Sea: funded activity sets the operating value

Sea combines Shopee commerce, Monee consumer and SME finance, Garena digital entertainment and smaller services. The October 20 CEO letter opens two additional possibilities: paid external Sea Cloud services and a potential Monee listing. Neither is a disclosed order book or a free addition to existing earnings.

The selected case values operating profit after customer acquisition, credit losses, service resources and depreciation. Lending is reduced when finite cash and external funding cannot support the desired volume. The active ceiling is therefore conditional on a paid operating and funding path, rather than an assumption that every saved loan-growth budget can be financed.

Current case	Value / boundary
Active operating ceiling	150
Currency / claim	USD per ADS; one ADS represents one Class A ordinary share
Active window	Q4 2027 through Q3 2028
Method	20x current quarter plus next three quarters native valuation OP / starting diluted-WA share proxy
Starting share proxy	634,487,453
Analytical assessment	35/60; rounded 58; Fail
Protected Excel Base	60
Latest actual	Q2 ended June 30, 2026, published August 11
Market quote	No fresh dated quote verified; no current-price upside or return claim

The native valuation numerator is an incremental-IPO-adjusted consolidated OP proxy. It subtracts the hypothetical new listing claim, while retaining the existing consolidated convention; it does not claim that all existing minorities or VIE rights have been netted. The score is separate from valuation and from the protected spreadsheet control.

Main money, shares and percentages are displayed in whole reader units. Nonzero amounts below one million use <1; negatives use parentheses. Clearly marked technical tables retain shown precision. Calculations use full saved values, so independently rounded displays may not add exactly.

The lending constraint is central to the thesis

All eighteen selected joint states reduce intended lending at some point to maintain the selected USD 2 billion quarter-end group-cash floor. This is a LOW planning constraint. It does not establish bank consent, new deposit capacity, regulatory capital adequacy, parent distributability or intraday liquidity.

June unrestricted group cash starts the bridge. Restricted cash, wallet or escrow obligations and short-term investments are not automatically free parent funding. The baseline admits no investment liquidation and no new Sea parent equity. Hypothetical subsidiary proceeds remain in a loan-only bucket.

Dated resource / use	USD million / boundary
June cash	3,529
Restricted cash outside general pool	2,462
Short investments excluded from baseline	5,570
Deposits: existing obligation, not new cash	4,285
Group borrowings, June actual	1,224
Convertible principal: Q3 planning cash use	997
Finance-lease principal: dated LOW carry	45
Selected quarter-end cash floor	2,000

When full lending fails the cash test, the solver permits closing combined principal to fall as low as 70% of opening principal and chooses the highest feasible amount within that interval. If even bounded runoff fails, it retains the runoff outcome and marks the funding breach. The deliberate USD 7 billion floor stress fails in every path at least once; its raw valuation ratios are nonexecutable diagnostics.

SEA LIMITED | CURRENT FRAMEWORK | OCTOBER 22, 2026

Business, competition and phased market opportunity

Shopee monetizes regional commerce through marketplace fees and advertising, logistics and value-added services, and owned goods. More buyers and sellers can improve matching and distribution, but subsidies, delivery investment and competition continue to consume paid resources. Scale is an advantage; the reviewed packet does not establish a physical scarcity monopoly.

Monee extends consumer and SME credit, payments and banking activity. Expansion beyond Shopee can enlarge the addressable receipt pool, while bringing underwriting, collection, funding and regulatory obligations. A larger principal balance is an asset requiring finance, not revenue and not a profit margin.

Garena monetizes recognized game services and engagement. Bookings and deferred-revenue adjustments are separate from GAAP receipts. Existing game and internal AI opportunities are already represented in the reviewed core budgets; no second AI, VIP, GMV or game wallet is stacked on the same customers.

The first phase is paid monetization within the existing commerce, finance and game footprint. A second phase is accepted external enterprise services, with distinct accounts, contracts and support. A possible listing changes financing and owner claims rather than creating another customer market. No independently verified enterprise market share, competitor cost spread or sold computing capacity is supplied, so the report does not manufacture those inputs.

Latest actual economics and the 2026 period boundary

The October letter repeats June operating statistics; it is not a Q3 earnings release. Q2 reported group operating profit differs from adjusted EBITDA because the latter adds back D&A, SBC and the defined deferred-revenue-related effect. The forecast uses operating profit after depreciation, not an EBITDA ambition.

Q2 2026 actual	USD million
Revenue	7,788
Cost of revenue	4,238
Gross profit	3,550
Net operating expenses	2,900
Operating profit	650
D&A	115
SBC	132
Adjusted EBITDA	917

Period	Revenue / scope
Actual H1 2026	14,885
Forecast H2 2026 only	17,363
Full-year planning bridge, not new guidance	32,248

The official Shopee guidance concerns approximately 25% full-year GMV growth and an adjusted EBITDA ambition. Those measures are not group GAAP operating-profit guidance. The technical annual subtotal for 2026 contains only Q3 and Q4 forecast rows; it must not be presented as a full-year actual or forecast on its own.

UNAUDITED SEGMENT INFORMATION

The Company has three reportable segments, namely Shopee, Monee and Garena. The Chief Operating Decision Maker ("CODM"), comprising our senior management team, evaluates each segment's financial performance by reviewing revenue, significant operating expenses, and segment operating income or loss. To allocate resources for each segment, the CODM evaluates these results, along with certain key operating metrics of each segment. This assessment is done regularly by monitoring each segment's actual financial and operating performance against projections as part of the Company's business planning and budgeting process. Amounts are expressed in thousands of US dollars ("$").

	For the Three Months ended June 30, 2026				
	Shopee	Monee	Garena	Other Services[1]	Total
	$	$	$	$	$
Revenue	5,587,577	1,402,830	746,603	50,769	7,787,779
Less[2]					
Cost of revenue	(3,842,289)	(158,125)	(210,319)	-	
Sales and marketing expenses	(1,258,084)	(293,851)	(56,253)	-	
Provision for credit losses	-	(553,733)	-	-	
Other operating expenses[3]	(326,920)	(118,090)	(75,875)	(102,244)	
Operating segment income (loss)	160,284	279,031	404,156	(51,475)	791,996
Unallocated expenses[4]					(141,667)
Operating income					650,329
Non-operating income, net					65,537

Net income					458,116

17

Q2 segment receipts and costs, before unallocated group expense; USD thousands. Source published 2026-08-11, original PDF page 17. Original issuer document.

Monee direct lending finance belongs in its service cost. The combined Other cost is split into a derived cost-of-revenue residual and below-GP resources, preserving total OP. Segment and group provision scopes differ; exact source tables control over noisy secondary call numbers.

Original source: D&A, SBC and the EBITDA bridge

The tables below present selected financial information of our reporting segments, the non-GAAP financial measures that are most directly comparable to GAAP financial measures, and the related reconciliations between the financial measures. Amounts are expressed in thousands of US dollars ("$") except for number of shares & per share data.

	For the Three Months ended June 30, 2026					
	Shopee	Monee	Garena	Other Services[1]	Unallocated expenses[2]	Consolidated
	$	$	$	$	$	$
Operating income (loss)	160,284	279,031	404,156	(51,475)	(141,667)	650,329
Net effect of changes in deferred revenue and its related cost	-	-	20,269	-	-	20,269
Depreciation and Amortization	95,135	8,954	5,331	5,250	-	114,670
Share-based compensation	-	-	-	-	131,920	131,920
Adjusted EBITDA	255,419	287,985	429,756	(46,225)	(9,747)	917,188

	For the Three Months ended June 30, 2025					
	Shopee	Monee	Garena	Other Services[1]	Unallocated expenses[2]	Consolidated
	$	$	$	$	$	$
Operating income (loss)	154,851	243,115	275,465	(15,683)	(170,029)	487,719
Net effect of changes in deferred revenue and its related cost	-	-	88,344	-	-	88,344
Depreciation and Amortization	72,843	12,148	4,381	1,917	-	91,289
Share-based compensation	-	-	-	-	161,892	161,892
Adjusted EBITDA	227,694	255,263	368,190	(13,766)	(8,137)	829,244

[1] A combination of multiple business activities that do not meet the quantitative thresholds to qualify as reportable segments are grouped together as "Other Services."
[2] Unallocated expenses are mainly related to share-based compensation, and general and corporate administrative costs such as professional fees and other miscellaneous items that are not allocated to segments. These expenses are excluded from segment results as they are not reviewed by the CODM as part of segment performance.

11

Quarter group/segment operating-profit-to-adjusted-EBITDA reconciliation; D&A/SBC are not extra operating profit; USD thousands. Source published 2026-08-11, original PDF page 11. Original issuer document.

The shared capital replacement does not add a full second historical D&A charge. Forecast SBC is still an OP expense. Its cash addback is a selected decomposition inside the retained unallocated budget; future compensation can dilute and is tested separately.

June30 deposits, borrowings, convertible carrying amount, operatingleases and other liabilities; USD thousands. Source published 2026-08-11, original PDF page 14. Original issuer document.

June net borrowing and convertible carrying figures are dated balance-sheet observations. The September note maturity has elapsed, but actual post-June settlement was not located. A source gap is not evidence of default, conversion or perpetual unpaid debt.

What the October 20 letter changes

The SEC-filed employee letter describes an AI-first enterprise platform that externalizes capabilities built for the existing businesses, and discusses a possible Monee public listing. It does not give paid external customers, a commercial launch date, unit prices, a hardware plan, IPO terms, a venue or a committed timetable.

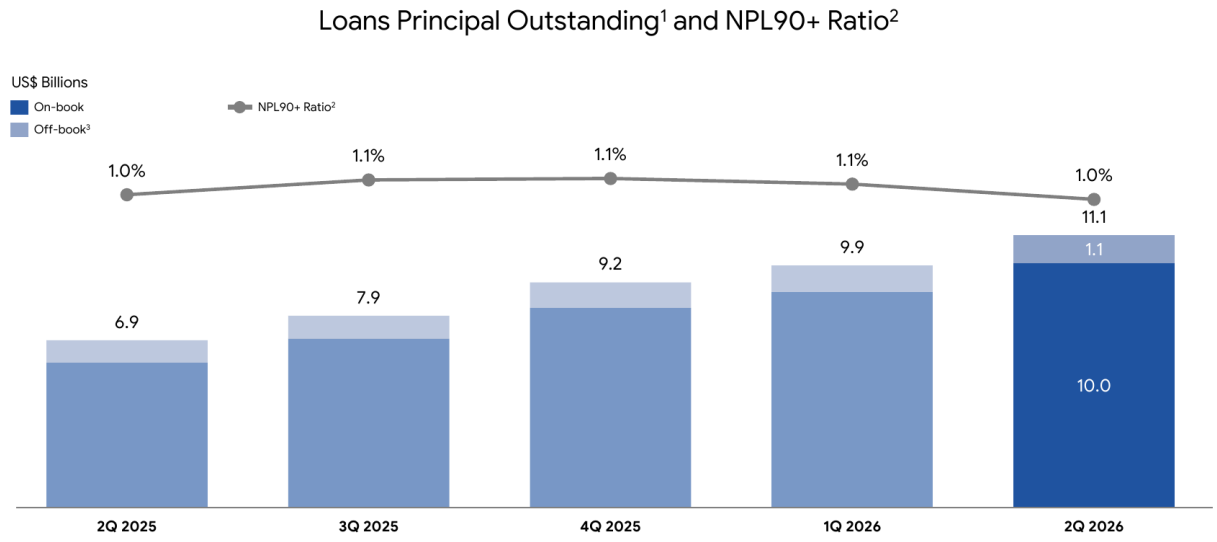

Approximately 500 people had already worked on the platform for two years. That is not an announcement of 500 new hires. Historical compensation allocation and capitalization are not disclosed. The selected external budget therefore charges new engineering, selling and support plus backfill to preserve the internal benefit, without charging the full existing team again.

The complete primary public text is preserved with exact provenance. Raw HTML download attempts returned access errors; no fabricated original page screenshot is substituted. Company source tables, not imprecise third-party transcript labels, control exact financial values.

New information	Economic transmission / unresolved boundary
External Cloud intent	Accepted paid accounts x ACV; variable service inputs, fixed support/backfill and paid capital
Possible Monee listing	Conditional primary capital, costs and a new outside earnings claim; no SOTP addition
Repeated June statistics	Dated comparatives; no new Q3 actual
Not supplied	External customers/prices/launch commitment, IPO structure/terms and regulatory cash-transfer rights

Monee: principal, loss expense and cash are different

Monee

1. Consumer and SME loans principal outstanding.
2. Non-performing loans past due by more than 90 days as a percentage of consumer and SME loans principal outstanding, which includes both on-book and off-book loans principal outstanding.
3. Off-book loans principal outstanding mainly refers to channeling arrangements, which is lending by other financial institutions on our platform.

Sea 2Q 2026 Results | 13

June combined consumer/SME on/off-book principal in USD billions and NPL90 percentage; different accounting-loan and provision scopes. Source published 2026-08-11, original PDF page 14. Original issuer document.

The reported 1% NPL90 ratio is a delinquent-principal stock on combined on- and off-book consumer and SME balances. It is not a lifetime loss rate, a provision expense or a cash-writeoff budget. Accounting loans measured at amortized cost also include a different product and deferred-fee perimeter from the rounded consumer/SME principal figure.

The source says cash loans to Shopee buyers are generally three to twelve months, with higher-ticket BNPL longer. The selected 60% quarterly collection rate is a LOW turnover assumption, not a portfolio vintage measurement. Its sensitivity matters: different turnover changes new gross originations and lifetime provisions even at a similar closing book.

Equity securities	393,462	376,387
Equity method investments	185,008	177,568
	2,694,305	1,888,829

Dated FY2025 allowance/provision/writeoff/FX bridge, USD thousands; not verified H12026 writeoffs. Source published 2026-04-17, original PDF page 203. Original issuer document.

The FY2025 provision, writeoff and FX bridge is historical. Interim H1 provision minus allowance growth is not verified 2026 writeoffs. In the selected model, the opening allowance is realized across the first two forecast quarters and new losses follow explicit two- and three-quarter lags. Those are planning cohorts, not observed collections.

Loan stock and CECL cash identity

Let G be pre-allowance amortized-cost loans, A the allowance, C scheduled collections and W realized writeoffs. Gross originations equal closing G minus opening G plus C plus W. Lifetime provision is originations times the selected loss rate; closing A equals opening A plus provision minus W. Net loans are G minus A.

Net lending investing cash equals the change in gross loans plus realized writeoffs. Because OP already deducts provision, OP + provision - loan-investing cash equals OP - change in net loans. This stock-and-flow identity avoids treating credit losses as a second loan disbursement or treating principal collections as operating revenue.

Monetization uses average opening and closing combined principal, calibrated from Q2 segment receipts and Q1/Q2 principal. It is a multi-product segment receipt proxy, not borrower APR. The constant accounting-book scope factor is also a LOW bridge, not a source on/off-book funding percentage.

Borrowing resources are paid once

11. ACCRUED EXPENSES AND OTHER PAYABLES

The components of accrued expenses and other payables are as follows:

	As of December 31, 2024 $	2025 $
Current		
Accrued cost of revenue and operating expenses	1,236,212	1,807,832
Business and other taxes payables	324,434	462,358
Other payables	281,205	406,445
Accrued payroll and welfare expenses	364,752	387,091
Payables and accruals for long-lived assets	42,397	42,412
Finance lease liabilities	4,488	11,635
Others	126,883	38,977
	2,380,371	3,156,750
Non-current		
Finance lease liabilities	9,012	33,767
Others	62,666	74,533
	71,678	108,300

12. BORROWINGS

Bank borrowings

As of December 31, 2024 and 2025, the Company had nil outstanding balance and $400,000 of undrawn revolving credit facilities.

Secured borrowings

Sale proceeds from transfers of loans receivable that do not qualify for sale accounting are reported as secured borrowings. As of December 31, 2024 and 2025, $80,615 and $116,910, respectively, remained outstanding. Net cash flows from these transfers are presented in "Proceeds from (repayments of) secured borrowings, net" in the consolidated statements of cash flows.

Borrowings under securitization transactions

As of December 31, 2024 and 2025, $299,474 and $676,667, respectively, remained outstanding. As of December 31, 2024, the borrowings bear an interest rate of 5.3% to 8.2% and the maturity of the borrowings range from May 2025 to January 2027. As of December 31, 2025, the borrowings bear an interest rate of 4.9% to 8.5% and the maturity of the borrowings range from April 2026 to December 2028.

F-56

Dated December secured/securitized borrowings, undrawn bank facility and separately classified financeleases; USD thousands. Source published 2026-04-17, original PDF page 209. Original issuer document.

The December note identifies secured loan-transfer and securitized credit borrowings rather than a drawn bank corporate loan. The selected June carry assumes all group borrowings are credit funding at a LOW annual rate. Deposit and borrowing interest are stripped from the opening Monee service-cost residual and replaced once in COGS as their balances change. A noncredit sensitivity alone charges the chosen residual below OP.

The same original page separately reports finance-lease liabilities within accrued and other payables. The selected dated carry is paid as principal over twelve quarters with explicit interest; its equipment is already in PPE and is not purchased again. Operating rent and ROU accounting are a different scope, and are not given a second principal charge.

	412,236	354,486	351,834

9. LEASES

The Company has entered into commercial operating leases for the use of offices, warehouses and data centers as lessee. These leases have terms not exceeding 15 years. These leases have varying terms, escalation clauses, option to renew and option to terminate.

F-53

Dated December2025 PPE classes including land and CIP, USD thousands; exact June classes unknown. Source published 2026-04-17, original PDF page 206. Original issuer document.

The exact June asset-class roll is unavailable. The model carries the dated December land and CIP amounts as LOW class estimates inside actual June PPE. Land is nondepreciable; opening CIP is already paid and commissions in Q1 2027. Remaining in-service PPE and intangibles have explicit remaining lives. New paid cohorts begin depreciation the following quarter.

The future-depreciable book includes paid but not yet commissioned new cohorts. It is not described as an entirely in-service book. Operating ROU and goodwill receive no extra PPE depreciation or amortization. Only the new actual-book and cohort DA minus the tagged embedded forecast budget changes OP, with a LOW 60/40 COGS/below-GP allocation.

External Cloud: billable units and paid resources

The external service forecast uses annual-average paid enterprise accounts multiplied by annual contract value, recognized evenly within each modeled year. These are LOW units and prices, not announced orders. No GPU-rental, gigawatt or full-chip hardware sales market is inferred from an enterprise-platform announcement.

Case	Year	Paid accounts	ACV USD	Annual R	Paid fixed	Cash capex
delayed	2027	0	100,000	0	20	5
delayed	2028	150	100,000	15	20	5
delayed	2029	500	100,000	50	25	8
delayed	2030	1,250	100,000	125	30	10
selective	2027	100	100,000	10	43	10
selective	2028	400	100,000	40	51	15
selective	2029	1,000	120,000	120	64	20
selective	2030	1,800	120,000	216	85	25
strong	2027	250	120,000	30	64	20
strong	2028	1,000	150,000	150	85	30
strong	2029	2,500	180,000	450	128	50
strong	2030	5,000	200,000	1,000	170	75

Purchased hosting, licenses and metered security consume 55% of accepted receipts. The baseline annual fixed budget is USD 43 million when rounded: 100 backfill roles, 75 external engineers, 50 selling roles and 50 support roles at explicit paid rates. Scenario factors scale this resource budget; the delayed case retains readiness costs despite little initial revenue. Q4 2026 pays launch costs and capital without backdating the October event into Q3.

R&D is expensed. New hardware or gateway capital is paid and depreciated in the group cohorts. Existing internal AI productivity is not added again. There is no evidence of a new free external-margin pool or an uncosted reassignment of the existing team.

A listing changes funding and owner claims

The hypothetical Q4 2028 primary offer raises USD 2 billion for a 10% new outside Monee economic claim. That is a sizing bound, not an announced transaction. Direct issuance fees reduce the loan-only bucket without an OP charge; separate transaction and preparation costs are expensed and paid. No secondary parent proceeds or subsidiary SOTP value is added.

Selected conditional control	Value / scope
Primary gross cash	2,000
New outside economic claim	10%
Direct issuance fee	3%
Separation transaction expense	2%
Preparation each quarter in 2027-28	3
No-listing winddown in Q1 2029	5
Listing timing	Q4 2028; moved-date diagnostic also shifts the new claim

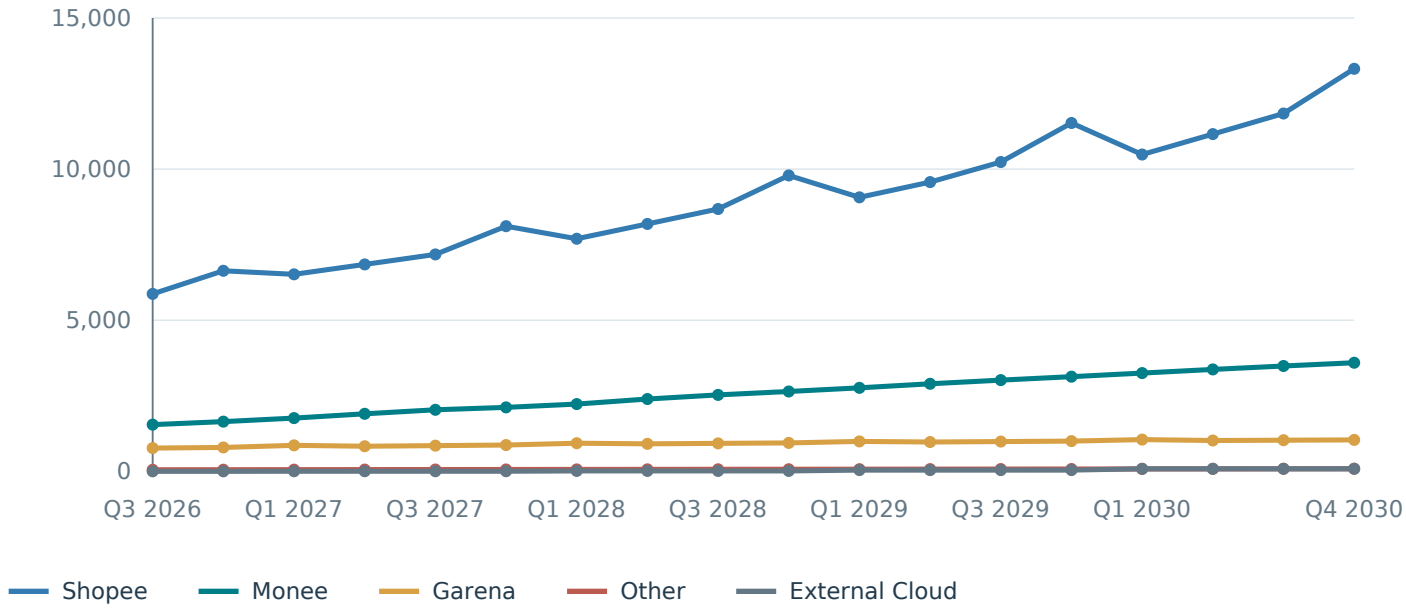

The new claim removes only the hypothetical incremental outside share of Monee OP after the selected DA allocation. Existing source NCI net income and equity cannot be translated into Monee-specific operating ownership. The native parent-economic label remains an incremental-IPO-adjusted consolidated OP proxy, rather than a claim that all existing minorities or VIE economic rights were netted.

Sea ADS shares are not increased by a subsidiary primary issue. The denominator remains a fixed H1 diluted weighted-average proxy, with separate dilution diagnostics. Subsidiary cash is released only to loan funding, after ordinary external finance; it is neither freely available parent cash nor a price add-on.

Expected receipts by five exhaustive streams

Accepted modeled receipts by stream

USD million

Conditional analytical forecast; LOW inputs. Exact arrays retained in the model; adjacent table uses whole reader units.

Sum of five stream GP less the shared COGS replacement equals group GP. Less stream below-GP resources, central and IPO costs, and the below-GP DA replacement gives group OP. Subtract the incremental outside claim once to obtain native valuation OP. Negative DA replacement is an explicit removal of the tagged embedded budget, not an unexplained cash saving.

Expected credit and cash after funding feedback

These are probability-weighted conditional outcomes. Funding, allowance, cash and owner claims are solved within each state before weighting. Probability weights are applied once. Averaging does not establish that funds can be transferred across regulated businesses or across states.

Native valuation across every complete window

Each ceiling uses the current quarter and next three quarters of native valuation OP, multiplied by twenty and divided by the starting H1 diluted weighted-average ADS proxy. There is no score multiplier, second probability haircut, net-cash addition or IPO/SOTP wallet. Later windows reflect credit, capital and ownership economics rather than a current-price return forecast.

All complete operating ceilings

SEA LIMITED | CURRENT FRAMEWORK | OCTOBER 22, 2026

Cost, turnover, financing and ownership diagnostics

The following twenty-four saved case rows include the selected case and changed-input bounds. They are not official alternative forecasts. Failed cash paths and raw ratios remain visible; a raw ceiling from a failed funding stress is not executable.

Case	Q4 2026 raw	Q4 2027 raw	Q1 2030 raw	Failed mass	Minimum cash
Selected case	115	150	259	0%	2,000
No external Cloud or listing event	116	152	261	0%	2,000
Cloud receipts zero; paid costs retained	115	150	254	0%	2,000
Cloud strong only	114	150	265	0%	2,000
No listing; preparation retained	115	150	263	0%	2,000
Listing outside claim 20%	115	150	255	0%	2,000
Listing Q4 2029	115	150	259	0%	2,000
Lifetime loss +2 percentage points	90	115	210	0%	2,000
No new external funding	110	132	230	0%	2,000
Funding fraction 40%	113	141	261	0%	2,000
New funding cost 8%	113	146	249	0%	2,000
Cash floor USD 2,500 million	111	144	258	0%	2,500
No principal runoff	115	150	259	25%	1,665
Cash capex +50%	110	133	235	0%	2,000
New asset life 12 quarters	112	142	246	0%	2,000
Quarter collections 40%	141	187	312	0%	2,000

Case	Q4 2026 raw	Q4 2027 raw	Q1 2030 raw	Failed mass	Minimum cash
Quarter collections 80%	89	113	207	0%	2,000
Noncredit borrowing cost 8%	115	150	259	0%	2,000
Finite treasury access 25%	116	153	261	0%	2,000
Borrowing credit scope 80%	115	150	258	0%	2,000
Existing credit cost allocation 850 basis points	115	151	260	0%	2,000
Finance-lease proxy doubled	115	150	259	0%	2,000
Opening PPE life 16 quarters	118	153	254	0%	2,000
Cash floor USD 7,000 million; failed	72	92	211	100%	5,912

The 40% and 80% loan-turnover tests are particularly material: faster collection at a fixed closing book requires more new originations and lifetime provisions, not free extra revenue. The 850-basis-point existing-credit case changes the allocation removed from actual COGS as well as its forward replacement; it is an allocation test. The separate new-funding 8% test holds baseline allocation fixed.

The noncredit borrowing-rate test is inert in the selected all-credit scope; it does not certify the selected funding rate. The no-runoff case fails for part of the probability mass; the deliberate USD 7 billion reserve fails in all paths. Actual funding, collection vintages, cash transferability and intraperiod needs can differ from these LOW boundaries.

SEA LIMITED | CURRENT FRAMEWORK | OCTOBER 22, 2026

The denominator is a convention, not a dilution forecast

Nonselected diagnostic	Window	Starting shares	USD / ADS
1% annual	Q4 2026	636,067,758	115
1% annual	Q4 2027	642,428,435	148
1% annual	Q1 2030	656,973,492	250
2% annual	Q4 2026	637,636,371	114
2% annual	Q4 2027	650,389,098	147
2% annual	Q1 2030	680,023,059	242

The selected 634,487,453 H1 diluted weighted-average proxy is retained throughout the native model. It is not a June closing share register or a forecast of no new award dilution. These 1% and 2% annual denominator-only tests hold OP, expenses and cash fixed; they do not assert a share plan or change the selected case.

Score, risk classes and protected controls

Category	Points / maximum	Current reason
CoreThesis	14/20	Scaled commerce, credit and games with paid customer acquisition, underwriting and regional execution; no physical scarcity monopoly.
Cycle	7/10	Latest Q2 receipts/activity grow, with competitive subsidies and consumer-credit exposure.
TAMExpansion	7/10	External enterprise cloud and deeper lending are eligible options; paid external cloud customers remain undisclosed.
Catalysts	3/5	Actual earnings, paid cloud adoption and any concrete listing terms can resolve the case; no promised timetable.
Macro	6/10	Regional consumption and digitization offset by FX, consumer credit, regulation and VIE/legal exposure.
Alpha	3/5	Monetization after full customer/credit/capital costs is the test; no fresh quote or demonstrated current mispricing.
Risks	-5/0	Framework floor: credit/funding, competition/subsidies, regulatory/VIE rights, new enterprise execution and minority/IPO cash boundaries.

The selected total is 35/60, rounded to 58 and rated Fail under Framework 8 because it is below 65. This is an analytical confidence assessment, not a portfolio-removal instruction. The protected Excel Base stays 60 as a separate owner control. Neither figure multiplies OP or valuation.

Principal risks are competition and subsidies, credit loss and funding access, bank/VIE and regulatory cash rights, FX and consumer conditions, enterprise execution, useful-life/allocation uncertainty and new outside claims. No fresh dated price demonstrates mispricing or supports a current-price upside statement.

Catalysts, counterevidence and future revisions

Observation	What it resolves
Published Q3 results and current balance sheet	Actual OP, credit losses, cash and note settlement rather than a repeated June statistic
Loan vintage, collection and funding disclosures	Turnover/loss timing, funding cap and regulatory capital dependence
Paid external customer contracts and delivery costs	Cloud acceptance, ACV, real resource use and economic margin
Concrete listing perimeter and primary terms	Net capital, retained control, existing minorities, fees and dividend rights
Asset class / commissioning information	Land/CIP, useful lives and exact embedded DA allocation
Dated issued/treasury/award share bridge	Native proxy versus actual dilution
A fresh dated quote	A separate market comparison; never a substitute for funded economics

New evidence should change the eligible volume, price, costs, capital, funding and owner claims together. An undisclosed detail is not automatic zero probability, while a management possibility is not a signed funded outcome. Revisions should not stack a new headline on the same already-modeled internal AI or customer activity.

Newest two management calls and source completeness

Event	Call date	Primary prepared scope	Written Q&A / close	Audio
Q2 2026	2026-08-11	Issuer prepared pages complete; Q&A absent from the prepared PDF	Secondary full supplied Q&A and closing read	No independent audio comparison
Q1 2026	2026-05-12	Issuer prepared pages complete; Q&A absent from the prepared PDF	Secondary full supplied Q&A and closing read	No independent audio comparison

The latest two calls are August 11 and May 12. The Q1 secondary URL carries a later publication date and its fresh body omits the initial operator/IR introduction; the retained older body contains it. Both supplied Q&A sequences and company/operator conclusions were read. The report does not claim an issuer-produced full Q&A PDF or independent audio verification.

Secondary speaker and numerical errors remain preserved as source limitations. Primary company releases and prepared materials control exact loan, VIP, EBITDA and license quantities. The October 20 SEC letter is genuinely newer evidence despite a stale issuer resource index; no Q3 earnings call is inferred.

Current source gaps include actual September convertible settlement, June asset-class/finance-lease/borrowing detail, Monee ownership and regulatory capital transferability, external Cloud commercial terms, listing structure and fresh quote date. Annual review was selective over relevant notes, not a claim that every annual-report page was read word for word.

Technical appendix: state weights and conditional endpoints

Technical money and shares are in millions unless labeled otherwise. Shown decimals are for auditability; full saved model and contracts retain the arithmetic. The three core regimes, three independent Cloud regimes and core-conditional binary listing yield eighteen positive states. This is a tractable LOW dependence model, not a statistical estimate.

State	Probability	Core / Cloud / IPO	Min cash	Final cash	Growth-cut quarters
1	0.074375	competition_credit_stress / delayed / no listing	2,000	2,000	17
2	0.013125	competition_credit_stress / delayed / listing	2,000	3,357	9
3	0.095625	competition_credit_stress / selective / no listing	2,000	2,000	17
4	0.016875	competition_credit_stress / selective / listing	2,000	3,246	9
5	0.0425	competition_credit_stress / strong / no listing	2,000	2,000	17
6	0.0075	competition_credit_stress / strong / listing	2,000	3,285	9
7	0.1225	execute / delayed / no listing	2,000	7,578	2
8	0.0525	execute / delayed / listing	2,000	9,496	2
9	0.1575	execute / selective / no listing	2,000	7,493	2
10	0.0675	execute / selective / listing	2,000	9,410	2
11	0.07	execute / strong / no listing	2,000	7,554	2
12	0.03	execute / strong / listing	2,000	9,471	2
13	0.0525	scale_credit_control / delayed / no listing	2,000	10,507	6
14	0.035	scale_credit_control / delayed / listing	2,000	12,425	6
15	0.0675	scale_credit_control / selective / no listing	2,000	10,429	7
16	0.045	scale_credit_control / selective / listing	2,000	12,346	7

State	Probability	Core / Cloud / IPO	Min cash	Final cash	Growth-cut quarters
17	0.03	scale_credit_control / strong / no listing	2,000	10,491	7
18	0.02	scale_credit_control / strong / listing	2,000	12,408	7

Probability display is a decimal technical fraction. Every selected path cuts lending at some point, even though its finite quarter-end cash budget meets the selected floor. No observed funding commitment or parent cash fungibility follows from a successful conditional formula.

Technical appendix: complete conditional credit and cash paths

State 1: competition credit stress / delayed / no listing

Technical appendix: a worked cash-limited credit bridge

Illustration is state 9, Q4 2026, the first constrained quarter in the execute/selective/no-listing path. This is a worked identity within the selected model, not a new financial choice. Collection and loss equations are retained while ending principal is solved within the permitted runoff/volume interval.

Recorded component	USD million, shown precision
planned principal before funding cap	13055.75158786
ending combined principal	12841.17698162
scheduled collections	6978.04529416
assumed realized writeoffs	557.395
gross originations	8322.62676864
lifetime provision	624.19700765
closing gross amortized cost loans	12417.26196475
closing allowance	1216.25034442

Recorded component	USD million, shown precision
closing net loans	11201.01162033
delta net loans	720.38446684
loan investing cash use	1344.58147449
new external funding	468.24990345
new bank restricted reserve	46.82499034
IPO loan only release	0
group GAAP style OP	839.94143011
DA	119.84958029
SBC noncash addback	137.249568
cash tax	293.68817104
cash capex	298.73368146
nonloan gross asset cash growth	363.65756494
borrowing principal cash	300
convertible principal cash	0
finance lease principal cash	3.7835
cash debt interest	0.83237
cash before treasury draw	2000
closing general cash	2000

Opening cash is the previous quarter closing cash, or the source opening balance in the first row. Add group OP, provision, DA and SBC; subtract loan-investing cash, tax, capital, gross-asset growth, principal and below-OP interest; add new funding net of its restricted reserve and any permitted loan-only IPO release. The closing cash identity then determines the maximum feasible ending loan volume.

Shared asset roll: competition credit stress / delayed

Q3 2030	446	284	4,141	3,880
Q4 2030	496	306	4,331	4,070

The two listing outcomes share this exact paid asset and depreciation schedule. Total book retains nondepreciable land and any paid uncommissioned capital; future-depreciable book is not an in-service label. Each new cash-capital row is one cohort, commissioned the next quarter over twenty quarters. Opening CIP is a separate already-paid cohort. No listing creates free hardware.

Monee lifetime credit provisions are rebuilt from originations rather than copied from the old revenue-ratio proxy. Paid marketing and other reference components retain their defined variable/fixed splits. Other combined cost is divided across GP and below-GP without changing total cost.

Technical reference receipt / contribution: Shopee commerce

Legacy saved contribution / R is the old pre-reclassification planning representation, not current modeled or reported gross margin. Other services now includes its separately derived cost of revenue. Current Monee credit receipts and loss costs are rebuilt; its legacy receipt and contribution curves are retained budget and marketing-scaling inputs only. The shared DA replacement is applied separately.

This table is a projection of root-selected controls. Actual source balances, dated LOW carries, joint probabilities, commercial inputs, lives and cash assumptions are distinguished in the narrative and source exhibits. The score is not a risk probability, and none of these controls supplies official capacity or funding certainty.

Every term is after the current shared DA replacement and incremental IPO claim, where applicable. The first quarter of each window supplies the native share proxy. The final three windows have insufficient OP quarters and remain blank. Eight-decimal shown precision is not a second valuation method.

Technical equations: activity, credit and turnover

Quarter progress i/17 starts at0 inQ326 and reaches1 inQ430. Shopeeactivity gradually reaches90/100/110% of saved GMV; coretake delta reaches-50/0/+25bp, and materials/service contribution margin delta-50/0/+25bp. Marketplace core, logistics and owned-goods receipts remain distinct before adding. Marketing has 60%variable/40%fixed reference cost; other resources40/60. Garena recognized receipts reach90/100/110% of budget, retain reference content/service contribution, pay70/30marketing and50/50other cost splits. Source bookings/deferred effects stay separate from recognized revenue. OtherCOGS uses27.160/50.769 of receipts, and the remainder of its old combined cost is belowGP. Central costs/SBC remain in OP. Exact market share/customerASP/competitor margin are not source facts.

Monee eligible business, resources and credit Target principal starts at11.1B plus80/100/120% of the saved planned increment. Eligible final volume is reduced when finite cash/funding cannot support it. Opening monetization =1402.830/average(9900,11100); receipts use average opening/ closing combined principal, with horizon compression150/75/30bp by core regime. This is a group product monetization proxy, not borrowerAPR or an exact yield. Gross amortized-cost loan scope maps through10733.565/11100, keeping the source accounting-loan versus consumer/SME-principal perimeter difference explicit.

Scheduled collection=60%ofopeninggrossG/q. The annual source says cash loans generally3-12months, with some BNPL longer;60%is a LOW turnover choice. Lifetime credit expense per new gross origination is9/7.5/6.5% by regime. Writeoff budget uses half the opening allowance1114.790 in each first two rows, then70%oflag2 provision and30%oflag3. These are proxy vintages, not inferred interim writeoffs. Originations=Gnext-Gopening+scheduledcollections+writeoffs. Provision=originations x selectedlossrate. Anext=Aopening+provision-writeoffs;netloans=G-A. Loan-investingcash=deltaG+writeoffs. Therefore OP+provision-loancash =OP-delta(netloans), before other cash movements. Source1%NPL90 is a stock metric and supplies none of these assumed flow rates.

ActualQ2MoneeCOGS158.125 contains funding and service costs. Root explicitly allocates opening deposit4285.326 interest at4.2%/year and all June groupcredit borrowings1224.316 at6.5%/year to funding, then removes both from the residual paid service budget. June debt classification is LOW: December bank borrowings werezero and secured/securitizedcredit borrowings793.577; exact June mix/rates are unknown.6.5%lies inside the dated4.9-8.5% securitized range. Service residual is half fixed with3%annual inflation and half receipt-linked. Existing credit borrowings interest is replaced once inCOGS, declining after repayment. New direct credit funding interest4.2%uses average incremental funding balance. Any sensitivity's noncredit portion is separately paid belowOP; both scopes are never charged again. Monee marketing/other retain40/50%fixed reference costs.

Technical equations: capital and external services

Capital, commissioning and depreciation JunePPE1579.308 and intangible6.974 are actual. December land261.748 and CIP42.997 are LOW June carry-forwards inside that total, with exact June class data absent. Opening in-servicePPE1274.563 has12remaining quarters; intangibles also12. Land is held nondepreciable. Opening CIP is already paid, commissionsQ127 into20q straight-line DA and creates no new cash purchase. New base capital=250/q x GMV/38300; each new paid cohort starts DA nextquarter over20q and stops on book exhaustion. NewexternalCloudcapital is added to those paid cohorts. Total future- depreciable book includes newly paid uncommissioned cohorts; it is not mislabeled in-service. ROU1845.170 remains within existing operating-rent accounting and is excluded from a second PPE depreciation/lease-principal charge. Goodwill99.014 is not amortized.

Old forecast budgets embed DA114.670 x GMV/38300. New actual-book/cohort DA replaces that tagged budget: only DAnew-DAembedded enters incremental cost,60%inCOGS and 40%belowGP as LOW classification.10%of the replacement is allocated to Monee for the incremental listing-claim proxy. Exact future asset usage and allocation are undisclosed; this is not a reported business-ownership allocation. All streamGP before that shared replacement minus itsCOGSportion equals modeled groupGP; groupGP minus totalbelowGPexpense equals groupOP without a repeated charge.

ExternalCloud paid enterprise units Annual2027-30 average paid accounts/ACV give receipts: delay0/15/50/125;selective10/40/120/216;strong30/150/450/1000. All counts/prices/dates are LOW assumptions; no paid external client or price is disclosed. Purchasedhosting40%,licenses10%,meteredsecurity5%consume receipts. Baselineannualfixed42.5=100backfill x 0.16+75newexternalengineers x 0.16+ 50selling x 0.15+50support x 0.14. Selected state factors stage these paid resources; delay retains20/20/25/30 annual readiness. Backfill preserves existing internal benefits; historical500staff are not charged as newly announced hires. Q426pays 5launchcost and5capital; newOct20 costs are not backdated toQ326. R&D is expensed. Annualcapex is delay5/5/8/10,selective10/15/20/25,strong20/30/50/75, into paid DA.

SEA LIMITED | CURRENT FRAMEWORK | OCTOBER 22, 2026

Technical equations: funding, claims and valuation

Finite funding and cash budget June generalgroupcash3529.303 starts the bridge;restricted2461.531 and short investments5569.553 are excluded from baseline available funds. Opening bank deposits/escrow/advances are not received again. Newexternal lending funds cover atmost40/65/75%ofpositivedelta netloans, also capped at600/750/900/1000/1000 per quarter by calendar year.10%ofnewfunding is incremental restrictedbankcash. These are uncommitted source-informed budgets; they do not establish actual capacity.

Gross nonloanAR389.279/prepaidother2472.133 scale with groupreceipts;inventory 273.295 scales with Shopeeownedgoods. Growth is paid with no assumed newAP, accrual,escrow or deferred-financing benefit. This conservative gross-asset cash budget is not a fullGAAPCFforecast. Cash tax=35%ofpositivegroupOP minus applicable belowOP cashinterest, with no losscredit/extra investmentincome. FutureSBCcash

addback131.920 x 1.02^(i+1) sits inside corporateexpense145 x 1.02^i, leaving positive cashcorporatecost. Native fixed diluted-WA shares remain a proxy; future SBC can dilute, as separate1/2%annual denominator diagnostics show.

Unconverted2026note principal996.725 is cash-repaidQ326 once in the planning bridge. Its actualSeptsettlement is absent; no automatic ADSsettlement is assumed. Existinggroupborrowings repay300Q426/400Q427/524.316Q428 as LOW maturity budgets, without rollover. Source loan/financing facilities do not promise those dates. Decemberfinancelease45.402 is carried LOW to June, principal3.7835/q for12quarters, interest8%onopeningliability; financedPPE is already in assets. This separately reduces its payable liability; operatinglease rent is not paid a second time.

Cashbeforetreasury =openingcash+groupOP+provision+DA+SBC-tax-loaninvestingcash+ newexternalfunding-newbankreserve+IPOloanonlyrelease-capex-nonloangrossassetgrowth-borrowingsprincipal-belowOPinterest-convertibleprincipal-financeleaseprincipal. Groupcashfloor2B is a quarter-end budget, not intraday regulatory/parent liquidity. If full loanvolume fails, neworiginations are reduced, allowing closingprincipal as low as70%ofopening in that quarter. Collection/allowance/orgination equations remain paid. Bisection chooses highest feasibleprincipal within that bound. If even boundedrunoff fails, use thatrunoff result and explicitly mark failure; unfunded rawratios are not executable. Everyselected state cuts growth at some point; no full prior loanvolume is asserted funded merely because it was saved.

Possible listing and owner economics ConditionalQ428 primarycapital2B buys10%newoutsideMoneeeconomicclaim, coherent with20Bpostmoney only as a sizing bound. No transaction terms are announced. Directequityissuefee3%=60 reducesnetloan-onlycash to1940 withoutOPcharge. Separate2%=40transaction/separationexpense is paid throughOP/cash. Preparation 2.5/q in2027-28 is paid in allintentoutcomes; no-listing windsdown5Q129. Primarycash goes solely to loanfunding after ordinaryexternalfunding; it creates no generalparentcash or directprice/NAV/SOTP addition. Postlisting groupOP stays consolidated, while the nativeeconomicproxy removes10%ofMoneeOP after its shared DAallocation. Claimstart follows the selected listing quarter, including tests.

Existing H1NIattributabletoNCI27.613/equityNCI138.329 are source but cannot be mapped to Monee-specific operating ownership. The old nativeconsolidatedOP convention is preserved. The parent-economic label is an incremental-IPO-adjusted consolidatedOP proxy, not a claim that all existing minorities/VIE economic rights have been netted or all Monee entities were100%owned. Exact perimeter/tax/dividend/ cashtransfer rights remain material source gaps. Newoutsideclaims are distinct from SeaADS share count and from existing minorities.

Valuation and score Nativevalue=20 x sum(current+next3 nativeeconomicOP)/634.487453M startingH1dilutedWA proxy,1ADS=1ClassA. GroupOP and the separate incrementalIPOclaim are visible. Three incomplete tailwindows areblank. No score/probability multiplier, netcash, fullsubsidiaryIPO/SOTP addition or automatic futurebuyback applies. Saved113.61 is undated and provides no current-price upside claim. Score14/20Core+7/10Cycle+7/10TAM+3/5Catalysts+6/10Macro+3/5Alpha-5Risks=35/60, 58.333%rounded58; Fail under Framework8(<65). ProtectedExcelBase60 is unchanged and separate. Scale/paidmonetization supports the thesis; source, credit/funding, competition/regulatory and newventure execution risk limit confidence.
