Kraken Robotics | Qualification, scale and ordinary earnings

Research date: October 23, 2026, Toronto. Framework 8.0. Classification: BOTTLENECK / BENEFICIARY. Holding status is unverified because the saved master holding input is blank. The selected ceiling quarter is Q4 2027. All forward financial values are conditional model estimates; reported actuals and company guidance are identified separately.

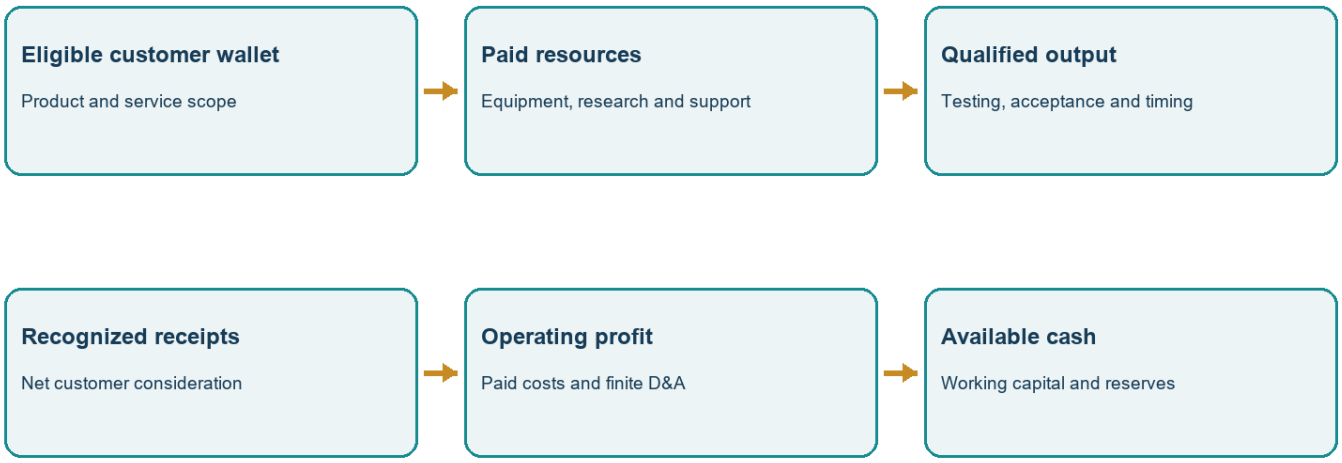

T001 | Current analytical assessment and sanctioned valuation

Measure	Current value / basis
Analytical score	41 / 60 = 68.333%; rounded 68%
Retained Excel Base	72; protected owner input, separate from analytical assessment
Q4 2027 ceiling	CAD 4.859314 per diluted model share
Exact earnings window	Q4 2027 through Q3 2028; CAD 106.364987M parent-economic OP
Method	18 × current-and-next-three-quarter OP / 394M starting-quarter diluted shares
Price / market-cap snapshot	Current dated quote unavailable. Saved quote is undated; no current market cap or price-based return is inferred.

SeaPower battery qualification and merchant synthetic-aperture sonar put Kraken inside the enabling layers of larger autonomous-underwater programs. Higher accepted output can spread paid engineering, production and support budgets over more receipts. Covelya broadens underwater positioning, sensing, software and rental exposure. The opportunity depends on qualified output, customer acceptance and financed working capital converting that demand into ordinary operating profit.

The strongest potential information edge is the connection between prototype adoption, paid capacity and later production orders. Technical performance and urgency can support customer retention and attractive receipts; the model assigns explicit probability to those outcomes. Covelya’s acquired H1 economics, ordinary finite amortization and cash needs constrain how much of the opportunity reaches shareholders. An overlapping order headline alone cannot establish incremental earnings.

From eligible content to financed operating profit

Analyst schematic | Paid resources and acceptance constrain recognized receipts

Scope: four exclusive external-receipt wallets, eighteen quarterly operating periods from Q3 2026 through Q4 2030, and fifteen complete rolling valuations through Q1 2030. Twelve joint demand, execution and pricing outcomes retain their own production, costs, assets, taxes and cash before weighting. The last three operating quarters support the earlier forward windows and have no complete ceiling of their own.

Cycle, adoption and customer capture

Underwater autonomy is in a qualification-to-production transition. Mine-countermeasure urgency, longer-duration UUV missions and offshore monitoring support demand, while customer integration, pressure testing and sea acceptance control timing. Kraken earns battery, sensor, tow-system or service content; the whole naval platform or offshore project budget belongs outside its revenue wallet. This is a secular adoption opportunity with procurement and qualification cycles inside it.

T002 | Four exclusive economic wallets

Wallet	Eligible customer receipts	Boundary / confidence
SeaPower batteries	Qualified modules/systems for OEM underwater platforms and repeat customer programs	HIGH product existence; LOW receipt, ASP and paid-throughput forecasts
SAS / KATFISH	Merchant SAS content and accepted KATFISH bundles	Bundled SAS and launch/recovery content counted once; LOW tender capture
Legacy services	PanGeo, 3D at Depth, survey and related external services	Paid crew/equipment and billable schedule; LOW day-rate/utilization proxies
Covelya external	Sonardyne, Voyis, sensing, software, rentals and monitoring	Single acquired wallet; GBP source basis; OD-OBN and stationary vectors remain inside it

Covelya Group Limited

4. Revenue

Revenue analysed by type of goods or service

Group	30 June 2026 £	30 June 2025 £
Product	53,430,640	54,047,393
Software	2,842,084	3,188,416
Rental	4,037,071	6,628,337
Other	5,327,109	5,425,023
Total revenue from contracts with customers	65,636,904	69,289,169

Revenue analysed by geographical market

SeaPower's pressure-tolerant architecture can save space and weight and support demanding depths, but each customer configuration still requires testing, logistics, quality and support. The product literature describes over-600-bar testing and a separate current fact sheet describes a 6,000m rating with testing up to 660 bar. Version dates differ; these specifications establish technical eligibility rather than an annual factory output or standardized selling price.

Although the secret behind SeaPower's high-energy density and reliability lies in exclusive, tightly integrated pressure-neutral and electronic design technology, the exceptional production quality of these batteries is just as crucial. Crafted with German precision, Kraken batteries undergo ISO 9001 certified quality control processes, ensuring that each unit meets the highest standards of production excellence.

To guarantee enhanced operational range and dependability, each battery unit undergoes rigorous pressure testing. This includes subjecting the unit to over 600 bar. Such extensive testing ensures that the batteries are not only reliable but also durable under the extreme pressures of deep-sea environments.

Furthermore, SeaPower battery modules are compliant with UN38.3 standards, which certifies the safety of batteries for transportation by air, sea, and land. Each battery is carefully packed in certified containers prior to shipment.

Kraken also offers additional certifications tailored to client-specific needs, ensuring that the battery solutions meet various operational and safety requirements across different industries.

KRAKEN ROBOTICS | SeaPower™

Advanced Technology

- Rated to 6,000 m, our pressure-tolerant Li-ion pouch cells embedded in a polymer matrix eliminate the need for housings or oil compensation.
- BMS architecture enables parallel operation across varying state of charges, real-time telemetry, and software-based power control.

Certified Reliability

- Subjected to stringent ISO-certified quality control procedures, units are pressure-tested up to 660 bar to ensure reliability and durability.
- BMS monitors every cell for temperature and voltage, with system-wide communication to ensure reliable mission execution.
- Designed for compliance with UN 38.3, IEC, DNV, and NAVSEA standards.

Scalable Energy Solution

- Modular battery modules configurable to meet power requirements across diverse underwater platforms.
- Scalable solutions from 2 kWh to 5 MWh for small to extra-large underwater vehicles.

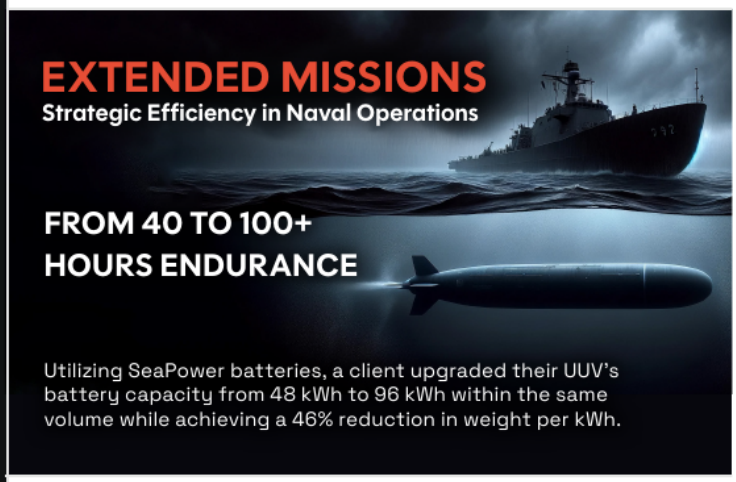

+2x ENDURANCE

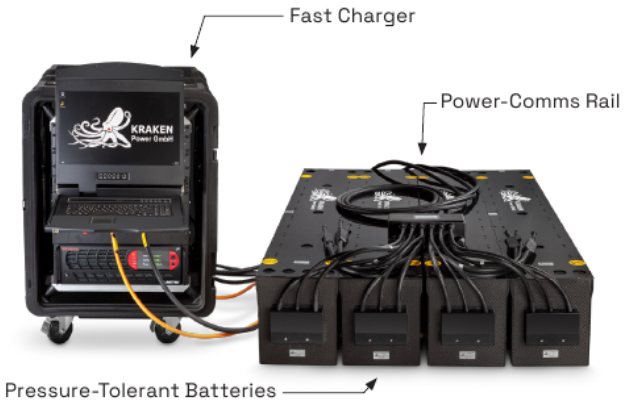

-46% WEIGHT

Zero OIL

Breakthrough **PRESSURE TOLERANCE**

Potted **BATTERIES**

SAS produces detailed seafloor imagery used by OEM UUVs and towed systems. The preserved HII REMUS product matrix lists Kraken AquaPix SAS for REMUS 620; attach rates and customer contract economics remain undisclosed. Kongsberg's February 26, 2026 merchant HISAS offering establishes direct alternative supply. The advantage is technical qualification, delivery and integration rather than assumed exclusivity. Customer source: https://www.hii.com/products/remus-uuvs . Competition source: https://www.kongsberg.com/news/news-archive/2026/proven-synthetic-aperture-sonar-now-available-beyond-integrated-systems/ .

Operating Software

KATVIEW - Towbody Operation

KATVIEW is the primary interface for commanding, controlling and monitoring the KATFISH towbody in real-time during operations. KATVIEW enables operators to:

- Monitor all system parameters
- Control depth, heading, attitude, cable length, and launch & recovery
- Power devices
- Run automated pre-dive testing
- Diagnose faults
- Monitor forward looking sonar and activate obstacle avoidance

SASVIEW – Control, Visualization and Target Detection

SASVIEW manages sonar acquisition and beamforming, displaying 3 cm x 3 cm SAS imagery in real time. Operators can adjust parameters such as pulse length, gain, and ping rate, or load a planned survey to automatically calculate optimal settings. SASVIEW allows operators to:

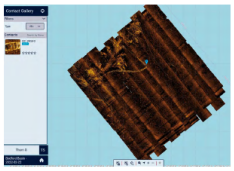

- Enable or disable sonar acquisition
- Perform real-time data quality checks
- Detect and mark targets
- Slow down or pause the waterfall
- Zoom in on targets of interest
- Jump to a previous time in the data

OCTO – Sonar Target Classification and Identification

As targets are detected via SASVIEW, the full-resolution data appears in OCTO for review and classification. Data can be exported to a JPG or a mission report. OCTO also enables operators to:

- Detect targets
- Manage, filter, merge, and sort targets
- Inspect, measure, and classify targets
- Generate target reports

INSIGHT - SAS Post-Processing Tool

INSIGHT is Kraken's SAS post-processing software that can be used for re-beamforming the raw data into SAS imagery. It outputs geo-referenced SAS image tiles in industry standard formats (GeoTIFF, XTF, XYZ). Output of the processor consists of high-quality SAS imagery and bathymetry, with constant resolution to the edges of the swath.

Safety and Reliability

Robust Design

Transmitter and receiver arrays are all manufactured with 1:3 composite ceramic which allows very fine and predictable control of the beam patterns. The array modules are all fully encapsulated in polyurethane, with no metal to plastic bonds exposed to seawater. All connectors are wet-mating with a polyurethane-molded body that is also bonded to the array modules. This provides a robust solution in highly cathodic environments.

Quality Assurance

Design and Factory Acceptance Testing (FAT) of KATFISH takes place in Kraken's facilities in Newfoundland, Canada, certified to ISO 9001 standard. Kraken's Quality Assurance Program ensures that each KATFISH passes a FAT, an endurance test, and an environmental stress screen test. The system also goes through Sea Acceptance Testing (SAT) at a variety of water depths, surveying a variety of targets including shipwrecks, pipelines, and geological features. Kraken's quality production process follows the AS9003 standard.

Safety Features

KATFISH includes a robust obstacle avoidance system, which incorporates a forward looking sonar in the nose of the KATFISH to detect obstacles on the seafloor and features such as wrecks and fast rising slopes. The obstacle avoidance system calculates both the distance to the seabed as well as the seabed slope and estimates whether there is a collision risk in real-time. For increased redundancy, the tow cable includes a second fibre optic line to ensure connectivity if the primary fibre fails. If vessel power is lost, the winch brake engages automatically.

System Health Monitoring

KATFISH performs a series of self-tests during initialization and the user is alerted when the system is ready to survey. As the system is brought through the pre-dive and launch procedures, the Fault Detect - Fault Response system continuously monitors all subsystems to ensure the vehicle is operating within normal parameters.

System Maintenance

The KATFISH is designed to be a low-maintenance system, consisting of stainless-steel hardware and carbon fiber fairings affixed to a titanium super-structure. All major line replaceable units in the KATFISH are field-replaceable, including sonar transmit and receive arrays, actuators, and various sensors.

KRAKEN ROBOTICS | KATFISH™ krakenrobotics.com

T03 | Original Sonar factory/sea acceptance and support. Version filenameV010926; upload Jan2026; date convention not assumed. Original PDF page 6; Original technical units; no inferred price/ASP/annual throughput. Company-hosted primary technical PDF. Services convert survey capability into paid projects. Technical coverage maxima depend on platform and conditions; the forecast uses paid annual staffing and equipment plus a seasonal billable-output limit. Winter or idle periods still carry the committed staff budget. No service inventory is created.

KRAKEN ROBOTICS

Applications

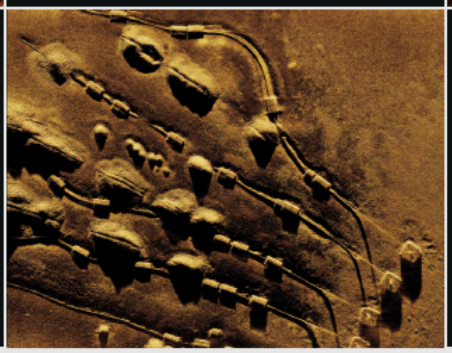

Underwater Infrastructure Inspection

- High-resolution data enables seabed change detection
- Provide seabed context along pipeline/cable routes including fishing activities and scour monitoring
- Conditional assessment of infrastructure

Pre- and Post-Construction Survey

- Pre-installation survey for high-resolution contact list
- Perform comprehensive site clearance
- Identify cable/ infrastructure exposures
- Accurate boulder and seabed debris measurement

UXO and Mine Countermeasure Survey

- Target identification and discrimination, including small contacts on or near infrastructure
- Data clarity provides insight to decrease master target list
- Secure data management and transfer

Our Technology

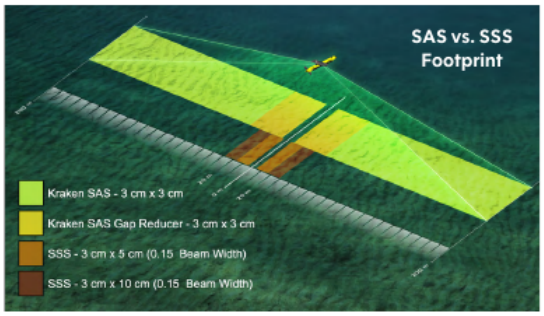

KATFISH Specifications

Towfish Dimensions	Hull: 2.9 m length x 0.3 m diameter; Wingspan: 1.20 m
Towfish Weight in Air	200 kg
Towfish Depth Rating	300 m
Data Deliverables	GIS-compatible target listing; Geo-referenced TIFF images and mosaics
Data Format	Kraken TIL (.til), XTF (.xtf), GeoTIFF (.tif / .kml), XYZ (.xyz), HDF5 (.h5)
Personnel Requirements	Minimum three per shift

Performance specifications represent maximum sensor values and may vary due to environmental conditions, vehicle stability, and operational specifics.

Area Coverage Rates

Survey Speed	SAS Range	SAS AC	SAS + Gap Filler
4 kn (2.06 m/s)	200 m	2.18 km^2/hr	2.96 km^2/hr
6 kn (3.09 m/s)	183 m	2.99 km^2/hr	4.06 km^2/hr
8 kn (4.12 m/s)	135 m	2.94 km^2/hr	4.00 km^2/hr
10 kn (5.14 m/s)	107 m	2.91 km^2/hr	3.95 km^2/hr

Cross-book watch: underwater autonomy can increase qualified component demand across platform OEMs, sonar suppliers, survey providers and offshore customers. HII customer integration and Kongsberg competition are direct operating watches. Broader robotics, power and AI infrastructure spending cannot be assigned to Kraken without an underwater content and acceptance bridge. No other portfolio model is changed by this company review.

The accompanying notes form part of the condensed consolidated financial statements.

A01 | Original Latest actuals — legacy reported revenue/GP/OP. Released2026-08-27; period ended2026-06-30. Original PDF page 4; CAD thousands except actual share counts/per-share prices. Company-hosted primary PDF. Source: https://www.krakenrobotics.com/wp-content/uploads/2026/08/Kraken-Robotics-Inc.-Q2-26-Financial-Statements-FINAL.pdf

The primary financial statement governs the actual baseline. H1 GP less admin, net research, D&A and SBC plus ITC income gives IFRS OP of minus CAD5.584M. Transaction/restructuring admin of CAD4.761M is separate from CAD18.324M ordinary admin. Cash arbitration of CAD6.911M is below operating profit and receives a single explicit cash settlement. Issuer adjusted EBITDA has its own adjustments and is not substituted for the ordinary OP valuation metric.

T004 | Reported acquired Covelya | GBP millions

Metric	FY2025 audited IFRS	H1 2026 unaudited IFRS
Revenue	142.375447	65.636904
Gross profit	103.524985	48.063671
Admin	78.469877	39.246441
Other operating income	0.898797	0.376002
Operating profit	25.953905	9.193232
CFO	26.197183	-1.410765
Paid PPE	6.406770	2.747821
Paid capitalized development	2.031721	1.551505

H1 acquired revenue fell 5.271047% and OP fell 38.714377% year over year. Its reported GP margin was 73.226597%. Ordinary functions sit within admin, so the forward model rebuilds total paid resources and uses an explicit management-accounting reclassification for comparable gross costs. H1 net ordinary cash-like burden = revenue − OP − D&A = GBP53.095785M; pure COGS + admin − D&A = GBP53.471787M, before the GBP0.376002M other-income credit.

Covelya H1 operating cash flow was negative GBP1.410765M despite positive OP. GBP18.25M of seller dividends had already reduced acquired June cash. The acquired H1 appears only as a standalone comparison; Kraken consolidation begins July 2. Historical UK GAAP figures and the September IFRS schedules have different accounting bases and are not spliced together.

Covelya Group Limited

Condensed Consolidated Interim Statement of Comprehensive Income
For the Six Months Ended 30 June 2026

	Notes	Period ended 30 June 2026	Period ended 30 June 2025
		£	£

	16,242,105	35,175,712

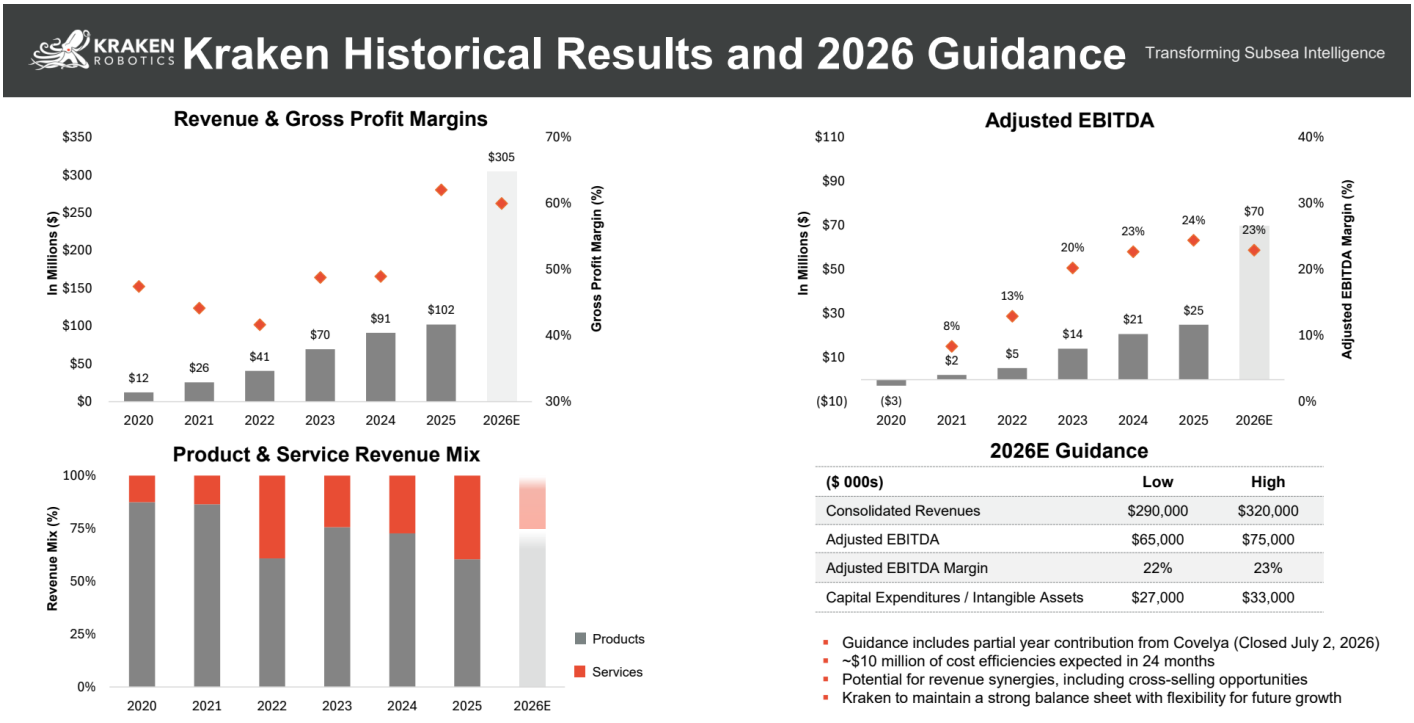

The notes on pages 10 – 35 form part of these condensed consolidated interim financial statements.

A10 | Original Acquired cash continuation and lease principal. 2026-09-22 filing; FY2025 audited ScheduleA / H126 unaudited ScheduleB. Original PDF page 70; GBP pounds, not CAD and not thousands. Issuer-authored filing retrieved from FinancialFilings CDN mirror; original regulator-host retrieval unverified. Source: https://cdn.financialreports.eu/financialreports/media/filings/46335/2026/RNS/46335_rns_2026-09-22_d1e8eb9a-884d-4b12-9697-e33082970cbd.pdf

T005 | FY2026 company guidance and model bridge

Measure / scope	Issuer guide	Current model / basis
Revenue, full calendar FY26	CAD290–320M	CAD299.313469M = H1 legacy49.025 + H2 model250.288469
Adjusted EBITDA, full FY26	CAD65–75M; roughly22–23%	CAD68.270164M = H1 issuer8.007 + H2 EBITDA-before-SBC proxy60.263164
PPE plus intangible cash investment	CAD27–33M	CAD30.000000M = H1 actual15.956 + H2 paid14.044
Cost-efficiency target	Approximately CAD10M within24months	Definition uncertain; recurring/cumulative/unrealized interpretation weights20%/50%/30%

The model EBITDA bridge is a diagnostic proxy rather than a certified future issuer adjustment definition. Its H2 source object covers only six months. Weak and strong conditional outcomes can fall outside guidance; the weighted bridge above does not assert every outcome meets the company range.

A04 | Original Company guidance and integration target. 2026-08-27. Original PDF page 10; Charts: CAD millions; guidance grid: CAD thousands ($000s). The model bridge is normalized to CAD millions. Company-hosted primary management presentation. Source: https://www.krakenrobotics.com/wp-content/uploads/2026/08/Kraken-Q2-Conf-Call-Deck_Final.pdf

KRAKEN

Condensed Consolidated Interim Statements of Cash Flows
(Unaudited)
For the Three and Six-Months Ended June 30, 2026 and 2025
(Expressed in thousands of Canadian Dollars)

	June 30, 2026	June 30, 2025
Cash flows (used in) provided by operating activities		
Net loss	**$ (10,844)**	$ (484)
Adjustments for items not involving cash:		
Depreciation	**4,063**	2,761
Amortization of intangible assets	**2,008**	1,157
Share-based payments	**2,759**	1,076
Investment tax credit	**(1,172)**	(12)
Financing Costs	**1,650**	981
Income tax expense	**(2,421)**	288
Changes in non-cash working capital (note 19)	**(12,278)**	(4,228)
Net cash flows (used in) provided by operating activities	**(16,235)**	1,539
Cash flows used in investing activities		
Acquisition of 3D at Depth, Inc. (net of cash acquired) (note 7)	**-**	(23,361)
Purchase of property and equipment	**(14,233)**	(7,582)
Purchase of intangible assets	**(1,723)**	(1,465)
Net cash flows used in investing activities	**(15,956)**	(32,408)
Cash flows provided by financing activities		
Proceeds from exercise of options	**875**	93
Payment of share issue costs	**-**	(15)
Payment of principal on leases	**(843)**	(1,170)
Payment of interest on leases	**(413)**	(396)
Payment of principal on long-term obligations	**(413)**	(649)
Payment of interest on long-term obligations	**(583)**	(483)
Proceeds from long term obligations	**2,285**	9,608
Net cash flows provided by financing activities	**908**	6,988
Net decrease in cash and cash equivalents	**(31,283)**	(23,881)
Effect of foreign exchange on cash	**2,042**	(1,770)
Cash and cash equivalents at beginning of period	**120,507**	58,518
Cash and cash equivalents at end of period	**$ 91,266**	$ 32,867

A11 | Original Legacy cash flow and paid H1 investment. Released2026-08-27; period ended2026-06-30. Original PDF page 7; CAD thousands except actual share counts/per-share prices. Company-hosted primary PDF. Source: https://www.krakenrobotics.com/wp-content/uploads/2026/08/Kraken-Robotics-Inc.-Q2-26-Financial-Statements-FINAL.pdf

The two newest confirmed earnings calls

Available prepared remarks and all available analyst Q&A in the April 16 FY2025 and August 27 Q2 call ASRs were read completely. They contain transcription corruption and omitted passages. Preserved recording mirrors were not listened to, and a company-authored verbatim transcript was not found. A May 28 Q1 actual call was not located; the saved Q1 landing page says no conference call. Financial amounts are anchored to primary statements and official slides.

T006 | Management evidence and model transmission

Call / question themes	Information admitted	Economic treatment / counter
April16: battery orders/capacity; urgent navy programs; seasonality and working capital	Prototype adoption, customer demand and conditional ramp	Positive battery/sonar states; paid capacity and inventory; tender delay retains weak outcomes
April16: cross-selling and acquisition; gross-margin mix	Complementary acquired customers and integration opportunity	Single Covelya wallet; explicit uncertain savings; ordinary support is paid and finite PPA amortization remains charged
August27: in-house batteries/competition; CAM platforms; production timing	OEM eligibility, customer alternatives and production conversion over12–18months	Root demand30/50/20%; conditional timely55/75/80%; no universal attach-rate
August27: scope reversal, spare tow body, order visibility and guidance cadence	Acceptance and timing are material	Delay and expediting costs; overlapping gross orderflow never added to revenue
August27: stationary sensing and offshore monitoring	Modest positive probability for acquired sensor/OD-OBN increments	0/2/5MGBP stationary and0/8/16MGBP OD-OBN endpoints in2027; source ASR omission limits precision

Q2 company-linked webcast: https://event.choruscall.com/mediaframe/webcast.html?webcastid=7UYSQnvx . FY2025 company-linked webcast: https://event.choruscall.com/mediaframe/webcast.html?webcastid=sLXYSQ25 . The August ocean-bottom-node answer contains unrelated closing words and omitted content; one CFO seasonality reply is truncated. Those gaps stay explicit and do not erase otherwise quantifiable conditional outcomes.

Demand, qualification and probability

T007 | Joint operating states before pricing

Demand	P(demand)	P(timely | demand)	P(delayed joint)	P(timely joint)
weak	30.000%	55.000%	13.500%	16.500%
central	50.000%	75.000%	12.500%	37.500%
strong	20.000%	80.000%	4.000%	16.000%

Subjective demand probabilities are weak30%, central50% and strong20%. Adoption, order activity and urgency support growth; prior tender delays, scope reversals, acquired H1 profit/cash weakness and concentration retain a meaningful weak branch. Timely probabilities rise with stronger demand and supported execution. Pricing is a separate30% realization hypothesis and70% unrealized branch; only21% of joint probability receives any positive premium because weak-demand pricing is zero. These are analyst beliefs, not observed frequencies.

T008 | Twelve complete joint outcomes

Outcome	Joint weight	Minimum available cash	Q4 2027 ceiling
weak delayed | price unrealized	9.450%	107.764751	2.063226
weak timely | price unrealized	11.550%	125.023489	2.684542
central delayed | price unrealized	8.750%	121.163204	4.637796
central timely | price unrealized	26.250%	118.984744	5.687552
strong delayed | price unrealized	2.800%	113.207103	5.987194
strong timely | price unrealized	11.200%	113.799348	7.239825
weak delayed | price realized	4.050%	107.764751	2.063226
weak timely | price realized	4.950%	125.023489	2.684542
central delayed | price realized	3.750%	121.227387	4.732727
central timely | price realized	11.250%	118.619363	5.787085
strong delayed | price realized	1.200%	112.448574	6.189420
strong timely | price realized	4.800%	112.999176	7.452925

T009 | Annual core eligible receipts | LOW model proxies

Wallet / currency	2027	2028	2029	2030
Battery core CADM	110.000000	130.000000	150.000000	170.000000
Sonar core CADM	35.000000	44.000000	53.000000	62.000000
Covelya core GBPM	145.000000	160.000000	177.000000	195.000000

T010 | New OEM battery eligible annual endpoints | CADM

Demand state	2027	2028	2029	2030
weak	15.000000	35.000000	55.000000	75.000000
central	45.000000	75.000000	110.000000	145.000000
strong	80.000000	130.000000	190.000000	260.000000

T011 | Sonar tender increment eligible annual endpoints | CADM

Demand state	2027	2028	2029	2030
weak	15.000000	20.000000	30.000000	38.000000
central	33.000000	43.000000	55.000000	68.000000
strong	50.000000	65.000000	80.000000	100.000000

T012 | Services eligible annual endpoints | CADM

Demand state	2027	2028	2029	2030
weak	50.000000	58.000000	65.000000	72.000000
central	60.000000	70.000000	80.000000	90.000000
strong	68.000000	82.000000	98.000000	112.000000

T013 | OD-OBN inside Covelya eligible annual endpoints | GBPM

Demand state	2027	2028	2029	2030
weak	0.000000	4.000000	8.000000	15.000000
central	8.000000	18.000000	30.000000	45.000000
strong	16.000000	32.000000	55.000000	75.000000

T014 | Stationary sensing inside Covelya eligible annual endpoints | GBPM

Demand state	2027	2028	2029	2030
weak	0.000000	1.000000	2.000000	4.000000
central	2.000000	5.000000	8.000000	12.000000
strong	5.000000	10.000000	15.000000	20.000000

Battery core is multiplied by0.95/1/1.05 in weak/central/strong demand, and acquired core by0.95/1/1.08. Delayed incremental recognition is65/80/90/95% across2027–2030; service delayed demand receives95%. Battery and sonar customer demand then encounter paid commissioned capacity, annual staff limits and quarterly stock/acceptance. Acquired core and new-vector support are separately funded before sharing the acquired plant ceiling. Services use annual billable capacity and a30% maximum quarter. Unrecognized demand earns no additional revenue or backlog asset.

The company’s February26,2025 facility statement describes almost CAD200M total annual battery sales-equivalent capacity once fully operational. It includes existing facilities and depends on completion. Future modeled250/300/350M upper capacity steps are LOW planning limits, each constrained by paid expansion, staffing and commissioning. Source: https://www.krakenrobotics.com/news-releases/kraken-robotics-receives-34-million-of-seapower-battery-orders/ .

Combined announced orders of CAD355M are overlapping gross order flow, not verified remaining backlog. The July update and August release belong to one issuer information family. The XL-UUV MSA and SEFINE MOU establish conditional eligibility without disclosed minimum purchases. Source: https://www.krakenrobotics.com/news-releases/kraken-robotics-reports-q2-2026-financial-results/ .

Paid manufacturing, support and operating costs

T015 | Legacy direct cost assumptions | LOW forward budgets

Wallet	Variable content / receipts	Paid annual staff-equivalents2027–2030	2027 loaded cost CADM each	Tools CADM2027–2030
Battery	22% cells/components +5% logistics +3% qualification/warranty	[110, 140, 170, 200]	0.115000	[1.8, 2.2, 2.6, 3.0]
Sonar	26% materials +5% outsourcing/logistics +5% acceptance/warranty	[70, 82, 95, 110]	0.135000	[1.2, 1.4, 1.6, 1.8]
Services	31% vessel/travel/external project costs	[70, 80, 92, 105]	0.140000	[2, 2.3, 2.6, 3]

Resource equivalents represent paid financial allowances, not disclosed manufacturing headcounts. Annual loaded compensation inflates4%; material cost rates inflate2% with2027 as the first step; delayed outcomes add1.5% variable expediting. Staff and tools are paid quarterly throughout the year. Battery/sonar variable cost follows accepted constant-price receipts, while funded operating inventory carries the cost-equivalent prebuild requirement. Paid support is retained when demand is weaker.

T016 | Annual ordinary group budgets | CADM unless specified

Budget	2027	2028	2029	2030
Legacy admin	48.000000	53.000000	58.000000	63.000000
Expensed R&D	11.000000	12.500000	14.000000	15.500000
legacy grants	1.000000	1.100000	1.200000	1.300000
ITC income	2.000000	2.200000	2.400000	2.600000
legacy SBC	6.000000	6.600000	7.200000	7.800000
covelya SBC	1.000000	1.200000	1.400000	1.600000
integration cost CAD	3.000000	2.000000	1.000000	0.000000

Legacy admin is allocated40% to customer support/sales engineering,25% to sales/bidding,20% to corporate control and15% to sites/IT; these describe the same paid budget. Gross expensed research, grants, ITC income and capitalized qualifying development remain distinct. Forward grant offsets assume same-period cash realization as a LOW planning input; uncollected tax credits remain withheld from available cash. SBC is an ordinary economic cost even with diluted shares. Covelya’s source-derived ordinary resource burden includes engineering, manufacturing/support, SG&A and research; FY25 expensed R&D is a diagnostic and receives no second charge.

Covelya core purchased-content ratio is26.77340326716202%. The2027 ordinary cash resource budget is GBP78.28M with3% annual inflation and10% support on core receipts above GBP131.273808M annualized baseline. New OD-OBN/stationary receipts separately pay40% bought/manufacturing and12% support, plus GBP2/3/4/5M annual field qualification. All new-vector resources are incremental to core. A25% share of ordinary resource plus field qualification is reclassified into gross costs for comparability; the remainder is operating expense. Total OP is invariant to that presentation reclassification.

Expected savings use20% recurring interpretation,50% cumulative implementation and30% no realization. Recurring timely schedules are CAD3/8/10/10M versus delayed1/4/8/10M; cumulative schedules2/3/0/0 versus1/4/0/0. Integration costs remain paid, with1.4× friction in delayed outcomes. There is no second unmodeled10M saving or percentage operating-leverage overlay.

(c) Share unit plans

In June 2026, the Company established the Omnibus Incentive Plan (the Plan). Under the terms of the Plan, the Company can grant deferred share units (DSUs), performance share units (PSUs) and restricted share units (RSUs).

The Company has offered DSUs to its independent directors under the Plan, entitling them to elect to receive all of or any portion of their annual compensation in the form of DSUs in place of cash compensation. Under the terms of the award, each DSU represents the right to acquire one common share or the cash equivalent which is determined at the discretion of the Board. The DSUs vest immediately upon grant and are expected to be equity settled. The amount expensed for the three and six months ended June 30, 2026 is $337 (June 30, 2025 - $nil) in relation to granting of 47,395 DSUs at a fair value of $7.11.

At June 30, 2026, no PSUs or RSUs have been granted.

(d) Share-based compensation

The weighted average fair value of the options granted during the six-month period ended June 30, 2026 was $3.89. The fair value of the options is estimated using the Black-Scholes option pricing model with the following assumptions:

	Six-months ended June 30, 2026
Risk-free interest rate	2.88%
Expected life of options	3.21 years
Expected volatility	56.20%
Weighted average share price	$8.50
Dividend yield	nil

16. Government assistance:

During the three-months and six-months ended June 30, 2026, the Company received government assistance in the amount of $38 (2025 - $1,104) and $1,938 (2025 – $1,414). Government assistance for the three-months and six-months ended June 30, 2026 has been classified as a reduction to Research and development expense of $nil (2025 - $6) and $990 (2025 - $11), Administrative expense of $nil (2025 - $nil) and $nil (2025 - $43), and Construction in progress of $38 (2025 - $1,098) and $948 (2025 – $1,360).

The Company receives refundable and non-refundable investment tax credits (ITCs) from the Government of Canada in respect of eligible expenditures incurred under various research and development and capital investments. During the three-months and six-months ended June 30, 2026, the Company recognized $185 (2025 - $149) and $367 (2025 - $298) respectively of refundable ITCs and $586 (2025 - $123) and $804 (2025 - $242) respectively of non-refundable ITCs.

A16 | Original Ordinary SBC, assistance and tax-credit recognition. Released2026-08-27; period ended2026-06-30. Original PDF page 21; CAD thousands except actual share counts/per-share prices. Company-hosted primary PDF. Source: https://www.krakenrobotics.com/wp-content/uploads/2026/08/Kraken-Robotics-Inc.-Q2-26-Financial-Statements-FINAL.pdf

Finite assets, acquisition accounting and capital deployment

Ordinary operating profit deducts PPE depreciation, lease/ROU depreciation, finite development/software amortization and bounded new acquisition uplift. For every cohort, quarterly expense = min(remaining book, annual runoff/4) once available for use; closing book = opening book − expense. Depreciation stops at exhaustion. Land, goodwill and the dated indefinite-brand proxy receive no amortization. Existing source software is counted once. The source assistance note reports CAD0.948M while the PPE roll applies CAD0.910M; the CAD0.038M scope/timing difference is unreconciled. Source closing books remain the baseline without an invented adjustment.

T017 | Existing legacy finite inputs | CADM

Asset	Starting book	Annual runoff	Availability
Depreciable PPE	44.609000	5.860000	Q3 2026
Construction in progress	6.984000	0.997714	Q1 2027 timely /Q2 2027 delayed
ROU	13.335000	2.266000	Q3 2026
Finite aggregate intangibles	13.249000	4.016000	Q3 2026
Dated indefinite brand proxy	2.492000	0.000000	FY25 class amount; June split unavailable
Goodwill	16.876000	0.000000	Excluded from finite amortization

8 . Property and equipment:

(a) As at June 30, 2026 property and equipment are pledged as security of a Long-term obligation (note 13).

(b) Reconciliation of property and equipment:

	Furniture, tools and equipment	Computer equipment	Construction in progress	Leasehold improvements	Marine Equipment	Software	Total
Cost

A15 | Original Acquired finite software and expired patents. 2026-09-22 filing; FY2025 audited ScheduleA / H126 unaudited ScheduleB. Original PDF page 85; GBP pounds, not CAD and not thousands. Issuer-authored filing retrieved from FinancialFilings CDN mirror; original regulator-host retrieval unverified. Source: https://cdn.financialreports.eu/financialreports/media/filings/46335/2026/RNS/46335_rns_2026-09-22_d1e8eb9a-884d-4b12-9697-e33082970cbd.pdf

T019 | Unreported acquisition PPA | bounded LOW alternatives

Extra finite uplift / consideration	Probability	Extra finite book CADM	Life years	Annual amortization CADM
10.000%	25.000%	61.500000	7.500000	8.200000
20.000%	50.000%	123.000000	7.500000	16.400000
30.000%	25.000%	184.500000	7.500000	24.600000

The incremental finite fair-value uplift is61.5/123/184.5M with25/50/25% probabilities. Its linear mean is123M and ordinary annual amortization16.4M over7.5years. This is a synthetic allocation over historical acquired software; actual purchase accounting and useful lives are unavailable. Acquisition cash was paid in the closing bridge. New PPA earns zero cash-tax shield; cash tax adds this amortization back. Six- and ten-year lives are tested separately.

T020 | Base annual paid additions before demand/timing factor

Budget / currency	2027	2028	2029	2030
cash_PPE_legacy	15.000000	18.000000	21.000000	24.000000
cash_PPE_covelya_GBP	7.027027	8.108108	9.189189	10.270270
cash_dev_legacy	4.000000	4.500000	5.000000	5.500000
cash_dev_covelya_GBP	3.300000	4.100000	4.700000	5.300000
new_ROU_legacy	2.500000	3.000000	3.500000	4.000000
new_ROU_covelya_GBP	2.000000	2.300000	2.600000	3.000000

Legacy budgets are CADM; acquired budgets are GBPM and convert at forecast1.85CAD/GBP. PPE and qualifying development cash follow demand factors0.85/1/1.2 and an additional1.10 delayed-cost factor. Quarterly cash seasonality is20/25/25/30%. New ROU is noncash at recognition, with later lease service. PPE becomes available one quarter after payment in timely outcomes and two in delayed outcomes; development follows one more quarter later. Finite lives are7years PPE,5years development and6years ROU.

From2027 onward, legacy paid PPE allocates45% to batteries,20% sonar,30% services and5% corporate. Deduct annual maintenance2/1/1.5M from productive purposes before adding expansion. H2 paid11.8M is allocated2/1/2/0.8/6M battery/sonar/services/corporate/Covelya; each purpose scales with actual total paid. Battery/acquired finishing spend is already in initial capacity and adds no duplicate initial capacity. Acquired productive PPE deducts GBP2M annual maintenance. Commissioned incremental PPE times LOW capacity turns supports extra output, then paid staff and planned limits cap it.

Closing resources, working capital and funding

Component	Amount
Legacy June unrestricted cash	91.266000
Approximately fully fee-net equity proceeds	386.400000
Separate escrow interest on net-proceeds basis	2.703000
Actual new term draw	125.000000
Cash consideration	-480.000000
Acquired June cash16.242105GBPM ×1.85	30.047894
Illustrative total before unknown closing movement	155.416894

Exact July closing cash, FX, working capital adjustments, final PPA and detailed post-close loan terms remain unknown. This bridge uses dated June cash and known financing once. Gross escrow396.745M is an alternative source presentation and is not added to fully net proceeds. The seller dividend is already reflected in acquired June cash. Receipt conversion and seller shares are already inside the dated issued count and preserved native diluted path.

- **Voyis Imaging Inc.** – develops laser scanning and imaging payloads for subsea vehicles to capture high-resolution 3D data.

Covelya Group employs approximately 750 staff and operates internationally from 12 facilities in locations including Yateley (Global headquarters), Aberdeen, Sparkford and Plymouth (United Kingdom); Aarhus (Denmark); Hamburg (Germany); Waterloo (Canada); Houston and West Virginia (United States); Rio das Ostras (Brazil); Loyang (Singapore); and Sydney (Australia).

The Acquisition is expected to provide principal benefits to the Company including: better positioning Kraken as a major supplier of dual-use subsea technology with industry-leading capabilities, increased scale, long-standing customer relationships, and enhanced innovation capacity across two market-facing business units (Defence and Commercial); deepening customer relationships in the growing defence and maritime surveillance market by offering comprehensive solutions for autonomous platforms, including remote operated towed vehicles (“**ROTVs**”), remotely operated vehicles (“**ROVs**”), autonomous underwater vehicles (“**AUVs**”), uncrewed surface vessels (“**USVs**”) and stationary sensors; expanding Kraken's product offering and total addressable market through Covelya Group's navigation, positioning, communications, and software solutions across defence and commercial end markets; adding strategic geographic locations and improving business diversification with a combined customer base of over 700 customers and a more balanced mix of defence and commercial revenue; and bolstering Kraken's technical capabilities through access to Covelya Group's experienced engineering team, a combined portfolio of over 110 patents (issued and pending), advanced facilities with approximately 1,200 employees including 790 technical staff and over 450,000 square feet of global production capacity on a combined basis.

2.2 Acquisition Date

The Acquisition was completed on July 2, 2026.

2.3 Consideration

The aggregate purchase price for the Acquisition was approximately $615 million, subject to closing adjustments, comprised of approximately $480 million in cash (the "Cash Consideration") and approximately $135 million through the issuance of 15,882,352 common shares in the capital of the Company (“Common Shares”) at a deemed issue price of $8.50 per Common Share to the Seller.

The cash portion of the purchase price was funded from: (i) the net proceeds of Kraken's $402.5 million bought deal public offering of subscription receipts (“Subscription Receipts”), which closed on March 12, 2026; (ii) interest earned on the escrowed proceeds of the Subscription Receipts; and (iii) borrowings under a new committed, secured, non-revolving term credit facility in the amount of $125 million (the "New Credit Facility").

The Company’s bought deal public offering consisted of 47,353,550 Subscription Receipts, including 6,176,550 Subscription Receipts issued pursuant to the exercise in full of the over-allotment option granted to the underwriters. The Subscription Receipts were issued at a price of $8.50 per Subscription Receipt, for total gross proceeds of approximately $402.5 million. After deducting underwriters’ fees and expenses, the net proceeds were approximately $386.4 million. In conjunction with the closing of the Acquisition, each holder of Subscription Receipts received, automatically and without payment of additional consideration, one Common Share for each Subscription Receipt held.

20. Other loss:

During the quarter, the Company recognized a provision of $6,911 for probable costs associated with an arbitration proceeding related to a supplier contract entered in 2017. The provision represents management's best estimate of the expected obligation and is based on the royalty amounts owed and related interest, and reimbursement of the supplier's legal and arbitration costs as set out in a July 2026 arbitration decision.

21. Commitments:

(a) The Company applies the short-term lease recognition exemption to its short-term leases (i.e., those leases that have a lease term of 12 months or less from the commencement date and do not contain a purchase option). It also applies the lease of low-value assets recognition exemption to leases of office equipment that are considered of low value (i.e., below $5). Lease payments on short-term leases and leases of low-value assets are recognized as expense on a straight-line basis over the lease term. The total value of these short-term lease commitments at June 30, 2026, is $47.

22. Subsequent events:

Subsequent to June 30, 2026, the Company:

(a) On July 2, 2026, the Company acquired 100% of the shares of Covelya Group Limited ("Covelya"), for approximately $615,000 (consisting of $355,000 cash on hand (including cash from subscription receipt offering), $125,000 term loan and $135,000 through the issuance of 15,882,352 common shares) subject to adjustment for, among other things, any debt indirectly assumed or paid out on closing and to customary working capital adjustments.

The Company will report the acquired business as part of its Products and Services segments and will be accounted for as a business combination using the acquisition method. Given the proximity of the transaction closing, the initial accounting for the transaction has not yet been completed when these financial statements were authorized for issue.

4. Trade and other receivables:

Trade and other receivables consist of the following:

	June 30, 2026	December 31, 2025
Trade receivables (net of expected credit loss of $nil (2025 - $2,057))	**$ 26,397**	$ 22,504
Government assistance receivable and other	**4,976**	4,815
	$ 31,373	$ 27,319

5. Inventory:

Inventory consists of the following:

	June 30, 2026	December 31, 2025
Raw materials	**$ 31,378**	$ 24,736
Work in progress	**18,539**	9,928
	$ 49,917	$ 34,664

Included in the cost of sales for the three-months and six-months ended June 30, 2026 is inventory of $3,734 (2025 - $6,365) and $6,611 (June 30, 2025 - $10,629). Inventory write-downs consisted of $Nil (2025 - $Nil).

6. Subscription receipt offering and pending acquisition:

On March 3, 2026, the Company entered into an agreement to acquire Covelya Group Limited for a total consideration of $615 million, excluding transaction costs and subject to adjustment.

The purchase price is intended to be satisfied with a combination of common shares and cash. The cash portion of the purchase price is intended to be financed at closing from an offering of 47,353,550 subscription receipts, completed March 12, 2026, at a price of $8.50 each for gross proceeds of $402.5 million and a non-revolving term loan. The net proceeds (gross proceeds from the sale of the subscription receipts, less 50% of the underwriters' fees, together with any interest and other income received or credited thereon) will be held in escrow and are expected to be used to finance a portion of the purchase price of the acquisition.

The subscription receipt arrangement creates the following separate financial instruments, which have been recorded on the unaudited condensed interim consolidated statements of financial position:

a) **Subscription receipt proceeds held in escrow** - a financial asset (non-cash), recorded net of the underwriters' fees, plus interest earned on the subscription receipt proceeds held in escrow, representing the proceeds that the Company expects to receive upon the closing of the Acquisition; and
b) **Subscription receipts obligation** - a financial liability representing the Company's obligation to reimburse the holders of the subscription receipts representing the original proceeds, plus interest earned, pursuant to the subscription receipt agreement. The obligation arises in the event that the acquisition of Covelya Group Limited is not completed.

The offsetting amount for the underwriters' fees ($8,463) recognized to date, have been recorded in prepaids on the unaudited condensed interim consolidated statement of financial position. For the three-months and six-months ended June 30, 2026, $2,217 and $2,703 respectively of interest was earned on the amounts held in escrow relating to the subscription receipt offering. An update regarding the acquisition is disclosed in subsequent event note 22.

LIQUIDITY AND CAPITAL RESOURCES

As at June 30, 2026, the Company had working capital, defined as current assets less current liabilities, of $151,781 (June 30, 2025 – $71,813). Cash as at June 30, 2026, was $91,266 as compared to $32,867 as at June 30, 2025.

During the six-month period ended June 30, 2026, the Company experienced cash outflows of $16,235 (2025 – cash inflows of $1,539) from operating activities. Cash outflows from investing activities were $15,956 versus $32,408 for the same period in 2025. Financing activities resulted in inflows of $908 versus $6,988 for the same period in 2025.

In 2025 the Company closed a bought deal equity financing in July 2025 for gross proceeds of $115 million by issuing 43,240,000 common shares at a price of $2.66 per share.

The net proceeds of the offerings are expected to be used by the Company to (i) to facilitate its long term strategy, including potential investment in facilities, expanding manufacturing capacity, anticipated working capital for expansion of sole-source/single award programs and high probability pipeline opportunities; (ii) to further strengthen the Company’s balance sheet in anticipation of upcoming customer and partners decisions and source selection on additional large, new program and contract opportunities; and (iii) for general corporate purposes.

Per the final short form prospectus, the anticipated and approximate amounts used are below:

Principal Purpose	**Anticipated Amount**	**Approximate Amount Used**
Capital expenditures	$ 26,200	$ 27,435
Supply chain/parts and inventory	32,200	32,200
General corporate purposes and working capital	111,349	39,266
Offering expenses	1,050	1,050
Total	$ 170,799	$ 99,951

The term facility consists of (i) a revolving 3-year term facility of up to $60 million (subject to meeting certain borrowing base requirements based on eligible receivables and inventory) (the “Revolver”); (ii) a $10 million revolving capital expenditure line of credit; (iii) a $10 million uncommitted letter of credit facility; (iv) an uncommitted accordion facility of up to $30 million (the “Accordion”); (v) a US$5 million term loan (“Term Loan #1”); and (vi) a $125 million facility (“Term Loan #2”).

At June 30, 2026, the Company’s net debt (cash) was ($51.6) million compared to $(82.4) million at December 31, 2025.

	June 30, 2026	December 31, 2025
Long-term obligations (current and non-current portion)	**$25,740**	$23,780
Lease liabilities (current and non-current portion)	**13,956**	14,362
Total debt	**39,696**	38,142
Less: cash and cash equivalents	**$(91,266)**	$(120,507)
Net debt (cash)	**$(51,570)**	$(82,365)

No cash dividends have been declared or paid since the date of incorporation and the Company has no present intention of paying dividends on its common shares. The Company anticipates that all available funds will be used to finance the growth of its business.

CAPITAL MANAGEMENT

The Company’s objectives when managing its capital are to maintain a financial position suitable for supporting its operations and growth strategies, to provide an adequate return to shareholders and to meet its current obligations.

The Company’s capital structure consists of shareholders’ equity, lease liabilities, bank indebtedness, and long-term obligations. The Company will make adjustments to the capital structure depending on economic conditions, its financial position and performance. In order to maintain or adjust the capital structure, the Company may issue new shares, buyback shares, issue debt or sell assets to reduce debt.

A12 | Original Updated actual financing perimeter. Released2026-08-27; reporting period ended2026-06-30. Original PDF page 8; CAD thousands unless explicitly stated; actual share counts separately. Company-hosted primary PDF. Source: https://www.krakenrobotics.com/wp-content/uploads/2026/08/Kraken-MDA-Q2-2026-FINAL.pdf

Normal opening NWC is CAD70.365M legacy plus GBP33.688606M acquired ×1.85. Legacy financing prepaids8.463M and government assistance AND other4.976M are excluded from the trade conversion proxy; their composition and collection timing remain gaps. Arbitration6.911M is reclassified out of normal payables and paid once separately. Acquired prior-period tax is excluded from NWC and paid separately. This preserves the cash settlement without a duplicate provision deduction.

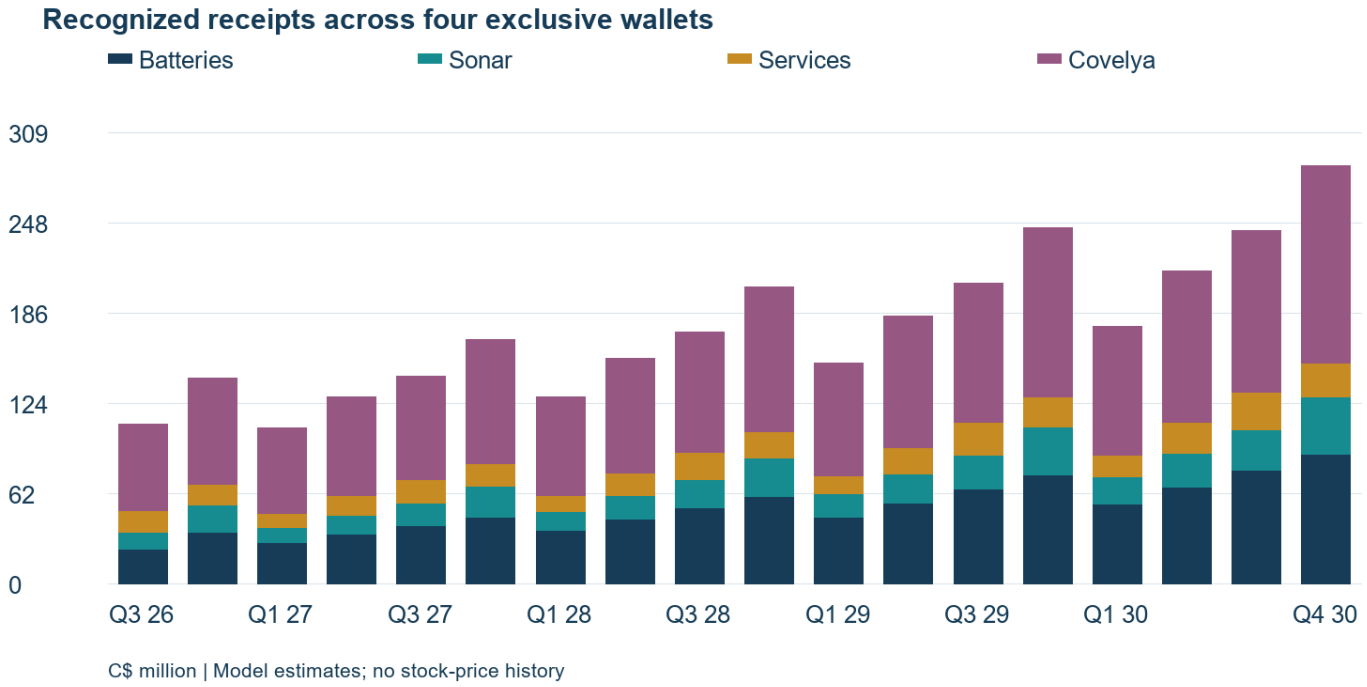

T023 | Sales-based NWC planning days | LOW

Component	Legacy days	Acquired days
inventory	110.000000	90.000000
trade_receivable	60.000000	60.000000
contract_asset	25.000000	3.000000
operating_prepay	20.000000	20.000000
supplier_accrual_payable	45.000000	38.000000
customer_advance	25.000000	40.000000

Each signed component equals annual eligible-receipt plan × days/365; payables and customer advances subtract. H2 transitions halfway toward the target each quarter. Battery/sonar prebuild stock times45% defines a financial inventory floor; use the larger of it and normal legacy inventory, without a second stock cash charge. This sales-based financial proxy includes paid labor/resources, while source purchased-content COGS alone would omit functions. Available cash is a conservative planning measure under these assumptions, not reported cash or a certified cash-tax forecast.

Cash tax =25% × max(0, OP + new-PPA amortization − debt interest − lease interest). No loss monetization, PPA shield, spare-cash yield or automatic ITC refund is credited. Available closing cash = opening cash + OP + D&A + SBC − uncollected ITC − forecast tax − opening tax settlement − NWC increase − PPE cash − development cash − debt/lease interest − debt/lease principal − arbitration. Debt and leases roll independently. A breach of30M would require an explicitly financed lower-capacity case.

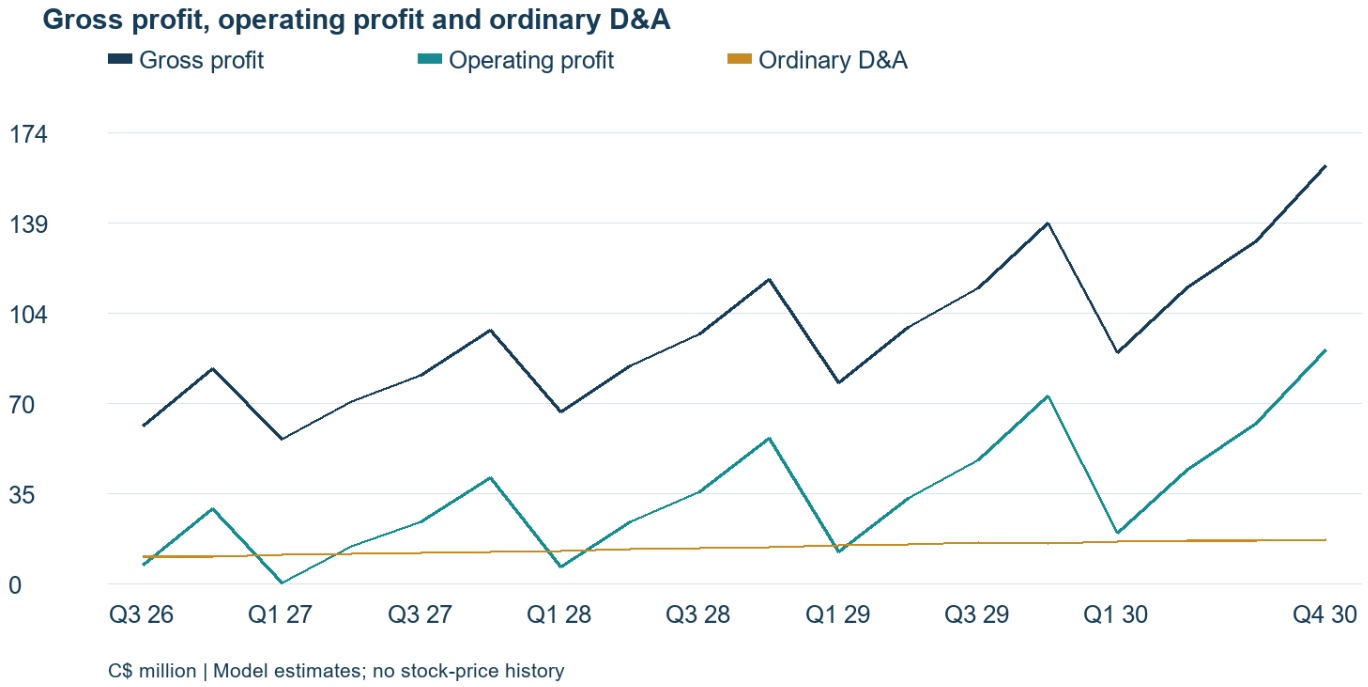

Quarterly revenue, margins and the principal driver

Current weighted model, CADM. Four external wallets sum to company receipts; no separate whole-program or overlapping-order line.

Exact rolling parent-economic ceiling derivation

Displayed table amounts are rounded; all sums, weights and ceilings use the unrounded structured calculations. Each quarter's OP = revenue × derived OP margin = GP − cash-like opex − ordinary SBC − ordinary D&A + ITC income + expected savings. Parent attribution is1, additional parent-cost adjustment0 and claim adjustment0. The valuation uses18 × the sum of parent OP from the named current quarter through its next three quarters, divided by that starting quarter's diluted model shares. Financing cost and taxes affect funding rather than the sanctioned pre-financing OP metric.

Q2–Q4 2030 have operating estimates but insufficient later quarters for their own four-quarter ceilings. Their forward-OP and ceiling cells remain genuinely blank. The Q4 2027 ceiling is CAD4.859314134960247 = CAD106.36498717635207M ×18 /394M. Shares are390/394/398/402/406M for starting quarters in2026/27/28/29/30. Acquired equity/receipt shares receive no duplicate addition.

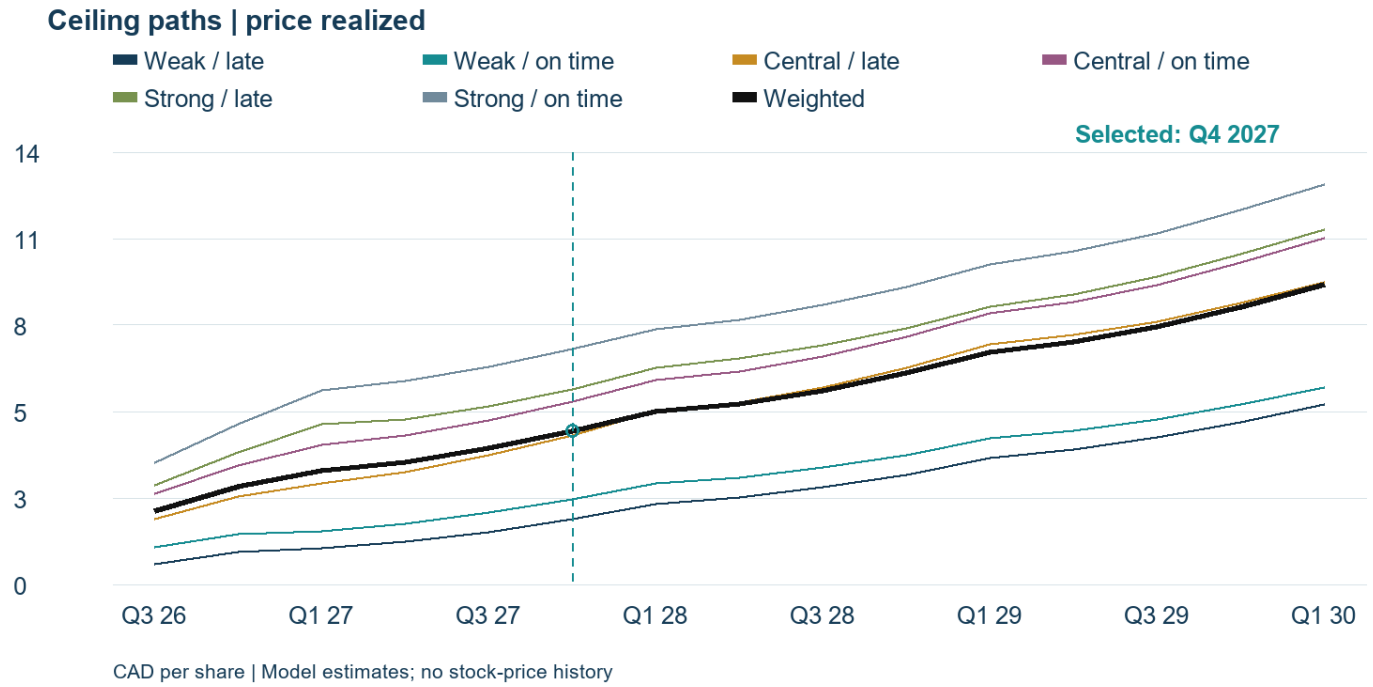

Six conditional operating outcomes in this pricing branch, plus the all-twelve-outcome weighted ceiling. Each line uses18x identical rolling windows and native starting-quarter shares. Subjective weights describe model uncertainty; no stock-price series is plotted.

Rule 16b ledger, active contributions and counters

Issuer releases, slides and the same management remarks form correlated source families. The MSA, demonstrations and capacity plans receive positive bounded weight before a formal award, subject to paid qualification and receipts. Marginal controls remove one modeled driver while retaining other assumptions and committed resources. They overlap and must never be summed into the target. They describe current-model causal exposure, not a historical target-change decomposition.

PNG-COVE-20260702-CLOSED | 100% Covelya control from July 2, with its external customer receipts consolidated once.

Source dates: 2026-07-02, 2026-09-22. Origin group: Issuer closing announcement and September BAR; the same acquisition..

Numerical probability: 100.000%. Completed ownership fact. Future acquired growth has its own conditional outcomes.

Kraken FY2026 includes reported legacy H1 and acquired H2 only. Acquired standalone GBP source accounts remain separate; forecast receipts convert at the LOW assumption of CAD1.85 per GBP.

Overlap control: Sonardyne, Voyis, software, rentals and monitoring stay in the single acquired wallet. Seller and receipt shares and the seller dividend are included once.

Counter evidence: A new combined filing changes the acquisition accounting or external-revenue scope; Actual closing FX, working capital, cash and purchase allocation replace the dated proxies.

PNG-BAT-XLUUV-20260827 | Eligible OEM platforms progress from prototypes to paid, qualified battery production during 2027–2030.

Source dates: 2026-07-20, 2026-08-27. Origin group: Issuer order updates, MSA and related management remarks; one correlated information family..

Numerical probability: 57.500%. Subjective probability that recognized 2027 battery receipts reach CAD150M. The MSA discloses no minimum purchases.

Core receipts of CAD110/130/150/170M combine with state-specific eligible OEM demand. Paid commissioned capacity, qualification, staff, prebuild inventory and acceptance cap recognition. Pricing applies only to the open future-order tranche.

Overlap control: The current new-program ramp is removed in its control while core renewals and committed paid resources remain. The full wallet is calculated once.

Increase test: By H1 2027, dated funded production awards and repeat accepted shipments can shift 10 percentage points toward stronger demand or timely execution; funded capacity needs separate support.

Reduction test: Production deferrals or repeated acceptance and scope reversals by H1 2027 shift 10 percentage points toward weak demand or delay and rephase eligible receipts.

PNG-SONAR-TENDERS-20260416 | Merchant SAS and eligible KATFISH content convert into accepted bundles.

Source dates: 2026-04-16, 2026-05-06, 2026-08-27. Origin group: Issuer tender discussion, demonstration and MOU; one operating-opportunity group..

Numerical probability: 57.500%. Subjective probability that recognized 2027 sonar receipts reach CAD65M. A demonstration supplies eligibility evidence.

Core CAD35/44/53/62M plus state-specific incremental receipts, phased for delay and constrained by paid assembly, test, staff and stock. Whole naval procurement budgets are excluded.

Overlap control: SAS and launch/recovery content inside a KATFISH bundle are counted once. MOU eligibility receives no separate duplicate receipt line; merchant competition constrains capture.

Increase test: A named funded award with Kraken content and acceptance dates supports a higher timely probability.

Reduction test: Awards deferred beyond 2027 or competing platform wins reduce conditional capture and rephase recognition.

PNG-OD-OBN-20260720 | At least GBP8M of incremental monitoring receipts are recognized in 2027 inside Covelya.

Source dates: 2026-07-20, 2026-08-27. Origin group: Issuer qualification and commercialization expectations; one source family..

Numerical probability: 57.500%. Subjective model probability. Positive but smaller or later receipts have 70% probability; neither outcome establishes a booked full-field award.

2027 eligible endpoints are GBP0/8/16M. Later endpoints follow the input register. Delay, acquired paid plant and separately paid manufacturing/support constrain recognition before CAD1.85/GBP conversion.

Overlap control: Incremental monitoring remains within Covelya. Historical core may contain development work; its uncertain carve-out is a LOW estimate. Whole oilfield spending is excluded.

Increase test: Customer field acceptance and repeat orders during 2027 can shift 10 percentage points from weak/delayed to central/timely outcomes.

Reduction test: Commercialization slips or a failed field qualification reduce or rephase the eligible increment.

PNG-STATIONARY-ASW-20260827 | At least GBP2M of incremental stationary-sensor and critical-infrastructure receipts are recognized in 2027.

Source dates: 2026-08-27. Origin group: Management Q2 call; retained ASR incompleteness limits detail..

Numerical probability: 57.500%. Subjective probability of the stated 2027 receipts; a funded award or minimum contractual purchase has not been established.

2027 eligible endpoints are GBP0/2/5M inside Covelya. Later schedules remain in the input register. Each increment pays 40% manufacturing, 12% support and field qualification while sharing funded plant capacity.

Overlap control: Existing acquired sensing business stays in core. Whole surveillance-system spending and a second MOU revenue line are excluded.

Increase test: Named customer funding, sensor content and delivery timing before H2 2027 support higher capture.

Reduction test: Deferred budgets or engineering-only scope reduce capture or rephase receipts.

PNG-PRICE-DELIVERY-SCARCITY | A modest price premium is realized on eligible open future renewals and orders.

Source dates: 2026-04-16, 2026-08-27. Origin group: Issuer delivery urgency and customer switching; there is no announced price increase..

Numerical probability: 30.000%. Subjective realization probability of 30%; only the central and strong realized branches receive a positive premium, making total positive-premium probability 21%.

A 2% central or 4% strong premium applies to 25% of legacy product receipts and 15% of acquired core receipts in the realized branch. Fixed backlog remains unchanged; inflation and expediting are paid.

Overlap control: Price is already inside receipts and is never added again to gross margin. A new-OEM demand control leaves distinct core-customer renewals in place.

Increase test: Verified improved open-order pricing can raise realization probability from 30% toward 45%.

Reduction test: Discounting, alternatives or insourcing can reduce it toward 15%, or to zero if the hypothesis is refuted.

PNG-COVE-SYNERGY-202603 | Paid operating-cost savings are realized, with uncertainty over the target's recurring versus cumulative definition.

Source dates: 2026-03, 2026-08-27. Origin group: Issuer target of approximately CAD10M cost efficiencies within 24 months..

T041 | PNG-COVE-SYNERGY-202603 | uncertainty weights

Interpretation	Probability
recurring	20.000%
cumulative	50.000%
unrealized	30.000%

20% recurring, 50% cumulative implementation and 30% unrealized interpretations use explicit timely/delayed schedules. Integration and retention costs remain charged.

Overlap control: The explicit expected saving is counted once. There is no additional CAD10M credit or second percentage-based opex reduction.

Increase test: A combined expense bridge demonstrates a durable annual saving and the costs needed to sustain it.

Reduction test: Integration costs exceed savings, or management clarifies that the target is cumulative rather than recurring.

PNG-COVE-PPA-20260922-GAP | The closed acquisition creates incremental finite fair-value uplift and ordinary amortization.

Source dates: 2026-09-22. Origin group: The September BAR omits the new purchase allocation; a bounded accounting hypothesis is required..

T042 | PNG-COVE-PPA-20260922-GAP | uncertainty weights

Interpretation	Probability
uplift10percent	25.000%
uplift20percent	50.000%
uplift30percent	25.000%

Extra finite pools of CAD61.5/123/184.5M carry 25%/50%/25% weights and a 7.5-year life. The weighted annual amortization is CAD16.4M. The extra PPA earns zero cash-tax shield.

Overlap control: Existing acquired software is retained once. Goodwill and indefinite brands are excluded from finite amortization; acquisition cash is already paid in the closing bridge.

Replacement test: A filed purchase allocation and useful-life reconciliation replace the LOW distribution. The synthetic pools are never presented as actual PPA.

Q3 2030	12.301754	7.463429	Incomplete
Q4 2030	17.497846	10.616215	Incomplete

No-PPA is a diagnostic of the current synthetic accounting assumption. Acquisition accounting is economically required; the diagnostic cannot be treated as an extra uncharged upside case. Zero price removes open-tranche premiums while

retaining input inflation, paid support and other operating resources. Removing new OEM demand leaves distinct core-customer renewals eligible for their own pricing branch.

Scorecard, risks and dated investment tests

T050 | Analytical score | sums to41/60

Category	Points / maximum	Evidence and constraint
Core	14 /20	Depth/energy-density and SAS qualification; merchant competition and OEM insourcing constrain exclusivity
Cycle	8 /10	UUV adoption and urgent defense/monitoring needs; tender cycles and seasonal acceptance
TAM	8 /10	Battery production transitions, mine countermeasures and acquired sensing; own content only
Catalysts	4 /5	Expected November24 results and2027 qualification/production; exact realization uncertain
Macro	8 /10	Defense/autonomy and subsea monitoring support spending; budget/project execution remains
Alpha	4 /5	Connect enabling content to paid capacity and ordinary acquired economics; no monopoly assumption
Risks	minus5	Five separate scored risk classes below
Total	41 /60 =68.333%; rounded68	Retained Excel Base72 remains a separate protected owner input

T051 | Five scored risk classes | one point each

Risk class	Deduction	Counter / measurable test
Qualification / tender timing	-1.000000	Repeat acceptance reversals, production slips or tender losses reduce demand/timely weights
Competition / customer concentration	-1.000000	Customer insourcing, merchant alternatives or lower attach reduce core capture and price probability
Acquired earnings / integration	-1.000000	Covelya ordinary support costs, weaker cash conversion or unrealized savings lower OP
Accounting / source completeness	-1.000000	Actual PPA/lives, source discrepancies and unreviewed audio replace LOW proxies when available
Funding / working capital	-1.000000	Closing adjustments, inventory absorption and loan terms may require lower paid capacity or explicit new funding

Precommitted tests: by H1 2027, dated funded OEM production awards and repeat accepted shipments can shift10percentage points toward stronger/timely states; repeated slips shift10points toward weak/delayed. Verified open-order price improvement can move the30% pricing hypothesis toward45%; discounting or insourcing moves it toward15% or zero when refuted. Named field commercial acceptance in2027 supports OD-OBN, while deferred commercialization rephases its own receipts. Filed combined expenses and PPA replace the savings/allocation hypotheses rather than layering another benefit.

T052 | Single-input sensitivities | Q4 2027 / same18x and394M shares

Changed input	Ceiling CAD	Difference vs selected	All cases above30M cash
GBP_FX_low	4.745711	-0.113603	Yes
GBP_FX_high	4.972917	0.113603	Yes
PPA_life_6	4.672004	-0.187310	Yes
PPA_life_10	5.046624	0.187310	Yes
closing_cash_minus20	4.859314	0.000000	Yes
cash_rate_plus2pp	4.859314	0.000000	Yes
NWC_days_plus20	4.859314	0.000000	Yes

Joint funding stress combines a20M lower closing-cash adjustment,20extra inventory days in both groups,9% debt interest, no pricing realization and no ITC monetization. Its lowest modeled available cash is CAD45.322001M, above the30M reserve. This is a bounded planning stress under the stated paid-capacity assumptions. The former3× leverage /1.15× coverage thresholds are monitoring proxies only; exact post-close legal covenants and compliance have not been verified.

Reproducible input register and calculation laws

All forecast inputs below are current root financial planning selections unless explicitly sourced actuals. Units: legacy and consolidated money CADM; keys endingGBP/GBPM are GBPM before1.85 conversion; shares M; costs per resource equivalent CADM/year; days are financial collection/payment indices; percentages are fractions in the raw register. Index0–3 means2027–2030, while H226 covers two quarters. Quarter index0 meansQ3 2026. Raw source pounds and CAD000 were normalized only in explicitly labeled actual tables.

Calculation laws | paid output, recognition and cash

Calculation sequence: (1) determine state/timing/pricing and annual eligible demand; (2) sum previously paid purpose-PPE that has commissioned; (3) cap financial capacity by initial capacity plus expansion, paid staff and plan ceilings; (4) phase annual demand and customer acceptance; (5) produce battery/sonar sales-equivalent stock up to one quarter of qualified annual capacity and recognize the lesser of demand and available stock; (6) apply open-tranche repricing only; (7) pay variable costs, full staff/tools, acquired core/new support and ordinary opex; (8) run finite cohorts; (9) compute OP, NWC, taxes, debt/lease service and available cash; (10) value complete forward windows; (11) weight all outcomes. Every nonlinear MIN/MAX/tax/stock calculation occurs within its conditional outcome first.

Legacy initial annual sales-equivalent capacity is200M batteries,60M sonar and50M services. Future expansion turns are8.333333 battery capacity/CADM productive PPE,5 sonar and2.5 services. Paid staff caps are1.8181818 battery,1.2 sonar and1.0 service annual receipts per resource equivalent. These are LOW proxies. Battery qualification is92% timely /84% delayed; delayed post2027 upper-plan expansion loses an additional10% of its increment. Forecast service receipts cannot exceed annual resources or30% of annual capacity per quarter.

Acquired initial financial capacity is GBP160M. Each commissioned incremental productive GBP of PPE supports4GBP of extra annual sales-equivalent capacity. Core resource capacity =160 × paid annual ordinary resources /[2 ×(53.095785−17.573233)]. New-vector support capacity is eligible OD-OBN plus stationary receipts times min(1, funded support/12%, funded manufacture/40%, funded qualification/base qualification). Core and new resource limits bind separately before the shared plant limit scales eligible receipts. Quarterly mixed-wallet scheduling caps at30% annual funded capacity in H2; annual forward demand already passes the shared caps.

Battery/sonar production = min(qualified quarter capacity, annual constant-price accepted-receipt plan/4; H2 uses half its half-year plan). Available stock = opening stock + planned production. Accepted constant-price receipts = min(seasonal desired receipts, available stock); closing stock = available stock − receipts. Starting sellable stock is zero because source inventory identifies raw materials/WIP without separately disclosed finished goods. No customer unit count or ASP is inferred.

weak delayed | price unrealized | complete quarterly path

Joint probability 9.450000%. All money CADM except ceilingCAD/share and sharesM. Current-quarter OP and funding are calculated within this complete outcome. Available-cash minimum 107.764751M. Conditional2026annual objects mean H2 only.

The finite cohort register and committed resource schedule below also apply to the price-realized twin of this demand/timing state. Its accepted prices, OP, taxes and cash remain separately tabulated in that later path. Equality of the complete cohort records has been checked before this shared presentation.

The finite cohort register and committed resource schedule below also apply to the price-realized twin of this demand/timing state. Its accepted prices, OP, taxes and cash remain separately tabulated in that later path. Equality of the complete cohort records has been checked before this shared presentation.

The finite cohort register and committed resource schedule below also apply to the price-realized twin of this demand/timing state. Its accepted prices, OP, taxes and cash remain separately tabulated in that later path. Equality of the complete cohort records has been checked before this shared presentation.

The finite cohort register and committed resource schedule below also apply to the price-realized twin of this demand/timing state. Its accepted prices, OP, taxes and cash remain separately tabulated in that later path. Equality of the complete cohort records has been checked before this shared presentation.

The finite cohort register and committed resource schedule below also apply to the price-realized twin of this demand/timing state. Its accepted prices, OP, taxes and cash remain separately tabulated in that later path. Equality of the complete cohort records has been checked before this shared presentation.

The finite cohort register and committed resource schedule below also apply to the price-realized twin of this demand/timing state. Its accepted prices, OP, taxes and cash remain separately tabulated in that later path. Equality of the complete cohort records has been checked before this shared presentation.

Source register, completeness and reproducibility

Original financial and technical exhibits are embedded at their point of use for offline reading. Issuer-authored Covelya BAR schedules were retrieved from the FinancialReports CDN mirror; original regulator-host retrieval remains unverified. FY2025 acquired IFRS is audited, H1 is unaudited, and neither supplies the new Kraken purchase allocation or an actual consolidated July closing balance. Source exact dates and units appear beside each exhibit.

Closing balance sheet and purchase accounting: An actual consolidated July 2 balance sheet, acquired closing cash, transaction FX, final working capital adjustment and new purchase allocation have not been supplied. Dated June balances and known financing produce an illustrative opening bridge; bounded finite amortization and closing-cash sensitivities remain necessary.

Escrow and financing expenses: June escrow of CAD396.745M already contains CAD2.703M interest and is net of only part of the underwriting fee. The approximately CAD386.4M fully fee-net raise is the alternative used in this model, with the interest identified separately. Gross escrow is never added again. Final closing movement and fee timing remain unverified.

Post-close loan terms: The actual CAD125M term draw and CAD60M total revolver limit are verified. The model's loan rate, amortization and covenant diagnostics remain LOW assumptions because the final post-close details have not been independently established. The preserved security charge is a scanned document; a readable underlying credit agreement was not supplied.

Dated net-debt illustration: The April presentation's CAD26M net-debt illustration combines different historical balance dates and proposed financing. The later statement that net debt is minimal gives no actual closing amount. The current model therefore uses the explicit closing and debt bridge rather than treating that illustration as the July balance.

Issuer share-count inconsistencies: The Q2 financial statement shows June issued shares of307,668,838, while the Q2 MD&A table shows307,686,285. The later August26 issued count is371,412,137. The displayed Q2 weighted basic count also exceeds the June closing figure. No invented reconciliation or change to the preserved diluted-share convention is made.

Issuer option weighted-average inconsistency: The option movement table, detailed option table and grant/exercise arithmetic report inconsistent weighted-average exercise prices. The exact disclosed counts and strikes remain preserved; a corrected weighted average has not been invented.

Quarterly D&A narrative discrepancy: The Q2 MD&A quarterly depreciation and amortization narrative sums to CAD3.221M, versus CAD3.189M in the primary income statement. The H1 depreciation roll less Q1 supports the primary total. The CAD0.032M discrepancy remains explicit; the primary statement and full H1 asset data govern the model.

Quarterly summary discrepancy: The MD&A quarterly summary contains different gross-profit, operating-profit and net-income figures from the current primary financial statement and the MD&A financial discussion. The model uses the primary current statement and preserves the conflicting source table as a gap.

Acquired payable-note discrepancy: Acquired current payables of GBP28.085308M plus noncurrent GBP1.386M total GBP29.471308M, while the note prints GBP30.471308M. The face balance sheet supports the component values. The unexplained GBP1M discrepancy is retained; source components govern the opening bridge.

Management-call completeness: The newest two confirmed earnings calls are August27 and April16. Complete available prepared remarks and Q&A in their saved ASRs were read, with obvious transcription errors and omissions retained. Mirrored recordings were preserved but not listened to; a company-authored verbatim transcript was not found. A May28 Q1 actual call was not located. The model does not claim complete primary-audio review.

Additional model gaps: no disclosed product ASP, standardized module attach rate, function-specific headcount, measured annual factory throughput or complete customer acceptance schedule. Financial sales-equivalent capacity, resources, capture, cost rates, PPA, FX and post-close debt terms are labeled LOW forward proxies. Missing official confirmation does not force a quantifiable opportunity to zero; explicit bounded probability and the paid economics govern its inclusion.

Source visual scope:44 selected financial pages plus one additional deck page were rendered before financial approval; the source agent personally viewed six and root viewed eight selected financial originals. Two additional preserved pages, BAR2 and deck11, were subsequently rendered and personally inspected by the source reviewer. Its personal total is eight; root's separate original-financial-page total remains eight. Twelve technical source pages were separately prepared. Rendering/hash checks are distinct from personal image inspection. Current PDF rendering requires independent and root review before release; the call recordings remain unlistened.
