POET Technologies | POET

Research cutoff: 25 October 2026, America/Toronto. Latest actual: Q2 2026, released 13 August. Classification: early commercial photonics, qualification and manufacturing scale-up. Holding status: not recorded in the supplied master.

A differentiated optical-integration platform and substantial funding create time to scale. The active operating case remains loss-making in the selected four-quarter window after manufacturing, development, support, depreciation, stock compensation and customer consideration.

Opening reference	Current interpretation
Saved quote	USD 8.91; no verified quote date. This is not a refreshed market quote.
Active window	Q4 2027 through Q3 2028
Quarterly reported-style revenue	25.642493 USD million
Quarterly operating profit	-16.844790 USD million
Four-quarter parent operating profit	-63.054363 USD million
Sanctioned method	20 x rolling four-quarter parent operating profit x unit factor / starting-quarter gross-potential shares
Starting-quarter denominator	270.882353 million shares
Signed operating-profit screen	-4.655480 USD/share arithmetic
Interpretation	No earnings-supported positive ceiling in this window. The negative arithmetic is not a negative share-price prediction, zero fair value, or a meaningful positive upside ratio. Cash is not added under the sanctioned method.
Analytical thesis score	36/60 = 60%. Fail band; independent of price.
Portfolio Base	60%. Protected portfolio control.

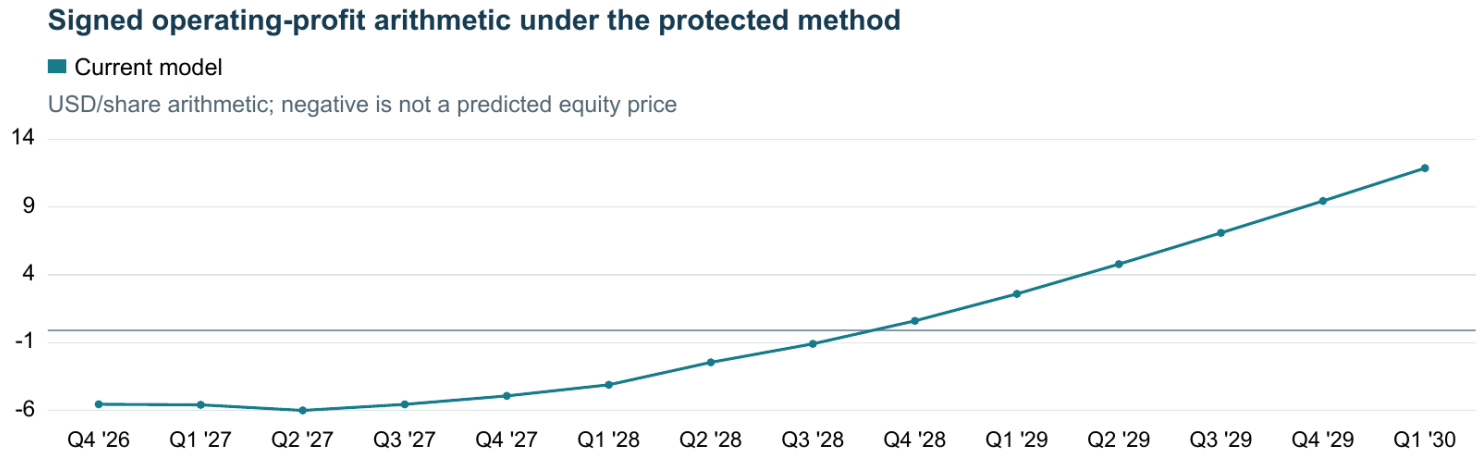

All financial amounts are USD millions unless labeled otherwise. The three conditional outcomes form one probability-weighted active case. Their weights are analyst judgments and are not management guidance. [M, E1, E6]

Q0-Q3 denote the four quarters beginning with each row. Current rows sum the displayed parent OP, multiply by the protected multiple and unit factor, then divide by the starting-quarter gross-potential denominator. Parent OP=(operating OP+Q) x P-Q-R. The protected P/Q/R paths remain 1/0/0. Q is a parent-only operating cost already included in company OP; it is added back before ownership allocation, then deducted in full. The legacy model identifier control.interest names this operating control, not financing interest. Liquid-fund interest is separate and excluded from OP. The historical Q3 2026 row is the original published vintage, not the current reconstruction. The last three financial quarters have no complete four-quarter window; no tail earnings are invented. [M]

Interpret the method within its limits

F01. Complete current windows. Only current model windows appear; the immutable historical vintage is separately preserved.

Q3 2029	96.4705	279.1176	6.912530
Q4 2029	128.6153	280.2941	9.177168
Q1 2030	161.9347	281.4706	11.506333

A negative result means this particular operating-earnings formula does not support a positive ceiling in that window. It is not a complete cash-adjusted equity appraisal. No revenue multiple, net-income substitute, cash addition or changed share convention is introduced. Price and per-share arithmetic remain confined to this opening panel. [M]

The investment case

POET offers an integration platform for optical engines and external light sources, rather than a complete AI network or a merchant share of every transceiver sold. Its Optical Interposer combines electronic and photonic devices with wafer-level passive assembly. The commercial question is whether that process becomes a repeatable, qualified production route with attractive retained economics. [E1, E4, E6, E8]

The balance sheet provides time to industrialize the platform. It does not remove qualification, yield, customer concentration or incentive costs. An optical component can solve a real engineering problem while its supplier still reports operating losses. The active case therefore builds accepted units, pricing, manufacturing costs, engineering and support, customer consideration, working capital and cash together. [E1, E4, E6, E8]

The principal information advantage is the timing of industrialization. Equipment commitments, a separate prototype line and products progressing through qualification are more useful than another generic optics-market forecast. They support a measurable operating hypothesis, with failure outcomes retained. Named development partners and customer logos do not establish market share. [E1, E4, E6, E8]

What POET changes in the manufacturing process

Conventional optical assembly often handles discrete components one at a time and uses active alignment to optimize optical coupling. POET integrates waveguides, multiplexing and other passive functions on an interposer, then attaches active devices with passive pick-and-place methods. Removing certain alignment and wire-bond steps can improve throughput, footprint and parasitics. The platform also accommodates different device materials and optical architectures. [E6, E17]

The cost advantage is a hypothesis about manufacturing steps. It is not a disclosed gross margin. The September presentation compares its platform with conventional chip-on-board and silicon-photonics implementations using internal estimates. Its whole-module savings and the larger packaging-cost claim have different denominators. Neither proves that a customer will pay a premium or that all savings remain with POET. [E6, E17]

Testing, fiber attachment, thermal performance, reliability and customer acceptance remain necessary. Passive interposer assembly does not eliminate every alignment or packaging operation elsewhere in the supply chain. This limits simplistic conclusions about the disappearance of competitors such as fiber-array and precision-assembly suppliers. [E6, E17]

Optical Interposer and optical-engine integration

POET'S FUNDAMENTAL TECH

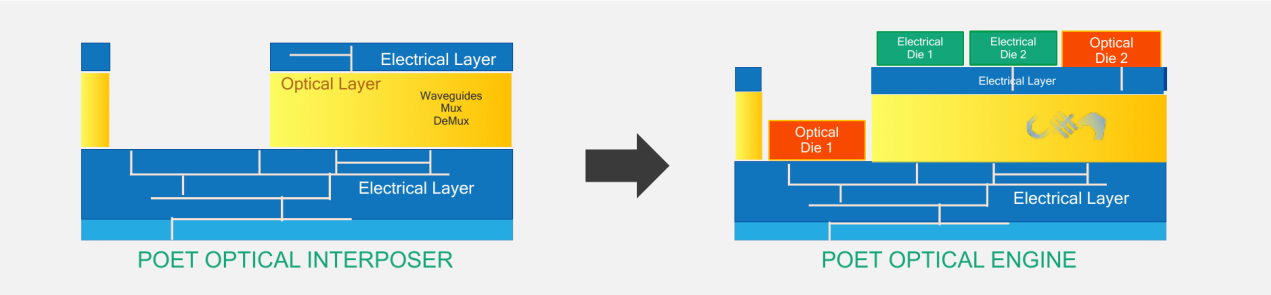

High throughput, visually assisted, passive "pick and place" assembly of electronics and photonics ICs and components at wafer scale – the "semiconductorization of photonics"

Improves Performance

- Chip-scale integration combines photonics and electronic devices in the same package
- Eliminates wire bonds - reducing interference and signal loss
- Compatible with multiple high performance devices, such as InP, TFLN, SiPh and more

Geometric Scaling

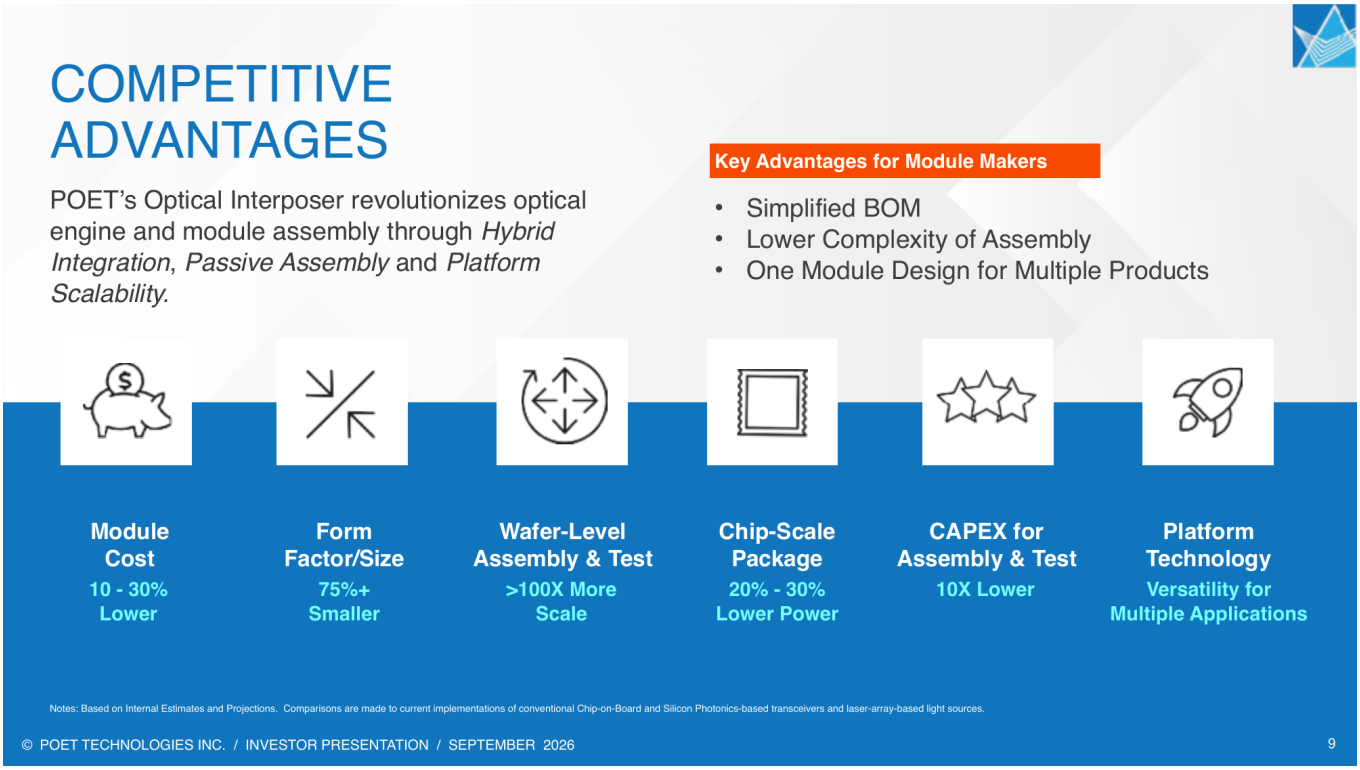

- Wafer-scale manufacturing, assembly and test allows rapid increase in scale and volume of devices produced.

Optical Interposer and optical-engine integration. Issuer September 2026 presentation, page 8. Architecture diagram; it does not establish a realized production yield. [E6]

Internal estimates of integration advantages

Internal estimates of integration advantages. Issuer September 2026 presentation, page 9. All comparisons are internal estimates and projections, with different cost denominators from a reported gross margin. [E6]

Three product curves, one operating company

The first curve is existing 400G and 800G products and the transition to 1.6T engines. Its near-term inflection is qualification turning into accepted repeat shipments. The second is the Lumilens Electrical-Optical Interposer program, where new high-speed designs and customer qualification determine the delivery schedule. The third is external light sources, including Blazar, whose larger scale opportunity remains later in the roadmap. [E6, E7, E10]

The themes overlap. A module development partnership can use POET engines, while a new external-light-source architecture can serve both pluggable and near-package systems. The model therefore uses disjoint engine, light-source, Lumilens and NRE baskets. It does not add the value of a complete module to the value of its internal engine or count the same optical demand twice. [E6, E7, E10]

In 2026-2027, the useful lens is orders, prototypes, accepted units and manufacturing readiness. In 2028-2029, the lens expands to faster links, NPO/CPO deployments and retention across product generations. For 2030 and beyond, capacity, actual component content and customer economics must constrain the addressable market. An industry transceiver forecast is a boundary and capture input, not a company revenue forecast. [E6, E7, E10]

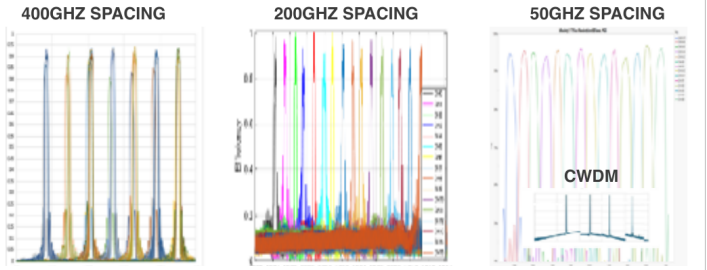

Blazar channel architecture and power configurations

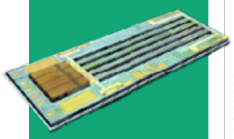

POET BLAZAR™ - HYBRID LASER

- Extreme control and precision across wafer utilizing conventional CMOS technology
- Ultra narrow bandwidth supporting channel spacing frequency down to 50GHz
- Center Wavelength control across wafer of < +/- 2nm
- Channel spacing control of < 10GHz
- Ability to generate >50mW of power per channel into a waveguide for applications requiring downstream multiplexing
- Ability to generate >80mW of power per channel when emitting into free space
- Potential to further increase power through optimization

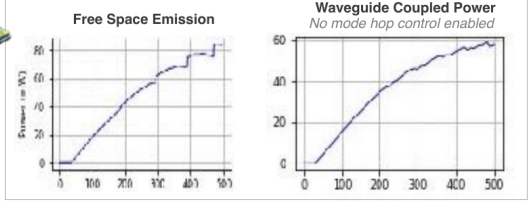

CHANNELS ARE SELECTED IN THE OPTICAL INTERPOSER

High Channel Count / Multi-frequency Solutions

High Power output per channel

Latest actuals and the expense anchor

Metric, USD million	Q1 2026	Q2 2026	H1 2026
Revenue	0.503389	0.569925	1.073314
Operating expenses	18.373547	20.760396	39.133943
Operating profit	-17.870158	-20.190471	-38.060629

Q2 operating loss = revenue 0.569925 - R&D 6.993258 - selling/marketing/admin 13.767138 = -20.190471. The statements do not provide a standalone commercial gross-margin series. [E1, M]

Q2 bridge or asset	USD million	Meaning
Net loss	-11.338060	Includes non-operating financial items; not the operating-earnings basis.
Stock compensation	3.816906	Note 20 component sum. An MD&A prose amount differs by USD3.
Finance-advisory expense	6.172500	Financing-related cost within reported administration; not repeated mechanically forever.
Operating cash flow	-12.270393	Exact H1 less Q1, rather than the rounded release summary.
Cash plus short investments	796.341903	Liquid starting pool; not cumulative capital raised.
Strategic loan asset	30.644384	Not cash. Borrower, security and any Lumilens relationship are undisclosed.
Lessengers financial asset	2.955150	Not liquid cash or evidence of control.

The next scheduled actual release is Q3 2026 on November16. It had not occurred at the research cutoff. Regular quarterly calls are intended to begin with the Q4/full-year 2026 release in March2027; those future events are not completed call coverage. [E5]

Normalize expenses without discarding real costs

Normalization, USD million	Amount	Interpretation
R&D excluding disclosed SBC	5.784056	Expense proxy, not an issuer-reported cash R&D line.
Administration excluding SBC, D&A and finance advisory	3.959981	Expense proxy; the forecast separately budgets administration, support and legal costs.
Total operating expense excluding finance advisory	14.587896	Stock compensation and depreciation are still real costs and remain in the operating model.

Forward engineering and administration grow from these source-derived anchors through explicit quarterly factors. Support, legal expenses, stock compensation, factory cost and depreciation remain separate. Direct product costs are introduced instead of assuming that a historical lack of a cost-of-sales line implies a product margin. The scenario tables show every input and its cost transmission. [M, E1]

The strategic-loan diagnostic is separate from operating earnings. A full loss of the recorded asset is a noncash financial-asset stress, with no loan recovery or interest assumed in the active cash path. The money was already lent in H1, so a later write-down does not create a second cash outflow. A borrower identity or contractual recovery should not be invented. [M, E1]

Thesis score and risk deductions

Category	Points	Evidence
Core thesis	13/20	Distinct wafer-level integration platform and named commercial engagements; volume manufacturing moat remains unproven.
Inflection and cycle	6/10	Funded equipment build and qualification progress, with little recognized product revenue so far.
Forward TAM	8/10	Higher speeds and optical I/O broaden the opportunity, bounded by component capture and alternative architectures.
Catalysts	4/5	Specific qualification, commissioning and customer-conversion milestones.
Macro and policy	7/10	AI connectivity demand and manufacturing diversification, with supply-chain and architecture risk retained.
Alpha and evidence	3/5	Separating accepted revenue from funnel, capital raised from liquid funds, and gross sales from customer incentives.
Risk deductions	-5	Five distinct classes: manufacturing, concentration, economics/dilution, governance/legal, competition/architecture.

The category sum is 36/60 = 60%. The protected portfolio Base is 60%. The score assesses thesis quality and is not the probability of a contract, a return measure or a second discount on operating results. [M]

Lumilens: commercial validation with substantial conditions

The initial purchase order sits within the potential multi-year purchasing framework. It is not an additional amount on top of that framework. The joint program depends on successful development, qualification and manufacturing scale-up. Engineering samples, validation and eventual shipments are separate events. [E1, E8, E10]

The latest available informal management update says much of the new design work is complete and product validation is expected to begin. That is a forward signal worth modeling. It does not mean the entire order has been accepted or paid. The conditional outcomes vary both delivery timing and cumulative realization, including a failure outcome. [E1, E8, E10]

Customer warrants make this more than a gross-sales exercise. The booked deferred customer consideration is distinct from a conservative full-vesting valuation proxy. The model retains the existing same-unit-fair-value treatment as an explicit estimate, rather than silently substituting current share prices for grant-date values. Amortization reduces reported-style revenue and profit while gross customer receipts depend on delivery and collection. [E1, E8, E10]

In the failure outcome, the known deferred customer asset is written off rather than left stranded. That impairment is noncash and is added back once in cash flow. In successful outcomes, amortization is also added back once. Neither treatment creates cash from an undelivered order, and no warrant-exercise financing is assumed. [E1, E8, E10]

Other customers and partners: separate roles and overlap

LITEON contributes optoelectronic and manufacturing capabilities to module development. Lessengers contributes Direct Optical Wiring to a transceiver using POET engines. The later Lessengers sampling target supersedes the earlier target, but delivery against it is not established merely by repeating the announcement. The applicable market is the same 1.6T bandwidth segment, not two additive markets for different connector formats. [E11-E16]

Sivers independently confirms a technical laser engagement. It does not disclose a POET end-customer allocation or guarantee that every Blazar configuration uses a Sivers component. Conventional DFB arrays and the Blazar hybrid architecture must remain distinct. Likewise, the unnamed Tier 1 laser development agreement is not automatically assigned to a familiar supplier. [E11-E16]

NTT, Mitsubishi and ADTRAN represent different product or customer roles. Their presence broadens the roadmap, but component collaboration is not an extra revenue award beyond the modeled engine or light-source basket. The September presentation explicitly says representative end-customer logos of partners do not imply a POET relationship. [E11-E16]

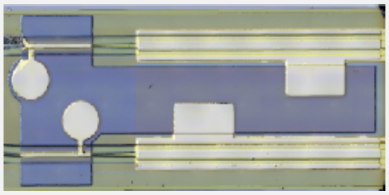

The canceled Celestial AI orders remain excluded. The issuer confirmed cancellation and disclosed Marvell's stated confidentiality objection. The objection and pending litigation are not adjudicated findings of misconduct. A separately described order from another technology company must not be counted twice under slightly different descriptions. [E11-E16]

Mitsubishi laser integration roadmap

CUSTOMER FOCUS

MITSUBISHI ELECTRIC

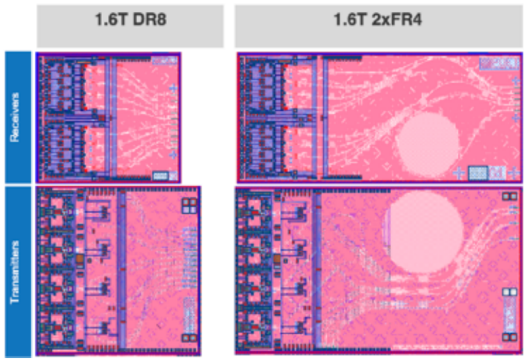

A collaboration to build 1.6T and 3.2T pluggable transceiver modules pluggable transceiver modules using Mitsubishi's 200G and 400G EMLs on the POET Optical Interposer.

2 X 200G – Single Chip 400G EML

EXTENDING EMLs INTO NEXT GENERATION TRANSCEIVERS

- Mitsubishi's 400G lasers cannot be used in conventional assembly with wire bonds – too much cross-talk
- Requires an integration platform
- Reliable, inexpensive, field-proven EMLs are preferred laser solution for end-users at 800G and 1.6T

ONE set of lasers – THREE different form factors – ONE module design

© POET TECHNOLOGIES INC. / INVESTOR PRESENTATION / SEPTEMBER 2026

14

Mitsubishi laser integration roadmap. Issuer September 2026 presentation, page 14. Integration roadmap and component relationship, not a separately quantified revenue award. [E6]

Capacity is funded; qualification still determines throughput

The newer September capacity slide and June's monthly endpoint are not identical. The model uses a bounded capacity envelope and does not infer shipped demand from either target. Different products can consume different assembly and test resources, so mixed engine-equivalent utilization is a diagnostic rather than proof of shared-tool throughput. [E6-E8]

The latest informal interview places equipment deliveries ahead of installation and production use. The model reflects the lag between paying for equipment and earning revenue from it. Opening equipment not yet in service also requires commissioning. Depreciation begins when assets enter service, while the cash payment can occur earlier. [E6-E8]

A separate Singapore prototype line can protect Penang production from development interruptions, but it adds staff, infrastructure and running costs. Manufacturing support, engineering, sales support and recurring public-company costs remain explicit. Customer acceptance, qualified yield, component availability and repeat orders are the tests of operating leverage. [E6-E8]

Assembly and test capacity expansion

ASSEMBLY AND TEST CAPACITY

LOCATION

Penang, Malaysia

CONTRACT MANUFACTURERS

Established partners in key jurisdiction

> 8K sq ft of clean room space going to 20K sq ft

> 25 semiconductor assembly and test tools installed:

- Electrical die bonders
- Reflow oven
- Wire-bonders
- Burn-in and testers

Wafer-level assembly and test

GROWING FROM 1M/yr UNITS TO 10M/yr

© POET TECHNOLOGIES INC. / INVESTOR PRESENTATION / SEPTEMBER 2026

Assembly and test capacity expansion. Issuer September 2026 presentation, page 11. The newer annual capacity target differs from the older monthly endpoint; capacity is not accepted demand. [E6]

Rule16b: model the uncertainty through complete outcomes

The three mutually exclusive outcomes represent joint commercial and manufacturing states. They are subjective analyst judgments, not measured frequencies. Their probabilities sum to one. Each outcome carries its own units, timing, manufacturing margin, expenses, capex, working capital and cash. The active case weights complete coherent outcomes rather than multiplying a bullish sales headline by an unrelated margin. [M, E6-E13]

The delayed outcome retains limited other-engine and light-source activity but fails the Lumilens program. The commercial outcome fulfills the initial order over time and realizes a substantial partial multi-year relationship. The accelerated outcome achieves faster engine adoption and the full modeled purchasing envelope. Later-period purchasing tails are disclosed separately and do not enter current four-quarter operating windows. [M, E6-E13]

The equipment build, the engagement funnel and named programs are correlated evidence. They are not independent revenue additions. Scarcity pricing is confined to a small eligible portion of new other-engine orders in the accelerated state, with incremental expediting and material costs. Fixed Lumilens orders are not repriced. This avoids counting both a whole-market price uplift and the same margin benefit twice. [M, E6-E13]

The delayed outcome supplies the no-increment reference. The difference between the active case and this reference is the joint expected effect of greater commercialization, including its costs and incentives. It is not a set of separately additive awards. The quarterly probability expansions below show exactly how the active financial case is formed. [M, E6-E13]

Rule16b | signal ledger 1-2

POET-LUMI-INITIAL50 | 75.0%

Signal dates: 2026-05-15;reassessed2026-09-30. Outcome: Full initial USD50M accepted cumulatively by end-2028 in the commercial or accelerated state; the delayed state cancels.

Rationale: 75% equals the 55% commercial and 20% accelerated weights. A disclosed initial order is stronger evidence than the full envelope but remains conditional on development and qualification. Full initial delivery during 2027 occurs only in the 20% accelerated state. Source/repost group: May agreement, June AGM and official recap, same event, September unofficial interview transcript.

Reference and derivation: The delayed outcome is the no-broader-commercialization reference, not a second active model. Each outcome includes units and ASPs, direct product costs, shared factory costs and depreciation, core operating expenses, customer consideration or impairment, working capital, capex, interest, taxes, debt and lease cash.

Overlap: Equipment readiness, customer qualification, components, accepted shipments and all cost/financing paths are represented jointly. Apply the joint weights once and do not add overlapping programs twice.

Quarterly contribution: L1. Model owners: active.Lumilens.1, active.Lumilens.2 through active.Lumilens.17

Revision tests: Joint-distribution test: earlier qualified acceptance, repeat paid shipments and sound retained margins/throughput support moving 10 percentage points from delayed to commercial, maintaining 100% total weight. A two-quarter qualification or commissioning miss supports moving 15 points from commercial to delayed; cancellation invokes the program-failure path. Review November16 results, Q1/Q2 2027 commissioning and 2028 ELS production. Update one joint distribution once for a source event, not independently for every overlapping ledger row.

POET-LUMI-FULL500 | 20.0%

Signal dates: 2026-05-15;reassessed2026-09-30. Outcome: Full USD500M cumulative gross purchases over 2027-2031 in the accelerated state.

Rationale: The specific agreement supplies a conditional endpoint, not full firm backlog. The commercial state realizes USD400M; the delayed state realizes zero. New-design validation and the customer ramp constrain timing. Source/repost group: May15agreement SAMEeventasinitial50, JuneAGMfullwarrantvestingthreshold500, Sep30interview.

Reference and derivation: The delayed outcome is the no-broader-commercialization reference, not a second active model. Each outcome includes units and ASPs, direct product costs, shared factory costs and depreciation, core operating expenses, customer consideration or impairment, working capital, capex, interest, taxes, debt and lease cash.

Overlap: Equipment readiness, customer qualification, components, accepted shipments and all cost/financing paths are represented jointly. Apply the joint weights once and do not add overlapping programs twice. This is the broader outcome of the same Lumilens vector. Its quarterly contribution is shown once and is not added again to the initial-order contribution or company revenue

Quarterly contribution: L1. Model owners: active.Lumilens.1, active.Lumilens.2 through active.Lumilens.17

Revision tests: Additional orders, payments and qualified designs supporting the broader path may justify moving 10 percentage points from commercial to accelerated after reassessing capacity and retained margins. A larger-program design, payment or ramp miss may justify moving 10 points from accelerated to commercial or delayed, with timing and costs revised. The initial order alone does not confirm the full envelope. Review November16 results, 2027 acceptance and later incremental orders; update the joint distribution once.

Rule16b | signal ledger 3-4

POET-ENGINE-ACCEPTANCE | 75.0%

Signal dates: 2026-08-13;2026-09-23;2026-09-30. Outcome: Qualified repeat engine shipments above the delayed path in the commercial and accelerated outcomes.

Rationale: Funded capacity, named partnerships and reported qualification progress support nonzero capture. Accepted end-customer orders and realized margins remain sparsely disclosed. Source/repost group: Q2productionorders incl5M/2.4M, Septdeck, Septinterview.

Reference and derivation: The delayed outcome is the no-broader-commercialization reference, not a second active model. Each outcome includes units and ASPs, direct product costs, shared factory costs and depreciation, core operating expenses, customer consideration or impairment, working capital, capex, interest, taxes, debt and lease cash.

Overlap: Equipment readiness, customer qualification, components, accepted shipments and all cost/financing paths are represented jointly. Apply the joint weights once and do not add overlapping programs twice. Known orders and partner projects are included within other engines. A small order does not establish near-certainty for the entire larger outcome

Quarterly contribution: L2. Model owners: active.engines.1, active.engines.2 through active.engines.17

Revision tests: Joint-distribution test: earlier qualified acceptance, repeat paid shipments and sound retained margins/throughput support moving 10 percentage points from delayed to commercial, maintaining 100% total weight. A two-quarter qualification or commissioning miss supports moving 15 points from commercial to delayed; cancellation invokes the program-failure path. Review November16 results, Q1/Q2 2027 commissioning and 2028 ELS production. Update one joint distribution once for a source event, not independently for every overlapping ledger row.

POET-ELS-BLAZAR | 75.0%

Signal dates: 2026-06-26;2026-08-13;2026-09-23. Outcome: Broader external-light-source expansion from 2028, including the Blazar roadmap, in commercial and accelerated outcomes.

Rationale: Sponsored/NRE work, the laser-development agreement and a credible technical roadmap support capture before official volume confirmation. Reliability, acceptance and component economics limit the amounts. Source/repost group: AGMBlazar2028, Q2unnamedtier1laser+exclusivecomponent, Sivers/LITEON/Lessengers roleboundaries, Septdeckp15.

Reference and derivation: The delayed outcome is the no-broader-commercialization reference, not a second active model. Each outcome includes units and ASPs, direct product costs, shared factory costs and depreciation, core operating expenses, customer consideration or impairment, working capital, capex, interest, taxes, debt and lease cash.

Overlap: Equipment readiness, customer qualification, components, accepted shipments and all cost/financing paths are represented jointly. Apply the joint weights once and do not add overlapping programs twice. Blazar and unnamed supplier programs sit inside the ELS vector. No separate fabricated TAM or additional named-customer allocation is added

Quarterly contribution: L3. Model owners: active.ELS.1, active.ELS.2 through active.ELS.17

Revision tests: Joint-distribution test: earlier qualified acceptance, repeat paid shipments and sound retained margins/throughput support moving 10 percentage points from delayed to commercial, maintaining 100% total weight. A two-quarter qualification or commissioning miss supports moving 15 points from commercial to delayed; cancellation invokes the program-failure path. Review November16 results, Q1/Q2 2027 commissioning and 2028 ELS production. Update one joint distribution once for a source event, not independently for every overlapping ledger row.

Rule16b | signal ledger 5-6

POET-CAPACITY-Q227 | 75.0%

Signal dates: 2026-09-30. Outcome: The broader commercial/accelerated qualified-capacity and acceptance envelope is available during Q2 2027; the delayed path retains smaller capacity.

Rationale: Equipment orders and installation plans are concrete forward signals, but the latest spoken-source transcript is unofficial and AI-generated. The delayed state retains slower industrialization. Source/repost group: Sept30interview, Sept23deck10M/year envelope.

Reference and derivation: The delayed outcome is the no-broader-commercialization reference, not a second active model. Each outcome includes units and ASPs, direct product costs, shared factory costs and depreciation, core operating expenses, customer consideration or impairment, working capital, capex, interest, taxes, debt and lease cash.

Overlap: Equipment readiness, customer qualification, components, accepted shipments and all cost/financing paths are represented jointly. Apply the joint weights once and do not add overlapping programs twice. The equipment orders, initial H2 deployment plan and full-year capex projection overlap. The model uses the total 2026 plan less actual H1 capex, not a sum of the three headlines. Capacity remains a feasibility check rather than booked sales

Quarterly contribution: L4. Model owners: active.capex.1, active.capex.2 through active.capex.17

Revision tests: Joint-distribution test: earlier qualified acceptance, repeat paid shipments and sound retained margins/throughput support moving 10 percentage points from delayed to commercial, maintaining 100% total weight. A two-quarter qualification or commissioning miss supports moving 15 points from commercial to delayed; cancellation invokes the program-failure path. Review November16 results, Q1/Q2 2027 commissioning and 2028 ELS production. Update one joint distribution once for a source event, not independently for every overlapping ledger row.

POET-SCARCITY-PRICING | 20.0%

Signal dates: 2026-06-26;reassessed2026-09-30. Outcome: The accelerated state earns an 8% premium on 25% of eligible new other-engine base sales, with 4% extra expediting cost on that same pool.

Rationale: Scarce components and qualified slots can support pricing, but unproven utilization and undisclosed contracts limit realization to the accelerated joint state. There is no second independent pricing probability. Source/repost group: AGMcomponent/isolatorleadtime, Frameworkscarcityprotocol.

Reference and derivation: The delayed outcome is the no-broader-commercialization reference, not a second active model. Each outcome includes units and ASPs, direct product costs, shared factory costs and depreciation, core operating expenses, customer consideration or impairment, working capital, capex, interest, taxes, debt and lease cash.

Overlap: Equipment readiness, customer qualification, components, accepted shipments and all cost/financing paths are represented jointly. Apply the joint weights once and do not add overlapping programs twice. Variable margins apply to base-price sales. Premium and extra costs are explicit; fixed Lumilens orders and unrepriceable backlog receive no premium

Quarterly contribution: L5. Model owners: active.scarcity_revenue.1, active.scarcity_revenue.2 through active.scarcity_revenue.17

Revision tests: Joint-distribution test: earlier qualified acceptance, repeat paid shipments and sound retained margins/throughput support moving 10 percentage points from delayed to commercial, maintaining 100% total weight. A two-quarter qualification or commissioning miss supports moving 15 points from commercial to delayed; cancellation invokes the program-failure path. Review November16 results, Q1/Q2 2027 commissioning and 2028 ELS production. Update one joint distribution once for a source event, not independently for every overlapping ledger row.

Rule16b | signal ledger 7-8

POET-LUMI-ASSET-RISK | 25.0%

Signal dates: 2026-08-13;Rootreview2026-10-25. Outcome: The delayed 25% failure outcome writes off the known USD30.142069M customer asset in Q1 2028; successful outcomes amortize the proxy as related sales occur.

Rationale: A contract-failure state is required for contingent development and qualification. Keeping the asset forever or assuming every order is certain would understate risk. Source/repost group: Q2Notes2/21/24, Same Lumi jointoutcomes.

Reference and derivation: The delayed outcome is the no-broader-commercialization reference, not a second active model. Each outcome includes units and ASPs, direct product costs, shared factory costs and depreciation, core operating expenses, customer consideration or impairment, working capital, capex, interest, taxes, debt and lease cash.

Overlap: Equipment readiness, customer qualification, components, accepted shipments and all cost/financing paths are represented jointly. Apply the joint weights once and do not add overlapping programs twice.

Quarterly contribution: L6. Model owners: active.impairment.1, active.impairment.2 through active.impairment.17

Revision tests: Joint-distribution test: earlier qualified acceptance, repeat paid shipments and sound retained margins/throughput support moving 10 percentage points from delayed to commercial, maintaining 100% total weight. A two-quarter qualification or commissioning miss supports moving 15 points from commercial to delayed; cancellation invokes the program-failure path. Review November16 results, Q1/Q2 2027 commissioning and 2028 ELS production. Update one joint distribution once for a source event, not independently for every overlapping ledger row.

POET-CANCELLED-CELESTIAL | 0.0%

Signal dates: 2026-04-27. Outcome: Reinstatement of canceled orders within the active case.

Rationale: The primary cancellation remains controlling; no contrary commercial evidence was established. Source/repost group: April27issuerPOupdate.

Reference and derivation: The delayed outcome is the no-broader-commercialization reference, not a second active model. Each outcome includes units and ASPs, direct product costs, shared factory costs and depreciation, core operating expenses, customer consideration or impairment, working capital, capex, interest, taxes, debt and lease cash.

Overlap: Equipment readiness, customer qualification, components, accepted shipments and all cost/financing paths are represented jointly. Apply the joint weights once and do not add overlapping programs twice. All outcomes retain zero Celestial/Marvell orders because of explicit cancellation evidence, not a generic lack of confirmation

Quarterly contribution: No additional operating contribution; explicit disposition above.. Model owners: No additional operating series.

Revision tests: A credible reinstatement or replacement signal identifying amount, product, timing and terms triggers a bounded expected-economics review. Continued cancellation or contrary customer evidence retains zero reinstatement. Repeated cancellation reposts do not create a new event.

Rule16b | signal ledger 9-10

POET-ACQUISITIONS | 20.0%

Signal dates: 2026-06-26. Outcome: An identifiable strategic acquisition completed by 2028.

Rationale: Management expresses strategic interest, but a target, terms, price and earnings are unknown. A subjective event probability does not establish retained operating profit. Source/repost group: JuneAGMstrategy, Lessengers4.99%investmentseparate.

Reference and derivation: The delayed outcome is the no-broader-commercialization reference, not a second active model. Each outcome includes units and ASPs, direct product costs, shared factory costs and depreciation, core operating expenses, customer consideration or impairment, working capital, capex, interest, taxes, debt and lease cash.

Overlap: Equipment readiness, customer qualification, components, accepted shipments and all cost/financing paths are represented jointly. Apply the joint weights once and do not add overlapping programs twice. A tested USD50M budget proxy cannot establish acquired profit, price or useful timing without target economics. No acquisition earnings, purchase cash or financing is invented. The Lessengers minority financial asset is not evidence of control

Quarterly contribution: No additional operating contribution; explicit disposition above.. Model owners: No additional operating series.

Revision tests: An identifiable target with price, financing, ownership, technology and earnings permits a bounded acquisition bridge and refreshed event probability. Abandoned talks, prohibitive terms or strategic retrenchment lower that likelihood. Do not mechanically change engine-qualification probabilities.

POET-PENDING-LITIGATION | 20.0%

Signal dates: 2026-08-13. Outcome: A material adverse final settlement beyond routine legal expense.

Rationale: Pending claims remain a risk, but allegations are not an adjudicated finding. Source/repost group: Q2legalnotes, Aprilcancellation.

Reference and derivation: The delayed outcome is the no-broader-commercialization reference, not a second active model. Each outcome includes units and ASPs, direct product costs, shared factory costs and depreciation, core operating expenses, customer consideration or impairment, working capital, capex, interest, taxes, debt and lease cash.

Overlap: Equipment readiness, customer qualification, components, accepted shipments and all cost/financing paths are represented jointly. Apply the joint weights once and do not add overlapping programs twice. The recurring legal budget is already explicit. A claim-size/settlement proxy could not be bounded because damages, claim quantum and settlement terms are missing. This does not make event probability zero or authorize a fabricated liability

Quarterly contribution: No additional operating contribution; explicit disposition above.. Model owners: No additional operating series.

Revision tests: Court findings, quantified claims or settlement negotiations can establish adverse-event likelihood, amount and timing. Dismissal, withdrawal, favorable judgment or an immaterial settlement reduce legal risk. Review material legal news and the next contingency disclosure separately from the operating distribution.

Rule16b | signal ledger 11-12

POET-STRATEGIC-LOAN | 25.0%

Signal dates: 2026-06-30. Outcome: A credit or fair-value loss on the strategic loan asset, separate from operating earnings.

Rationale: Level3 FVTPL exposure and an undisclosed borrower justify a separate financial-asset risk. No Lumilens connection is established. Source/repost group: Q2Notes18/22/23.

Reference and derivation: The delayed outcome is the no-broader-commercialization reference, not a second active model. Each outcome includes units and ASPs, direct product costs, shared factory costs and depreciation, core operating expenses, customer consideration or impairment, working capital, capex, interest, taxes, debt and lease cash.

Overlap: Equipment readiness, customer qualification, components, accepted shipments and all cost/financing paths are represented jointly. Apply the joint weights once and do not add overlapping programs twice. A full USD30.644384M noncash financial-asset loss is the maximum recorded-asset stress. The active law excludes recovery and loan interest; the sanctioned OP measure excludes financial fair-value items. The H1 cash was already lent, so no second cash deduction occurs. The probability is a risk diagnostic, not an extra operating weight

Quarterly contribution: No additional operating contribution; explicit disposition above.. Model owners: No additional operating series.

Revision tests: Funding failure, default, an adverse valuation or weaker recovery terms raise financial-loss likelihood. Verified repayment, new funding, secured recovery or improved conversion/liquidity reduce it. Review issuer loan/FV disclosures or credible borrower evidence; do not invent the borrower, security or correlation with Lumilens.

POET-GENERIC-AI-CAPEX | 15.0%

Signal dates: 2026-10-25 scopecheck. Outcome: A new direct POET award inferred from broad AI infrastructure spending.

Rationale: Optical demand is credible, but project capex does not establish this component wallet or customer allocation. Source/repost group: Existingframeworkopticsdemand, Partnerrepresentativeendcustomerlogos.

Reference and derivation: The delayed outcome is the no-broader-commercialization reference, not a second active model. Each outcome includes units and ASPs, direct product costs, shared factory costs and depreciation, core operating expenses, customer consideration or impairment, working capital, capex, interest, taxes, debt and lease cash.

Overlap: Equipment readiness, customer qualification, components, accepted shipments and all cost/financing paths are represented jointly. Apply the joint weights once and do not add overlapping programs twice. A capex x optical-wallet x capture attempt could not identify a non-overlapping award beyond the current engine, ELS and Lumilens paths. No additional macro revenue or undisclosed customer claim is invented

Quarterly contribution: No additional operating contribution; explicit disposition above.. Model owners: No additional operating series.

Revision tests: A credible customer, program or component-wallet signal identifying incremental POET units or sales prompts review. Competing architectures, reduced optical content or lost capture weaken the inference. Broad capex reposts alone are not a new award.

Rule16b L1 | quarterly conditional and active contribution

Source signal: POET-LUMI-INITIAL50. Metric: Gross Lumilens sales. All values are USD millions. Reused table references represent the same modeled series and are never added again. Positive capex and impairment values are uses or expenses, not revenue. [M]

The delayed outcome is the no-broader-commercialization reference. A displayed increment already belongs to the relevant product or cost vector in the active company model. It is not another revenue award. The model evaluates product margins, shared factory cost, support, cash and incentives through complete outcomes rather than applying this difference to revenue alone. [M]

Active revenue: disjoint product baskets

F02. Current active reported-style revenue. Four baskets reconcile to total revenue. Q3 2026* is a current reconstruction, not the historical display.

Each product contribution includes allocated common factory fixed cost and production depreciation. Lumilens also deducts customer consideration. The four contributions sum to company gross profit; they are not four independent factories. [M]

Operating earnings, customer consideration and cash

The latest interim statements include operating costs in R&D and selling, marketing and administration rather than disclosing a standalone product cost-of-sales or gross-margin series. Historical revenue less these operating expenses reproduces operating loss. The absence of a cost-of-sales line is not evidence of a commercial product margin near one hundred percent. [M, E1, E2]

The forecast introduces explicit variable manufacturing costs, factory fixed costs and production depreciation. It then deducts engineering, administration, sales support, legal costs, stock compensation, non-production depreciation and any customer-asset impairment. Product-level gross-profit attribution allocates common factory costs for presentation and reconciles to total gross profit; it does not create four independent factories. [M, E1, E2]

Interest income and derivative-warrant remeasurement are excluded from operating profit. Cash includes the modeled return on liquid funds, but that return is not added to operating earnings. Customer-consideration amortization and stock compensation are noncash add-backs, not free economic profit. Working-capital investment and capex are cash uses. [M, E1, E2]

The customer-warrant notes contain inconsistent dates and valuation assumptions. The report preserves those source discrepancies and does not claim an independent option-valuation replication. The full-vesting proxy is a model assumption, distinct from the amount booked in the current financial statements. Future vesting, contract performance, amortization timing and final accounting can change retained economics materially. [M, E1, E2]

The Q2 stock-compensation component sum differs from an MD&A prose amount by only USD3. The component sum is used. This small source inconsistency is retained and does not justify rewriting the historical financial statements. [M, E1, E2]

Common financial assumptions and source anchors

Assumption	Value	Unit	Basis
Opening liquid funds	796.341903	USD million	Q2 filed cash432.531904 + shortinvestments363.809999; excludes loan30.644384
Opening net equipment	15.851816	USD million	Q2 financial Note6 netPPE
Equipment not yet in service	4.373195	USD million	Q2 financial Note6 equipment not in service
Known deferred customer asset	30.142069	USD million	Q2 Note24 booked deferred customer consideration
Initially vested customer warrants	2.292140	million warrants	Q2 Note21/24 vested initial customer warrants
Total customer warrants	22.921408	million warrants	Q2 Note24 total customer warrants, already in gross shares
Conditional purchase envelope	500.000000	USD million	May15 agreement: conditional five-year envelope INCLUDING first50; not backlog
Reported H1 cash capex	5.508836	USD million	Q2 cashflow5.444848 PPE +.063988 patents; excludes noncash leases
2026 capex projection	60.000000	USD million	September23 issuer deck p18; approximate total2026 capex plan, not48+50+60
New asset production allocation	0.900000	fraction	Analyst bounded economic proxy, October25 2026
Opening production allocation	0.800000	fraction	Analyst bounded economic proxy, October25 2026
Opening remaining-life estimate	12.000000	quarters	Analyst remaining-life estimate, NOT reported remaining useful life
Cash interest yield	0.030000	annual fraction	Analyst liquidity yield, not OP; no warrant-exercise financing assumed
Cash tax proxy	0.200000	fraction	Analyst cash tax proxy on positive current OP plus interest income; no NOL benefit assumed; future jurisdiction/deductibility uncertain
Receivables / quarterly gross sales	0.333333	fraction	Analyst30-day collection assumption
Inventory / quarterly cash cost	0.666667	fraction	Analyst60-day inventory assumption
Trade payables / quarterly cash cost	0.500000	fraction	Analyst45-day supplier payment assumption
Opening net trade working capital	-2.003671	USD million	Q2 receivable less TRADE AP2.393443; other payroll/accruals2.040352 held constant outside tradeWC; no double settlement

Source amounts and estimated allocations remain distinct. New equipment uses a five-year life with a two-quarter commissioning lag; opening in-service equipment uses an estimated three-year remaining life. Opening equipment not in service begins depreciation separately when commissioned. Cash capex excludes noncash lease additions. [M, E1]

Customer consideration: explicit accounting proxy

Allowance rate = booked initial customer consideration / initially vested awards x all customer awards / conditional purchase envelope = 30.142069 / 2.292140 x 22.921408 / 500.000000 = 60.284159%. Amounts are USD millions and awards are million warrants. This full-vesting, same-unit-fair-value assumption is not the issuer-booked total future asset. [M, E1]

Revenue = gross customer sales minus amortized customer consideration. Gross profit = direct product contribution minus amortization, factory fixed cost and production depreciation. Successful states amortize the proxy in proportion to gross Lumilens shipments. The delayed failure state writes off the known asset in Q1 2028 and does not invent subsequent Lumilens sales. Noncash amortization or impairment is added back once in the cash bridge. [M]

The source notes contain inconsistent grant dates and valuation assumptions. The model does not claim to resolve those contradictions by reconstructing an option valuation. Future expected vesting and accounting recognition can differ materially from this conservative proxy. The cash and gross-potential share conventions are kept separate. [E1, E2]

Financing and liquidity are separate from operating value

The opening cash pool includes cash and short-term investments. The strategic loan receivable and Lessengers investment are different assets and are not counted as immediately available cash. Capital raised is also a different measure from the liquid balance on a specific reporting date. [M, E1, E6]

The model does not rely on a new equity placement, warrant-exercise proceeds, acquisition gains or an assumed strategic-loan repayment. Known Sanan cash maturities and lease-principal payments are included. A conversion is not assigned an invented fixed number of shares. The protected gross-potential share path already includes the customer warrants once. [M, E1, E6]

Trade working capital is modeled from gross customer sales and cash production cost. Trade payables are distinguished from payroll and other accruals to prevent an artificial first-quarter cash release. Cash taxes apply to positive modeled operating earnings plus interest without assuming an unverified future loss-offset benefit. [M, E1, E6]

Long-dated liquidity supports development and procurement, but it is not proof of accepted demand or profitable manufacturing. The scenario cash paths below expose the cost of capacity, incentive accounting, inventory, collections and operating support. [M, E1, E6]

The strategic loan borrower, security and any connection to Lumilens are not disclosed. A full recorded-asset loss is a noncash financial stress rather than an operating charge in this method. Cash already advanced in H1 is not deducted again. No recovery or loan interest is assumed. [M, E1, E6]

Delayed outcome | commercial inputs

Joint realization weight: 25.0%. Quantities, ASPs and timing below are analyst estimates. Volumes are thousand units; ASPs are USD per component equivalent. Engine/ELS sales equal thousand units x ASP / 1,000. Lumilens gross purchases are a separate schedule, with implied engine equivalents used only for capacity. [M]

Margin and price/cost inputs are fractions. Scarcity revenue and expediting cost apply only to the eligible base-price other-engine pool. They do not reprice fixed Lumilens purchases. Product variable margins exclude common fixed factory cost and depreciation, which are deducted explicitly. [M]

Margin and price/cost inputs are fractions. Scarcity revenue and expediting cost apply only to the eligible base-price other-engine pool. They do not reprice fixed Lumilens purchases. Product variable margins exclude common fixed factory cost and depreciation, which are deducted explicitly. [M]

Active case | probability expansions 1-4

Each active measure is the weighted sum of the same measure from coherent conditional outcomes. Weights are applied once. Cash, incentives and nonlinear timing are evaluated inside each outcome before weighting. [M]

Q3 2026 | current reconstruction

Revenue = 0.25 x 0.73000 + 0.55 x 1.29000 + 0.20 x 1.85000 = 1.26200.

Gross profit = 0.25 x -1.12524 + 0.55 x -1.25644 + 0.20 x -1.26924 = -1.22620.

Operating expenses = 0.25 x 13.95631 + 0.55 x 14.70631 + 0.20 x 15.60631 = 14.69881.

Operating profit = 0.25 x -15.08155 + 0.55 x -15.96275 + 0.20 x -16.87555 = -15.92501.

Ending liquidity = 0.25 x 769.70413 + 0.55 x 768.77940 + 0.20 x 767.82613 = 768.81993.

Q4 2026

Revenue = 0.25 x 1.42000 + 0.55 x 2.93500 + 0.20 x 5.25000 = 3.01925.

Gross profit = 0.25 x -0.94439 + 0.55 x -0.80849 + 0.20 x -0.25919 = -0.73261.

Operating expenses = 0.25 x 14.24131 + 0.55 x 15.30631 + 0.20 x 16.53631 = 15.28606.

Operating profit = 0.25 x -15.18570 + 0.55 x -16.11480 + 0.20 x -16.79550 = -16.01867.

Ending liquidity = 0.25 x 729.33924 + 0.55 x 727.31632 + 0.20 x 725.17472 = 727.39373.

Q1 2027

Revenue = 0.25 x 1.56000 + 0.55 x 3.97000 + 0.20 x 9.61432 = 4.49636.

Gross profit = 0.25 x -1.82524 + 0.55 x -1.40774 + 0.20 x -0.25492 = -1.28155.

Operating expenses = 0.25 x 14.62631 + 0.55 x 16.00631 + 0.20 x 17.56631 = 15.97331.

Operating profit = 0.25 x -16.45155 + 0.55 x -17.41405 + 0.20 x -17.82123 = -17.25486.

Ending liquidity = 0.25 x 719.22497 + 0.55 x 711.15465 + 0.20 x 703.18286 = 711.57787.

Q2 2027

Revenue = 0.25 x 2.65000 + 0.55 x 9.09932 + 0.20 x 20.87158 = 9.84144.

Gross profit = 0.25 x -3.26780 + 0.55 x -2.03194 + 0.20 x -0.10642 = -1.95580.

Operating expenses = 0.25 x 15.08377 + 0.55 x 16.77877 + 0.20 x 18.66877 = 16.73302.

Operating profit = 0.25 x -18.35157 + 0.55 x -18.81070 + 0.20 x -18.77519 = -18.68882.

Ending liquidity = 0.25 x 708.73456 + 0.55 x 694.45594 + 0.20 x 682.56506 = 695.64742.

Active case | probability expansions 5-8

Each active measure is the weighted sum of the same measure from coherent conditional outcomes. Weights are applied once. Cash, incentives and nonlinear timing are evaluated inside each outcome before weighting. [M]

Q3 2027

Revenue = 0.25 x 4.77000 + 0.55 x 16.32295 + 0.20 x 35.71453 = 17.31303.

Gross profit = 0.25 x -2.80200 + 0.55 x -1.01405 + 0.20 x 3.66653 = -0.52492.

Operating expenses = 0.25 x 15.39377 + 0.55 x 17.42877 + 0.20 x 19.67377 = 17.36902.

Operating profit = 0.25 x -18.19577 + 0.55 x -18.44282 + 0.20 x -16.00724 = -17.89394.

Ending liquidity = 0.25 x 698.19670 + 0.55 x 679.65573 + 0.20 x 668.16813 = 681.99345.

Q4 2027

Revenue = 0.25 x 6.95000 + 0.55 x 25.34090 + 0.20 x 49.83749 = 25.64249.

Gross profit = 0.25 x -2.27100 + 0.55 x 0.32215 + 0.20 x 7.75398 = 1.16023.

Operating expenses = 0.25 x 15.70377 + 0.55 x 18.07877 + 0.20 x 20.67877 = 18.00502.

Operating profit = 0.25 x -17.97477 + 0.55 x -17.75662 + 0.20 x -12.92478 = -16.84479.

Q2 2029

Revenue = 0.25 x 30.08500 + 0.55 x 82.96680 + 0.20 x 156.35720 = 84.42443.

Gross profit = 0.25 x 6.64770 + 0.55 x 23.61680 + 0.20 x 58.20345 = 26.29185.

Operating expenses = 0.25 x 17.41377 + 0.55 x 21.80377 + 0.20 x 26.50877 = 21.64727.

Operating profit = 0.25 x -10.76607 + 0.55 x 1.81303 + 0.20 x 31.69468 = 4.64459.

Ending liquidity = 0.25 x 660.79899 + 0.55 x 711.45997 + 0.20 x 798.18546 = 716.13982.

Active case | probability expansions 13-16

Each active measure is the weighted sum of the same measure from coherent conditional outcomes. Weights are applied once. Cash, incentives and nonlinear timing are evaluated inside each outcome before weighting. [M]

Q3 2029

Revenue = 0.25 x 35.93500 + 0.55 x 96.59612 + 0.20 x 184.82334 = 99.07628.

Gross profit = 0.25 x 10.07724 + 0.55 x 31.05736 + 0.20 x 74.02107 = 34.40507.

Operating expenses = 0.25 x 17.51996 + 0.55 x 22.23746 + 0.20 x 27.28496 = 22.06758.

Operating profit = 0.25 x -7.44272 + 0.55 x 8.81990 + 0.20 x 46.73612 = 12.33749.

Ending liquidity = 0.25 x 662.69578 + 0.55 x 739.54358 + 0.20 x 859.58515 = 744.33994.

Q4 2029

Revenue = 0.25 x 42.90000 + 0.55 x 112.46975 + 0.20 x 215.34797 = 115.65296.

Gross profit = 0.25 x 13.36494 + 0.55 x 38.73874 + 0.20 x 90.87021 = 42.82158.

Operating expenses = 0.25 x 17.81746 + 0.55 x 22.86246 + 0.20 x 28.25246 = 22.67921.

Operating profit = 0.25 x -4.45252 + 0.55 x 15.87628 + 0.20 x 62.61775 = 20.14238.

Ending liquidity = 0.25 x 665.34486 + 0.55 x 772.98579 + 0.20 x 934.42511 = 778.36342.

Q1 2030

Revenue = 0.25 x 47.41000 + 0.55 x 127.55475 + 0.20 x 240.35634 = 130.07888.

Gross profit = 0.25 x 15.68214 + 0.55 x 47.32799 + 0.20 x 107.29307 = 51.40954.

Operating expenses = 0.25 x 18.11496 + 0.55 x 23.48746 + 0.20 x 29.21996 = 23.29083.

Operating profit = 0.25 x -2.43282 + 0.55 x 23.84053 + 0.20 x 78.07312 = 28.11871.

Ending liquidity = 0.25 x 672.79634 + 0.55 x 816.63948 + 0.20 x 1,026.44670 = 822.64014.

Q2 2030

Revenue = 0.25 x 53.73500 + 0.55 x 142.15339 + 0.20 x 267.54747 = 145.12761.

Gross profit = 0.25 x 18.93324 + 0.55 x 55.11387 + 0.20 x 123.64196 = 59.77433.

Operating expenses = 0.25 x 18.41246 + 0.55 x 24.11246 + 0.20 x 30.18746 = 23.90246.

Operating profit = 0.25 x 0.52078 + 0.55 x 31.00142 + 0.20 x 93.45450 = 35.87188.

Ending liquidity = 0.25 x 682.10856 + 0.55 x 868.39066 + 0.20 x 1,131.61060 = 874.46412.

Active case | probability expansions 17-18

Each active measure is the weighted sum of the same measure from coherent conditional outcomes. Weights are applied once. Cash, incentives and nonlinear timing are evaluated inside each outcome before weighting. [M]

Q3 2030

Revenue = 0.25 x 59.57500 + 0.55 x 157.40770 + 0.20 x 294.73479 = 160.41494.

Gross profit = 0.25 x 22.11904 + 0.55 x 64.09794 + 0.20 x 141.06402 = 68.99643.

Operating expenses = 0.25 x 18.70996 + 0.55 x 24.73746 + 0.20 x 31.15496 = 24.51408.

Operating profit = 0.25 x 3.40908 + 0.55 x 39.36048 + 0.20 x 109.90907 = 44.48235.

Ending liquidity = 0.25 x 694.22391 + 0.55 x 929.00903 + 0.20 x 1,252.94250 = 935.09944.

Q4 2030

Revenue = 0.25 x 67.25500 + 0.55 x 173.45634 + 0.20 x 322.71642 = 176.75802.

Gross profit = 0.25 x 26.32209 + 0.55 x 73.48432 + 0.20 x 157.95291 = 78.58748.

Operating expenses = 0.25 x 19.00746 + 0.55 x 25.36246 + 0.20 x 32.12246 = 25.12571.

Operating profit = 0.25 x 7.31463 + 0.55 x 48.12187 + 0.20 x 125.83045 = 53.46178.

Ending liquidity = 0.25 x 708.99094 + 0.55 x 999.06958 + 0.20 x 1,389.84793 = 1,004.70559.

Calendar-year operating trajectory

Year	Gross sales	Contra	Net revenue	GP	Opex	OP	Operating cash	Capex
2027	69.953	12.660	57.293	-2.602	68.080	-70.682	-15.956	39.000
2028	208.221	31.951	176.270	33.259	85.860	-52.601	35.065	24.250
2029	420.019	51.242	368.778	123.170	87.424	35.746	120.670	19.500
2030	680.501	68.121	612.379	258.768	96.833	161.935	246.262	19.500

Annual figures sum the same quarterly active case. They are not additional sales, issuer guidance, a different operating scenario or a substitute for the exact four-quarter method in the opening panel. [M]

Lumilens five-year scope and separate tail

Outcome	Joint weight %	2027-2030 gross	2031 gross tail	2027-2031 total
Delayed	25.0	0.000	0.000	0.000
Commercial	55.0	320.000	80.000	400.000
Accelerated	20.0	480.000	20.000	500.000

Expected total gross purchases = 320.000 across the defined five-year program. The initial order is inside these amounts. The 2031 tails lie outside the eighteen-quarter financial build and do not enter any current four-quarter earnings window. The commercial outcome is substantial partial realization, while the accelerated outcome is the full envelope. [M]

Five risk classes and the evidence that would change the case

Qualification and manufacturing: equipment delivery is insufficient without installation, stable yield and customer acceptance. Watch the first production quarters supported by the new tools, with accepted units separated from samples. [E1, E8, E10, E14]

Commercial concentration: the Lumilens relationship and the broader engagement funnel depend on counterparties, product plans and purchasing decisions. Delayed validation, payment misses or changed customer roadmaps reduce the realization probability. [E1, E8, E10, E14]

Economics and dilution: incentives, stock compensation and manufacturing investment can absorb the value of gross sales. Watch actual customer-consideration recognition, cash receipts, unit costs, support staffing and the share-claim reconciliation. [E1, E8, E10, E14]

Governance and legal: the canceled orders and pending claims remain relevant to disclosure discipline and customer trust. An additional confidentiality dispute or material adverse legal development would weaken the case. Resolution without substantial cost would reduce this risk. [E1, E8, E10, E14]

Competition and architecture: integrated silicon-photonics platforms, conventional transceiver assembly, alternative light sources and internal customer designs compete for the same functions. More laser supply can also reduce scarcity pricing. A product must retain a cost, reliability or integration advantage as architectures change. [E1, E8, E10, E14]

Dated milestones and probability revision tests

November 16, 2026: the next scheduled results release should distinguish qualification progress, accepted shipments, revenue conversion and equipment commitments. A repeat of production targets without acceptance or cash evidence is weaker than a customer conversion. The scheduled event is not a completed result. [E5-E8, E10-E13]

Q1-Q2 2027: test equipment delivery, installation and entry into productive service. If commissioning slips, shift both capacity and revenue timing and retain the related cash commitments. If qualified throughput arrives sooner with repeat orders, increase commercial realization only to the extent that economics and supply support it. [E5-E8, E10-E13]

Late 2026 through 2027: test Lumilens engineering samples, validation, qualification, payment milestones and accepted shipments. A named customer is useful corroboration but is not the sole admission gate. Quantified successful progress supports a higher probability; missed technical or commercial milestones reduce it. [E5-E8, E10-E13]

2028 and thereafter: test Blazar qualification, sustainable channel power and reliability, customer designs entering production, and retained unit contribution. A large industry optics forecast cannot substitute for these company tests. Review both favorable developments and adverse timing changes. [E5-E8, E10-E13]

Cross-book implications without duplicate revenue

POET sits between device suppliers and transceiver or systems customers. A stronger optical-engine ramp can create demand for lasers, passives, assembly and test, but the same system spending cannot be allocated in full to every component supplier. Sivers' technical relationship is a relevant lead, while the specific product wallet and program timing remain necessary. [E6, E11-E16]

Module makers can adopt a new integration route, develop their own, or source alternatives. Wafer-level passive assembly can change the location of packaging work without eliminating fiber management, reliability testing or complete-module integration. Competition and supplier opportunity can coexist. [E6, E11-E16]

The analysis does not turn partner end-customer logos or general AI infrastructure spending into undisclosed POET orders. Any subsequent cross-company model update requires a company-specific non-overlapping bridge. [E6, E11-E16]

Historical forecasts and source completeness

Published forecasts for Q3 2026 and earlier remain historical records. Their original formulas, input vintages and as-then four-quarter screens are preserved with the source workbook. The current Q3 reconstruction used to roll cash and assets forward is displayed separately and does not replace that historical view. Q4 2026 and future periods use the current active model. [E1-E9, M]

No complete Q1 or Q2 2026 earnings-call body was verified. The issuer plans regular calls beginning with its Q4/full-year 2026 results in March 2027. A press release, slide deck or annual meeting is not relabeled as a quarterly earnings call. [E1-E9, M]

The two available management bodies reviewed are the September business interview and June informal AGM presentation with Q&A, through publicly supplied unofficial transcripts. Both supplied texts were read fully. The September text is AI-generated by a forum user. Official webcast metadata was retrieved, but caption retrieval did not establish usable text and complete original audio was not checked. These limits remain explicit. [E1-E9, M]

Forward quantities, ASPs, margins, cost allocation, commissioning, working capital and realization probabilities are analyst estimates. The current sources do not disclose a program-level accepted-unit and margin schedule. Native Excel is unavailable; supported saved-file calculation and affected-feature checks must be assessed separately. [E1-E9, M]

Sources and precise coverage 1-5

E1 | Q2 2026 interim financial statements

Source date: 13 Aug 2026. Preserved complete on-disk filing text; fresh SEC access returned403. Financial tables and notes control the actuals.

https://www.sec.gov/Archives/edgar/data/1437424/000149315226037615/ex99-1.htm

E2 | Q2 2026 management discussion and analysis

Source date: 13 Aug 2026. Preserved source, with date, percentage, warrant-life and award-count inconsistencies retained.

https://www.sec.gov/Archives/edgar/data/1437424/000149315226037615/ex99-2.htm

E3 | Q1 2026 financial statements and MD&A

Source date: 14 May 2026. Issuer PDFs preserved; prior-quarter actual and cash-flow calibration.

https://www.poet-technologies.com/investors

E4 | Q2 results and commercial update

Source date: 13 Aug 2026. Issuer release. The new order, unnamed laser agreement and component relationship overlap existing modeled channels.

https://www.poet-technologies.com/news/poet-technologies-reports-second-quarter-2026-results-revenue-up-112-year-over-year-in-sixth-consecutive-quarter-of-sequential-growth

E5 | Q3 results calendar and future quarterly calls

Source date: 16 Oct 2026. Q3 results scheduled November16; quarterly calls intended from Q4/FY2026 results in March2027. Future events are not completed coverage.

https://www.poet-technologies.com/news/poet-technologies-to-report-third-quarter-2026-financial-results-on-november-16

Sources and precise coverage 6-10

E6 | September investor presentation

Source date: September 2026. 19 pages preserved. Source exhibits reproduce selected technical and capacity slides. All internal comparison labels are retained.

https://cdn.prod.website-files.com/672933631b7b783bf9d0fe72/6abce35a6439b9022896852e_POET_InvestorPresentation_September%202026.pdf

E7 | June AGM presentation and official recap

Source date: 26 and30 June 2026. 23-page issuer deck plus recap; the same event, not two independent confirmations.

https://www.poet-technologies.com/news/poet-technologies-recaps-highlights-of-ceos-update-on-commercial-activities-and-provides-results-of-2026-agm

E8 | September business interview

Source date: 30 Sep 2026 transcript publication. Official video metadata:15m17s. Full supplied AI-generated forum transcript read; complete original audio not verified; usable captions not retrieved.

https://www.youtube.com/watch?v=cEEQjIpm0WU

E9 | June informal AGM transcript and webcast

Source date: 26 June 2026. Official video metadata:42m13s. Full third-party informal presentation and Q&A text read; formal meeting portion outside transcript; complete audio not verified.

https://www.youtube.com/watch?v=sC83U7rHKMU

E10 | Lumilens joint development and supply agreement

Source date: 14 May dateline;15 May website publication. Initial order within conditional multi-year envelope; development, qualification and manufacturing conditions.

https://www.poet-technologies.com/news/poet-technologies-and-lumilens-advance-wafer-level-photonic-integration-for-next-generation-ai-optical-networks

Sources and precise coverage 11-15

E11 | LITEON module collaboration

Source date: 16 Mar 2026. Prototype and production timing expectations; no disclosed purchase schedule.

https://www.poet-technologies.com/news/poet-technologies-and-liteon-announce-joint-development-of-optical-modules-for-ai-applications

E12 | Lessengers1.6T development

Source date: 17 Mar 2026. Initial Q2 sampling target differs from the later Q3 FAQ target. The formats share one industry bandwidth segment.

https://www.poet-technologies.com/news/poet-technologies-and-lessengers-expand-partnership-to-deliver-1-6t-2xdr4-optical-transceivers-for-ai-network-connectivity

E13 | Production and funding FAQ

Source date: 14 July 2026. Updated sampling target and capacity discussion; approximate cash wording is not the filed liquid-funds balance.

https://www.poet-technologies.com/blog/faq-production-orders-cash-position-and-the-path-to-greater-revenue

E14 | Purchase-order cancellation

Source date: 27 Apr 2026. All Celestial orders canceled; notice from Marvell dated April23. The stated confidentiality allegation is not an adjudicated finding.

https://www.poet-technologies.com/news/poet-technologies-provides-purchase-order-update

E15 | Sivers partnership and supplier confirmation

Source date: 6 Nov 2025 and26 Feb 2026. Confirms laser sampling to POET, not a quantified POET end-customer wallet.

https://www.sivers-semiconductors.com/2026/02/26/vickram-vathulyas-letter-to-shareholders-interim-report-q4-2025/

Sources and precise coverage 16-19

E16 | Sivers current manufacturing context

Source date: 27 Aug and3 Sep 2026. Supplier capacity expansion, not POET-reserved allocation; other supplier contracts remain separate.

https://www.sivers-semiconductors.com/press/sivers-semiconductors-invests-usd-30-million-to-expand-european-photonics-manufacturing-for-ai-datacenters/

E17 | External-light-source technical discussion

Source date: 1 Apr 2026. Issuer technical/marketing analysis; packaging claims and third-party scenarios are not reported margins.

https://www.poet-technologies.com/blog/the-laser-problem-in-ai-hardware-and-how-poet-can-solve-it

E18 | Industry optical-interconnect discussion

Source date: 6 Oct 2026. Context only. Industry scenarios do not become additional company awards.

https://www.poet-technologies.com/blog/why-optical-interconnects-are-the-next-big-thing-in-ai-chips

M | Selected complete operating model

Source date: 25 Oct 2026. Analyst estimates, probabilities, full conditional states and active case; companion FormulaModel workbook contains the linked calculations.

POET_POETTechnologies_DeepDive_2026_Model.json

Model package and remaining information gaps

The accompanying ModelJSON and FormulaModel workbook contain the same selected financial law, conditional inputs and active case. All charts and numerical tables in this report are projections of that selected model. The operating analysis is self-contained here; the linked files provide machine-readable inputs and formulas.

The principal unresolved inputs are accepted program shipments, customer-level selling prices, actual production yield and throughput, product-level retained margins, exact future warrant-accounting recognition, and a fully reconciled current award count. These uncertainties are represented through explicit outcomes and disclosed assumptions, not silently treated as confirmed.

The two newest quarterly reporting periods are Q2 and Q1 2026. Neither has a verified full earnings-call body in this package. The two available unofficial management texts are supplemental coverage, with the original audio limitations stated above. A scheduled future call cannot close a past transcript gap.

Published historical forecast values remain preserved. Current reconstruction is distinct from that history. Current and future quarters use the active model after validation. Native Microsoft Excel could not be tested; separate saved-file calculation, package and rendered checks must support any completed workbook release.
