Qualified optical growth and a paid manufacturing transition

Qualified optical-connectivity and MCU ecosystem positions within a competitive diversified integrated semiconductor manufacturer. Temporal technical/qualification and execution advantages; no demonstrated permanent monopoly across the company.

Qualified PIC, electronic IC and MCU content gives STM exposure to higher-bandwidth AI networks. STM32 software and customer qualification support repeat business. Space semiconductor content can expand with launches, satellites and terminals. Converting that demand into profitable shipments requires paid frontend capacity, qualified assembly/test, customer acceptance and an eventual reduction in legacy factory costs. Growing AI revenue alone does not establish the resulting whole-group operating margin.

The useful analytical edge is the bridge from customer engagements to accepted semiconductor receipts and then paid operating profit. Investors can overestimate earnings by counting the same optical module several times, treating total customer AI capex as STM revenue, using underutilized legacy fabs as immediately qualified photonics output, or assuming a factory-cost step before transfers and closures finish. The positive case is that qualified photonics and MCU content expands faster than mature semiconductor demand while manufacturing savings eventually become cash savings. This review supports that opportunity with explicit costs and probabilities; it does not establish an unverified market-consensus gap or a live-price excess-return claim.

STM optical semiconductor content complements optical module, EIC and networking exposures; it cannot capture their complete module revenue. Foundry competitors and qualified assembly/test can limit scarcity duration. AI power participation addresses particular conversion/control stages, not every power-infrastructure dollar. Satellite semiconductor content depends on accepted hardware and terminal mix. Related stock evidence can inform demand and competition without duplicate portfolio-model revenue. Qualified products can have meaningful switching costs while alternative process, MCU, power and assembly/test platforms limit group-wide monopoly economics.

All forward quarters are model estimates. This report values GAAP-style consolidated operating profit at 18x the current and next three quarters, divided by native starting-quarter diluted shares. It calculates no live-price upside or recommendation. Consolidated profit and cash do not establish parent legal entitlement or immediate cash access.

T001 | Current valuation and analytical assessment

Measure	Current model
Q4 2027 conditional ceiling, USD/share	43.591664
Q4 2027 current + next3 OP, USD M	2,290.690285
Q4 2027 starting shares, M	945.878667
Analytical points	41.000000
Analytical percentage	68.333333
Analytical band	Watchlist

Latest actuals, guidance and source boundary

Actual: Q2/H1 ended June27 are latest recovered actuals. Q2 GAAP3487 revenue minus2272 COGS gives1215 GP; minus551 R&D and444 SG&A plus25 other operating income minus58 restructuring gives187 OP. Adjusted269 adds58 restructuring and24 acquisition PPA. Product-segment disclosures do not reveal six endmarket gross margins.

Guidance: Q3 remains a forecast: revenue3700 plus/minus3.5%, GM37% plus/minus2pp including70bp unused capacity. Adjusted net opex980 already includes startup and SBC. A920 counterfactual is not a current cost credit. Q4 above4000 is qualitative; no independently reported Q4 GM is invented.

Calls: Newest two written management-call bodies, April23 and July23, were read fully in the saved packet and hash-reused. Primary prepared remarks control numeric conflicts, including Q1 500million rather than erroneous500billion and FCF−723. Independent audio is unreviewed. CitiSeptember9 is supplemental partial/indiscernible text with corrupt figures; it is not promoted to a complete third call.

Local language: Bounded French issuer search recovered the French March9 PIC100 release and July23 Q2 release, confirming scale and terminology. English primary financial statements remain the controlling USD accounts. A calendar search hit was rejected after checking that it belonged to Dassault rather than STM. STM's October5 notice and current issuer index schedule Q3 results October29.

Management qualitatively expects Q4 2026 revenue above USD4,000M. Our eligible model demand is USD4,125M, while the selected qualification and shared-capacity proxies yield accepted revenue of about USD3,895M, below that company expectation. This cautious analytical delivery assumption will be tested at the next release. Q4 remains unreported, and the model figure is our forecast rather than company guidance or an observed miss.

T002 | Reported consolidated financial anchors | USD M

Metric	Q1 2026 actual	Q2 2026 actual
revenue	3,095.000000	3,487.000000
Cost of goods sold	2,050.000000	2,272.000000
gross profit	1,045.000000	1,215.000000
SG&A	429.000000	444.000000
R&D	520.000000	551.000000
other operating income net	45.000000	25.000000
restructuring phaseout	71.000000	58.000000
GAAP OP	70.000000	187.000000
adjusted OP	171.000000	269.000000
Operating cash flow	534.000000	502.000000
net capex nonGAAP	362.000000	409.000000
FCF nonGAAP	-723.000000	75.000000

Product reportable segments do not equal the six analytical end-market vectors. Unallocated factory, strategic R&D, startup, restructuring and acquisition effects remain in consolidated profit. A segment operating margin is not a disclosed vector gross margin.

Informations financières complémentaires non-U.S. GAAP
Réconciliation entre normes U.S. GAAP — non-U.S. GAAP

Les données financières complémentaires non-U.S. GAAP présentées dans ce communiqué de presse ne sont pas auditées et sont donc sujettes à des limites inhérentes. De telles données non-U.S. GAAP ne reposent pas sur un ensemble de règles ou principes comptables et ne doivent donc pas être considérées comme un substitut aux mesures comptables U.S. GAAP. En outre, nos données financières non-U.S. GAAP complémentaires peuvent ne pas être comparables à des mesures non-U.S. GAAP de même intitulé, utilisées par d'autres sociétés. De plus, un certain nombre de limites spécifiques relatives à ces mesures non-U.S. GAAP individuelles et les raisons de présenter des informations financières non-U.S. GAAP sont détaillées dans les paragraphes ci-après. Compte tenu de ces limites, les données financières non-U.S. GAAP complémentaires ne doivent pas être lues indépendamment, mais uniquement en même temps que nos états financiers consolidés préparés selon les normes comptables américaines U.S. GAAP.

ST pense que ces mesures financières non-U.S. GAAP fournissent des informations utiles aux investisseurs et à la direction parce qu'elles permettent, lorsque lues en conjonction avec les données financières de ST en normes U.S. GAAP, (i) d'établir des comparaisons de période à période plus pertinentes du résultat d'exploitation en cours de ST, (ii) de mieux identifier les tendances de l'activité de ST et d'analyser lesdites tendances, et (iii) de comparer facilement les résultats des opérations de ST aux modèles et aux valorisations des analystes financiers et des investisseurs, qui ne tiennent généralement pas compte de ces éléments.

Marge brute ajustée non-U.S. GAAP, résultat d'exploitation ajusté non-U.S. GAAP, résultat net ajusté non-U.S. GAAP et résultat par action diluée ajusté Non-U.S. GAAP (mesures non-U.S. GAAP)

Le résultat d'exploitation avant dépréciations, charges de restructuration et autres coûts liés au redéploiement de l'outil de production, ainsi que certains autres éléments, est utilisé par la direction pour aider à la compréhension des activités courantes et communiquer l'impact des éléments exclus, tels que les dépréciations, les charges de restructuration et autres coûts liés au redéploiement de l'outil de production ainsi que les effets de l'allocation du prix d'acquisition (APA). La marge brute non-U.S. GAAP est aussi utilisée par la direction pour communiquer l'impact des effets de l'APA sur la marge brute en pourcentage des ventes. Le résultat net et le résultat par action (EPS) ajustés sont utilisés par la direction pour aider à la compréhension des activités courantes et communiquer l'impact des éléments exclus tels que les dépréciations, les charges de restructuration et autres coûts liés au redéploiement de l'outil de production ainsi que certains autres éléments, tels que les effets de l'APA, nets de l'effet d'impôt.

Deuxième trimestre 2026 (En millions de dollars US, à l'exception des données par action)	**Marge brute**	**Résultat d'exploitation**	**Résultat net**	**Résultat dilué par action correspondant**
U.S. GAAP	**1 215**	**187**	**222**	**0,24**
Dépréciations, charges de restructuration et autres coûts liés au redéploiement de l'outil de production	-	58	58	
Effets de l'APA liés à l'achat de l'activité capteurs MEMS de NXP	14	24	24	
Estimation de l'impôt applicable	-	-	(13)	
Non-U.S. GAAP	**1 229**	**269**	**291**	**0,31**

F03 | Q2 GAAP to non-GAAP reconciliation of gross profit, OP, parent net income and EPS. French issuer release dated 2026-07-23, complete physical PDF p13. T003 | Latest guide versus assumptions

Scope	Evidence
Latest reported quarter	Q2 2026 ended June27; released July23
Next release	Q3 results scheduled October29; Q3 remains Model
Q3 revenue guide	USD3700M +/-3.5%
Q3 gross margin guide	37% +/-2 percentage points; includes70bp unused capacity
Q3 adjusted net operating cost guide	About980M; startup and employee awards included
Q4 revenue statement	Above4000M expectation; no numerical Q4 GM/OP guide
Datacenter ambition	Above1000M2026; well above2000M2027 conditional on demand/engagements
Space ambition	Well above3000M cumulative2026–28; not annual company TAM

Technology, S-curves and the three-phase expansion lens

AI optical interconnects are in commercial acceleration: PIC100, advanced BiCMOS electronic ICs and controllers serve 800G/1.6T links, with later near/co-packaged optics increasing engineering scope. Data-center power has current participation and a larger modeled post-2028 ramp. Automotive and industrial are a cyclical recovery with structural semiconductor content growth. Space is an established concentrated program scaling toward additional constellations, with second sourcing and launch/terminal demand risks.

Today: Current qualified optical, power, sensing and control products. Corporate data-center capture ambition above USD1B in 2026 and well above USD2B in 2027 is company sales context, never an industry TAM added to other wallets.

Three to five years: Optical links, industrial edge systems, automotive control and robotics can reuse process/software capabilities. Adjacent power architectures require production sockets and qualification; announcing a design platform is insufficient for accepted revenue.

New markets: Near/co-packaged optical links, additional LEO constellations and distributed edge systems may expand addressable applications. Company space market context around USD3B by 2030 differs from cumulative company sales well above USD3B over 2026–28. No quantum-investment announcement creates an additive forecast.

Phase weights: Framework100/50/20 thematic confidence lens informs thesis assessment; the explicit joint demand/qualification probabilities govern financial outcomes. Neither set is multiplied into the same revenue twice.

Eight genuine complete financial source pages appear at their relevant sections: six French issuer financial appendices and two English CEO/CFO script pages. The French Q1/Q2 releases reproduce the already-reviewed earnings events; their scoped financial numbers reconcile the preserved English source captures and do not create new model applications. Selected primary text from the March 9 Cloud AI and May 4 LEO presentations supports the technical discussion, but their raw PDFs and original page rasters were not recovered after one timeout and one bounded HTTP403 response each. No technical-deck image or independent audio review is claimed. The diagram is an analyst explanation of the model resource law.

PIC, EIC and MCU content can coexist within one optical module. This model recognizes eligible ST components once. NPO/CPO and new power architectures have conditional qualification and deployment schedules. A factory site capacity plan does not establish an absolute photonics wafer/yield/ASP denominator.

From customer demand to paid, qualified receipts

Analyst schematic | No physical wafer or shipment quantities implied

Analyst schematic. Request, qualification, shared resources and cash timing are distinct. No physical wafer or shipment counts implied.

Six distinct company receipt wallets

T004 | Eligible receipts and principal constraint

Wallet	Eligible role	Constraint
Automotive	Qualified sensors, MEMS, BCD, smart power and SiC	Customer/end-market conversion; shared fab/package resources
Industrial	MCUs, analog, sensing and control excluding optical/space	Sell-through and MCU capacity competition
DC optical	PIC/EIC/MCU semiconductor content, counted once	Customer acceptance; Crolles/digital and backend qualification
DC power / thermal	Qualified ST power/analog/control sockets	Architecture timing; power-stage capture and SiC/GaN competition
Space	Satellite/gateway/terminal ST content and packaging	Launches, product generations, second sourcing and mixed economics
Personal / other	Residual non-AI/non-space products	Seasonality, customer programs and mature product competition

CompanyAI/AWS/CECP/PIC-EIC-MCU are one accepted semiconductor receipt wallet. UpdatedhigherSpaceXAIcapex is a customer-demand condition already inside jointAIendpoints, not another vendor revenueadd.

SpaceX terrestrialAIcompute andStarlink satellite/terminal content are distinct; existingcumulative3.815Bspace2026-28 fullyincluded inreference.

MDRF/APMS80/20 is product-divisional, not pure optical/power scope. Retained2B/.5B2027base allocations are LOWproxies ratherthan CFO-pure endmarketguidance.

Sanan fullconsolidation preserved.51%JVminority is not51%ofwholegroupOP and no49%rev scaling.

NXP895H1cash/13Q2inventorystepup/debt750 andgrosswarrant/convertshares are not paid/counteddouble.

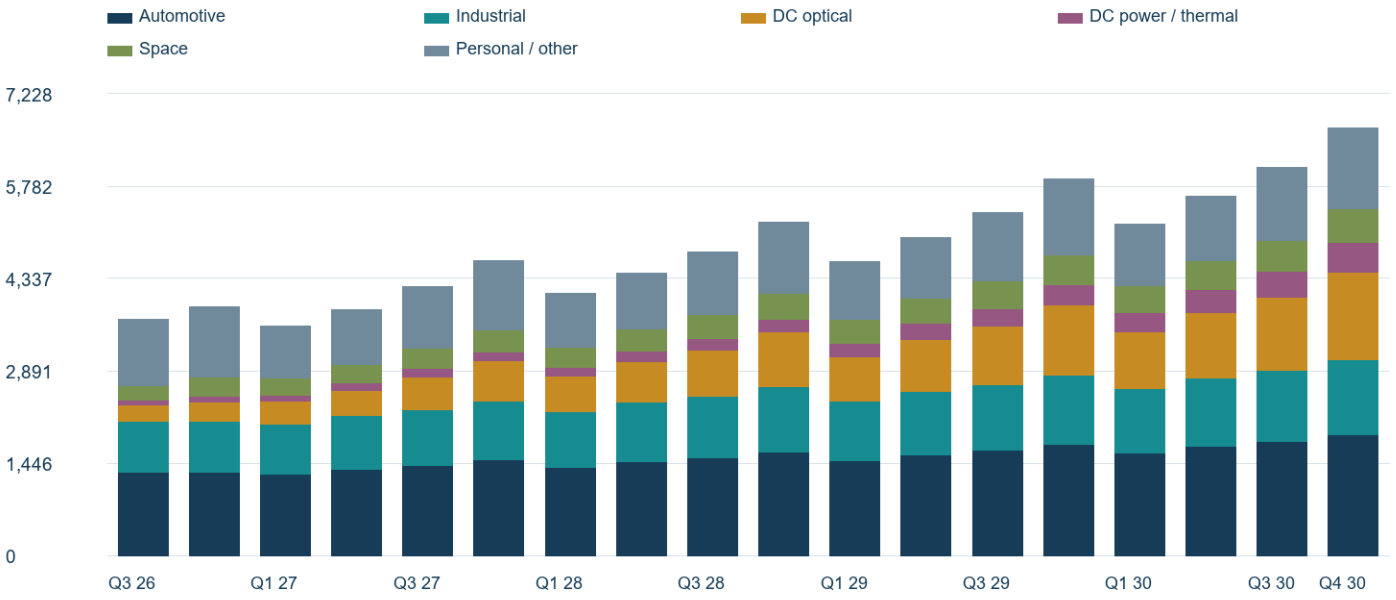

2027 requested optical/power totals3200/2500/1850M by demand state. Paid capacity and shared300mm constraints determine delivered amounts in each joint path. Corporate AI ambition, AWS commercial conditions, CECP, PIC/EIC/MCU and SpaceX terrestrial AI demand sit within the same eligible data-center envelope. No complete server/module or total customer capex claim is added.

2027 requests1550/1250/850M;2028 requests1900/1500/950M. Deliveries follow the same paid/qualified capacity law. The existing cumulative2026–28 company opportunity is included once, distinct from terrestrial SpaceX AI compute and from a2030 industry SAM.

Source price increases largely offset input costs; no separate scarcity windfall is evidenced. Accelerated capture allows more accepted paid volume. Post-guide materials cost and resource-intensity diagnostics expose margin sensitivity. New enforceable repricing data could justify a separately bounded eligible-order premium.

Treasury repurchases for employee plans are not automatic cancellation or OP. AWS warrant fair value331 is not product revenue. Sanan equity ownership is not a revenue scaling rule. IPO/cloud customer financing is not additional STM operating profit. Quantum optionality has no separately quantified receipt basis.

Six-vector accepted receipts

USD millions | Model estimates; no stock-price history

Probability-weighted accepted receipts; all future vector allocations are LOW estimates.

T005 | C01 | Exact quarterly plotted data | 1

Joint demand and qualification probabilities

Specific management company-revenue ambitions, product high-volume production and customer reservations justify75% demand weight above2B2027. Credible cancellations, concentration, output and qualification misses carry25%. Execution is correlated: accelerated commitments improve chance65% of on-time transition, orderly50%, stress25%. Conditional paths sum1. They are subjective decisions, not measured frequencies or source authenticity odds.

Three bounded demand states25/50/25%, with on-time qualification conditional65/50/25%. Six joint weights16.25/8.75/25/25/6.25/18.75% sum100%; on-time marginal47.5%. Demand and execution are correlated, so AI demand, space delivery and closure cannot each claim an independent full upside.

Reserved photonics capacity, commercial HVM and raised company engagements warrant material central and accelerated capture. A25% stress branch retains substantial AI sales and ordinary business rather than forcing unconfirmed opportunities to zero. Concentration, cancellation, customer qualification and cyclicality justify the downside; booked or engaged volume does not prove all 2027 acceptances.

On-time frontend/backend acceptance lags2/1quarters; delayed4/3. Accounting readiness begins earlier and incurs costs before customer qualification. Closure timing Q12028 orQ32028 is tied to these same execution branches. These are explicit LOW timing proxies, not recovered contractual schedules.

T007 | Six conditional financial paths

Demand state	Execution	Joint probability	Closure quarter
accelerated adoption	on time	16.250%	Q1 2028
accelerated adoption	delayed	8.750%	Q3 2028
engaged ordered ramp	on time	25.000%	Q1 2028
engaged ordered ramp	delayed	25.000%	Q3 2028
demand and conversion stress	on time	6.250%	Q1 2028
demand and conversion stress	delayed	18.750%	Q3 2028

Joint probability equals the demand-state probability multiplied by its conditional qualification probability. We apply it once to each complete financial outcome. The three-phase relevance lens, source confidence, reported/estimate labels and analytical score do not multiply the financial weights again.

T008 | accelerated adoption | Annual eligible requests, USD M

Demand-funded frontend, backend and shared capacity

Opening frontend/backend resources and paid cohorts set vector output ceilings. Frontend and backend qualify after separate selected lags; a shared300mm load envelope then limits accepted receipts. Monetary receipt-equivalent capacity is a LOW proxy for eligible paid production, not a measured wafer or unit forecast. Customer-paid reservations support demand credibility but do not certify every future receipt.

T012 | Capacity and investment inputs

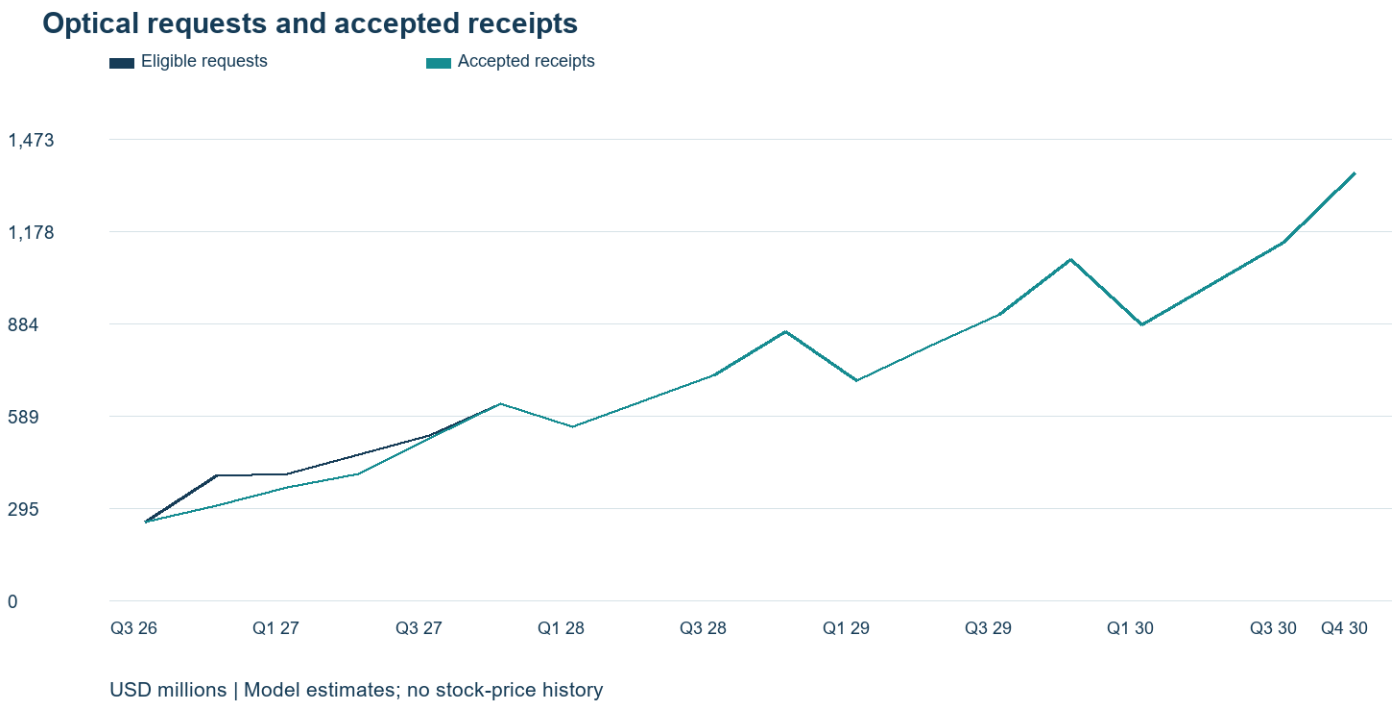

Vector	Opening FE	Opening BE	New capex allocation	CIP allocation	Shared load weight
Automotive	1,450.000000	1,450.000000	22.000%	15.000%	0.250000
Industrial	900.000000	900.000000	15.000%	5.000%	0.600000
DC optical	300.000000	300.000000	25.000%	10.000%	1.000000
DC power / thermal	100.000000	100.000000	7.000%	50.000%	0.200000
Space	300.000000	300.000000	13.000%	5.000%	0.600000
Personal / other	1,200.000000	1,200.000000	18.000%	15.000%	0.250000

T013 | Qualification and closure timing

Timing	Frontend lag, q	Backend lag, q	Closure
on time	2.000000	1.000000	Q1 2028
delayed	4.000000	3.000000	Q3 2028

For each vector, preliminary accepted output is min(eligible demand, qualified frontend, qualified backend). The shared load equals the sum of preliminary output times vector load weight. The shared factor is min(1, shared capacity / requested load). Each preliminary receipt is multiplied by that same factor when the shared envelope binds, conserving the shared resource. Capex cuts reduce the future cohort resources from the actual paid amount; the model does not recognize unfunded capacity.

Six mutually exclusive wallets. Requested receipts are limited by paid frontend and backend receipt-equivalent capacity and shared300mm resources. All shared-resource-dependent preliminary receipts scale proportionately if the shared load exceeds capacity, preserving resource conservation. The monetary intensity is LOW USDmillion of accepted quarterly revenue-equivalent capacity per paid investment, not fabricated physical wafer, yield or unit counts.

Selected monetary capacity proxy; qualified output and shared resources can delay eligible receipts.

Paid manufacturing, support and operating costs

Materials, direct labor, outside processing and warranty/field support follow accepted vector receipts. Each wallet shows variable contribution after those disjoint variable costs. Shared fixed factory cash, finite manufacturing depreciation and correctly scoped acquired amortization are deducted once at consolidated GP. These are not disclosed product gross margins. Q3 fixed factory cash is calibrated once to revenue3700 and GAAP GP1369; the70bp unused-capacity and60bp reshaping amounts are memo pieces inside that envelope. They are not deducted a second time. Closure savings enter the single paid-cost schedule, with no separate automatic3.5pp margin step.

T015 | Variable manufacturing cost rates

Wallet	Materials	Labor	Outside process	Warranty / field
Automotive	20.000%	8.000%	10.000%	2.000%
Industrial	16.000%	7.000%	11.000%	2.000%

Space	14.000%	7.000%	13.000%	2.000%
Personal / other	20.000%	7.000%	14.000%	2.000%

Turning now to profitability:

Gross profit in the second quarter was $1.22 billion, increasing 31.1% on a year-over-year basis.

Gross margin was 34.8%, increasing 130 basis points year-over-year, mainly due to lower unused capacity charges and better product mix. On a sequential basis, gross margin increased by 100 basis points. Non-U.S. GAAP gross margin was 35.2%.

Q2 gross margin included about 60 basis points of negative impact resulting from non-recurring costs related to our manufacturing reshaping program. The negative impact on Gross margin just mentioned non-recurring costs is expected to remain at similar level over the rest of the year.

Total net operating expenses, excluding restructuring, amounted to $970 million in the second quarter. Non-U.S. GAAP Opex stood at $960 million, in line with expectations given in April.

For the third quarter of 2026 we expect non-U.S. GAAP net Opex to stand at about $980 million. The sequential increase is mainly due to start-up costs and employee share award expenses that are more than offsetting the positive vacation seasonality effect. Excluding these two headwinds, Q326 non-U.S. GAAP net Opex would have been at about $920 million.

F06 | Q2 factory drag and Q3 startup/SBC net opex guidance. Issuer 2026-07-23; complete preserved CEO/CFO script physical PDF p9. Genuine source-page raster, not a recreated analyst table; USD millions unless marked otherwise.

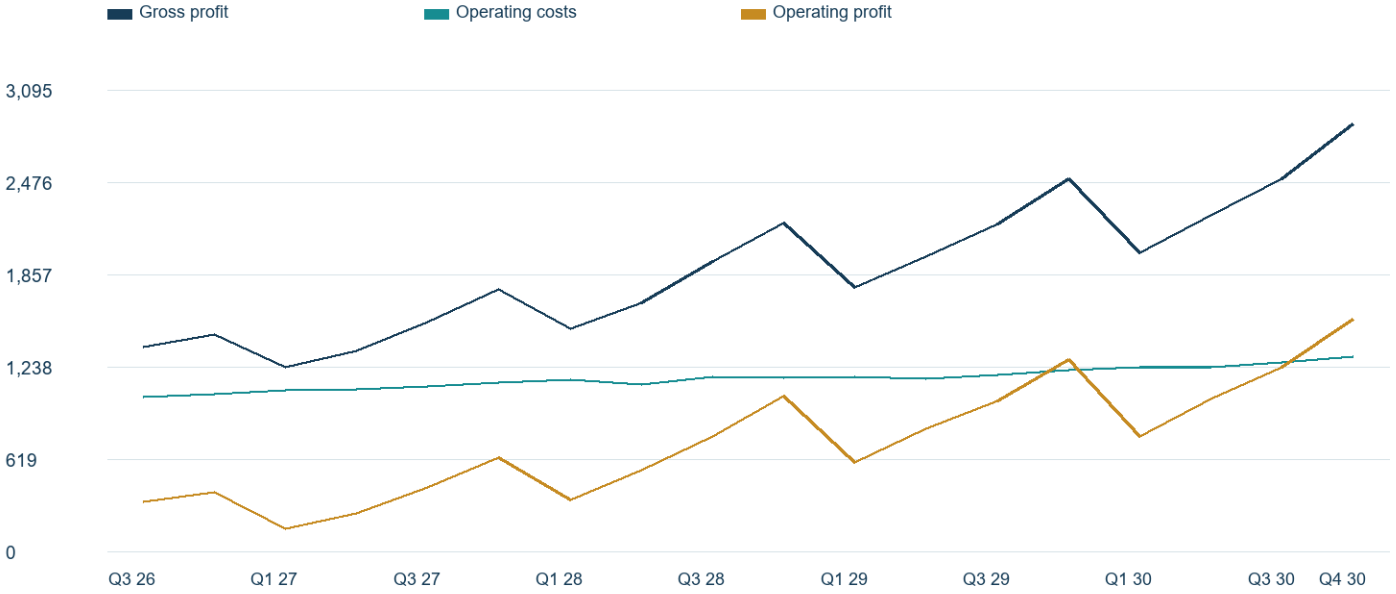

R&D hiring follows the selected lag and planned AI/space demand; SG&A pays incremental sales support. Public operating income, startup and patent/other cash are shown separately. The cost budget includes ordinary support/SBC rather than replacing the980M guide with its920M counterfactual. The acquisition inventory stepup was fully consumed by June and is not a recurring future margin charge.

Four disjoint variable components—materials, direct labor, outside processing and warranty/field support—plus shared factory cash and finite factory depreciation/acquired COGS amortization derive group GP. Vector contribution excludes shared costs and is labeled accordingly. Underloading and reshaping are memo components of the known guide calibration, not additional charges/addbacks. Baseline guide calibration occurs once.

R&D/SG&A resource envelopes are calibrated once after ordinary below-GP depreciation/amortization. Future finite asset charges change profit rather than being offset by a fictitious reduction in cash resources. Engineering hires follow prior planned AI/space demand even when shipments miss acceptance. Sales support, operating leases, public grants, startup, patents, restructuring, recurring SBC and acquired amortization are paid/scoped separately; SBC is added back once in CFO.

One combined saving program:130M quarterly factory cash plus8% relative variable-cost reduction on explicitly eligible transferred fractions, only once closure completes. Delayed paths pay25M quarterly dual running inQ1/Q22028. Retired1.2% of remaining opening-owned asset book is impaired and its depreciation reduced proportionately. No independent free350bp or400bp margin step is added.

Gross profit and operating costs

USD millions | Model estimates; no stock-price history

GAAP-style model includes ordinary paid costs, finite D&A, acquired amortization and restructuring.

T016 | C03 | Exact quarterly plotted data

Finite assets, leases and acquisition accounting

Opening owned depreciable PPE excludes land and operating/finance ROU scopes. Finance ROU depreciation remains separately finite; operating lease cash is already in factory/R&D/SG&A costs. CIP is already paid and moves to ready assets without new cash. New assets use actual funded capex and finite books; half first-ready-quarter depreciation is followed by full quarterly charges until the remaining book is exhausted.

T017 | Opening resource scopes | USD M

Resource	Amount
June PPE net	10,895.000000
June CIP	1,049.000000
June land	146.000000
June operating ROU	239.000000
June finance ROU	88.000000
June owned depreciable PPE	9,373.000000
ordinary intangible ready	262.000000
ordinary intangible pending	60.000000

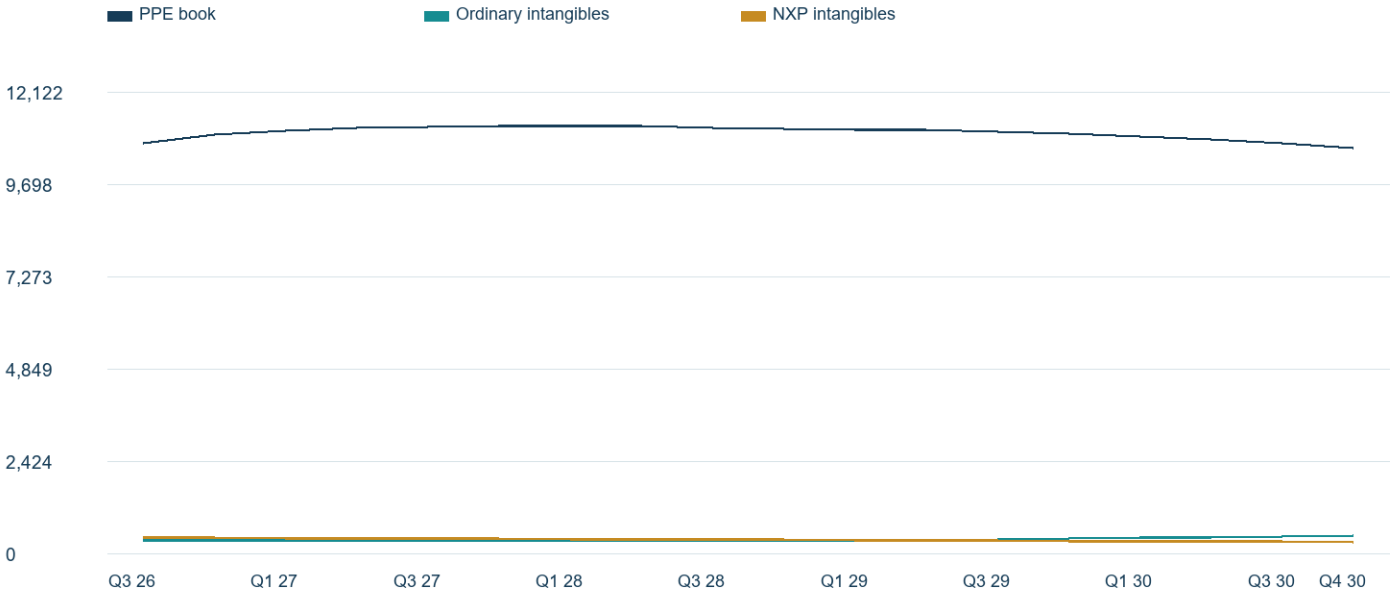

T018 | NXP acquired intangible asset lives

Asset	Initial acquired basis	Life, quarters
technology licenses	165.000000	56.000000
customer relationships	265.000000	68.000000
reacquired rights	7.000000	24.000000

Source-life NXP amortization uses the437M acquired asset pool and its disclosed lives, reduced for12M already amortized in H1. Future COGS/R&D/SG&A allocations follow the selected line fractions. Q2 PPA24M is broader than recurring acquired amortization:13M inventory plus1M COGS acquired amortization,6M below-GP acquired amortization and4M unresolved below-GP scope. The1M rounded H1-versus-quarter aggregate mismatch remains disclosed. The895M acquisition cash and acquired assets are not purchased again.

Opening owned depreciable PPE9373 excludes land146, operatingROU239, financeROU88 and CIP1049 from reported net10895; financeROU88 has its own finite life. Opening CIP is already paid; its release creates no cash and qualified output follows later. Software ready262/pending60 and NXP net425 have finite lives. NXP inventory stepup is fully expensed by June. Source initial intangibles165/56+265/68+7/24 produce7.135154M quarterly acquired amortization before exhaustion. Purchase895 was paid in H1; only selected future50 milestone is paid again. Against June contingent liability41, selected full50 settlement produces9 noncash remeasurement inQ12027, conservatively included in OP with no assumed tax deduction and added back once to CFO before paying50 once. Timing and operating versus financing classification are LOW proxies; finance classification would raise only the three containing near-window OP ceilings by at most USD0.173, leaving Q42027 unchanged.

Finite model asset books

USD millions | Model estimates; no stock-price history

Probability-weighted finite books; CIP, grants and actual paid purchases follow disclosed model scopes.

Cash, grants and financing discipline

Consolidated cash/deposits/marketables fromJune27 rolled under explicit assumptions, not observedOctober cash or proof of legal parent access. Exclude unspent capitalgrant advances and200JVliquidity proxy before500floor.

Start from June cash/deposits/marketable liquidity6032 and actual receivables2067+inventory3188−payables1774=3481 operating NWC. Future45/70day collection/payment and declining inventory days are LOW policies.306 grant advances are finite restrictions already received; allocation reduces eligible asset book/net capex but creates no new cash. Current grant inflows alone enter cash. Debt nominal4035 versus carrying4025 differs by issuance fees; new1500 is already inside debt, old750 cash principal is paid once. Dividends, buybacks, tax, interest, software and capex use cash. No automatic rescue financing is supplied.

Available liquidity deducts remaining grant restrictions and the LOW200JV cash-access reserve. Planned growth capex is cut to preserve a500 liquidity floor, reducing later installed/qualified resources. Maintenance remains in the cash payment even when it breaches that policy floor. The model's funding_gap is precisely the floor/reserve-policy shortfall, not a verified unpaid-maintenance amount or legal default. A negative available cash balance would be a separate cash deficit. Native group OP valuation excludes interest/cash balances, so financing-cost shocks may affect cash without mechanically changing an OP ceiling while investment remains funded.

T020 | Opening cash resources, working capital and policies | USD M

carrying debt source	4,025.000000

(Annexes – suite)

Situation financière nette et situation financière nette ajustée (mesure non-U.S. GAAP)

La situation financière nette, qui n'est pas une mesure U.S. GAAP, représente la différence entre le montant total de nos liquidités et notre dette financière totale. Nos liquidités totales comprennent la trésorerie et les équivalents de trésorerie, la trésorerie soumise à restriction, le cas échéant, les dépôts à court terme, et les valeurs mobilières de placement, tandis que notre dette financière totale comprend les endettements à court terme et les endettements à long terme, tel que publié dans notre bilan consolidé. ST présente également sa situation financière nette ajustée en tant que mesure non-U.S. GAAP afin de tenir compte de l'effet sur la liquidité totale des avances reçues sur subventions d'investissement pour lesquelles les dépenses d'investissement n'ont pas encore été engagées.

ST pense que sa situation financière nette et sa situation financière nette ajustée sont des données utiles pour les investisseurs et la direction, car elles montrent clairement sa situation globale en termes d'endettement net ou de trésorerie nette en mesurant ses ressources en capital à partir de la trésorerie et des équivalents de trésorerie, de la trésorerie soumise à restriction, le cas échéant, des dépôts à court terme et des valeurs mobilières de placement, ainsi que le niveau total de son endettement financier. Il est à noter que nos définitions de la situation financière nette et de la situation financière nette ajustée peuvent différer des définitions retenues par d'autres sociétés, de sorte que toute comparaison peut s'avérer limitée.

Capex net et Free Cash Flow (mesures non-U.S. GAAP)

ST présente le Capex net comme une mesure non-U.S. GAAP, qui est publiée comme faisant partie de notre Free Cash Flow (mesure non-U.S. GAAP) afin de tenir compte de l'effet des avances sur subventions d'investissement reçues au cours de périodes antérieures et allouées aux immobilisations corporelles au cours de la période de référence.

Le Capex net, une mesure non-U.S. GAAP, se définit comme (i) les paiements pour achat d'actifs corporels, tel que publié, plus (ii) les encaissements sur cession d'actifs corporels, tel que publié, plus (iii) les recettes liées aux subventions d'investissement et aux autres contributions, tel que publié, plus (iv) les avances reçues sur subventions d'investissement allouées aux immobilisations corporelles au cours de la période de référence.

ST pense que le Capex net est une information utile pour les investisseurs et la direction, dans la mesure où le budget annuel pour achats d'immobilisations corporelles inclut l'effet des subventions d'investissement. Notre définition du Capex net peut différer de définitions retenues par d'autres sociétés, de sorte que toute comparaison peut s'avérer limitée.

(En millions de dollars US)	**T2 2026**	**T1 2026**	**T4 2025**	**T3 2025**	**T2 2025**
Paiements pour achat d'actifs corporels, tel que publié	(453)	(549)	(518)	(431)	(574)

Recettes liées aux subventions d'investissement et aux autres contributions, tel que publié	34	167	111	11	89
Avances sur subventions d'investissement allouées aux immobilisations corporelles	10	17	12	16	16
Capex net (non-U.S. GAAP)	**(409)**	**(362)**	**(395)**	**(401)**	**(465)**

Le Free Cash Flow, qui est une mesure non-U.S. GAAP, se définit comme (i) la trésorerie nette générée par les activités opérationnelles, plus (ii) le Capex net, plus (iii) les paiements pour achats (nets d'encaissements sur cessions) d'actifs incorporels et financiers et (iv), le cas échéant, les paiements versés lors d'acquisitions d'entreprises, nets de trésorerie acquise.

ST pense que le Free Cash Flow est une information utile pour les investisseurs et la direction, car il mesure la capacité de ses activités d'exploitation et d'investissement à générer des liquidités pour soutenir ses opérations.

Le Free Cash Flow peut être réconcilié avec les flux de trésorerie totaux et la variation nette des liquidités et équivalents de liquidités en y ajoutant les encaissements (placements) liés aux valeurs mobilières de placement et dépôts à court terme, les flux de trésorerie générés (absorbés) par les activités de financement et l'impact sur la trésorerie des variations de taux de change, et en excluant les avances sur subventions d'investissement reçues au cours des périodes antérieures et allouées aux immobilisations corporelles au cours de la période de référence. Il est à noter que notre définition du Free Cash Flow peut différer de celle retenue par d'autres sociétés, de sorte que toute comparaison peut s'avérer limitée.

(En millions de dollars US)	**T2 2026**	**T1 2026**	**T4 2025**	**T3 2025**	**T2 2025**

F05 | Q2 capital spending and free-cash-flow reconciliation. French issuer release dated 2026-07-23, complete physical PDF p15. Genuine original source-page raster; financial statement text is French and the report discussion is English. USD millions unless marked otherwise; French comma is the decimal separator.

Operating cash starts from OP, adds only noncash D&A/SBC/retirement and the selected NXP contingent remeasurement, pays interest and tax, adjusts working capital and the operating-grant collection difference. The9M Q1 2027 remeasurement has no assumed tax deduction and is added back once to CFO; the50M milestone is paid once in investing/other cash uses. Investing cash pays actual gross capex and software; only current capital-grant cash offsets those payments. Finite prior-advance releases reduce asset/accounting net-capex basis once and release reserved cash access; they do not create another cash inflow. New convert proceeds are already in June liquidity. Old750M principal is paid once in the Q3 debt schedule, not again at the old2027 maturity.

Available liquidity subtracts remaining capital-grant advances and the selected JV-access reserve. If the selected floor is threatened, growth capex is cut while maintenance remains paid. The reported shortfall measures the selected floor/reserve policy, rather than unpaid maintenance or a legal default. The model supplies no automatic equity or debt rescue. Consolidated cash availability is not lender certification or legal parent cash access.

A deliberately6000M liquidity-floor stress cuts growth investment and future receipts. Lower depreciation and installed operating costs can raise later OP despite lost sales; this is an economic tradeoff within the selected18xOP method, not a fabricated financing benefit or guarantee that a cash shortage improves equity value. The omitted growth beyond2030 and legal cash availability remain limitations. Do not impose an artificial all-stress-targets-must-fall rule.

Six conditional liquidity paths

USD millions | Model estimates; no stock-price history

All six conditional paths; floor and JV/reserved-cash assumptions are model proxies.

Treasury repurchases serving employee obligations are not automatic cancellation. Historical diluted EPS, issued/outstanding ordinary shares, warrant potential and modeled starting-quarter gross claims have different definitions and dates. The native denominator convention remains unchanged. Group OP retains full consolidated Sanan results;51% of that JV is not51% of whole-company OP.

Cash dividends paid to stockholders in the second quarter of 2026 totaled $75 million.

ST maintained its financial strength with a net financial position that remained solid at $2.01 billion as of June 27, 2026, reflecting total liquidity of $6.03 billion and total financial debt of $4.02 billion.

During the quarter, ST issued a new $1.5 billion dual-tranche senior unsecured convertible bond (Tranche A and Tranche B for $750 million each) due 2031 and 2033 and announced the early redemption of its $750 million convertible bond due in 2027.

Now back to Jean-Marc, who will comment on our outlook.

Thank you Lorenzo.

Now, let's move to our business outlook for Q3 2026:

- We are expecting Q3 revenues of $3.70 billion +/- 350 basis points. At the mid-point, our Q326 net revenues will increase 6.2% sequentially and by 16.2% year-over-year.
- We expect our gross margin to be at about 37.0%+/- 200 basis points, including about 70 basis points of unused capacity charges.
- This business outlook does not include any impact for potential further changes to global trade tariffs compared to the current situation.

Valuation and conditional outcomes

For each quarter t, OP claim S=(OP+Q)×P-Q-R, with retained P1/Q0/R0. The complete-window ceiling equals18×Σ(S[t:t+4])÷native starting-quarter shares[t]. All six paths share those exact native share literals. The final model ceiling is Σ(joint probability×path ceiling), with no second score/phase discount. The three terminal quarters lack a complete four-quarter forecast and remain Incomplete.

Analytical scorecard, risks and catalysts

The source and cost review changes modeled earnings precision, not the underlying thesis-quality judgment. The risk deduction is a score classification, not an extra numerical haircut to already probability-weighted earnings. Preserve the existing Excel Base.

T032 | Analytical factors

Factor	Points	Reason
Core	13.000000	Process integration, qualified optics and STM32 software switching costs support capture; diversified IDM products face credible competition and broad pricing pressure.
Cycle	9.000000	Rising bookings, commercial photonics ramp and normalized channel inventories support recovery, with auto/industrial end-demand risk.
TAM	9.000000	Optical links, industrial/physical AI, power and space adjacencies share real engineering capabilities. Conditional capture and qualification prevent treating every endmarket dollar as revenue.
Catalysts	4.000000	Next actual/guide,2027 accepted optical volume and late2027/2028 manufacturing transitions are concrete tests; timing remains conditional.
Macro	8.000000	AI infrastructure and electronics content growth are strong structural drivers; automotive cycle, FX and input costs constrain the benefit.
Alpha	2.000000	Paid capacity/closure accounting offers useful differentiation, but the headline AI/space themes are public and no private consensus gap is established.
Risks	-4.000000	Auto/industrial demand and channel reversal−1; Paid manufacturing, customer qualification and closure execution−1; Competition, price/input costs and product substitution−1; Large customer/program concentration and related timing, claims and legal cash scope−1
total	41.000000	Arithmetic total / scale
maximum	60.000000	Arithmetic total / scale
percentage	68.333333	Arithmetic total / scale

Analytical41/60 equals68.333333%, displayed68, Watchlist. The retained Excel Base68 has a separate protected-input role. The score is not an earnings adjustment or another financial probability.

Auto/industrial demand and channel reversal−1; Paid manufacturing, customer qualification and closure execution−1; Competition, price/input costs and product substitution−1; Large customer/program concentration and related timing, claims and legal cash scope−1

October29 Q3 actual and guide; 2027 qualified photonics deliveries; late2027/2028 transfer/closure milestones; actual share/convert settlement and cash access. Replace proxies on actual accepted shipments, product gross margins/cost partitions, qualified frontend/backend throughput, wafer/yield/ASP data, customer schedule changes, factory closure milestones, actual grant cash, cash access, debt settlement and gross claims. New contrary evidence changes conditional amounts/probabilities; absence of official confirmation alone does not require zero.

accelerated adoption on time | Complete conditional derivations

Selected joint probability 16.250000%; closure Q1 2028. All future rows are model estimates. Amounts are USD M unless shares/ratios are stated. The preceding equations apply to every row; this appendix displays the full conditional numerical result.

Cohort depreciation/amortization uses min(remaining book, initial basis/life × first-ready-quarter factor). The selected first-ready factor is0.5; the later charge is1.0 until exhausted. New software is not ready until the next selected quarter.

Retirement reduces the original owned-PPE pool; the separate impairment is noncash and appears once in operating expense/CFO. Tables below show every cohort charge, so their sums reconcile to the quarter totals above.

accelerated adoption delayed | Complete conditional derivations

Selected joint probability 8.750000%; closure Q3 2028. All future rows are model estimates. Amounts are USD M unless shares/ratios are stated. The preceding equations apply to every row; this appendix displays the full conditional numerical result.

Cohort depreciation/amortization uses min(remaining book, initial basis/life × first-ready-quarter factor). The selected first-ready factor is0.5; the later charge is1.0 until exhausted. New software is not ready until the next selected quarter. Retirement reduces the original owned-PPE pool; the separate impairment is noncash and appears once in operating expense/CFO. Tables below show every cohort charge, so their sums reconcile to the quarter totals above.

Cohort depreciation/amortization uses min(remaining book, initial basis/life × first-ready-quarter factor). The selected first-ready factor is0.5; the later charge is1.0 until exhausted. New software is not ready until the next selected quarter.

Retirement reduces the original owned-PPE pool; the separate impairment is noncash and appears once in operating expense/CFO. Tables below show every cohort charge, so their sums reconcile to the quarter totals above.

T148 | PPE cohort D&A | 1

engaged ordered ramp delayed | Complete conditional derivations

Selected joint probability 25.000000%; closure Q3 2028. All future rows are model estimates. Amounts are USD M unless shares/ratios are stated. The preceding equations apply to every row; this appendix displays the full conditional numerical result.

Cohort depreciation/amortization uses min(remaining book, initial basis/life × first-ready-quarter factor). The selected first-ready factor is0.5; the later charge is1.0 until exhausted. New software is not ready until the next selected quarter. Retirement reduces the original owned-PPE pool; the separate impairment is noncash and appears once in operating expense/CFO. Tables below show every cohort charge, so their sums reconcile to the quarter totals above.

T192 | PPE cohort D&A | 1

The complete values for this path are identical to T104, included earlier in this document. That table applies here without a change to any quarter, cost, pool or calculation. Open T104.

T193 | PPE cohort D&A | 2

The complete values for this path are identical to T061, included earlier in this document. That table applies here without a change to any quarter, cost, pool or calculation. Open T061.

T194 | PPE cohort D&A | 3

The complete values for this path are identical to T150, included earlier in this document. That table applies here without a change to any quarter, cost, pool or calculation. Open T150.

Cohort depreciation/amortization uses min(remaining book, initial basis/life × first-ready-quarter factor). The selected first-ready factor is0.5; the later charge is1.0 until exhausted. New software is not ready until the next selected quarter.

Retirement reduces the original owned-PPE pool; the separate impairment is noncash and appears once in operating expense/CFO. Tables below show every cohort charge, so their sums reconcile to the quarter totals above.

T236 | PPE cohort D&A | 1

The complete values for this path are identical to T060, included earlier in this document. That table applies here without a change to any quarter, cost, pool or calculation. Open T060.

T237 | PPE cohort D&A | 2

The complete values for this path are identical to T061, included earlier in this document. That table applies here without a change to any quarter, cost, pool or calculation. Open T061.

Cohort depreciation/amortization uses min(remaining book, initial basis/life × first-ready-quarter factor). The selected first-ready factor is0.5; the later charge is1.0 until exhausted. New software is not ready until the next selected quarter. Retirement reduces the original owned-PPE pool; the separate impairment is noncash and appears once in operating expense/CFO. Tables below show every cohort charge, so their sums reconcile to the quarter totals above.

T280 | PPE cohort D&A | 1

Sources and specific remaining gaps

Future endmarket splits, resource intensity, yields, cost partition, asset lives, corporate cash access and schedules are analyst LOW proxies. Source financial-image originals are preserved; two additional technical deck rasters remain unrecovered after timeouts/403 and are not represented as reviewed pixels. Fresh issuer text remains cited. PDF must be self-contained with the eight verified financial figures, model charts, numeric tables and all derivations. Preserve18x current-plus-next3 whole-group GAAP-style OP, USD/unit1, starting-quarter gross diluted shares940M atQ32026 growing0.5% annually, P1/Q0/R0, three genuinely blank tail windows. Sanan is fully consolidated despite49% ownership and51% JV NCI; groupOP is not parent legal distributable earnings. No49% revenue or51% groupOP haircut. Mixed-date gross claims939.764964–944.156970M bracket940 because old settlement netshares may already be inside October treasury changes. Keep the native proxy and disclose5% sensitivity rather than double count. Actual post-settlement cap table is a future checkpoint. Saved56.1 quote is undated; no live upside/ranking/holding claim is made in the artifact.
