EOS: accepted system profit requires funded delivery

EOS combines fielded remote weapon systems, direct high-energy lasers, space technology and MARSS command-and-control integration. The opportunity is to turn accepted external deliveries into operating profit after purchased components, own people, engineering, warranty support and depreciation. A large prime contract can lift revenue much more than owned economic value.

The current case includes one conditional Kuwait programme. Its headline already includes third-party sensors and effectors. The forecast replaces the prior generic growth curve rather than adding the headline on top of that curve. The investment case depends on funded acceptance and a defensible system contribution, not the contract face value alone.

Current case	Value / boundary
Active operating ceiling	10
Currency and unit	AUD per ordinary share; reader displays rounded to whole units
Window	Q4 2027 through Q3 2028
Method	20x expected operating profit after depreciation / expected starting-quarter ordinary-share proxy
Analytical score	41/60; rounded 68; Watchlist
Protected Excel Base	68
Market quote	No fresh dated quote verified; no price-return or upside claim
Latest actual	H1 ended June 30, 2026, released August 25

This ceiling is a conditional earnings framework, not a statement that financing is secured. Some paths require a finite new-equity cure which has not been committed. Cash-flow viability is separate from the operating ratio, and quarter-end cash does not establish daily liquidity.

Reader money, share counts and percentages use whole units. A nonzero amount below one million is shown as <1. Negative amounts use parentheses. Exact model values and a labeled technical precision appendix preserve the arithmetic; independently rounded rows may not add exactly.

Funding and collection risk are part of the thesis

Removing all new-equity access causes about 21% of selected-business probability mass to breach the quarter-end cash floor, first in Q1 2028. The raw operating ratio can remain unchanged in an earlier window because the native denominator uses that window's starting shares. A raw ratio from an unfunded path is not an executable target.

The forecast uses a LOW 60-day future collection target while blending from actual balances. June receivables divided by H1 revenue and multiplied by 180 gives about 166 days as a simple historical ratio; it is not contractual DSO. Slower collections, larger liquidity reserves and unreleased collateral can exhaust the finite funding allowance.

Risk test	AR days	Cash floor	Expected gross equity	Maximum gross equity	Unfunded mass	First breach
AR120	120	20	45	200	1%	Q3 2030
AR166 historical ratio stress	166	20	137	200	20%	Q4 2028
quarter cash buffer80	60	80	27	200	1%	Q3 2030
combined AR120 buffer80 no security release full backing	120	80	181	200	31%	Q2 2028

The extra collection and reserve tests are analytical risk diagnostics. They do not revise the selected operating forecast. The 80 million quarter-end buffer is a rough peak-funding stress rather than a daily cash model. A completed financing formula proves neither bank consent nor actual capital access.

EOS | CURRENT FRAMEWORK | OCTOBER 22, 2026

Business, differentiation and competitive limits

Remote weapon systems provide an established external-delivery base. Direct HEL products add a larger system opportunity, while MARSS NiDAR integrates sensors, command and control, and effectors. Space remains a separate activity. These streams have different material economics, customer-acceptance schedules and engineering requirements, so the model does not apply one margin to every defense receipt.

The useful bottleneck is qualified, accepted performance supported by paid engineering, integration and supply. EOS has differentiated technology and an installed franchise, but the source packet does not prove sole-source control, exclusive tender access or a permanent monopoly. MARSS prime integration also imports supplier, warranty, localization and funding dependencies. The classification is a differentiated supplier and system-integrator beneficiary with potential temporary bottlenecks.

Comparative rival production cost, accepted unit price, yield and win-rate data are unavailable in the primary packet. There is therefore no invented market-share win or competitor-margin spread. The forecast expresses accepted company receipts and paid resources, with downside tests for weaker contribution and higher costs.

Demand, phased market expansion and company capture

Counter-drone defense demand supports the nearer opportunity: remote weapons, lasers and integrated command-and-control systems. The second opportunity is broader system integration and localized production. Space-control programmes add longer-dated optionality. These phases describe eligible demand; they are not separately stacked market wallets or extra forecast probabilities.

The company-specific receipt bridge is finite. June backlog is scheduled once; new external receipt budgets are accepted-revenue assumptions rather than signed orders. The conditional Korea programme and additional space option have their own delivery gates. Gen5 JV gross pipeline, Dutch and Czech letters or memoranda, and factory-development announcements do not become extra EOS consolidated revenue merely by being mentioned.

Excluded / bounded item	Treatment
Gen5 JV gross USD250M/290M pipeline is not EOS consolidated receipts; no awarded development or recurring royalty assumed. Equity-accounted profits/cash not valued as native operating profit without evidence.	No separate additive revenue or native-OP value
Dutch LOI/factory, Czech MoU and US development completion are opportunity evidence within receipt budgets, not separate awards or free capacity.	No separate additive revenue or native-OP value
No additional SpaceX or German defense-wallet allocation; no NAV or net-cash addition under native20x OP.	No separate additive revenue or native-OP value
No MARSS earnout fair-value remeasurement in underlying OP. Real contingent cash/financing risk remains explicit and stressed. No claim that June164.082 contingent liability was discharged.	No separate additive revenue or native-OP value

TAM expansion matters only through company capture after overlap, supplier purchases, staff, capital and acceptance. No new global defense wallet, SpaceX allocation or net-asset-value addition is placed on top of the native operating-profit method.

Reported H1 cost basis and the non-GAAP bridge

Reported H1 revenue and materials expense produce a materials contribution before separately reported labor, occupancy, administration, other expenses and depreciation. That contribution is not fully burdened production gross profit. Reported underlying EBITDA is a non-IFRS, unaudited measure and is not operating profit after depreciation.

H1 actual / source bridge	AUD million
H1 revenue	169
materials expense	72
materials contribution	97
employee	53
occupancy	2
administration	25
other expense	5
DA	10
rounded underlying EBITDA	22
rounded other adjustment	10
identified expensed advisory	5
identified expensed signon	2

Only identified sign-on and advisory expenses are removed from the analytical fixed base. The issuer's full rounded acquisition adjustment is not itemised; the unallocated remainder is neither removed nor assigned to an invented future cost category. The extra full-quarter MARSS consolidation budget is a LOW allowance above a partial-period H1 base, not a separately disclosed recurring payroll figure.

ELECTRO OPTIC SYSTEMS HOLDINGS LIMITED

Consolidated Statement of Profit or Loss and Other Comprehensive Income for the half-year ended 30 June 2026

		30 June 2026	30 June 2025
Continuing operations	**Note**	**$(000's)**	**$(000's)**

Notes to the consolidated financial statements are included on pages 19 to 38.

H1 2026 statutory income statement: AUD thousands, with EPS in cents per share. Materials, employees, depreciation, amortisation and contingent-consideration fair value are separate lines. Source: 2026-08-25, original PDF page 17 (printed 15). Original issuer / ASX document.

Underlying EBITDA is not the valuation numerator

RECONCILIATION OF STATUTORY PROFIT / (LOSS) AND NON-GAAP MEASURES

A$M	1H 2026	1H 2025
(Loss) for the period	**(33.7)**	**(44.8)**
Income tax expense/(benefit)	4.8	(0.4)
(Loss) before tax	**(28.9)**	**(45.2)**
Net finance (income) / costs	(2.8)	15.0
EBIT (loss)	**(31.7)**	**(30.2)**
Foreign exchange (gain) / loss	(1.2)	5.8
Depreciation & amortisation	10.3	9.5
Fair value remeasurement of MARSS contingent consideration[1]	34.0	-
Other non-recurring non trading **expense adjustment**[2]	10.2	-
Underlying EBITDA gain/(loss) (before foreign exchange gains/losses) [3]	**21.6**	**(14.9)**

Notes:

1. This fair value remeasurement includes the impact of the change in EOS share price as well as the managements assessment of the probability of contract wins between the date of acquisition (20 May 2026) and 30 June 2026 and the impact of this on the value of EOS shares estimated to be issued as contingent consideration. More information on the MARSS earn out was announced on 15 May 2026. Further adjustments are expected at 31 December 2026 and 30 June 2027 and may increase or decrease EBITDA depending on the EOS share price and the assessment of the likelihood of contract wins at those dates.
2. Other costs relating to the acquisition of MARSS
3. Underlying EBITDA is a non-IFRS measure and comprises net profit after tax, adjusted to exclude significant items such as tax, net finance costs, depreciation and amortisation, foreign exchange, and other non-recurring non trading impacts. The directors consider it useful as it enables readers to obtain an understanding of results from operations. Underlying EBITDA is not audited by the Company's auditors.

Electro Optic Systems

31

Issuer reconciliation from statutory loss to underlying EBITDA, in AUD millions. The underlying measure is non-IFRS and unaudited; the acquisition-cost adjustment is described generically. Source: 2026-08-25, original PDF page 31 (printed 31). Original issuer / ASX document.

The statutory-to-underlying reconciliation removes foreign exchange, contingent-consideration fair value and acquisition-related items to describe a non-IFRS earnings measure. The forecast then pays explicit resource budgets and asset depreciation. It does not use a 20% EBITDA target as operating profit or add back the same PPA amortisation twice.

Cash and cash equivalents at the end of the half-year		**256,025**	**90,289**

Notes to the consolidated financial statements are included on pages 19 to 38.

18

H1 2026 cash-flow statement in AUD thousands, separating operating cash, acquisition payments, security deposits, equity funding, borrowing and lease principal. Source: 2026-08-25, original PDF page 20 (printed 18). Original issuer / ASX document.

June cash excludes the separately reported security deposits. The later July cash and August collateral movement are included once in the forecast bridge. Existing May equity, borrowing and acquisition cash, together with June deposits, are already reflected in the actual opening balance; they are not received or spent a second time.

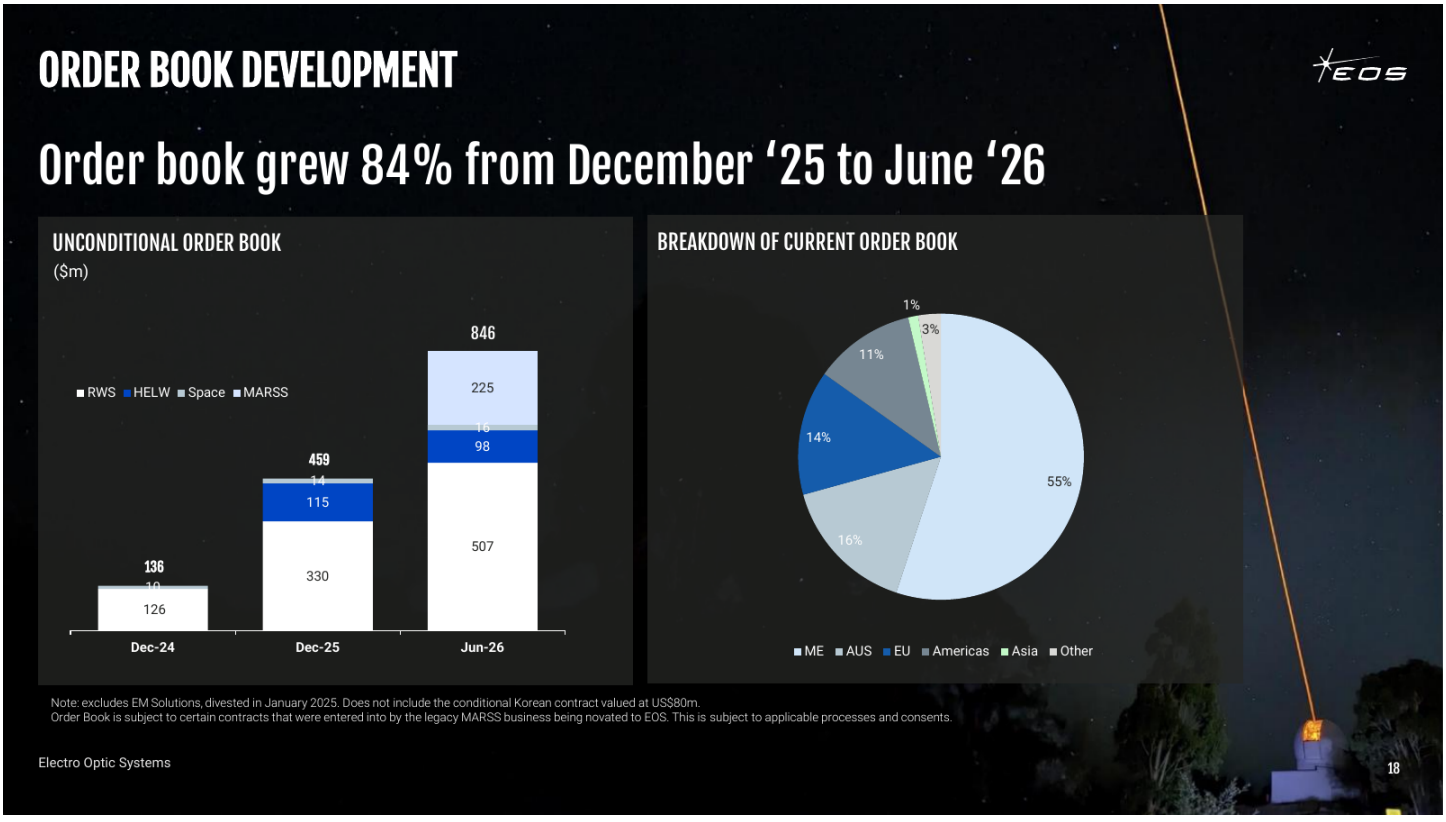

This is the June financial position, not a verified October bank balance.

Acquisition payments, acquisition transaction cash, deposits, capital purchases, lease principal and financing are separate cash-flow categories. Income-statement expense normalization does not establish an identical cash payment date. Staff is treated conservatively as paid cash in the forward model, with no separate SBC cash addback.

EOS | CURRENT FRAMEWORK | OCTOBER 22, 2026

Backlog is a dated receipt pool, not a second growth curve

The latest reported unconditional backlog is a June observation. Certain legacy MARSS contracts still require novation processes and consents. The exact unresolved portion is not disclosed. The existing Middle Eastern MARSS programme is within the MARSS pool, and the announced RWS order is within its RWS pool; neither is added again. Later conditional Kuwait work is scheduled separately.

June 30, 2026 unconditional order book and geographic mix, in AUD millions. The footnote excludes the conditional Korean contract and retains MARSS novation-consent qualifications. Source: 2026-08-25, original PDF page 18 (printed 18). Original issuer / ASX document.

Stream	June pool	H2 2026	2027	2028	2029	2030
RWS	507	97	240	130	30	10
HEL	98	18	35	35	10	0
MARSS	225	90	90	45	0	0
Space	16	7	5	3	2	0

EOS | CURRENT FRAMEWORK | OCTOBER 22, 2026

Kuwait: one prime contract with unresolved conditions

The October 9 signing, October 12 customer identification and later issuer article describe one GBP 370 million programme, reported as approximately AUD 700 million. Third-party components are inside that prime value. No separate internal EOS component sale is created by supplying an EOS product into the same system.

The Contract also includes initial supply of third-party effectors, such as hard-kill interceptors and soft-kill jammers.

EOS expects over 80% of revenue to be earned over the initial 12-24 months after the Contract becomes unconditional. Approximately 20% of the Contract's value relates to ongoing support over a four-year period.

EOS believes that completing this work may lead to further sales opportunities in future, although there is no guarantee this will occur.

Example counter-drone kinetic interceptor

Under the Contract a number of conditions need to be satisfied before performance of the Contract can commence. These include:

- → EOS providing a performance bond guarantee for 10% of the Contract value (£37m). As announced previously, this performance bond guarantee was provided on 12 August 2026. The guarantee is secured by a cash security deposit for British £40.3m (~A$77.0m) that EOS has provided to a commercial bank,
- → EOS providing a bank guarantee of £74m, and an advance payment of the same amount being paid by the Customer to EOS, and
- → EOS obtaining relevant export licences for the various components of the System within two months following receipt of necessary documentation from the Customer.

EOS will work to satisfy the conditions in the coming months, however there is no guarantee if or when this will occur. The Customer may terminate the Contract or withdraw the work and execute it at EOS' expense if EOS fails to fulfil any condition of the Contract (including failure to obtain export licences) which includes warranties by EOS of the system for a period of 5 years from acceptance by the Customer, termination rights and both capped and uncapped damages payable to the Customer for failure to perform or delay in performing the Contract and other breaches.

The Contract is expected to be profitable and cashflow positive over its term, noting that, as is the nature with integration projects such as this, there will be a significant short-term working capital funding requirement in the early stages of the Contract which is expected to turn positive during mid-2027.

EOS carried out a capital raising in May 2026 to fund the upfront consideration of the MARSS acquisition, provide working capital to support contract ramp-up and development, and increase balance sheet flexibility to pursue growth opportunities and execute on strategic initiatives. EOS notes that it requires certain consents and further accommodation from WHSP and providers of guarantee facilities in connection with the performance bond and guarantee for the Contract.

October 9 contract conditions: sterling-denominated guarantees and advance, export permissions, revenue timing after unconditional status, early working capital and required funding-provider accommodation. Source: 2026-10-09, original PDF page 2 (printed 2 of 4). Original issuer / ASX document.

The required additional guarantee, matching advance, export documents and lender/guarantee-provider accommodation are not verified as completed. The source's term profitability and mid-2027 positive-cash

expectation is not quarterly guidance or proof of available funding. Revenue timing begins after unconditional status and customer acceptance, not on the headline signing date.

EOS | CURRENT FRAMEWORK | OCTOBER 22, 2026

Accepted-receipt budgets and nominal capacity

New RWS, direct HEL and MARSS budgets are LOW external accepted-receipt assumptions. They replace the generic growth path; they are not incremental customer awards. Exact units, system mix, labor/test hours, accepted ASP and complete supplier cost data are unavailable. Annual planning weights are 20%, 23%, 26% and 31%, not reported seasonality.

New accepted-receipt budget	2027	2028	2029	2030
RWS	80	240	400	520
HEL	80	160	280	400
MARSS	60	120	200	260
Continuing uncontracted space	8	13	21	28
Additional space if admitted	0	20	35	60
Conditional Korea if delivered	40	56	16	0

Management describes nominal RWS shift capacity and a Singapore HEL design capacity, but those figures do not establish qualified good output, funded components or customer acceptance. Conflicting cumulative sold/delivered counters remain unreconciled. Nominal capacity comparisons are checks, not sourced ASPs or factory certifications.

Expansion capital, incremental labor, engineering and readiness remain paid. If actual accepted unit economics or qualified capacity is lower than implied, receipts must fall or resources rise; nominal factory capacity does not itself create revenue.

EOS | CURRENT FRAMEWORK | OCTOBER 22, 2026

Rule 16b: coherent states and one probability application

Three commercial outcomes jointly control new-receipt capture and manufacturing economics. They avoid multiplying several overlapping demand headlines as though each were an independent order. Kuwait timing and cash backing are explicit; Korea and the new space programme retain separate gates. Independence between these separate programmes is a tractable analytical assumption, tested with combined downside.

Commercial state	Probability	RWS capture	HEL capture	MARSS capture	Space capture
weak	25%	35%	25%	25%	50%
execute	50%	75%	60%	65%	100%
scale	25%	125%	125%	120%	125%

Condition	Selected probability / timing
Kuwait timely	50%
Kuwait later	30%
Kuwait not executable	20%
Korea delivery	55%
New space admission	35%
Funded guarantee: 25% cash backing	70% conditional weight
Funded guarantee: 100% cash backing	30% conditional weight

Three commercial states times five relevant Kuwait/security combinations times two Korea and two space outcomes give 60 positive paths. The not-executable Kuwait outcome has one irrelevant-security state rather than duplicate copies. Path probabilities sum to one and are applied once to operating quantities; neither the score nor another probability haircut is applied to the resulting ceiling.

EOS | CURRENT FRAMEWORK | OCTOBER 22, 2026

Kuwait hardware, support and readiness schedule

The analytical schedule splits the rounded prime value into hardware and support. Hardware is accepted over six quarters after the funding condition, while support begins with first acceptance and runs for sixteen quarters. The source gives approximate timing, not these exact weights. Support beyond the forecast horizon is not pulled forward simply to complete the contract face value.

Control	Selected value / scope
Hardware pool	560
Support pool	140
Hardware accepted over six quarters	5%, 15%, 25%, 25%, 20%, 10%
Support life	Sixteen quarters from first acceptance
First acceptance	One quarter after the selected unconditional quarter
Timely / later unconditional	Q4 2026 / Q2 2027

Control	Selected value / scope
Hardware material contribution	28%
Support material contribution	50%
Readiness	Paid before acceptance, including failure-case wind-down budgets

A later handoff can move more operating profit inside Q4 2027 through Q3 2028 even when near-term delivery is worse. That is a window effect, not more lifetime contract value. The complete rolling schedule and timely/later diagnostics remain visible below.

EOS | CURRENT FRAMEWORK | OCTOBER 22, 2026

Paid costs and fully burdened production GP

Supplier purchases are deducted from each stream to obtain material contribution. Fixed employees, fixed other costs, incremental engineering, manufacturing labor, support, warranty, readiness and severance are then paid. Depreciation is charged after EBITDA. Fixed costs do not automatically fall with receipts or ASP.

Paid resource	Selected control
Normalized employee per quarter	26
Normalized other cash costs per quarter	14
Extra full-quarter MARSS cost	4
Fixed annual inflation	3%
Non-Kuwait incremental manufacturing labor	8%
Non-Kuwait support / variable SGA	2% / 2% of accepted receipts above the quarterly capacity proxy
Kuwait hardware own labor / integration / warranty	4% / 4% / 2% of hardware receipts
Kuwait support own staff	8%
Production allocation of fixed employees	60%
Production allocation of DA	70%

The fully burdened production-GP proxy includes supplier cost, the selected share of fixed employees, all incremental manufacturing labor and the selected share of DA. The remainder is below production GP. This is a LOW classification proxy: production GP minus below-GP expenses equals operating profit without adding or subtracting any resource twice.

Asset cohorts, PPA and depreciation

Opening PPE, right-of-use assets and acquired/other intangible assets form one opening depreciable book. The acquisition-related split is a LOW allocation inside the actual intangible balance, not another PPA asset. Goodwill is not amortised. Each new cash-capital cohort starts depreciation the next quarter and stops when its book is exhausted.

Opening cohort	Book AUD M	Remaining quarters
June_PPE	43	16
June_ROU	14	12
June_MARSS_PPA_intangibles_proxy	70	39.6
June_other_intangibles_proxy	26	20

New cohorts use twenty-quarter straight-line lives in the selected case, with a twelve-quarter sensitivity. Maintenance and capacity expansion are paid cash budgets; weak demand reduces future expansion rather than deleting depreciation on existing or idle assets. Historical and incremental engineering remain separately expensed. The asset appendix shows the actual modeled roll and cohorts for each distinct commercial capital path.

EOS | CURRENT FRAMEWORK | OCTOBER 22, 2026

Working capital, collateral and finite equity

Non-Kuwait gross balances blend from June actuals over four quarters to the selected collection, inventory, payment and advance targets. The existing customer-advance balance is not received again. Kuwait working capital starts only once funded, with advance amortisation, supplier timing and restricted collateral modeled separately.

Item	Selected target / boundary
Non-Kuwait receivables	60 days of quarterly receipts; LOW collection assumption
Contract assets	3 days of receipts
Materials inventory / prepayments / payables	45 / 5 / 45 days of supplier cost
Ordinary customer advances	20% of quarterly receipts
Kuwait receivables	30 days of current receipts
Kuwait inventory / supplier prepayments	30 days / 10% of next-quarter hardware supplier cost
Kuwait supplier payables	30 days of current supplier cost
New advance	140 million; once through the customer liability
Existing August collateral	77 million remains restricted through 2030

Item	Selected target / boundary
Additional guarantee cash backing	Selected 25% or 100%; proportional release is assumed, not a bank commitment

Pre-financing cash is opening cash plus OP and DA, less cash tax, loan and lease interest, working-capital growth, capital purchases and principal, plus the dated July/August events once. The loan is repaid in Q1 2028 without assumed rollover or use of its undrawn balance. Lease principal reduces its own opening balance; interest uses that balance before repayment.

Financing control	Selected value
Quarter-end cash floor	20
Cumulative gross equity cap	200
Issue cost	3%
Underwriting price	AUD 5.50; LOW assumption, not current quote
Gross cure	MIN(remaining cap, MAX(0, floor minus pre-financing cash) / 97%)
Shares	Gross proceeds / 5.50; added at start of the cure quarter and retained

The cash cure is finite and conditional. A shortfall beyond the cap fails path viability; using the full cap while meeting the floor is not itself failure. Intraquarter peaks, escrow transferability and actual funding consent remain source and execution gaps.

EOS | CURRENT FRAMEWORK | OCTOBER 22, 2026

MARSS earn-out: share caps do not settle the cash question

The selected full ordinary-share proxy already includes the maximum MARSS share cap, the July issuance and an employee/other allowance. It does not prove legal settlement. The first earn-out, elective cash, mandatory overflow and optional advance require separate liquidity analysis rather than a second addition of the full cap or the all-share illustration.

For personal use only

APPENDIX – DETAIL OF AMENDED TRANSACTION TERMS

The key amendments, which were made to the asset transfer agreement and terms of the performance rights referenced in the announcement on 12 January 2026, are as follows:

- Up-front consideration of €36m in cash remains unchanged.
- The maximum contingent consideration ('earnout') payable to the MARSS management shareholders has been increased from €100m to €140m.
- The conversion ratio of new MARSS contracts during the earnout period remains €20m for each €100m of order intake value (with pro-rated amounts being earned for order intake values of lower than €100m). As such, MARSS would need to achieve €700m of new order intake in the earnout period (which runs from 12 January 2026 until 12 months from the completion date), in order to achieve the maximum earnout of €140m.
- The maximum earnout is capable of being earned by the MARSS management shareholders as follows:
    - The first €500m of order intake will earn contingent consideration of €100m. This consideration is payable in EOS shares at the previously agreed conversion price of $7.40 per EOS share and an exchange rate of 0.57. The maximum number of shares to be issued is 23,529,411. As previously announced, the vendors can elect to receive up to €20m of this first tranche in cash.
    - A further €200m of order intake can earn additional contingent consideration of €40m. This consideration is payable in EOS shares, at a new conversion price equal to the volume weighed average of EOS's share price in the 5 trading days (converted into euros at the exchange rate on the day) prior to completion of the acquisition of MARSS ("New Conversion Price"). The maximum number of shares that may be issued in respect of this element of the earnout is 5,413,403 and any earnout amount earned in excess of the value of those EOS shares is payable in cash (as described below).
- The maximum total number of EOS shares that could be issued if MARSS achieves €700m of order intake by the date that is 12 months after completion is now 28,942,814 (previously 23,529,411) ("Maximum Shares"). The Maximum Shares of 28,942,814 potentially issuable represent 15% of EOS' currently issued share capital (meaning that the payment of the earnout in EOS shares is subject to this 'placement capacity cap'). Accordingly, if the aggregate amount payable under the MARSS performance rights exceeds the value of the 23,529 411 Shares at A$7.40 per Share and 5,413,403 Shares at the New Conversion Price per Share, the balance (up to the earnout cap) will be payable in cash.
- The previous earnout was payable in two separate tranches (under two classes of performance rights), one at 90 days from completion and one after the end of the earnout period (after 31 May 2027). The amended terms now split the payment into three tranches (under three classes of performance rights), one at 90 days from completion, one after 270 days from completion and one after the end of the earnout period (31 May 2027). If sufficient contracts are signed during a tranche period, the entire earnout payment of €140m could be earned in that tranche period (provided that the cap on all earnout payments is €140m).

May 15 amended MARSS consideration terms: EUR earn-out thresholds, historical AUD/EUR conversion buckets, capped ordinary shares and separate cash overflow. Source: 2026-05-15, original PDF page 4 (printed 4 of 6). Original issuer / ASX document.

Settlement remains unresolved in the latest located source

ELECTRO OPTIC SYSTEMS HOLDINGS LIMITED

Notes to the consolidated financial statements for the half-year ended 30 June 2026

14. Related Party Transactions

The Group pays director fees to non-executive directors or their nominated entity, for director services received by the Group on arm's length terms.

During the half-year, Air Vice-Marshal (Ret'd) Catherine Roberts AO, CSC and Major General (Ret'd) Kathryn Toohey AM, CSC were appointed as non-executive directors of the Company, effective from 1 June 2026. Director fees for the period include amounts payable from the date of appointment.

During the half-year, 21,539 share rights and 80,413 share options were granted under the Omnibus Equity Incentive Plan to the Managing Director and CEO, Dr Schwer.

During the half-year, eligible Directors participated in the Company's Share Purchase Plan (Note 13) on the same terms as other eligible shareholders. Shares issued under the Share Purchase Plan were issued at $8.00 per share and rank equally with existing ordinary shares from their date of issue.

Apart from salaries, bonus and fees paid to Directors and other key management personnel, there were no other related party transactions outside the ordinary course of business.

15. Subsequent Events

As a condition precedent to a proposed new contract on 12 August 2026, EOS provided a bank guarantee for British £37.1m (~A$70.9m) to a prospective government customer in the Middle East. The guarantee is secured by a cash security deposit for British £40.3m (~A$77.0m) that EOS has provided to a commercial bank. The contract is expected to be signed imminently, although there is no certainty that this will occur, or that revenue or activity will ultimately arise. Should the contract be signed the guarantee covers performance under the contract. In the event that the contract is not signed EOS expects to cancel the bank guarantee and return the security deposit amount to unrestricted funds.

On 20 August 2026, the vendors of MARSS agreed with EOS that the tranche 1 period of the earnout had been completed with €120.3m of qualifying orders received. (See additional details regarding the earnout in Note 5 to the financial report). In accordance with acquisition agreement the value of tranche 1 of the earnout is 0.2 times this amount, or €24.06m. Under the acquisition agreement, the vendors may elect to receive up to €20.0m in cash and the remainder in EOS shares, at a value of €4.25 (A$7.40) (for the first €100.0m of earnout). As at the date of this report the vendors have not notified EOS as to whether they wish to take the €20m in cash and the balance in EOS shares or the full amount in EOS shares. Assuming the vendors elect to receive all shares, this would equate to approximately 5.7m EOS shares vesting in tranche 1. The relevant shares are expected to be issued to the vendors in the coming weeks along with any required cash transfers. Vested shares will be subject to the usual restrictions under the EOS' Securities Trading Policy. Tranche 2 and 3 of the earn out are due to be determined at 210 days and 365 days after the completion of the acquisition being 16 December 2027 and 20 May 2027 respectively.

There were no other significant subsequent events arising after 30 June 2026 and up to the date of this report.

H1 subsequent-events note dated August 25: August collateral, agreed first-tranche qualifying orders and an unresolved vendor cash election; the all-share amount is an illustration. Source: 2026-08-25, original PDF page 40 (printed 38). Original issuer / ASX document.

The September 22 notice recovered as complete indexed issuer text concerns existing employee-share transfers. It is not new MARSS issuance and does not close the first-tranche election gap. Original notice pixels were not recovered. The source's conflicting printed trigger date remains disclosed; historical conversion buckets are not reset to a future settlement-date VWAP.

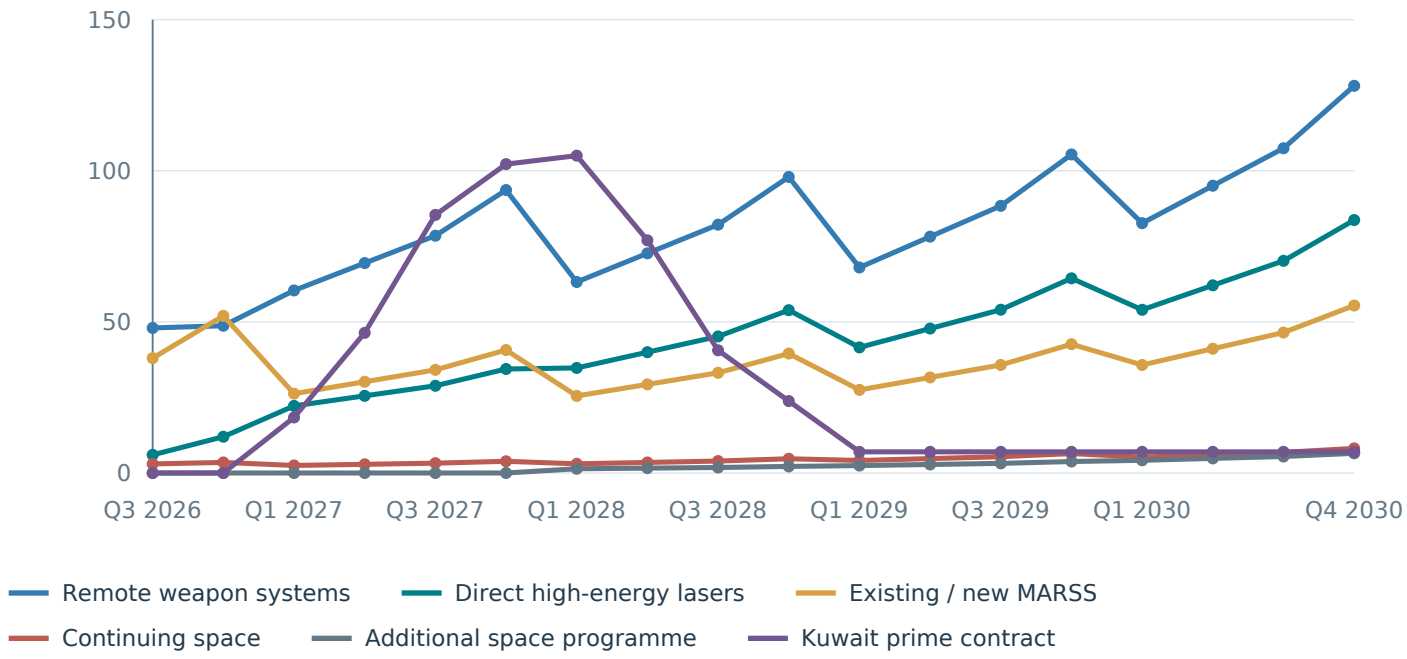

The EUR 20 million elective cash and EUR 140 million maximum cash-claim bound are separate stresses at a planning FX rate. Retaining a full share-cap proxy while testing all cash is a deliberate liquidity bound, not a probability-weighted joint legal outcome or a publishable stock-price target. Any actual election needs a matched cash/share reconciliation.

Annual totals and the FY2026 guide bridge

The modeled 2026 subtotal contains H2 only. H1 actual revenue plus that H2 forecast gives the planning full-year revenue anchor within the official range. No H1 forecast-cost subtotal is misrepresented as a complete FY2026 operating result, and no group profit guidance is invented.

Period	Revenue	Contribution	Cash opex	DA	OP	Capex	Gross equity
2026 H2 only	211	109	103	14	(9)	24	0
2027	809	379	252	37	90	56	0
2028	886	430	262	48	119	64	<1
2029	746	414	251	59	103	72	3
2030	937	514	282	66	166	72	7

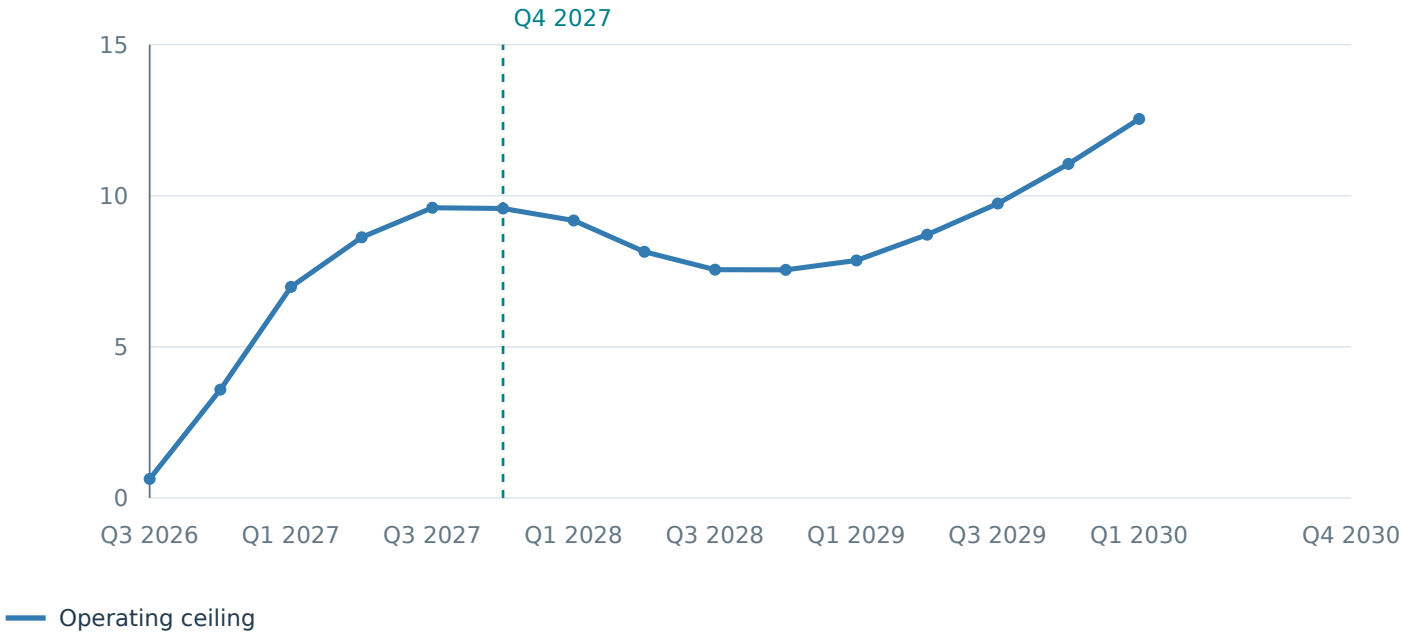

Scope	AUD million
Reported H1 revenue	169
Forecast H2 revenue	211
Planning full-year sum	380
Company FY2026 revenue guide	360 to 400
Company forward operating-profit guide	Not supplied

Native valuation and the full horizon

For every complete window, current-quarter OP plus the next three quarters is multiplied by 20 and divided by the expected starting-quarter full ordinary-share proxy. No net-cash/NAV addition, score multiplier or second probability haircut is applied. Expected-input valuation differs from the average of conditional ratios once financing changes shares; the latter is a nonlinear diagnostic.

All complete four-quarter operating ceilings

AUD per ordinary share; whole reader display

Analytical forecast, LOW input confidence; exact series are retained in the model. Adjacent table uses whole reader units.

Quarter	Operating ceiling
Q3 2026	<1
Q4 2026	4
Q1 2027	7
Q2 2027	9
Q3 2027	10
Q4 2027	10
Q1 2028	9
Q2 2028	8
Q3 2028	8
Q4 2028	8

Quarter	Operating ceiling
Q1 2029	8
Q2 2029	9
Q3 2029	10
Q4 2029	11
Q1 2030	13
Q2 2030	Incomplete
Q3 2030	Incomplete
Q4 2030	Incomplete

The final three windows are incomplete and remain blank in the native model; they are not annualized or assigned zero. A negative conditional OP-derived ratio is an operating-loss diagnostic rather than a negative share-price prediction. There is no fresh dated quote for a current-price return comparison.

EOS | CURRENT FRAMEWORK | OCTOBER 22, 2026

Main diagnostics: cost, timing, funding and legal bounds

The following tests change declared controls around the selected case. They are diagnostics, not alternative company forecasts. Failed-path mass and first breach remain visible; a raw ratio is not an executable target when funding fails or when the test deliberately combines full shares and all-cash claim bounds.

Case	Q4 2027 raw ratio	Unfunded mass	First breach	Expected gross equity	Interpretation
selected	10	0%	None in modeled window	10	Conditional ratio diagnostic
Kuwait timely	10	0%	None in modeled window	6	Conditional ratio diagnostic
Kuwait late	12	0%	None in modeled window	8	Conditional ratio diagnostic
Kuwait not funded	5	0%	None in modeled window	26	Conditional ratio diagnostic
prime margin minus8points	8	0%	None in modeled window	19	Conditional ratio diagnostic
all forward material margin minus5points	6	1%	Q3 2030	35	Raw diagnostic only
paid fixed and RD plus20pct	6	11%	Q3 2029	50	Raw diagnostic only
capacity cash expansion plus50pct	9	1%	Q4 2030	22	Raw diagnostic only

Case	Q4 2027 raw ratio	Unfunded mass	First breach	Expected gross equity	Interpretation
no new equity	10	21%	Q1 2028	0	Raw diagnostic only
equity issue4 fee5pct	10	0%	None in modeled window	11	Conditional ratio diagnostic
WHSP cash interest20pct	10	0%	None in modeled window	12	Conditional ratio diagnostic
earnout cash bound EUR20	10	0%	None in modeled window	18	Raw diagnostic only
earnout cash bound EUR140	9	28%	Q1 2028	151	Raw diagnostic only
optional advance EUR12	10	0%	None in modeled window	15	Raw diagnostic only
guarantee all full cash backing	10	0%	None in modeled window	11	Conditional ratio diagnostic
hold advance collateral through2030	10	2%	Q4 2030	24	Raw diagnostic only
new assets three year life	9	0%	None in modeled window	10	Conditional ratio diagnostic
new receipts budget minus25pct	7	1%	Q3 2030	30	Raw diagnostic only
known backlog plus conditional Kuwait only	(4)	100%	Q1 2029	200	Raw diagnostic only
combined weak no Kuwait Korea space	(3)	0%	None in modeled window	153	Conditional ratio diagnostic

The timely and later Kuwait cases expose the active-window handoff. Shorter asset lives, weaker prime contribution and larger paid budgets show how depreciation and own resources consume the headline. Optional and maximum cash claims are liquidity bounds, not assumptions that all cash and all share caps simultaneously settle as a legal outcome.

Score, risk and protected controls

Category	Points / maximum	Reason
CoreThesis	15/20	Fielded RWS/HEL technology and legacy external backlog; MARSS integration/supplier execution remains material.
Cycle	8/10	Defense/counter-drone demand supported by actual backlog and signed conditional projects; lumpy acceptance.
TAMExpansion	8/10	DirectHEL and external NiDAR prime integration expand capture, with no JV gross/internal-sales double count.
Catalysts	4/5	Guarantee/export satisfaction and accepted deliveries/cash, not LOI headlines alone.
Macro	8/10	Government defense need and localization; export and concentrated buyer risks retained.
Alpha	3/5	Accepted own-IP/system integration contribution can create profit; headline700 is not profit or proven mispricing.
Risks	-5/0	Framework maximum-5: funding/security, contingent cash earnout, acquisition/PPA, supplier/warranty and uncapped contractual exposures.

The analytical total is 41/60, rounded 68 and classified Watchlist. Risks uses the framework floor of minus five. Protected Excel Base remains 68 as a separate owner control; coincident rounded values do not make them the same concept. The score is not a probability, valuation multiple or multiplier on OP.

Principal risks are uncommitted guarantee/equity accommodation, collection and advance security, contingent cash earn-out, acquisition/PPA estimation, supplier execution, warranty and uncapped contract exposures. The differentiated technology case does not eliminate export, localization or customer-concentration risk.

Catalysts, counterevidence and revision triggers

Observation	What it would resolve
Customer/export documents and bank guarantee backing	Funded timing and acceptance eligibility
Advance receipt and lender accommodation	Cash availability and restricted-collateral burden
Accepted hardware, supplier purchases, staffing and warranty data	Prime contribution and paid unit economics
Actual MARSS election, issuance and cash settlement	Matched legal share/cash bridge
H2 results and new revenue guidance	Forecast receipts, cost budgets and collection calibration
Qualified output, customer acceptance and useful-life evidence	Capacity and asset-cohort assumptions
New RWS/HEL awards	Replace remaining new-receipt budgets only after overlap checks

A further conditional headline is not by itself a second source of profit. Equally, absent confirmation alone does not require zero probability for a signed conditional programme. New evidence should change the relevant dated receipt, cost, funding or share branch while retaining the overlap and cash boundaries.

EOS | CURRENT FRAMEWORK | OCTOBER 22, 2026

Management calls and source completeness

Event	Date	Written scope	Closing scope	Audio	Provenance
H12026	2026-08-25	Complete written prepared remarks and supplied Q&A	CEO closing and operator disconnect supplied	Not independently listened	TradingView connector returned Quartr redistributed transcript/AST; not an issuer-hosted transcript PDF
FY2025/H22025	2026-02-23	Complete written prepared remarks and supplied Q&A	Company representative ends webcast questions; no separate operator-disconnect text supplied	Not independently listened	TradingView connector returned Quartr redistributed transcript/AST; not an issuer-hosted transcript PDF

The two newest recovered management records are redistributed Quartr written transcripts, not issuer-hosted transcript PDFs. The supplied prepared remarks, Q&A and closing were fully read in the source review. The H1

record includes company closing and operator disconnect; the FY2025 record ends with the company ending webcast questions and supplies no separate operator-disconnect text. No independent audio listen is claimed.

Official financial originals and contract terms are preserved separately from written redistribution and analytical forecasts. No new Q3 actual is invented. The original September notice PDF, actual MARSS settlement, completed Kuwait funding conditions, exact program-level accepted units and complete future manufacturing economics remain gaps. Source completeness does not imply forecast certainty.

EOS | CURRENT FRAMEWORK | OCTOBER 22, 2026

Technical appendix: all 60 path probabilities and funding outcomes

Technical tables retain eight decimal places where needed. These are conditional financed-business trajectories, not every possible real-world legal outcome. Probabilities multiply once. Zero conditional receipt outcomes still pay their selected readiness and resource budgets.

A Yes flag means the selected finite formula meets its quarter-end floor within the modeled equity cap. It does not mean an actual financing commitment or daily liquidity has been secured. Full legal-settlement and no-equity stresses remain separate.

Technical appendix: compact complete 60-state trajectories

One compact trajectory per conditional state preserves all eighteen OP, working-capital, closing-cash, equity and starting-share observations. All money and shares in these technical tables are in millions, at shown precision. The shared commercial cost/cohort schedules, primitive vectors and explicit equations reproduce components without repeating identical matrices. Starting shares include the planned cure-quarter issue once. Unfunded outcomes are not presented as executable targets.

Technical appendix: one fully worked conditional operating and cash bridge

Illustration: weak|not_funded|Korea0|Space0|collateral0, Q3 2028. This is the first equity-cure quarter of the path with the largest total selected gross equity, not a new forecast or economic choice. It connects the generic equations to paid costs, funding and dilution. Money and shares are in millions at shown precision.

Operating component	AUD million
revenue	97.11
supplier cost	47.7373
material contribution	49.3727
employee	24.42069796
fixed other	13.3382183
MARSS consolidation increment	3.81924
incremental RD	5
incremental manufacturing labor	0
incremental support warranty	0

Operating component	AUD million
incremental SGA	0
Kuwait fixed readiness	0
Korea fixed readiness	0
severance	1
cash opex	47.57815626
EBITDA	1.79454374

Technical appendix: exact shown four-term chains

Shown precision is eight decimal places and is for auditability. Calculations use the full saved precision. Every term is operating profit after DA in AUD million; starting shares below are in millions. This appendix is not a second valuation method.

Window start	Four OP terms, in order	Four-quarter OP	Starting shares M	AUD / share

Technical appendix: current operating and cash equations

Quarter i = 0 is Q3 2026; year-array index is calendar year minus 2026. For H2 2026, the two supplied receipt points and common material rates apply. From 2027, RWS, direct HEL and MARSS receipts equal the scheduled committed annual pool times the quarter weight, plus the new annual receipt budget times that state's capture times the same weight. Continuing space applies Space capture only to its uncontracted budget. The separate space programme uses its own binary gate without another Space-capture volume factor. Korea uses its binary gate and its own annual delivery budget inside direct HEL without a second HEL-volume capture; the HEL material economics still apply.

From 2027, commercial margin offsets apply to the indicated stream contribution rates. Kuwait first acceptance is unconditional index plus one; hardware receipts are its six weights times the hardware pool, and service receipts are one-sixteenth of the service pool for sixteen quarters from first acceptance. Its hardware and service material rates share the commercial Kuwait offset. No unfunded Kuwait case creates programme receipts or next-quarter supplier stock.

For each stream: supplier cost = external receipts minus materials contribution. Group materials contribution = sum of six streams. Own cash opex is the sum of fixed employees, fixed other resources, extra MARSS consolidation, incremental RD, incremental manufacturing, support/warranty, variable SGA, readiness and severance. EBITDA = contribution - own cash opex; OP = EBITDA - DA.

Fixed employees, fixed other and extra MARSS resources grow by 1.03 to the calendar-year index. Only the weak state applies its dated fixed-resource factors; severance follows its annual schedule and quarter weights. Incremental RD uses the dated quarterly budget without the weak factor. Non-Kuwait receipts above the 100 million quarterly proxy pay 8% manufacturing labor, 2% support and 2% variable SGA. Kuwait hardware additionally pays 4% own manufacturing labor, 4% integration and 2% warranty; Kuwait service pays 8% own staff. These rates are separate from purchased supplier components.

Kuwait readiness of 3 million is paid from i = 0 through the final hardware quarter; 1 million then continues while its service period is open. In the not-executable case, 3 million continues through i = 3, 1 million through i = 5, then zero. Korea readiness of 1 million continues through i = 3 whether or not delivery succeeds. These paid budgets do not disappear before the delivery gate.

Production cost = supplier cost + 60% of fixed employees + all incremental manufacturing labor + 70% of DA. Production GP = receipts - that cost. Below-GP expenses are the remaining paid resource budget, so production GP - below-GP expenses = OP. These allocations do not create extra total cost.

Opening cohort DA = minimum of remaining book and original straight-line amount while commissioned. New cash-capital cohort starts the next quarter. Closing book = opening book + cash purchases - DA. Intangible/PPA allocation remains inside opening actual total; goodwill is excluded.

For ordinary working capital, each gross balance = actual balance x MAX(0, 1-(i+1)/4) + forecast target x the complementary weight. Net working capital = AR + contract assets + inventory + prepayments - AP - customer advances. Project net working capital also includes additional restricted collateral; advance balance falls with cumulative accepted receipts. Delta NWC is charged once to cash.

Ordinary forecast targets use receipts times AR/contract-asset days divided by 90, supplier cost times inventory/prepayment/AP days divided by 90, and the selected fraction of quarter receipts as advances. Kuwait targets use 30/90 of current receipts as AR, 30/90 and 10% of next-quarter hardware supplier cost as

inventory and prepayments, and 30/90 of current hardware plus support supplier cost as AP. Remaining customer advance = MAX(0, 140 minus 20% of cumulative accepted Kuwait receipts). Additional restricted cash is the selected backing fraction times that remaining advance unless the held-collateral stress applies. Existing August collateral remains restricted separately.

Pre-financing cash = opening cash + OP + DA - tax - loan interest - lease interest - delta NWC - cash capital - loan principal - lease principal + the July cash and August collateral event once. Tax = 30% x MAX(OP - loan interest - lease interest, 0); no loss credit is assumed. Finite gross equity = MIN(remaining 200 cap, MAX(0, 20-pre-financing cash)/97%). Fees = 3% of gross; new shares = gross / 5.50. Expected OP and starting shares are separately probability-weighted before the native 20x division.

Readiness is paid before receipt, after a failed programme for the selected finite wind-down period, or through service support as specified. The forward 90-day working-capital convention is analytical. Actual intraperiod cash and legal transferability of customer or escrow balances remain undisclosed.
