Palantir: paid operational AI, with real delivery costs

Q2 2026 earnings deep dive | Research cutoff October 24, 2026 | USD | Calendar quarters

Current assessment	Value
Classification	BENEFICIARY with differentiated software execution; no exclusive physical chokepoint established
Analytical Base / rating	43/60 = 72 / Watchlist
Protected Excel Base	75 - retained independently of analytical assessment
Active Q4 2027 ceiling	USD 80.8578146411 per share
Active earnings window	Q4 2027 + Q1 2028 + Q2 2028 + Q3 2028
Method	20x forward-four-quarter parent-attributed GAAP-style operating profit, including full SBC
Price snapshot - header only	USD 196.75; October 23, 2026 delayed regular-session daily bar; not real-time
Issued shares / market-cap snapshot	2,403.05848M all classes at July 27, 2026; USD 472.802B using the header quote (mixed-date snapshot)
Position status	No position value recorded in the available master snapshot; actual holding status is not established

The thesis is that an operational ontology, fine-grained security, application tooling and implementation skill can turn increasingly capable AI into paid workflows. A model that recognizes this opportunity also has to pay for cloud hosting, forward-deployed work, R&D, sales support and dilution. Customer savings, a partner announcement and a compute buildout are not themselves Palantir fees.

The active case is a single probability-weighted financial path. Its US commercial bookings/cohort reference and government-programme reference are supplemented by a 30% broader-company growth outcome and a 20% NHS extension-loss outcome. Sovereign deployment channels are one mechanism for broader capture. Four coherent joint outcomes explain the weighting; they are diagnostic states rather than competing active valuations.

Financial forecast precision reflects arithmetic, not confidence: extrapolated capture, cost allocations, timing and contract shares remain LOW-confidence planning inputs. Latest reported results are Q2 2026. Q3 is completed but unreported; it remains Model.

A score for business quality, separate from the financial path

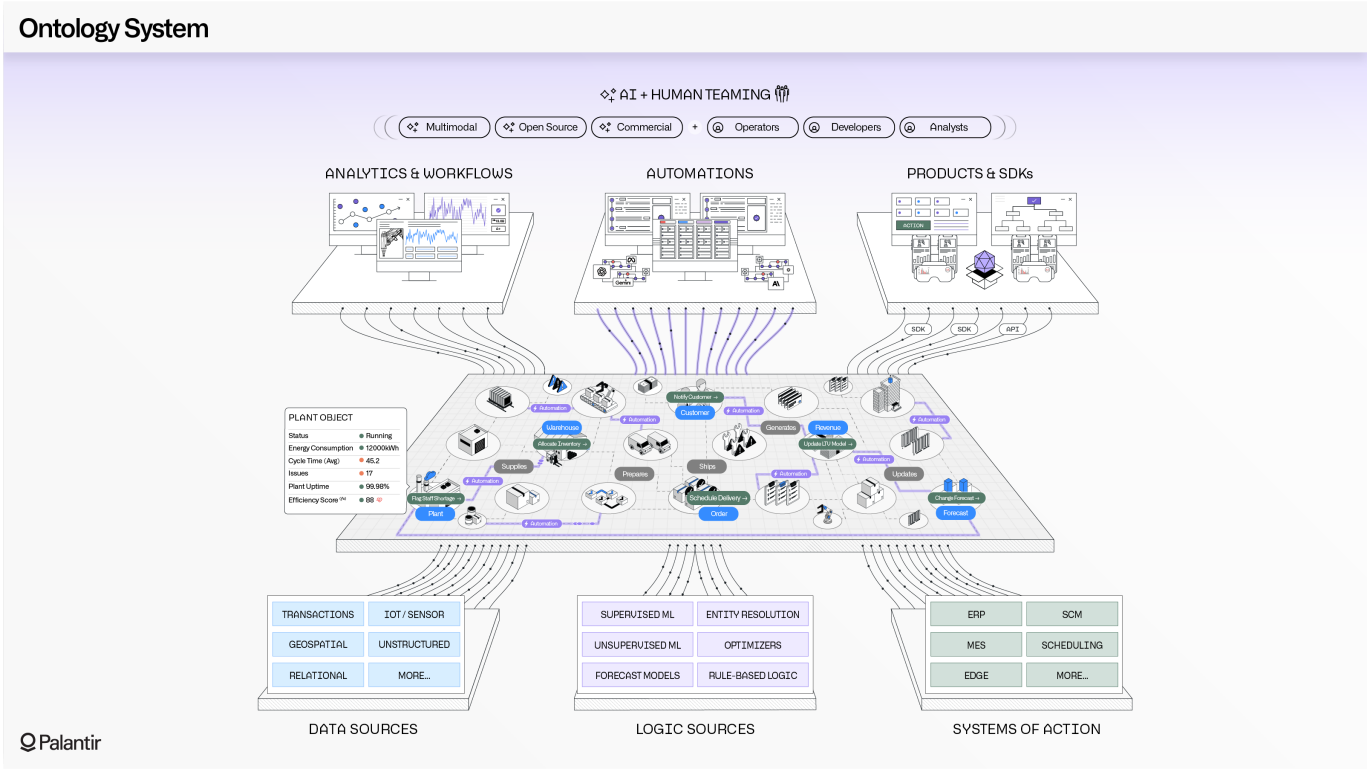
Category	Points	Evidence / constraint
Core thesis	16/20	Ontology, security, operational write-backs and implementation knowledge can create switching friction. In-house builds, hyperscalers, model labs, integrators and bundled alternatives prevent an exclusive-chokepoint conclusion.
Cycle stage	9/10	Reported US commercial expansion, bookings and retention support an adoption cycle; procurement, staffing and real deployment constrain conversion.
TAM expansion	9/10	The Ford Principle applies across defense, banking, manufacturing, healthcare and construction. Lower deployment friction can expand software use, but customer benefit is not vendor wallet.
Catalysts	4/5	November 2 Q3 report, subsequent guidance, paid sovereign deployments and the March 2027 NHS decision provide dated tests.
Macro	8/10	AI adoption, sovereignty and defense digitization are structural demand drivers; customer budgets, credit and cloud availability temper the tailwind.
Alpha	2/5	The edge is disciplined economics and overlap control rather than discovery of an uncovered business; public management ambition is widely visible.
Risk deductions	-5	Five distinct one-point classes: competition; deployment/hosting execution; procurement/concentration; financing/customer budgets; governance/dilution.

16 + 9 + 9 + 4 + 8 + 2 - 5 = 43 points. 43 / 60 = 71.6667%, normally rounded to analytical Base 72: Watchlist. The protected Excel Base remains 75. Neither a higher financial ceiling nor a source illustration mechanically raises the analytical score.

Scored risk	Deduction	What would make it material
Competition	-1	Insourcing, bundled software or model-native tools erode paid conversion or pricing.
Execution and hosting	-1	FDE/hiring bottlenecks, provider limits or hosting costs outrun deployments.
Procurement and concentration	-1	Government awards/options, NHS renewals or large-client budgets convert more slowly.
Financing and customer budgets	-1	Customer credit/capital spending squeezes software budgets; funding stress invalidates financial windows.
Governance and dilution	-1	Control rights, awards and issued/diluted shares diverge from planning economics.

The active model retains a 20x multiple and the existing minority-attribution convention. Score and financial method are independent domains. No price performance, insider-sale heuristic or analyst target is used to set this assessment.

The operational AI software stack



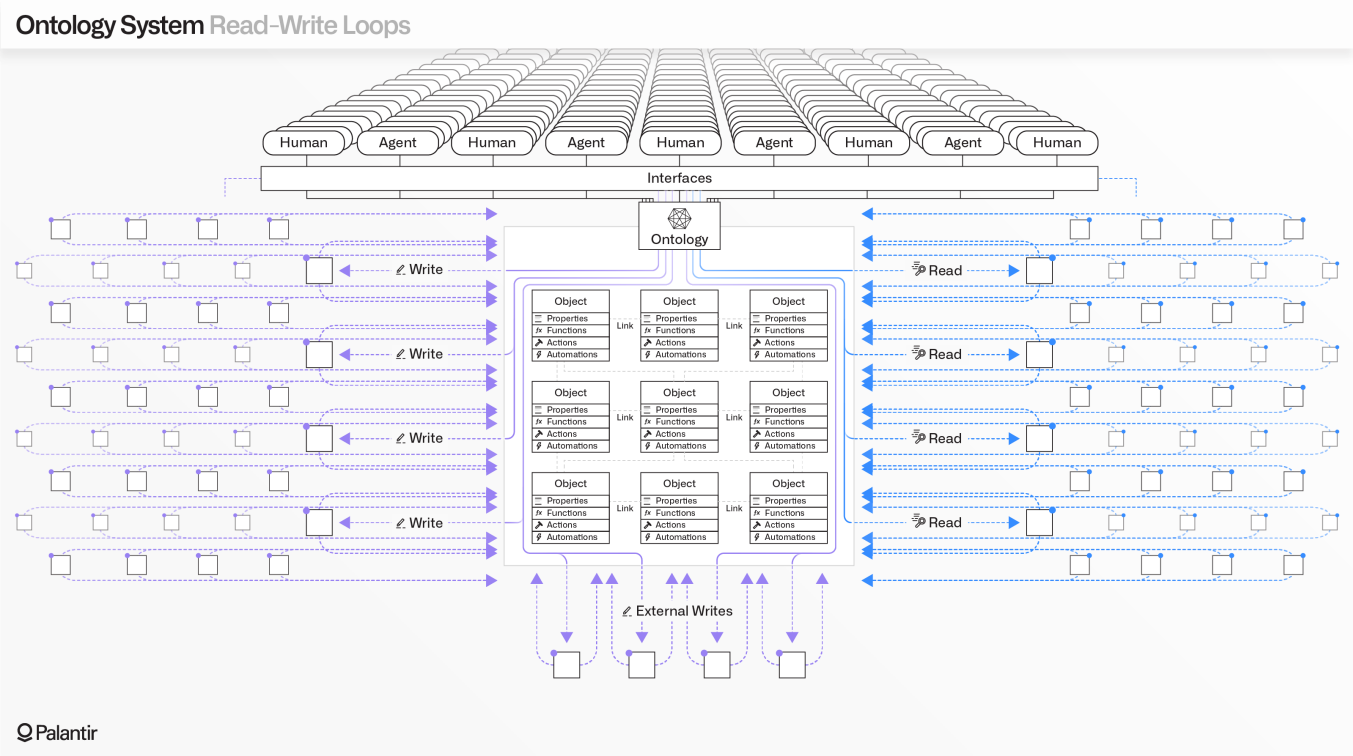
Source exhibit ARCH-ontology-system. Issuer architecture: the Ontology connects data sources, logic sources, and external systems/actions with analytics/workflows, automations, and products/SDKs. Qualification: Explanatory architecture, not proof of exclusivity, fees, market share or incremental revenue. Source: https://www.palantir.com/docs/resources/foundry/architecture-center/ontology-system.png

Foundry connects operational data and business logic; the Ontology makes entities, relationships and permissible actions usable by people and software. AIP exposes models and agent workflows within those controls. Apollo handles deployment across supported environments. These product names describe an integrated stack, not three independent additive revenue pools.

A customer can substitute an underlying model while retaining permissions, semantics and workflow integration. That model-agnostic position is a credible source of durability. The investment question is whether customers pay for this operating layer after considering their own engineering teams, hyperscaler offerings, model-lab products and integrators.

The four forecast vectors are US commercial (USC), US government (USG), international commercial (IntlC) and international government (IntlG). They are geography/segment intersections used to explain capture; exact historical four-way intersections and standalone product gross margins are not fully disclosed.

Switching friction comes from operations and implementation



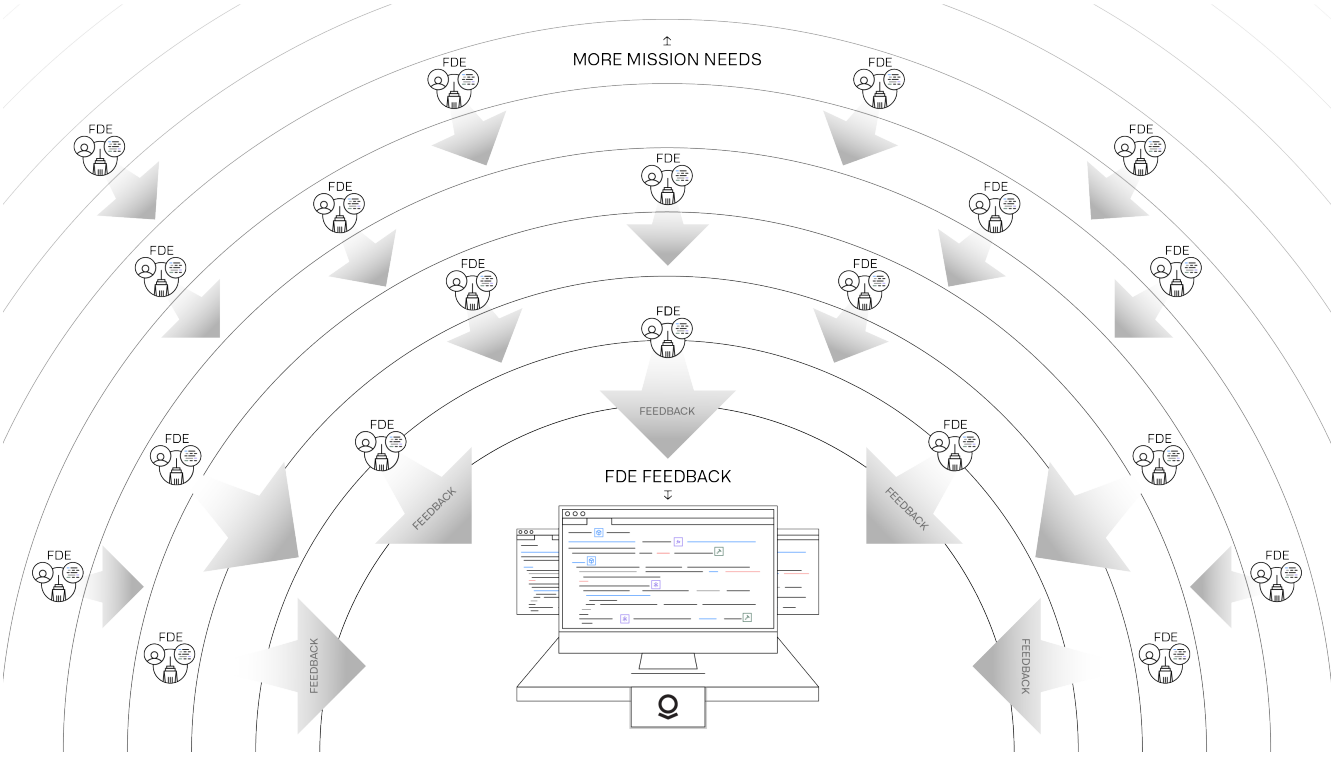
Source exhibit ARCH-ontology-read-write-loops. Issuer architecture: human and agent interfaces read from and write to objects, properties, functions, actions and automations, including external write-backs. Qualification: Operational action capture is a mechanism; diagram does not quantify switching costs, retention or economic exclusivity. Source: https://www.palantir.com/docs/resources/foundry/architecture-center/ontology-read-write-loops.png

Read/write loops connect AI output with approved changes to real systems. Shared semantics, permissioning, action history, testing and workflows can make a deployment harder to replace than a prompt interface. The moat is the accumulated operational implementation and reusable software, not a physical monopoly on compute or a demonstrated patent-exclusive bottleneck.

NHS data and commissioned ontology/product IP remain under NHS control; Palantir retains its pre-existing Foundry IP. Sovereign deployments preserve customer data/model control. These facts support trust and deployment, while limiting any thesis built on appropriating customer data.

Counterevidence: the filings explicitly acknowledge in-house software development, enterprise vendors, government contractors and systems integrators. Large rivals can bundle or price aggressively. Claimed bake-off wins and customer outcomes are useful breadcrumbs, not independent proof that no alternative works.

Software scale still needs people and physical infrastructure



Source exhibit ARCH-overview-fde-feedback. Issuer schematic: forward-deployed engineers connect customer missions and product feedback with the common software core. Qualification: Not an FDE headcount, utilization, deployment-capacity or labor-cost measurement. Source: https://www.palantir.com/docs/resources/foundry/architecture-center/overview-fde-feedback.png

Forward-deployed engineers make software operational and feed lessons into common products. Aplos, Fujitsu, PwC, Knox and Stagwell can expand implementation routes. No reviewed announcement supplies an incremental billable FDE count, utilization rate, guaranteed customer minimum or Palantir fee. The model therefore pays explicit incremental support, R&D, sales, G&A and SBC rather than converting every announcement into near-zero-cost revenue.

Cloud-provider token/request limits, geographic capacity, hosting availability and customer security processes remain binding constraints. Palantir cannot bypass the underlying provider limits. BYOM model calls may be billed directly to the provider with no additional Palantir platform fee for that registered-model use; this does not make all AIP or Foundry software free.

Selected Foundry Worker operations became exempt from compute charges; that is not blanket zero cost of revenue. Model cash hosting/support costs and the contractual cloud floor remain explicit. No owned GPU fleet, turbine factory or hyperscaler capex pass-through is invented.

Dated commercial evidence: outcomes versus Palantir receipts

Date / event	What the evidence supports	What is not disclosed
Oct 22 Aplos Elite	Existing implementation partner upgraded; additional delivery route and joint US customer access.	FDE count, fees, minimum software purchases or new paid-customer count.
Oct 22 Stagwell	Expansion of the November 2025 marketing alliance; Machine product family uses Palantir technology.	Palantir contract value, revenue share or a wholly separate underlying partnership.
Oct 21 sovereign cases	L3Harris: 30+ ERPs, about 3.5M connections, 5,000+ scheduled feeds. McCarthy: 100,000+ RFIs and 30,000 annual hours saved. Tampa General: 7% model improvement, 22x lower latency.	Test details, software fees or five net-new paid customers; Tampa General has been a customer since 2021.
Oct 19 Knox	Federal authorization/managed deployment channel; Knox reports 100+ applications and around 90-day authorization.	100 new Palantir customers, Palantir-wide sales-cycle proof or committed pipeline.
Oct 15 Customers Bank	Engineers embedded with bank staff for deposit onboarding.	Palantir fees, engineer count or revenue per deposit; bank assets/deposits are customer statistics.
Oct 12 Ondas / Regna	Regna initially wholly owned by Ondas; training and FDE-supported deployments planned.	Palantir equity ownership, fees or a second independent October 21 customer event.
Oct 1 Armada	Certified modular-datacenter route on customer-owned infrastructure.	Palantir software dollars, minimum MW or ownership of the pods.

All these signals help explain P01 jointly. None is added again as an independent contract wallet. Existing Nebius and partner arrangements, the earlier bootcamp programme and announced customer outcomes overlap with the broader deployment mechanism. Sources: issuer releases captured through the current official IR feed; individual dates and original bodies retained.

Government contracts: ceiling, obligation, recognition

Event	Verified scope	Economic treatment
Army enterprise agreement, July 31 2025	Ten-year maximum $10B across 75 contracts (15 prime and 60 related). Maximum potential purchasing ceiling.	Not $10B funded, booked or recognized revenue. Existing programme context; no new additive wallet.
TITAN, September 1 2026	$127M Palantir and $65M Anduril, $192M total, eight systems over 18 months; anticipated FY2027 follow-on.	Use Palantir-specific scope; do not allocate the Anduril share or unawarded follow-on as guaranteed receipts.
Ammunition programme, September 17 2026	$48.094071M firm-fixed-price delivery order, 12-month base plus five optional years, nine legacy systems.	Order face value is not a disclosed quarterly funded-cash schedule; base/options and prior overlap retained.
Maven builder/usage evidence	Management cites 25,000+ builders and 1,000+ ATF graduates; usage growth in prior call.	Builders, training graduates and usage are not paying seats, FDE capacity or contract dollars.
Armada / Johnson Controls, October 20 label / October 21 dateline	500MW distributed sovereign-capacity plan for 2027; the release does not mention Palantir.	Zero separate Palantir allocation. Hardware money is not Palantir software revenue.

The USG reference uses a decelerating programme-expansion proxy from the Q4 allocation, not the contract ceiling. A $100M annual programme-equivalent unit is a synthetic demand benchmark. It is not a count of real awards or an assertion of new cash. Government options and contract timing require procurement and revenue-recognition evidence.

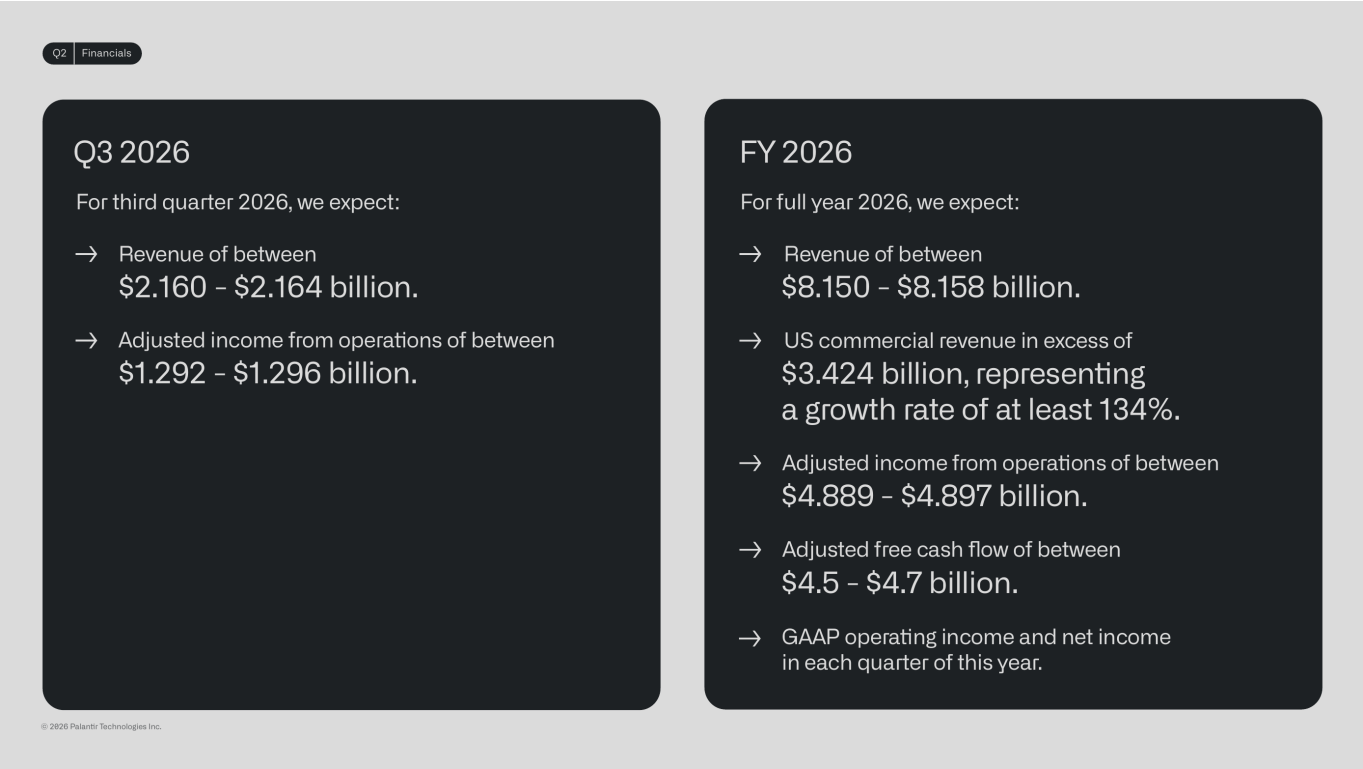
The newest two calls: ambition, evidence and cost warnings

Management source	Relevant signal	Model consequence / limit
May 4, 2026 Q1 call	US commercial growth ambition, Maven usage, operational product strategy, hiring competition and defense prioritization.	Correlated with the later US expansion thesis. No independent additional growth increment. A commercial-to-government category transfer is not lost or incremental total revenue.
August 3, 2026 Q2 CEO	Aspiration to drive business at a pace equal to or above US commercial growth for the next 18 months.	P01 is an own 149%-annualized company trajectory, probability 30%, not issued Q4 2027 or Q1 2028 guidance.
August 3 Q2 CRO	Approximately $370M/3-year tech expansion, $35M/3-year asset manager, $15M/5-month initial software-services deal and $37M/3-year health-system conversion.	Examples are already within TCV; neither the whole face value nor each case is an additive quarterly revenue item.
August 3 Q2 CTO	AIP/FDE competitive example with about $10M ACV; agent and ontology capabilities.	Management assertion, with overlap versus other cases unknown. Reinforces mechanism without creating a second booked wallet.
August 3 Q2 CFO	Significant Q3 expense ramp tied to new-hire seasonality and product/marketing investment.	Full payroll, SBC, hosting and support costs retained. Investment marks stay outside operating profit.

Both latest management calls were read in full as supplied by the connected TradingView/Quartr vendor text, including management remarks and Q&A. Numerical claims were checked to issuer/filed material. Issuer replay links were captured, but the entire audio was not independently listened to or manually transcribed; an issuer-authored full transcript was not retrieved. Analyst questions are context, not management facts.

Q1 replay: https://www.youtube.com/watch?v=1Aghjshi3U8 | Q2 replay: https://www.youtube.com/watch?v=yTHNjVWnoWo

Issued guidance anchors the near term



Source exhibit DECK-P027. Q3 2026 guide: revenue $2.160-2.164B and adjusted operating income $1.292-1.296B. FY2026: revenue $8.150-8.158B; US commercial above $3.424B/at least 134% growth; adjusted operating income $4.889-4.897B; adjusted FCF $4.5-4.7B; GAAP operating and net income each quarter. Qualification: As provided with Q2 results; not a Q3 actual. Adjusted income guide excludes costs and is not the sanctioned GAAP-style earnings denominator. Broader 149%-growth/18-month scenario must be distinguished from this CFO guidance. Source: Palantir Q2 2026 earnings presentation, original page 27

USD billions	Revenue	Adjusted OP	GAAP-style model OP
Q3 2026 Model	2.162	1.294	0.974
Q4 2026 Model - derived anchor	2.424	1.421	1.066
FY2026 issued midpoint	8.154	4.893	not issued as GAAP OP guide

Q4 revenue = FY2026 midpoint 8.154 - H1 actual 3.568047 - Q3 midpoint 2.162 = 2.423953. This is a derivation, not separately issued Q4 guidance. Q3/Q4 planned SBC of 0.300/0.335B and equity-payroll expense of 0.020B each are LOW planning inputs. Subtracting those costs from adjusted income preserves GAAP-style operating expense. No broader-company growth increment is applied in 2026.

Reported calibration: annual and quarterly periods remain distinct

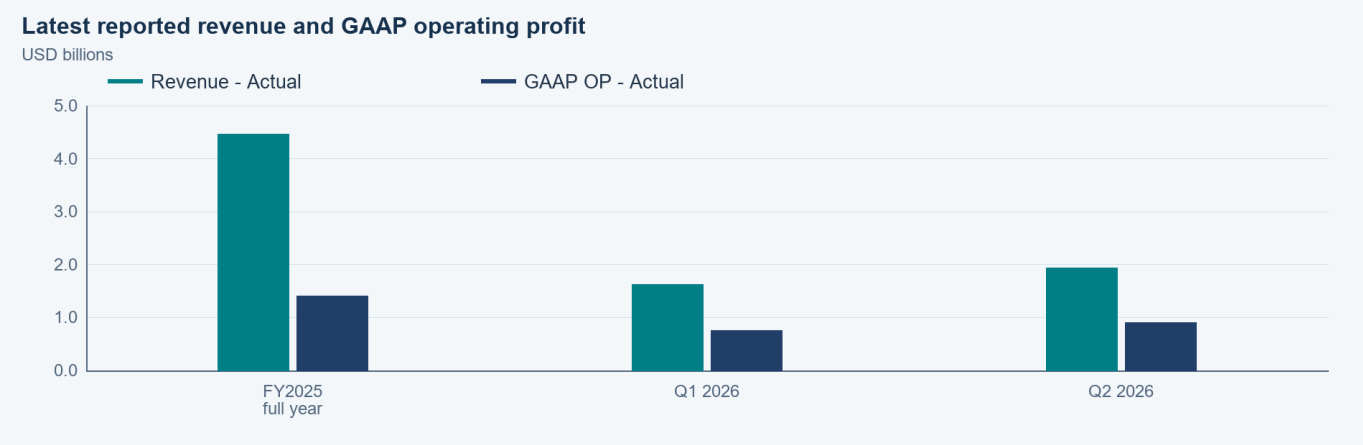


Figure A01. Latest reported revenue and GAAP operating profit. Probability-weighted model forecast unless marked Actual or conditional; LOW forecast confidence.

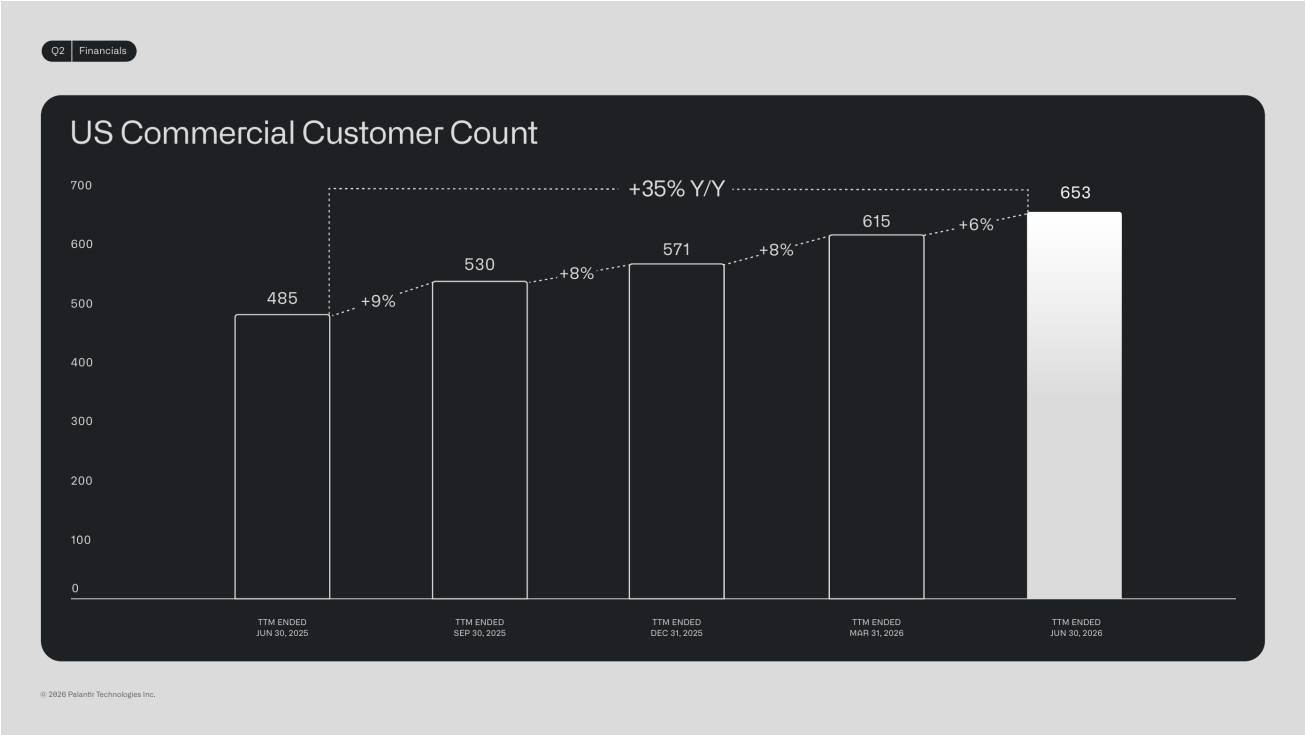
USD billions - Actual	FY2025 full year	Q1 2026	Q2 2026
revenue	4.475446	1.632583	1.935464
gross profit	3.686269	1.416785	1.638594
total opex	2.272254	0.662787	0.726590
GAAP operating income	1.414015	0.753998	0.912004
SBC total	0.684033	0.201592	0.265209
cash flow from operations	2.134473	0.899165	1.216167
cash capex	0.033882	0.007401	0.014554

Source financial statements use USD thousands; the table divides by 1,000,000 into USD billions. The full-year bar is not a quarterly run-rate comparison. Q2 revenue of 1.935464 less GAAP cost of revenue 0.296870 gives gross profit 1.638594; less opex 0.726590 gives GAAP operating profit 0.912004. Interest and other investment income are excluded from operating profit.

Q2 government and commercial contribution margins of 71% and 78% are not consolidated operating margins. The filing reconciles their 1.436050B combined contribution with non-SBC R&D, non-SBC G&A and total SBC to reach GAAP operating income. Source: Q2 Form 10-Q pp4,17-19,30-31.

Customer growth and contract conversion



Source exhibit DECK-P023. US commercial trailing-twelve-month customer count: 485/530/571/615/653 at June/September/December 2025 and March/June 2026; +35% year on year. Qualification: TTM recognized-revenue customer definition; neither instantaneous active contracts nor bootcamp attendees. Counts are a subset of worldwide commercial customers. Source: Palantir Q2 2026 earnings presentation, original page 23

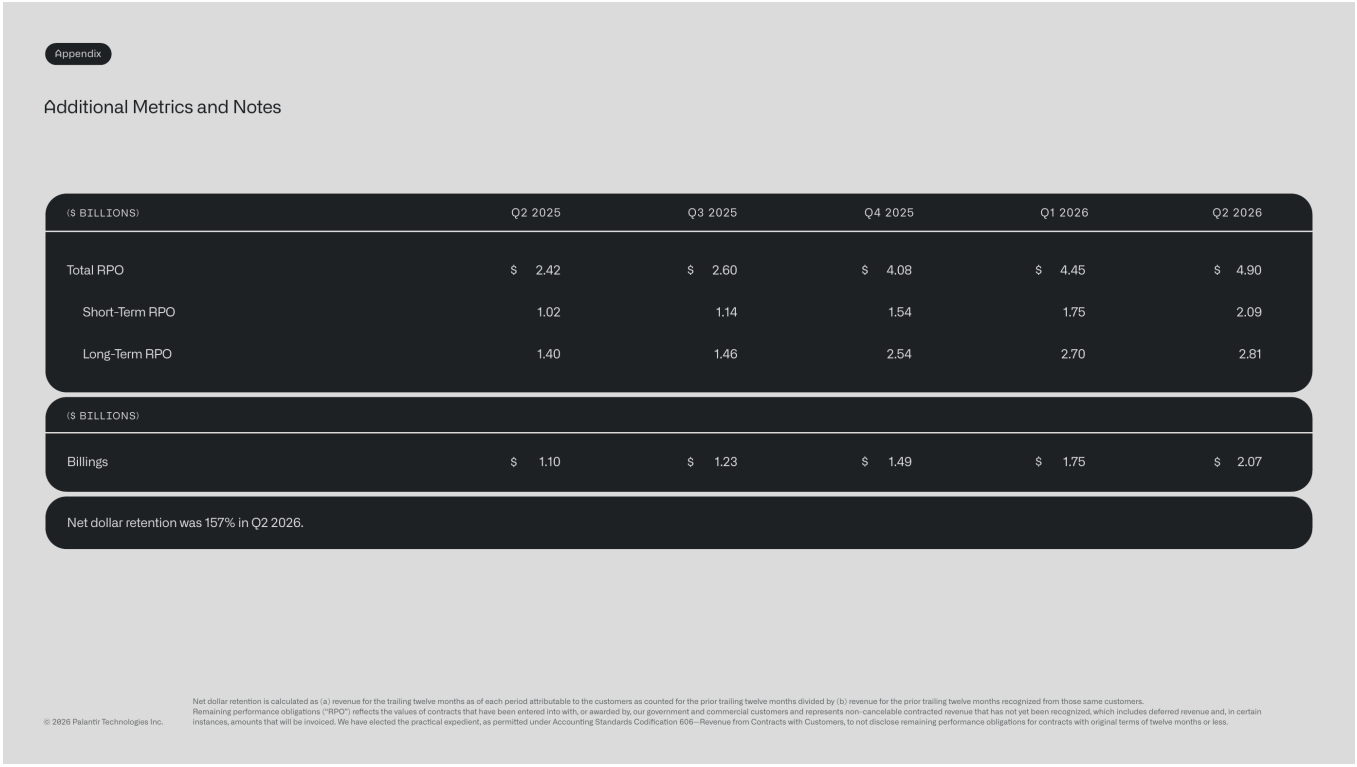
Reported scope	Q1 2026	Q2 2026	Interpretation
US commercial TTM recognized-revenue customers	615	653	A revenue-recognition population, not paid seats or bootcamp attendees
Total customers	1,007	1,049	US commercial is a subset; do not sum population cuts
Net dollar retention	150%	157%	Backward cohort comparison, not guaranteed forward growth
US commercial quarterly TCV ($B)	1.176	2.132	Bookings face value and term scope, not quarterly receipts
US commercial RDV ($B)	4.920	6.238	Broader remaining deal value; can include options/termination exposure

Reference customer growth is 6% sequentially through 2027, then 4%/3%/2% in 2028/2029/2030. Aggregate TCV per TTM-customer proxy grows 2% sequentially through 2027, then 1.5%/1%/1%. These are LOW assumptions calibrated to the reported population and bookings; they are not disclosed contract prices.

The reference contract-stock roll is an explicit proxy

Reported Q2 US commercial RDV roll: 4.920B opening + 2.132B TCV - 0.764B rounded quarterly revenue = 6.288B versus reported 6.238B. The unexplained -0.050B residual reflects scope/rounding/timing differences; it is not proof of recurring cancellations. The model applies a separate 0.5% quarterly RDV haircut as a LOW planning assumption.

Quarterly recognition proxy = 0.764 / 4.920 = 15.528455%. Future revenue draws from the opening remaining-deal stock under this proxy; new bookings replenish the stock. RPO, RDV, backlog, TCV and contract examples are overlapping views, not separate demand pools.



Appendix

Additional Metrics and Notes

($ BILLIONS)	Q2 2025	Q3 2025	Q4 2025	Q1 2026	Q2 2026
Total RPO	$ 2.42	$ 2.60	$ 4.08	$ 4.45	$ 4.90
Short-Term RPO	1.02	1.14	1.54	1.75	2.09
Long-Term RPO	1.40	1.46	2.54	2.70	2.81

($ BILLIONS)					
Billings	$ 1.10	$ 1.23	$ 1.49	$ 1.75	$ 2.07

Net dollar retention was 157% in Q2 2026.

© 2026 Palantir Technologies Inc.

Net dollar retention is calculated as (a) revenue for the trailing twelve months as of each period attributable to the customers as counted for the prior trailing twelve months divided by (b) revenue for the prior trailing twelve months recognized from those same customers.
Remaining performance obligations ("RPO") reflects the values of contracts that have been entered into with, or awarded by, our government and commercial customers and represents non-cancelable contracted revenue that has not yet been recognized, which includes deferred revenue and, in certain instances, amounts that will be invoiced. We have elected the practical expedient, as permitted under Accounting Standards Codification 606—Revenue from Contracts with Customers, to not disclose remaining performance obligations for contracts with original terms of twelve months or less.

Source exhibit DECK-P029. Total RPO $2.42/$2.60/$4.08/$4.45/$4.90B from Q2 2025 to Q2 2026; Q2 2026 short-term RPO $2.09B, long-term $2.81B; quarterly billings $1.10/$1.23/$1.49/$1.75/$2.07B. Q2 2026 net dollar retention 157%. Qualification: RPO is non-cancellable contracted unrecognized revenue, includes deferred amounts, and excludes elected contracts originally twelve months or less. NDR compares trailing-twelve-month revenue from a prior-period customer cohort; not a forward guarantee. RPO/TCV/RDV/backlog cannot be added. Source: Palantir Q2 2026 earnings presentation, original page 29

The US commercial capture diagnostic permits a minimum same-quarter extra booking if the modeled balance would otherwise turn negative. That is a mathematical feasibility condition, not an award, future customer forecast or cash receipt. Real delivery could require signing earlier, depending on start date, contractual acceptance and revenue recognition.

Rule 16b P01: the broader-company growth outcome

Field	Current model
Source / specific claim	August 3 Q2 CEO 18-month aspiration, US commercial actual growth/bookings/NDR, partner deployment routes and named customer outcomes.
Numerical probability	30% subjective conditional probability; not an observed frequency.
Reference already included	Guide-anchored Q3/Q4, US commercial booking/RDV roll and ordinary government-programme growth.
Conditional magnitude	Q4 2026 derived revenue 2.423953B x 2.49 = Q4 2027 conditional revenue 6.035642970B. Apply quarterly factor 2.49^(1/4) from Q1 2027 through Q1 2028.
Clock / timing limit	August 3, 2026 + 18 months is February 3, 2028, inside Q1 2028. Modeling the whole Q1 quarter approximates that date; one-quarter delay is a diagnostic.
Outer normalization	After Q1 2028, annualized sequential pace 50% for the remaining 2028 quarters, 35% in 2029, 25% in 2030. Not exact full-calendar-year growth claims.
Allocation	International vectors stay at reference; domestic residual split by the same-quarter reference US commercial/government ratio.
Costs on incremental revenue	Cash CoR 14% commercial / 24% government; cash R&D 8%, S&M 7%, G&A 3%; SBC 12% plus related payroll at Q2 ratio; capex, D&A and working capital. All LOW.
Overlap	May aspiration, August ambition, Nebius, Armada, Aplos, Knox, Stagwell, Ondas and customer outcomes are one joint mechanism; no separate fee or MW add-ons.

Why 30%: booking growth, 157% NDR and operational examples justify a nonzero quantified outcome. Ambiguous broader-company wording, formal guidance well below the conditional pace, hiring/deployment constraints, hosting costs and customer-budget/credit pressure lower confidence. Missing official confirmation alone is not a reason to assign zero.

Raise test: reported 2027 guidance, customer expansion and paid partner deployments support the required capture without disproportionate cost. Reduce test: slower conversion, weak funding, talent/provider limits, hosting overruns or customer credit pressure. No automatic probability change is triggered by another repost.

Rule 16b P02: NHS is a bounded subset, not the programme budget

Source fact / proxy	Treatment
Current official contract clock	Award November 2023; formal March 2024 start; initial three-year term comes up March 2027; extensions 2 + 1 + 1 years, potential March 2031 end.
Consortium ceiling	GBP330M maximum over seven years, up to 240 NHS organizations; Palantir with Accenture, PwC, Carnall Farrar and NECS. Net Palantir share and verified minimum payments absent.
Excluded budget	Separate GBP150M multi-vendor solution exchange; GBP480M programme is not a Palantir award.
October 22 counterevidence	Committee pressure and government undecided on break clause; no actual termination established. Limited Royal Cornwall adoption is a counter, not whole-programme proof.
Probability / conditional wallet	20% extension-loss probability. GBP0.330B / 7 x 50% modeled net share x 1.30 USD/GBP / 4 = USD0.007660714B conditional quarterly wallet. Share, adoption and FX are LOW proxies.
Timing / costs	First full post-March quarter Q2 2027; exact day and notice terms unavailable. Avoid only 50% of associated reference cash government delivery costs; retain fixed R&D, S&M, G&A and SBC.
No double counting	Subtract from the existing IntlG reference once. No separate GBP330M revenue addition or second penalty for London proposal that was never entered.

The first-full-quarter convention leaves a possible partial March/Q1 effect unresolved. A 50% company share is not claimed as disclosed. Evenly dividing a maximum contract value is only a scale proxy. The 1.30 FX planning rate is not represented as a verified spot quote.

Sources: current NHS England contract explainer and FAQs; October 22 House of Commons committee page; Royal Cornwall and London City Hall disclosures. Full redacted contract, minimum schedule, compensation, termination notice and Palantir-specific revenue remain unavailable.

Four coherent joint states explain one active case

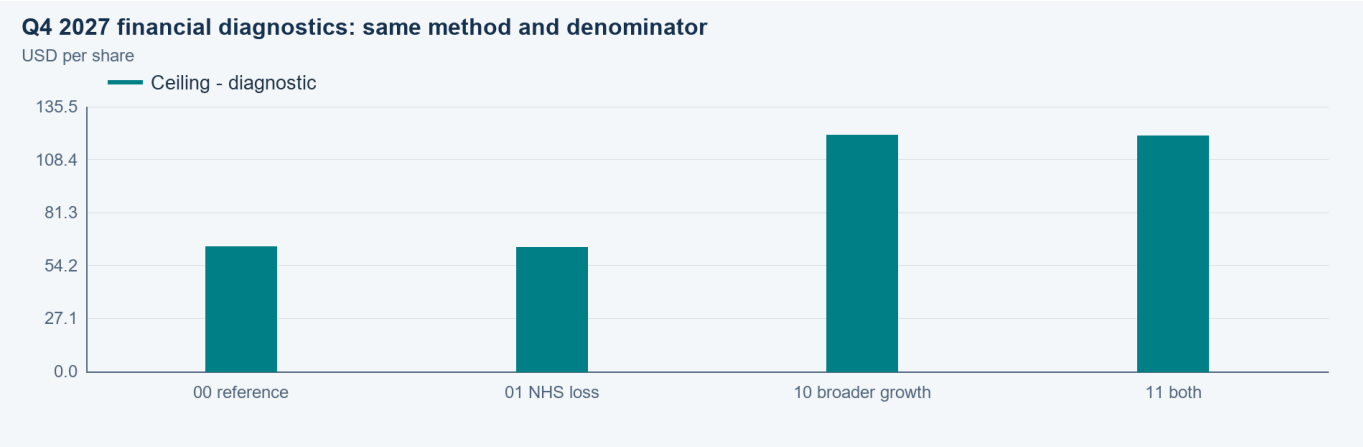


Figure D01. Q4 2027 financial diagnostics: same method and denominator. Probability-weighted model forecast unless marked Actual or conditional; LOW forecast confidence.

State	Weight	Q4 2027 revenue $B	F4 parent OP $B	Q4 2027 ceiling $
case00	0.56	3.658563	8.470298	63.714629
case01	0.14	3.650902	8.442210	63.503353
case10	0.24	6.035643	16.085807	120.999432
case11	0.06	6.027982	16.057720	120.788156

The two probabilities are combined with an explicit independence planning assumption: 0.70 x 0.80 = 0.56; 0.70 x 0.20 = 0.14; 0.30 x 0.80 = 0.24; 0.30 x 0.20 = 0.06. Each state computes its own revenue, costs, working capital, assets and cash before weighting. The active path is the weighted operating result; the ceiling does not receive another probability haircut.

The active Q4 2027 ceiling is 80.8578146411. Joint-state outcomes diagnose uncertainty rather than define four concurrent investment cases. Funding availability is checked across the required forward window. No debt, restricted funds, investment mark or undrawn credit facility is added to operating value.

The active ceiling is a forward earnings calculation

Figure V01. Q4 2027 prices Q4 2027 through Q3 2028 operating earnings. Probability-weighted model forecast unless marked Actual or conditional; LOW forecast confidence.

Quarter - Model	Revenue $B	OP margin	GAAP OP $B	Parent OP $B
Q4 2027	4.370155	50.3476%	2.200266	2.191861
Q1 2028	5.044348	51.4000%	2.592797	2.582892
Q2 2028	5.497713	51.9836%	2.857911	2.846993
Q3 2028	5.979179	52.5085%	3.139579	3.127586

F4 parent OP = 2.1918611593 + 2.5828923221 + 2.8469934823 + 3.1275860415 = 10.7493330052B. Ceiling = 10.7493330052 x 20 x 1,000 / 2658.8235294118M = USD 80.8578146411.

Consolidated GAAP-style OP includes full SBC and equity-payroll expense. The existing parent attribution proxy is 0.9961799764, derived from Q2 common net income / consolidated net income. It is an imperfect convention rather than a disclosed segment operating-profit attribution. No interest income, investment mark, balance-sheet cash or enterprise-value replacement is added.

Sensitivity: execution and capture matter more than a headline

Diagnostic change	Q4 2027 ceiling $	Interpretation
goal one quarter delay	75.682358	Same R2 causal law, one disclosed input perturbation; diagnostic only.
higher incremental commercial support cost	78.745206	Same R2 causal law, one disclosed input perturbation; diagnostic only.
higher deployment RnD	77.519063	Same R2 causal law, one disclosed input perturbation; diagnostic only.
cloud source upper annual floor	80.857815	Upper disclosed annual minimum, but no additional shortfall where modeled included hosting already exceeds it.
higher optional RDV attrition	74.283041	Same R2 causal law, one disclosed input perturbation; diagnostic only.
zero NHS company share	80.900070	Same R2 causal law, one disclosed input perturbation; diagnostic only.
earlier partial March NHS loss	80.857821	Same R2 causal law, one disclosed input perturbation; diagnostic only.
no avoidable NHS costs	80.854208	Same R2 causal law, one disclosed input perturbation; diagnostic only.
share denominator plus5pct	77.007443	Same R2 causal law, one disclosed input perturbation; diagnostic only.
attribution proxy sensitivity	79.544520	Same R2 causal law, one disclosed input perturbation; diagnostic only.

These sensitivities use the same financial law. The timing test shifts the broader-company growth acceleration one quarter; support/R&D tests raise incremental cost rates. A cloud-floor result that is unchanged is not evidence that cloud costs are zero: hosting already included in cash costs can cover the tested minimum.

NHS share/adoption/probability, timing and avoidable costs remain uncertain. Nearer-window sensitivity to an earlier partial March loss can flow through finite asset/cash schedules even when the active forward period is later. Unfunded required windows are unavailable rather than assigned a fabricated positive ceiling.

Shares: issued capital and future denominator are different

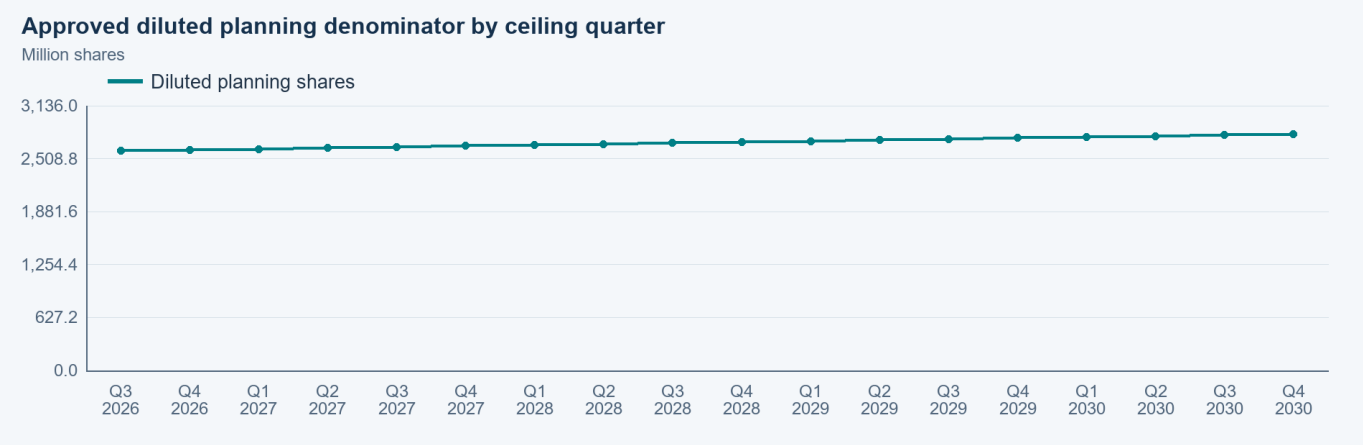

Figure S01. Approved diluted planning denominator by ceiling quarter. Probability-weighted model forecast unless marked Actual or conditional; LOW forecast confidence.

Quarter	Shares M	Quarter	Shares M	Quarter	Shares M
Q3 2026	2,600.000000	Q1 2028	2,670.588235	Q3 2029	2,741.176471
Q4 2026	2,611.764706	Q2 2028	2,682.352941	Q4 2029	2,752.941176
Q1 2027	2,623.529412	Q3 2028	2,694.117647	Q1 2030	2,764.705882
Q2 2027	2,635.294118	Q4 2028	2,705.882353	Q2 2030	2,776.470588
Q3 2027	2,647.058824	Q1 2029	2,717.647059	Q3 2030	2,788.235294
Q4 2027	2,658.823529	Q2 2029	2,729.411765	Q4 2030	2,800.000000

Latest verified issued all-class count is 2,403.05848M as of July 27, 2026, not the model denominator. Q2 diluted weighted-average shares were 2,568.694M; the preserved future planning path runs 2,600M to 2,800M. Each ceiling uses the beginning/ceiling-quarter planning count, not an annual average.

Q2 outstanding options, SARs and RSUs are not simply stacked onto a denominator that already incorporates dilution conventions. SAR shares reflect appreciation and award terms. SBC expense is not cash raised; the planning share path does not generate financing proceeds.

Opening liquidity and eligible funds

Opening June 30, 2026 item	USD billions	Treatment
Cash and cash equivalents	2.030047	Included
Short-term US Treasuries	7.194962	Included
Opening core liquidity	9.225009	Sum of the two eligible rows
Public equity in marketables	0.184090	Excluded from core liquidity
Restricted cash	0.033311	Excluded
Undrawn revolver	0.500000	Excluded; no borrowing assumed
Customer deposits already received	included in historical cash	Do not add again as financing
SpaceX/investment valuation marks	not operating cash	No automatic cash realization or OP addition

Operating cash proxy = GAAP OP + SBC + D&A - change in net working capital - cash tax. Equity-related employer payroll costs remain real cash expense, unlike the issuer adjusted-FCF addback. Core liquidity closes from opening funds plus CFO proxy less capex; interest income is conservatively zero in the cash forecast.

Net working capital uses receivables and prepaids less payables/accruals and contract liabilities. Ratios are calibrated to Q2, but future stocks are LOW continuations. Only changes consume or release cash. The full balance is not repeatedly subtracted every quarter.

Liquidity and model funding

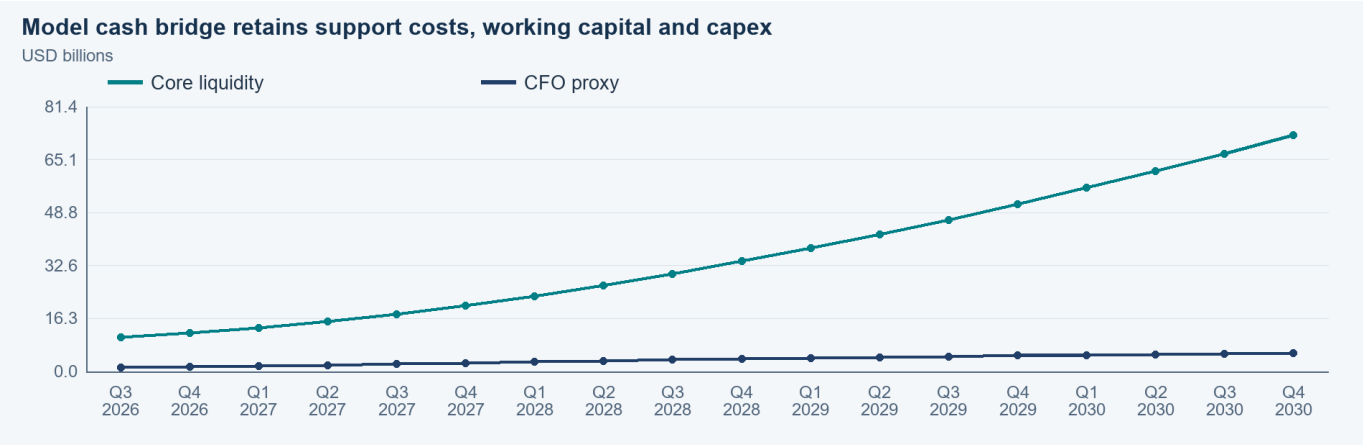

Figure C01. Model cash bridge retains support costs, working capital and capex. Probability-weighted model forecast unless marked Actual or conditional; LOW forecast confidence.

Quarter - Model	CFO proxy $B	Capex $B	Closing core funds $B	Funded

Q4 2030	5.747	0.063	72.671	yes

All future cash figures are LOW model proxies, not issuer cash guidance. The four joint states are checked before active weighting. The preserved diluted-share path does not finance deficits. Operating leases remain in modeled cash costs; neither lease proceeds nor debt is introduced.

Hosting: a contractual floor inside a broader cost model

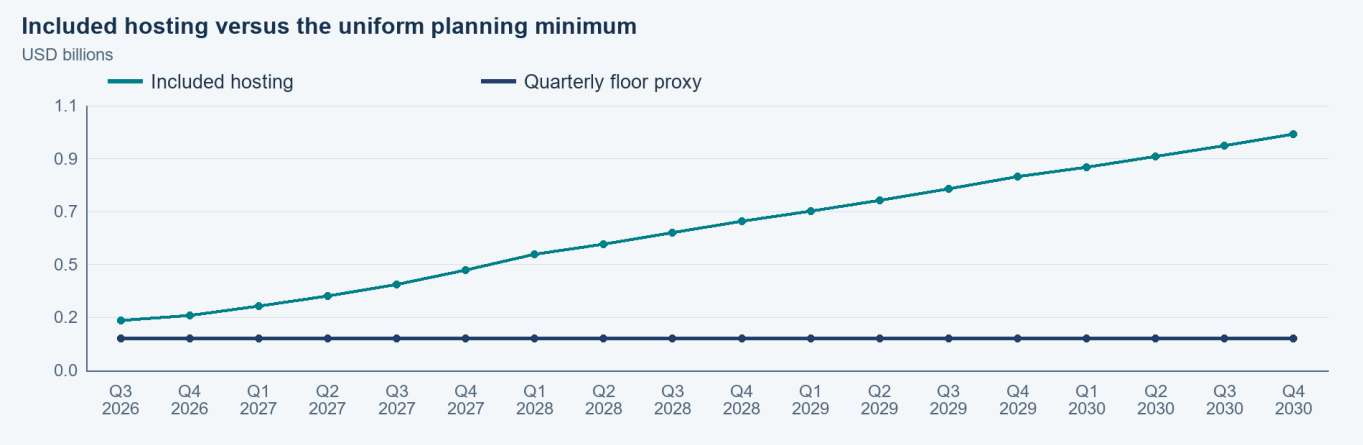

Figure C02. Included hosting versus the uniform planning minimum. Probability-weighted model forecast unless marked Actual or conditional; LOW forecast confidence.

The March 2026 amended cloud agreement commits at least $5.6B over ten years through February 29, 2036, with annual minima $268M-$979M. It replaced previous obligations under that agreement. The actual year-by-year schedule is unknown. The default $560M annual uniform floor is a planning proxy; only a shortfall versus already included hosting adds cost.

Reference hosting components: 6% commercial revenue + 12% government revenue + 15% cash R&D. Incremental components: 7% commercial delta + 17% government delta + 15% extra cash R&D, bounded inside modeled cash costs. These are LOW cost allocations, not a disclosed cloud invoice.

Opening net PPE is $61.403M. Existing net book value depreciates at the H1 D&A quarterly rate until zero. Each new capex cohort has a finite 16-quarter planning life and starts depreciating the following quarter. Capex is calibrated to H1 capex/revenue. There is no terminal extrapolation of an exhausted opening asset.

Finite new-asset cohorts and depreciation

D&A allocation is a LOW functional proxy: 20% CoR, 30% R&D, 10% S&M, 40% G&A. Useful life and allocation are modeling choices, not issuer asset guidance. Cash capex is separate from noncash depreciation.

US commercial: revenue, costs and allocated gross profit

Booking/RDV roll calibrated to 653 TTM recognized customers, $2.132B quarterly TCV and $6.238B RDV. Capture depends on deployments and expansion, not physical compute capex alone. All extrapolated figures and product GP/GM are LOW allocations, not reported segment gross margins. Cash delivery costs split within commercial/government groups by revenue, and shared CoR SBC/D&A by total revenue. The allocated GP sums exactly to consolidated modeled GP.

US government: revenue, costs and allocated gross profit

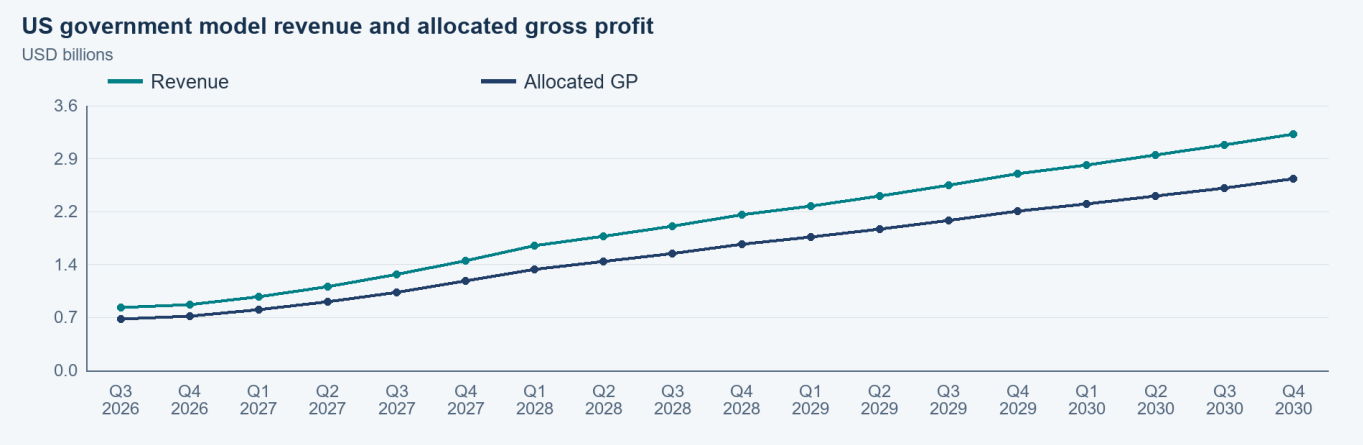

Figure P-USG. US government model revenue and allocated gross profit. Probability-weighted model forecast unless marked Actual or conditional; LOW forecast confidence.

Main driver: Q3/Q4 guidance anchors; 2027+ US commercial booking/recognition and programme expansion; weighted P01 scale; NHS subset counter. HIGH confidence attaches to issued aggregate guide anchors, not product allocations. Every forecast allocation, cost extrapolation and weighted result is LOW. Q3 is completed but still unreported; every row remains Model.

Reference cash R&D/S&M/G&A growth is explicit by year rather than a fixed operating-margin assumption. SBC has a separate quarterly growth path and preserves Q2 functional weights. Additional P01 revenue bears extra cash R&D/S&M/G&A, SBC and payroll. NHS loss retains fixed operating costs. All costs are charged before applying the 20x multiple.

Reference quarterly growth	2027	2028	2029	2030
RD	10.0%	8.0%	6.0%	5.0%
SM	7.0%	6.0%	5.0%	4.0%
GA	5.0%	4.0%	4.0%	3.0%
SBC	6.0%	4.0%	3.0%	2.5%

A noncash label does not remove SBC from the earnings valuation. Actual Q2 SBC was $265.209M, up 66% year on year. Actual cash hosting increases also occurred in both cost of revenue and R&D. This is a software business with physical compute dependencies and a substantial human implementation cost base.

All money in USD billions. Cash costs exclude SBC and D&A but retain payroll, hosting and support. Equity-related payroll expense remains a cash cost. NWC stock = receivables + prepaid assets - payables/accruals - contract liabilities. The change, not the whole closing stock, enters CFO.

Working-capital balances - complete 18-quarter schedule

USC equivalent = modeled quarterly USC revenue / (Q2 reported rounded $0.764B / 653 TTM recognized-revenue customers). This is not reported ARPC, paid seats or a forecast count of real customers. USG equivalent = annualized quarterly revenue / $0.100B synthetic annual programme unit. The same organization can expand spending rather than requiring a new customer.

Required TCV and minimum extra TCV keep the conditional remaining-deal stock nonnegative under its stated recognition assumptions. The minimum may require earlier real-world signing, delivery and acceptance. It is not guaranteed funding, an incremental cash inflow, or a second source of recognized revenue. Conditional-state benchmarks are shown next to expose the ambition behind P01.

P01 conditional capture: a demanding paid-deployment path

Case10 is the broader-company growth outcome with no NHS loss. It is a diagnostic conditional state, not the active probability-weighted forecast. Sovereign deployments are one capture mechanism. The whole Q1 2028 call-clock-quarter approximation and finite deployment capacity make timing particularly uncertain. Partner announcements demonstrate routes to capture, not proof this required wallet is signed.

A defensible change in probability needs paid deployments, booking and renewal conversion, customer expansion, support productivity and disclosed budgets. Headline compute spending, usage growth, customer savings and sovereign demand establish opportunity but do not alone establish Palantir fees.

Every reference customer-population, ticket, booking, attrition and recognition parameter is a labeled proxy. Q3/Q4 aggregate revenue remains anchored to guidance. Booking stocks can exceed near-term recognized revenue; only the modeled conversion becomes revenue. The unexplained historical RDV roll is disclosed, not reverse-fitted into hidden revenue.

The reference is the already-modeled opportunity. P01 contributes only its conditional excess above it, allocated within the US business. IntlC and IntlG remain reference except the explicit NHS subset. This prevents adding AIP, Foundry, Nebius, Armada and partner stories as overlapping wallets.

Q4 2030	3.038064	0.001532	1.560497	-0.001402

Active Q4 2027 forward-four-quarter parent-OP contribution: P01 +2.2846527208B; P02 -0.0056174529B. Those contributions already carry their 30%/20% probabilities and incremental costs. They are not extra adjustments to apply again to the completed operating model or ceiling.

Probability is attached to a specific conditional outcome, magnitude, timing and cost bridge. Announcement count is not probability. Customer and partner updates are assessed for genuinely new independent evidence, with original dates and event overlap retained.

Annual totals are secondary trajectory checks

Calendar year	Coverage	Revenue $B	GAAP OP $B	OP margin	SBC $B	Capex $B
2026	Q3-Q4 only	4.5860	2.0400	44.5%	0.6350	0.0282
2027	four modeled quarters	14.2813	7.0058	49.1%	1.7295	0.0879
2028	four modeled quarters	23.0144	12.0204	52.2%	2.5114	0.1416
2029	four modeled quarters	30.6760	16.5043	53.8%	3.1132	0.1888
2030	four modeled quarters	38.1841	20.8610	54.6%	3.6935	0.2350

The active valuation remains the exact rolling four-quarter method. Annual totals test capture and trajectory only. They do not replace the Q4 2027-Q3 2028 earnings window, and the 2026 table explicitly covers only modeled Q3/Q4 rather than a full-year forecast.

Cross-book watch	Transmission channel	No automatic inference
PLTR / cloud and model providers	Inference availability, usage cost and on-premises model delivery influence deployment economics.	AI infrastructure capex is not a fixed Palantir revenue share.
PLTR / NVIDIA ecosystem	Apollo/on-premises and sovereign workflows can use accelerated infrastructure.	Hardware partnership is not GPU ownership or a disclosed per-GPU fee.
PLTR / defense integration	Maven/TITAN and other systems connect data, software and hardware contractors.	Builders and total consortium/system values are not Palantir receipts.
PLTR / power and networking	Physical bottlenecks can delay customer compute and enterprise deployment.	No portfolio-wide revenue addition from the same MW headline.

These links transmit demand through customer budgets, deployment timing and service costs. A slower physical buildout can delay capture; a larger buildout does not establish a fixed software-spend share.

Rolling forward-four-quarter ceiling path

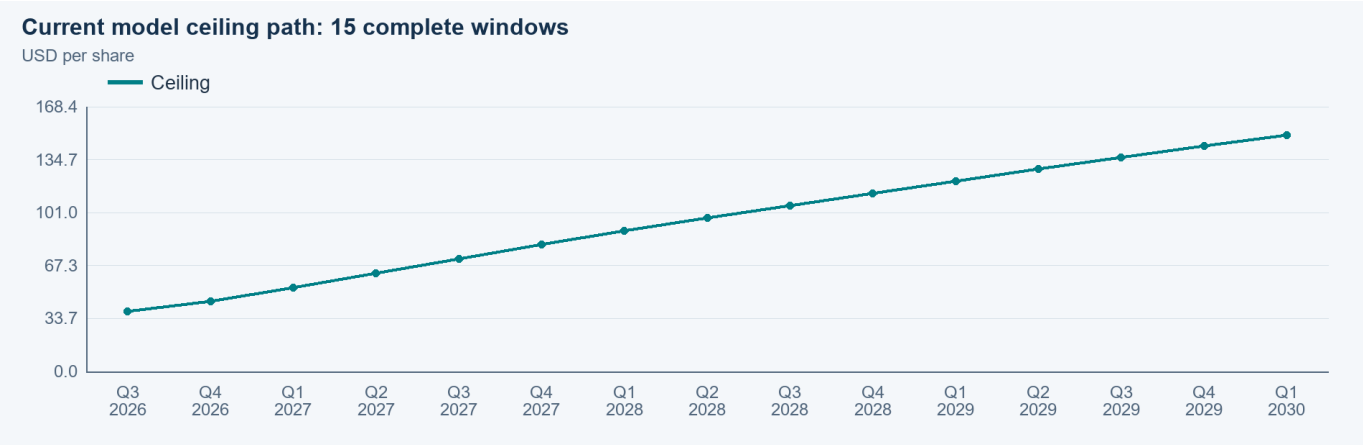

Figure V02. Current model ceiling path: 15 complete windows. Probability-weighted model forecast unless marked Actual or conditional; LOW forecast confidence.

Ceiling quarter	Exact earnings window	F4 parent OP $B	Multiple	Shares M	Ceiling $

Q2, Q3 and Q4 2030 have operating forecasts but no complete four-quarter forward window within the model. Their ceilings are unavailable, not zero and not extrapolated. The active calendar selection is Q4 2027. Each complete window retains the approved multiple, attribution and ceiling-quarter shares.

programme.P02.probability	0.20000000	fraction	LOW planning proxy / judgment	economic_proxy

Actuals and issued aggregate anchors are HIGH; extrapolated capture, costs and probabilities are LOW research assumptions. Native method/share conventions remain protected. Parameter bounds and source labels follow. Values are shown to eight decimals where applicable; full precision is retained in the linked financial model.

What remains uncertain - and what would change the thesis

1. Latest two vendor management transcripts include remarks and Q&A, but full issuer replay audio was not independently audited and an issuer-authored full transcript was not retrieved.

2. Direct SEC HTML requests returned 403. Issuer financial PDFs and official release/API bodies supply primary financial evidence; failed captures remain failed.

3. An issuer earnings.pdf route returned an HTML error, not a PDF/transcript. It is not treated as successful source retrieval.

4. Q2 financials, notes, MD&A pp1-33, competition pp48-49 and procurement p75 were read. The 223-page package includes exhibits not all read; no full-exhibit claim.

5. Relevant Q1 financial/statement/competition pages and FY2025 financial/segment/methodology/competition sections were read; no all-90/all-120-page claim.

6. Exact four-way geography/segment intersections, product gross margins, FDE capacity, customer software budgets and annual cloud payment schedule are absent. Labeled LOW proxies remain necessary.

7. No Q3 2026 actual/preliminary result or new CFO-issued 2027 numerical guide was found before October 24; Q3 remains Model. Next results scheduled November 2.

Dated test	Raise conviction when	Reduce conviction when
November 2 Q3 results	Reported revenue, retention and booking conversion support guide plus paid deployments.	Revenue/conversion lags or hiring/hosting cost outruns the bridge.
2027 guidance / updates	Paid sovereign implementations support the required US capture and deployment throughput.	Ambition lacks actual customer spending, budgets or timely funding.
March 2027 NHS term	Verified renewal and net economics narrow share/adoption/timing gaps.	Break exercised, adoption weak or retained costs prevent recovery.
Through Q1 2028 call clock	Conditional pace supported by customer expansion and capacity.	Delay, provider limits or insourcing undermine conversion.

Completeness, reproducibility and current-state boundaries

8. NHS/ContractsFinder/Parliament direct bodies were unavailable/403 in places; primary web extractions are preserved. Full redacted contract, minimums, net consortium share and detailed termination terms are not verified.

9. Army direct requests returned 403 where noted; primary web-tool text was read. Funded obligations, option exercise and exact revenue schedules are not fully disclosed.

10. Partner fees, minimum purchases, revenue shares, FDE staffing and capacity allocations are undisclosed. Customer performance claims lack published benchmark detail and were not independently replicated.

11. GBP/USD 1.30 and the 50% NHS net share are LOW planning proxies, not disclosed economics or verified spot FX. The exact March roll day and partial-Q1 exposure remain gaps.

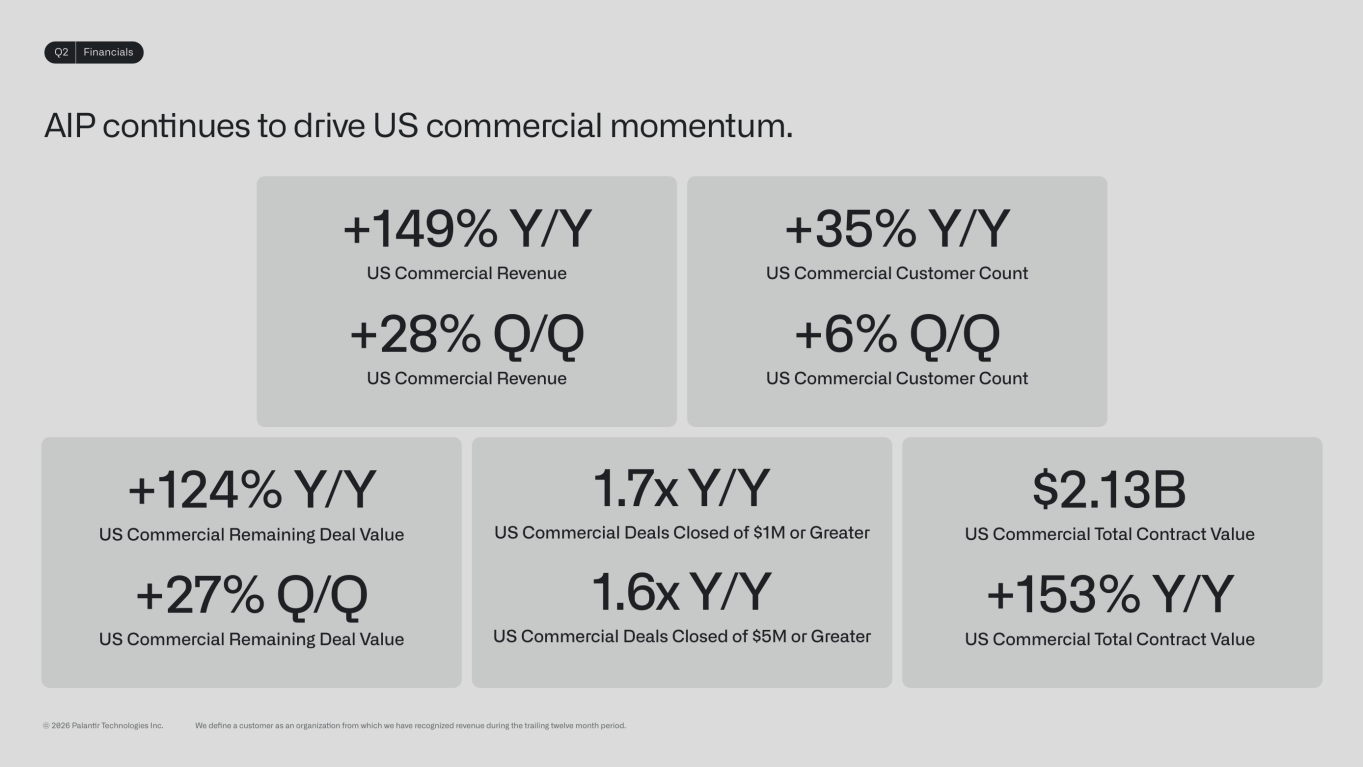
12. The parent operating-profit attribution convention is a net-income-derived proxy. Actual diluted-share mechanics, cash realization of equity holdings and future award settlements can differ.

13. Primary sources establish the reported facts, not the research probabilities, cost allocations or analytical score. Those remain explicit research assumptions subject to the tests in this report.

The analysis treats official confirmation as one evidence type, not a prerequisite for probabilistic modeling. A nonzero hypothesis still needs bounded economics, specific timing, incremental costs and overlap controls. Conversely, a large reported market or partner capacity number does not become Palantir revenue without a capture bridge.

The financial law uses the exact current-plus-next-three-quarter window and the established 20x multiple. Capture, delivery cost, funding and the diluted share denominator determine the resulting financial path. Portfolio ranking remains a live workbook function.

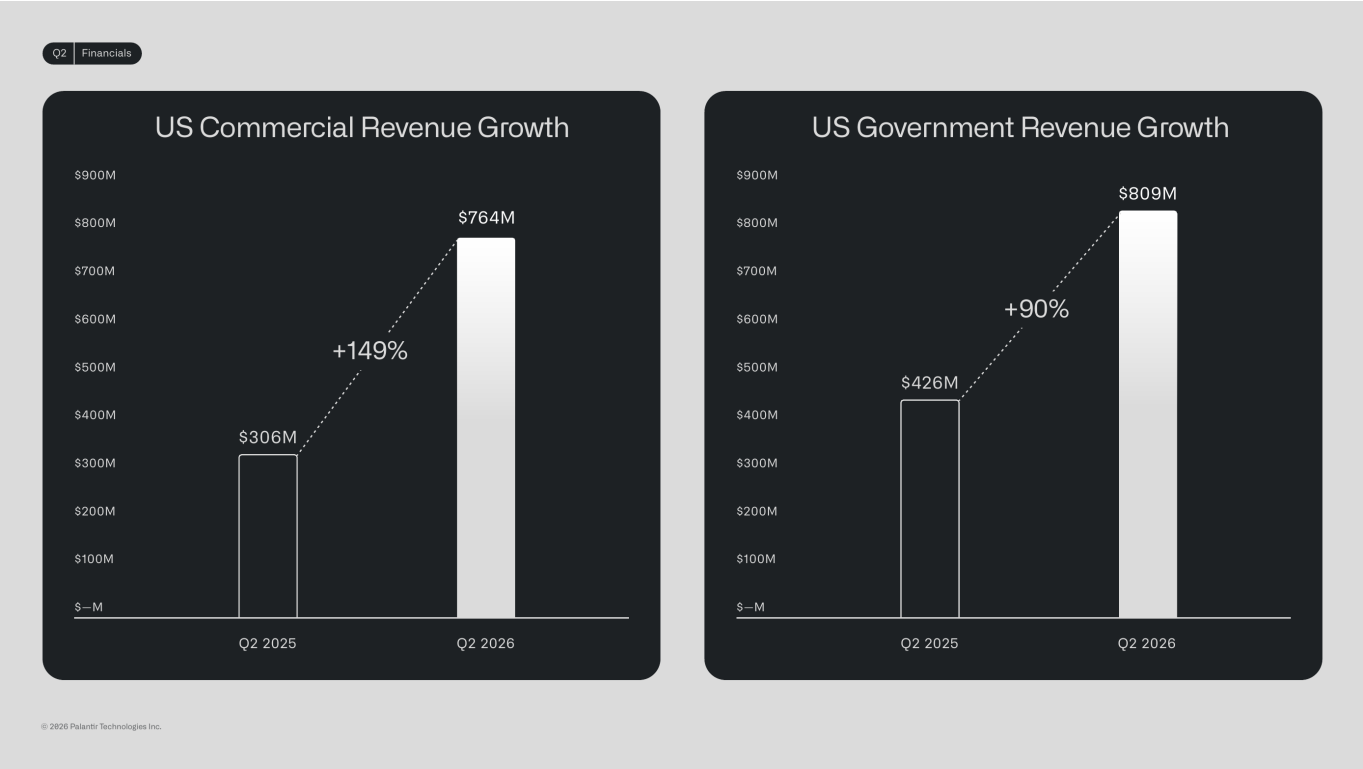
Evidence | US commercial actuals and capture context



Source exhibit DECK-P014. Q2 2026 US commercial revenue +149% year on year and +28% sequentially; customer count +35%/+6%; remaining deal value +124%/+27%; $1M-plus deals 1.7 times year on year, $5M-plus 1.6 times; TCV $2.13 billion, +153%. Qualification: 149% is reported Q2 growth, not a forecast. TCV and remaining deal value are not firm RPO or recognized revenue. Customer definition is organizations with recognized revenue over the trailing twelve months. Source: Palantir Q2 2026 earnings presentation, original page 14

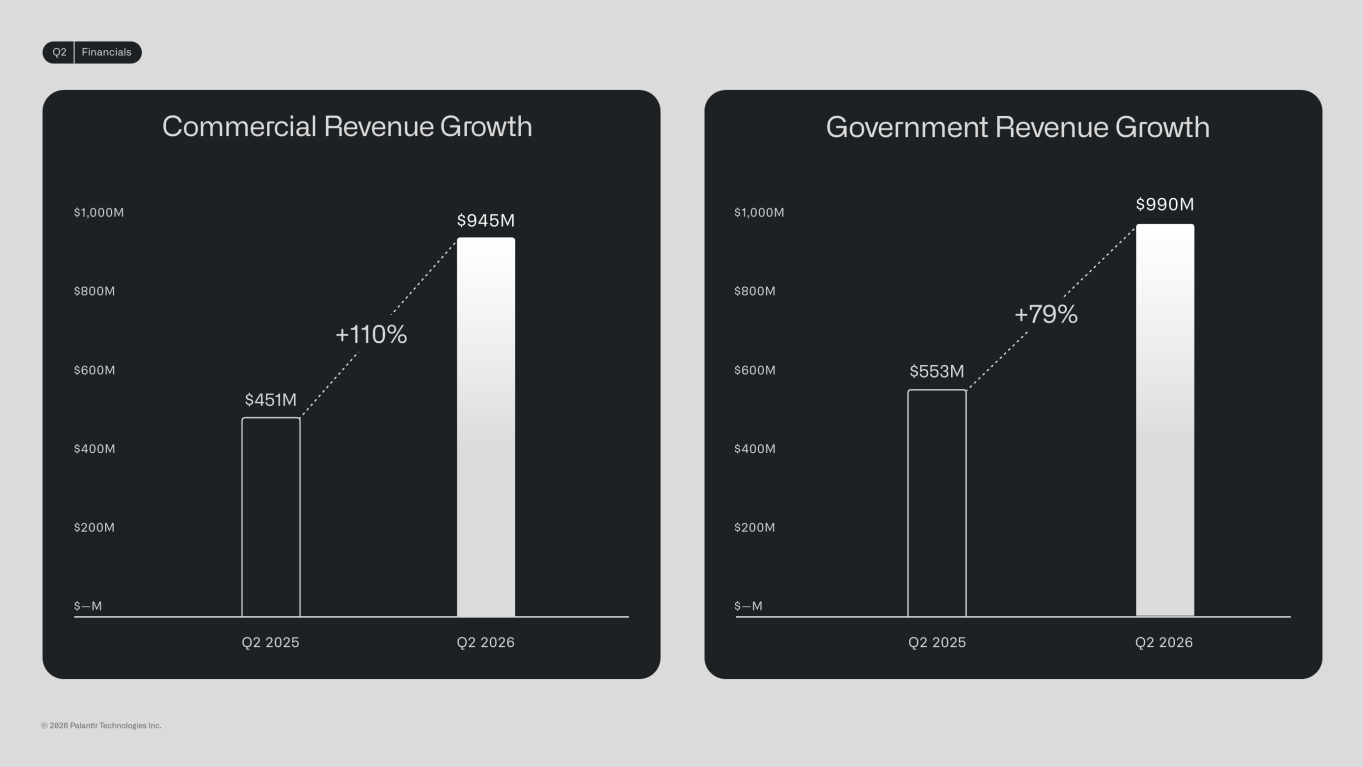
Reported growth and bookings support a real adoption cycle. They do not establish the duration or probability of the own 149% company path.

Evidence | US actual segment growth



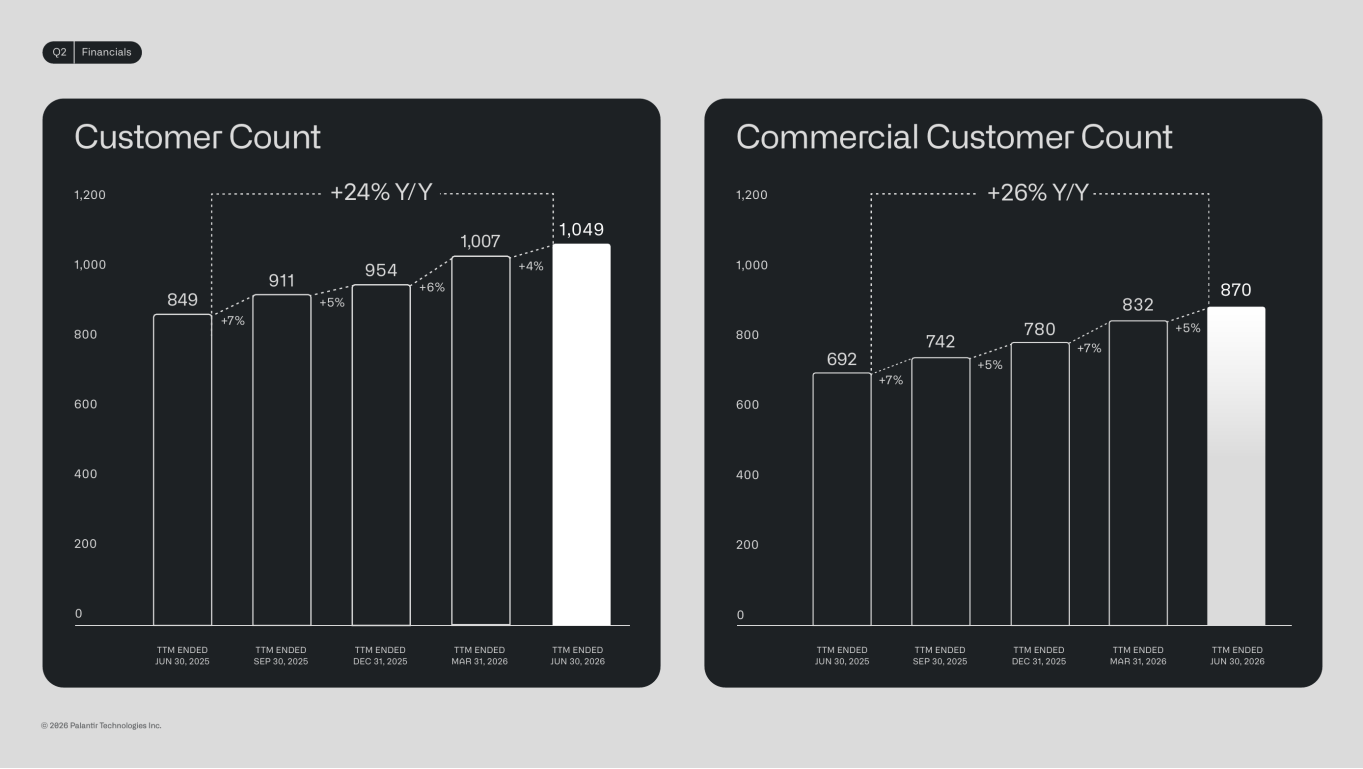
Source exhibit DECK-P019. Rounded presentation: Q2 2025 to Q2 2026 US commercial revenue $306M to $764M (+149%); US government $426M to $809M (+90%). Qualification: Use exact filing/canonical inputs for calculations. These US pools are subsets of worldwide commercial/government, not additional pools. Source: Palantir Q2 2026 earnings presentation, original page 19

Evidence | Worldwide segments reconcile the US pools



Source exhibit DECK-P020. Rounded presentation: Q2 2025 to Q2 2026 worldwide commercial revenue $451M to $945M (+110%); worldwide government $553M to $990M (+79%). Qualification: Geography and segment presentations overlap. Do not sum US growth to worldwide totals. Source: Palantir Q2 2026 earnings presentation, original page 20

Evidence | Customer definitions and nested populations



Source exhibit DECK-P024. Total TTM customers 849/911/954/1,007/1,049 and commercial TTM customers 692/742/780/832/870 from June 2025 through June 2026; respective Q2 growth +24%/+26%. Qualification: US commercial 653 is contained in commercial 870, which is contained in total 1,049. Counts cannot be added. Source: Palantir Q2 2026 earnings presentation, original page 24

Evidence | Reported cash conversion and liquidity categories

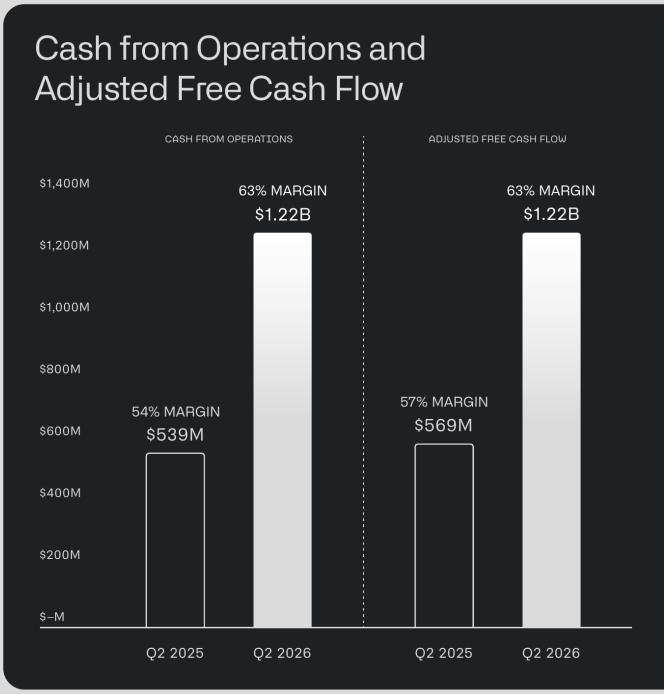
Q2 | Financials

We ended Q2 2026 with

$9.2B

in cash, cash equivalents, and US Treasury securities and no debt.

© 2026 Palantir Technologies Inc.



Source exhibit DECK-P026. Issuer slide states $9.2B cash, cash equivalents and US Treasury securities, with no debt, at Q2 2026 end. Operating cash flow $1.22B/63% margin versus $539M/54% a year earlier; adjusted free cash flow $1.22B/63% versus $569M/57%. Qualification: Retain the US Treasury category: balance-sheet marketable securities include a different broader category. Figures rounded. Adjusted FCF includes issuer adjustments and is neither GAAP operating profit nor proof SBC has no economic cost. Source: Palantir Q2 2026 earnings presentation, original page 26

Evidence | Adjusted cash flow retains explicit adjustments

Appendix

Reconciliation of Cash Flow from Operating Activities to Adjusted Free Cash Flow and Adjusted Free Cash Flow Margin

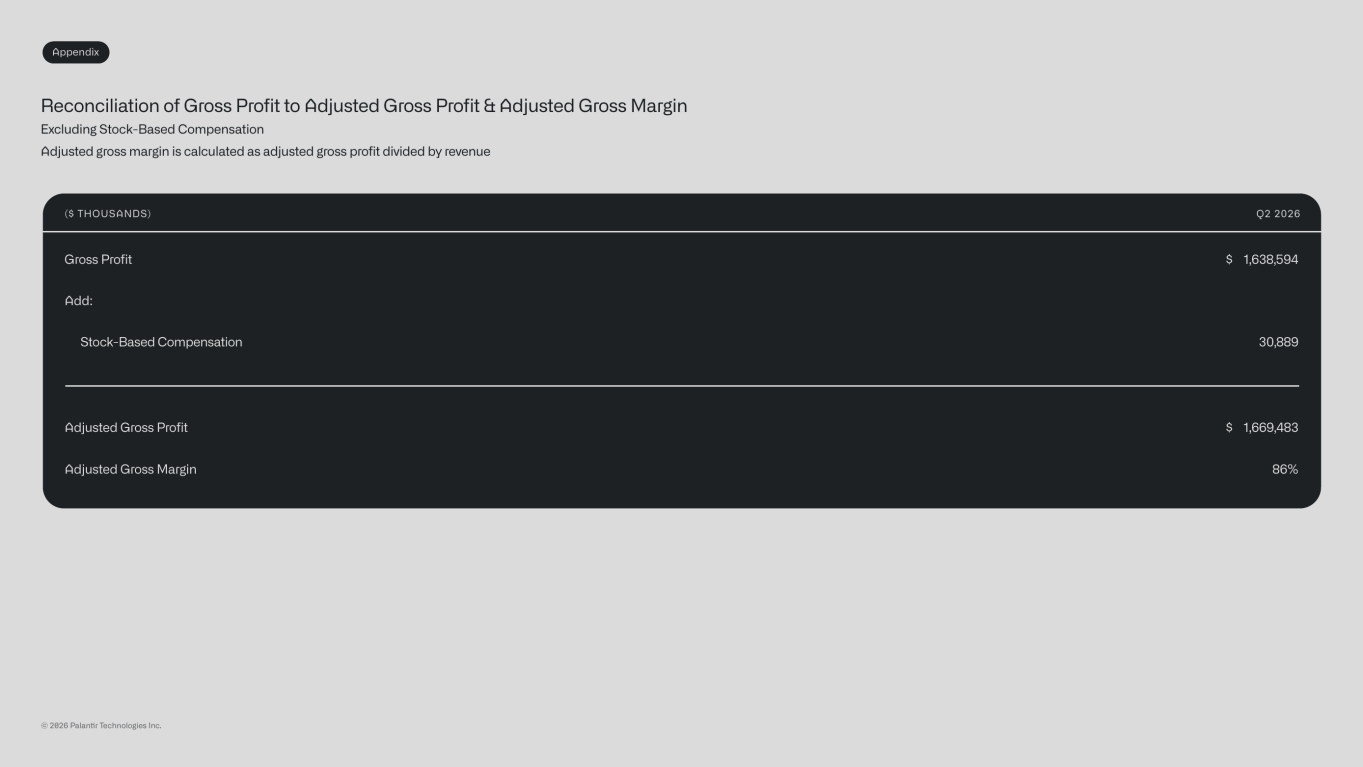
Adjusted free cash flow margin is calculated as adjusted free cash flow divided by revenue

($ THOUSANDS)	Q2 2025	Q2 2026
Cash Flow from Operating Activities	$ 539,251	$ 1,216,167
Add:		
Cash Paid for Employer Payroll Taxes Related to Stock-Based Compensation	37,152	18,746
Less:		
Cash Used to Purchase Property and Equipment	(7,634)	(14,554)
Adjusted Free Cash Flow	$ 568,769	$ 1,220,359
Adjusted Free Cash Flow Margin	57%	63%

© 2026 Palantir Technologies Inc.

Source exhibit DECK-P031. USD thousands: Q2 2026 CFO 1,216,167 plus employer payroll taxes related to SBC 18,746 less property/equipment purchases 14,554 equals adjusted FCF 1,220,359 (63% margin). Q2 2025 corresponding amounts 539,251/37,152/7,634/568,769 (57%). Qualification: Adjusted FCF adds back cash employer payroll taxes; do not call it unadjusted free cash flow or operating profit. This is a reported reconciliation, not a model bridge. Source: Palantir Q2 2026 earnings presentation, original page 31

Evidence | Gross margin: SBC changes the definition



Appendix

Reconciliation of Gross Profit to Adjusted Gross Profit & Adjusted Gross Margin

Excluding Stock-Based Compensation

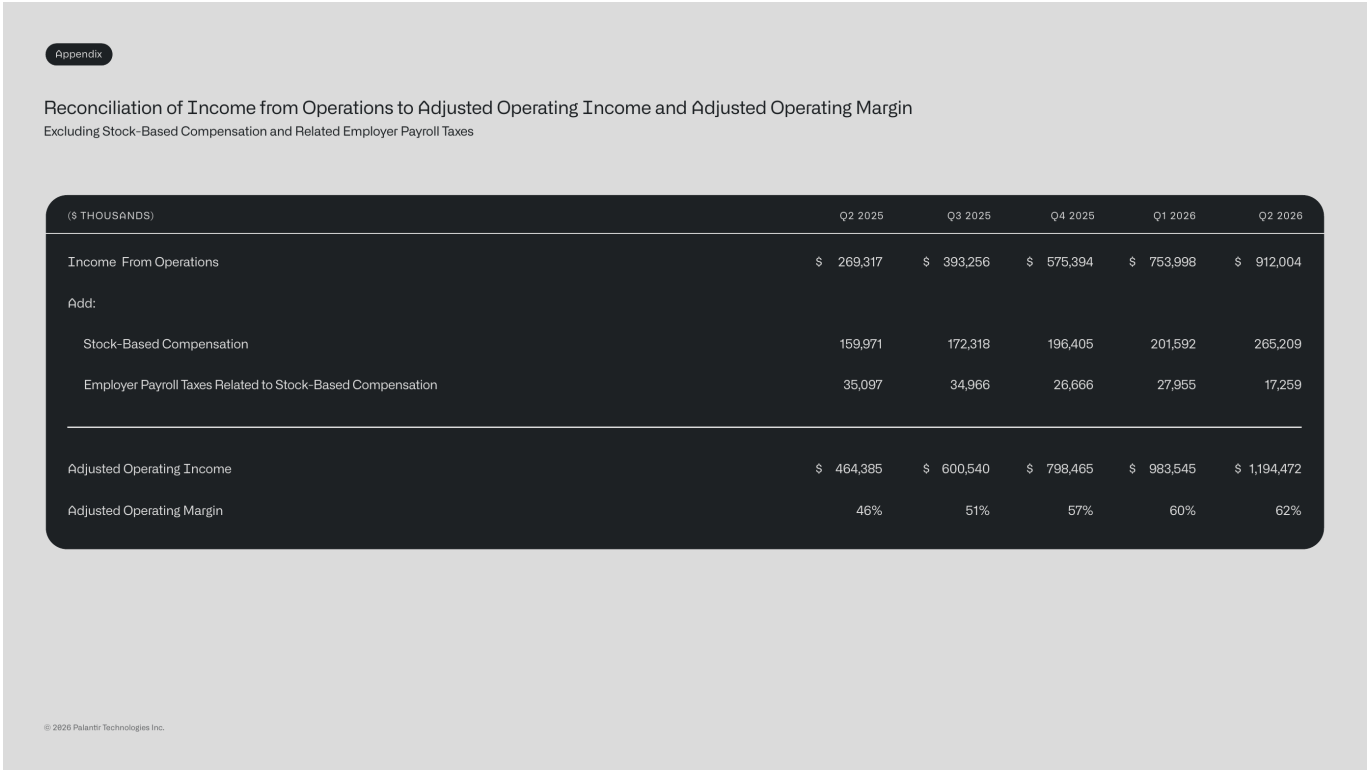
Adjusted gross margin is calculated as adjusted gross profit divided by revenue

($ THOUSANDS)	Q2 2026
Gross Profit	$ 1,638,594
Add:	
Stock-Based Compensation	30,889
Adjusted Gross Profit	$ 1,669,483
Adjusted Gross Margin	86%

© 2026 Palantir Technologies Inc.

Source exhibit DECK-P032. USD thousands, Q2 2026: gross profit 1,638,594 plus cost-of-revenue SBC 30,889 equals adjusted gross profit 1,669,483; adjusted gross margin 86%. Qualification: Reported GAAP gross margin rounds to 85%; the adjusted 86% excludes SBC. Retain this distinction in cost bridge and captions. Source: Palantir Q2 2026 earnings presentation, original page 32

Evidence | Operating income: GAAP and adjusted are different



Appendix

Reconciliation of Income from Operations to Adjusted Operating Income and Adjusted Operating Margin

Excluding Stock-Based Compensation and Related Employer Payroll Taxes

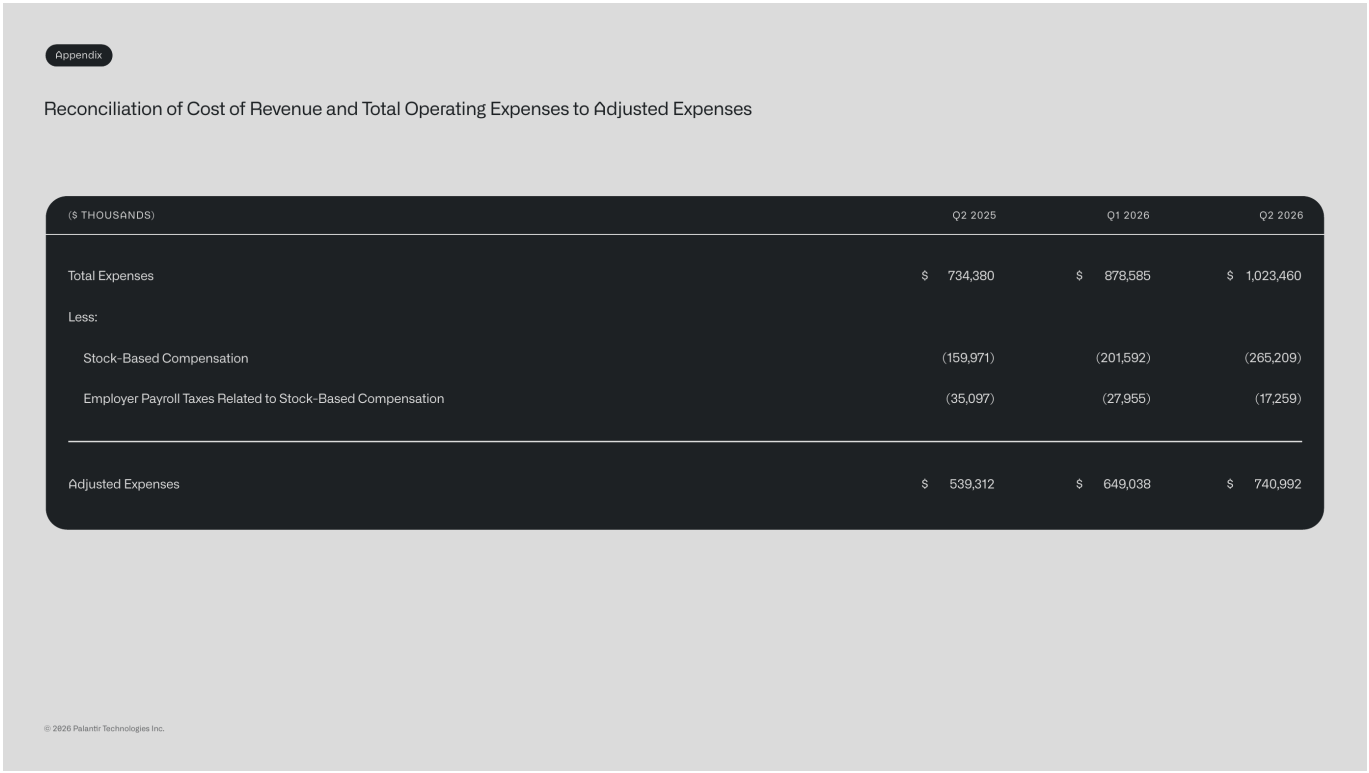
($ THOUSANDS)	Q2 2025	Q3 2025	Q4 2025	Q1 2026	Q2 2026
Income From Operations	$ 269,317	$ 393,256	$ 575,394	$ 753,998	$ 912,004
Add:					
Stock-Based Compensation	159,971	172,318	196,405	201,592	265,209
Employer Payroll Taxes Related to Stock-Based Compensation	35,097	34,966	26,666	27,955	17,259
Adjusted Operating Income	$ 464,385	$ 600,540	$ 798,465	$ 983,545	$ 1,194,472
Adjusted Operating Margin	46%	51%	57%	60%	62%

© 2026 Palantir Technologies Inc.

Source exhibit DECK-P033. USD thousands, Q2 2026 operating income 912,004 plus SBC 265,209 plus related employer payroll taxes 17,259 equals adjusted operating income 1,194,472 (62% margin). Table also shows quarterly sequence Q2 2025 through Q2 2026. Qualification: GAAP-style model retains SBC; 62% adjusted margin must not be substituted for GAAP operating margin. Employer-tax addback differs from the cash-flow paid-tax number on p31. Source: Palantir Q2 2026 earnings presentation, original page 33

The sanctioned valuation charges full SBC. The adjusted presentation is a reconciliation aid, not the operating-profit denominator.

Evidence | Total cost and expense reconciliation



Appendix

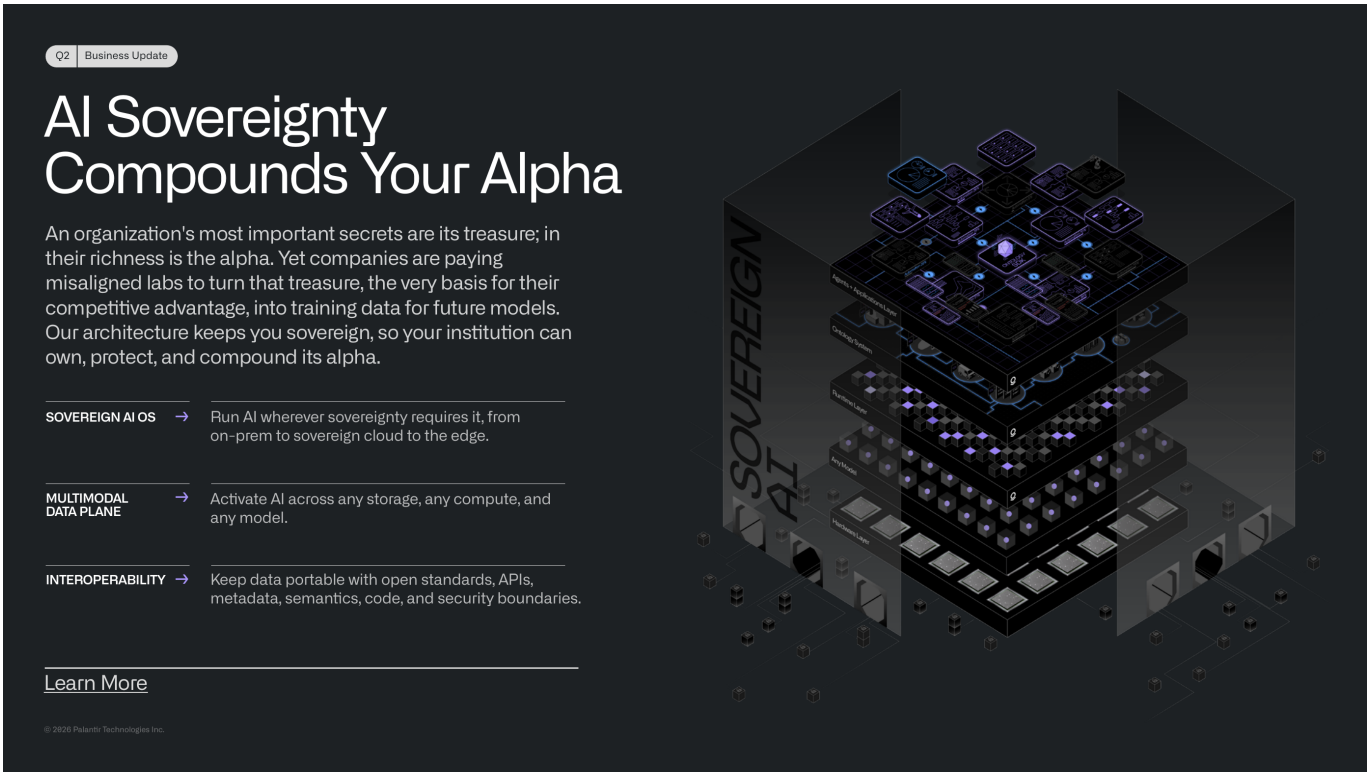
Reconciliation of Cost of Revenue and Total Operating Expenses to Adjusted Expenses

($ THOUSANDS)	Q2 2025	Q1 2026	Q2 2026
Total Expenses	$ 734,380	$ 878,585	$ 1,023,460
Less:			
Stock-Based Compensation	(159,971)	(201,592)	(265,209)
Employer Payroll Taxes Related to Stock-Based Compensation	(35,097)	(27,955)	(17,259)
Adjusted Expenses	$ 539,312	$ 649,038	$ 740,992

© 2026 Palantir Technologies Inc.

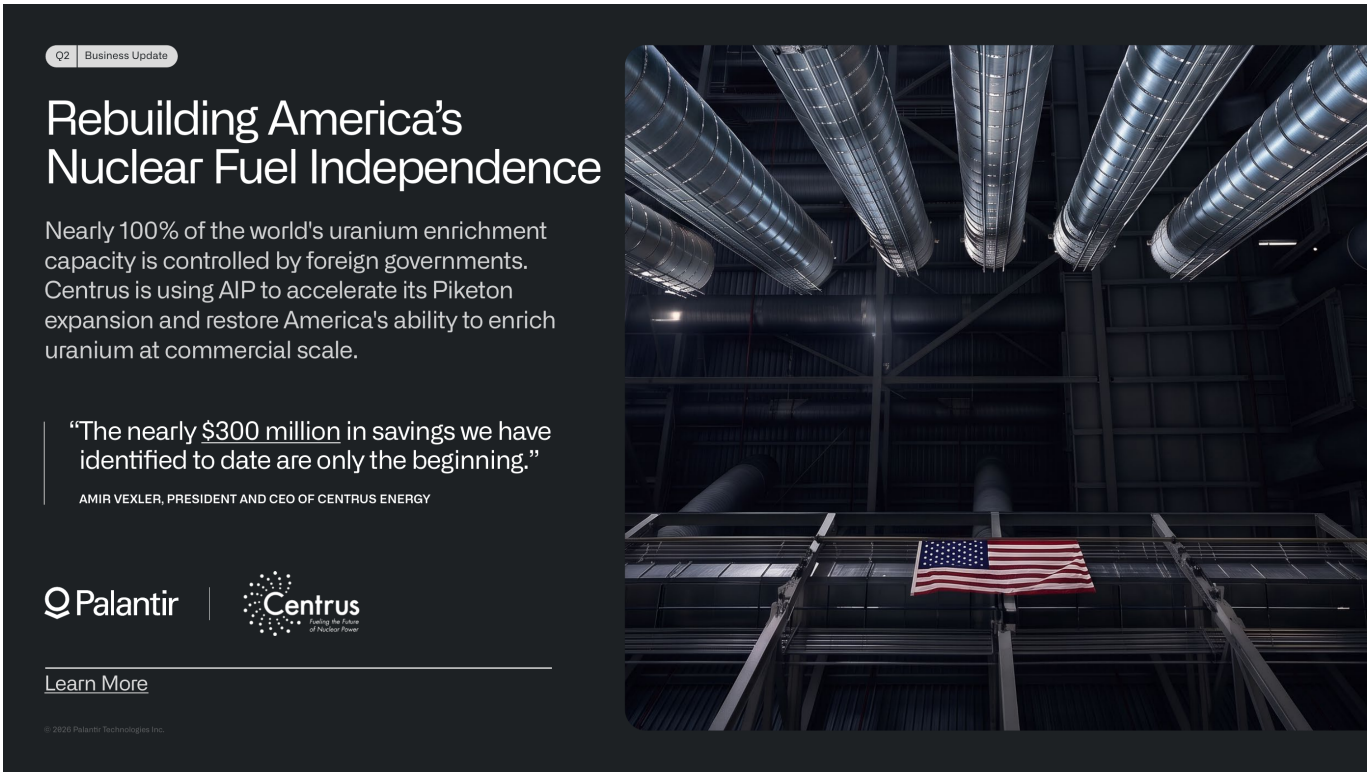
Source exhibit DECK-P036. USD thousands, Q2 2026 total costs/expenses 1,023,460 less SBC 265,209 and employer taxes 17,259 equals adjusted expenses 740,992; comparison Q2 2025 and Q1 2026 provided. Qualification: Total expense includes cost of revenue plus operating expenses. Do not compare it with opex alone or double subtract SBC already included in GAAP costs. Source: Palantir Q2 2026 earnings presentation, original page 36

Evidence | Sovereign architecture: applicability, not assured fees



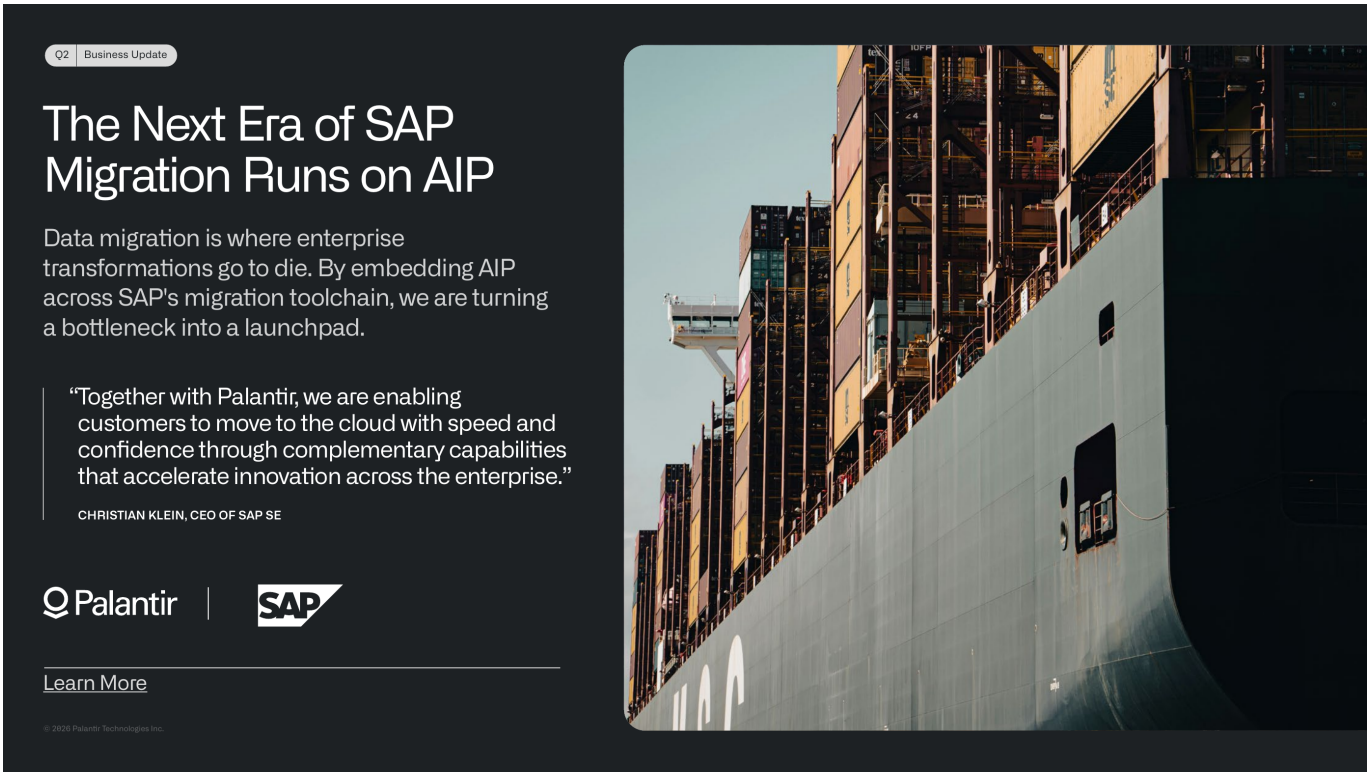
Source exhibit DECK-P005. Issuer AI-sovereignty schematic: on-premises, sovereign-cloud and edge deployment; multimodal data, compute and models connected through standards, interfaces, semantics, code and security. Qualification: Business mechanism and issuer positioning. No disclosed fee, customer minimum, guaranteed margin or permanent monopoly. Source: Palantir Q2 2026 earnings presentation, original page 5

Evidence | Centrus: customer savings and implementation value



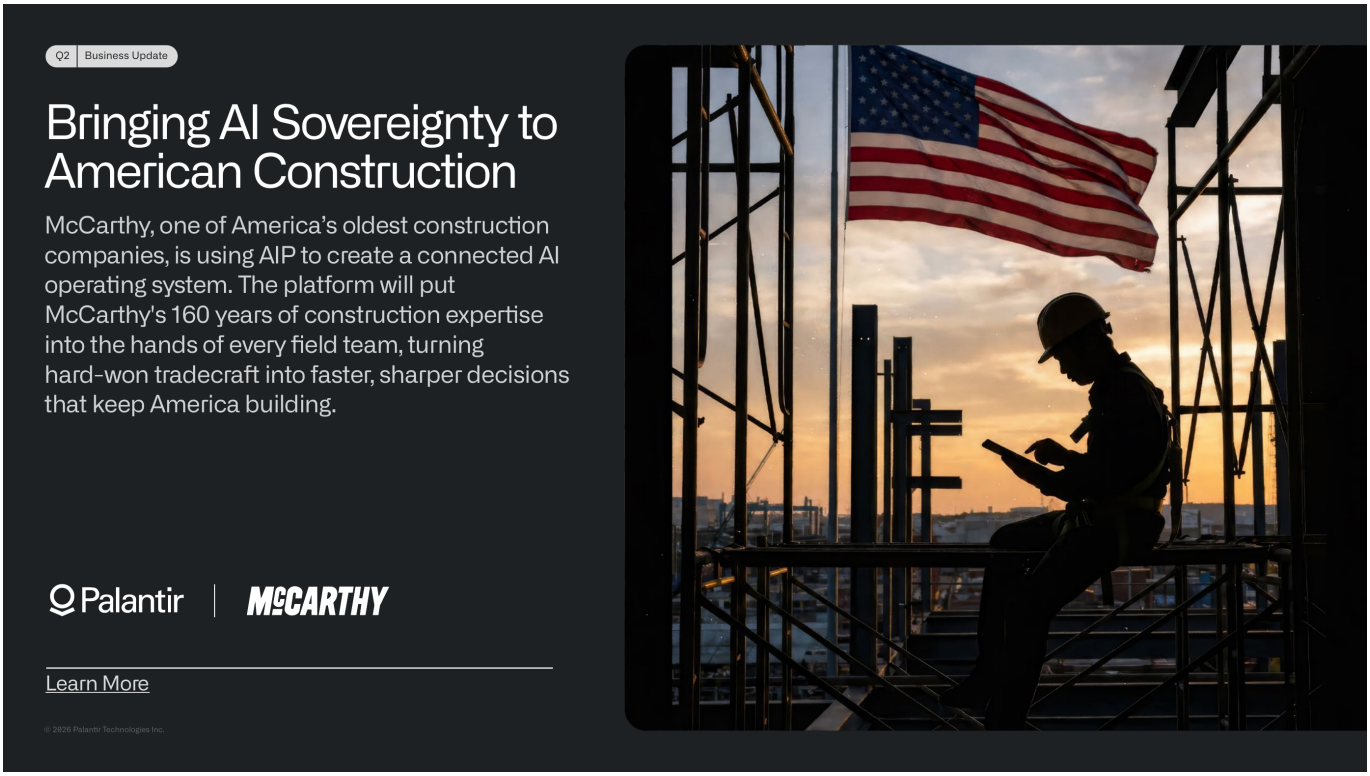
Source exhibit DECK-P007. Centrus describes AIP supporting its Piketon expansion and nearly $300 million of savings identified to date. Qualification: Identified customer savings are not necessarily realized cash savings, Palantir revenue or Palantir operating profit. Preserve issuer/customer attribution. Source: Palantir Q2 2026 earnings presentation, original page 7

Evidence | SAP distribution route and workflow integration



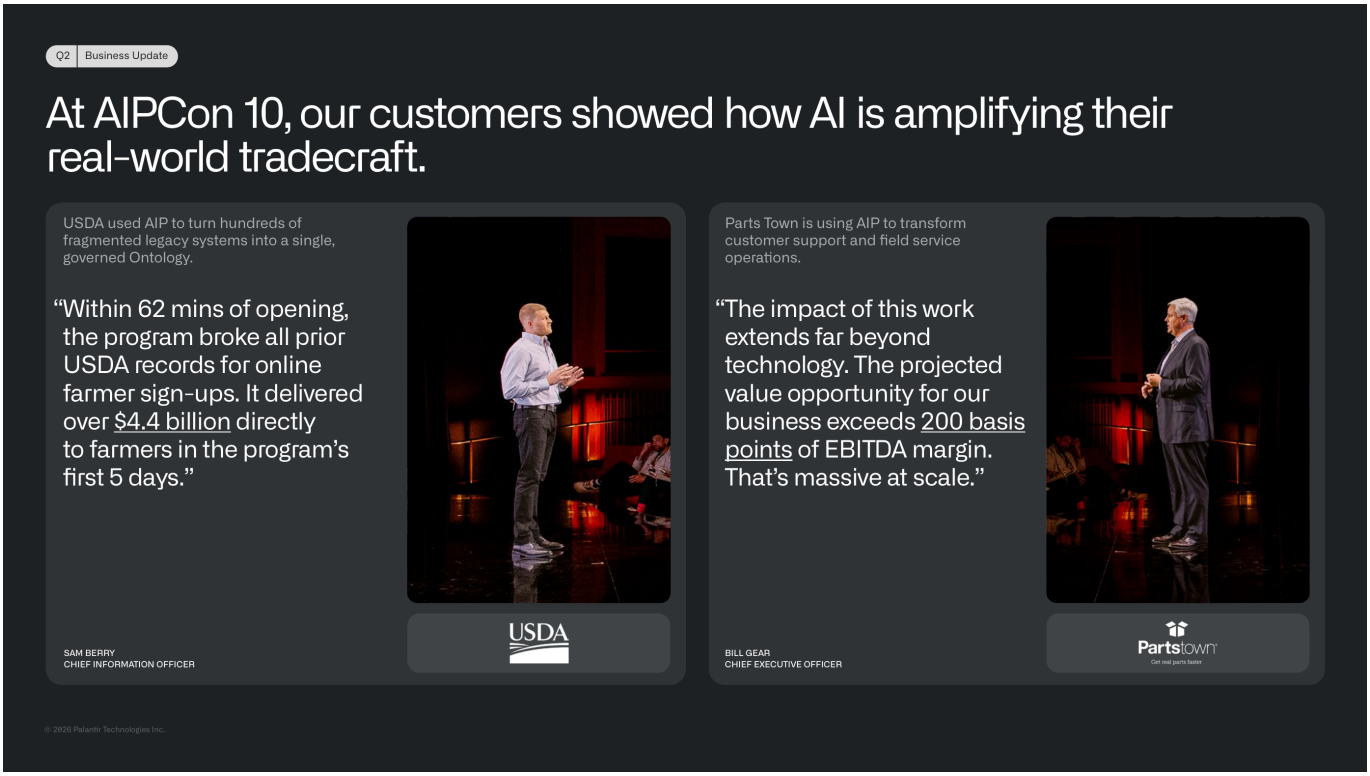
Source exhibit DECK-P008. Issuer depicts AIP embedded in the SAP migration toolchain and includes SAP leadership commentary. Qualification: No universal SAP customer conversion, minimum contract value or Palantir fee disclosed. Source: Palantir Q2 2026 earnings presentation, original page 8

Evidence | McCarthy: an existing customer expanding use



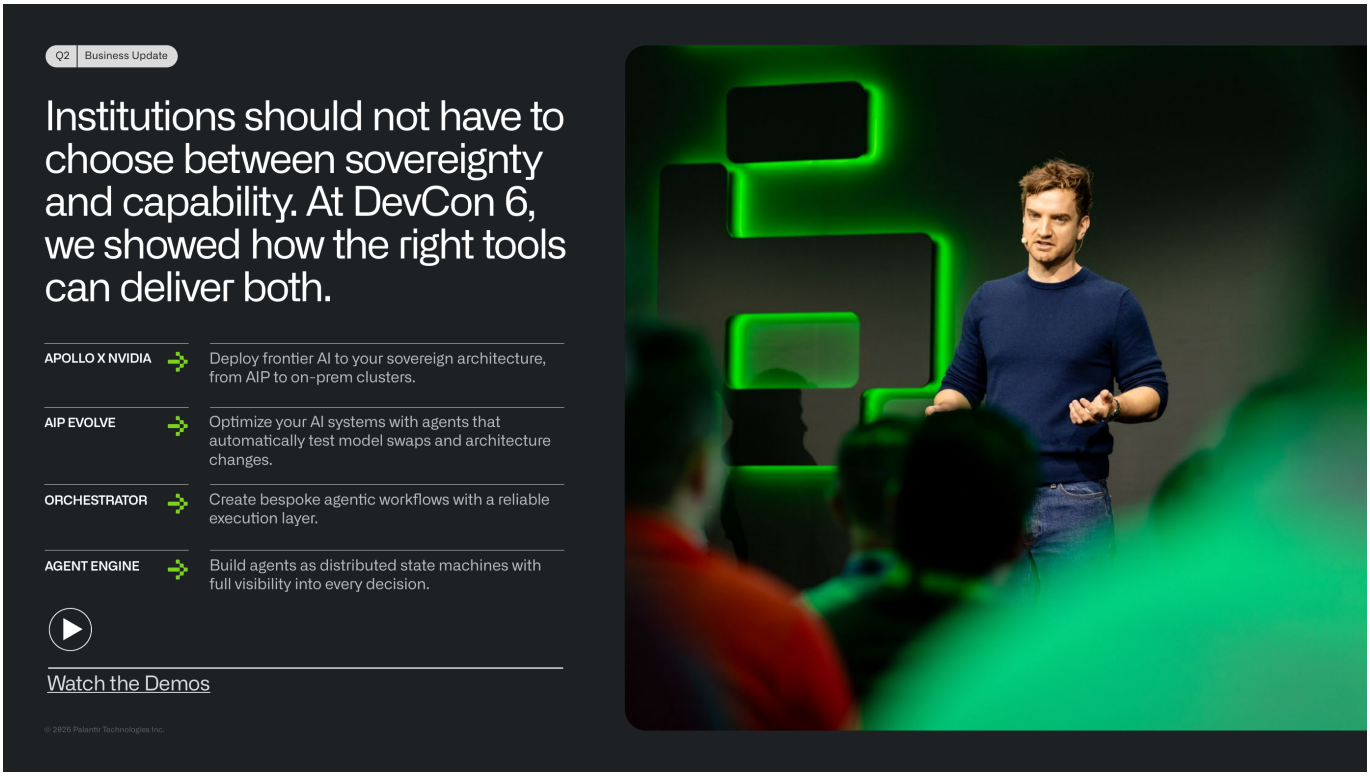
Source exhibit DECK-P009. McCarthy is shown applying an AI operating system to construction knowledge and field teams. Qualification: Same existing customer as the October 21 RFI/time-savings update; do not count as another new customer or separate revenue pool. Source: Palantir Q2 2026 earnings presentation, original page 9

Evidence | USDA and Parts Town: benefit units matter



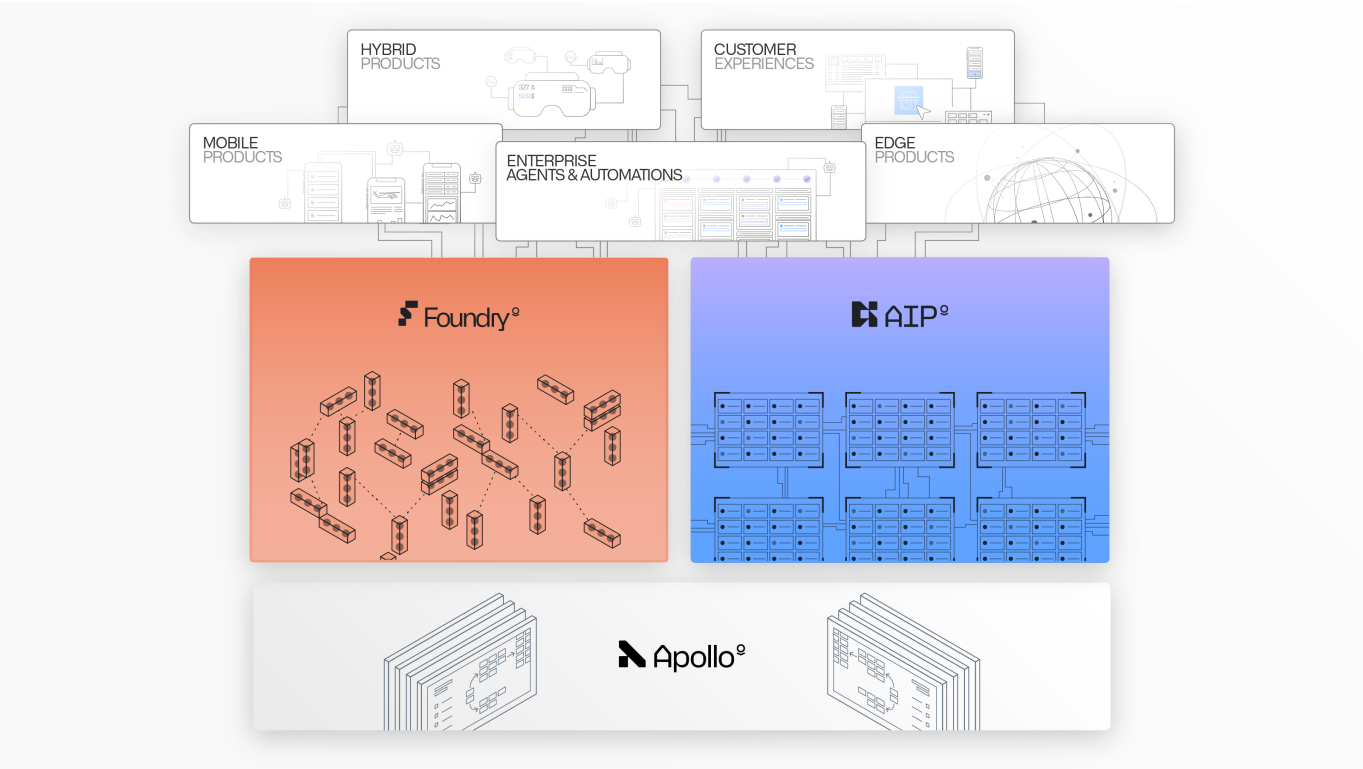
Source exhibit DECK-P010. AIPCon10: USDA customer quotation cites more than $4.4 billion delivered directly to farmers in the first five days; Parts Town cites more than 200 basis points of projected EBITDA-margin value opportunity. Qualification: USDA program transfers are not Palantir receipts. Parts Town projected customer EBITDA opportunity is not Palantir margin or an accomplished result. Source: Palantir Q2 2026 earnings presentation, original page 10

Evidence | Product tooling and infrastructure dependencies



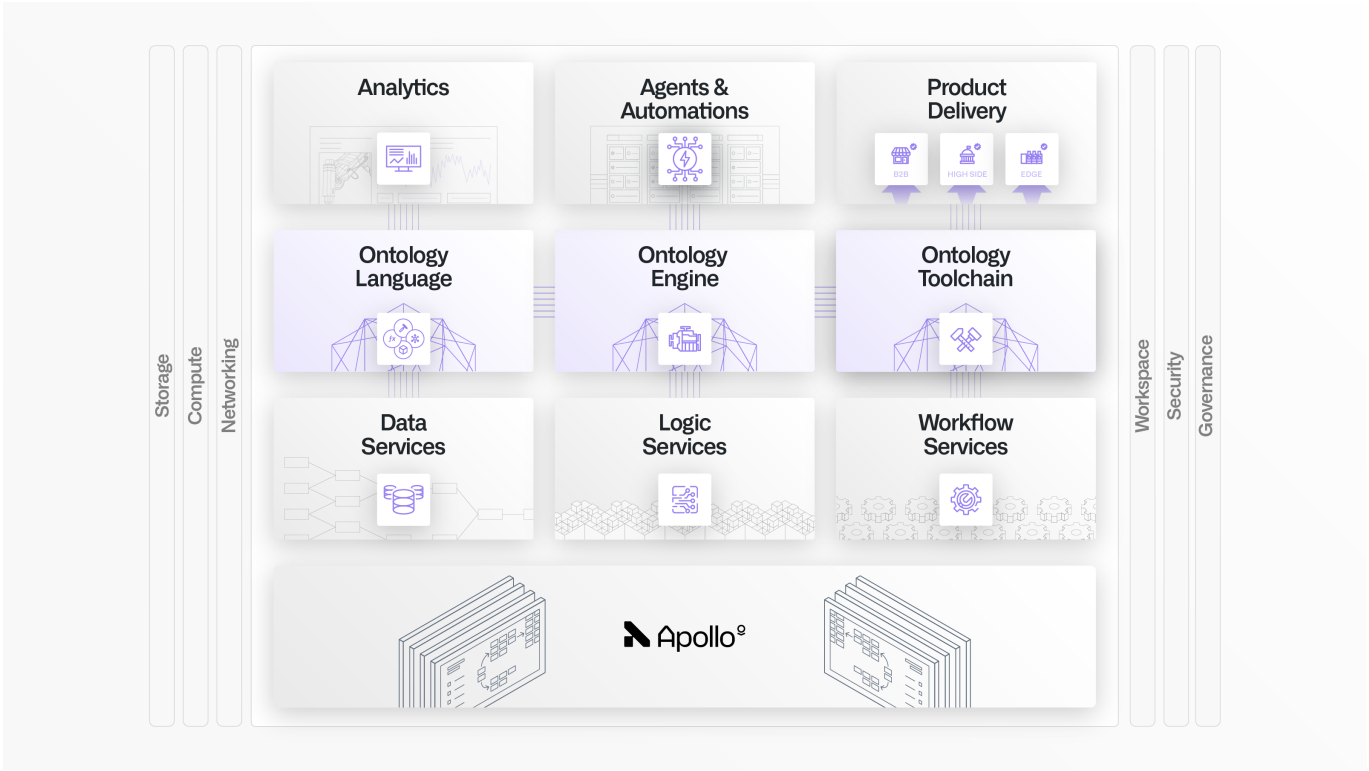
Source exhibit DECK-P011. DevCon6 product material shows Apollo with NVIDIA/on-premises clusters, AIP Evolve model/architecture swaps, Orchestrator and Agent Engine distributed state machines. Qualification: Issuer product features, not proof of paid adoption, unconstrained compute supply, fee rates or exclusivity. Source: Palantir Q2 2026 earnings presentation, original page 11

Evidence | Integrated products avoid additive wallet errors



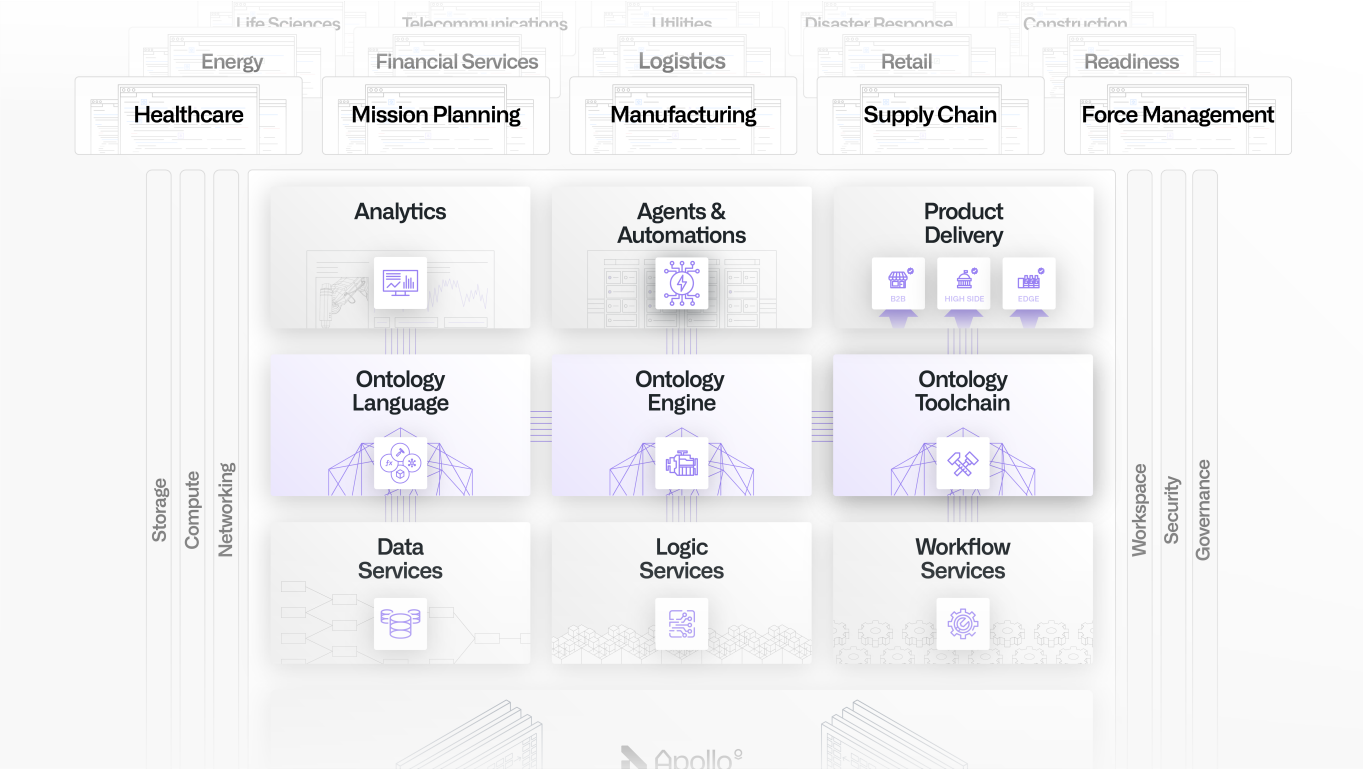
Source exhibit ARCH-overview-platforms-and-products. Issuer schematic: Foundry and AIP run on Apollo across customer, mobile, hybrid, enterprise-agent and edge use cases. Qualification: Do not treat Foundry, AIP and Apollo as additive independent revenue pools. Source: https://www.palantir.com/docs/resources/foundry/architecture-center/overview-platforms-and-products.png

Evidence | The software stack depends on compute and operations



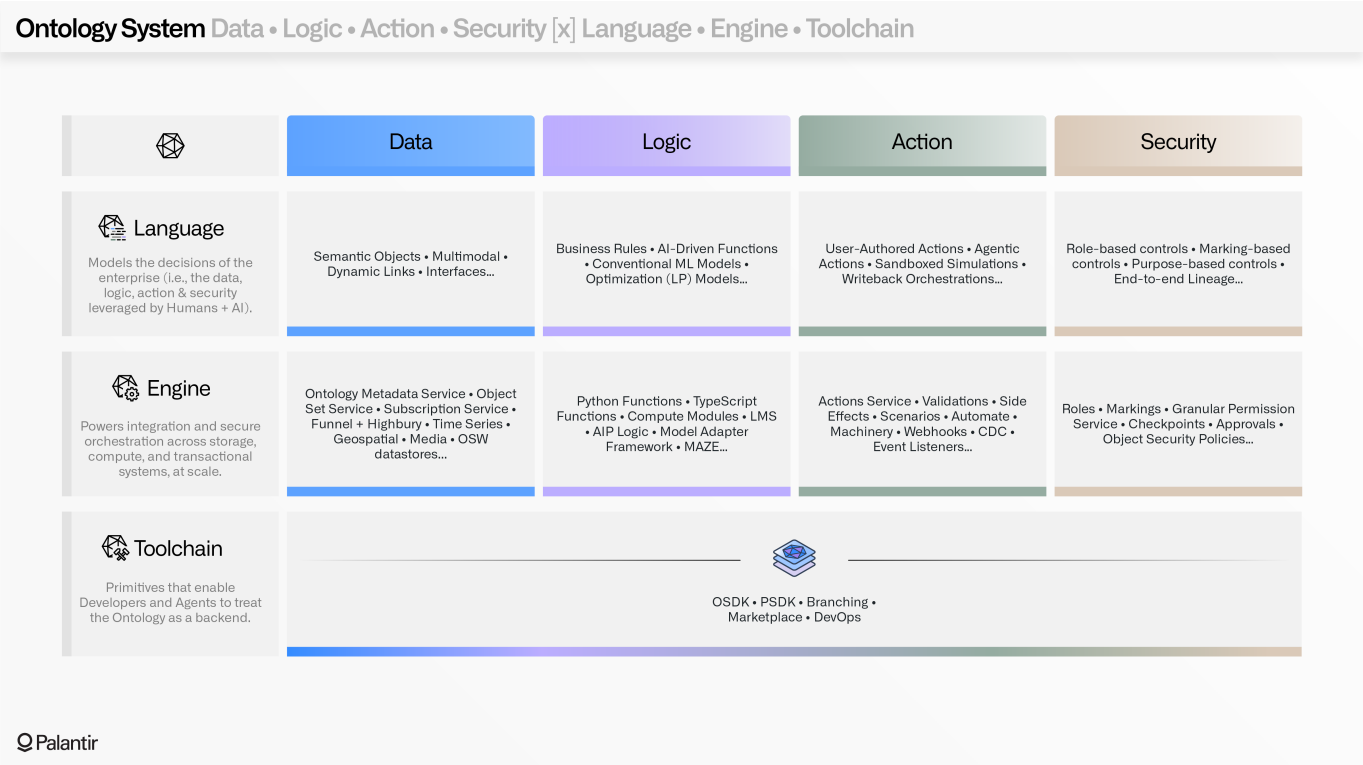
Source exhibit ARCH-overview-nine-grid. Issuer stack groups analytics/agents/products, Ontology language/engine/toolchain and data/logic/workflow services above Apollo; compute, storage, network and security remain underlying dependencies. Qualification: No physical compute capacity, external model availability or cost exemption is established by this diagram. Source: https://www.palantir.com/docs/resources/foundry/architecture-center/overview-nine-grid.png

Evidence | TAM expansion through use cases



Source exhibit ARCH-overview-nine-grid-above. Issuer architecture maps the common software stack to mission planning, healthcare, manufacturing, supply chain and other application domains. Qualification: Industry labels show intended applicability, not customer counts, awarded contracts, share or quantified total addressable market. Source: https://www.palantir.com/docs/resources/foundry/architecture-center/overview-nine-grid-above.png

Evidence | Data, logic, action and security capabilities



Source exhibit ARCH-ontology-table. Issuer capability matrix: Language, Engine and Toolchain across Data, Logic, Action and Security. Qualification: Dense table. Preserve all labels; use sufficient landscape space to retain readability. Source: https://www.palantir.com/docs/resources/foundry/architecture-center/ontology-table.png

Evidence | The filed operating statement

Source exhibit 10Q-P004. USD thousands, Q2 2026: revenue 1,935,464; cost of revenue 296,870; gross profit 1,638,594; sales/marketing 339,500; R&D 192,513; G&A 194,577; opex 726,590; operating income 912,004; common-attributable net income 1,061,890; diluted weighted shares 2,568,694 thousand; diluted EPS $0.41. Qualification: GAAP operating income is distinct from investment/interest-inflated net income. Units are thousands, except per-share values. Q2 actual diluted shares are not the future model share schedule. Source: Palantir Q2 2026 Form 10-Q, original page 4

Evidence | Cloud commitment and credit facility

Table of contents

Palantir Technologies Inc.
Notes to Unaudited Condensed Consolidated Financial Statements

The Company also holds equity securities in privately-held companies without readily determinable fair values that are recorded using the measurement alternative. As of June 30, 2026 and December 31, 2025, the total amount of privately-held equity securities included in other assets on the condensed consolidated balance sheets was $167 million and $170 million, respectively. The Company classifies these fair value measurements as Level 3 within the fair value hierarchy. There were no material upward or downward adjustments or impairments for the privately-held equity securities during the three and six months ended June 30, 2026 or 2025. Cumulative upward and downward adjustments and impairments on privately-held equity securities held by the Company as of June 30, 2026 were not material.

5. Supplemental Financial Statement Information

Cash, Cash Equivalents, and Restricted Cash

The following table provides a reconciliation of cash, cash equivalents, and restricted cash reported within the condensed consolidated balance sheets that sum to the total of the amounts shown in the condensed consolidated statements of cash flows (in thousands):

	As of June 30,	
	2026	2025
Cash and cash equivalents	$ 2,030,047	$ 929,547
Restricted cash included in prepaid expenses and other current assets	9,739	9,015
Restricted cash included in other assets	23,572	12,672
Total cash, cash equivalents, and restricted cash	$ 2,063,358	$ 951,234

Accounts Payable, Accrued Liabilities, and Other

Accounts payable, accrued liabilities, and other consisted of the following (in thousands):

	As of June 30, 2026	As of December 31, 2025
Accounts payable	$ 3,102	$ 8,064
Accrued payroll and related expenses	144,079	178,659
Accrued taxes	104,785	56,579
Other current liabilities	252,104	166,250
Total accounts payable, accrued liabilities, and other	$ 504,070	$ 409,552

6. Debt

2014 Credit Facility

The Company has a secured revolving credit facility which provides for aggregate revolving commitments of $500 million and has a maturity date of March 31, 2027 (as amended, the "2014 Credit Facility"). As of June 30, 2026, the Company had no outstanding debt balances under the 2014 Credit Facility.

The 2014 Credit Facility contains customary representations and warranties, and certain financial and nonfinancial covenants, including but not limited to maintaining minimum liquidity of $50 million, and certain limitations on liens and indebtedness. The Company was in compliance with all covenants associated with the 2014 Credit Facility as of June 30, 2026.

7. Commitments and Contingencies

Purchase Commitments

The Company has purchase commitments with various third parties primarily for cloud hosting services. In March 2026, the Company amended one of its third-party cloud services agreements. Under the amended agreement, the Company has committed to spend at least $5.6 billion, with annual minimum commitments of $268 million to $979 million, over ten contract years through February 29, 2036, among other things. Any and all previous payment obligations related to such third-party cloud hosting services agreement were terminated concurrently with the signing of this amendment.

As of June 30, 2026, except for the aforementioned, there were no material changes outside the ordinary course of business to the Company's commitments, as disclosed in its Annual Report on Form 10-K for the year ended December 31, 2025.

13

Source exhibit 10Q-P013. June 30 2026 credit facility: $500M aggregate capacity, March 31 2027 maturity, no outstanding debt balance. March 2026 amended cloud-services agreement commits at least $5.6B, annual minima $268M-$979M over ten contract years through February 29 2036; previous payment obligations under that agreement terminated concurrently. Qualification: Commitment is not current expense, current quarter capex or a second additive unchanged old obligation. Annual minimum schedule per year is not disclosed here. Underlying vendor identity not supplied by this page. Source: Palantir Q2 2026 Form 10-Q, original page 13

The new cloud commitment replaces the old obligation and is tested inside hosting costs. The actual annual mapping remains unknown.

Evidence | SBC by function

Table of contents

Palantir Technologies Inc.
Notes to Unaudited Condensed Consolidated Financial Statements

As of June 30, 2026, the total unrecognized stock-based compensation expense related to the RSUs outstanding was $916 million, which the Company expects to recognize over a weighted-average service period of three years. As of June 30, 2026, there was no unrecognized stock-based compensation expense related to the P-RSUs outstanding.

Stock-based Compensation Expense

Total stock-based compensation expense was as follows (in thousands):

	Three Months Ended June 30,		Six Months Ended June 30,	
	2026	2025	2026	2025
Cost of revenue	$ 30,889	$ 14,973	$ 48,795	$ 29,989
Sales and marketing	106,067	56,040	182,963	108,553
Research and development	58,193	32,068	94,738	63,902
General and administrative	70,060	56,890	140,305	112,866
Total stock-based compensation expense	$ 265,209	$ 159,971	$ 466,801	$ 315,310

10. Income Taxes

The Company is subject to income tax in the U.S. as well as other tax jurisdictions in which it conducts business. The Company's effective tax rate as of June 30, 2026 differs from the U.S. statutory rate primarily due to foreign income taxed at different rates, non-deductible stock-based compensation, other non-deductible expenses, and valuation allowances recorded on its deferred tax assets from the U.S., United Kingdom ("U.K."), and other jurisdictions. The provision for income taxes increased by $12 million and $18 million, respectively, for each of the three and six months ended June 30, 2026 compared to the same periods in 2025. The increases were primarily related to higher U.S. and foreign profits.

The realization of deferred tax assets is dependent upon the generation of sufficient taxable income of the appropriate character in future periods. The Company assesses its ability to realize the deferred tax assets on a quarterly basis, and it establishes a valuation allowance if it is more likely than not that some portion of the deferred tax assets will not be realized. The Company weighs all available positive and negative evidence, including its earnings history and results of recent operations, scheduled reversals of deferred tax liabilities, projected future taxable income, and tax planning strategies. For example, due to the weight of objectively verifiable negative evidence, including its history of U.S. and U.K. net operating tax losses, the Company has maintained a full valuation allowance on its U.S. and U.K. deferred tax assets as of June 30, 2026. However, given the Company's recent earnings and anticipated future earnings, there is a reasonable possibility that it will have sufficient positive evidence in the future to release all or a portion of the valuation allowance it recorded against its deferred tax assets.

The Organisation for Economic Co-operation and Development ("OECD") Base Erosion and Profit Shifting ("BEPS") global minimum tax provision ("Pillar Two") rules are at varying stages of adoption across jurisdictions where the Company operates. Several countries have enacted Pillar Two and in certain jurisdictions these rules were applicable to the Company starting January 1, 2024. These did not have a material impact on our financial condition or results of operations for the periods presented. Furthermore, the OECD released administrative guidance on January 5, 2026, including a "Side-by-Side Safe Harbor", which reduces the impact of Pillar Two rules on the Company.

17

Source exhibit 10Q-P017. USD thousands, Q2 2026 SBC: cost of revenue 30,889; S&M 106,067; R&D 58,193; G&A 70,060; total 265,209. H1 total 466,801. Unrecognized RSU SBC $916M over a weighted three-year service period. Qualification: SBC remains an economic/model expense despite being noncash. Allocation is already within GAAP expenses. Deferred-tax valuation allowance may affect future net tax results, not operating profit. Source: Palantir Q2 2026 Form 10-Q, original page 17

Evidence | Diluted shares and contribution definition

Table of contents

Palantir Technologies Inc.
Notes to Unaudited Condensed Consolidated Financial Statements

11. Earnings Per Share Attributable to Common Stockholders

The following table presents the calculation of basic and diluted earnings per share attributable to common stockholders (in thousands, except per share amounts):

	Three Months Ended June 30,		Six Months Ended June 30,	
	2026	2025	2026	2025
Numerator				
Net income attributable to common stockholders for diluted earnings per share	$ 1,061,890	$ 326,727	$ 1,932,417	$ 540,758
Denominator				
Weighted-average shares used in computing earnings per share:				
Basic	2,399,820	2,365,196	2,396,861	2,356,983
Effect of dilutive shares	168,874	197,716	172,965	200,928
Diluted	2,568,694	2,562,912	2,569,826	2,557,911
Earnings per share				
Earnings per share attributable to common stockholders:				
Basic	$ 0.44	$ 0.14	$ 0.81	$ 0.23
Diluted	$ 0.41	$ 0.13	$ 0.75	$ 0.21

Diluted earnings per share is calculated using our weighted-average shares of outstanding common stock including the dilutive effect of stock awards as determined under the treasury stock method. There were outstanding potentially dilutive common stock equivalents for stock-based compensation awards of 3 million for the three and six months ended June 30, 2026 and 1 million for the three and six months ended June 30, 2025. These were excluded from the computation of diluted earnings per share attributable to common stockholders due to their antidilutive effect.

As of June 30, 2026 and 2025, the Company had 14 million and 7 million SARs outstanding, respectively, of which the maximum number of potentially dilutive shares of Class A common stock upon vesting would be the fraction that equals the appreciation, or maximum appreciation if capped, divided by the Company's Class A common stock price at that time.

12. Segment and Geographic Information

The following reporting segment tables reflect the results of the Company's reportable operating segments consistent with the manner in which the chief operating decision maker ("CODM") evaluates the performance of each segment and allocates the Company's resources. The CODM does not evaluate the performance of the Company's assets on a segment basis for internal management reporting and, therefore, such information is not presented.

Contribution is used, in part, to evaluate the performance of, and allocate resources to, each of the segments, primarily by monitoring actual results versus historical periods. A segment's contribution is calculated as segment revenue less the related costs of revenue and sales and marketing expenses. It excludes certain operating expenses that are not allocated to segments because they are separately managed at the consolidated corporate level or are noncash costs. These unallocated and noncash costs include stock-based compensation expense, research and development expenses, and general and administrative expenses.

18

Source exhibit 10Q-P018. Shares in thousands, Q2 2026 basic weighted shares 2,399,820 plus dilutive effect 168,874 equals diluted 2,568,694. Q2 common net income 1,061,890 thousand; diluted EPS $0.41. Three million anti-dilutive stock-award equivalents excluded. Qualification: Do not replace the approved future share schedule with a basic count. Segment contribution excludes unallocated R&D, G&A and SBC; contribution is not consolidated operating profit. Source: Palantir Q2 2026 Form 10-Q, original page 18

Evidence | Segment contribution is not operating profit

Evidence | Revenue expansion and cash hosting cost

Table of contents

Comparison of the Three and Six Months Ended June 30, 2026 and 2025

Revenue

	Three Months Ended June 30,		Change		Six Months Ended June 30,		Change	
	2026	2025	Amount	%	2026	2025	Amount	%
Revenue:								
Government	$ 990,032	$ 552,983	$ 437,049	79 %	$1,848,442	$1,039,946	$ 808,496	78 %
Commercial	945,432	450,714	494,718	110 %	1,719,605	847,606	871,999	103 %
Total revenue	$ 1,935,464	$1,003,697	$ 931,767	93 %	$3,568,047	$1,887,552	$1,680,495	89 %

Revenue increased by $932 million, or 93%, for the three months ended June 30, 2026 compared to the same period in 2025. Revenue from government customers increased by $437 million, or 79%, for the three months ended June 30, 2026 compared to the same period in 2025. Of the increase, $428 million was from government customers existing as of December 31, 2025. Revenue from U.S. government customers was $809 million for the three months ended June 30, 2026 compared to $426 million for the same period in 2025. Revenue from commercial customers increased by $495 million, or 110%, for the three months ended June 30, 2026 compared to the same period in 2025. Of the increase, $407 million was from commercial customers existing as of December 31, 2025. Revenue from U.S. commercial customers was $764 million for the three months ended June 30, 2026 compared to $306 million for the same period in 2025, a 149% increase.

Revenue increased by $1.7 billion, or 89%, for the six months ended June 30, 2026 compared to the same period in 2025. Revenue from government customers increased by $808 million, or 78%, for the six months ended June 30, 2026 compared to the same period in 2025. Of the increase, $795 million was from government customers existing as of December 31, 2025. Revenue from U.S. government customers was $1.5 billion for the six months ended June 30, 2026 compared to $0.8 billion for the same period in 2025. Revenue from commercial customers increased by $872 million, or 103%, for the six months ended June 30, 2026 compared to the same period in 2025. Revenue from U.S. commercial customers was $1.4 billion for the six months ended June 30, 2026 compared to $0.6 billion for the same period in 2025, a 142% increase.

Generally, increases in revenue from our existing customers are related to increased adoption of our products and services within their organizations.

Cost of Revenue and Gross Profit

	Three Months Ended June 30,		Change		Six Months Ended June 30,		Change	
	2026	2025	Amount	%	2026	2025	Amount	%
Cost of revenue	$296,870	$192,934	$103,936	54 %	$512,668	$365,904	$146,764	40 %
Gross profit	$1,638,594	$810,763	$827,831	102 %	$3,055,379	$1,521,648	$1,533,731	101 %
Gross margin	85 %	81 %	4 %		86 %	81 %	5 %	

Cost of revenue for the three months ended June 30, 2026 increased by $104 million, or 54%, compared to the same period in 2025. The increase was primarily due to increases of $89 million in third-party cloud hosting services and $13 million in stock-based compensation and related expenses, partially offset by a decrease of $13 million in subcontractor expenses.

Our gross margin for the three months ended June 30, 2026 and 2025 was 85% and 81%, respectively.

Cost of revenue for the six months ended June 30, 2026 increased by $147 million, or 40%, compared to the same period in 2025. The increase was primarily due to increases of $128 million in third-party cloud hosting services and $16 million in payroll and other payroll-related costs, partially offset by a decrease of $19 million in subcontractor expenses.

Our gross margin for the six months ended June 30, 2026 and 2025 was 86% and 81%, respectively.

Source exhibit 10Q-P030. Q2 2026 revenue grew $931.767M/+93%. Government increase $437M, of which $428M from customers existing at Dec 31 2025; commercial increase $495M, of which $407M from existing customers. Cost of revenue rose $103.936M/+54%, primarily $89M higher cloud hosting and $13M SBC/related expenses, partly offset by $13M lower subcontractor cost. GAAP gross margin 85% versus 81%. Qualification: Change drivers are rounded selected explanations, not a complete cost decomposition or absolute hosting bill. Cloud costs have real cash economics. Existing-customer expansion cannot be counted as wholly net-new logos. Source: Palantir Q2 2026 Form 10-Q, original page 30

Existing-customer expansion and real cloud expense jointly matter. Revenue growth is not cost-free and is not entirely a new-logo story.

Evidence | Opex, hosting, payroll and SBC

Table of contents

Operating Expenses

	Three Months Ended June 30,		Change		Six Months Ended June 30,		Change	
	2026	2025	Amount	%	2026	2025	Amount	%
Sales and marketing	$ 339,500	$ 243,788	$ 95,712	39 %	$ 658,720	$ 480,097	$ 178,623	37 %
Research and development	192,513	135,043	57,470	43 %	353,494	269,932	83,562	31 %
General and administrative	194,577	162,615	31,962	20 %	377,163	326,254	50,909	16 %
Total operating expenses	$ 726,590	$ 541,446	$ 185,144	34 %	$1,389,377	$1,076,283	$ 313,094	29 %

Sales and Marketing

Sales and marketing expenses increased by $96 million, or 39%, for the three months ended June 30, 2026 compared to the same period in 2025. The increase was primarily due to increases of $43 million in stock-based compensation and related expenses and $22 million in payroll and other payroll-related costs.

Sales and marketing expenses increased by $179 million, or 37%, for the six months ended June 30, 2026 compared to the same period in 2025. The increase was primarily due to increases of $58 million in stock-based compensation and related expenses, $43 million in payroll and other payroll-related costs, and $36 million in marketing expenses,

Research and Development

Research and development expenses increased by $57 million, or 43%, for the three months ended June 30, 2026 compared to the same period in 2025. The increase was primarily due to increases of $25 million third-party cloud hosting services and $20 million in stock-based compensation and related expenses.

Research and development expenses increased by $84 million, or 31%, for the six months ended June 30, 2026 compared to the same period in 2025. The increase was primarily due to increases of $50 million in third-party cloud hosting services and $18 million in stock-based compensation and related expenses.

General and Administrative

General and administrative expenses increased by $32 million, or 20%, for the three months ended June 30, 2026 compared to the same period in 2025. The increase was primarily due to an $11 million in stock-based compensation and related expenses and $8 million in payroll and other payroll-related costs.

General and administrative expenses increased by $51 million, or 16%, for the six months ended June 30, 2026 compared to the same period in 2025. The increase was primarily due to an increase of $17 million in stock-based compensation and related expenses and $12 million in payroll and other payroll-related costs.

Stock-Based Compensation

	Three Months Ended June 30,		Change		Six Months Ended June 30,		Change	
	2026	2025	Amount	%	2026	2025	Amount	%
Cost of revenue	$ 30,889	$ 14,973	$ 15,916	106 %	$ 48,795	$ 29,989	$ 18,806	63 %
Sales and marketing	106,067	56,040	50,027	89 %	182,963	108,553	74,410	69 %
Research and development	58,193	32,068	26,125	81 %	94,738	63,902	30,836	48 %
General and administrative	70,060	56,890	13,170	23 %	140,305	112,866	27,439	24 %
Total stock-based compensation expense	$ 265,209	$ 159,971	$ 105,238	66 %	$ 466,801	$ 315,310	$ 151,491	48 %

Stock-based compensation expenses increased by $105 million, or 66%, and $151 million, or 48%, for the three and six months ended June 30, 2026 compared to the same periods in 2025, respectively. The increase was driven by expense from new grants awarded since June 30, 2025, including restricted stock units (“RSUs”), performance-based RSUs (“P-RSUs”), and stock appreciation rights (“SARs”), partially offset by reductions in expense from equity awards that became fully vested and forfeitures.

Source exhibit 10Q-P031. Q2 2026 GAAP opex $726.590M versus $541.446M (+34%). S&M +$96M chiefly +$43M SBC/related and +$22M payroll; R&D +$57M chiefly +$25M cloud and +$20M SBC/related; G&A +$32M chiefly +$11M SBC/related and +$8M payroll. Total SBC $265.209M versus $159.971M (+66%). Qualification: Selected rounded drivers are not a complete bridge. R&D cloud increase is additional to cost-of-revenue hosting increase, but neither measures the full bill. Payroll/FDE capacity and noncash SBC must remain distinct. Source: Palantir Q2 2026 Form 10-Q, original page 31

People, hosting and equity compensation are distinct cost drivers. Scaling assumptions must retain all three.

Evidence | Procurement and competition counterevidence

Table of contents

governments and government agencies. If we are unable to modify or develop pricing models and strategies that are attractive to existing and prospective customers, while enabling us to significantly grow our sales and revenue relative to our associated costs and expenses in a reasonable period of time, our business, financial condition, and results of operations may be adversely impacted.

If our customers are not able or willing to accept our product-based business model, instead of a labor-based business model, our business and results of operations could be negatively impacted.

Our platforms are generally offered on a productized basis to minimize our customers' overall cost of acquisition, maintenance, and deployment time. Many of our customers and potential customers are instead generally familiar with the practice of purchasing or licensing software through labor contracts, where custom software is written for specific applications, the intellectual property in such software is often owned by the customer, and the software typically requires additional labor contracts for modifications, updates, and services during the life of that specific software. Customers may be unable or unwilling to accept our model of commercial software procurement. Should our customers be unable or unwilling to accept this model of commercial software procurement, our growth could be materially diminished, which could adversely impact our business, financial condition, results of operations, and growth prospects.

We have entered into, and expect in the future to enter into, agreements with our customers that include exclusivity arrangements or unique contractual, pricing, or payment terms, which may result in significant risks or liabilities to us.

Our contracts with our customers are typically non-exclusive, but we have historically entered into arrangements with our customers and our partners that include exclusivity provisions, and we expect to continue to do so in the future. These exclusivity provisions limit our ability to license our platforms and provide services to specific customers, or to compete in certain geographic markets or industries, which may limit our growth and negatively impact our results. In addition, we have entered into joint ventures and strategic alliances with our customers, as described below, which also limit our ability to compete in certain geographic markets or industry verticals.

We have entered into, and may continue to enter into, in limited circumstances, unique contractual, pricing, and payment arrangements with our customers, including some that may be outside of our typical scope of business, including arrangements relating to the receipt of noncash consideration. Our ability to sell or transfer, convert to cash, or realize value from, any noncash consideration we have received, or may receive in the future, in a timely manner or at all, may be limited by, among other things, applicable securities law and regulations, and global market and macroeconomic conditions, which could adversely impact our business, financial condition, cash flows, and results of operations.

We face intense competition in our markets, and we may lack sufficient financial or other resources to maintain or improve our competitive position.

The markets for our platforms are very competitive, and we expect such competition to continue or increase in the future. A significant number of companies are developing products that currently, or in the future may, compete with some or all aspects of our proprietary platforms. We may not be successful in convincing the management teams of our potential customers to deploy our platforms in lieu of existing software solutions or in-house software development projects often favored by internal IT departments or other competitive products and services. In addition, our competitors include large enterprise software companies, government contractors, and system integrators, and we may face competition from emerging companies as well as established companies who have not previously entered this market. Additionally, we may be required to make substantial additional investments in our research, development, services, marketing, and sales functions in order to respond to competition, and there can be no assurance that we will be able to compete successfully in the future.

Many of our existing competitors have, and some of our potential competitors could have, substantial competitive advantages such as:

- greater name recognition, different reputational profiles, longer operating histories, and larger customer bases;
- larger sales and marketing budgets and resources and the capacity to leverage their sales efforts and marketing expenditures across a broader portfolio of products;
- broader, deeper, or otherwise more established relationships with technology, channel and distribution partners, and customers;
- wider geographic presence or greater access to larger potential customer bases;
- greater focus in specific geographies;
- lower labor and research and development costs;
- larger and more mature intellectual property portfolios; and

Source exhibit 10Q-P048. Issuer risk factors describe product-based versus labor-based procurement friction, generally non-exclusive customer contracts, occasional exclusivity and unusual payment/noncash terms, and competition from enterprise software, government contractors, systems integrators and in-house development. Qualification: Risk-factor language describes possibilities, not realized current losses. Qualifies claims of unavoidable software chokepoints and uniform customer monetization. Source: Palantir Q2 2026 Form 10-Q, original page 48

The company itself describes commercial and procurement alternatives; the differentiated-software thesis cannot assume an exclusive physical bottleneck.

Evidence | Bundling, insourcing and compatibility risk

Table of contents

- substantially greater financial, technical, and other resources to provide services, to make acquisitions, and to develop and introduce new products and capabilities.

In addition, some of our larger competitors have substantially broader and more diverse product and service offerings and may be able to leverage their relationships with distribution partners and customers based on other products or incorporate functionality into existing products to gain business in a manner that discourages customers from purchasing our platforms, including by selling at zero or negative margins, product bundling, or offering closed technology platforms. Potential customers may also prefer to purchase from their existing provider rather than a new provider regardless of platform performance or features. As a result, even if the features of our platforms offer advantages that others do not, customers may not purchase our platforms. These larger competitors often have broader product lines and market focus or greater resources and may therefore not be as susceptible to economic downturns or other significant reductions in capital spending by customers. If we are unable to sufficiently differentiate our platforms from the integrated or bundled products of our competitors, such as by offering enhanced functionality, performance, or value, we may see a decrease in demand for those platforms, which could adversely affect our business, financial condition, and results of operations.

In addition, new, innovative start-up companies and larger companies that are making significant investments in research and development may introduce products that have greater performance or functionality, are easier to implement or use, incorporate technological advances that we have not yet developed, or implemented or may invent similar or superior platforms and technologies that compete with our platforms, such as platforms, products, or services that incorporate AI. Our current and potential competitors may also establish cooperative relationships among themselves or with third parties that may further enhance their resources.

Some of our competitors have made or could make acquisitions of businesses that allow them to offer more competitive and comprehensive solutions. As a result of such acquisitions, our current or potential competitors may be able to accelerate the adoption of new technologies that better address customer needs, devote greater resources to bring these products and services to market, initiate or withstand substantial price competition, or develop and expand their product and service offerings more quickly than we do. These competitive pressures in our market, or our failure to compete effectively, may result in fewer orders, reduced revenue and margins, and loss of market share. In addition, it is possible that industry consolidation may impact customers' perceptions of the viability of smaller or even mid-size software firms and consequently customers' willingness to purchase from such firms.

We may not compete successfully against our current or potential competitors. If we are unable to compete successfully, or if competing successfully requires us to take costly actions in response to the actions of our competitors, our business, financial condition and results of operations could be adversely affected. In addition, companies competing with us may have an entirely different pricing or distribution model. Increased competition could result in fewer customer orders, price reductions, reduced margins, and loss of market share, any of which could harm our business and results of operations.

The competitive position of our platforms depends in part on their ability to operate with third-party products and services, and if we are not successful in maintaining and expanding the compatibility of our platforms with such third-party products and services, our business, financial condition, and results of operations could be adversely impacted.

The competitive position of our platforms depends in part on their ability to operate with products and services of third parties, software services, and infrastructure in connection with our work in the public and commercial sectors, including but not limited to, our joint ventures, channel sales relationships, platform partnerships, strategic alliances, and other similar arrangements where applicable. As such, we must continuously modify and enhance our platforms to adapt to changes in, or to be integrated or otherwise compatible with, hardware, software, networking, browser, and database technologies. In the future, one or more companies may choose not to support the operation of their hardware, software, or infrastructure, or our platforms may not support the capabilities needed to operate with such hardware, software, or infrastructure. In addition, to the extent that a third party were to develop software or services that compete with ours, that provider may choose not to support one or more of our platforms. We intend to facilitate the compatibility of our platforms with various third-party hardware, software, and infrastructure by maintaining and expanding our business and technical relationships. For example, in March 2024, we were selected by the U.S. Army to develop and deliver the Tactical Intelligence Targeting Access Node ground station system, the Army's first AI-defined vehicle, which involves coordination with third parties such as hardware manufacturers. If we are not successful in achieving our compatibility goal, our business, financial condition, and results of operations could be adversely impacted.

If the market for our platforms and services develops more slowly than we expect, our growth may slow or stall, and our business, financial condition, and results of operations could be harmed.

The market for our platforms is rapidly evolving. Our future success will depend in large part on the growth and expansion of this market, which is difficult to predict and relies on a number of factors, including customer adoption, customer demand,

Source exhibit 10Q-P049. Issuer warns larger rivals may bundle products or sell at zero/negative margins; customers can prefer an existing provider; new AI-enabled entrants may compete; third-party infrastructure/software compatibility can fail or be withdrawn. TITAN involves hardware partners. Qualification: Risk-factor disclosure, not proof of realized impairment or quantified margin pressure. Useful beside moat discussion and cloud/model capacity dependencies. Source: Palantir Q2 2026 Form 10-Q, original page 49

AI-native entrants, bundles and third-party dependencies can weaken capture despite the platform integration advantage.
