MACOM: qualified component content and operating leverage

MTSI | Research cutoff October 23, 2026 | Framework 8.0 | USD

MACOM's opportunity is to sell more qualified high-frequency and optical semiconductor content while spreading existing fab and engineering costs across larger production volumes. Current 800G/1.6T PAM4 and 200G photodetectors provide an actual sales anchor. Higher-rate driver/TIA/detector designs, qualified CW lasers and denser optical packaging can broaden the component wallet; defense radar, missile/EW and LEO payload/gateway content diversify demand. The economic engine is accepted component revenue and manufacturing/engineering leverage.

T001 | Active operating-profit result

Measure	Value	Scope
Q4 2027 OP ceiling	230.64	USD/share
Forward economic OP	945.631	USD million; Q4 2027-Q3 2028
Modeled forward shares	82.0	million; valuation share convention
OP multiple	20	x
Unit factor	1	USD million / shares million
Analytical score	44	points out of 60
Analytical Base	73	73, lattice-rounded
Protected Excel Base	73	73; independently retained

Reading key: issuer historical statements are Actual. The elapsed Q4 FY2026 period is guidance-anchored Model pending the November 5 release. All future gross profit, operating expenses and PPE are economic gross-cost projections; future issuer grant accounting and tax basis are unknown. Four operating regimes have 30%/25%/30%/15% weights, crossed with 65% no-grant and 35% reimbursement outcomes. All dollar schedules use USD millions unless labeled otherwise.

The opportunity depends on accepted high-frequency/optical semiconductor invoices, a larger eligible component wallet and cost absorption. Current optical products anchor the core path; CW and NPO retain explicit qualification, commercial timing, replacement and cash constraints.

Contents: thesis; product architecture and wallets; current results; probabilities and funding; dated evidence; manufacturing and costs; cash and shares; rolling ceilings and sensitivities; score and risks; full quarterly schedules; source register.

Qualified component content and operating leverage

MACOM's opportunity is to sell more qualified high-frequency and optical semiconductor content while spreading existing fab and engineering costs across larger production volumes. Current 800G/1.6T PAM4 and 200G photodetectors provide an actual sales anchor. Higher-rate driver/TIA/detector designs, qualified CW lasers and denser optical packaging can broaden the component wallet; defense radar, missile/EW and LEO payload/gateway content diversify demand. The economic engine is accepted component revenue and manufacturing/engineering leverage.

Classification: differentiated merchant semiconductor bottleneck, Path B, with a qualification and execution window. Alternative suppliers, integrated DSP drivers and customer architecture choices remain viable. No named physics/IP barrier establishes an irreplaceable architecture-wide chokepoint. Trusted US/European manufacturing is relevant to particular programs; it does not confer every optical or GaN socket. Publicly discussed growth and broad coverage leave only modest information asymmetry. The main analytical edge is mapping commercial stages and net component content into costs and timing rather than attributing the entire module or compute-spending pool to MACOM.

From an eligible design to economic operating profit

Our explanation | channels, packages, modules and dollars keep separate units

Explanatory schematic of the approved thesis. Engineering eligibility, customer acceptance and captured component invoices lead to contribution; manufacturing, engineering, ordinary compensation and capital consumption remain costs.

Products, architectures and the eligible wallet

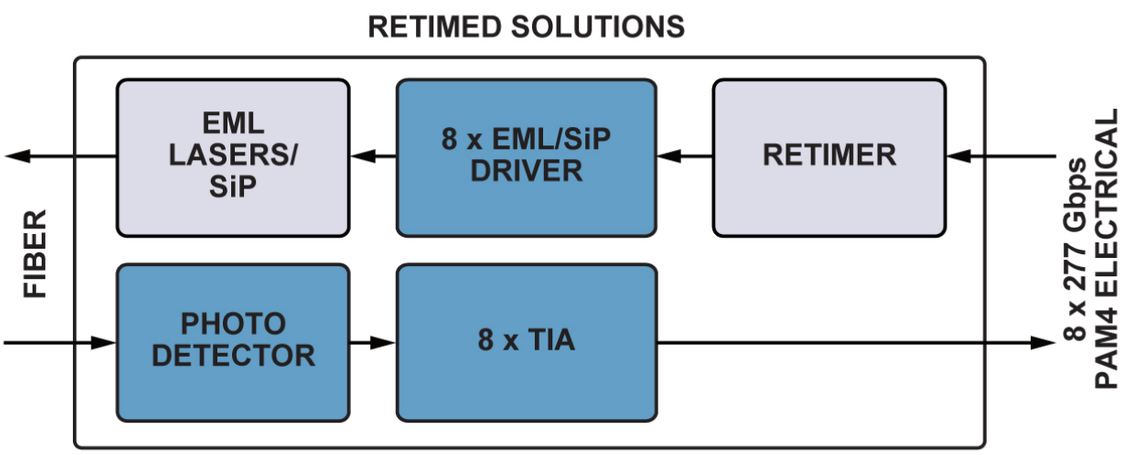

DB1 is the principal supercycle. Current 800G/1.6T PAM4 and 200G detectors are in the revenue ramp; CW is in pre-production qualification. The 3.2T chipset and NPO have separate development-to-production schedules. DB3 LEO and DB8 defense are distinct demand vectors, booked once within their reported end markets. MACOM has no disclosed claim on an entire hyperscaler's capital budget. SpaceX compute or ARR ambitions create no additional MACOM invoice by themselves.

The controlling DB1 September 7/20 revision estimates the global optical-module market at $67.7/$131.4/$148.5 billion for 2026/2027/2028. Approximate module ASPs are $420/$400/$320 for 800G and $800/$750/$600 for 1.6T; 3.2T is $1,500/$1,200 for 2027/2028. These are dated broker forecasts, distinct from MACOM's component SAM. Current industry sources establish competing architectures and capacity plans, with no replacement full unit/ASP series. Independent forecasts are not stacked together, and module ASPs are not used as driver, TIA, detector or laser prices.

Management's 2027 SAM is $6 billion Data Center, $6 billion Industrial & Defense and $3 billion Telecom. The 2028/2029/2030 model pools are $7.5/$9/$10.5 billion Data Center, $6.6/$7.2/$7.8 billion I&D and $3.3/$3.6/$3.9 billion Telecom. These later pools are LOW sensitivity denominators. Component families remain inside the relevant end-market pool. Forecast revenue divided by the pool is a fitted capture index; it does not establish measured market share or qualified capacity.

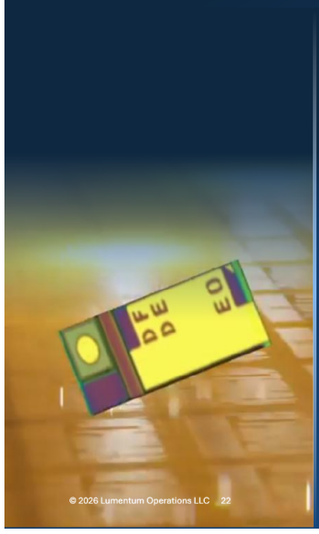

Q3 FY2026 actual Data Center/I&D/Telecom revenue of $137.584/$133.390/$71.263 million sums to $342.237 million. Annualized historical run rates are $550.336/$533.560/$285.052 million. The guidance-based mix uses 35% Data Center and 20% I&D growth, plus a LOW 3% Telecom assumption for management's low-single-digit outlook. This produces $185.7384/$160.068/$73.40089 million, or $419.20729 million total, inside the $415-$425 million range. Annualizing that mix gives $742.9536/$640.272/$293.60356 million, totaling $1,676.82916 million. Management separately used the $420 million midpoint times four, $1,680 million, as an illustrative FY2027 reference. It is not formal annual guidance. The assumed 2026 SAM, calculated as 2027 SAM divided by 1.25, calibrates a proxy rather than observed share.

The TAM-expansion lens has three phases. Current AI optics, RF and defense programs establish engineering eligibility. Physical AI, medical and test/measurement applications use related high-frequency, optical and control capabilities; 50% thematic expansion confidence supports the analysis, with receipts retained inside I&D/core revenues. Pervasive space, sensing and emerging optical applications carry 20% thematic confidence and remain within Telecom, I&D, CW and NPO. These score-confidence weights do not multiply operating forecasts or event probabilities. Quantum or ubiquitous-compute marketing creates no separate booked-sales pool.

I46 | MACOM's current 1.6T retimed architecture shows eight driver channels and eight TIA channels. The associated part map identifies quad TIA ICs, so channel count and die/package count differ. The DSP/retimer and laser blocks do not establish an all-MACOM captured bill of materials. Date: Undated; retrieved October 23, 2026. Original issuer diagram; I06 application page / I45 part map. Confidence: HIGH for diagram and part-map scope; no supplier allocation inferred. Source: https://appdiagrams.macom.com/api/downloads/6ab6963ab27081a578271aa7

EMLs: Growing Volume at 1.6T; Setting the Standard at 3.2T

Data Rate	EML-Based Transceivers	SiPho-Based Transceivers
1.6T (8x200G)	One chip per transmitter; proven transceiver yields; improved BW per fiber	InP + SiPho per transmitter; all channels must be yielded simultaneously; more complex supply chain
3.2T (8x400G)	Extension of 1.6T platform and its benefits by 400G differential EML	SiPho does not have sufficient bandwidth for 400G/lane; Replacement materials unproven in mass production

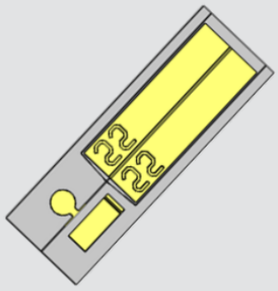

Expect EMLs to become de facto standard at 400G per lane (3.2T era)

LUMENTUM

I35_p 022 | Lumentum, March 17, 2026, PDF page 22. The architectures illustrate 1.6T at eight 200G lanes and 3.2T at eight 400G lanes. The vendor favors EML and criticizes SiPh at higher rates; that technology position is not universal proof of a physical limit. Date: 2026-03-17. PDF page 22. Confidence: HIGH for exact source statements; vendor projections and inferred applicability remain conditional. Source: https://s21.q4cdn.com/377324469/files/doc_presentations/2026/2026-Lumentum-at-OFC_final.pdf

283VCS/283VCL

EML Die for Applications Up to 1.6-Gb/s (200-Gb/s, 112 Gbaud per Lane)

Key Features

- Very high reliability
- Low power dissipation
- High-power output
- High bandwidth modulator

Overview

Broadcom offers a range of single-mode, electro-absorptive modulated (EML) laser diode chip and chip-on-carrier products with 1.3-µm CWDM wavelengths, for use in data centers and other applications including 800G DR4/ FR4, 1.6T 8-channel.

Leveraging extensive knowledge in CMBH-grown, multi-quantum, well active layer designs with a long history of proven field reliability, the lasers are qualified per the intent of Telcordia GR-468, qualified for use in non-hermetic environments, and offer class-leading electrical and optical performance.

The 283VCS/283VCL variant offers standard 20°C to 70°C performance capability for uncooled operation.

Contact Broadcom for additional detailed information about this product for your application.

Ordering Information

Description	Part Number
200-Gb/s (112 Gbaud), CWDM (1270 nm to 1330 nm) EML laser, 20°C to 70°C	283VCS
200-Gb/s (112 Gbaud), CWDM (1270 nm to 1330 nm) shrunk size EML laser, 20°C to 70°C	283VCL

T002 | Eligible invoice wallets and commercial stages

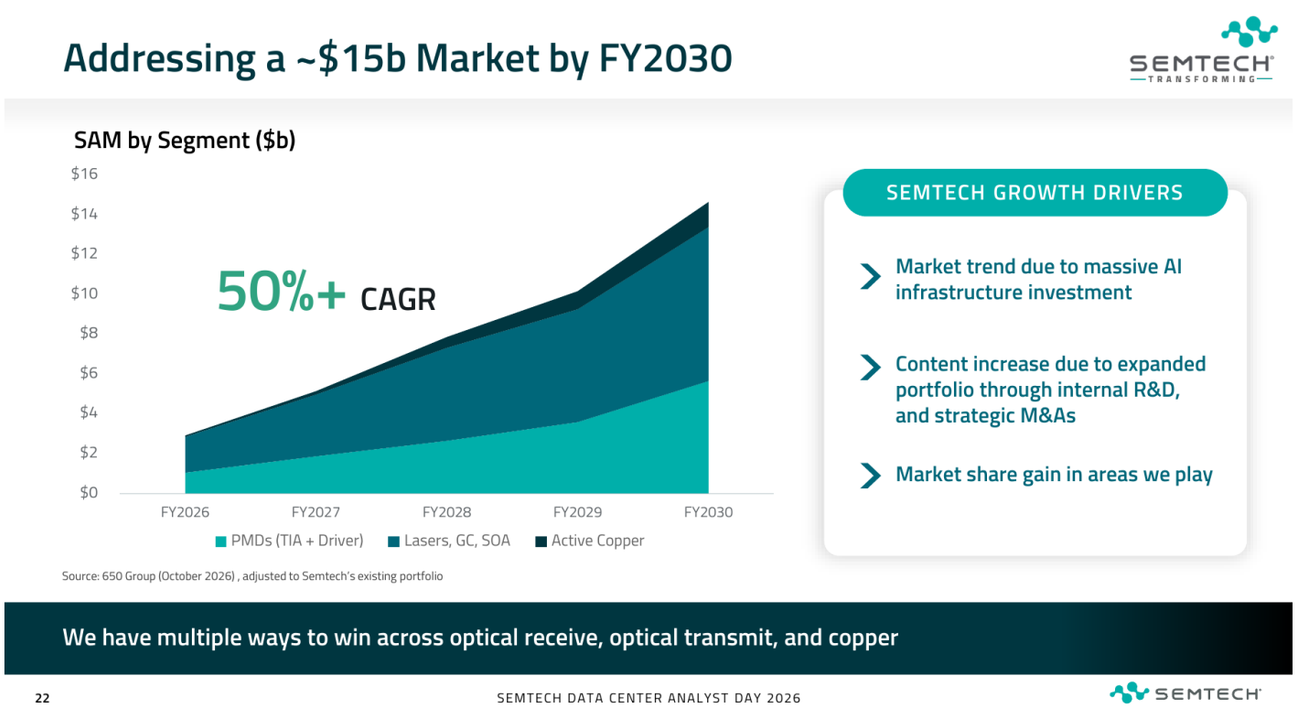

Wallet	Actual / engineering anchor	Forward endpoint and limit
Core Data Center	800G/1.6T PAM4 and 200G PD sales; 3.2T chipset availability	Core includes speed evolution, legacy DFB, equalizers and coherent products; new CW/NPO invoices excluded.
CW laser chips	75/100 mW SiPh-compatible products; process and customer qualification	Small late-2027 receipts, larger 2028 conditional ramp; complete high-power CPO/ELS assembly wallet excluded.
Net new NPO chips	10-20 active development projects; main sales expected 2028	Dollar endpoints are gross new chip content less explicit displaced pluggable invoices; project count is not equal awards.
Industrial & Defense	Radar, EW, missile, medical/test and trusted RF/foundry capabilities	Revenue recognition, good output, engineering and program timing govern capture.
Telecom	LEO payload/gateway/control, 5G, cable and metro/long-haul products	No whole-terminal, constellation-capex or SpaceX revenue multiplier.

I27_p 021 | Semtech, October 15, 2026, PDF page 21. The approximately $8 module-content figure belongs to 800G. No 1.6T dollar content is disclosed; FRO driver attachment is approximately 15%. The projected 3.2T NPO/XPO portfolio opportunity above $100 includes TIA, driver, modulator, detector and CW content. It is a competitor estimate with schematic composition, not a MACOM ASP. Date: 2026-10-15. PDF page 21. Confidence: HIGH for exact source statements; vendor projections and inferred applicability remain conditional. Source: https://investors.semtech.com/media/document/1990dee5-1dee-4ff0-b311-750aaf76c638/assets/Semtech_Analyst_Day_Final_101526_FULL-DECK.pdf

I35_p 013 | Lumentum, March 17, 2026, PDF page 13. Its 2027 CPO pipeline includes external-light-source assembly opportunities described as approximately twice the UHP chip wallet. A turnkey ELS scope is broader than the MACOM chip-only conditional endpoint. Date: 2026-03-17. PDF page 13. Confidence: HIGH for exact source statements; vendor projections and inferred applicability remain conditional. Source: https://s21.q4cdn.com/377324469/files/doc_presentations/2026/2026-Lumentum-at-OFC_final.pdf

I27_p 022 | Semtech, October 15, 2026, PDF page 22. Approximately $3 billion FY2026 to $15 billion FY2030 is a portfolio SAM based on 650 Group October 2026 adjusted for Semtech PMDs, lasers/gain chips/SOAs and active copper. Its scope and years differ from management's MACOM 2027 SAM and from full optical-module TAM. Date: 2026-10-15. PDF page 22. Confidence: HIGH for exact source statements; vendor projections and inferred applicability remain conditional. Source: https://investors.semtech.com/media/document/1990dee5-1dee-4ff0-b311-750aaf76c638/assets/Semtech_Analyst_Day_Final_101526_FULL-DECK.pdf

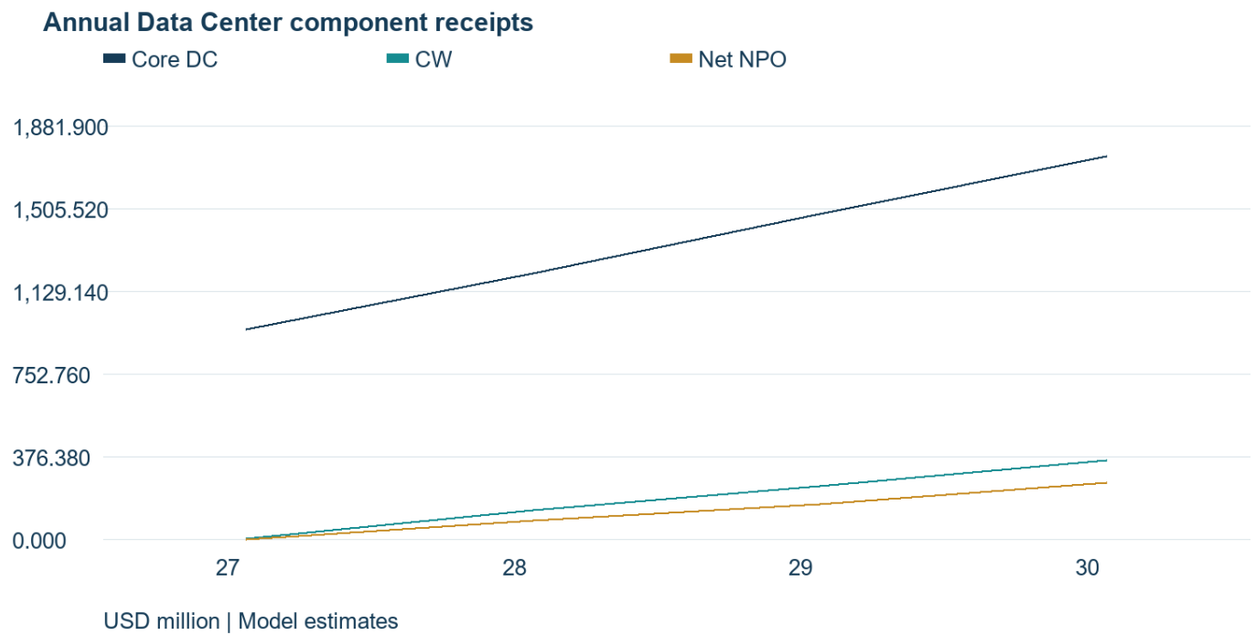

T003 | Dated global optical-module context | USD billion / USD module ASP

Year	Module market, USD B	800G ASP, USD	1.6T ASP, USD	3.2T ASP, USD
2,026	67.7	420	800	Not supplied
2,027	131.4	400	750	1,500
2,028	148.5	320	600	1,200

T004 | Annual eligible SAM and fitted captured index

Year	DC SAM	I&D SAM	Telecom SAM	DC revenue / SAM
2,027	6,000.000	6,000.000	3,000.000	15.98%
2,028	7,500.000	6,600.000	3,300.000	19.00%
2,029	9,000.000	7,200.000	3,600.000	20.88%
2,030	10,500.000	7,800.000	3,900.000	22.48%

Management supplies the 2027 end-market SAM. The 2028-2030 pools are LOW model denominators. The ratios are fitted capture indexes, with no measured share, customer allocation or qualified production-capacity claim.

Weighted component receipts remain inside Data Center. CW and NPO are separate new invoices; the NPO endpoint already deducts displaced pluggable content.

T005 | C01 | Exact plotted data

Year	Core DC	CW	Net NPO
2027	955.000000	3.750000	0.000000
2028	1,210.000000	132.000000	83.000000
2029	1,480.000000	241.500000	157.500000
2030	1,742.500000	360.000000	257.500000

Product roadmaps and competing architectures

MACOM Announces Two New 448G per Lane Drivers for 3.2T Data Center Connectivity

March 17, 2026

LOWELL, Mass., March 17, 2026 (GLOBE NEWSWIRE) -- MACOM Technology Solutions Inc. ("MACOM") , a leading supplier of semiconductor products, today announced the availability of its new 448G PAM4 modulator drivers, designed to accelerate time-to-market for next generation 1.6T and 3.2T optical transceivers. Exceeding 400G per lane transmission enables the development of dense, high performance optical transceivers with industry-leading energy efficiency to support high capacity data networking solutions in artificial intelligence (AI), machine learning (ML) and high performance computing (HPC) data center architectures.

MACOM's new **MAOM-025408 Mach-Zehnder Driver** and **MAOM-022404 EML Driver** are among the first in the industry to support 400G per lane transmission. These drivers use a proven high volume silicon process technology and support multiple optical platforms including silicon photonics, EML (Electro-absorption Modulated Laser) and TFLN (Thin-Film Lithium Niobate) modulators, enabling customers to scale next generation connectivity systems with confidence and reduced integration risk.

"We are excited to push the limits with our new 400G per lane driver products," said Stephen G. Daly, President and Chief Executive Officer, MACOM. "These products can support a wide range of advanced interconnect applications and form factors."

The MAOM-025408 Mach-Zehnder Driver can deliver over 120 GHz of RF bandwidth, high gain, output voltage and excellent linearity. It is well-suited for silicon photonics modulators targeting 300G and 400G PAM4 transmission.

The MAOM-022404 EML Driver can deliver over 120 GHz of RF bandwidth, well beyond the minimum required for 400G PAM4 transmission, along with high gain and low power consumption. It is ideal for differential EML and TFLN modulators.

Both the MAOM-025408 and MAOM-022404 are available as wire-bondable die or bumped die used in compact flip-chip packaging, supporting high volume manufacturing with options for side-by-side and 3D assemblies. No external components are required for biasing the drivers, which leads to simpler integration and bill of materials savings for module vendors. The drivers are on display in MACOM's Booth 1227 at OFC 2026 from March 17 to 19, 2026 in Los Angeles, CA. More information can be found at www.macom.com.

About MACOM
MACOM designs and manufactures semiconductor products for telecommunications, industrial and defense and data center applications. Headquartered in Lowell, Massachusetts, MACOM has design centers and sales offices throughout North America, Europe and Asia. MACOM is certified to the ISO9001 international quality standard and ISO14001 environmental management standard.

MACOM Introduces 3.2T Chipset Solution for High Speed Optical Connectivity

Lowell, MA, September 17, 2026 – MACOM Technology Solutions Inc. ("MACOM"), a leading supplier of semiconductor products, today announced a front end chipset solution for 3.2T applications, designed to accelerate the development of next generation optical interconnects for AI infrastructure, cloud data centers and high speed networking applications.

The solution is designed to support new optical architectures, delivering up to 3.2T throughput through eight channels operating at 448 Gbps PAM-4. This solution combines MACOM's new high performance transimpedance amplifiers (TIAs) and photodiodes in a receiver platform with its previously introduced 448 Gbps PAM-4 drivers on the transmit side. By offering key transmit and receive building blocks from a single supplier, MACOM helps customers simplify development, accelerate time-to-market and optimize overall link performance.

"MACOM's 3.2T chipset solution has been engineered and optimized as a platform, helping customers optimize link performance while reducing development and qualification efforts," said Stephen G. Daly, President and Chief Executive Officer, MACOM.

Optimized for 448 Gbps PAM-4 Optical Links
MACOM's receive-side solution combines advanced photodiodes and TIA technologies engineered to work together in demanding 448 Gbps PAM-4 optical applications.

This solution includes MACOM's **MATA-42754** and **MATA-41754** quad linear TIAs, designed to support the bandwidth requirements of next-generation optical links. The devices incorporate RSSI functionality for photo alignment and power monitoring, as well as digital control of bandwidth, output amplitude, peaking, gain and loss-of-signal thresholds.

The TIAs are paired with **MACOM's MARP-BP224** backside-illuminated PIN photodiode, optimized for 448 Gbps PAM-4 receiver applications. The photodiode features greater than 100 GHz bandwidth and ultra-low parasitics to maximize performance and signal integrity in high speed optical links. Leveraging a proprietary design for high coupling efficiency, the device is available in multiple layouts to support a variety of optical interface implementations. Together, these components provide a scalable building block approach for transceivers supporting eight channels at 448 Gbps PAM-4 and aggregate data rates reaching 3.2T.

The new receive-side solution complements MACOM's previously announced **MAOM-025408** and **MAOM-022404** driver solutions, which support 448 Gbps PAM-4 optical transmit architectures. By combining drivers, photodiodes and TIAs within a single portfolio, MACOM is providing customers with a comprehensive set of technologies for next-generation optical module development.
.

Availability
All products within the 3.2T chipset solution are readily available. Please visit www.macom.com or contact your local MACOM sales representative for more information. The products will also be on display at MACOM's Booth 1055 at ECOC2026 from September 21 to 23, 2026 in Málaga, Spain.

I49_p 001 | MACOM, September 17, 2026. The available 3.2T chipset combines quad TIAs, photodiodes and 448G drivers. Availability supports engineering eligibility; it establishes no accepted commercial volume. This launch remains inside the core product wallet. Date: 2026-09-17. PDF page 1. MACOM Demonstrates Technologies Enabling the Future of High Speed Connectivity at ECOC 2026

Lowell, MA, September 15, 2026 – MACOM Technology Solutions Inc. ("MACOM"), a leading supplier of semiconductor products, today announced it will showcase its latest optical and high speed connectivity technologies at the **European Conference on Optical Communication (ECOC) 2026**, taking place **September 21 - 23, 2026, in Málaga, Spain**. Visitors to **Stand 1055** can learn about MACOM's broad portfolio of solutions designed to support the growing bandwidth, performance and power efficiency demands of AI infrastructure, cloud data centers, telecommunications networks and emerging optical architectures.

MACOM continues to advance the critical analog and optoelectronic technologies that enable more efficient data transmission throughout datacenter AI networks. The company will demonstrate its IC solutions in a variety of applications in optical transceivers, active copper cables, PCIe interconnects, coherent networking, optical access networks and near packaged optics (NPO).

"Demand for higher bandwidth and lower power consumption continues to drive innovation across the optical communications ecosystem. We're excited to showcase our portfolio which is helping customers build the next generation of optical and connectivity infrastructure," said Stephen G. Daly, President and Chief Executive Officer, MACOM.

Featured Demonstrations
MACOM will present live demonstrations featuring:

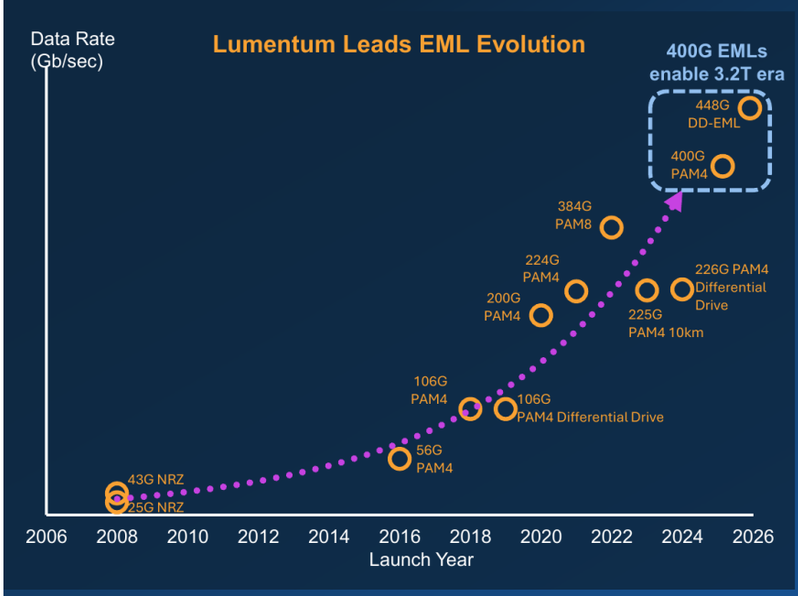

- 3.2T Optical Solutions, featuring 448 Gbps/lane modulator drivers, transimpedance amplifiers and photodetectors.
- 1.6T Active Copper Cable Solution, demonstrating 224 Gbps/lane equalizers and cable drivers designed to deliver high speed copper connectivity.
- 1.6T Optical Products incorporating 224 Gbps/lane photodetectors, laser drivers and transimpedance amplifiers.
- PCIe Connectivity showcasing Optical PCIe® 6.0 and Copper PCIe® 7.0 technologies for next generation compute and storage architectures.
- NPO featuring 112 and 226 Gbps/lane drivers, transimpedance amplifiers and photodetectors.
- 800G Scale Out Networks utilizing 400 Gbps-per-wavelength coherent drivers and transimpedance amplifiers.
- 5G Advanced and 6G Fronthaul highlighting linear drivers and TIAs for SFP56/SFP112 LPO.

Additional Product Display
MACOM will also feature a dedicated display highlighting its technologies for:

- Free Space Optics (FSO) applications supporting high speed optical communication links.

NVIDIA Announces Spectrum-X Photonics, Co-Packaged Optics Networking Switches to Scale AI Factories to Millions of GPUs

- **1.6 Terabits Per Second Per Port Switches to Deliver 3.5x Energy Savings and 10x Resilience in AI Factories**
- **Joint Inventions and Collaborations With TSMC, Coherent, Corning Incorporated, Foxconn, Lumentum and SENKO to Create Integrated Silicon, Optics Process and Supply Chain**

GTC—NVIDIA today unveiled NVIDIA Spectrum-X™ and NVIDIA Quantum-X silicon photonics networking switches, which enable AI factories to connect millions of GPUs across sites while drastically reducing energy consumption and operational costs. NVIDIA has achieved the fusion of electronic circuits and optical communications at massive scale.

As AI factories grow to unprecedented sizes, networks must evolve to keep pace. NVIDIA photonics switches are the world's most advanced networking solution. They integrate optics innovations with 4x fewer lasers to deliver 3.5x more power efficiency, 63x greater signal integrity, 10x better network resiliency at scale and 1.3x faster deployment compared with traditional methods.

"AI factories are a new class of data centers with extreme scale, and networking infrastructure must be reinvented to keep pace," said Jensen Huang, founder and CEO of NVIDIA. "By integrating silicon photonics directly into switches, NVIDIA is shattering the old limitations of hyperscale and enterprise networks and opening the gate to million-GPU AI factories."

NVIDIA silicon photonics networking switches are available as part of the NVIDIA Spectrum-X Photonics Ethernet and NVIDIA Quantum-X Photonics InfiniBand platforms.

The Spectrum-X Ethernet networking platform delivers superior performance and 1.6x bandwidth density compared with traditional Ethernet for multi-tenant, hyperscale AI factories, including the largest supercomputer in the world.

NVIDIA Spectrum-X Photonics switches include multiple configurations, including 128 ports of 800Gb/s or 512 ports of 200Gb/s, delivering 100Tb/s total bandwidth, as well as 512 ports of 800Gb/s or 2,048 ports of 200Gb/s, for a total throughput of 400Tb/s.

NVIDIA Quantum-X Photonics switches provide 144 ports of 800Gb/s InfiniBand based on 200Gb/s SerDes and use a liquid-cooled design to efficiently cool the onboard silicon photonics. NVIDIA Quantum-X Photonics switches offer 2x faster speeds and 5x higher scalability for AI compute fabrics compared with the previous generation.

A Networked Ecosystem
NVIDIA's silicon photonics ecosystem includes TSMC, Browave, Coherent, Corning Incorporated, Fabrinet, Foxconn, Lumentum, SENKO, SPIL, Sumitomo Electric Industries and TFC Communication.

"A new wave of AI factories requires efficiency and minimal maintenance to achieve the scale required for next-generation workloads," said C. C. Wei, chairman and CEO of TSMC. "TSMC's silicon photonics solution combines our strengths in both cutting-edge chip manufacturing and TSMC-SoIC 3D chip stacking to help NVIDIA unlock an AI factory's ability to scale to a million GPUs and beyond, pushing the boundaries of AI."

NVIDIA photonics will drive massive growth for a new wave of state-of-the-art AI factories, alongside pluggable optical transceiver technologies supported by industry leaders including Coherent, Eoptolink, Fabrinet and Innolight.

Availability
NVIDIA Quantum-X Photonics InfiniBand switches are expected to be available later this year, with NVIDIA Spectrum-X Photonics Ethernet switches coming in 2026 from leading infrastructure and system vendors.

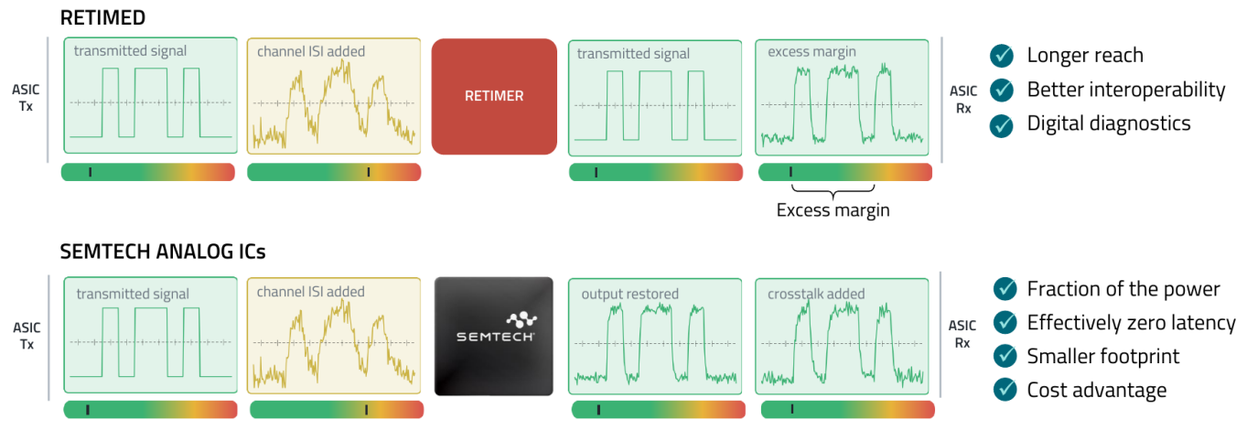

Learn more by watching the NVIDIA GTC keynote and register for sessions from NVIDIA and industry leaders at the show, which runs through March 21.

About NVIDIA
NVIDIA (NASDAQ: NVDA) is the world leader in accelerated computing.

Certain statements in this press release including, but not limited to, statements as to: the benefits, impact, availability, and performance of NVIDIA's products, services, and technologies; third parties adopting or offering NVIDIA's products and technologies; and by integrating silicon photonics directly into switches, NVIDIA is shattering the old limitations of hyperscale

I29_p 001 | NVIDIA, GTC 2025. The source gives announced photonics platform specifications and planned availability. Switch capacity is distinct from shipped units. Its named ecosystem neither proves MACOM content nor rules out indirect participation. Date: 2025-03-18. PDF page 1. Confidence: HIGH for exact source statements; vendor projections and inferred applicability remain conditional. Source: https://nvidianews.nvidia.com/_gallery/download_pdf/67d9bf5b3d6332b0a6d11f0e/

Next-Generation Data Centers Are Increasingly Using Linear Signal Integrity Solutions

- Longer reach
- Better interoperability
- Digital diagnostics

- Fraction of the power
- Effectively zero latency
- Smaller footprint
- Cost advantage

"Linear when you can and retimed when you must"

I27_p 034 | Semtech, October 15, 2026, PDF page 34. Retiming supports reach, interoperability and diagnostics; linear analog approaches trade those attributes for lower power, latency, size and cost. This is a vendor's architecture comparison, not a measured MACOM share-loss series. Date: 2026-10-15. PDF page 34. Confidence: HIGH for exact source statements; vendor projections and inferred applicability remain conditional. Source: https://investors.semtech.com/media/document/1990dee5-1dee-4ff0-b311-750aaf76c638/assets/Semtech_Analyst_Day_Final_101526_FULL-DECK.pdf

An Additional Growth Engine – Semtech Photonics Portfolio

SEMTECH TRANSFORMING

ADDITION OF LASER PRODUCTS

March 2026

Caltech
ORTEL
Lucent Technologies
emcore
HIEFO

- 46-year heritage in photonic chip design & manufacturing (gain chips, SOAs, DFBs, PDs)
- Vertically integrated (MOCVD EPI, Wafer Fab, Bar/Chip Fab, CoC)
- Pure-play U.S. laser chip supplier based in Los Angeles area

ADDITION OF PHOTODIODE CAPABILITY

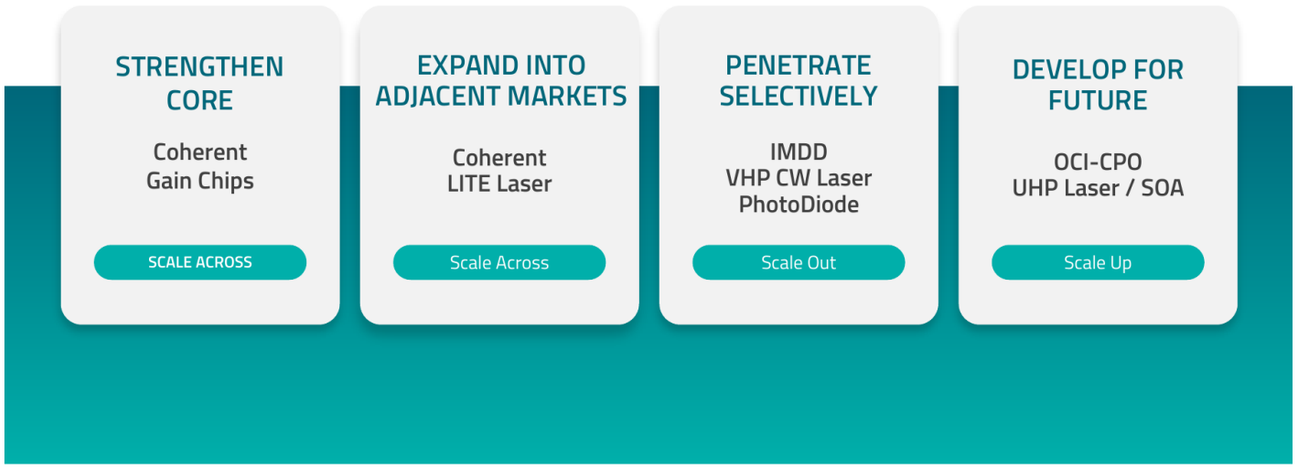

June 2026

D-TECH optoelectronics inc.

- World-class design talents of high-speed photodiodes
- Instant access to 7,000 ft^2 cleanroom for laser capacity expansion
- Close proximity to the HieFo photonics fab
- Plan to demonstrate 200G and 300G PDs at OFC'27

I27_p 019 | Semtech, October 15, 2026, PDF page 19. The company describes March laser assets, June detector capability and a 7,000 square-foot cleanroom, with future OFC 2027 demonstrations. Capabilities and future demos have different commercial status from accepted production sales. Date: 2026-10-15. PDF page 19. Confidence: HIGH for exact source statements; vendor projections and inferred applicability remain conditional. Source: https://investors.semtech.com/media/document/1990dee5-1dee-4ff0-b311-750aaf76c638/assets/Semtech_Analyst_Day_Final_101526_FULL-DECK.pdf

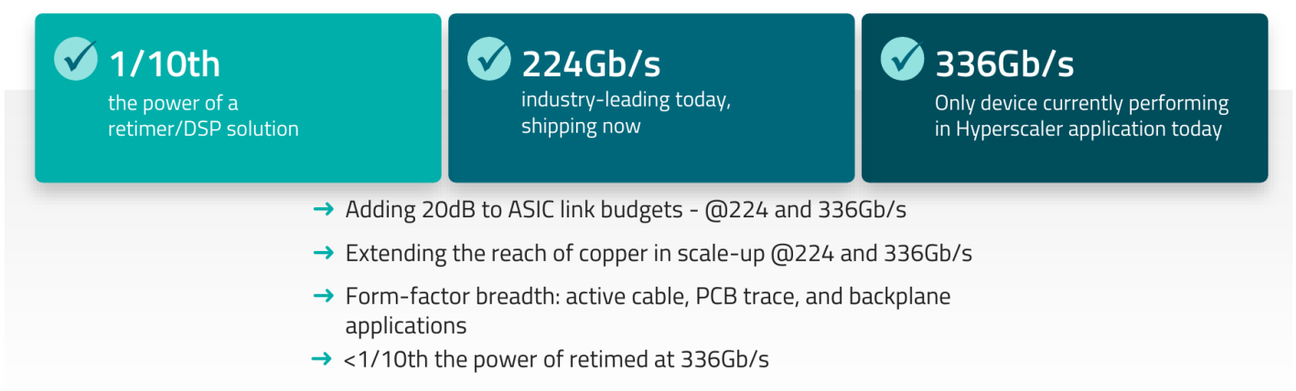

Photonics Business Expansion Strategy

I27_p 020 | Semtech, October 15, 2026, PDF page 20. The roadmap separates existing coherent gain chips, adjacent coherent-lite and selective IMDD very-high-power products from future ultra-high-power and SOA opportunities. The roadmap does not make every family current production. Date: 2026-10-15. PDF page 20. Confidence: HIGH for exact source statements; vendor projections and inferred applicability remain conditional. Source: https://investors.semtech.com/media/document/1990dee5-1dee-4ff0-b311-750aaf76c638/assets/Semtech_Analyst_Day_Final_101526_FULL-DECK.pdf

Why We Win: CopperEdge™

Partnered with definitional customer to introduce redrivers to the industry

I27_p 037 | Semtech, October 15, 2026, PDF page 37. Semtech claims shipping 224 Gbps redrivers and customer use of 336 Gbps products, alongside power comparisons with retimers. These are competing-vendor product claims, not MACOM order or realized-price data. Date: 2026-10-15. PDF page 37. Confidence: HIGH for exact source statements; vendor projections and inferred applicability remain conditional. Source: https://investors.semtech.com/media/document/1990dee5-1dee-4ff0-b311-750aaf76c638/assets/Semtech_Analyst_Day_Final_101526_FULL-DECK.pdf

Why We Win: FiberEdge™

Decades of TIA leadership, from 2.5G to 200G and beyond

Proven Performance
Leading100G/lane TIA in the industry — FRO and LPO
From 18% to >50% market share

Form Factor Agnostic
Every module type — we don't bet on one form factor

100G + 200G
capacity to deliver both nodes at volume

- → Low-noise, high-bandwidth architecture delivering the highest linearity/THD in the industry
- → 200G TIA + PD attach, built on an architecture we patented in 2002
- → Proven optics interoperability across the ecosystem
- → Production capacity in place, and form-factor agnostic — LPO, XPO, NPO, and emerging highly integrated architectures

World's #1 100G/lane TIA, extending to 200G and beyond for all form factors in the volumes that the industry needs

I27_p 038 | Semtech, October 15, 2026, PDF page 38. Its claimed 100G-per-lane TIA share grows from 18% to above 50%, alongside 100G/200G capacity and packaging breadth. The share claim's denominator and time path are not fully disclosed; it must not become a global 200G share fact. Date: 2026-10-15. PDF page 38. Confidence: HIGH for exact source statements; vendor projections and inferred applicability remain conditional. Source: https://investors.semtech.com/media/document/1990dee5-1dee-4ff0-b311-750aaf76c638/assets/Semtech_Analyst_Day_Final_101526_FULL-DECK.pdf

Why We Win: Photonics

Aligned to Semtech's power efficient data center portfolio

Power Efficiency
Higher laser efficiency plus lower coupling loss

Signal Quality
Low noise and narrow linewidth, ready for coherent-lite

US Supplier
Vertically integrated, US supplier provides geographic resilience

40–50mW savings

per 800G module
25–30mW from power conversion;
15–20mW from coupling efficiency

~44% PCE vs. typical ~30% at 25°C; <0.8 dB coupling loss vs. typical ≥1.2–1.5 dB

Better than –145dB/Hz

relative intensity noise (RIN)

Linewidth <500 kHz, coherent-lite ready

40+ year history

in photonic chips: gain chips, SOAs, high-power DFBs, and PDs, added to Semtech portfolio through disciplined M&A

MOCVD epi through chip-on-submount

Lower power, cleaner signal, US-built, across scale-up, scale-out and scale-across

I27_p 039 | Semtech, October 15, 2026, PDF page 39. A US production chain extends from MOCVD through chip-on-submount, with laser and detector performance claims. It is evidence of an alternative production route; no MACOM cost or pricing follows from the page. Date: 2026-10-15. PDF page 39. Confidence: HIGH for exact source statements; vendor projections and inferred applicability remain conditional. Source: https://investors.semtech.com/media/document/1990dee5-1dee-4ff0-b311-750aaf76c638/assets/Semtech_Analyst_Day_Final_101526_FULL-DECK.pdf

Q3'26 Business Highlights

- Infrastructure grew 47% sequentially and 210% over Q3'25 continuing as MaxLinear’s largest revenue category. This was led by strong growth in high-speed optical interconnects.
- Keystone, our 100G-per-lane PAM4 DSP platform, continues to ramp into high-volume production. Rushmore, our 1.6T, 200G-per-lane PAM4 DSP, is now in customers' hands and progressing through initial qualification.
- Panther Storage Accelerator won FMS 2026 Best in Show award in servers & networking
- Launched Puma 9, enabling operators to accelerate AI-ready DOCSIS 4.0/3.1+ multi-gig services
- Introduced Carmel high-speed USB-to-UART for next-gen AI data center console access
- Introduced RackCommander control plane portfolio for next-gen AI infrastructure

MAXLINEAR

I55_p 005 | MaxLinear, October 22, 2026, PDF page 5. Keystone at 100G per lane is in volume production, while Rushmore 1.6T is in initial customer qualification. Product stages affect the merchant driver opportunity; these statements do not measure MACOM growth. Date: 2026-10-22. PDF page 5. Confidence: HIGH for exact source statements; vendor projections and inferred applicability remain conditional. Source: https://d1io3yog0oux5.cloudfront.net/_4b5957e600a139ac92ad374dac841dea/maxlinear/db/269/1725/conference_call_presentation/MaxLinear+Quarterly+Earnings+Deck+Q326.pdf

MACOM family ASPs, program allocations, accepted-unit series, good CW output, die area, wafer starts, production yield and burn-in/test acceptance are undisclosed. Product availability, sampling, reliability qualification, module/hyperscaler acceptance and recognized revenue remain distinct stages. Integrated DSP drivers and alternative optical implementations can remove a merchant socket while higher rates or denser packaging expand other content.

Current results, guidance and management evidence

The latest actual period is Q3 FY2026, ended July 3 and released August 6. The October 22 issuer notice schedules Q4/FY2026 results for November 5; no later actual or preliminary results were found in issuer/SEC indexes. Q4 ended October 2 but remains guidance-anchored Model. Fiscal Q3 FY2026 maps mainly to calendar Q2 2026, fiscal Q4 to calendar Q3, and FY2027 Q1 mainly to calendar Q4 2026. The calendar Q4 2027 ceiling prices Q4 2027-Q3 2028, approximately FY2028's four fiscal quarters.

The available May 7 Q2 and August 6 Q3 management transcript bodies include CEO/CFO remarks, Q&A and closing. They are third-party Motley Fool transcriptions, with primary audio unverified. Q2 begins with Daly and omits the operator/IR introduction; Q3 includes that introduction. Issuer releases, 10-Qs and the 10-K independently anchor reported financials. The complete financial ledger preserves the current statements and comparative rows; missing audio is never relabeled verified.

Book-to-bill progressed from 1.3 to 1.5 to a record 1.6, with bookings generally eligible for delivery within 12 months. Data Center growth reflects current 800G/1.6T and detector sales. Management describes rising utilization, yield and output, with modest additions to existing fabs. It expects FY2027 gross-margin progress of 25-50 basis points per quarter and adjusted operating-expense additions around $2-$3 million per quarter, targeting adjusted OP margin above 40%. R&D resources must grow with scale. The roughly $60 million FY2027 capex indication differs from longer-run discipline of 4-5% of revenue and the rewritten CHIPS proposal.

The following tables present our revenue disaggregated by markets and geography (in thousands):

	Three Months Ended		Nine Months Ended	
	July 3, 2026	July 4, 2025	July 3, 2026	July 4, 2025
Revenue by Market:				
Industrial & Defense	$ 133,390	$ 108,206	$ 371,755	$ 304,148
Data Center	137,584	75,822	321,526	213,286
Telecom	71,263	68,051	209,523	188,654
Total	$ 342,237	$ 252,079	$ 902,804	$ 706,088

	Three Months Ended		Nine Months Ended	
	July 3, 2026	July 4, 2025	July 3, 2026	July 4, 2025
Revenue by Geographic Region[1]:				
United States	$ 121,151	$ 105,300	$ 358,989	$ 310,543
China	133,791	70,967	318,193	197,545
Asia Pacific, excluding China	40,235	29,535	104,241	76,475
Other Countries [2]	47,060	46,277	121,381	121,525
Total	$ 342,237	$ 252,079	$ 902,804	$ 706,088

(1) Revenue by geographic region is aggregated by customer billing address.
(2) No country or region represented greater than 10% of our total revenue as of the dates presented, other than the United States, China and Asia Pacific region as presented above.

Contract Balances

We record contract assets or contract liabilities depending on the timing of revenue recognition, billings and cash collections on a contract-by-contract basis. Our contract liabilities primarily relate to deferred revenue, including advanced consideration received from customers for contracts prior to the transfer of control to the customer, and, therefore, revenue is subsequently recognized upon delivery of products and services.

The following table presents the changes in contract liabilities during the nine months ended July 3, 2026 (in thousands, except percentage):

	July 3, 2026	October 3, 2025	$ Change	% Change
Contract liabilities	$ 3,941	$ 7,676	$ (3,735)	(48.7)%

During the three and nine months ended July 3, 2026, we recognized revenue of $0.7 million and $5.8 million, respectively, that were included in the contract liabilities balance as of October 3, 2025. During the three and nine months ended July 4, 2025, we recognized revenue of $0.3 million and $1.7 million, respectively, that were included in the contract liabilities balance as of September 27, 2024. The decrease in contract liabilities during the nine months ended July 3, 2026 was primarily related to recognition of revenue that was previously deferred for products and services invoiced prior to when certain of our customers obtained control of such products and/or services, partially offset by deferral of revenue for additional invoicing prior to when our customers obtain control of such products and/or services.

F03 | Revenue by end market for the quarter and nine months ended July 3, 2026. The disclosed categories are Data Center, Industrial and Defense, and Telecom; modeled CW/NPO chip invoices remain within Data Center. Date: 2026-08-06. PDF page 11. Confidence: HIGH for reported issuer financial facts; forecast applications are Model. Source: https://ir.macom.com/static-files/78582187-3497-43eb-adad-0d1db19e7689

USD million | Issuer actual; quarter ended July 3, 2026

The issuer bridge restores ordinary compensation/payroll, acquired amortization and integration. Total software amortization already inside adjusted costs is not deducted twice. Fair-value gains and interest remain below OP.

T008 | C02 | Exact plotted data

Measure	USD M
Adjusted OP	107.714000
Comp./payroll	-24.511000

Joint outcomes and the probability ledger

The selected model uses four mutually exclusive operating regimes, summing 100%, crossed with two conditional capital-funding outcomes to create eight coherent cash paths. Each path carries its correlated revenue, costs, capital needs, working capital, interest, tax and funding feasibility. Expectations are taken after nonlinear calculations. These are subjective outcome judgments. The single active forecast is their weighted result. Protected Excel Base 73 is independent of these probabilities and never multiplies the operating forecast or ceiling.

A, 30%: constrained conversion and competitive pricing. The 2027 reference is $750 million core Data Center, $650 million I&D and $300 million Telecom, close to the annualized exit-guidance mix, followed by slower capture. CW remains zero and net NPO reaches only $20 million in 2030. This is the no-increment reference rather than a guaranteed worst recession outcome.

B, 25%: timely core delivery, delayed CW qualification and partial NPO conversion. Core Data Center is $1,000/$1,300/$1,600/$1,900 million in 2027-2030; I&D is $760/$900/$1,050/$1,190 million; Telecom is $380/$450/$530/$620 million. Net NPO adds $0/$80/$150/$220 million once, while CW is zero.

C, 30%: the same core, I&D and Telecom path as B, plus qualified CW of $5/$240/$430/$650 million and net NPO of $0/$100/$200/$330 million in 2027-2030. Small initial CW receipts appear only in calendar Q4 2027; substantial production begins in 2028. Engineering, reliability, capital and working-capital resources are charged throughout the forecast.

D, 15%: faster accepted volume and a wider component wallet. Core Data Center is $1,200/$1,600/$2,100/$2,650 million, I&D $850/$1,050/$1,300/$1,550 million, Telecom $440/$550/$700/$900 million, CW $15/$400/$750/$1,100 million and net NPO $0/$220/$400/$650 million in 2027-2030. This aggressive conditional endpoint has a deliberately low weight and represents no awarded allocation.

The combined B/C/D timely-core probability is 70%, supported by actual sales, repeated order growth and installed-fab plans. A retains 30% for supply, concentration, timing and concrete competing products. Correlated launch reposts do not automatically raise probability. CW realization in C/D has 45% weight: positive reliability/performance testimony and customer pull are balanced against unfinished process, module and hyperscaler qualification and competing capacity. D's faster/wider case is 15%. Partial NPO conversion in B/C/D is 70%, with meaningful receipts beginning in 2028. The 10-20 development projects are not equal-sized reported awards.

NPO represents net new semiconductor invoices after replacing existing pluggable content. LOW gross-minus-replacement proxies in 2028 are B $120-$40=$80 million, C $160-$60=$100 million and D $340-$120=$220 million. In 2029 they are B $230-$80=$150 million, C $320-$120=$200 million and D $650-$250=$400 million. In 2030 they are A $50-$30=$20 million, B $340-$120=$220 million, C $530-$200=$330 million and D $1,050-$400=$650 million. These endpoints reflect the development funnel and current revenue scale, rather than signed awards. Core Data Center excludes new CW/NPO invoices but already includes 3.2T/PAM4, detector, legacy DFB, equalizer and coherent-family evolution. The same speed transition receives no second uplift.

The C 2028 CW endpoint of $240 million implies 16 million equivalent good dies at an assumed $15 per die, or 24-9.6 million at $10-$25. This is a LOW unit cross-check, not another revenue input. Actual ASP, chip/array packaging and qualified good-unit capacity are undisclosed. Arrays and shared external sources prevent assuming one or eight lasers per module. Die area, wafer size, process yield, burn-in and test acceptance remain missing. The arithmetic establishes no named customer or accepted production output. Later qualification/capacity disclosures should replace the proxy; they are not required before assigning 45% today.

I&D and Telecom are jointly contained in A/B/C/D, without another probability multiplier. MESC's twofold process-capacity improvement is site/process specific. Fourfold geometric wafer area does not establish fourfold accepted output or company revenue. RTP's 30% capacity addition and $15-$16 million capex concern an existing expansion. Forecast I&D/Telecom capture includes defense replenishment, two to three LEO ramps and prospective 5G sockets. Satellite counts and defense budgets supply no additional company invoices independently.

T012 | Four coherent operating regimes

Regime	Subjective weight	Commercial realization
A	30.00%	Constrained conversion near annualized exit-guide reference
B	25.00%	Core delivery; laser qualification delayed
C	30.00%	Core delivery plus qualified photonics
D	15.00%	Faster conversion and wider component wallet

T013 | Regime A | annual component receipts | USD million

Year	Core DC	CW	Net NPO	I&D	Telecom
2,027	750.000	0.000	0.000	650.000	300.000

T018 | CW equivalent-unit cross-check | 2028 C endpoint

Assumed USD / good die	Revenue endpoint, USD M	Equivalent good dies, M
10.00	240.000	24.000
15.00	240.000	16.000
25.00	240.000	9.600

T019 | Receipt hypothesis 1 | MTSI-CORE-PAM4-PD-20260806

Field	Scope / judgment
source date	2026-08-06
source scope	August 6 actual PAM4/detector growth and record bookings; current 3.2T launch; October 15 Semtech and October 22 MaxLinear competitive evidence.
probability	70.00%
subjective probability rationale	Actual qualified 800G/1.6T/detector sales, broad customers and installed-fab plans support timely conversion. Unproven capture and integrated DSP drivers retain a 30% constrained case.

Field	Scope / judgment
Evidence confidence	LOW future amount/cost proxy; HIGH actual and formal-guidance anchors.
overlap and dependence	Core excludes new CW and net new NPO invoices. Lower-rate DFB, 3.2T, equalizers and coherent evolution already belong to core, without another market multiplier.
OP transmission	Evaluate contribution, factory, R&D, SG&A, ordinary compensation, amortization and cash costs inside each coherent state before expectation. Apply neither a second OP premium nor another probability to the ceiling.
counter trigger	Qualification, acceptance, timing, mix, price, good-output or cost misses shift realization toward A or B. Independent productive-unit/order evidence can raise weight, retaining finite 0-100% probabilities that sum to 100%.

T022 | Receipt hypothesis 2 | MTSI-DEFENSE-RF-MESC-20260806

Field	Scope / judgment
source date	2026-08-06
source scope	August 6 defense, radar/EW and MESC production-conversion testimony; September 29 EuMW engineering launch.
probability	70.00%
subjective probability rationale	Existing production, customer diversity and defense demand support capture; process conversion, yield and program timing remain uncertain.
Evidence confidence	LOW future amount/cost proxy; HIGH actual and formal-guidance anchors.
overlap and dependence	MESC/RF receipts stay within I&D. Twofold site process capacity does not imply fourfold good output or twice all-company sales. Satellite receipts classified Telecom are not repeated here.
OP transmission	Evaluate contribution, factory, R&D, SG&A, ordinary compensation, amortization and cash costs inside each coherent state before expectation. Apply neither a second OP premium nor another probability to the ceiling.
counter trigger	Qualification, acceptance, timing, mix, price, good-output or cost misses shift realization toward A or B. Independent productive-unit/order evidence can raise weight, retaining finite 0-100% probabilities that sum to 100%.

T025 | Receipt hypothesis 3 | MTSI-LEO-5G-CABLE-20260806

Field	Scope / judgment
source date	2026-08-06
source scope	August 6 management testimony on two to three LEO ramps, 5G opportunities after competitor exit and cable demand.
probability	70.00%
subjective probability rationale	An active program funnel and existing receipts support growth. Award values and acceptance dates remain undisclosed.
Evidence confidence	LOW future amount/cost proxy; HIGH actual and formal-guidance anchors.
overlap and dependence	Payload, gateway, control, 5G, cable and metro content stay within Telecom. SpaceX ARR/capex and complete terminal value are not additional receipts.
OP transmission	Evaluate contribution, factory, R&D, SG&A, ordinary compensation, amortization and cash costs inside each coherent state before expectation. Apply neither a second OP premium nor another probability to the ceiling.
counter trigger	Qualification, acceptance, timing, mix, price, good-output or cost misses shift realization toward A or B. Independent productive-unit/order evidence can raise weight, retaining finite 0-100% probabilities that sum to 100%.

T028 | Receipt hypothesis 4 | MTSI-CW-QUALIFICATION-20260806

Field	Scope / judgment
source date	2026-08-06
source scope	August 6 management testimony on 75 mW reliability/process work and potential late-calendar-2027 production.
probability	45.00%
subjective probability rationale	Performance and customer pull are positive, while internal production, module and hyperscaler qualification remain unfinished. Competition and timing justify 45% rather than certainty.
Evidence confidence	LOW future amount/cost proxy; HIGH actual and formal-guidance anchors.
overlap and dependence	CW reference revenue is zero. Current DFB/PAM4/detector receipts remain in core. The endpoint covers compatible SiPh chips, without inheriting a high-power turnkey CPO/ELS wallet. Initial 2027 sales occur only in Q4.
OP transmission	Evaluate contribution, factory, R&D, SG&A, ordinary compensation, amortization and cash costs inside each coherent state before expectation. Apply neither a second OP premium nor another probability to the ceiling.
counter trigger	Qualification, acceptance, timing, mix, price, good-output or cost misses shift realization toward A or B. Independent productive-unit/order evidence can raise weight, retaining finite 0-100% probabilities that sum to 100%.

T031 | Receipt hypothesis 5 | MTSI-NPO-NET-WALLET-20260806

Field	Scope / judgment
source date	2026-08-06
source scope	August 6 management testimony on 10-20 active NPO development projects and main sales expected in 2028.
probability	70.00%
subjective probability rationale	Partial productive-funnel conversion has 70% weight; the widest fast case has 15%. Dollar endpoints are LOW conditional proxies, not reported project awards.
Evidence confidence	LOW future amount/cost proxy; HIGH actual and formal-guidance anchors.
overlap and dependence	Net new chip receipts deduct displaced pluggable invoices. Core excludes the new program invoices. Projects are not equal-sized and full engine/module value is excluded.
OP transmission	Evaluate contribution, factory, R&D, SG&A, ordinary compensation, amortization and cash costs inside each coherent state before expectation. Apply neither a second OP premium nor another probability to the ceiling.
counter trigger	Qualification, acceptance, timing, mix, price, good-output or cost misses shift realization toward A or B. Independent productive-unit/order evidence can raise weight, retaining finite 0-100% probabilities that sum to 100%.

T034 | Positive capital-funding hypothesis | 35% realization

Field	Model scope
signal id	MTSI-CHIPS-REVISED-CAPITAL-PLAN-20260806
date	2026-08-06
source scope	Issuer 10-Q preliminary nonbinding funding proposal and management testimony on the rewritten project and unresolved negotiations.
probability	35.00%
probability rationale	Management describes a potential capital benefit. Revised-project uncertainty and unacceptable terms retain 65% no reimbursement. The 35% is subjective, not a measured award frequency.
Evidence confidence	LOW conditional amount, eligible share, reimbursement rate, timing and cash-tax assumptions.
conditional annual gross cash USDM	6
derivation	$60M annual capital reference x 50% eligible fab share x 20% incremental reimbursement = $6M gross/year, paid $1.5M each quarter in 2028-2030.
expected annual gross cash USDM	2.1
assumed incremental grant cash tax rate	20.00%
expected annual cash tax USDM	0.42
expected annual net direct cash USDM	1.68
operating profit increment	0
economic transmission	Evaluate eight complete cash states before averaging interest, tax and funding. Gross capex stays deducted; grant tax is deducted once in CFO and gross funding follows FCF. Recurring OP and its gross depreciation cost basis are unchanged.
accounting scope	Modeled capital resources are not issuer future GAAP grant profit, PPE/tax-basis or cash-tax guidance. Actual accounting must be reassessed when terms are known.
overlap	No product revenue, automatic old $70M/$345M award or second receipt of the recognized $8.3M ITC. The $6M annual endpoint is limited to this reference project; larger company capex does not automatically increase it.
source gaps	Revised eligibility, conditions, amount, milestone schedule, tax and GAAP treatment remain unknown; the source proposal is nonbinding.
counter trigger	New terms or negotiation changes revise probability, eligibility, rate, timing and tax. Probability 0/1 and cash-tax 0/40% controls are tested.

T035 | Capital funding | 18 quarter bridges | USD million

Quarter	Conditional gross	Expected gross	Expected grant tax	Expected direct net
Q3 2026	0.000	0.000	0.000	0.000
Q4 2026	0.000	0.000	0.000	0.000

Q4 2028	1.500	0.525	0.105	0.420
Q1 2029	1.500	0.525	0.105	0.420

Quarter	Conditional gross	Expected gross	Expected grant tax	Expected direct net
Q2 2029	1.500	0.525	0.105	0.420
Q3 2029	1.500	0.525	0.105	0.420
Q4 2029	1.500	0.525	0.105	0.420
Q1 2030	1.500	0.525	0.105	0.420
Q2 2030	1.500	0.525	0.105	0.420
Q3 2030	1.500	0.525	0.105	0.420
Q4 2030	1.500	0.525	0.105	0.420

Expected annual gross capital funding is $2.1 million in 2028-2030. A LOW 20% grant cash-tax haircut produces $0.42 million expected tax and $1.68 million direct net cash. Future interest and ordinary tax effects are computed within each coherent cash path. This is a proxy for a revised project, separate from the old preliminary amount and existing recognized ITC.

T036 | Eight coherent joint cash substates

State	Operating weight	Grant outcome	Joint weight
A_G0	30.00%	no reimbursement	19.50%
A_G1	30.00%	reimbursement	10.50%
B_G0	25.00%	no reimbursement	16.25%
B_G1	25.00%	reimbursement	8.75%
C_G0	30.00%	no reimbursement	19.50%
C_G1	30.00%	reimbursement	10.50%
D_G0	15.00%	no reimbursement	9.75%
D_G1	15.00%	reimbursement	5.25%

Dated evidence, overlap and counter-evidence

The September 15 ECOC demonstrations and September 17 3.2T launch support product architecture and timing within core Data Center. The September 29 EuMW announcement supplies additional engineering evidence for the existing Industrial & Defense, Telecom and MESC wallets. A further launch does not create a separate sales pool. The framework's optical-market revision informs eligible demand and intensity; it does not mechanically scale MACOM by total module-market growth.

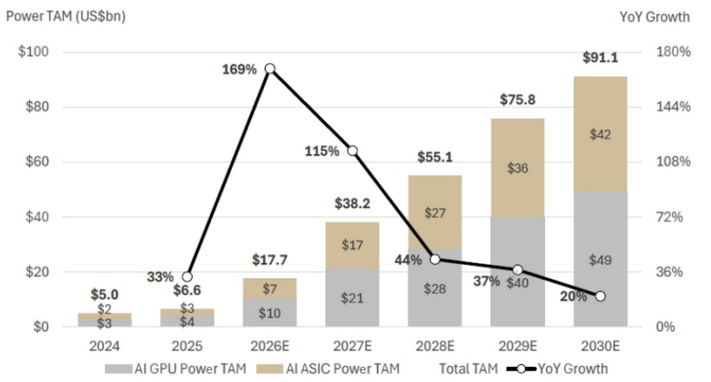

The October 15 Semtech deck and October 22 MaxLinear results provide new competitive evidence. Merchant analog, detector and laser competition, together with DSP-integrated drivers, can limit capture and realized pricing. Semtech's approximately $8 applies to 800G; its future 3.2T NPO/XPO wallet above $100 has broader content. Neither is a MACOM 1.6T ASP. Marvell's integrated drivers are another direct alternative. The constrained-state weight and adverse margin deviation price these risks. Show-floor claims are not measured MACOM performance inferiority.

The owner-supplied UBS-labelled October 15 excerpt contains 11 image-only pages. The analog-chain and commercial DFB tables on pages 10-11 support existing product scope. CW/EML dashes establish no absence of capability, and the power-market USD forecast supplies no MACOM optical-chip wallet. Standalone incremental revenue is zero because these tables provide no economic revision beyond the modeled analog/DFB business. Full report pages 12 onward, disclosures and authenticated provenance remain unavailable.

The IQE-Tower-MACOM supply/investment material describes one existing transaction. Its allocation probability concerns IQE supply rather than a new MACOM sales contract. The strategic investment is already reflected in July 3 cash. Repetition of the financing or supply commitment creates no additional MACOM revenue or cash flow. Existing coherent/copper architecture evidence affects the joint core, cost and competition paths. Net merchant content can decline as well as grow; the model applies no separate all-laser or campus-spending multiplier.

power consumption, higher yields, and greater durability.

Figure 15: AI Power TAM growth

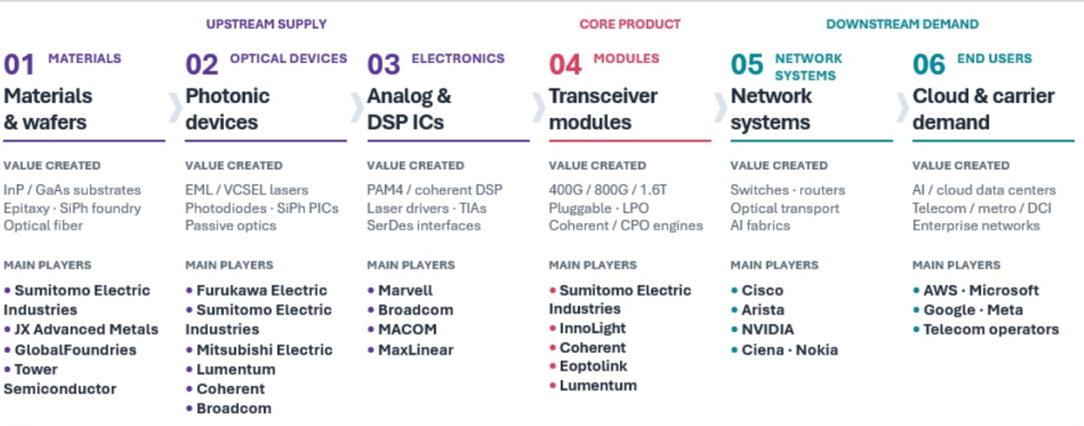

Source: UBS Global tech team (report link)

Figure 16: Pluggable transceiver vs LPO vs NPO vs CPO

	Pros	Cons
Traditional pluggables	Most mature, offering a balance between cost and performance	3.2T and above would be challenging; Could be constrained by DSP limited supply
LPO	Cost-efficient as DSP is removed	Signal loss may arise without DSP
NPO	Closer to switch ASIC so higher and faster bandwidth; Easier maintenance (socket used); Open ecosystem	Higher requirement on thermal management and smaller form factor
CPO	Closest to switch ASIC so highest and fastest bandwidth	Extremely complicated for chip manufacturing; Hard for maintenance (bumped)

Source: UBS China tech team (report link)

OWNER_p 010 | Owner-supplied UBS-labelled excerpt, October 15, 2026, page 10. The analog-chain diagram includes MACOM. Figure 15 is a USD power-market forecast, with no MACOM optical-chip revenue allocation. The page's architecture comparison supplies context for existing eligible component content. The 11 supplied image-only pages are incomplete: pages 12 onward and disclosures are absent; provenance is not independently authenticated. Date: 2026-10-15. Supplied PDF and printed page 10. Confidence: LOW for unauthenticated owner excerpt; no incremental standalone dollar endpoint inferred. Source: Owner-supplied local excerpt; no authenticated underlying public URL recovered

Figure 18: Product development from major "active component" companies

Company	CW	EML	DFB	Leading disclosed product / specification	Primary application / wavelength	Public maturity
Furukawa Electric	Confirmed	Confirmed	Confirmed	CW-DFB chips at ~70 mW and ~100 mW; FOL13EBxCS EML+SOA at 50 Gbaud and >12 dBm	SiPh / 100G–400G Ethernet; CWDM 1271–1331 nm and O-band LAN-WDM	Commercial CW-DFB; EML samples shipped
Sumitomo Electric Industries	Confirmed	Confirmed	-	STA4P 200 Gb/s EML chip, 112 Gbaud, 15 mW; separate 70 mW CW laser family	DR/FR4; 1271–1331 nm	Commercialized
Coherent	Confirmed	Confirmed	Confirmed	100 mW uncooled / 300 mW cooled CWDM4 DFB; 100/200 Gb/s-class EML chips	DR4/DR8 and 100G–3.2T links; 1270–1330 nm	Commercialized
Lumentum	Confirmed	Confirmed	-	InP CW lasers plus 25G NRZ LAN-WDM and 100G PAM4 CWDM EMLs	SiPh/CPO and data-center/telecom; 400G, 800G and 1.6T platforms	Commercialized
Suzhou Dongshan Precision Manufacturing	Announced / planned	Development route	-	Public reporting references CW lasers for silicon photonics and parallel EML development	AI optical interconnect / SiPh	Announcement/plan-level; commercial status not verified
Yuanjie Semiconductor Technology	Confirmed	Confirmed	Confirmed	Up to 100 mW CW DFB; 200G CWDM4 PAM4 EML; 50G PAM4 DFB	Datacom, PON and 5G; 1270–1370 nm families	Commercialized / IDM mass-production lines
Accelink Technologies	-	Platform confirmed	Platform confirmed	Company states independent EML and DFB chip technologies and mass-production platforms	Data center, access, wireless and transport	Mass-production platform disclosed; product specs not public
Broadcom	Confirmed	Confirmed	-	200G/lane EML production release; CW laser demonstrated for 200G SiPh; 400G EML demonstrated in 2025	AI/ML interconnects and 1.6T optics	200G EML in production; CW/400G EML at demo/roadmap stages
Mitsubishi Electric	-	Confirmed	-	200 Gb/s, 112 Gbaud PAM4 EML chip; 1271/1291/1311/1331 nm CWDM4	800G and 1.6T data-center transceivers	Developed; targeted mass production from 2024
MACOM	-	-	Confirmed	25G CWDM DFB die and 50G PAM4 DFB family;	100G CWDM4, 200G FR4, 5G fronthaul; 1271–1331 nm	Commercial die products

Source: UBS, company data

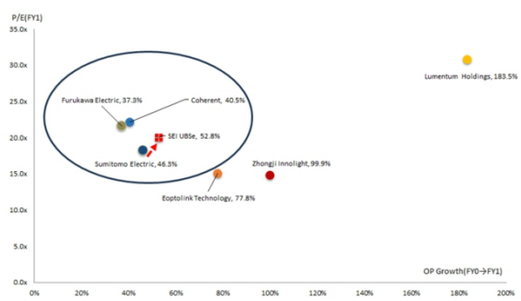

Figure 19: OP Margin

Source: Refinitiv

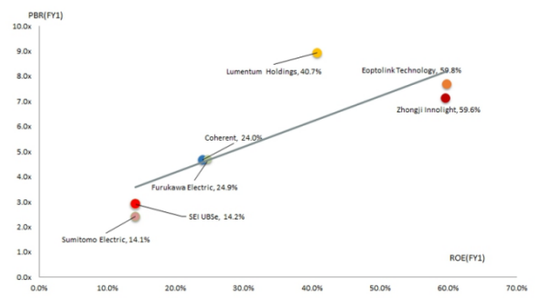

Sumitomo Electric also has a substantial automotive business, making simple comparison of its valuation multiples with global optical-device peers difficult. As Figure 20 shows, its PER (based on FY1 consensus) remains below peer levels due to the high proportion of its business accounted for by automotive components. However, we are bullish on OP growth in its optical devices business, forecasting yoy growth of 89% in FY26, 46% in FY27, and 30% in FY28, driven by the benefits of capacity expansion. As a result, we expect optical devices to account for 20% of OP, with the infocommunications segment as a whole accounting for 47%, supporting a rise in valuation multiples.

Figure 20: Active parts names PER vs OP growth

Note: SEI & Furukawa Electric use the numbers of active parts related segment

Figure 21: Active parts names P/BV and ROE cons

Source: Refinitiv, UBSe

#3 High-density packaging and low signal loss are technology bottlenecks for substrate materials

OWNER_p 011 | Owner-supplied UBS-labelled excerpt, October 15, 2026, page 11. The product table identifies commercial DFB die and distinguishes other products' maturity. Dashes do not establish that MACOM lacks CW or EML capability. Peer ratios and forecasts do not establish MACOM margins or incremental sales. The 11 supplied image-only pages are incomplete: pages 12 onward and disclosures are absent; provenance is not independently authenticated. Date: 2026-10-15. Supplied PDF and printed page 11. Confidence: LOW for unauthenticated owner excerpt; no incremental standalone dollar endpoint inferred. Source: Owner-supplied local excerpt; no authenticated underlying public URL recovered

T037 | Standalone overlap disposition | 1

Field	Judgment
date	2026-10-15
probability	85.00%
outcome	Existing merchant analog/commercial DFB participation in the supplied table context.
incremental revenue USDM	0
reason	Pages 10-11 repeat analog/DFB scope already inside core. Table dashes establish no absent capability; power-market dollars supply no optical wallet. Full report/disclosures and authenticated provenance remain missing.

T038 | Standalone overlap disposition | 2

Field	Judgment
date	2026-10-04
probability	85.00%
outcome	Existing supply continuity under the completed strategic transaction.
incremental revenue USDM	0
reason	The same completed strategic-investment/LTSA event is already in cash and supply-risk assumptions. No contract-economics, allocation or acceptance revision adds another MACOM receipt. An IQE allocation probability is not a MACOM sales probability.

T039 | Standalone overlap disposition | 3

Field	Judgment
date	2026-10-13
probability	40.00%
outcome	Alternative coherent/analog architectures change eligible merchant content.
incremental revenue USDM	0
reason	Existing coherent/copper architectures affect eligible merchant content inside joint core, cost and competition paths. No matched-performance or allocation revision makes a repeated post another receipt.

Manufacturing, engineering and recurring costs

Guidance-quarter variable contribution assumptions are 72% core Data Center, 70% I&D and 66% Telecom, before fixed factory cost and restored recurring exclusions. These are LOW model splits; company end-market margins are undisclosed. Weighted contribution less $40.60342495 million factory expense reproduces 60.5% guidance-midpoint gross margin on $419.20729 million revenue. Future financial schedules are economic gross-cost projections, with no claim of reported or future issuer segment margins.

Base contribution margins for 2027-2030 are 72.5%/73%/73.5%/74% core Data Center, 70%/70.5%/71%/71.5% I&D and 66%/66.5%/67%/67.5% Telecom. The annual 0.5 percentage-point gain is a model assumption: illustrative manufacturing/yield +0.8 points and mix +0.5 are offset by pricing -0.5 and inputs -0.3. No additional generic yield/price premium is added. A has a 1.5-point adverse deviation and D a 0.5-point favorable deviation within each full path. CW begins at 66% in 2027, then 70%/72%/74%; NPO is 70%/72%/74% in 2028-2030, before fixed factory cost. Competitor consolidated margins are not substituted for MACOM product margins.

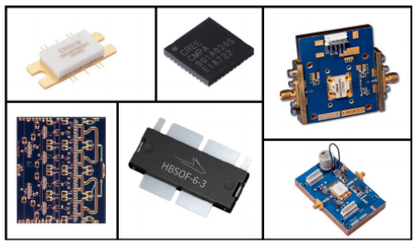

The fixed factory cash plan begins at $32.84342495 million per quarter, derived as $40.60342495 million minus 80% of the $9.7 million depreciation proxy, and rises $0.6 million each quarter. PPE depreciation begins at $9.7 million and adds prior new capex over 24 quarters after a two-quarter service lag; 80% belongs to manufacturing, 16% to R&D and 4% to SG&A. Cash R&D is max(fixed cash plan, 12.5% of revenue minus $4.352 million). Cash SG&A is max(fixed cash plan, 5% of revenue minus $0.388 million). Fixed cash plans begin at $62.448 million/$31.312 million and rise $2 million/$0.75 million per quarter. Live R&D then adds 16% of PPE depreciation and software amortization; live SG&A adds 4% of PPE depreciation. These costs appear once. The floor offsets are frozen calibration anchors and do not reset when live D&A/software changes.

Equity SBC starts at $22 million in calendar Q3 2026 and increases $1 million each quarter as an economic cost. Cash ISU/payroll expense begins at $3.5 million and rises $0.15 million per quarter; same-quarter settlement is a LOW cash proxy rather than a reported payment. Acquired finite-asset amortization begins at $3.3 million, declines $0.15 million per quarter to a $0.75 million floor and is capped by finite net assets. Software amortization remains within R&D. An ordinary cash integration/support reserve of $1 million per quarter remains a cost. All-in forecast PPE depreciation avoids a second acquisition-related depreciation addback.

The actual quarterly reconciliation is $107.714 million adjusted OP less $24.511 million compensation/payroll, $3.335 million acquisition amortization and $2.753 million integration, equaling $77.115 million GAAP OP. Equity-only SBC is $21.097 million; the $3.414 million residual is ISU/payroll expense and is not wholly noncash. Total intangible amortization of $6.156 million includes $2.821 million software amortization already within adjusted expense. Actual all-in PPE depreciation of $9.496 million differs from $9.021 million adjusted depreciation by $0.475 million within acquisition/integration treatment. That difference is not restored again in the all-in forecast. The $41.543 million investment fair-value gain and interest remain below valued OP.

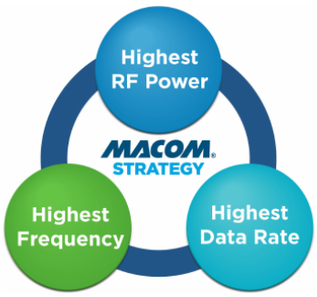

MACOM Announces Definitive Agreement to Acquire the RF Business of Wolfspeed

About Wolfspeed's RF Business

- Gallium Nitride (GaN) on Silicon Carbide (SiC) product portfolio of 300+ products
- Expertise in epitaxy, circuit design, semiconductor processing and packaging
- 20+ years of GaN HEMT experience with over 50 million devices shipped
- Design centers in Arizona, California and North Carolina
- Production wafer fab in Research Triangle Park (RTP), North Carolina
- Category 1A accredited trusted foundry with the Department of Defense
- Assembly & test backend manufacturing in California and Malaysia
- Proven quality and reliability in mission critical applications
- Multiple processes (28 V, 40 V and 50 V) covering applications up to 40 GHz
- LDMOS products, intellectual property and assets from prior Infineon acquisition

MACOM's Strategic Rationale

- Adds highly specialized workforce with industry leading talent and capabilities
- Strengthens market position in RF and microwave industry
- Complements products, technology and manufacturing capabilities
- Expands business with tier 1 aerospace, defense and telecommunication customers
- Establishes strategic long term supply agreement for silicon carbide materials
- Assigned or licensed a robust intellectual property portfolio including over 1,400 patents associated with the RF Business
- Aligns with long term strategy to grow High RF Power and High Frequency portfolio
- Expected to be immediately accretive to MACOM's non-GAAP earnings
- Improves ability to service the growing RF power GaN market, with estimated SAM over two billion dollars

Customers, Products and Markets

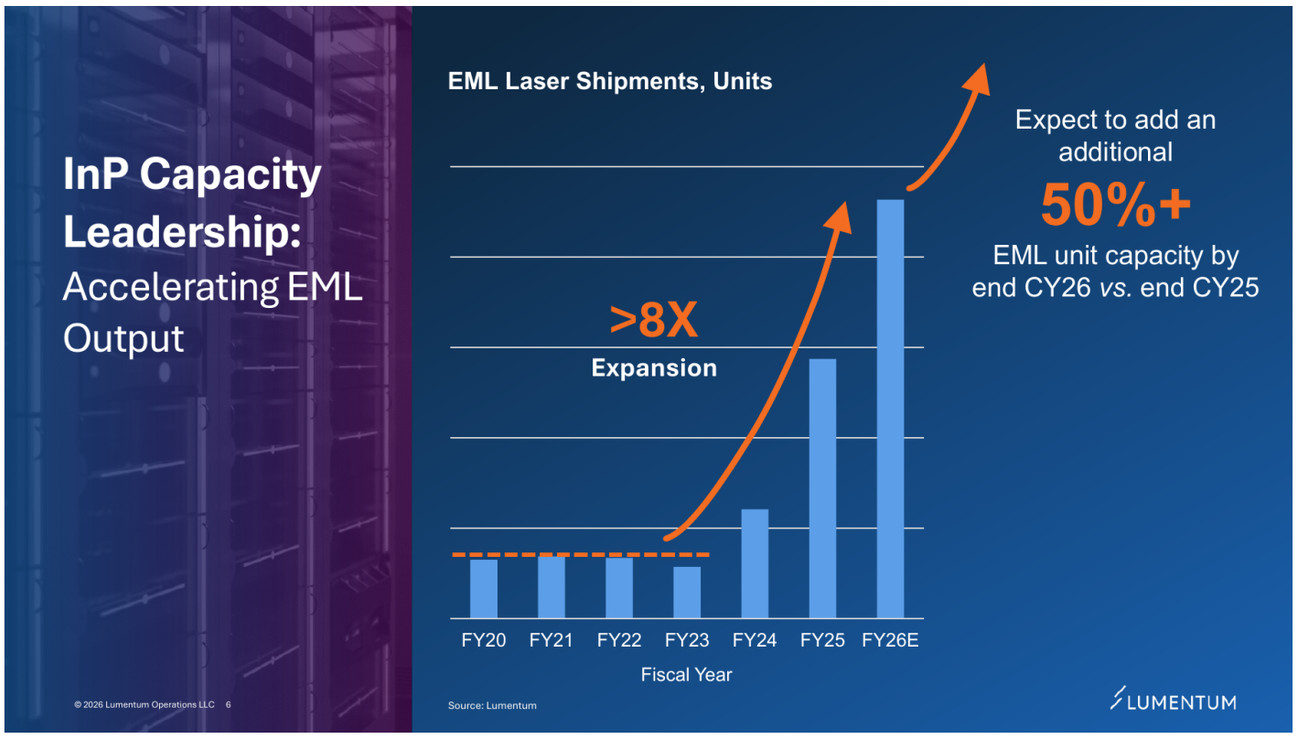

- Approximately $150M USD in annual revenue
- Global customer base, served with direct and distribution sales channels
- Diversified revenue from Commercial and Defense markets
- Established supplier to long term US defense programs
- Standard and custom products, providing design and foundry services
- Specialized high performance, sole source, non-commodity products

Transaction Overview

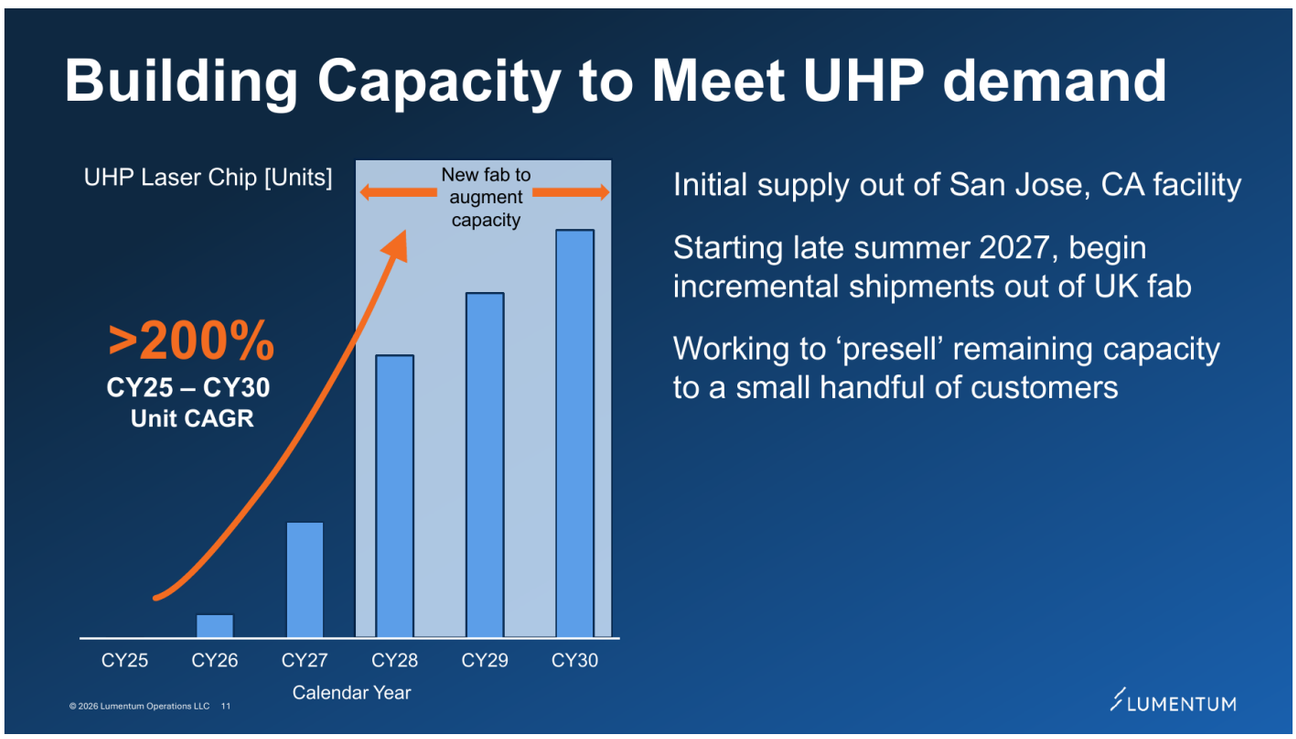

- Carve-out/asset acquisition of the RF Business, associated technology, R&D and production sites
- Purchase price of $75M USD at closing. Additional $50M in MACOM common stock at closing subject to certain restrictions.
- Includes RTP wafer fab with 100mm production line which will convey to MACOM following Wolfspeed's relocation of certain production equipment.
- Prior to RTP wafer fab conveyance, Wolfspeed to supply wafers to MACOM under wafer and epi supply agreements
- ~280 employees expected to be hired at closing and additional wafer fab employees expected to join MACOM when RTP fab conveys
- Closing subject to customary regulatory approvals and closing conditions

"We are excited to acquire Wolfspeed's RF Business and I look forward to welcoming its employees to MACOM," stated Stephen G. Daly, President and Chief Executive Officer, MACOM. "The RF team's engineering capabilities, technology and products are a perfect fit to MACOM and our strategy."

I20_p 001 | MACOM, August 22, 2023. The historical RF acquisition tearsheet describes roughly $150 million annual revenue, a market above $2 billion, the 100 mm RTP line, silicon-carbide supply arrangements and back-end assets. The acquisition is an existing business and manufacturing perimeter. Date: 2023-08-22. PDF page 1. Confidence: HIGH for exact source statements; vendor projections and inferred applicability remain conditional. Source: https://www.macom.com/files/live/sites/macom/files/Leadership/tearsheetRF.pdf

I35_p 006 | Lumentum, March 17, 2026, PDF page 6. The company planned EML capacity 50% higher at year-end 2026 than year-end 2025. The historical graph lacks an absolute unit scale. This is competing supply expansion rather than a MACOM demand or capacity forecast. Date: 2026-03-17. PDF page 6. Confidence: HIGH for exact source statements; vendor projections and inferred applicability remain conditional. New UHP Laser Fab to Generate $5B Annual Revenue Capacity

- Acquired from Qorvo—Greensboro, NC
- Fully operational fab with compound semiconductor equipment
- Deal closed today (March 17, 2026)
- Expect to be ramping UHP production by early 2028

for assets placed into service after December 31, 2025. We account for the investment tax credit as a reduction to the carrying value of the qualifying asset and record a corresponding receivable for expected tax credits in connection with the CHIPS Act. As of July 3, 2026 and October 3, 2025, there was an $8.3 million and $5.6 million reduction, respectively, to the gross carrying amounts of the qualifying assets in the condensed consolidated balance sheet.

Depreciation and amortization expense related to property and equipment for the three and nine months ended July 3, 2026 was $9.5 million and $28.2 million, respectively. Depreciation and amortization expense related to property and equipment for the three and nine months ended July 4, 2025 was $7.5 million and $22.2 million, respectively. Accumulated amortization on finance lease assets as of July 3, 2026 and October 3, 2025 was $11.5 million and $10.3 million, respectively.

8. INTANGIBLE ASSETS

Amortization expense related to intangible assets is as follows (in thousands):

	Three Months Ended		Nine Months Ended	
	July 3, 2026	July 4, 2025	July 3, 2026	July 4, 2025
Cost of revenue	$ 1,622	$ 3,349	$ 4,866	$ 10,024
Research and development	2,623	2,269	7,823	6,618
Selling, general and administrative	1,911	1,756	5,829	6,771
Total	$ 6,156	$ 7,374	$ 18,518	$ 23,413

A summary of the activity in gross intangible assets as of July 3, 2026 and October 3, 2025 is as follows (in thousands):

	July 3, 2026		
	Gross Carrying Amount	Accumulated Amortization	Net Carrying Amount
Acquired technology	$ 34,837	$ (19,668)	$ 15,169
Customer relationships	74,539	(46,376)	28,163
Software licenses and licensed technology	27,804	(13,923)	13,881
Trade name [1]	5,200	(866)	4,334
Balance as of July 3, 2026 [2]	$ 142,380	$ (80,833)	$ 61,547

	October 3, 2025		
	Gross Carrying Amount	Accumulated Amortization	Net Carrying Amount
Acquired technology	$ 34,994	$ (14,859)	$ 20,135
Customer relationships	74,572	(41,304)	33,268
Software licenses	26,186	(5,544)	20,642
Trade name [1]	5,200	(675)	4,525
Balance as of October 3, 2025 [2]	$ 140,952	$ (62,382)	$ 78,570

(1) Includes an indefinite-lived trade name of $3.4 million that is not amortized.
(2) Foreign intangible asset carrying amounts include foreign currency translation adjustments.

As of July 3, 2026, our estimated amortization of our intangible assets in future fiscal years is as follows (in thousands):

	2026 Remaining	2027	2028	2029	2030	Thereafter	Total
Amortization expense	$ 6,223	21,916	9,630	5,943	5,217	9,218	$ 58,147

F05 | Acquired intangibles and software at July 3, 2026. The report separates the $3.4 million indefinite-lived trade name from finite assets. Forecast amortization must remain covered by finite net assets; total reported net intangibles are $61.547 million. Date: 2026-08-06. PDF page 15. Confidence: HIGH for reported issuer financial facts; forecast applications are Model. Source: https://ir.macom.com/static-files/78582187-3497-43eb-adad-0d1db19e7689

14. STOCKHOLDERS' EQUITY AND SHARE-BASED COMPENSATION

We have authorized 10 million shares of $0.001 par value preferred stock and 300 million shares of $0.001 par value common stock as of July 3, 2026.

Stock Plans

As of July 3, 2026, we had approximately 2.5 million shares available for issuance under our 2021 Omnibus Incentive Plan (the "2021 Plan") and approximately 0.9 million shares available for issuance under our 2021 Employee Stock Purchase Plan (the "Employee Stock Purchase Plan"). Under the 2021 Plan, we have the ability to issue incentive stock options ("ISOs"), non-statutory stock options ("NSOs"), stock appreciation rights ("SARs"), restricted stock awards ("RSAs"), unrestricted stock awards, stock units (including restricted stock units ("RSUs") and performance-based restricted stock units ("PRSUs")), performance awards, cash awards, and other share-based awards to employees, directors, consultants and advisors. The ISOs and NSOs must be granted at an exercise price, and the SARs must be granted at a base value, per share of not less than 100% of the closing price of a share of our common stock on the date of grant (or, if no closing price is reported on that date, the closing price on the immediately preceding date on which a closing price was reported) (110% in the case of certain ISOs). Certain of the share-based awards granted and outstanding as of July 3, 2026 are subject to accelerated vesting upon a change in control of the Company.

Incentive Stock Units

Aside from the equity plans described above, we also grant incentive stock units ("ISUs") to certain of our international employees which typically vest over three years and for which the fair value is determined by our underlying stock price, which are classified as liabilities and settled in cash upon vesting.

As of July 3, 2026 and October 3, 2025, the fair value of outstanding ISUs was $10.1 million and $5.1 million, respectively, and the associated accrued compensation liability was $6.1 million and $3.7 million, respectively. During the three and nine months ended July 3, 2026, we recorded an expense for ISU awards of $2.7 million and $5.9 million, respectively. During the three and nine months ended July 4, 2025, we recorded an expense for ISU awards of $1.8 million and $3.0 million, respectively. These expenses are not included in the share-based compensation expense totals below.

Share-Based Compensation

The following table shows a summary of share-based compensation expense included in the condensed consolidated statements of operations (in thousands):

	Three Months Ended		Nine Months Ended	
	July 3, 2026	July 4, 2025	July 3, 2026	July 4, 2025
Cost of revenue	$ 2,324	$ 1,728	$ 6,920	$ 6,376
Research and development	7,671	7,109	25,628	25,235
Selling, general and administrative	11,102	8,469	33,325	29,982
Total share-based compensation expense	$ 21,097	$ 17,306	$ 65,873	$ 61,593

As of July 3, 2026, the total unrecognized compensation costs related to RSUs and PRSUs was $119.3 million, which we expect to recognize over a weighted-average period of 1.9 years. As of July 3, 2026, total unrecognized compensation cost related to our Employee Stock Purchase Plan was $1.9 million.

Restricted Stock Units and Performance-Based Restricted Stock Units

A summary of RSU and PRSU activity for the nine months ended July 3, 2026 is as follows:

	Number of shares (in thousands)	Weighted-Average Grant Date Fair Value
Balance as of October 3, 2025	1,419	$ 97.19
Granted	539	$ 171.15
Performance-based adjustment [1]	201	$ 85.93
Vested and released	(856)	$ 83.73
Forfeited, canceled or expired	(68)	$ 114.54
Balance as of July 3, 2026	1,235	$ 136.00

F08 | Stock-based compensation disclosures retain ordinary equity compensation as an economic cost. The $21.097 million quarterly equity amount is distinct from the broader non-GAAP addback, which also contains cash-settled awards and payroll costs. Date: 2026-08-06. PDF page 20. Confidence: HIGH for reported issuer financial facts; forecast applications are Model. Source: https://ir.macom.com/static-files/78582187-3497-43eb-adad-0d1db19e7689

17. SEGMENT REPORTING, GEOGRAPHIC AND SIGNIFICANT CUSTOMER INFORMATION

We have one reportable operating segment that designs, develops, manufactures and markets semiconductors and modules. The determination of the number of reportable operating segments is based on the chief operating decision maker's ("CODM") use of financial information provided for the purposes of assessing performance and making operating decisions. The Company's CODM is its President and Chief Executive Officer and Chair of the Board. In evaluating financial performance and making operating decisions, the CODM primarily uses consolidated metrics. The Company assesses its determination of operating segments at least annually. We continue to evaluate our internal reporting structure, changes to our business and the potential impact of these changes on our segment reporting. The accounting policies of the single operating segment are the same as those described in the summary of significant account policies.

The CODM uses consolidated gross profit and net income (loss) to assess financial performance against prior periods and our competitors, to decide how to allocate resources and to evaluate income generated from segment assets in deciding whether to reinvest profits into our operations or into other parts of the entity, such as for acquisitions or other investments. The measure of segment assets is reported on the balance sheet as total assets. Financial forecasts and budget to actual results used by the CODM to assess performance and allocate resources, as well as those used for strategic decisions related to headcount and capital expenditures are also reviewed on a consolidated basis.

The following table presents a summary of consolidated net income (loss) inclusive of significant segment expenses and other expense information provided to the CODM (in thousands):

	Three Months Ended		Nine Months Ended	
	July 3, 2026	July 4, 2025	July 3, 2026	July 4, 2025
Revenue	$ 342,237	$ 252,079	$ 902,804	$ 706,088
Less:				
Cost of revenue (1)	137,990	106,881	373,044	299,937
Research and development (1)	65,270	55,113	180,091	153,046
Selling, general and administrative (1)	31,263	26,569	87,530	74,363
Share-based compensation including cash incentive stock units (2)	24,511	19,568	75,761	68,051
Amortization expense (3)	3,335	4,967	10,141	16,436
Acquisition- and integration-related costs	2,753	1,321	4,994	4,198
Income from operations	77,115	37,660	171,243	90,057
Interest income, net of interest expense	5,192	6,420	17,576	18,114
Gain on investment fair value	41,543	—	41,543	—
Loss on extinguishment of debt	—	—	—	(193,098)
Income tax expense	23,142	7,546	34,556	14,403
Net income (loss)	$ 100,708	$ 36,534	$ 195,806	$ (99,330)

(1) Excludes share-based compensation including cash incentive stock units, amortization expense and acquisition- and integration-related costs.
(2) Includes share-based compensation expense for awards that are equity and liability classified on our balance sheet and the related employer tax expense at vesting.
(3) Relates to acquired intangible assets and excludes amortization for purchased software licenses and licensed technology.

This expense information is based on management's internal view of expense classification when reviewing aspects of financial and operating performance of the business, and may not be representative of expense classification that is comparable to other peer companies' internal management views. As a result, this expense information should not be considered in isolation or as substitute for analysis of the Company's results in conjunction with the accompanying condensed consolidated financial statements and notes thereto.

Geographic and Significant Customer Information

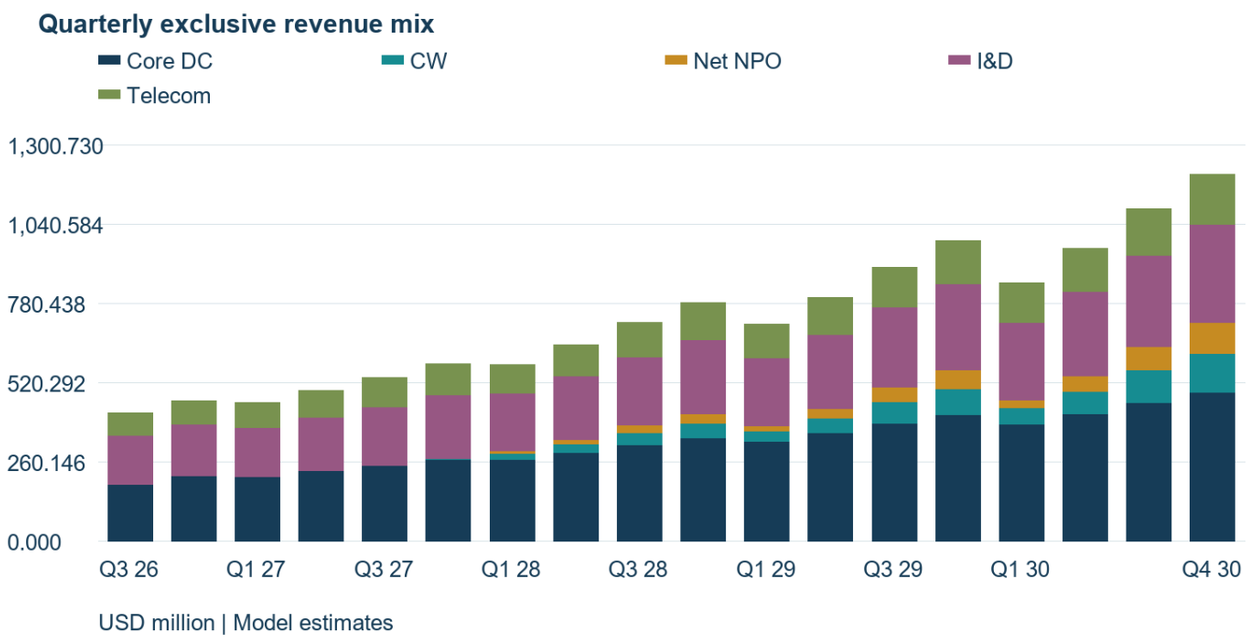

For information about our revenue in different geographic regions, based upon customer locations, see *Note 2 - Revenue*.

Information about net property and equipment in different geographic regions is presented below (in thousands):

F10 | MACOM reports one operating segment and provides a company-wide measure of segment profitability. Disclosed consolidated adjustments do not establish separate product or end-market margins. Date: 2026-08-06. PDF page 23. Confidence: HIGH for reported issuer financial facts; forecast applications are Model. Source: https://ir.macom.com/static-files/78582187-3497-43eb-adad-0d1db19e7689

Gross PPE/software capital expenditure remains deducted once in FCF. Grant cash tax is deducted once in CFO and gross grant cash is added once after FCF. Capital funding contributes no product revenue, operating profit or direct principal-to-ceiling value. Recurring OP charges the gross replacement-cost and depreciation budget. Forecast GP, operating expense and PPE are economic gross-cost projections, with future issuer grant accounting, net PPE and tax basis unknown. Actual terms will require reassessment.

Finite net assets begin at $13.881 million software and $44.266 million acquired amortizable assets, with a separate $3.4 million indefinite-lived trade name: $61.547 million total. Software consumption is $2.8 million per quarter, capped at available assets, plus $3 million quarterly purchases. An accounting-only zero-renewal test depletes the asset; it is not a production plan with perpetual free licenses.

Five exclusive receipt fields sum to company revenue. Each component family appears once; Data Center includes core, CW and net NPO.

T044 | Cost uncertainty beside the margin build

Diagnostic	Q4 2027 ceiling, USD	Scope
Contribution margin -1 pp	224.496602	Linear OP sensitivity; receipts, other costs and shares held
Contribution margin -2 pp	218.351407	Linear OP sensitivity; receipts, other costs and shares held
Contribution margin -3 pp	212.206212	Linear OP sensitivity; receipts, other costs and shares held
Fixed factory cash +$5M/q	225.763749	Linear OP sensitivity; no full tax/cash rerun

The D 2030 endpoint requires $4.4 billion Data Center revenue against a LOW $10.5 billion pool, a 41.90% fitted capture index, and approximately $6.85 billion total revenue with a roughly 48.7% economic OP margin. It is a demanding 15%-weight conditional endpoint. Neither the index nor fab-area arithmetic establishes qualified good output.

Cash conversion, funding and the share path

Opening liquidity of $663.030 million is cash plus short-term investments. The $102.132 million strategic investment is separate and unavailable as operating liquidity. The $60.588 million IQE purchase and $161.151 million retired-note principal are already reflected in cash. Balance-sheet classification and the stock-price conversion trigger do not make the remaining notes mature in 2026. The $344.316 million December 2029 notes have a 0% regular cash coupon; 0.25% belonged to the retired 2026 issue.

The working-capital proxy uses AR at 48/91 of revenue, inventory at 165 days initially declining 1.5 days per quarter to 140, and AP at 46/91 of economic cost of sales. Opening NWC is $179.147+$281.518-$72.823=$387.842 million. The reduction from roughly 180 historical inventory days to 165 assumes improved throughput; it is not observed. Other working-capital use is $3 million per quarter. Cash yield is a LOW 3.5%; other financing/lease cash interest is $1.2 million per quarter against $1.203 million actual. LOW cash-tax rates of 3%/5%/7%/10%/12% for 2026-2030 apply to positive economic OP plus net cash interest. The 3% company non-GAAP tax guide is distinct from cash taxes. Historical provision/deferred movements and cash tax remain separate.

CFO adds back equity SBC, all PPE depreciation and acquired/software amortization while retaining cash ISU/payroll and support expense. It deducts the increase in working capital, cash interest, ordinary and grant cash taxes, plus other working-capital use. Initial forecast CFO is $104.9708595 million versus management's roughly $100 million indication. Gross PPE capex of $18.111 million in the final FY2026 quarter plus $46.889 million actual nine-month spend totals $65 million. The next four fiscal quarters use $15 million each, consistent with the approximate $60 million indication. Later PPE capex is 4.5% of revenue plus $3 million software investment per quarter, an explicit expansion proxy. Existing recognized ITC of $8.3 million is already reflected in opening PPE. Conditional incremental capital reimbursement is modeled separately from these gross costs and from existing credits.

Net employee/ESPP financing cash reserve is $15 million per quarter versus $44.026 million actual over nine months. It is separate from OP cost. Lease/other financing principal consumes $0.8 million per quarter. The $344.316 million note principal is paid once in Q4 2029; immediate repayment in Q3 2026 leaves a modeled minimum closing liquidity of $386.7738595 million. No additional convertible shares are layered onto the protected gross valuation share path. Common shares outstanding on August 3 were 76.370931 million, distinct from 78.409 million reported weighted diluted shares and 78.9 million guidance shares. Valuation retains 80 million plus 0.4 million per quarter.

No selected state requires new financing. A forced shortfall test retains negative cash and marks the path unfunded. It supplies no invented facility or free-cash plug, and an unpriced funding need blocks an executable ceiling. The $100 million minimum is a model operating buffer, not a covenant. Reported closing-cash minima exclude the separately stated $663.030 million opening balance.

Four operating regimes at 30%/25%/30%/15% cross with 65% no reimbursement and 35% capital reimbursement to produce eight coherent cash paths. Each branch calculates its own cash, interest, ordinary tax, grant tax and funding before expectation. A positive-probability unfunded branch blocks the active ceiling. Zero-weight branches do not contaminate it.

The LOW conditional funding proxy is a $60 million annual capital reference x 50% eligible fab share x 20% incremental reimbursement = $6 million per year, received as $1.5 million per quarter in 2028-2030. This is a bounded revised-project proxy, distinct from the old preliminary proposal and issuer guidance. At 35% realization, expected gross cash is $2.1 million annually. A separate LOW 20% grant cash-tax haircut leaves $1.68 million expected direct net cash, before subsequent yield and ordinary-tax effects. All factors and timing are live assumptions.

F02 | Nine months ended July 3, 2026 cash flows. Capital purchases, the completed strategic investment, retired principal and employee-related financing cash movements are actual historical items; the opening forecast balance already reflects them. Date: 2026-08-06. PDF page 8. Confidence: HIGH for reported issuer financial facts; forecast applications are Model. Source: https://ir.macom.com/static-files/78582187-3497-43eb-adad-0d1db19e7689

condensed consolidated statements of operations. Unrealized gains and losses on available-for-sale investments are reported as a separate component of stockholders' equity within accumulated other comprehensive income.

Long-Term Investments

On May 28, 2026, we completed an investment in IQE plc ("Investee"), which included entering into a Subscription Agreement to purchase newly-issued ordinary shares of Investee (representing approximately 12% of Investee's issued and outstanding ordinary shares on the date of issuance), for £30.0 million ($40.4 million) ("Equity Investment"), a five-year Convertible Loan Note Agreement with a principal balance of £15.0 million ($20.2 million) ("Debt Investment", collectively, "Long-Term Investments") and long-term supply agreements. The Debt Investment has a zero-coupon rate and is expected to be repaid beginning on the third anniversary of the issuance. The Debt Investment is convertible into Investee ordinary shares at a conversion price equal to the same price per share as was paid in the Equity Investment. The conversion option is available if the Debt Investment is repaid prior to the contractual maturity date, based on the occurrence of certain contingent events. Warrants for shares of Investee's ordinary shares were issued as part of the Debt Investment, which become exercisable in lieu of conversion under the early repayment terms. In accordance with ASC 323, *Investments - Equity Method and Joint Ventures*, and upon consideration of the totality of our agreements, including our right to appoint two members to Investee's board of directors, we concluded the Equity Investment is an equity method investment. We have elected to account for the Long-Term Investments using the fair value option for simplification. The Long-Term Investments are recorded within "Long-term investments" on the condensed consolidated balance sheet, and changes in fair value are recorded through "Gain on investment fair value" within the condensed consolidated statement of operations. The Equity Investment is valued using a market approach and the Debt Investment is valued using an income approach based on contractual future cash flows discounted to present value as of the last day of our fiscal quarter.

As of July 3, 2026, the Equity Investment and Debt Investment were recorded at their fair values of $90.0 million and $12.1 million, respectively, and the fair value of the warrants was not material. During the three and nine months ended July 3, 2026, we recorded a net gain of $41.5 million on Long-Term Investments, comprised of a gain of $49.6 million on the Equity Investment and a loss of $8.1 million on the Debt Investment.

5. FAIR VALUE AND FINANCIAL INSTRUMENTS

We group our financial assets and liabilities measured at fair value on a recurring basis in three levels, based on the markets in which the assets and liabilities are traded, and the reliability of the assumptions used to determine fair value. These levels are:

Level 1 *- Quoted prices in active markets for identical assets or liabilities.*

Level 2 *- Observable inputs other than Level 1 prices, such as quoted prices for similar assets or liabilities, quoted prices in markets with insufficient volume or infrequent transactions (less active markets), or model-driven valuations in which all significant inputs are observable or can be derived principally from, or corroborated with, observable market data.*

Level 3 *- Fair value is derived from valuation techniques in which one or more significant inputs are unobservable, including assumptions and judgments made by us.*

Assets and Liabilities Measured and Recorded at Fair Value on a Recurring Basis

We measure certain assets and liabilities at fair value on a recurring basis such as our financial instruments. There have been no transfers between Level 1, 2 or 3 assets or liabilities during the three and nine months ended July 3, 2026.

Assets and liabilities measured at fair value on a recurring basis consist of the following (in thousands):

	July 3, 2026			
	Fair Value	Active Markets for Identical Assets (Level 1)	Observable Inputs (Level 2)	Unobservable Inputs (Level 3)
Assets				
Money market funds	$ 23,941	$ 23,941	$ —	$ —
U.S. Treasuries and agency bonds	42,339	23,409	18,930	—
Corporate bonds	531,087	—	531,087	—
Marketable equity securities	90,013	90,013	—	—
Non-marketable debt securities	12,119	—	12,119	—
Total assets measured at fair value	$ 699,499	$ 137,363	$ 562,136	$ —

F04 | Note 4 records the completed May 2026 strategic investment at $60.588 million cost and $102.132 million period-end carrying value, including a $41.543 million unrealized gain. The gain is below operating profit and the asset is outside spendable cash. Date: 2026-08-06. PDF page 13. Confidence: HIGH for reported issuer financial facts; forecast applications are Model. Source: https://ir.macom.com/static-files/78582187-3497-43eb-adad-0d1db19e7689

Holders of the 2029 Convertible Notes may convert their notes at their option at any time prior to the close of business on the business day immediately preceding September 15, 2029 in multiples of $1,000 principal amount, only under the following circumstances: (i) during any fiscal quarter commencing after the fiscal quarter ending on April 4, 2025 (and only during such fiscal quarter), if the last reported sale price of our common stock for at least 20 trading days (whether or not consecutive) during a period of 30 consecutive trading days ending on the last trading day of the immediately preceding fiscal quarter is greater than or equal to 130% of the conversion price for the notes on each applicable trading day (the "Stock Price Trigger"); (ii) during the five business day period after any five consecutive trading day period (the "Measurement Period") in which the "trading price" (as defined in the 2024 Indenture) per $1,000 principal amount of the notes for each trading day of the Measurement Period was less than 98% of the product of the last reported sale price of our common stock and the conversion rate for the notes on each such trading day; (iii) if we call such notes for redemption, at any time prior to the close of business on the second scheduled trading day immediately preceding the redemption date; or (iv) upon the occurrence of specified corporate events described in the 2024 Indenture. On or after September 15, 2029 until the close of business on the second scheduled trading day immediately preceding the maturity date, the holders may convert their notes, in multiples of $1,000 principal amount, regardless of the foregoing circumstances.

The initial conversion rate for the 2029 Convertible Notes is 5.7463 shares of common stock (subject to adjustment as provided for in the 2024 Indenture) per $1,000 principal amount of the notes, which is equal to an initial conversion price of approximately $174.03 per share of common stock.

The 2029 Convertible Notes do not bear regular interest, and the principal amount of the notes does not accrete. The notes are senior unsecured obligations of the Company and will mature on December 15, 2029, unless earlier redeemed, repurchased or converted. Upon conversion of the 2029 Convertible Notes, we are required to pay cash up to the aggregate principal amount of the notes to be converted and pay or deliver, as the case may be, cash, shares of our common stock or a combination of cash and shares of our common stock, at our election, in respect of the remainder, if any, of our conversion obligation in excess of the aggregate principal amount of the notes being converted (subject to, and in accordance with, the settlement provisions of the 2024 Indenture). We must notify the holders of the 2029 Convertible Notes of our settlement method for our conversion obligation in excess of the aggregate principal amount no later than September 15, 2029, for conversions occurring on or after that date. We may redeem for cash all or any portion of the notes, at our option, on or after December 20, 2027 and prior to September 15, 2029 if the last reported sale price per share of our common stock has been at least 130% of the conversion price then in effect for at least 20 trading days (whether or not consecutive), including the trading day immediately preceding the date on which we provide notice of redemption, during any thirty (30) consecutive trading day period ending on, and including, the trading day immediately preceding the date on which we provide notice of redemption, at a redemption price equal to 100% of the principal amount of the notes to be redeemed, plus accrued and unpaid interest, to, but not including, the redemption date.

The 2024 Indenture does not contain any financial or operating covenants or restrictions on the payments of dividends, the making of investments, the incurrence of indebtedness or the purchase or prepayment of securities by us or any of our subsidiaries.

During the fiscal quarter ended July 3, 2026, the Stock Price Trigger was satisfied, and as a result, holders of our 2029 Convertible Notes may convert their notes at their option at any time during our fourth fiscal quarter ending October 2, 2026, and the 2029 Convertible Notes balance of $340.5 million, net of deferred financing costs, is classified as short-term debt in our condensed consolidated balance sheet.

For the three and nine months ended July 3, 2026, total interest expense for the 2029 Convertible Notes was $0.3 million and $0.8 million, respectively, which represents amortization of issuance costs. For the three and nine months ended July 4, 2025, total interest expense for the 2029 Convertible Notes was $0.3 million and $0.6 million, respectively, which represents amortization of issuance costs.

The fair value of our 2029 Convertible Notes was $791.9 million and $353.3 million as of July 3, 2026 and October 3, 2025, respectively. The fair value was determined based on quoted prices in markets that are not active, which is considered a Level 2 valuation input.

The full principal amount of the 2029 Convertible Notes of $344.3 million is due on December 15, 2029.

2026 Convertible Notes

On March 25, 2021, we issued 0.25% convertible senior notes due in fiscal year 2026, pursuant to an indenture dated as of such date (the "2021 Indenture"), between the Company and U.S. Bank National Association, as trustee, with an aggregate principal amount of $400.0 million (the "Initial Notes"), and on April 6, 2021, we issued an additional $50.0 million aggregate principal amount (the "Additional Notes") (together, the "2026 Convertible Notes"). The Additional Notes were issued and sold to the initial purchaser of the Initial Notes, pursuant to the option to purchase the Additional Notes granted by the Company to the initial purchaser and have the same terms as the Initial Notes.

F06 | The convertible-note terms distinguish contractual maturity, stock-price-related conversion rights and accounting classification. A current-liability label does not itself make the remaining December 2029 principal contractually mature in 2026. Date: 2026-08-06. PDF page 17. Confidence: HIGH for reported issuer financial facts; forecast applications are Model. Source: https://ir.macom.com/static-files/78582187-3497-43eb-adad-0d1db19e7689

On December 12, 2024, we entered into separate, privately negotiated exchange and subscription agreements (the "Exchange and Subscription Agreements") with a limited number of holders of the 2026 Convertible Notes. Under the terms of the Exchange and Subscription Agreements, the holders exchanged $288.8 million in aggregate principal amount of 2026 Convertible Notes held by them for $257.7 million of our 2029 Convertible Notes (defined above), 1,582,958 newly-issued shares of the Company's common stock, par value $0.001 per share, issued at a fair value of $205.9 million, and $17.6 million in cash (collectively, the "Exchanges"). The Exchanges resulted in aggregate pre-tax debt extinguishment charges of $193.1 million. The Company also issued approximately $86.6 million in additional aggregate principal amount of the 2029 Convertible Notes in a private placement to certain investors (the "Subscription" and, together with the Exchanges, the "Transactions"). The Transactions closed on December 19, 2024. Following the closing of the Transactions, the aggregate principal balance of the 2026 Convertible Notes was $161.2 million and the terms of the 2021 Indenture were unchanged.

In September 2025, certain holders exercised their right to convert $0.5 million of the notes. The transaction settled during the first fiscal quarter of 2026 and we paid $0.5 million principal in cash and issued 2,610 shares of our common stock for the conversion premium, par value $0.001 per share, issued at a fair value of $0.5 million. On March 16, 2026, pursuant to the terms of the 2021 Indenture, we settled the remaining 2026 Convertible Notes and paid the total outstanding principal balance of $160.7 million in cash and issued 1,259,111 shares of our common stock for the conversion premium, par value $0.001 per share, issued at a fair value of $283.2 million. There was no gain or loss recognized for these transactions in our condensed consolidated statement of operations and there was an immaterial amount recognized in additional paid-in capital in our condensed consolidated balance sheets for these transactions.

For the nine months ended July 3, 2026, total interest expense for the 2026 Convertible Notes was $0.4 million of which $0.2 million was for coupon interest. For the three and nine months ended July 4, 2025, total interest expense for the 2026 Convertible Notes was $0.5 million and $1.6 million, respectively, of which $0.1 million and $0.5 million, respectively, was for coupon interest.

The fair value of our 2026 Convertible Notes was $251.6 million as of October 3, 2025 and was determined based on quoted prices in markets that are not active, which is considered a Level 2 valuation input.

11. FINANCING OBLIGATIONS

We are party to a power purchase agreement for the use of electric power and thermal energy producing systems at our fabrication facility in Lowell, Massachusetts. We do not own these systems; however, we control the use of the assets during operation. As of July 3, 2026 and October 3, 2025, the net book value of the systems in Property and equipment, net was $7.1 million and $7.5 million, respectively, and the corresponding liability was $8.7 million and $9.0 million, respectively, primarily classified in Financing obligation on our condensed consolidated balance sheet.

Sale-Leaseback

Our lease for the wafer fabrication facility in Research Triangle Park ("RTP"), North Carolina (the "RTP Fab") is considered a failed sale-leaseback for accounting purposes. Accordingly, we recognize this transaction as a financing arrangement. As of July 3, 2026 and October 3, 2025, the net book value of the land and building in Property and equipment, net was $28.2 million and $28.6 million, respectively, and the corresponding liability was $28.4 million and $28.5 million, respectively, primarily classified in Financing obligation on our condensed consolidated balance sheet.

F07 | The financing disclosures support the separate treatment of cash interest and principal on financing and lease obligations. The remaining convertible's regular coupon is distinct from other financing cash costs. Date: 2026-08-06. PDF page 18. Confidence: HIGH for reported issuer financial facts; forecast applications are Model. Source: https://ir.macom.com/static-files/78582187-3497-43eb-adad-0d1db19e7689

is effective beginning in our fiscal year ending October 2, 2026. The July 4, 2025 Bill permits the acceleration of our unamortized balance of domestic research and development expenses which were previously deferred.

There were no unrecognized tax benefits as of July 3, 2026 and October 3, 2025. It is our policy to recognize any interest and penalties accrued related to unrecognized tax benefits in income tax expense. During the fiscal quarters ended July 3, 2026 and July 4, 2025, we did not make any accrual or payment of interest or penalties.

16. SUPPLEMENTAL CASH FLOW INFORMATION

The following is a summary of supplemental cash flow information for the periods presented (in thousands):

	Nine Months Ended	
	July 3, 2026	July 4, 2025
Cash paid for interest	$ 3,822	$ 2,332
Cash paid for income taxes	$ 10,188	$ 9,839
Non-cash activities:		
Issuance of common stock for convertible note exchange	$ —	$ 205,915
Issuance of common stock for settlement of convertible notes	$ 283,650	$ —
Operating lease right-of-use assets obtained in exchange for new lease liabilities	$ 6,751	$ 8,472
Finance lease assets obtained in exchange for new lease liabilities	$ —	$ 129
Additions to property and equipment, net included in liabilities	$ 3,460	$ 969
Purchase of software licenses and licensed technology included in liabilities	$ 1,212	$ 5,578

F09 | Reported tax provision and effective rates are accounting actuals. They do not establish the forecast cash-tax path or make non-GAAP tax guidance a promised cash payment. Date: 2026-08-06. PDF page 22. Confidence: HIGH for reported issuer financial facts; forecast applications are Model. Source: https://ir.macom.com/static-files/78582187-3497-43eb-adad-0d1db19e7689

Cash Flow from Financing Activities

During the nine months ended July 3, 2026, our cash used in financing activities of $207.5 million was primarily related to repayment of the 2026 Convertible Notes of $161.2 million and $55.6 million of common stock withheld associated with employee taxes on vested equity awards, partially offset by $11.5 million of proceeds from employee stock purchases.

During the nine months ended July 4, 2025, our cash provided by financing activities of $58.8 million was primarily related to $86.6 million of proceeds from convertible notes, $28.8 million of proceeds from financing arrangement and $10.2 million of proceeds from stock option exercises and employee stock purchases, partially offset by $42.7 million of common stock withheld associated with employee taxes on vested equity awards and $23.2 million of fees for the convertible note exchange and payments for debt issuance costs.

Liquidity

As of July 3, 2026, we held $89.6 million of cash and cash equivalents, primarily deposited with financial institutions, as well as $573.4 million of liquid short-term investments. The undistributed earnings of certain foreign subsidiaries are considered indefinitely reinvested for the periods presented and we do not intend to repatriate such earnings. We believe the decision to reinvest these earnings will not have a significant impact on our liquidity. As of July 3, 2026, cash held by our indefinitely reinvested foreign subsidiaries was $6.9 million, which, along with cash generated from foreign operations, is expected to be used in the support of international growth and working capital requirements as well as the repayment of certain intercompany loans.

During the fiscal quarter ended July 3, 2026, the Stock Price Trigger (as defined in *Note 10 - Debt*) was satisfied. As a result, holders of our 2029 Convertible Notes may convert their notes at their option at any time during the fiscal quarter ending October 2, 2026 in multiples of $1,000 principal amount. For additional information on the 2029 Convertible Notes, see *Note 10 - Debt* to our condensed consolidated financial statements in this Quarterly Report on Form 10-Q.

On January 14, 2025, we announced the execution of a preliminary, non-binding agreement with the CHIPS Program Office (“CPO”), which could provide for proposed direct funding from the U.S. Department of Commerce under the CHIPS Act of up to $70 million. The potential direct funding arrangement and the associated definitive agreement remain under discussion with the CPO.

We plan to use our remaining available cash and cash equivalents and short-term investments for general corporate purposes, including working capital, payment on the 2029 Convertible Notes, or for the acquisition of or investment in complementary technologies, design teams, products and businesses. We believe that our cash and cash equivalents, short-term investments and cash generated from operations will be sufficient to meet our working capital requirements for at least the next twelve months. We may need to raise additional capital from time to time through the issuance and sale of equity or debt securities, and there is no assurance that we will be able to do so on favorable terms or at all.

As of July 3, 2026, we had no off-balance sheet arrangements.

For additional information related to our Liquidity and Capital Resources, see *Note 10 - Debt* to our condensed consolidated financial statements in this Quarterly Report on Form 10-Q.

Recent Accounting Pronouncements

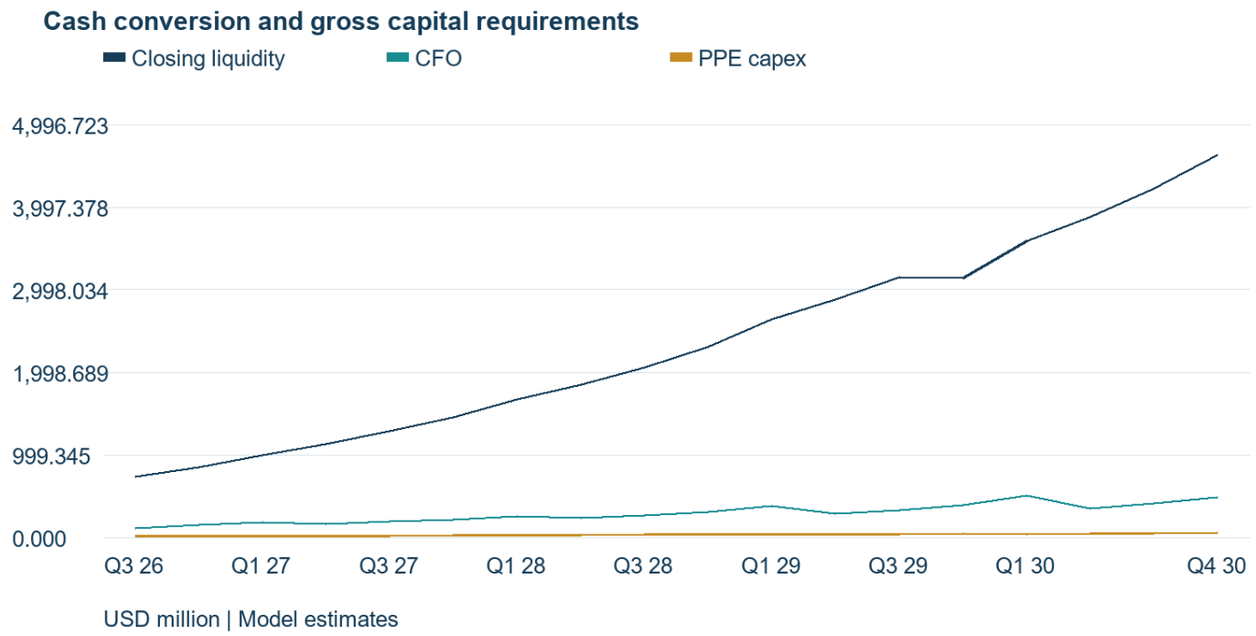

See *Note 1 - Basis of Presentation and Summary of Significant Accounting Policies* to our condensed consolidated financial statements in this Quarterly Report on Form 10-Q for information about recent accounting pronouncements.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

We are exposed to market risk in the ordinary course of business, which consists primarily of interest rate risk associated with our cash and cash equivalents and short-term investments, as well as foreign exchange rate risk.

Interest rate risk. The primary objectives of our investment activity are to preserve principal, provide liquidity and invest excess cash for an average rate of return. To minimize market risk, we maintain our portfolio in cash and diversified investments, which may consist of corporate bonds, bank deposits, money market funds, commercial paper and U.S. Treasury securities. The interest rates are variable and fluctuate with current market conditions. The risk associated with fluctuating interest rates is limited to this investment portfolio. We believe that a 1% change in interest rates would have a $6.6 million impact on our annual interest income, based on cash and cash equivalents and short-term investments balances as of July 3, 2026. We believe that a change in interest rates would not have a material impact on our results of operations, however, such change(s) could impact net income and earnings per share. We do not enter into financial instruments for trading or speculative purposes.

F12 | The filing retains preliminary CHIPS funding language. Management's August 6 call describes a completely rewritten project and unresolved terms. The original proposed amount cannot be treated as a current definitive award. Any new reimbursement path requires a labeled conditional proxy separate from recognized investment tax credits. Date: 2026-08-06. PDF page 31. Confidence: HIGH for reported issuer financial facts; forecast applications are Model. Source: https://ir.macom.com/static-files/78582187-3497-43eb-adad-0d1db19e7689

Closing cash and short-term investments are weighted after eight complete joint cash paths. Opening liquidity is $663.030 million, separately stated. Gross capex remains deducted; conditional grant receipts follow FCF and grant tax is already in CFO.

T045 | C06 | Exact plotted data

Quarter	Closing liquidity	CFO	PPE capex
Q3 2026	731.089860	104.970860	18.111000

D_G1	5.25%	731.090	18.000	3.600	0.000

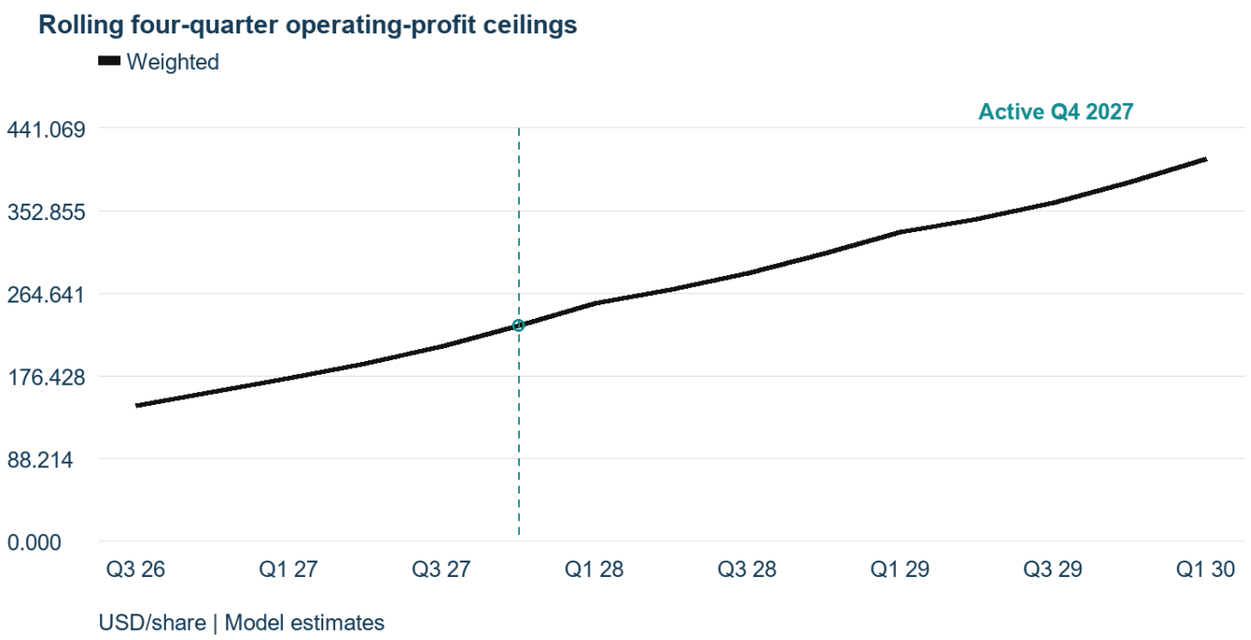

Cash roll-forward: opening liquidity + CFO - gross PPE capex - software capex + conditional capital-grant receipts - employee financing reserve - lease/other financing principal - note principal repayment = closing liquidity. CFO already deducts grant cash tax. Capital principal supplies no direct recurring-OP value.

Rolling operating-profit ceilings and uncertainty

The valuation uses 20 times rolling four-quarter recurring pre-financing economic OP, divided by modeled forward shares, with USD millions over shares millions and unit factor 1. This valuation share convention is 80 million plus 0.4 million each quarter, distinct from reported diluted shares. Expected quarterly OP is weighted after coherent state costs. Shared share paths make the weighted state ceilings agree with 20 times expected four-quarter OP divided by shares. No second event-probability or Excel Base multiplier is applied. Eighteen forecast quarters provide 15 complete ceilings; the final three remain incomplete because the forward four quarters are unavailable.

The active Q4 2027 operating-profit ceiling is $230.64 per share, based on $945.631 million recurring economic OP over Q4 2027-Q3 2028, 20x and 82 million modeled forward shares. The complete derivation schedules retain additional precision.

Full-path diagnostics expose uncertainty. The no-increment A control is $114.47; removing CW and net NPO gives $211.20. CW realization probabilities of 35%/55% give $228.14/$233.15, while timely-core probabilities of 60%/80% give $217.70/$243.58. Doubling PPE requirements gives $226.82 with all incremental depreciation included; a 1% higher share path gives $228.36. These rounded explanatory alternatives have exact values in the tables below. A forced funding gap rejects the ceiling. Core capture matters more than the isolated CW-probability swing within this forward window.

Each maturity quarter uses that quarter and the next three economic OP values. The active Q4 2027 point prices Q4 2027-Q3 2028. Last three quarters lack a complete F4 window and receive no ceiling.

T047 | C07 | Exact plotted data

Quarter	Weighted

software capex zero accounting only	233.373505	956.831369
grant probability zero	230.641797	945.631369
grant probability one	230.641797	945.631369
grant cash tax zero	230.641797	945.631369
grant cash tax forty percent	230.641797	945.631369
forced unfunded gap reject	Unfunded: no ceiling	945.631369

Full-path diagnostics recompute costs and cash. Grant probability 0/1 and grant cash-tax 0/40% change funding resources and associated interest/tax, while the protected pre-financing recurring OP basis is unchanged. Depreciation allocation alone changes presentation/working capital and leaves total OP unchanged. The zero-software-renewal test is an accounting control, not a commercially credible production plan. The forced unfunded gap blocks an executable ceiling.

T050 | Cash effects of grant diagnostics | USD million

Diagnostic	2030 gross grant	2030 grant tax	Q4 2030 liquidity	Q4 2027 ceiling
grant probability zero	0.000	0.000	4,621.333	230.641797
grant probability one	6.000	1.200	4,636.367	230.641797
grant cash tax zero	2.100	0.000	4,627.910	230.641797
grant cash tax forty percent	2.100	0.840	4,625.279	230.641797

Score, execution tests and risks

The analytical score is 44/60, lattice-rounded to 73: Core 15, Cycle 9, TAM Expansion 9, Catalysts 4, Macro 9, Alpha 2 and Risks -4. Protected Excel Base 73 is retained independently. Four one-point risk classes cover merchant competition/integration; qualification, manufacturing and execution; direct-buyer/end-customer concentration and routing; and program/geopolitical/export timing. Demonstrated liquidity adds no extra funding penalty, while insider sales carry zero opinion weight. Direct/reseller top-ten concentration is 60% for the quarter and 57% for nine months, with Customer A at 23% for the quarter. Management's look-through top-ten end customers are below 40% year to date. US fabs do not eliminate Chinese module-customer/export exposure.

Dated tests are the November 5 results/guidance and full call; end-2026 RTP and remaining MESC conversion; accepted 200G/400G design-win shipments, costs and pricing in 2027; late-2027 CW process/module/hyperscaler acceptance; and productive 2028 NPO programs with replacement debits. Independent favorable economic evidence may raise probability, while repeated availability announcements alone do not. CW delay into 2028 shifts C/D toward B. Persistent merchant share loss or late fab conversion shifts B/C toward A. Faster accepted good-unit output with pricing and cost proof may shift A toward B/C. Actual receipts, mix, costs, backlog delivery and working capital replace proxies once, without double counting.

T051 | Analytical score and protected Base

Input / measure	Approved value

alpha	2
risks	-4
sum	44
analytical Base	73
protected Excel Base	73
risk classes / 0	Merchant competition and customer integration
risk classes / 1	Qualification, fab/yield and reliability execution
risk classes / 2	End-demand/customer and China routing concentration
risk classes / 3	Program timing and geopolitical/export exposure

	July 3, 2026	October 3, 2025
United States	$ 182,539	$ 172,583
France	45,619	40,686
Other Countries [1]	18,150	17,022
Total	$ 246,308	$ 230,291

(1) Other than the United States and France, no country or region represented greater than 10% of the total net property and equipment as of the dates presented.

The following is a summary of customer concentrations as a percentage of revenue and accounts receivable as of and for the periods presented:

	Three Months Ended		Nine Months Ended	
Revenue	July 3, 2026	July 4, 2025	July 3, 2026	July 4, 2025
Customer A	23 %	13 %	19 %	13 %
Customer C	13 %	—	12 %	11 %

Accounts Receivable	July 3, 2026	October 3, 2025
Customer A	26 %	11 %
Customer B	—	11 %
Customer C	—	11 %

Customer Concentration

No other customer represented more than 10% of revenue or accounts receivable in the periods presented in the accompanying condensed consolidated financial statements. For each of the three and nine months ended July 3, 2026, our top ten customers represented 60% and 57% of total revenue, respectively. For each of the three and nine months ended July 4, 2025, our top ten customers represented 58% of total revenue.

F11 | Direct-buyer concentration is 60% for the quarter and 57% for nine months among the ten largest buyers, with Customer A at 23% for the quarter. These direct/reseller denominators differ from management's look-through end-customer concentration. Date: 2026-08-06. PDF page 24. Confidence: HIGH for reported issuer financial facts; forecast applications are Model. Source: https://ir.macom.com/static-files/78582187-3497-43eb-adad-0d1db19e7689

RF, GaN, satellite and program timing

MACOM IMS 2026 Product Announcements for Satellite Communications

June 5, 2026

LOWELL, Mass., June 05, 2026 (GLOBE NEWSWIRE) -- MACOM Technology Solutions Inc. ("MACOM") , a leading supplier of semiconductor products, today announced new additions to its RF and optical portfolio, designed to meet the evolving needs of the satellite communications (SATCOM) industry. These solutions will be demonstrated in MACOM's Booth #17035 at the upcoming International Microwave Symposium (IMS 2026) on June 9 to 11, 2026, in Boston, MA.

High Power L- and S-Band Direct-to-Device (D2D) Transmit/Receive Solution
MACOM will demonstrate a transmit and receive solution tailored for direct-to-device (D2D) SATCOM payloads. The transmit lineup includes a driver amplifier and a power amplifier, designed to deliver up to 1 W average output power, 45 dB gain and over 40% efficiency. On the receive side, low noise amplification and integrated bypass capability help maximize sensitivity while maintaining power efficiency. These solutions leverage MACOM's GaAs and GaN technologies to enable wide bandwidth operation and optimized signal chain performance.

K-/Ka-Band Uplink/Downlink Chain
This demonstration features a novel thermal compensation attenuator with K- and Ka-Band amplifiers supporting a K- and Ka-Band signal chain. Designed to minimize gain variation over temperature, this solution can improve performance consistency in dynamic environments while simplifying overall system design.

W-Band Product Demonstration
This demonstration showcases a 24 dBm power amplifier operating from 80 to 100 GHz and a low noise amplifier operating across 75 to 100 GHz delivering 2.8 dB noise figure with 23 dB gain.

Linearized Q-Band Power Amplifier
MACOM will demonstrate a linearized Q-Band GaN MMIC power amplifier that can significantly improve linear output power and efficiency using advanced analog linearization techniques. This approach supports higher data rates while helping reduce overall power dissipation, addressing the demands of next generation SATCOM.

Free Space Optical (FSO) and RFoF
MACOM will also showcase a range of components supporting both FSO and fiber-based links. Highlights include optical SATCOM transport architectures for ground-to-ground, ground-to-satellite and satellite-to-satellite communications, presented through hardware, components and system diagrams.

About MACOM

MACOM designs and manufactures semiconductor products for telecommunications, industrial and defense and data center applications. Headquartered in Lowell, Massachusetts, MACOM has design centers and sales offices throughout North America, Europe and Asia. MACOM is certified to the ISO9001 international quality standard and ISO14001 environmental management standard. To learn more, visit https://www.macom.com/.

MACOM to Showcase RF and Microwave Products and Technologies at European Microwave Week

September 29, 2026

LOWELL, Mass., Sept. 29, 2026 (GLOBE NEWSWIRE) -- MACOM Technology Solutions Inc. ("MACOM") , a leading supplier of semiconductor solutions, will exhibit at the upcoming **European Microwave Week (EuMW) from October 6 - 8, 2026, in London, England**. MACOM's demonstrations in its **Booth #B45** will highlight its latest RF, microwave, millimeter wave and photonic technologies, along with its high reliability and foundry capabilities. MACOM technical experts will also participate in conference presentations.

Featured Demonstrations at EuMW 2026:

K- and Ka-Band Signal Chains with VVA Temperature Compensation
Featuring MACOM's thermal compensation attenuator technology, this demonstration showcases K- and Ka-Band uplink and downlink signal chains designed to maintain consistent gain performance across temperature fluctuations, making this an ideal solution for satellite communications.

2 to 20 GHz Wideband GaN Power Amplifier
MACOM's wideband 10 W GaN-on-SiC power amplifier, suitable for electronic warfare, communications, radar and test instrumentation applications requiring high output power and broad frequency coverage.

AlGaAs Hot Via Technology
MACOM's innovative Hot Via process technology will be on display and enables direct surface mount attachment while reducing assembly complexity and supporting high performance operation at millimeter-wave frequencies.

Fast-Recovery X-Band GaN LNA
This demonstration highlights the fast recovery performance of MACOM's GaN-on-Si technology, showing significantly improved recovery times compared to traditional GaAs LNAs for radar, electronic warfare and communications applications.

Advanced Foundry Services
MACOM will showcase its extensive GaAs and GaN foundry capabilities, including wafer fabrication, custom packaging and testing services, with a focus on the manufacturing capabilities of MACOM's European Semiconductor Center.

RF-over-Fiber (RFoF) and Free Space Optical (FSO) Communications
This demonstration highlights MACOM's RF-over-Fiber portfolio, including lasers, photodiodes, TOSAs and ROSAs supporting applications across L-, S-, C-, X- and Ku-Band frequencies, as well as FSO communication systems.

Space and Hi-Rel Solutions
A display of optical and RF technologies designed for demanding space, satellite and defense applications, including optical power amplifiers, lasers, laser drivers, photodiodes, transimpedance amplifiers and RFoF subsystems.

MACOM Presentations at EuMW 2026:

Topic:	**EuMIC06-2: Generalized Two-Port Feedback Analysis**
Date:	October 5
Location:	Room 10
Author:	Thomas Winslow

Visit MACOM at Booth B45:

Exhibit Hours:	Tuesday, October 6: 09:30 to 18:00 Wednesday, October 7: 09:30 to 17:30 Thursday, October 8: 09:30 to 16:30

To schedule a meeting with MACOM during EuMW 2026, please visit https://www.macom.com/meet.

About MACOM
MACOM designs and manufactures semiconductor products for telecommunications, industrial and defense and data center applications. I56_p 001 | MACOM, September 29, 2026. EuMW demonstrations cover RF/GaN, thermal attenuators, HotVia, MESC foundry and space/optical applications. This is new engineering evidence within existing I&D and Telecom wallets, with no disclosed incremental order amount. Date: 2026-09-29. PDF page 1. Confidence: HIGH for exact source statements; vendor projections and inferred applicability remain conditional. Source: https://ir.macom.com/node/21371/pdf

Satellite and defense product receipts remain within their exclusive reported end markets. New antenna/control, power, frequency or packaging capability changes eligibility; customer acceptance, program schedule and manufacturing resources govern realized invoices.

Economic overlap across the supply chain

AAOI, Innolight and Eoptolink buy chip content embedded in module bills of materials; their complete module invoices create no additional MACOM wallet. IQE supplies epitaxy and is a strategic investment: MACOM's purchase is IQE's receipt, not another MACOM sale. Semtech, Marvell and MaxLinear can substitute particular merchant sockets. Lumentum, Coherent and Sivers compete or overlap in CW/external light, so each cannot capture the same full allocation. Foundry/OSAT receipts require actual process, wafer and customer scope. Satellite/RF and optical Data Center receipts remain in their exclusive end markets. Shared portfolio demand does not give each vendor another copy of a customer's entire capital budget.

Complete active quarterly economic and cash schedules

Economic gross-cost projections; hypothetical grant book/tax treatment unknown. Historical actuals alone are issuer GAAP. Money is USD million; margin columns are ratios displayed as percentages. All 18 quarters are shown. Tables split fields for readability without omitting costs or cash resources.

Conditional operating economics: four complete regimes

Each operating regime has 18 quarters. Its two grant branches have identical operating receipts, costs, OP and valuation. The operating schedules below show one copy per regime; both complete cash paths follow separately. All 72 operating rows remain explicit.

Conditional cash: eight complete funding paths

All 144 conditional cash-quarter rows are explicit. Probabilities belong to joint states and are applied after each full path. A positive-probability unfunded path blocks an executable active ceiling; no cash plug or unpriced facility is introduced. Financing principal of $0.8 million each quarter is a live common input and appears in the cash-law control table.

Operating, resource and valuation assumptions

The following values are model inputs and LOW proxies where undisclosed. They establish no measured segment margins, wafer output or future issuer accounting. The legacy R&D/SG&A totals are labeled read-only calibration diagnostics; the separate cash plans and frozen floor offsets control the forecast. Each value retains its exact source-model binding.

T170 | Model parameters and read-only calibration diagnostics

Input / measure	Approved value
contribution margin by year / 2026 / 0	0.72
contribution margin by year / 2026 / 1	0.7

Source register and remaining evidence gaps

Issuer filings/releases control actual financial values. Issuer/customer/vendor technical material supports product architecture and commercial stage. Secondary management transcripts, broker forecasts and owner excerpts retain their stated provenance, dates and completeness limits. Source originals and exact image/file hashes are retained in the separate author evidence and numeric receipts.

Unresolved public-data gaps: family ASP and unit allocation; CW known-good capacity, die area, wafer starts, yield, burn-in/test and hyperscaler acceptance; product/end-market margins; revised grant eligibility, milestone timing, tax and accounting terms; complete primary webcast audio; full UBS report/disclosures and recoverable underlying source URLs. Browser capture was unavailable, so the original issuer architecture image was recovered from the public diagram API. Failed original URLs are retained below.
