OUST NASDAQ 4 NOVEMBER 2026 FRAMEWORK 8.0

Ouster

Ouster sells the sensing and perception hardware and software used by robots, drones, industrial machines and traffic networks. Record camera shipments and early Rev8 deliveries strengthen its growth outlook. The operating model still requires materially larger paid deployments to cover recurring manufacturing, engineering and support costs.

The active Q4 2027 valuation window covers Q4 2027 through Q3 2028. Its selected forward operating loss is $11.35 million. The retained 20 times operating-profit method produces a signed output of minus $2.92 per share. A loss-making earnings window supports no positive operating-earnings ceiling. The first positive complete window is Q1 2028.

The latest actual quarter ended September 30. Earnings and the management call were released November 3. Forecasts begin in Q4 2026. All financial amounts are USD millions unless a table states another unit; displays are rounded and the synchronized model retains full precision. [N01-N04, M]

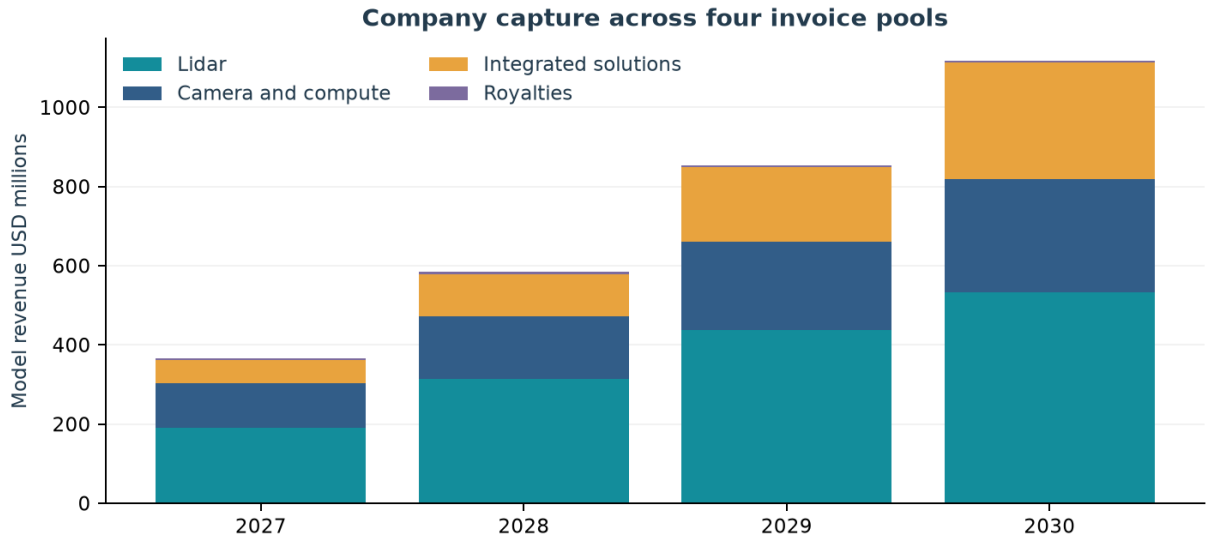
Current research snapshot	Reading
Analytical Base	41 / 60 = 68%
Protected Excel Base	72%
Classification	Competitive physical-AI perception beneficiary; Watchlist
Dated closing quote	$28.98 on November 3 regular session
Current method	20 x current plus next three quarters economic operating profit
Active signed output	-$2.92 per share for Q4 2027
First positive complete earnings window	Q1 2028: $1.32 per share
First positive individual-quarter operating profit	Q3 2028

PHYSICAL AI AND COMPANY CAPTURE

The useful engineering is specific

Physical AI requires reliable perception of distance, geometry, objects and movement. Useful performance depends on lighting, occlusion, weather, motion, latency and the safety requirements of the customer application. Ouster can sell several complementary technologies into the same machine.

The model separates four invoice pools: standalone lidar, camera and compute hardware, integrated BlueCity and Gemini solutions, and royalties. Solution hardware is already within the solution invoice. Two lidar sensors per modeled new solution site are removed from standalone shipments before standalone receipts are calculated. [S07-S11, N02, M]



Selected annual company revenue by invoice pool. The model measures paid company receipts across distinct invoices.

Year	Lidar	Camera and compute	Integrated solutions	Royalties
2027	190.9	111.4	58.5	6.0
2028	314.1	158.3	106.5	5.0
2029	437.9	222.4	189.2	4.0
2030	533.2	285.5	295.4	3.0

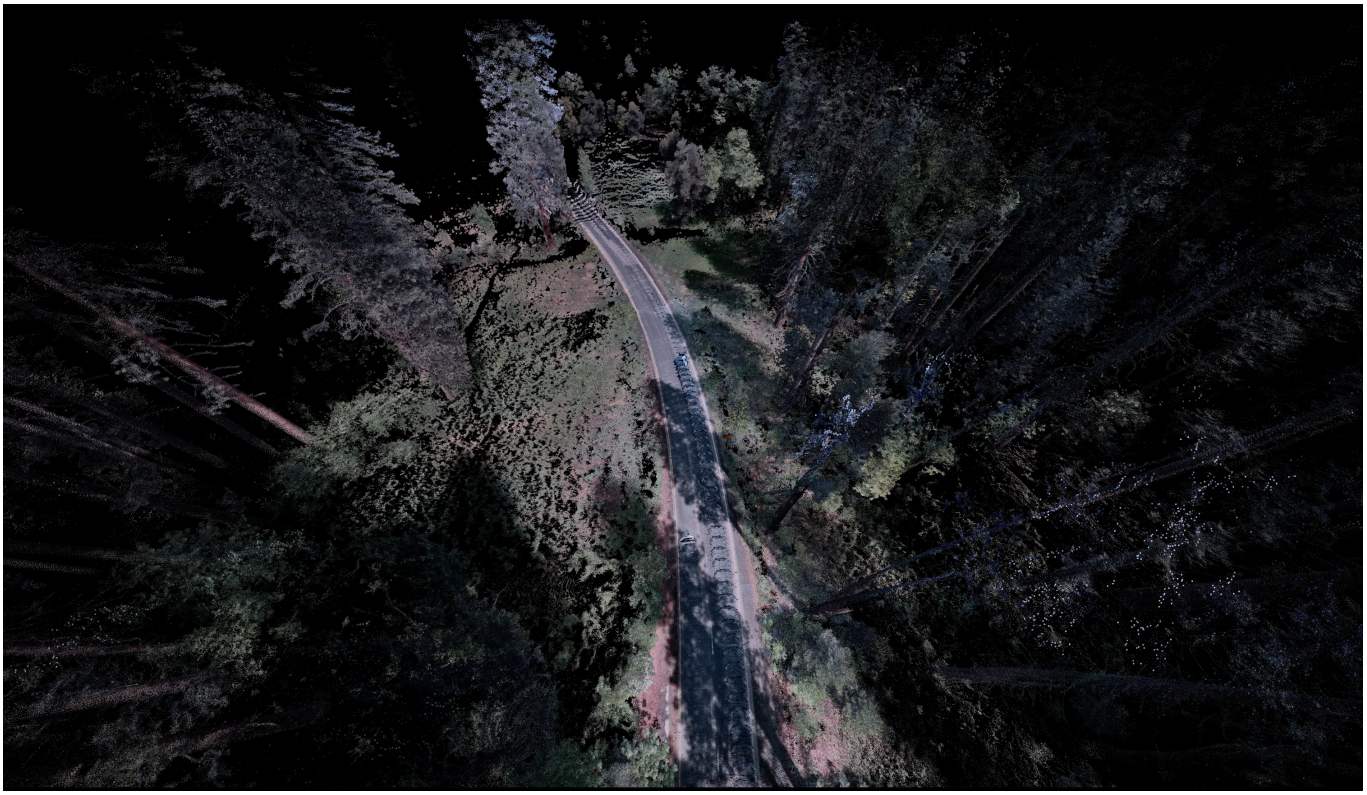
Expected selected revenue by invoice pool; USD millions. LOW company-capture forecasts.

THREE PHASES OF APPLICATION EXPANSION

The Ford expansion lens

The framework treats a new general-purpose technology as a sequence of wider applications. Industrial autonomy and traffic sensing provide the current base; larger robot fleets and richer perception systems create later opportunities. Each phase still requires Ouster to win sockets, deliver accepted hardware and earn recurring gross profit.

The selected annual revenue path is $367 million in 2027, $584 million in 2028, $853 million in 2029 and $1,117 million in 2030. This requires significant execution beyond current results. IFR robot-stock and annual-installation statistics describe different market scopes and enter the analysis as demand context. The model uses customer/site and unit proxies to convert that context into company receipts. [S37, S38, M]



Original Ouster OS1 Max point cloud, accessed October 16, 2026. The forest-road scene illustrates aligned color and geometry under its captured conditions. Image capture date is undisclosed. [S07]

Phase	Commercial condition
2026-2027	Rev8 adoption, camera repeat orders and accepted infrastructure sites
2028-2029	Larger fleets, additional sites and sustained manufacturing economics
2030 onward	Broader platform adoption with adequate capacity, support and funding

L4 AND L4 MAX SILICON

What Rev8 changes

Rev8 combines CMOS and SPAD reception, VCSEL illumination and custom processing in a native-color lidar architecture. Aligned color and geometry can reduce calibration work and improve scene interpretation, mapping and training. Customer systems can retain additional cameras for their own field of view, resolution or application requirements.

The OS family uses mechanical rotation for 360-degree coverage. L4 and L4 Max power Rev8. The current filing also describes a Chronos chip fabricated by its foundry and undergoing in-house tests. Automotive commercialization depends on subsequent customer qualification and paid programmes. The color channel requires ambient visible light; geometric lidar sensing has a different lighting dependency. [S07-S09, S13, N02]

Original Ouster Rev8 native-color intersection scene, accessed October 16, 2026. Capture date is undisclosed. The displayed conditions demonstrate the issuer example of shared color and geometric sensing. [S08]

SPECIFICATIONS AND OPERATING CONDITIONS

Range resolution and power trade off

Range and precision claims are useful only with their target, light, sampling and motion conditions. A long representable range and a specified dark-target detection range describe separate properties. Sampling mode also changes the frame-rate and angular-resolution trade-off.

The OS1 Max Rev8 datasheet specifies a 200-metre range on a 10% Lambertian target under 100-klux sunlight and a defined detection threshold, while its 500-metre maximum representable range is a data bound. Thermal mounting, power and payload mass affect deployment costs. [S07]

Metric	Issuer conditions
Channels and coverage	256 channels; 360-degree horizontal field; about 44-degree vertical field
Dark-target detection	200 m;10% Lambertian;100 klux;over 90% detection;1024 samples at 10 Hz
Sampling and rate	4096 horizontal samples at 5 Hz;40 Hz uses 512 samples
Power and sensor mass	19 W nominal at 1024/10 Hz;670 g without cap/baseplate
Accuracy	Typical 13 mm on Lambertian targets under specified tests

MEASUREMENT CONDITIONS

Read the original precision conditions

Precision measures repeatability while accuracy measures closeness to the underlying value. Both depend on range and target properties. The original datasheet page below retains the issuer curves, reflectivity assumptions, static-target test basis and optical/output conditions.

These specifications inform whether a customer can use the sensor for a particular task. Commercial conversion additionally depends on payload weight, compute requirements, mounting, acceptance and the customer programme. [S07]

Range Precision (Typical on Lambertian and Retroreflective targets beyond 1 m, 1024 @ 10 Hz mode, 1 standard deviation) **Note:** Precision is calculated based on the standard deviation of 100 measurements on a static target at a given range	Min: ±0.25 cm, Max: ±1.5 cm Range Accuracy (Typical on Lambertian and Retroreflective targets beyond 1 m, 1024 @ 10 Hz mode) Note: Accuracy is calculated based on the error between the mean of 100 measurements on a static target at a given range and the true range	±1.25 cm for lambertian targets, ±2.5 cm for retroreflective targets 
LASER

Laser Product Class	Class 1 eye-safe per IEC/EN 60825-1: 2014
Laser Wavelength	865 nm
Beam Diameter Exiting Sensor	19 mm
Beam Divergence	0.09° (FWHM)

LIDAR OUTPUT

Connection	UDP over gigabit Ethernet
Maximum Points Per Second	10,485,760
Data Per Point	RGB, Range, Signal, Reflectivity, Near-infrared, Channel, Azimuth angle, and Timestamp
Timestamp Resolution	< 1 µs
Data Latency	< 10 ms
Data Integrity	End to End CRC that covers entire data packet

DATA RATE (calculated at 1024 @ 10 Hz)

	32 channel	**64 channel**	**128 channel**	**256 channel**
Maximum Data Rate	N/A	148 Mbps	295 Mbps	589 Mbps
Minimum Data Rate	N/A	22 Mbps	43 Mbps	86 Mbps

Original OS1 Max Rev8 datasheet, PDF page 2, revision August 3, 2026. Issuer precision curves and test conditions are preserved with their original numerical precision. [S07]

SAFETY AND CYBERSECURITY

Safety requires completed customer qualification

Rev8 is designed for safety-oriented deployments. The current datasheet footnotes mark key functional-safety and cybersecurity configurations as pending certification. Its thermal specification also depends on the required mounting.

The November 3 call described Blue UAS certification on Rev7 and additional certification work planned for Rev8. Customer engineering and qualification can continue while that work proceeds. A forecast of larger safety-critical revenue therefore requires timing, configuration and acceptance assumptions. [S07, N03]

Dimensions	Diameter: 87 mm (3.42 in) Height: • Without cap: 82 mm • With thermal cap: 87 mm
Weight	No halo cap / baseplate: 670 g With halo cap: 720 g
Mounting	Bottom: 4x M3 screws, 2x locating 2 mm pin holes Top: 4x M3 screws, 4x locating 2 mm pin holes, 1x M6 screw
Bottom Mount Baseplate	Aluminum, 530 g, 110 mm x 110 mm x 20.5 mm (LxWxH), 4 x M8 thru holes

OPERATIONAL

Operating Temperature (at 1024*10 Hz)	-40°C to +85°C when mounted in accordance with Ouster Thermal Integration guide
Storage Temperature	-40°C to +105°C
Ingress Protection	IP68 (1m submersion for 1 hour, with I/O cable attached) IP69K (with I/O cable attached)
Shock	IEC 60068-2-27 (Amplitude: 100 G, Shape: 11 ms half-sine, 3 shocks x 6 directions)
Vibration	IEC 60068-2-64 (Amplitude: 10 Grms, Shape: 10 - 1000 Hz, Mounting: 3 axis @ 48hrs/axis, per ISO-16750-3 Test VII method. Ouster custom ASD derived from Test VII ASD
Compliance	**Functional Safety:** - IEC61508 SIL2[i] [2] - ISO26262 ASIL-B[i] [2] - ISO13849 PLd/CAT-2[i] [2] **Security/Cybersecurity:** - ISO 21434 Automotive[i] - UNECE-WP 29 Automotive[i] - IEC 62443 Industrial[i] - ISO 27001 **US and Canada** Laser Eye Safety: - IEC/EN 60825-1:2014 Class 1 eye safe - FDA US 21CFR1040 Laser Notice 56 Class 1 - Canada Radiation Emitting Devices Regulation (REDR) with SOR/2024-196[i] **Product Safety:** - UL 62368-1, 4th Edition - CSA 22.2 No. 62368-1-25 **EMC:** Commercial: FCC Part 15 and ICES03 Class B **European Union (EU)** Laser Safety: IEC 60825-1:2014, EN 60825-1:2014+A11:2021 Class 1 eye safe Product Safety: IEC 62368-1:2018, EN 62368-1:2014/AC:2015 **EMC:** - EN 55032:2015 + AC:2016 + A11:2020 + A1:2020 Class B - EN 61000-3-2:2014 - EN 61000-3-3:2013 - EN 55035:2017 + AC:2019 + A11:2020 **Automotive:** - GMW3097:2019[i] - UN-ECE Reg 10, Rev 6 **Earthmoving/Construction equipment:** - ISO-13766-1:2018 - ISO-13766-2:2018

Original OS1 Max datasheet, PDF page 4, revision August 3, 2026. Read its superscripted safety, cybersecurity and thermal entries together with the source legend in the next section. [S07]

ORIGINAL SOURCE LEGEND

The certification footnote defines the scope

The issuer legend is retained beside the safety analysis so that the stated performance and certification status remain visible. Modelled adoption assumes customers complete the applicable product and system-level qualification.

The relevant checks are the issued certificate, covered product configuration, customer validation and paid accepted deliveries. Publication of a roadmap gives an earlier technical signal. [S07, N03]

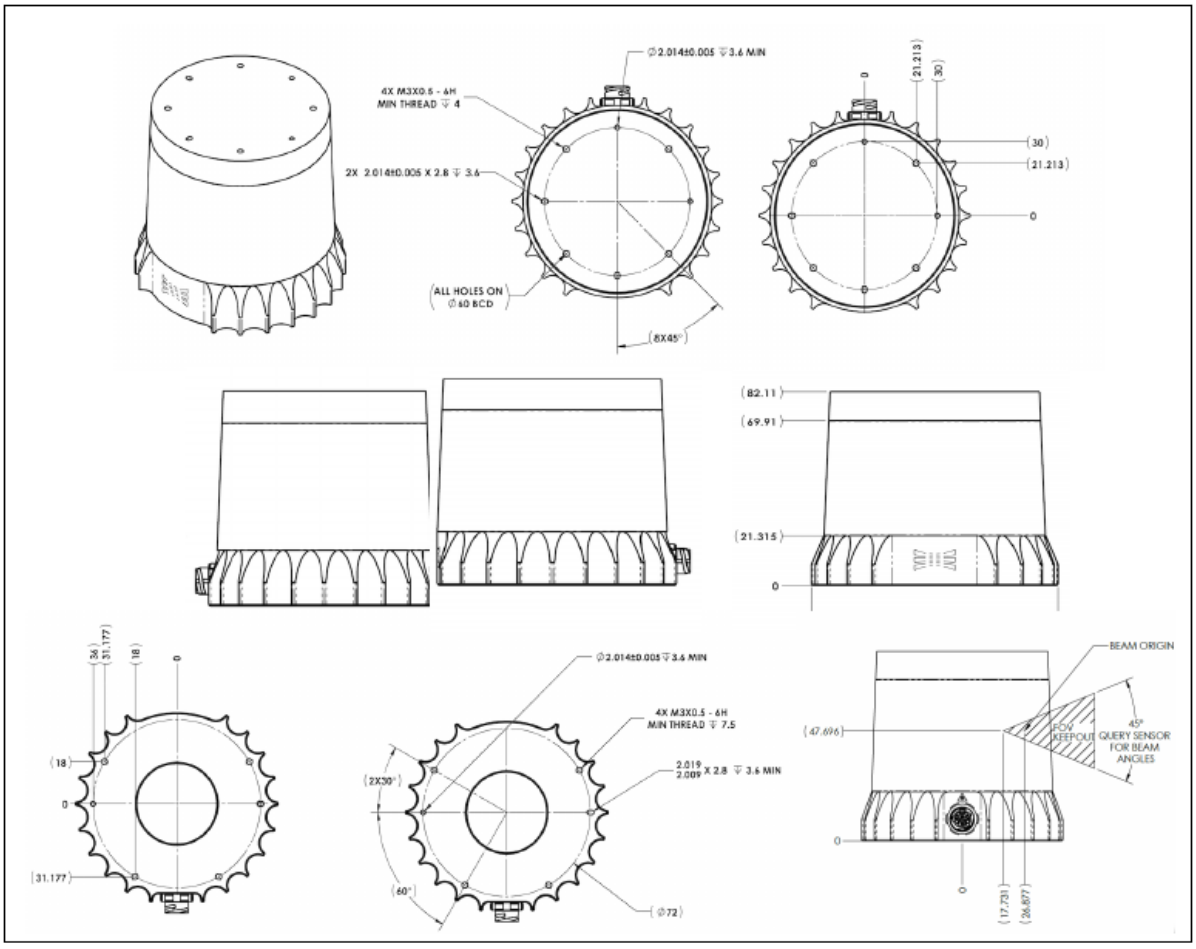
Note: Ouster UK (Ltd): 125 Princes Street, Edinburgh EH2 4AD, Scotland, United Kingdom Contact: Neil Calder Phone Number: +44(0).131.563.9078	**Industrial Trucks/Forklift:** - IEC/EN-12895:2015+A1:2019[i] [2] **Agricultural equipment:** - ISO 14982:2009[i] **Australia:** AS/NZS CISPR 32: 2015 + AMD1: 2020

[i] Pending certification, [2] Available in an alternate configuration

SOFTWARE

Ouster Software	Ouster Python SDK, C++ Driver, Ouster Studio
Supported 3rd Party Integrations	ROS2, ROS, NVIDIA Driveworks, MATLAB, NVIDIA Isaac, NVIDIA IsaacSIM

EXTERIOR DIMENSIONS



Original OS1 Max datasheet, PDF page 5, revision August 3, 2026. The legend identifies pending certification and availability in an alternate configuration. [S07]

CUSTOMER CONVERSION

Named customers occupy different commercial stages

Forterra, GUSS, Seneca, GeoCue and Flyability show demand across defence, agriculture, drones and inspection. Their commercial stages vary from operating Rev7 fleets to planned Rev8 integration. The October 21 Forterra release described 105 Lancers that had arrived in Ukraine in October 2025; their historical missions establish operating context. Prospective Rev8 AutoDrive integration belongs to future conversion.

The model includes these applications in its lidar unit pool. Individual customer programmes have explicit overlap against that pool; disclosed historical vehicles contribute evidence about durability and use. The source provides no new incremental Forterra contract price. [S12-S15, N05, N03]

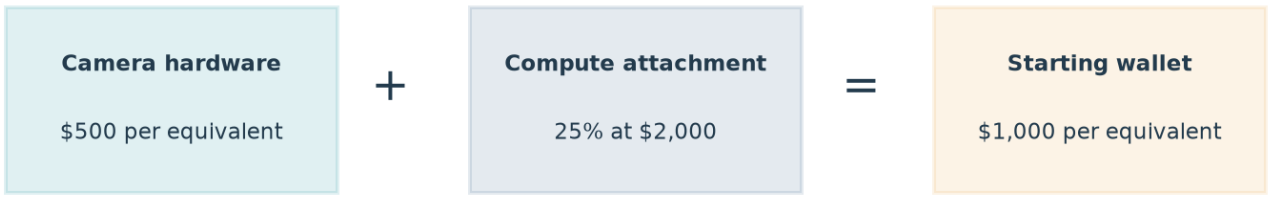
Customer or application	Evidence and forecast boundary
Forterra	Operational Rev7 Lancer history; planned future Rev8 AutoDrive integration
GUSS / Deere	Planned next-generation autonomous orchard equipment
Seneca	Named Rev8 wildfire-response drone integration
GeoCue	Survey payload integration with additional camera content
Flyability	Inspection integration and established operating application

STEREOLABS AND EDGE COMPUTE

Cameras provide a separate growth engine

Ouster shipped 20,000 cameras in Q3 and camera production more than doubled sequentially. Management described a step in demand and declined to give a separate quarterly Stereolabs revenue forecast. Camera and compute revenue therefore require an explicitly labelled allocation proxy.

I model a starting wallet of $500 for camera hardware plus 25% compute attachment at $2,000, producing $1,000 per camera-equivalent. The blended wallet declines to $970 in 2027 and $880 by 2030. These are LOW assumptions about invoice economics. The separate 60% conditional acceleration adds bounded camera volume above an already larger reference path. [N03, M]



Illustrative camera and compute wallet decomposition. Each customer invoice is captured once; absolute allocation and attachment are LOW proxies.

Wallet component	Assumption
Camera hardware per equivalent	$500
Compute attachment	25% at $2,000
Starting combined wallet	$1,000
2027 /2028 /2029 /2030 wallet	$970 /$940 /$910 /$880

ZED BOX AND NVIDIA SOFTWARE

Compatibility supports paid customer conversion

The October 27 ZED Box 2 family supports eight synchronized GMSL2 camera inputs, shared software and multiple sensor connections. Orin models list 117 or 157 TOPS; Thor models list 1,200 or 2,070 FP4 TFLOPS. Those metrics have different numerical definitions. The standard box began shipping in October and Max shipping was scheduled for late November.

AVerMedia integration, NVIDIA Isaac ROS support and the expanded compute family can lower development friction. The model records their economics within the camera/compute wallet and the conditional adoption gap. Repeat paid purchases and customer support requirements determine whether technical adoption becomes sustained profit. [S18, S21, N06, N03]

Commercial variable	Model handling
Technical compatibility	Supports conversion probability and available product scope
Camera/compute receipts	Inside reference wallet and 60% incremental-volume outcome
Incremental support	8% of conditional camera receipts
Additional fixed engineering	Selected quarterly expense schedule
Additional capex	2% of incremental camera receipts

BLUECITY AND GEMINI

Traffic and logistics support software attachment

BlueCity combines sensing with traffic detection, analytics and actuation. Gemini supplies perception and tracking for fixed environments. The latest call described several million-dollar BlueCity wins and a multi-million-dollar expansion across 100 additional intersections. Gemini can combine up to 100 lidar sensors on a server; some customers operate more than 500 sites.

I model a new-site wallet of $40,000, annual service receipts of $6,000 per opening site-equivalent and two bundled lidar sensors per new site. These LOW proxies translate deployment into invoicing, service and manufacturing demand. The new 100-intersection award and prior Utah cohort sit inside the same solution site pool. [S16, S22, S23, N03, M]

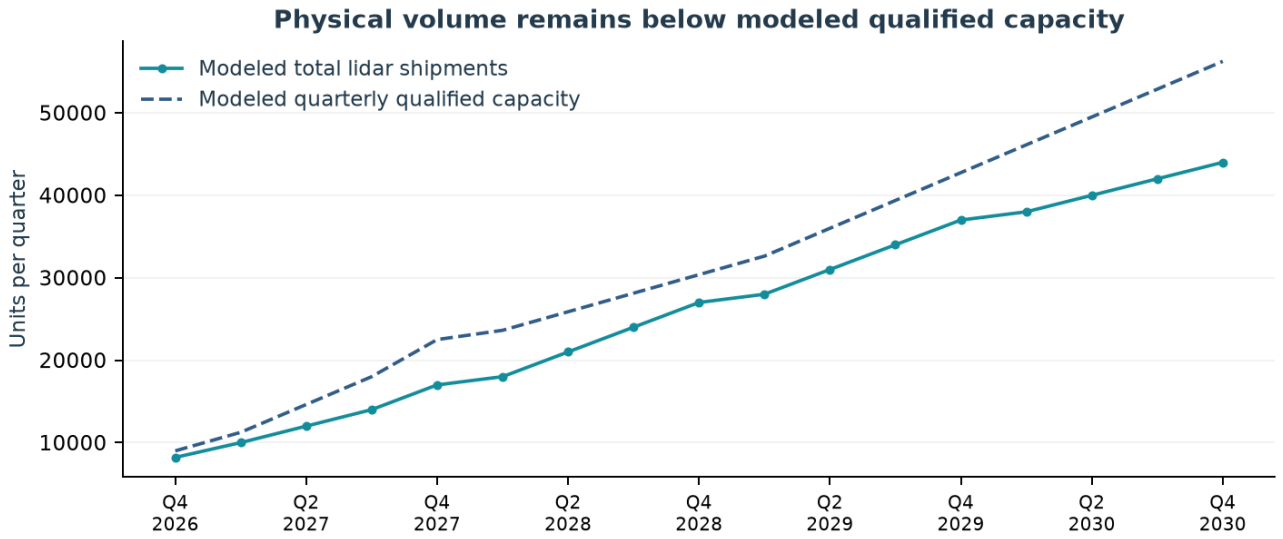
Driver	Selected treatment
Opening site-equivalents	1,000 LOW proxy
New-site hardware wallet	$40,000
Annual service wallet	$6,000 per opening site-equivalent
Bundled lidar	Two sensors per new site removed from standalone receipts
Acceptance	Invoice timing, support and renewal remain customer-specific

CAPACITY YIELD AND DELIVERY

Manufacturing must deliver good units

Management plans installed lidar capacity exceeding 100,000 annualized units by the end of 2027. It explicitly retains spare capacity for customer and product-mix variability. Rev8 shipments progress from hundreds in Q3 to thousands in Q4, with larger 2027 volumes as the production system ramps.

The model supplies a quarterly capacity path,90% qualified yield and later expansion. These LOW assumptions bound modeled shipments. Investment continues through 2027 in tooling, precision automation, testing and inventory. Camera production also requires its own manufacturing and support capacity. [N03, S24, M]



Modeled lidar shipments and qualified quarterly capacity. Annualized installed capacity is converted to quarterly qualified output using the selected yield.

Quarter	Lidar units	Annual capacity	Qualified/q	Rev8 mix
Q4 2026	8,206	40,000	9,000	36%
Q1 2027	10,000	50,000	11,250	35%
Q2 2027	12,000	65,000	14,625	50%
Q3 2027	14,000	80,000	18,000	65%
Q4 2027	17,000	100,000	22,500	80%
Q1 2028	18,000	105,000	23,625	85%
Q2 2028	21,000	115,000	25,875	85%
Q3 2028	24,000	125,000	28,125	85%
Q4 2028	27,000	135,000	30,375	85%
Q1 2029	28,000	145,000	32,625	90%
Q2 2029	31,000	160,000	36,000	90%
Q3 2029	34,000	175,000	39,375	90%
Q4 2029	37,000	190,000	42,750	90%
Q1 2030	38,000	205,000	46,125	95%
Q2 2030	40,000	220,000	49,500	95%
Q3 2030	42,000	235,000	52,875	95%
Q4 2030	44,000	250,000	56,250	95%

Every plotted observation. Only end 2027 installed capacity is directly issuer-supported; other physical forecasts are LOW proxies.

COMPETITOR OPERATING POINTS

Commercial substitutes have distinct strengths

Ouster competes with other lidar architectures, cameras, radar and integrated traffic systems. Supplier choice depends on range, field of view, update rate, weather, robustness, certification, software and delivered cost. A sensor with a different viewing geometry can be commercially competitive for a particular task.

Hesai, RoboSense, Innoviz, Aeva and MicroVision have different products and programme positions. The model retains one joint downside to Ouster lidar and solution expansion. It protects the modeled Q4 run rate and limits losses to subsequent expansion, with lost receipts tied to avoidable manufacturing and support costs. [S25-S30, S40-S44, M]

Alternative	Commercial question
Hesai / RoboSense	Production volume, integration, price and procurement eligibility
Aeva / Innoviz	Range, architecture and specific customer qualification
MicroVision / Blue-Band	Integrated traffic detection and named solution opportunity
Camera / radar alternatives	Task-specific accuracy, weather, field of view and system cost

HESAI PICASSO AND ETX

Native color has a competitive development clock

Hesai published a native-color ETX prototype with its Picasso announcement. This establishes a competing technical direction. Its source identifies prototype results and a future production product subject to customer requirements and delivery.

Commercial displacement would require a suitable operating point, production quality, software, qualification and a successful customer procurement. The selected 30% joint downside captures part of this uncertain competitive expansion in the same pool as the other alternatives. [S25, M]

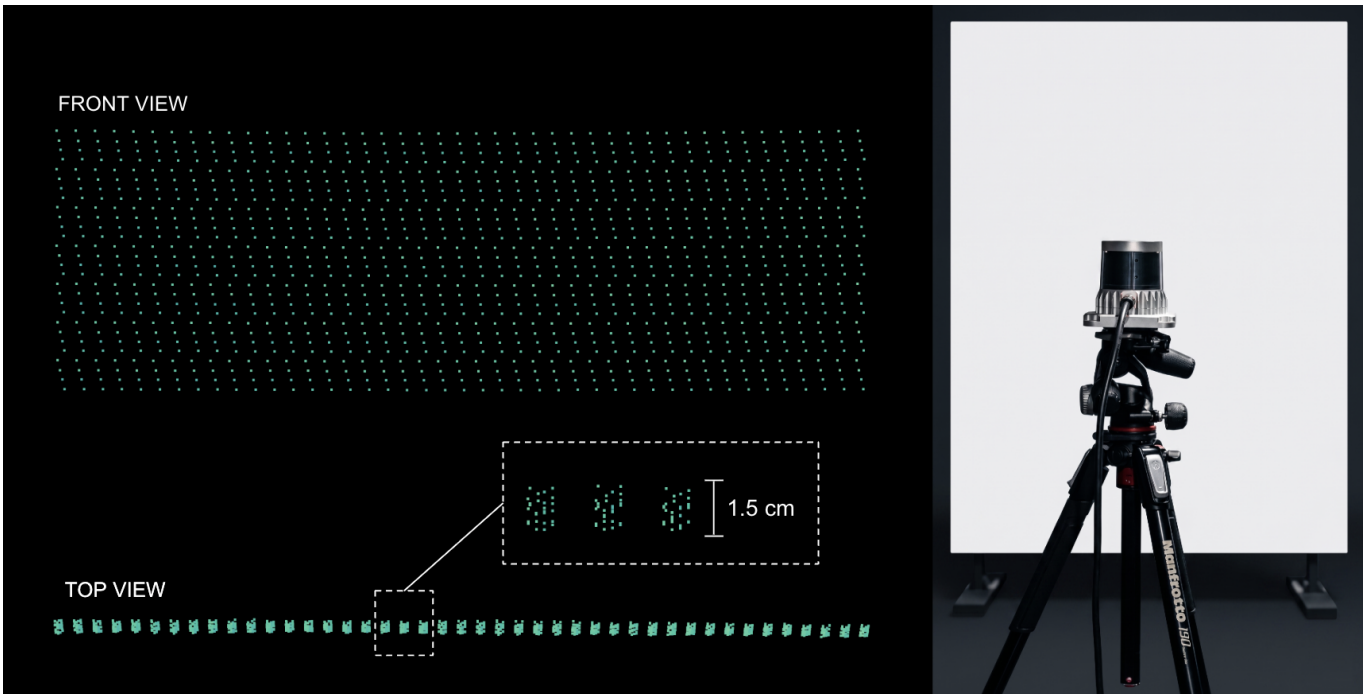
Original Hesai ETX prototype point cloud from its April 20, 2026 Picasso announcement. The issuer labels prototype results and qualifies final production delivery. [S25]

INTERSECTION DETECTION

Traffic competition includes a named alliance

MicroVision and Blue-Band announced an alliance addressing intersection hardware and software. Traffic agencies also choose among established radar, camera and detection suppliers. Ouster has existing awards and an integrated native-color platform; competing systems can still win new projects.

The model applies the solution downside only above the Q4 reference floor. A named win or loss, Ouster invoice scope and support cost would provide a stronger capture update than an aggregate traffic-market estimate. [S33, S34, S40, M]



Original Ouster static-precision illustration, accessed October 16, 2026. The planar target and cluster annotation illustrate repeatability; range and target conditions in the full datasheet govern performance. [S08]

PRODUCTION EVIDENCE

Competing robotics products are shipping

RoboSense reported robotics shipments alongside its ADAS volume and new production products. Its original graphic retains the separate counts. Those volumes demonstrate commercial activity across a wider set of architectures and applications.

The forecast treats this as evidence supporting a competing capture outcome. Matched Ouster-equivalent ASPs, costs and customer procurement outcomes remain unspecified. The 10-Q also states that revenue growth was partly offset by lower ASPs, while management described qualitative native-color pricing strength within Rev8. [S41-S44, N02, N03]

Original RoboSense October 9, 2026 graphic. Its Q3 counts are 450,400 ADAS units and 145,200 robotics units. Product and operating scopes vary across those categories. [S41]

RULE 16B JOINT DOWNSIDE

Competition applies to incremental expansion

I assign 30% probability to a joint outcome in which commercially credible alternatives reduce part of Ouster expansion from Q1 2027. The conditional receipt loss is 10% of standalone lidar above the Q4 reference of $30.575 million per quarter, plus 20% of integrated solutions above $8.925 million. Cameras and royalties have their own operating paths.

For each lost dollar,85% of the associated reference COGS is avoidable and 2% of lost receipts is saved in support expense. The remaining manufacturing cost and core engineering remain. All named competing suppliers map to this same residual outcome, preventing multiple vendor deductions on the same capture pool. These are LOW economic assumptions. [S25-S30, S40-S44, M]

Control	Selection
Probability	30%
Start	Q1 2027
Lidar conditional loss	10% of receipts above $30.575 M
Solution conditional loss	20% of receipts above $8.925 M
Avoidable associated COGS	85%
Avoidable support	2% of lost receipts
Residual overlap	0%; one joint competing outcome

FOUR JOINT STATES

Conditional outcomes reconcile to the selected case

The camera outcome has 60% probability of sustained camera and compute demand above the already increased reference path. Conditional extra volume is 5,000 to 16,000 equivalents per quarter from 2027. It carries the camera gross-margin schedule,8% support expense, explicit fixed engineering and 2% incremental capital spending.

The joint weights are 28% reference only,12% competition only,42% camera acceleration only and 18% both. Independence between these two residual outcomes is a selected modeling assumption. A shared-demand stress tests weaker conditions across both product families. The model calculates complete operating, cash and share paths for each state before weighting the valuation outputs. [N03, M]

State	Weight	Active F4 OP	Signed output $	Minimum cash
reference only	28%	-15.63	-4.02	342.5
competition only	12%	-27.40	-7.05	338.0
camera only	42%	-2.51	-0.65	340.4
competition and camera	18%	-14.65	-3.77	339.8

USD millions except per-share output. Active window is Q4 2027 through Q3 2028.

PROBABILITY AND COST TRANSMISSION

Each outcome has a quarterly economic bridge

The table records the camera conditional receipt gap, its 60% expected contribution and the 30% expected competing receipt loss. Incremental support and fixed engineering enter operating expenses. Inventory, receivables, payables and capital spending respond within each complete state.

Company gross profit is capped at 40% of revenue in every state as a selected conservative implementation of management long-term framework. Any excess vector gross profit becomes a separately disclosed manufacturing-friction cost. This creates nonlinear effects between the outcomes; the four complete states provide the controlling valuation. [M]

Quarter	Camera conditional R	Expected camera R	Expected lost R	Extra support	Net OP vs reference
Q4 2026	0.00	0.00	0.00	0.00	0.00
Q1 2027	4.85	2.91	0.36	0.53	0.41
Q2 2027	7.76	4.66	0.70	0.67	0.77
Q3 2027	10.67	6.40	1.04	0.81	1.14
Q4 2027	13.58	8.15	1.49	0.95	1.46
Q1 2028	11.28	6.77	1.73	0.99	1.02
Q2 2028	12.22	7.33	2.29	1.04	0.93
Q3 2028	13.16	7.90	2.91	1.08	0.87
Q4 2028	14.10	8.46	3.52	1.13	0.80
Q1 2029	14.56	8.74	3.85	1.30	0.73
Q2 2029	14.56	8.74	4.52	1.30	0.48
Q3 2029	14.56	8.74	5.24	1.30	0.21
Q4 2029	14.56	8.74	5.96	1.30	-0.07
Q1 2030	14.08	8.45	6.33	1.43	-0.45
Q2 2030	14.08	8.45	6.99	1.43	-0.70
Q3 2030	14.08	8.45	7.65	1.43	-0.95
Q4 2030	14.08	8.45	8.32	1.43	-1.21

USD millions. Conditional and expected receipts have distinct probability scopes.

BABA NDAA AND CONFIGURATION

Procurement eligibility supports defined projects

Ouster reports Build America Buy America compliance for its Rev8 OS family and selected domestic procurement advantages. Eligibility depends on the product configuration, project rules and customer purchasing process. Competitors can qualify for particular opportunities as well.

The model reflects these advantages through the selected customer and market-capture paths. The November 3 call distinguished the established Rev7 Blue UAS position from further work sought for Rev8. A paid contract still requires an eligible configuration, budget, award, acceptance and delivery. [S31-S34, N03]

Stage	Commercial test
Product eligibility	Documented applicable configuration
Customer procurement	Budget and awarded supplier scope
Qualification	Required system and product validation
Revenue recognition	Control transferred and accepted invoice scope

LATEST EARNINGS AND GUIDANCE

Q3 results establish the operating anchor

Ouster reported $59.325 million revenue, including $56.032 million product revenue and $3.293 million royalties. It shipped more than 7,000 lidars and 20,000 cameras. Gross profit was $25.259 million and GAAP operating expense $44.519 million, producing a $19.260 million operating loss. Customer E represented 15% of quarterly revenue.

The Q4 outlook is $61 million to $64 million total revenue, including approximately $3 million royalties. I adopt the $62.5 million midpoint. The company reports a combined product business; Q3 allocations to camera/compute, integrated solutions and standalone lidar are LOW calibration diagnostics. [N01-N03, M]

Actual metric	Q2 2026	Q3 2026
Total revenue	54.626	59.325
Product revenue	52.763	56.032
Royalty revenue	1.863	3.293
GAAP gross profit	26.685	25.259
GAAP operating expenses	46.730	44.519
GAAP operating loss	-20.045	-19.260
Net loss	-18.114	-14.156
Adjusted EBITDA	-4.453	-3.392

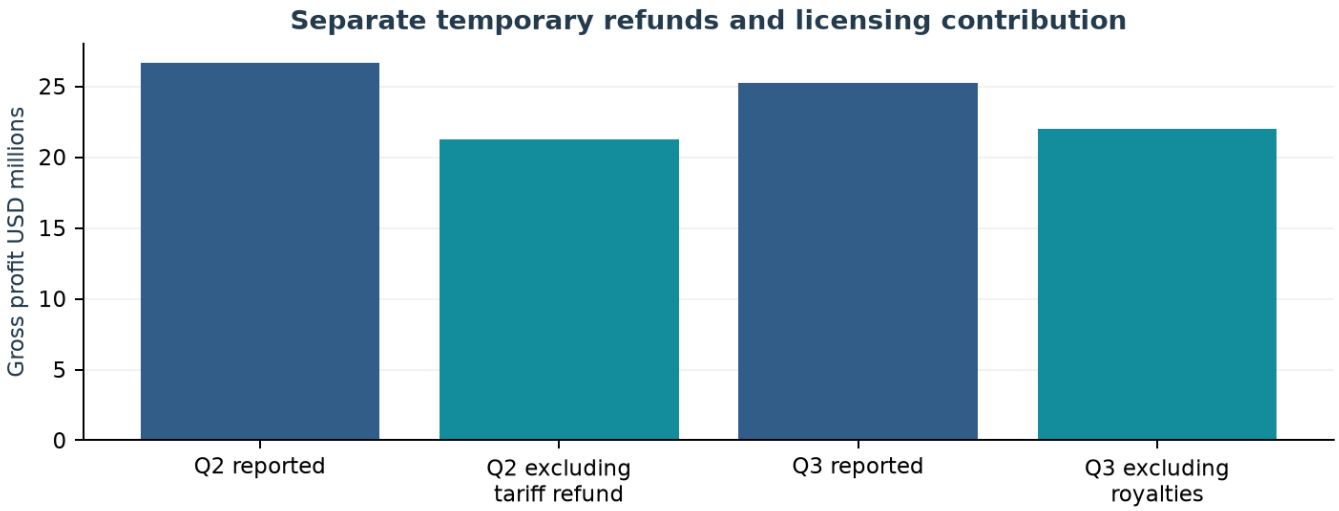
USD millions. Q2 includes a $5.4 M tariff refund in COGS.

RECURRING PROFITABILITY

Product margin and royalties have separate economics

Q3 GAAP gross margin was 43% and non-GAAP gross margin 47%. The reported royalty contribution raises the consolidated margin. Product gross profit excluding royalties is approximately $21.966 million, or 39% of product revenue. Q2 gross profit included a $5.4 million tariff refund; its refund-adjusted gross profit was $21.285 million.

Q3 adjusted EBITDA excludes $11.486 million SBC, $2.117 million acquired-intangible amortization, $1.641 million ordinary depreciation and $0.624 million acquisition/integration costs from operating profit. These costs remain within the retained GAAP-style operating-earnings valuation. [N01, N02, M]



Reported and normalized gross-profit scopes. Royalty revenue and tariff recoveries have distinct recurring assumptions.

Plotted observation	Gross profit $M
Q2 reported	26.685
Q2 excluding tariff refund	21.285
Q3 reported	25.259
Q3 excluding royalties	21.966

Reported source amounts and explicit arithmetic normalizations.

AUGUST 6 AND NOVEMBER 3 DISCUSSIONS

The newest management calls define execution tests

The August 6 call described early Rev8 prototype revenue, a production ramp through the second half and an approximately two-year customer transition. It identified fast camera demand and continued work to expand Stereolabs manufacturing. The November 3 call reported a substantial camera production step, initial Rev8 shipments and many thousands of Rev8 units in backlog.

Management plans more than 100,000 annualized lidar capacity by end 2027 and maintains a 35% to 40% long-term gross-margin framework. Rev8 shipment wording progresses from hundreds in Q3 to thousands in Q4 and tens of thousands by fiscal 2027 end; the final phrase has an unresolved annual versus exit-period scope. Separate camera revenue, precise ASPs, exact backlog dollars and quantified future capex remain undisclosed.

Full prepared remarks and every available Q&A were read from secondary transcript copies. The issuer replay links were located; audio was unavailable for an independent wording audit. [N03, N04, N07]

Near-term test	Reported or selected boundary
Q4 revenue	$61 M-$64 M including about $3 M royalties
2026 opex growth	5%-8% excluding specified tax refund and one-time acquisition items
Q4 complete opex proxy	$46 M, including normalization and production investment
Capacity	Installed annual capacity target by end 2027
Liquidity	Management expects current objectives to be funded

LIQUIDITY AND EXISTING CAPITAL

Financing funds the operating plan

September 30 cash and short-term investments total $419.796 million after excluding $1.435 million restricted cash. The July offering issued 3,621,876 shares and generated approximately $191 million net cash. Its 543,281-share overallotment expired unexercised. The current ATM was exhausted after $100 million gross proceeds.

All four selected states remain above the $30 million unrestricted-liquidity floor; the lowest state balance is $338 million. The conditional funding mechanism consequently issues zero new financing shares. A stress-triggered new public offering uses an assumed 25% discount to the dated closing quote,5% fees and a $100 million quarterly gross cap. No committed debt capacity is assumed. [N02, N03, M]

Opening component	USD millions
Cash and equivalents	88.899
Short-term investments	330.897
Unrestricted liquidity	419.796
Restricted cash excluded	1.435
Funded debt	0
Selected minimum liquidity floor	30
Minimum across all states	338.0

OPERATING CASH WORKING CAPITAL AND CAPEX

Cash consumption has its own bridge

Q3 operating cash flow was minus $29.349 million and capex $5.673 million, producing minus $35.022 million free cash flow. These quarter amounts equal nine-month statements less the first-half statements. Receivables, inventory and runoff of customer prepayments were substantial uses.

The model rolls each state through receivables, inventory, prepaid operating assets, payables, accruals and customer advances. The acquired $6.3 million tax liability and $1.855 million indemnity asset settle separately in Q4 2027 under a LOW timing assumption. Rent is already in operating costs; finite ROU amortization and lease principal reconcile earnings to cash.

Forecast tax uses a 27% normalized positive-profit charge and zero loss benefit. Cash tax separately applies 27% after a finite NOL-use limit. Future GAAP provision and valuation-allowance timing remain unresolved; the normalization difference carries no forecast recognized deferred-tax asset or allowance-release gain. [N02, N08, M]

Selected annual period	CFO	Capex	FCF	Ending cash
Q4 2026	-6.8	7.0	-13.8	404.3
2027	-28.2	26.4	-54.6	342.5
2028	34.8	20.6	14.2	349.0
2029	106.7	24.7	82.0	423.1
2030	182.9	28.7	154.3	569.0

Expected USD millions. Complete quarterly and state cash bridges follow in the same PDF.

ISSUANCE AWARDS AND CONTINGENT FUNDING

The share denominator is economic

The latest cover disclosed 72,997,169 issued shares on October 30. The forecast retains the established broad economic-dilution convention and reanchors it to that source. It adds 600,000 net employee shares at quarter end and an increasing economic award allowance at quarter start. The current Q4 2026 economic denominator is 74.014 million shares.

Stereolabs retention shares 660,005 are already issued. The expired overallotment receives zero additional shares. Outstanding Amazon warrants have a $50.30 strike and February 4, 2030 expiry; maximum issuance is 3,290,094 shares, with 3,225,731 vested at September 30. Options, RSUs, ESPP and warrants are registered within the broad dilution allowance and the separate gross sensitivities. Instrument-by-instrument vesting and exercise attribution within the broad proxy remains unverified. The separate share-count sensitivities show this uncertainty. [N02, M]

Instrument or convention	Current treatment
Latest issued common	72.997169 M at October 30
Employee net issuance	0.6 M per quarter LOW proxy
Economic award allowance	1.017 M in Q4 2026 rising to 6.288 M by Q4 2030
Unvested RSUs	4.140177 M disclosed; future replenishment inside broad proxy
Employee options	1.153389 M disclosed, weighted strike $8.12
Already-issued retention	0.660005 M; no repeated issuance
Conditional funding	Zero in selected states; distinct stress mechanism retained

COMPANY INVOICES AND CONFIDENCE

The selected operating case has four revenue vectors

The Q4 company midpoint is calibrated to $30.575 million standalone lidar, $20 million camera/compute, $8.925 million integrated solutions and $3 million royalties. Only total revenue and approximate royalties are issuer guidance. The product allocations and future physical paths are LOW proxies.

Standalone lidar receipts use total lidar demand less bundled site sensors, then apply the selected ASP. Camera/compute receipts use equivalents and a declining combined wallet. Solutions combine new-site hardware and service on opening sites. Royalty assumptions decline after the Q4 guide. Company gross-profit and cash schedules preserve recurring SBC, depreciation, amortization, support and engineering. [N01-N03, M]

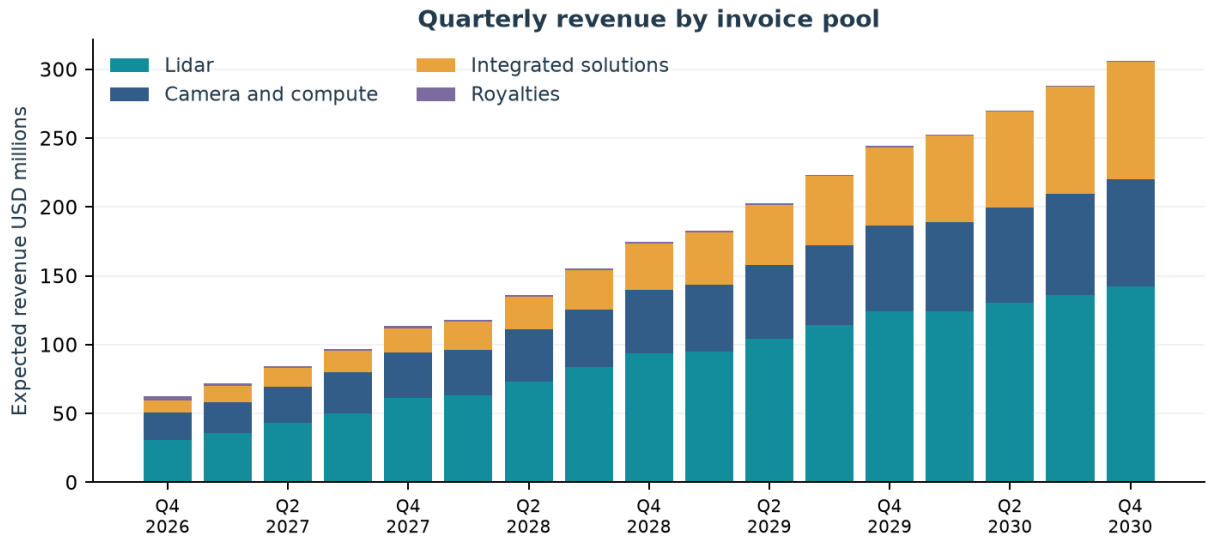
Vector	Q4 revenue	Forecast confidence
Lidar	30.575	LOW allocation and forward assumptions
Camera and compute	20.000	LOW allocation and forward assumptions
Integrated solutions	8.925	LOW allocation and forward assumptions
Royalties	3.000	HIGH approximate Q4 royalty;LOW later

USD millions. Source reports combined product revenue.

ALL CURRENT AND FUTURE OBSERVATIONS

The quarterly revenue path is explicit

The table contains every selected quarterly revenue observation. Camera acceleration and competition are already probability-weighted in these amounts. Solution hardware remains inside its own invoice pool and royalty receipts remain separately visible. [M]



Expected company revenue by quarter and distinct invoice pool.

Quarter	Lidar	Camera and compute	Integrated solutions	Royalties	Total
Q4 2026	30.6	20.0	8.9	3.0	62.5
Q1 2027	36.1	22.3	11.8	1.5	71.7
Q2 2027	43.2	26.0	13.7	1.5	84.4
Q3 2027	50.4	29.7	15.6	1.5	97.1
Q4 2027	61.2	33.4	17.5	1.5	113.5
Q1 2028	63.2	33.1	20.3	1.2	117.8
Q2 2028	73.5	37.4	24.0	1.2	136.2
Q3 2028	83.6	41.7	28.7	1.2	155.4
Q4 2028	93.8	46.1	33.4	1.2	174.5
Q1 2029	94.8	48.8	38.1	1.0	182.7
Q2 2029	104.7	53.3	43.8	1.0	202.8
Q3 2029	114.3	57.9	50.4	1.0	223.6
Q4 2029	124.1	62.4	56.9	1.0	244.4
Q1 2030	124.4	64.8	62.6	0.8	252.5
Q2 2030	130.3	69.2	70.1	0.8	270.3
Q3 2030	136.3	73.6	77.6	0.8	288.2
Q4 2030	142.3	78.0	85.1	0.8	306.1

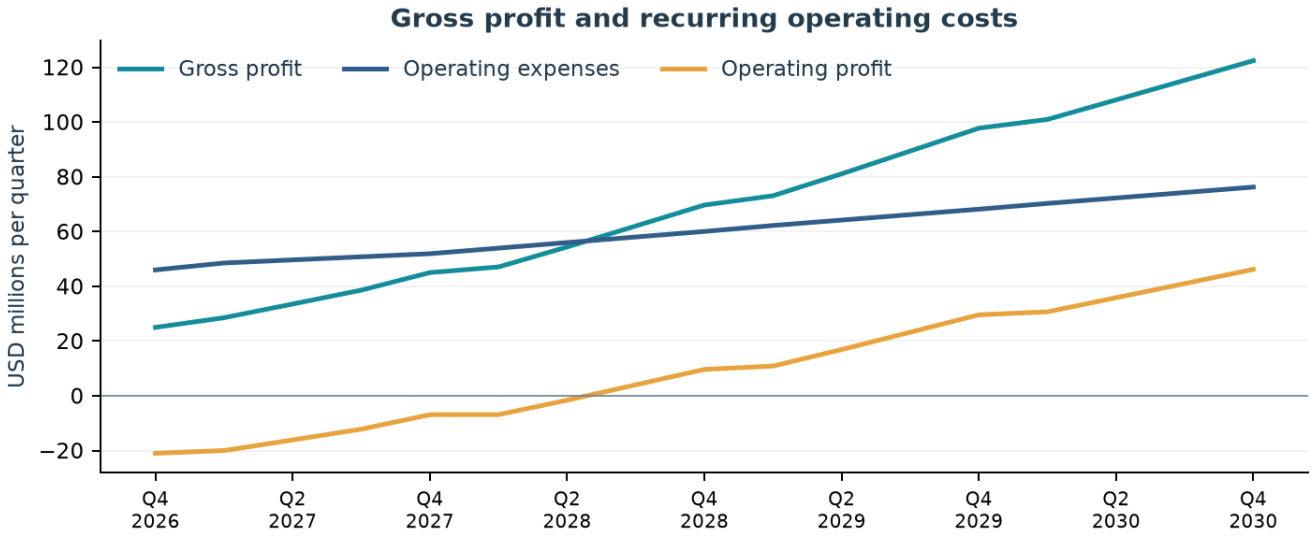
Expected USD millions; full calculation precision retained in the model.

GAAP STYLE OPERATING ECONOMICS

Gross profit must cover recurring operating costs

The selected complete expense base is $46 million in Q4 2026 and rises with engineering, commercialization and customer support. The model normalizes above the Q3 reported expense level because a sales-tax accrual reversal benefited that quarter, with its amount undisclosed. The $1.481 million normalization/ramp increment is a LOW judgment.

Each product has its own gross-profit path. Consolidated GP then absorbs any manufacturing-friction cost necessary to respect the selected 40% cap. The resulting profit includes SBC, ordinary depreciation and acquired PPA amortization. Company ratios equal expected financial amounts divided by expected revenue. [N01-N03, M]



Gross profit, complete operating expense and economic operating profit from the selected model.

Quarter	Revenue	GP	Opex	OP
Q4 2026	62.5	25.0	46.0	-21.0
Q1 2027	71.7	28.5	48.5	-20.0

Q4 2030	46.2	37.1	49.9	42.7	569.0	88.88

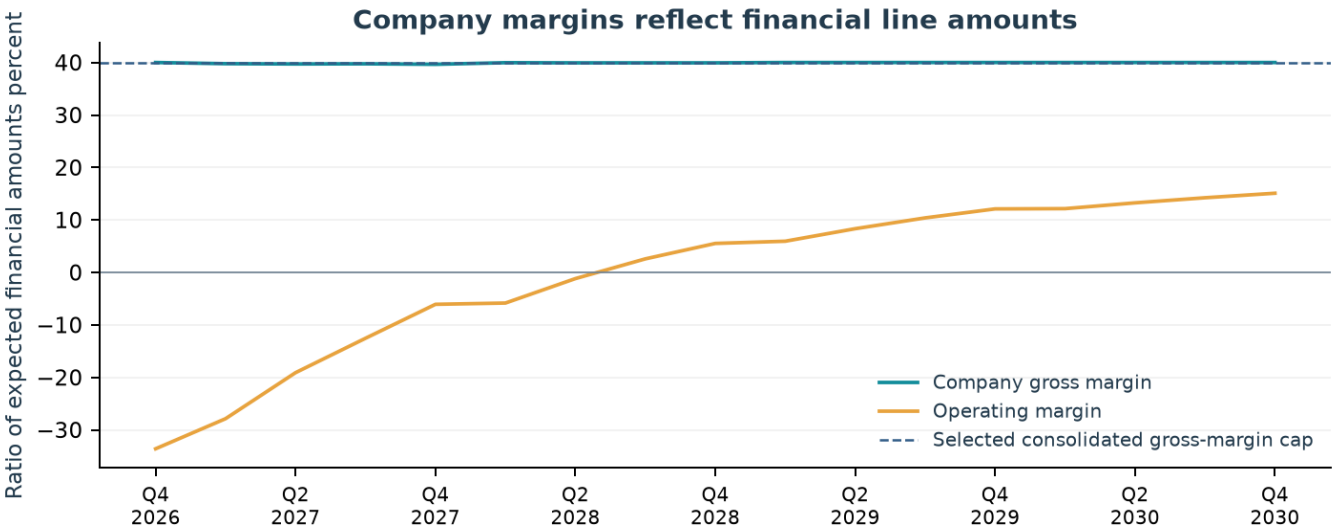
USD millions; economic shares in millions. Normalized NI is separate from unresolved future GAAP provision timing.

CONSOLIDATED FINANCIAL RATIOS

Product mix and recurring costs determine margins

Product-level margins are modeled separately. Lidar uses a lower gross-profit rate through the early ramp; cameras and compute have their own cost path; solution wallets include hardware, service and deployment. Royalties carry a distinct licensing gross-profit assumption.

The selected consolidated 40% gross-margin ceiling adds unallocated manufacturing friction whenever the sum of vector gross profit exceeds that amount. Every published company margin below is expected GP divided by expected revenue, or expected OP divided by expected revenue. A weighted average of state ratios is retained only as a separate model diagnostic. [M]



Consolidated margins from expected financial amounts and the selected 40% gross-margin cap.

Quarter	Company GM	OP margin	Friction COGS $M
Q4 2026	40.0%	-33.6%	0.00
Q1 2027	39.8%	-27.9%	0.00
Q2 2027	39.7%	-19.1%	0.00
Q3 2027	39.8%	-12.5%	0.00
Q4 2027	39.7%	-6.1%	0.00
Q1 2028	40.0%	-5.8%	0.40
Q2 2028	39.9%	-1.2%	0.44
Q3 2028	39.9%	2.6%	0.61
Q4 2028	39.9%	5.5%	0.77
Q1 2029	40.0%	5.9%	2.26
Q2 2029	40.0%	8.3%	2.70
Q3 2029	40.0%	10.4%	3.30
Q4 2029	40.0%	12.1%	3.91
Q1 2030	40.0%	12.2%	6.24
Q2 2030	40.0%	13.3%	7.31
Q3 2030	40.0%	14.2%	8.38
Q4 2030	40.0%	15.1%	9.44

Every plotted observation; ratios are derived from expected financial line amounts.

UNITS PRICING AND COMPANY RECEIPTS

Standalone digital lidar hardware

Total lidar demand covers standalone shipments and the sensors bundled into integrated solutions. Two units per new solution site are removed before standalone revenue is calculated. The Q4 calibration uses an illustrative $3,902 ASP and subsequent annual price erosion. Manufacturing costs, support, capital spending and customer acceptance constrain the revenue path.

The volume, ASP, qualified-yield and later capacity paths are LOW forecasts. End 2027 installed annual capacity above 100,000 units is the issuer anchor. Competitive capture reduces standalone receipts above the reference floor; existing hardware economics remain in the same operating bridge. [N02, N03, S24, M]

Quarter	Total units	ASP $	Standalone R	Vector GP	Vector GM
Q4 2026	8,206	3,902	30.6	9.5	31.0%
Q1 2027	10,000	3,824	36.1	11.9	33.0%
Q2 2027	12,000	3,824	43.2	14.4	33.4%
Q3 2027	14,000	3,824	50.4	17.1	33.9%
Q4 2027	17,000	3,824	61.2	21.0	34.3%
Q1 2028	18,000	3,748	63.2	22.0	34.8%
Q2 2028	21,000	3,748	73.5	25.6	34.8%
Q3 2028	24,000	3,748	83.6	29.1	34.8%
Q4 2028	27,000	3,748	93.8	32.6	34.8%
Q1 2029	28,000	3,673	94.8	33.5	35.3%
Q2 2029	31,000	3,673	104.7	36.9	35.3%
Q3 2029	34,000	3,673	114.3	40.3	35.3%
Q4 2029	37,000	3,673	124.1	43.8	35.3%
Q1 2030	38,000	3,599	124.4	44.5	35.8%
Q2 2030	40,000	3,599	130.3	46.6	35.8%
Q3 2030	42,000	3,599	136.3	48.7	35.8%
Q4 2030	44,000	3,599	142.3	50.9	35.8%

Revenue and GP in USD millions. Vector GP precedes consolidated manufacturing friction. Total units are reference physical demand; receipts include probability-weighted competing capture.

CAPACITY AND BOUNDED ACCELERATION

Camera and AI compute hardware

The reference camera path begins with 20,000 equivalents per quarter and grows to 79,000 by Q4 2030. The accelerated path reaches 95,000. Its 60% weight reflects current paid shipments, the manufacturing step and management demand commentary; absolute volumes and the combined invoice wallet remain LOW proxies.

Incremental camera receipts pay for hardware at the selected gross margin,8% support costs, fixed engineering/capacity expense and 2% incremental capex. ZED Box, NVIDIA compatibility and humanoid adoption belong to this same customer and invoice pool. [N03, N06, M]

Quarter	Reference units	Conditional units	Wallet $	Expected R	Vector GP
Q4 2026	20,000	20,000	1,000	20.0	7.6
Q1 2027	20,000	25,000	970	22.3	8.6
Q2 2027	22,000	30,000	970	26.0	10.0
Q3 2027	24,000	35,000	970	29.7	11.4
Q4 2027	26,000	40,000	970	33.4	12.8
Q1 2028	28,000	40,000	940	33.1	12.9
Q2 2028	32,000	45,000	940	37.4	14.6
Q3 2028	36,000	50,000	940	41.7	16.3
Q4 2028	40,000	55,000	940	46.1	18.0
Q1 2029	44,000	60,000	910	48.8	19.3
Q2 2029	49,000	65,000	910	53.3	21.1
Q3 2029	54,000	70,000	910	57.9	22.9
Q4 2029	59,000	75,000	910	62.4	24.7
Q1 2030	64,000	80,000	880	64.8	25.9
Q2 2030	69,000	85,000	880	69.2	27.7
Q3 2030	74,000	90,000	880	73.6	29.4
Q4 2030	79,000	95,000	880	78.0	31.2

Revenue and GP in USD millions before consolidated manufacturing friction; all physical/wallet values are labeled model assumptions.

SITES SERVICES AND ACCEPTANCE

Integrated BlueCity and Gemini solutions

The model converts reference new-site equivalents at $40,000 into hardware receipts and applies a $6,000 annual service wallet to opening sites. It includes a selected delivery/acceptance ramp, support expenses and the bundled sensors. The resulting site-equivalent forecast is an economic proxy across heterogeneous deployments.

Competitive losses apply to new receipts above the reference floor. The source-supported award history improves confidence in deployment, while the site wallet, recurring attachment and precise timing remain LOW. Hardware and service receipts already appear inside the solution total. [S16, S22, S23, N03, M]

Quarter	Reference new sites	Service R	Expected lost R	Expected total R	Vector GP
Q4 2026	186	1.5	0.00	8.9	4.9
Q1 2027	256	1.8	0.18	11.8	6.5
Q2 2027	296	2.2	0.30	13.7	7.6
Q3 2027	335	2.6	0.42	15.6	8.6
Q4 2027	372	3.1	0.54	17.5	9.7
Q1 2028	433	3.7	0.72	20.3	11.3
Q2 2028	517	4.3	0.96	24.0	13.4
Q3 2028	623	5.1	1.26	28.7	16.0
Q4 2028	724	6.0	1.56	33.4	18.6
Q1 2029	822	7.1	1.86	38.1	21.6
Q2 2029	941	8.3	2.22	43.8	24.8
Q3 2029	1,081	9.8	2.64	50.4	28.5

Q1 2030	1,320	13.2	3.42	62.6	36.1
Q2 2030	1,470	15.2	3.90	70.1	40.4
Q3 2030	1,615	17.4	4.38	77.6	44.7
Q4 2030	1,755	19.8	4.86	85.1	49.1

USD millions except reference site-equivalents. Service and physical sites are reference drivers; expected receipt loss accounts for competing capture.

CONTRACT TIMING AND FINITE ASSUMPTIONS

Royalties and other receipts

Q3 royalties were $3.293 million and the Q4 guide includes approximately $3 million. Current IP agreements recognize royalties when their applicable sales and performance conditions are met. Their timing can differ from cash collections and customer prepayments.

I model $6 million royalty receipts in 2027, then $5 million in 2028, $4 million in 2029 and $3 million in 2030. These declining later estimates are LOW assumptions. The model assigns 100% gross margin to royalty receipts, while company legal, administration and recurring expense remain in consolidated costs. [N01-N03, M]

Quarter	Royalty revenue	Royalty GP	Receipt confidence
Q4 2026	3.00	3.00	Q4 approximate guide
Q1 2027	1.50	1.50	LOW forecast
Q2 2027	1.50	1.50	LOW forecast
Q3 2027	1.50	1.50	LOW forecast
Q4 2027	1.50	1.50	LOW forecast
Q1 2028	1.25	1.25	LOW forecast

Q4 2030	0.75	0.75	LOW forecast

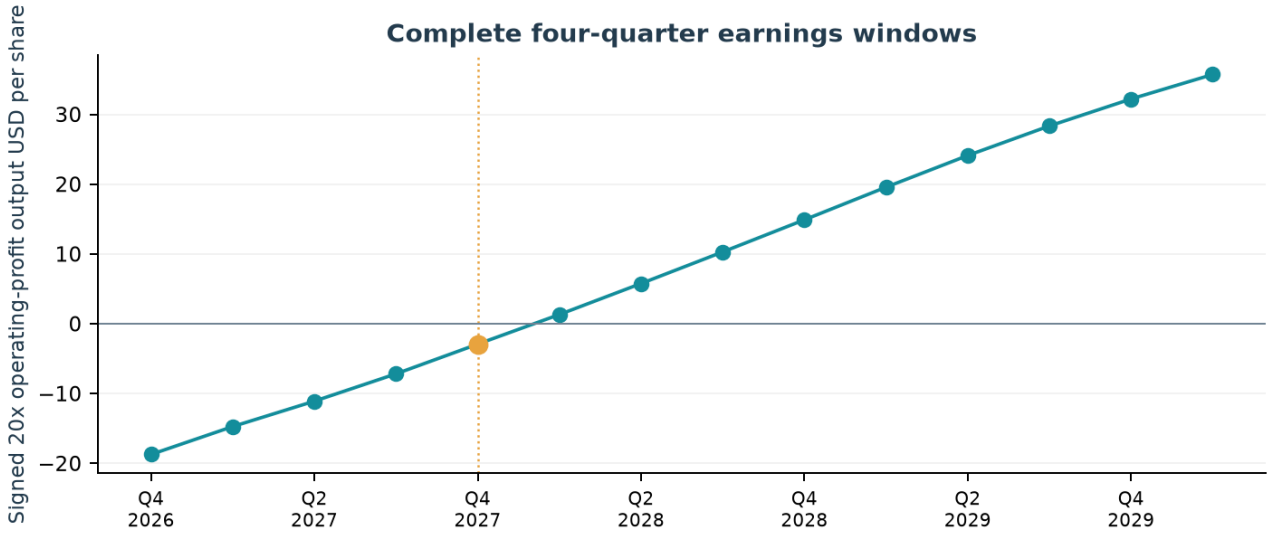
USD millions. The future schedule remains sensitive to actual contractual sales and recognition timing.

FORWARD FOUR QUARTER WINDOWS

The complete quarterly earnings ceilings

Each named ceiling quarter prices that quarter and the following three quarters using 20 times economic operating profit and economic diluted shares at the beginning of the named quarter. Probability weights apply to the complete branch values. Funding is inactive in all selected states, so their starting-share paths coincide.

The selected path becomes positive at Q1 2028. Q2 through Q4 2030 have operating forecasts but lack enough later quarters for a complete rolling window; their ceiling fields remain blank. Earlier loss windows retain their signed numerical diagnostics. [M]



Current complete signed operating-earnings outputs. The highlighted quarter is the current active Q4 2027 horizon.

Quarter	Window end	F4 OP $M	Shares M	Multiple	Signed $/share
Q4 2026	Q3 2027	-69.30	74.01	20 x	-18.73
Q1 2027	Q4 2027	-55.20	74.94	20 x	-14.73

Q4 2029	Q3 2030	137.13	85.17	20 x	32.20
Q1 2030	Q4 2030	153.73	86.10	20 x	35.71

All plotted complete windows. Negative outputs indicate the absence of a positive earnings-supported ceiling.

Q4 2027 THROUGH Q3 2028

The active valuation chain

The active four quarters generate $208.539 million gross profit against $219.893 million complete operating expense, resulting in minus $11.355 million operating profit. At 20 times and 77.732 million starting economic shares, the signed calculation is minus $2.921 per share before display rounding.

The result describes the selected earnings window. A positive valuation from operating earnings requires a profitable rolling window under this sanctioned method. The later positive outputs depend on the customer, manufacturing, cost and dilution assumptions shown throughout the report. [M]

Quarter	Revenue	Gross profit	Opex	Economic OP
Q4 2027	113.54	45.02	51.92	-6.90
Q1 2028	117.82	47.09	53.96	-6.87
Q2 2028	136.20	54.39	55.99	-1.60
Q3 2028	155.36	62.04	58.02	4.02
Window total	522.91	208.54	219.89	-11.35

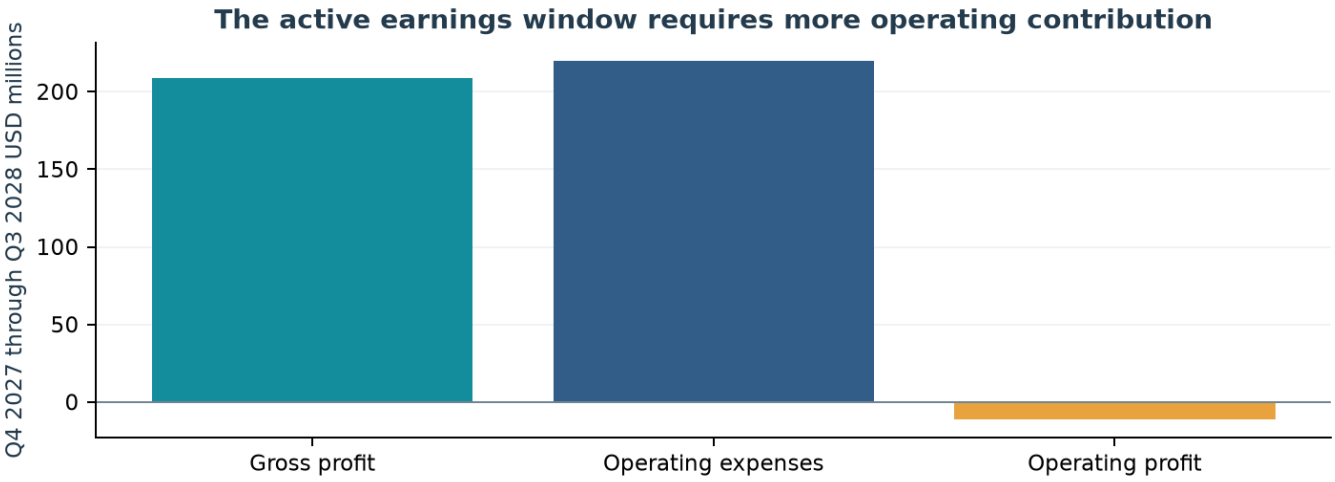
USD millions. The signed result equals 20 times total operating profit divided by 77.732 million starting shares.

GROSS PROFIT AND RECURRING EXPENSE

The operating bridge to profitability

The active window requires an additional $11.355 million operating contribution to reach zero, holding all other selected inputs fixed. Possible changes include stronger qualified shipments, richer mix, higher realized pricing, lower recurring cost or different acceptance timing. Each would require its own source-supported operating bridge.

The current first positive individual-quarter operating profit arrives in Q3 2028. The first positive rolling window arrives earlier because Q1 2028 already prices the following four quarters. Interest on the substantial cash balance also affects normalized earnings separately from operating profit. [M]



The active four-quarter gross-profit and expense bridge.

Plotted component	USD millions
Gross profit	208.539
Operating expense	219.893
Operating profit	-11.355

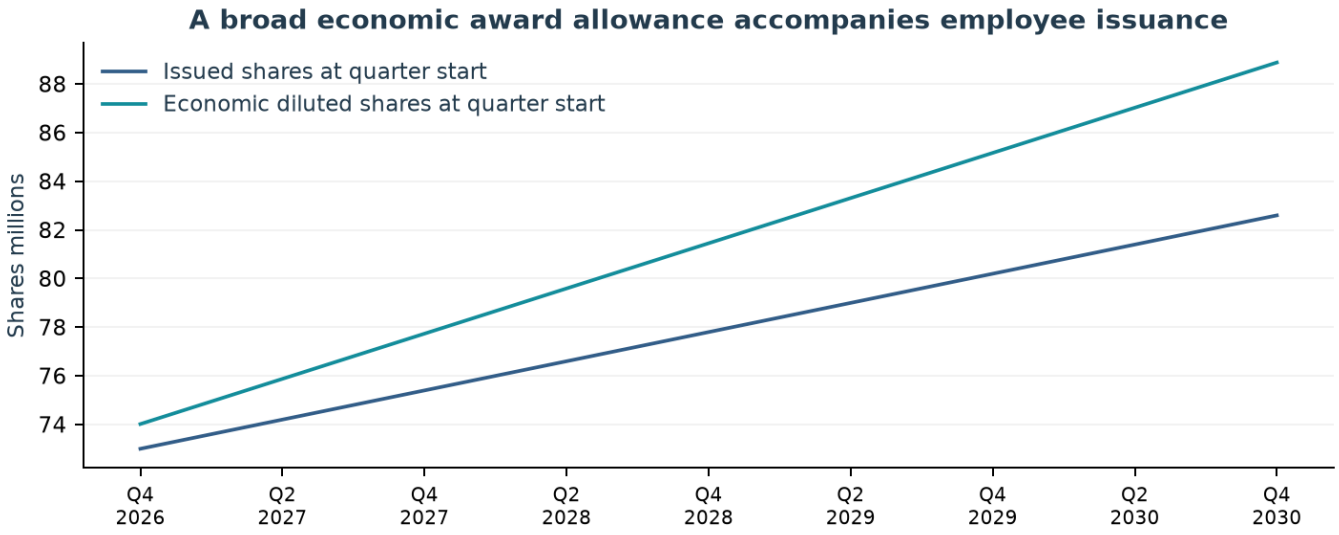
Current active-window amounts; no additional hypothetical receipts enter the selected forecast.

ECONOMIC SHARE PATH

Dilution affects later profitable windows

The economic share denominator combines issued common shares and the broad award allowance. Employee issuance occurs at quarter end; any conditional financing would enter the following quarter. Instruments already represented within the broad convention receive no repeated maximum-share addition.

An isolated additional 1 million shares reduces the Q1 2030 positive-window output from $35.71 to approximately $35.30 with operating profit fixed. The separate gross instrument-maximum stress is deliberately conservative and overlaps existing economic allowances. The selected path retains its established dilution convention. [N02, M]



Issued and economic diluted shares at the start of each modeled quarter.

Quarter	Issued start	Award allowance	Economic start	Net employee end
Q4 2026	73.00	1.02	74.01	0.60
Q1 2027	73.60	1.35	74.94	0.60
Q2 2027	74.20	1.68	75.87	0.60
Q3 2027	74.80	2.01	76.80	0.60
Q4 2027	75.40	2.33	77.73	0.60
Q1 2028	76.00	2.66	78.66	0.60
Q2 2028	76.60	2.99	79.59	0.60
Q3 2028	77.20	3.32	80.52	0.60
Q4 2028	77.80	3.65	81.45	0.60
Q1 2029	78.40	3.98	82.38	0.60
Q2 2029	79.00	4.31	83.31	0.60
Q3 2029	79.60	4.64	84.24	0.60
Q4 2029	80.20	4.97	85.17	0.60
Q1 2030	80.80	5.30	86.10	0.60
Q2 2030	81.40	5.63	87.03	0.60
Q3 2030	82.00	5.96	87.96	0.60
Q4 2030	82.60	6.29	88.88	0.60

Millions of shares; all plotted observations. Selected new-funding shares are zero in every branch.

RULE 16B ADOPTION LEDGER

Rev8 customer conversion

The continued paid Rev8 transition has 80% subjective probability in the retained customer ledger. Current evidence includes initial shipments, a growing backlog and specific customers planning integration. The reference volume and mix path already incorporate this conversion.

A unit-normalized diagnostic of $1 million receipts at 35% to 40% gross margin, with 8% incremental support, yields $0.27 million to $0.32 million operating contribution before company friction. The current model applies 100% overlap to this additional customer-ledger envelope, leaving zero separate incremental receipts or operating profit. The active physical path and manufacturing costs carry the adoption economics. [N03, M]

Field	Current disposition
Outcome probability	80%
Conditional diagnostic	Per $1 M accepted receipts
Incremental contribution before overlap	$0.27 M-$0.32 M before company friction
Overlap	100% against modeled lidar customer conversion
Separate active contribution	$0
Execution tests	Paid units, Rev8 mix, yield, ASP, cancellation and support costs

RULE 16B AWARD AND ACCEPTANCE

Utah awarded intersections

The retained Utah award covers 160 additional intersections. Its 95% subjective deployment probability reflects a named awarded expansion, with uncertainty about Ouster-versus-integrator invoicing, acceptance and timing. At the $40,000 site proxy,160 sites illustrate $6.4 million receipts.

At 55% illustrative gross margin and 8% support, the conditional operating contribution is $3.008 million before consolidation friction. The 95% raw weight is $2.858 million. The deployment cohort is 100% overlapped with the current integrated-solution site pool, producing zero separate incremental contribution. The November 3 additional 100-intersection award is also inside that same pool. [S16, N03, M]

Cohort	Units	Probability	Gross receipt proxy	Overlap	Extra active R
Utah award	160	95%	$6.4 M	100%	$0
Latest expanded award	100	95%	$4.0 M	100%	$0

Site wallets are LOW model assumptions; contract invoice totals are undisclosed.

RULE 16B BOUNDED CUSTOMER ENVELOPE

Seneca drone adoption

Seneca provides a named Rev8 integration for autonomous wildfire-response drones. The retained outcome has 75% subjective probability of continued commercial deployments during 2027-2028. Fleet scaling, payload design, field acceptance and support determine the paid result.

The bounded scenario of 50 to 250 sensor equivalents at an illustrative $4,000 wallet represents $0.2 million to $1 million receipts. Its gross weighted receipt envelope is $0.15 million to $0.75 million before overlap. This customer cohort is fully inside the selected cross-application lidar demand pool, so the separate addition is zero. A distinct paid programme beyond that pool would change the overlap assessment. [S12, N03, M]

Variable	Disposition
Probability	75%
Conditional units	50-250
Illustrative receipts	$0.2 M-$1.0 M
Gross-margin diagnostic	35%-40%, with 8% support
Overlap / separate active addition	100% /$0
Timing tests	Accepted units, repeat fleet orders and required engineering

RULE 16B CAMERA CONVERSION

AVerMedia and Stereolabs compatibility

The named integration supports Stereolabs camera use with JetPack on Orin and Thor platforms. The retained 75% subjective probability refers to continued paid conversion enabled by that compatibility. A technical release provides a channel for customer use with subsequent commercial timing.

The unit-normalized diagnostic uses 1,000 camera/compute equivalents at $1,000, or $1 million receipts. At 38% gross margin and 10% illustrative support, its gross weighted operating contribution is $0.21 million before overlap and company friction. Current camera reference and accelerated demand already cover this channel, so 100% overlap produces zero additional receipt or profit layer. [S18, N06, M]

Field	Current disposition
Probability	75%
Conditional diagnostic	1,000 equivalents /$1 M receipts
Raw weighted operating contribution	$0.21 M before overlap
Overlap	100% against camera/compute adoption
Separate active contribution	$0
Follow-up	Named paid volumes, repeat purchases and support burden

RULE 16B CUSTOMER COMMERCIALIZATION

NVIDIA platform qualification

Ouster announced Rev8 qualification for the NVIDIA DRIVE Hyperion ecosystem. The retained 80% subjective probability refers to subsequent customer use, with OEM awards, system qualification and paid scale as the commercial conditions.

A normalized 1,000-sensor scenario at a $4,000 illustrative wallet gives $4 million receipts. The selected company forecast already contains architecture-compatible lidar and camera demand. The incremental qualification ledger therefore uses 100% overlap and zero extra active receipts. ZED Box and broader NVIDIA/humanoid adoption also map into the current camera outcome without a separate wallet. [S21, N03, N06, M]

Signal	Probability	Overlap	Separate active contribution
Platform commercialization	80%	100%	$0
ZED Box/NVIDIA/humanoid residual	60%	100% against camera outcome	$0
Rev8 premium/capacity residual	80%	100% against physical driver path	$0
Forterra prospective Rev8 cohort	75%	100% against lidar cohort	$0

41 OF 60 POINTS

The analytical scorecard

The analytical score is 41 out of 60, rounded to 68%. Paid camera shipments, manufacturing expansion and the first Rev8 units support the cycle assessment. Differentiated sensing and deployment software provide useful customer economics, while multiple credible substitutes constrain exclusive capture.

The five risk deductions remain separate. The protected Excel Base is 72%, an owner/workbook control carried separately from the analytical score. This report uses the selected analytical assessment and the retained operating-earnings method. [M]

Category	Points	Maximum	Reason
Core thesis	13	20	Differentiated native-color lidar, cameras and deployment software provide useful customer value. Commercial substitutes compete for future expansion.
Cycle stage	9	10	Paid camera shipments reached 20,000 and production more than doubled sequentially; early Rev8 deliveries and repeat adoption improve cycle evidence.
TAM expansion	9	10	Industrial autonomy, traffic systems, drones and robotics broaden eligible applications. Forecasts depend on company capture and paid acceptance.
Catalysts	4	5	Rev8 capacity, camera repeat purchases, certification and normalized profitability provide measurable execution tests.
Macro	8	10	Automation investment and selected procurement eligibility support demand; customer budgets and international supply remain relevant.
Alpha	3	5	Separate product mix, royalty timing, qualification conditions and recurring cost economics expose concrete operating questions.
Risk deductions	-5	0	Five distinct risk classes remain: competition, deployment timing, manufacturing costs, software integration and losses/dilution.
Total	41	60	68% analytical Base

RISK AND FAILURE CONDITIONS

Five scored risks have measurable counters

Competition, paid deployment timing, manufacturing economics, software integration and losses/dilution each receive a separate one-point deduction. Evidence can change these assessments in either direction.

The lowest selected liquidity balance remains substantial, while capital requirements increase with inventory, hardware shipments and engineering. A common customer-demand shock or weaker yield can combine risks that the simple two-residual probability structure treats separately. [N02, N03, M]

Risk class	Deduction	Measurable counter
Competition and substitution	-1	Named wins/losses, eligible operating point and realized ASP
Deployment timing	-1	Accepted paid units, sites, cancellations and customer cash
Manufacturing and margins	-1	Yield, COGS, capex, inventory and complete GP
Software and integration	-1	Attachment, renewal, deployment support and engineering cost
Losses and dilution	-1	CFO, liquidity, award issuance and distinct new funding

CROSS COMPANY CONTEXT

Physical demand connects the wider supply chain

Ouster cameras and lidar feed computing systems, and customer robots require semiconductors, memory, networking, power and manufacturing. Shared physical demand can connect these layers while their supplier invoice pools and margins remain distinct.

Within Ouster, the camera family broadens its ability to serve customers using different sensor architectures. The selected model counts the relevant hardware and compute wallets once, with bundled solution sensors removed from standalone receipts. A wider robotics theme increases the range of applications; company-specific paid conversion determines capture. [S07-S11, N02, N03, M]

OPERATING AND FINANCIAL WATCHES

Precommitted tests guide the next review

The next update should compare actual receipts and costs with the selected physical and financial paths. Stronger or weaker evidence can alter current and future assumptions while earlier published forecast displays retain their original vintage.

Source-supported changes should connect to revenue, manufacturing cost, deployment support, engineering, operating profit, working capital, capex and shares. The explicit quarterly and state schedules provide that bridge. [M]

Watch	Decision-relevant evidence
Q4 earnings	Revenue 61-64 M, royalties, exactproductmix and recurring cost
Rev8	Accepted volumes, shift fromhundreds tothousands, qualifiedyield and certification
Cameras	Repeat 20 k-plus shipments, wallet/mix and sustainedcapacity
Solutions	Awarded andacceptedsites, invoicing, serviceattachment andsupport
Cash	AR/inventory/AP, prepaymentrunoff, taxsettlement andcapex
Shares	Employeeissuance, currentawardoverlap anddistinctfunding
Competition	Matchedwin/loss, price andqualifiedsubstitute evidence

SOURCE COMPLETENESS AND MODEL BOUNDARIES

What was read and what remains uncertain

The current review read the complete Q3 filing body through its signature, the earnings release and financial tables, the full newest two available management transcripts including Q&A, and the current presentation text. The original source images from the prior verified artifact remain embedded at the relevant technical analysis.

Original issuer PDF downloads were unavailable locally. Supported primary text extractions preserve the complete financial evidence. The full calls are secondary copies; original replay audio was unavailable for an independent wording audit. Source gaps remain explicit. Separate product revenue, exact ASPs, complete backlog, detailed future capex, the sales-tax reversal amount and exact annual opex exclusions are undisclosed.

The model therefore labels absolute vector allocations, forward unit volumes, wallets, yield, support, capital spending, taxes and funding assumptions as LOW where appropriate. The current company method remains 20 times forward-four-quarter economic operating profit. Normalized recurring tax and earnings are analytical measures; actual future GAAP provision timing remains unresolved. [N01-N11, M]

APPENDIX HISTORICAL DISPLAY

Published historical forecast vintage

This earlier-quarter forecast preserves the information vintage published before the November 3 earnings release. It remains distinct from the current Q3 reported-actual anchor. The as-then rolling ceiling retains the original forecast window and share convention.

Published history remains unchanged even though later evidence supplies a different current reconstruction. All current and future outputs in this report come from the selected November 4 model. [M]

Historical Q3 2026 field	Published value
Revenue $M	56.000000

APPENDIX COSTS

Complete operating expense and noncash schedule

All selected operating expenses include their SBC, ordinary depreciation and acquired-amortization components. Those components support the cash reconciliation without a second deduction from profit. The figures below are expected amounts. [M]

Quarter	R&D	Sales and marketing	G&A	SBC	PPE dep	PPA	Cash opex residual
Q4 2026	19.18	9.96	16.86	11.49	1.93	2.12	33.09
Q1 2027	20.31	10.62	17.59	12.06	2.52	2.10	34.85
Q2 2027	20.73	10.97	17.96	12.06	3.43	2.10	35.57
Q3 2027	21.15	11.32	18.32	12.06	4.30	2.10	36.31
Q4 2027	21.57	11.67	18.69	12.06	4.82	2.10	37.21
Q1 2028	22.55	11.98	19.42	12.66	5.29	1.88	38.60
Q2 2028	23.38	12.45	20.16	12.66	5.72	1.88	40.44
Q3 2028	24.22	12.92	20.89	12.66	6.14	1.88	42.28
Q4 2028	25.05	13.38	21.62	12.66	6.58	1.88	44.12
Q1 2029	26.04	13.83	22.35	13.30	7.05	1.77	45.56
Q2 2029	26.87	14.25	23.09	13.30	7.56	1.77	47.32
Q3 2029	27.70	14.67	23.82	13.30	8.08	1.77	49.07
Q4 2029	28.54	15.09	24.55	13.30	8.30	1.77	50.96
Q1 2030	29.52	15.49	25.29	13.96	8.27	0.56	53.06
Q2 2030	30.35	15.91	26.02	13.96	7.31	0.56	55.47
Q3 2030	31.19	16.33	26.75	13.96	6.04	0.56	58.03
Q4 2030	32.02	16.75	27.49	13.96	6.12	0.56	59.98

USD millions. SBC total spans COGS and opex; the residual removes only relevant included opex subsets.

APPENDIX WORKING CAPITAL

Complete working capital schedule

Ordinary working capital contains current receivables, inventory, operating prepaids and fixed noncurrent unbilled receivables, less payables, ordinary accruals and customer contract liabilities. The acquired tax liability and its indemnity asset roll separately. Current receivables already contain their current unbilled component. [M]

Quarter	AR	Inventory	Prepaids	AP	Accruals	Contract liabilities	NWC	Change
Q4 2026	41.4	40.2	27.2	25.2	30.0	13.3	45.6	4.8

Q3 2028	102.8	100.1	67.6	62.7	37.8	34.5	140.8	20.0
Q4 2028	115.5	112.4	75.9	70.4	39.1	38.8	160.8	20.0
Q1 2029	121.0	117.6	79.5	73.6	40.5	40.7	168.4	7.6
Q2 2029	134.2	130.4	88.2	81.7	41.8	45.2	189.4	21.0
Q3 2029	148.0	143.8	97.3	90.1	43.1	49.8	211.3	21.9
Q4 2029	161.8	157.3	106.3	98.5	44.4	54.5	233.3	21.9
Q1 2030	167.1	162.4	109.8	101.7	45.8	56.4	240.8	7.5
Q2 2030	178.9	173.9	117.6	108.9	47.1	60.4	259.3	18.6
Q3 2030	190.8	185.4	125.4	116.1	48.4	64.4	278.0	18.6
Q4 2030	202.6	197.0	133.2	123.3	49.7	68.4	296.6	18.7

Expected USD millions. Noncurrent unbilled receivables remain $5.268 M in each modeled quarter.

APPENDIX BALANCE SHEET ROLLS

Finite assets leases and acquired tax balances

Land retains its value without depreciation. Opening depreciable assets, new capital spending and construction in progress have finite service lives. PPA amortization follows the source remaining-value schedule, divided across quarters as an explicit timing assumption.

Lease ROU and liabilities decline through their finite rolls with selected renewals. The acquired tax and indemnity settle once in Q4 2027. [N02, N08, M]

Quarter	PPE end	PPA end	ROU end	Lease end	Acquired tax end	Indemnity end
Q4 2026	44.58	28.68	11.32	14.33	6.30	1.85

Q2 2030	45.31	4.54	6.61	7.05	0.00	0.00
Q3 2030	46.44	3.98	5.76	6.02	0.00	0.00
Q4 2030	47.48	3.41	4.90	4.98	0.00	0.00

Expected USD millions. Depreciation and amortization are included subsets of reported operating costs.

APPENDIX TAX RECONCILIATION

Normalized earnings and cash taxes

The 27% normalized charge applies to positive pretax earnings, with zero loss tax benefit. Cash tax applies 27% after use of the finite NOL pool, subject to an 80% positive-income-use assumption. Opening federal NOL is the prior-date $1.1 billion source balance; state NOL is a separate jurisdictional attribute and is excluded from that aggregate pool.

Future eligibility, ownership limitations and actual GAAP tax recognition remain uncertain. Taxes are calculated within each operating state and then probability-weighted. The table shows normalized earnings separately from the continued-valuation-allowance diagnostic, where provision equals cash tax. Their difference is a normalization measure and carries no forecast recognized deferred-tax asset. [N02, N08, M]

Quarter	Pretax	Normalized tax	Normalized NI	Cash tax	NOL used	NOL end	Continued VA NI
Q4 2026	-17.33	0.00	-17.33	0.00	0.00	1,117.3	-17.33

CFO equals normalized NI + tax less cash + SBC + depreciation/PPA + lease net - NWC change + acquired net. Other selected noncash adjustments are zero.

APPENDIX COMPLETE CAPITAL ROLL

Conditional funding and cash uses

After free cash flow,15% of SBC is paid as withholding-related financing cash. The net employee issuance assumption already reflects withholding. New financing would enter only when needed to restore the $30 million liquidity floor; all four selected states remain above it.

Future discretionary acquisitions, investments, debt repayments, dividends and buybacks are zero in this selected cash plan. Any new capital return or financing programme requires its own source-supported revision. [M]

Quarter	Opening cash	FCF	SBC cash	Other uses	Net new equity	Ending cash
Q4 2026	419.80	-13.77	1.72	0.00	0.00	404.30

Q1 2029	349.04	21.33	1.99	0.00	0.00	368.38
Q2 2029	368.38	14.29	1.99	0.00	0.00	380.68
Q3 2029	380.68	20.02	1.99	0.00	0.00	398.71
Q4 2029	398.71	26.37	1.99	0.00	0.00	423.08
Q1 2030	423.08	40.47	2.09	0.00	0.00	461.45
Q2 2030	461.45	33.63	2.09	0.00	0.00	492.99
Q3 2030	492.99	37.46	2.09	0.00	0.00	528.35
Q4 2030	528.35	42.70	2.09	0.00	0.00	568.96

Expected USD millions. All four state paths use the same funding policy; exact state cash balances are shown above.

APPENDIX VOLUME DERIVATION

Physical calibration and solution sensor overlap

The physical reference path removes two bundled lidar sensors per modeled new solution site before computing standalone lidar revenue. Camera and compute wallets count the same qualifying customer once. The camera conditional outcome adds only the volume gap above this reference.

Installed capacity, yield, quarter ramp, future customer quantities and wallet economics remain LOW assumptions apart from explicitly reported source anchors. [M]

Quarter	Total lidar	Bundled units	Standalone units	ASP $	Ref camera	Cond camera	Wallet $
Q4 2026	8,206	371	7,835	3,902	20,000	20,000	1,000
