital AP	30.518
Acquired accrued liabilities proxy	8.000	0.5 warranty proxy	7.500
Restricted prepaid proxy	0.500	Frozen outside turnover	No cash release
Aircraft VIE distribution	0.075 per quarter	Separate financing distribution	Outside tax/member and TRA

The operating NWC model adjusts receivables, contract assets, inventory, prepaid assets, AP, generic accruals and deferred revenue toward revenue-scaled targets with separate adjustment fractions. Contract assets matter because cost-to-cost recognition can precede billing and collection. The rounded $0.5 million restricted-prepaid allocation stays frozen outside turnover. The $0.211 million capital AP payment adds no new asset. The $1.1 million opening incentive is paid in Q4 2026 without a new OP charge. Warranty and technical cash reserve movements remain disjoint from generic accruals.

We perform work under contracts that broadly consist of fixed-price, cost-reimbursable, time-and-materials arrangements, or a combination of the three. Pricing is contractually based on specific negotiations with each customer. Advanced payments and billings for milestones in excess of revenues recognized are recorded as current and non-current deferred revenue in our consolidated balance sheets and recognized into revenue as we satisfy the underlying performance obligations.

For fixed-price contracts satisfied over time, progress is measured using a cost-to-cost method, which accurately reflects the transfer of control to the customer. This method assesses the extent of progress based on the ratio of costs incurred to date against the total estimated costs to complete the performance obligation. Estimating total costs to complete requires us to make informed estimates regarding subcontractor performance, material costs and availability, labor costs and productivity, as well as overhead expenses. Frequently, the period of performance of a contract extends over a long period of time and, as such, revenue recognition and our profitability from a particular contract may be affected to the extent that estimated costs to complete are revised, delivery schedules are delayed, performance-based milestones are not achieved, or progress under a contract is otherwise impeded. Accordingly, our recorded revenues and operating profit from period to period can fluctuate significantly depending on when contractual obligations are achieved.

Should the estimated total costs to be incurred on a contract surpass the anticipated total revenue, we recognize a provision for the entire loss on the contract in the period when the loss is identified. For further discussion of the critical judgments and estimates related to our revenue recognition policies, see “Critical Accounting Estimates.”

Cost of Revenue – consists of direct costs and allocated indirect costs. Direct costs include labor, materials, subcontractor and other costs directly related to the execution of a specific contract. Indirect costs include overhead expenses, fringe benefits, depreciation and amortization.

Selling, General, and Administrative – consists primarily of personnel-related expenses for our sales, marketing, supply chain, finance, legal, human resources and administrative personnel, the costs of customer service, information technology, risk management and related insurance, travel, allocated overhead and other marketing, communications and administrative expenses, as well as acquisition-related costs. We also expect to further invest in our corporate infrastructure and incur additional expenses associated with operating as a public company, including increased legal and accounting costs, investor relations and compliance costs. As a result, we expect that selling, general and administrative expenses will increase in absolute dollars in future periods but decline as a percentage of total revenue over time. In addition, as a result of becoming a public company, we will incur significant additional annual expenses including, among other things, additional directors’ and officers’ liability insurance, costs to administer a public company stock compensation plan, director fees, costs to comply with reporting requirements of the SEC, transfer agent fees, costs for additional accounting, legal and administrative personnel, increased auditing, tax and legal fees, stock exchange listing fees, additional stock compensation expense and similar expenses.

Research and Development – represents primarily employee and contractor compensation, supplies and materials for new product development and facility costs.

Amortization of Intangible Assets – represents customer relationships, technology and trade names acquired in business combinations that are not directly related to the delivery of our products or services and are amortized based on their pattern of economic benefit over their estimated useful lives.

Change in Contingent Consideration – As part of the acquisition of Tribe Aerospace, LLC in 2022, we agreed to pay contingent consideration to the sellers for any EBITDA (as defined in the earnout arrangement) recognized over certain thresholds during the earnout period from 2022-2024. The contingent consideration was settled using a combination of cash and Class A units based on converting a portion of each contingent payment to units at the fixed contractual price per unit. The change in fair value of the liability during the six months ended June 30, 2025 represents accretion of the discounted liability outstanding during the period. All earnout arrangement liabilities were settled as of December 31, 2025.

Interest Expense – consists primarily of interest expense incurred on borrowings under our credit agreements.

Interest Income – consists primarily of interest income earned on cash and cash equivalents.

S19 | AEVEX Form 10-Q, 12 August 2026, PDF p.40. Cost-to-cost recognition and full cost-of-sales policy. Delivery, revenue recognition, billing and cash collection have different clocks. Source file: E03_q2_10Q.pdf.

The April 20 credit agreement provides a $100 million initial term facility, a $75 million delayed-draw facility and a $200 million revolving commitment. Commitment is conditional contractual capacity. It is not proof of an actual post-close draw, available eligible cash or covenant compliance. Initial revolver commitment fee is 0.50%; lower tiers require verified pricing conditions. The forecast retains the dated 6.37% floating rate as a constant proxy and stresses higher rates.

The New Credit Facilities mature on April 20, 2031. Borrowings under the New Credit Agreement are available, at the Borrower's option, as term SOFR loans or base rate loans. Term SOFR loans under the New Credit Agreement accrue interest at a SOFR rate plus an applicable rate of 2.25% to 3.00% (depending on the secured net leverage ratio of the Borrower and its restricted subsidiaries). Base rate loans under the New Credit Agreement accrue interest at a base rate plus an applicable rate of 1.25% to 2.00% (depending on the secured net leverage ratio of the Borrower and its restricted subsidiaries). The Revolving Credit Facility also has a variable commitment fee, which is tied to the secured net leverage ratio of the Borrower and its restricted subsidiaries, which ranges from 0.25% to 0.50% per annum. Unused commitments made under the Delayed Draw Term Loan Facility have a commitment fee that accrues (i) from April 20, 2026, until October 17, 2026, at a rate of 0.00% per annum and (ii) thereafter, at a rate of 0.50% per annum. The commitment period under the Delayed Draw Term Loan Facility ends on the earlier of (i) April 20, 2028 and (ii) the commitments under the Delayed Draw Term Loan Facility being fully drawn or otherwise terminated under the New Credit Agreement. As of June 30, 2026, the interest rate was 6.37% for the term SOFR loans.

The New Revolving Credit Facility does not amortize. As of June 30, 2026, $200.0 million was available to be borrowed under the New Revolving Credit Facility and the unused letters of credit are $40.0 million. The New Term Loan Facility and the New Delayed Draw Term Loan Facility (to the extent funded) will amortize in equal quarterly installments, commencing with the last day of September 30, 2026, in aggregate annual amounts according to the following amortization schedule:

Payment Dates	Annual Amortization Amount (percent of principal)
Year 1	2.5 %
Year 2	2.5 %
Year 3	7.5 %
Year 4	7.5 %
Year 5	10.0 %

Future principal maturities of debt are due as follows (in thousands):

Remainder of year ending December 31, 2026	$	1,250
Year ending December 31, 2027		2,500
Year ending December 31, 2028		5,000
Year ending December 31, 2029		7,500
Year ending December 31, 2030		8,750
Thereafter		75,000
Total debt maturities	$	100,000

The entry into the New Credit Agreement and the termination of the Prior Credit Facilities was accounted for as an extinguishment and the recognition of a $0.9 million loss on extinguishment of debt during the three and six months ended June 30, 2026 that is included in interest expense in the condensed consolidated statements of operations.

Prior Credit Facilities

On March 18, 2020 the Company entered into a Credit Agreement (as amended by Amendment No. 1 to Credit Agreement, dated as of October 28, 2020, Amendment No. 2 to Credit Agreement, dated as of May 7, 2021, Amendment No. 3 to Credit Agreement, dated as of May 15, 2023, Amendment No. 4 to Credit Agreement, dated as of April 30, 2024 and Amendment No. 5 to Credit Agreement, dated as of September 15, 2025, the "Credit Agreement") with a syndicate of lenders, Ankura Trust Company, LLC, as administrative agent and PNC Bank, National Association as revolving agent and collateral agent.

S12 | AEVEX Form 10-Q, 12 August 2026, PDF p.23. Reported debt and interest terms at June. The separately retained April 20 credit agreement supplies amortization, notice and fee details; actual post-close certificates remain unavailable. Source file: E03_q2_10Q.pdf.

T18 | Debt and treasury rules

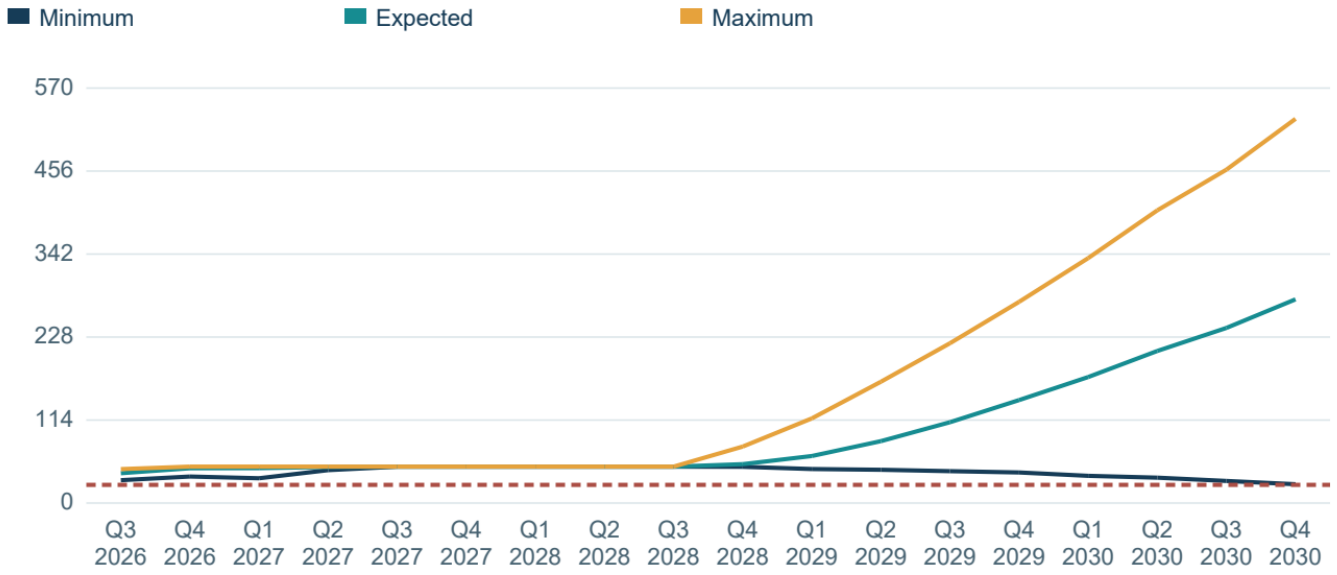

Item	Selected / sourced treatment
Mandatory amortization	2.5% yearly in loan years 1-2; 7.5% in years 3-4; 10% in year 5; equal quarterly installments
June $100m schedule	2028 .625/.625/1.875/1.875; 2030 1.875/1.875/2.5/2.5
Delayed draw	Assumed $75m at close; proportionate amortization is a model assumption
Maturity	20 April 2031, beyond forecast horizon
Optional term minimum	0.25m plus 0.10m increments, or whole remaining loan
Notice / application	SOFR two-business-day 11am New York notice; explicit latest-maturity application
Interest timing	Quarter-end principal repayment reduces next-quarter interest
Optional paydown reserve	50m forecast cash retained; 0.25% ancillary cash-fee reserve is LOW
Model guards	Net leverage 3.5x, then 3.0x from Q3 2029; cash-interest coverage 3x
Legal status	No certified covenant result or assumed lender waiver

The notice-based prepayment policy assumes treasury can forecast cash accurately before the source notice deadline. It does not grant a retroactive election based on realized quarter-end cash. Repaid term debt cannot be reborrowed. The separate 0.25% ancillary fee is a LOW reserve for unknown agent/engagement costs and sits below OP as financing cash. The source's maintenance covenant permits uncapped netting of eligible restricted-group cash; the $30 million cap belongs to pricing/incurrence tests. Consolidated modeled cash is not certified eligible restricted-group cash.

Funding limitation: all 15 selected paths meet the modeled $25 million operating floor and pay planned capex, but minimum cash is only $25.880583 million. A 22.5% probability mass breaches conservative model guards. The forecast assumes continued contractual debt availability, modeled cash access and no accelerated debt enforcement. Public adjusted EBITDA and the model cash-capacity proxy do not establish legal EBITDA. No legal compliance certificate, private QoE/addback schedule, cash-eligibility proof, lender consent or acceleration waiver is available.

The warning consists of 12.5% core-stress/services paths and 10% core-stress/technical-distress paths. Maximum incremental model EBITDA required to meet the selected guard is $35.251572 million. The $30 million comparison from a $150 million pre-close Maritime outlook times a 20% aspiration is only a reference; it is not legal earnings or a cure and leaves $5.251572 million uncovered at the maximum. Operating stress weights and the financing risk point do not separately pay a waiver or acceleration cost. If an actual breach or funding restriction emerges, the constrained response requires explicit re-evaluation.

Conditional closing-cash envelope

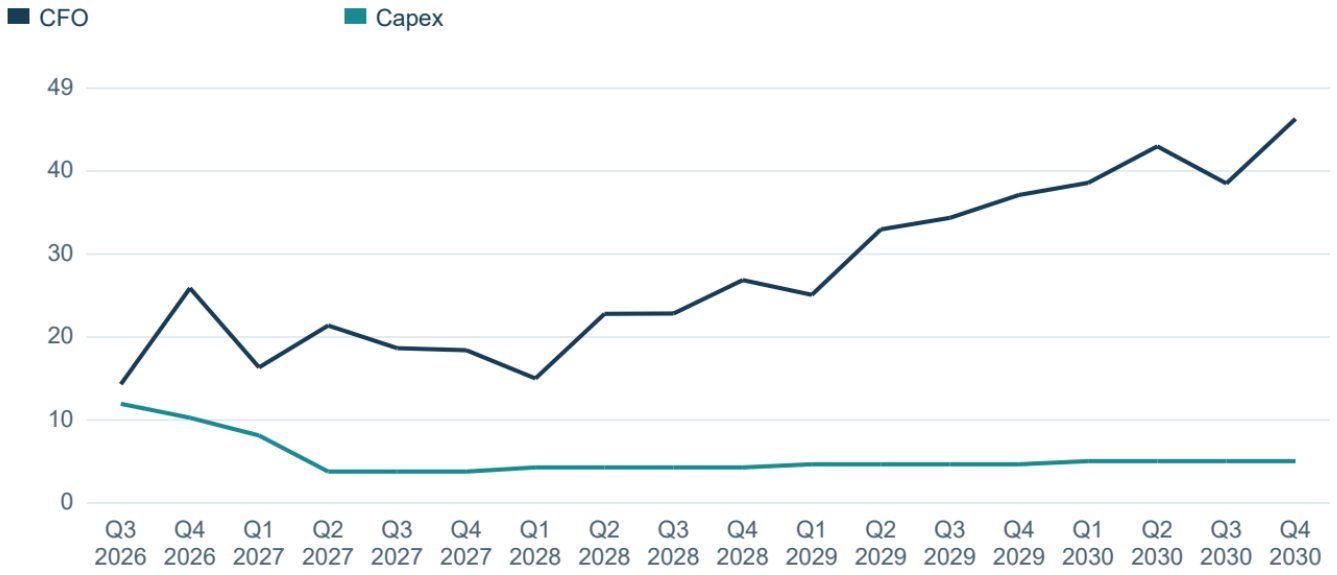

USD millions | all observations: model

Selected conditional model, USD millions. Min/max are path extrema rather than confidence intervals. Floor compliance assumes modeled cash access and continued debt availability; no legal certification is implied.

Up-C, TRA and a matching share denominator

The native method uses whole-company GAAP-style OP with fully converted Class A plus paired Class B/LLC economic units. P remains 100%, Q and R remain zero. The denominator already represents the economic claims to group operations, so a second parent-ownership haircut would mismatch numerator and shares. Class A EPS in the filed statement uses its reported ownership/net-income allocation; it is not the retained OP valuation basis.

NOTE 13. EARNINGS PER SHARE

The following table sets forth the reconciliation of the numerator and denominator used to compute basic and diluted net income per share of Class A common stock for the period following the Organizational Transactions (in thousands, except share and per share amounts):

	Period from April 17, 2026 to June 30, 2026
Numerator	
Net income	$ 4,956
Less: Net income attributable to the noncontrolling interest	(63)
Less: Net income attributable to the redeemable noncontrolling interests	(4,290)
Net income attributable to AEVEX Corp. - basic	603
Add: Net income attributable to the redeemable noncontrolling interests	—
Net income attributable to AEVEX Corp. - diluted	$ 603
Denominator	
Weighted-average Class A shares outstanding - basic	52,805,593
Dilutive effects of:	
Unvested RSUs	—
Unvested PSUs	—
Series B units exchangeable for Class A common stock	—
Weighted-average Class A shares outstanding - diluted	52,805,593
Earnings per share of Class A common stock - basic	$ 0.01
Earnings per share of Class A common stock - diluted	$ 0.01

Series B units, together with an equal number of shares of Class B common stock, may be exchanged, at the Company's option, for shares of its Class A common stock or for cash. After evaluating the potential dilutive effect under the if-converted method, the assumed exchange of all outstanding Series B Units for shares of the Company's Class A common stock was determined to be antidilutive and thus were excluded from the computation of diluted earnings per share. After evaluating the potential dilutive effect under the treasury stock method, the unvested RSUs of 728,586 were determined to be antidilutive and thus were excluded from the computation of diluted earnings per share. In addition, the Company excluded from the computation of diluted earnings per share 268,543 PSUs because the performance contingency has not been met as of the end of the period, and 537,101 PSUs because they are not considered granted for accounting purposes.

NOTE 14. SEGMENT INFORMATION

The Company's chief operating decision making officer ("CODM") is the Company's Chief Executive Officer. Consistent with how the Company evaluates its performance and the way it is organized internally, the Company reports its activities in two segments: i) Tactical Systems, and ii) Global Solutions. The segment information presented below conforms with these two reportable segments, which are organized based on the nature of the Company's products and services offered.

The CODM uses revenue and Segment Adjusted EBITDA to assess segment performance, to make decisions regarding the allocation of capital and other investments, and to monitor budget versus actual results. The CODM considers budget-to-actual variances on a quarterly basis for both revenue and Segment Adjusted EBITDA when making decisions about allocating capital and personnel to the segments and when assessing performance of the segments. Total segment expenses in the aggregate are regularly reported to the CODM and are comprised of cost of revenue, selling, general and administrative expenses, and R&D expenses, excluding depreciation expense. The CODM does not regularly review assets by segment. Therefore, the Company does not disclose assets by segment.

S15 | AEVEX Form 10-Q, 12 August 2026, PDF p.32. Class A EPS and ownership allocation have a different numerator/denominator perimeter from the whole-company operating-profit method used here. Source file: E03_q2_10Q.pdf.

The $95.933 million June TRA book liability has a realized-savings cash clock. The tax/member proxy is 21% x max(0, OP + goodwill impairment + acquired intangible amortization - cash interest - commitment fee), thereby granting no unproved acquired-PPA tax shield. Qualifying parent savings are the minimum of $2 million, 55% of that gross reserve and the remaining TRA book divided by 85%. Cash tax/member distribution equals the gross reserve less those savings; TRA cash is 85% of the savings. These are LOW cash-budget assumptions. The $0.075 million quarterly aircraft-VIE distribution is separately budgeted and does not change the group-OP numerator.

The first native starting-quarter proxy is 127.5 million shares, with 1% annual baseline growth. The 12.727273 million acquisition closing shares are already included. From Q1 2028, explicit earnout branches replace the historical additive reserve once: award paths add 1.785714 million shares at the selected $28 settlement proxy, and no-award paths add none. Expected Q1 2028 shares are 129.812363 million. Different path denominators make a ratio of weighted profits to weighted shares differ from the weighted average of path prices.

Earnout: eligible delivered-lot profit and the independent stock trigger

The contractual measurement period runs from the September 8, 2026 closing through December 31, 2027. The maximum award is $50 million. One route requires $24.750 million of qualifying GARC/Chaser production revenue and $8.910 million production profit; an alternate route including COMET uses $26.630 million and $9.570 million. Specified production, sale and delivery control eligibility. Service and operations CLINs are excluded. Recognition of GAAP progress revenue alone does not prove completion of an eligible lot.

T19 | Legal direct-profit equation and allocation

Element	Treatment
Eligible revenue	Specified produced, sold and delivered contract lots during the measurement period
Direct cost deductions	Materials/subcontracts, direct labor excluding fringe, other directly allocable execution cost
Ordinary provisions	Specific bad debt and ordinary warranty/defect provisions deducted
Exclusions	Indirect overhead; fringe; purchase accounting; interest/investments; specified affiliate, extraordinary, debt-relief, recovery and unrelated/predecessor credits
Root delivered-lot proxies	GARC/Chaser 80%, COMET 15%, other 5%; paid delivery fraction 100%, no-award diagnostic 80%
Root labor / overhead proxies	25% fringe markup on base labor: direct labor = burdened payroll / 1.25. Paid variable OH 50% direct, fixed OH 0% direct; no-award 100% / 50%
Technical allocation	Extra remediation relates to pre-period fleet/service work; ordinary new-product warranty remains deducted
Legal confidence	Terms from Appendix A; numerical cost/family/delivery allocations LOW and unverified

For each qualified lot, modeled legal direct profit equals eligible revenue less material/subcontract cost, direct labor excluding fringe, directly allocable execution overhead and ordinary warranty/defect/bad-debt provisions. GAAP group costs remain in the financial model regardless of their legal allocation. Technical remediation is assumed to concern pre-period fleet/service work; that LOW allocation is stressed. It cannot justify excluding an ordinary new-lot warranty provision. No issuer legal earnout certificate or contract-lot schedule has been recovered.

The production test is separate from a highest 30-trading-day VWAP of at least $28. A no-award branch can pass production and still fail the stock trigger. The settlement VWAP on or before December 31, 2027 is a different quantity from both that trigger and the $27.50 acquisition closing price. The selected $28 settlement proxy implies $50/28 = 1.785714 million shares. The remaining cap is 22.790 million less 12.727273 million closing shares and any Section 1.10 adjustments, or 10.062727 million before those adjustments. That cap is not binding at the selected proxy.

Cash applies to specified cap shortfalls or the reorganization-related 40% stock limitation under the agreement. The model does not pay a full cash award and full share award together. A statement follows within 45 days, with a 30-day dispute process and extensions, then payment within ten business days after final determination. Q1 2028 is a settlement timing proxy. Actual end-period VWAP, adjustments, eligibility and final determination remain unknown.

P15	No	15.772000	-3.223517	18.729250	-3.827927	No

Combined payout probability is 50% within acceptance and 15% within services. Distress has zero effective payout only because even its entire requested-period product revenue is $24.643750 million, below the lower $24.750 million threshold. The $0.106250 million margin is thin and depends on LOW product mix/timing. It is a conditional model bound rather than a source claim of legal impossibility. Changed eligible scope or delivery timing would require a fresh production test. The requested 2% distress payout is therefore not applied in the selected distribution.

Quarterly income and all fifteen forward-four-quarter ceilings

Every forecast quarter is built from its path-level paid revenue and full cost bridge before weighting. Expected operating profit is the sum of path OP times path probability. The ceiling is calculated within each path from its current and next three OP terms, multiplied by 20 and divided by that path's starting-quarter fully converted shares. The report then weights those conditional prices. The ratio of expected OP to expected shares is retained only as a diagnostic after share outcomes diverge.

Native conditional ceiling path

USD per fully converted share | all observations: model

Model conditional on continued debt availability, consolidated cash access and no accelerated enforcement. The active horizon is Q4 2027. Q2-Q4 2030 remain incomplete and are omitted from the line rather than assigned zero.

C10-data | Native conditional ceiling path | plotted data

Q1 2030	24.847638

Q3 2026 chain: expected OP terms 13.193440 + 3.887587 + -6.916149 + 1.825956 = 11.990834 million. The exact path calculation is E[20 x (OP0 + OP1 + OP2 + OP3) / starting shares] = $1.880915. Expected starting shares are 127.500000 million; the ratio-of-expectations diagnostic is $1.880915. The conditional four-term inputs for all fifteen outcomes appear in Appendix B.

Q4 2026 chain: expected OP terms 3.887587 + -6.916149 + 1.825956 + 9.860276 = 8.657670 million. The exact path calculation is E[20 x (OP0 + OP1 + OP2 + OP3) / starting shares] = $1.354692. Expected starting shares are 127.817562 million; the ratio-of-expectations diagnostic is $1.354692. The conditional four-term inputs for all fifteen outcomes appear in Appendix B.

Q1 2027 chain: expected OP terms -6.916149 + 1.825956 + 9.860276 + 2.894678 = 7.664761 million. The exact path calculation is E[20 x (OP0 + OP1 + OP2 + OP3) / starting shares] = $1.196349. Expected starting shares are 128.135914 million; the ratio-of-expectations diagnostic is $1.196349. The conditional four-term inputs for all fifteen outcomes appear in Appendix B.

Q2 2027 chain: expected OP terms 1.825956 + 9.860276 + 2.894678 + 13.140115 = 27.721026 million. The exact path calculation is E[20 x (OP0 + OP1 + OP2 + OP3) / starting shares] = $4.316066. Expected starting shares are 128.455060 million; the ratio-of-expectations diagnostic is $4.316066. The conditional four-term inputs for all fifteen outcomes appear in Appendix B.

Q3 2027 chain: expected OP terms 9.860276 + 2.894678 + 13.140115 + 19.326380 = 45.221449 million. The exact path calculation is E[20 x (OP0 + OP1 + OP2 + OP3) / starting shares] = $7.023327. Expected starting shares are 128.775000 million; the ratio-of-expectations diagnostic is $7.023327. The conditional four-term inputs for all fifteen outcomes appear in Appendix B.

Q4 2027 chain: expected OP terms 2.894678 + 13.140115 + 19.326380 + 23.215311 = 58.576484 million. The exact path calculation is E[20 x (OP0 + OP1 + OP2 + OP3) / starting shares] = $9.074890. Expected starting shares are 129.095737 million; the ratio-of-expectations diagnostic is $9.074890. The conditional four-term inputs for all fifteen outcomes appear in Appendix B.

Q1 2028 chain: expected OP terms 13.140115 + 19.326380 + 23.215311 + 29.492108 = 85.173914 million. The exact path calculation is E[20 x (OP0 + OP1 + OP2 + OP3) / starting shares] = $13.104649. Expected starting shares are 129.812363 million; the ratio-of-expectations diagnostic is $13.122620. The conditional four-term inputs for all fifteen outcomes appear in Appendix B.

Q2 2028 chain: expected OP terms 19.326380 + 23.215311 + 29.492108 + 27.554040 = 99.587839 million. The exact path calculation is E[20 x (OP0 + OP1 + OP2 + OP3) / starting shares] = $15.285361. Expected starting shares are 130.134700 million; the ratio-of-expectations diagnostic is $15.305347. The conditional four-term inputs for all fifteen outcomes appear in Appendix B.

Q3 2028 chain: expected OP terms 23.215311 + 29.492108 + 27.554040 + 32.986450 = 113.247909 million. The exact path calculation is E[20 x (OP0 + OP1 + OP2 + OP3) / starting shares] = $17.339531. Expected starting shares are 130.457839 million; the ratio-of-expectations diagnostic is $17.361610. The conditional four-term inputs for all fifteen outcomes appear in Appendix B.

Q4 2028 chain: expected OP terms 29.492108 + 27.554040 + 32.986450 + 37.291125 = 127.323724 million. The exact path calculation is E[20 x (OP0 + OP1 + OP2 + OP3) / starting shares] = $19.447075. Expected starting shares are 130.781784 million; the ratio-of-expectations diagnostic is $19.471171. The conditional four-term inputs for all fifteen outcomes appear in Appendix B.

Q1 2029 chain: expected OP terms 27.554040 + 32.986450 + 37.291125 + 40.944074 = 138.775690 million. The exact path calculation is E[20 x (OP0 + OP1 + OP2 + OP3) / starting shares] = $21.144287. Expected starting shares are 131.106535 million; the ratio-of-expectations diagnostic is $21.169912. The conditional four-term inputs for all fifteen outcomes appear in Appendix B.

Q2 2029 chain: expected OP terms 32.986450 + 37.291125 + 40.944074 + 42.695372 = 153.917022 million. The exact path calculation is E[20 x (OP0 + OP1 + OP2 + OP3) / starting shares] = $23.394372. Expected starting shares are 131.432096 million; the ratio-of-expectations diagnostic is $23.421527. The conditional four-term inputs for all fifteen outcomes appear in Appendix B.

Q3 2029 chain: expected OP terms 37.291125 + 40.944074 + 42.695372 + 45.710921 = 166.641492 million. The exact path calculation is E[20 x (OP0 + OP1 + OP2 + OP3) / starting shares] = $25.266558. Expected starting shares are 131.758467 million; the ratio-of-expectations diagnostic is $25.294996. The conditional four-term inputs for all fifteen outcomes appear in Appendix B.

Q4 2029 chain: expected OP terms 40.944074 + 42.695372 + 45.710921 + 37.251950 = 166.602317 million. The exact path calculation is E[20 x (OP0 + OP1 + OP2 + OP3) / starting shares] = $25.197950. Expected starting shares are 132.085651 million; the ratio-of-expectations diagnostic is $25.226407. The conditional four-term inputs for all fifteen outcomes appear in Appendix B.

Q1 2030 chain: expected OP terms 42.695372 + 45.710921 + 37.251950 + 39.038296 = 164.696539 million. The exact path calculation is E[20 x (OP0 + OP1 + OP2 + OP3) / starting shares] = $24.847638. Expected starting shares are 132.413650 million; the ratio-of-expectations diagnostic is $24.876067. The conditional four-term inputs for all fifteen outcomes appear in Appendix B.

Negative conditional OP and negative conditional arithmetic ceilings are retained as loss diagnostics under the locked OP method. They do not represent money owed by investors or a separate shareholder-liability claim. The aggregate ceiling is a native analytical operating-profit measure, with the stated financing assumptions, rather than a liquidation or lender-certified valuation.

T24 | Long-range cross-check | forecast period scope

Period	Revenue	GP	OP
2026 H2/post-close only	332.631014	86.591182	17.081027
2027 full forecast	755.750539	176.525811	7.664761
2028 full forecast	1,006.904410	253.426589	85.173914
2029 full forecast	1,257.004278	323.536177	138.775690
2030 full forecast	1,420.741313	360.138999	164.696539

The 2026 row above contains only H2 legacy plus post-close acquired forecasts. It is not a full-year consolidated forecast. The explicit full-year legacy revenue planning bridge is H1 actual $418.484 million plus expected legacy H2 $291.516 million = $710 million, matching the guide midpoint. Acquired pre-close revenue is excluded. Annual totals are operating cross-checks; the valuation remains the current-quarter-plus-next-three method.

What breaks: accounting, productivity and liquidity stresses

Sensitivity cases hold the selected joint law and other inputs fixed unless the case explicitly changes probabilities. They are diagnostics rather than additional scenarios added to the active distribution. Acquired intangible allocation/life affect OP; cash consideration, rates and treasury policy affect cash and debt. Lower paid-resource productivity changes eligible output and related costs. Ordinary warranty stress also changes legally allocable production profit. No favorable point is rounded upward for optionality.

T25 | Twenty controlled diagnostics | ceilings USD/share, cash USD millions

adverse core weights 15 45 40	5.290377	18.941253	25.880583	0.000000	0.00%	36.00%

Selected baseline: Current approved conditional baseline. The debt-availability, cash-access and enforcement limitations in Section 9 apply.

Acquired intangibles 180m: Acquired intangibles are $180 million, with the corresponding consideration allocation moved to residual goodwill. Amortization changes while total consideration and acquisition cash are held fixed. This allocation remains a model estimate; final PPA is unavailable.

Acquired intangibles 360m: Acquired intangibles are $360 million, with the corresponding consideration allocation moved from residual goodwill. Amortization changes while total consideration and acquisition cash are held fixed. This allocation remains a model estimate; final PPA is unavailable.

Acquired intangibles life 32quarters: Acquired intangible life is eight years. Recurring amortization rises; the purchased asset amount and total consideration are unchanged.

Acquired intangibles life 60quarters: Acquired intangible life is fifteen years. Recurring amortization falls; the purchased asset amount and total consideration are unchanged.

Distress goodwill impairment 0m: The distress goodwill charge is zero. Ordinary cash support and the acquired intangible-amortization base remain unchanged.

Distress goodwill impairment 120m: The distress goodwill charge is $120 million. This noncash operating charge changes GAAP-style OP while ordinary cash support and the acquired intangible-amortization base remain unchanged.

Floating rate plus 200bp: The floating borrowing rate is two percentage points higher. Cash interest, financing capacity and model guards respond; OP changes only where resource funding changes. Funding failures remain explicit.

Floating rate plus 400bp: The floating borrowing rate is four percentage points higher. Cash interest, financing capacity and model guards respond; OP changes only where resource funding changes. Funding failures remain explicit.

Acquisition cash 235m: Closing acquisition cash is $235 million in this LOW adjustment diagnostic. Other purchase allocations are held fixed to isolate cash effects; this is not an observed closing statement.

Acquisition cash 265m: Closing acquisition cash is $265 million in this LOW adjustment diagnostic. Other purchase allocations are held fixed to isolate cash effects; this is not an observed closing statement.

No optional term prepayment: Optional term prepayments are disabled. Mandatory principal continues, leaving additional cash and debt outstanding; this is a treasury-policy diagnostic.

High tax no qualifying savings: The tax/member cash reserve is 28% with no qualifying tax-basis savings. The diagnostic measures cash exposure without assuming an unverified shield.

Productive output per paid resource x0.9: Monetary eligible output per paid resource is 10% lower, with demand and paid trained resources unchanged. Funding and legal payout feasibility respond through the same conditional model.

Productive output per paid resource x1.1: Monetary eligible output per paid resource is 10% higher, with demand and paid trained resources unchanged. Funding and legal payout feasibility respond through the same conditional model.

Maritime ordinary warranty plus 2%: Ordinary Maritime warranty expense rises by two percentage points of product revenue. It affects GAAP cost of sales, cash and legally allocable delivered-lot profit.

Maritime ordinary warranty plus 5%: Ordinary Maritime warranty expense rises by five percentage points of product revenue. It affects GAAP cost of sales, cash and legally allocable delivered-lot profit; failed payout branches require revised active economics.

Restricted prepaid 0.45: The frozen restricted-prepaid allocation is $0.45 million. The reported $0.895 million restricted total remains outside opening unrestricted cash, so no second subtraction is made.

Restricted prepaid 0.55: The frozen restricted-prepaid allocation is $0.55 million. The reported $0.895 million restricted total remains outside opening unrestricted cash, so no second subtraction is made.

Adverse core weights 15 45 40: Core probabilities are 15% funded expansion, 45% orderly replacement and 40% procurement stress. This is a probability diagnostic; the selected 25/50/25 distribution is unchanged.

Unfunded sensitivity outputs are arithmetic diagnostics, not financed targets. +200 basis points produces up to $2.620506 million of cash-floor gap; +400 basis points up to $9.057781 million. Ten percent lower productive output per paid resource produces up to $15.613132 million of gap. Selected cash/capacity deferral responses do not certify lender consent or provide an automatic equity rescue. A $265 million closing-cash diagnostic uses model revolver capacity and deferred investment; it is outside the no-new-draw baseline. A 5-point ordinary warranty increase makes 7.125% payout-branch probability fail its legal-production proxy; that diagnostic requires revised payout economics before becoming an active forecast.

Same-window Q4 2027 diagnostics

Same Q4 2027 window, 20x and matching path starting shares. Cases with funding or legal-payout failures remain qualified raw diagnostics. Underlying values appear directly below.

Thesis quality, five risks and falsifiable tests

The score sums the evidence judgments without modifying the native ceiling a second time. Core earns 12/20 for mission manufacturing and integration with a temporal qualification advantage. Cycle earns 7/10 for a defense upcycle alongside replacement risk. TAM earns 8/10 for bounded air/water/ISR adjacencies. Catalysts earn 3/5, Macro 8/10 and Alpha 2/5. Public coverage and contested maritime evidence limit the alpha claim; no verified consensus miss is asserted.

T27 | Analytical score

Category	Points	Maximum	Evidence
Core	12	20	Useful mission manufacturing; no group-wide permanent monopoly
Cycle	7	10	Defense upcycle; DeepStrike replacement transition
TAM	8	10	Air/water/ISR adjacencies with bounded capture
Catalysts	3	5	Qualification, financial release, paid ramp
Macro	8	10	Defense autonomy and attritable mission demand
Alpha	2	5	Public coverage; disputed Maritime evidence
Risks	-5	0	Five separately identified risk classes
Total	35	60	58.333333%; ordinary display 58; Fail

T28 | Five independent risk classes | each -1

Class	Economic exposure	Counter / revision evidence
1. Program/procurement concentration	Runoff, competitive capture and award timing	Funded domestic/allied replacement; lower-cost rival evidence; realized tasking
2. Technical acceptance / fixed-price support	Reliability, ordinary warranty and incremental remedy	Independent qualification; accepted output; actual remedy cost
3. Paid manufacturing / acquisition integration	Training, finite plant, PPA and support overhead	Paid fitout, trained throughput and realized full margins
4. Financing / dilution / legal cash	Cash access, rates, covenant definitions, earnout and TRA	Closing statements, certificates, eligible cash, actual settlement
5. Governance / controls / information quality	Material weaknesses and complex information	Remediation evidence and reliable reporting; allegations remain unproven

Inflation Risk

We have generally experienced increases in our costs of labor, materials and services consistent with overall rates of inflation, but we do not believe that inflation has had a material effect on our business, results of operations, or financial condition. We expect the impact of such increases will be mitigated by efforts to lower costs through manufacturing efficiencies, seek alternative sourcing and reevaluate pricing, as we did in the prior periods. However, any continued cost inflation and supply chain disruptions may require similar efforts to mitigate the impact of continued cost inflation and supply chain disruptions on our results of operations. Our inability or failure to offset cost increases could adversely affect our business, results of operations, or financial condition.

ITEM 4. CONTROLS AND PROCEDURES

Evaluation of Disclosure Controls and Procedures

Our disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Exchange Act of 1934, as amended (the "Exchange Act")) are designed to ensure that information required to be disclosed by us in reports we file or submit under the Exchange Act, is recorded, processed, summarized, and reported within the time periods specified in SEC rules and forms, and that such information is accumulated and communicated to our management, including our Chief Executive Officer and Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure. Our management, under the supervision and with the participation of our Chief Executive Officer and Chief Financial Officer, has evaluated the effectiveness of our disclosure controls and procedures as of June 30, 2026, the end of the period covered by this Quarterly Report. Based on that evaluation, our Chief Executive Officer and Chief Financial Officer have concluded that, as of June 30, 2026, our disclosure controls and procedures were not effective, due to the material weaknesses in our internal control over financial reporting described below.

Material Weaknesses in Internal Control Over Financial Reporting

A material weakness is a deficiency, or a combination of deficiencies, in internal control over financial reporting such that there is a reasonable possibility that a material misstatement of our annual or interim consolidated financial statements will not be prevented or detected on a timely basis.

As previously reported, we identified material weaknesses in our internal control over financial reporting. We did not design and maintain an effective control environment, as we lacked a sufficient complement of personnel with an appropriate level of internal controls and accounting knowledge, training and experience commensurate with our financial reporting requirements. The limited personnel resulted in our inability to consistently establish appropriate authorities and responsibilities to support our financial reporting objectives, as demonstrated by, among other things, insufficient segregation of duties in our finance and accounting functions. Further, due to rapid business growth, the design and implementation of controls have not been sufficient to respond to changes to the risks of material misstatement to financial reporting. These material weaknesses contributed to the following additional material weaknesses: We did not design and maintain formal accounting policies, procedures, and controls to achieve complete, accurate, and timely financial accounting, reporting and disclosures, including controls over the preparation and review of account reconciliations and journal entries, and control activities related to all significant accounts and disclosures. These material weaknesses resulted in audit adjustments to substantially all account balances in the Company's consolidated financial statements as of and for the years ended December 31, 2025 and 2024, certain of which were material. In addition, these material weaknesses resulted in immaterial errors related to inventories, prepaid expenses, cost of revenue, and selling, general and administrative expenses as of and for the year ended December 31, 2025, immaterial errors related to revenue, cost of revenue, contract assets, and accrued expenses as of and for the year ended December 31, 2025 and for the three months ended March 31, 2026, and immaterial errors related to segment reporting disclosures for each of the interim and annual periods ended December 31, 2025 and for the interim period ended March 31, 2026.

S21 | AEVEX Form 10-Q, 12 August 2026, PDF p.59. Disclosed control and operational risks. The score recognizes reporting uncertainty without treating an allegation as an adjudicated fact. Source file: E03_q2_10Q.pdf.

The five classes represent different failure channels, not five independent probability multipliers. A warranty dollar appears once in the operating/cash bridge; integration risk does not charge the same loss again. The financing point measures thesis quality and does not create lender-waiver cash. The protected workbook Base remains 62 even though the current derived analytical result is 58.333333%.

T29 | Dated tests and pre-committed directions

When / evidence	Stronger outcome	Weaker outcome
Next quarterly release	Replacement revenue backed by awards and paid margin	DeepStrike recognition rolls off faster than new capture
Tampa ramp / qualification disclosure	Trained throughput, commissioned equipment and accepted work	Hiring/capex paid without eligible output; support costs rise
Navy / issuer technical evidence	Corroborated successor acceptance and durable tasking	Confirmed technical failure and actual remediation burden
Acquired financial/PPA amendment	Matched closing cash, assets, audited economics	Higher amortization, working capital or integration cost
Credit / legal certificates	Verified restricted cash and headroom	Actual borrowing restriction or enforcement needs a constrained model
Earnout statement / end-period VWAP	Contractual production and stock tests established	Changed eligible scope, direct costs, share cap or cash alternative

Cross-book transmission runs through actual defense procurement, accepted delivery and qualified manufacturing capacity. AEVEX and Electro Optic Systems share exposure to defense budget timing and mission qualification, while their platforms, contracting entities and acceptance requirements differ. EO/ISR and autonomy peers provide cost-per-mission and supply-chain comparisons where customer scope matches. SpaceX or AI-cloud spending supplies no separate AEVEX revenue. A portfolio-wide uniform haircut would obscure the company-specific award, technical and financing channels.

Appendix A: conditional income, cash and paid resources

Each path below uses the joint probability in T13. The tables retain all 270 forecast path-quarter rows. Numbers are model estimates in USD millions, except FTE and ratios. Income includes recurring DA in its declared cost location and the single distress goodwill charge. Cash is conditional on the financing limitations in Section 9. Baseline has zero unpaid-capex/hiring-suppression events; its success alone does not exercise the adverse cash-response branches.

Conditional model | probability 6.2500% | USD millions

P01: funded expansion / new platform acceptance / no award

Conditional cash forecast assumes contractual debt availability, modeled consolidated cash access and no accelerated enforcement. Legal covenant compliance is unverified. All displayed financial figures are LOW forecast estimates.

Appendix B: all 225 exact conditional four-term chains

For path p and starting quarter q: F4 OP = OP(q)+OP(q+1)+OP(q+2)+OP(q+3); path ceiling = 20 x F4 OP / starting-quarter fully converted shares. E(path ceiling) is the probability-weighted sum across the fifteen mutually exclusive paths. Display uses six decimals; raw canonical precision is retained in the underlying data. Each path's Q2, Q3 and Q4 2030 ceilings remain incomplete true tails.

Appendix C: expected cost components and accounting equations

The following tables show all 39 disjoint recognized cost components at expected value. Rows are weighted after the conditional cost calculation. All 39 sum once to COGS plus operating expenses, equal to revenue less OP. Legacy external-service capacity is a real additional paid H2 cost of sales and belongs in that sum. The aggregate DA and SBC addback views elsewhere reconcile expenses already included in these cost components; they are not additional expense rows.

Cash equation: closing cash = opening cash + CFO - paid capex - acquisition cash + delayed draw + new revolver draw - draw fees - mandatory principal - optional revolver/term principal - optional ancillary fee - opening capital AP settlement - VIE distribution + new equity cash. CFO = OP + total DA + SBC + noncash impairment - change in operating NWC - cash interest - unused facility fee - cash tax/member distribution after savings - TRA cash + expense-to-cash changes for warranty/technical reserves - opening incentive settlement. The selected baseline has zero new revolver/equity. Exact conditional cash observations in Appendix A retain these timing results. Source legal compliance remains separate from modeled cash arithmetic.

Appendix D: source register and remaining evidence gaps

The April 20 credit agreement is retained with targeted primary passages and a mirror HTML original after direct official-fetch errors; source terms are separated from LOW forecast treasury choices.

T30 | Unresolved inputs with material economic consequences

Gap	Current bounded treatment	Evidence that replaces it
Acquired audited/pro forma/PPA	20m PPE / 240m intangibles / 315m goodwill / 25m NWC LOW	Filed statements and matched purchase accounting
Actual closing cash and debt draw	250m cash / 75m delayed draw conditional	Closing adjustment and bank/facility statements
Contract EBITDA / restricted-group cash	Public modeled proxy; 22.5% warning mass	Compliance certificates, QoE/addbacks, eligible cash
Program ASP, labor, materials and shipments	Explicit LOW calibrated resources and capture	Qualified units, actual bills of material and accepted margin
GARC technical outcome	Joint services/distress/acceptance with paid costs	Independent technical evidence and actual tasking
Earnout legal lots / final VWAP	LOW delivery/direct-cost allocations and $28 settlement	Statement, dispute result, eligible schedules, actual VWAP
Management spoken source	Complete saved written calls; audio false	Independent audio review
Dated current quote / holding	Undated context; holding unspecified	Dated verified quote / explicit holding evidence

Snapshot basis: AEVEX financial model, 22 October 2026; framework 8.0 consolidated. The model is an explicitly conditional operating forecast with LOW program/resource/PPA proxies. Supporting frozen numerical data accompany the synchronized report. The PDF is complete offline with embedded figures and selectable derivation tables.
