The quote source reports delayed_streaming_900. Its provider market-cap field uses an unreconciled share basis; the header multiplies the dated quote by the reported 436,216,360 economic shares.

1. Business, current results and supercycle

DapuStor designs enterprise SSDs, controllers and firmware for data-center storage. Purchased NAND and DRAM, firmware, outsourced assembly, final test and customer qualification jointly determine the value of a shipped drive.

Q3 revenue reached CNY 5.113 B, up 49.83% quarter on quarter. Gross margin fell to 25.64% from 33.89% in Q2. Purchased memory costs, customer repricing and qualification determine profit capture. The 2027 model produces CNY 33.443 B revenue and CNY 5.727 B fully expensed operating profit.

DapuStor reports commercial availability of 122 TB SSDs, customer testing of 245 TB products, a 512 TB launch and PCIe 6.0 development. These stages provide separate delivery milestones for the operating forecast.

The company cites a TrendForce forecast for nine major CSPs of USD 957 billion in 2026 capital spending and more than USD 1.5 trillion in 2027. Company revenue requires an explicit storage-wallet, vendor-capture and accepted-delivery bridge.

Evidence: CURRENT_PRODUCT_STAGE, CURRENT_DEMAND_SPINE. Exact source locations and dated URLs appear in the source register.

三、其他重要事项

☑适用 □不适用

1、关于公司董事会完成换届选举及聘任高级管理人员的情况

公司于 2026 年 9 月 9 日召开 2026 年第二次临时股东会选举产生了公司第二届董事会非独立董事、独立董事，与公司职工代表大会选举产生的职工代表董事共同组成公司第二届董事会。同日，公司召开第二届董事会第一次会议，选举产生了第二届董事会董事长及各专门委员会成员，并聘任了公司高级管理人员和证券事务代表，公司董事会换届选举工作完成。具体情况详见公司于 2026 年 9 月 10 日在巨潮资讯网（www.cninfo.com.cn）披露的《关于董事会完成换届选举及聘任高级管理人员、证券事务代表的公告》（公告编号：2026-048）。

2、公司所处行业发展情况及公司业务情况

报告期内，全球人工智能基础设施建设驱动企业级 PCIe SSD 需求的持续快速增长，大模型应用也从训练向推理、智能体、机器人等不断延伸。据集邦咨询预测，2026 年全球九大云服务提供商资本支出预计进一步上调至 9,570 亿美元，同比增长约 106%，2027 年则有望突破 1.5 万亿美元。KV Cache、检索增强生成与长上下文处理对企业级 SSD 的容量、带宽和时延等性能提出更高要求，推动企业级 SSD 的代际更迭、产品创新显著加快，并成为影响 AI 推理成本与效率的关键环节。

报告期内，公司基于技术和产品优势，一方面积极把握 AI 发展带来的国内和海外市场机遇，公司企业级 SSD 国内外出货量均大幅增长、市场份额显著提升，另一方面，通过 AI 的积极应用和自研内部 AI 中台，显著和持续提升研发与经营效

Source exhibit: October 30,2026 Q3 filing p 7. AI storage investment and current issuer operating context; industry forecasts are attributed by the issuer.

率。2026 年前三季度，公司积极克服半导体存储行业各环节成本上升和供应交付紧张等方面的挑战，实现营业收入 98.35 亿元，同比增长 678.13%，归属于上市公司股东的净利润 25.43 亿元，同比扭亏为盈。其中，2026 年第三季度，公司实现营业收入 51.13 亿元，同比增长 891.31%，实现归属于上市公司股东的净利润 12.09 亿元。公司的产品创新迭代也进一步加快，例如大容量方向的 122TB QLC SSD 已实现商用，245TB 产品已启动送测，512TB 产品也于报告期内实现全球业内领先发布，PCIe 6.0 代际主控芯片及 SSD 产品按募投项目计划顺利推进。

四、季度财务报表

注：T 表示 Trillion、万亿。

2、企业级 SSD 行业

企业级 SSD 是一种高性能存储设备，在企业级应用场景中承载业务数据的海量存储和高速读写，主要由主控芯片、固件及存储介质（NAND Flash、DRAM）等组成。

报告期内，企业级 PCIe SSD 呈现"高性能、大容量、迭代加快"的显著创新趋势。在应用场景端，伴随大模型的规模化落地，企业级 PCIe SSD 已深度融入 AI 的分层上下文存储体系，分别在 KV cache 关键承载、长上下文处理与低成本海量存储等环节发挥重要作用，产品形态、性能以及容量向多档位、场景化细分演进，突出超大容量或超高性能的场景应用进一步加快；从企业级 PCIe SSD 的代际演进周期来看，业内产品的商用迭代周期已由 PCIe 3.0 时代的七年以上缩短至 PCIe 5.0 的约三年、PCIe 6.0/7.0 的两至三年，接口带宽逐代翻倍，驱动主控芯片、NAND Flash 介质、固件算法及模组设计全栈加速升级。当前，CXL 高速互联、CSD 可计算存储、HBF 高带宽闪存、PLC 及新型非易失介质等前沿存储技术方向及产业生态在 AI 高速发展和存储供需紧张的背景下也在向可商用化加快演进，为数据中心企业级存储带来广阔的持续创新空间。

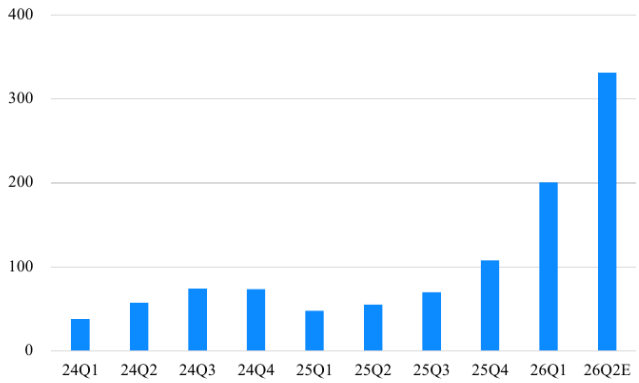

面向 KV cache 的上下文存储层级（左）和 PCIe 企业级 SSD 迭代周期（右）

据集邦咨询统计，2025 年全球企业级 SSD 市场规模为 280 亿美元，受到 AI Agent 服务普及与 CSP（云端服务提供商）强劲订单带动， 2026 年第一季度全球前五大企业级 SSD 营收创新高达 201 亿美元，环比增长 85.8%。

Source exhibit: August 25,2026 H1 report p 11. Workload and storage hierarchy; source industry periods and denominators apply.

2024-2026 年全球企业级 SSD 市场规模情况（亿美元）

数据来源：集邦咨询

（二）主营业务及产品

公司主要从事数据中心企业级 SSD 产品的研发和销售，是业内领先、国内极少数具备企业级 SSD“主控芯片+固件算法+模组”全栈自研能力并实现批量出货的半导体存储产品提供商。企业级 PCIe SSD 作为“先进存力”，是算力基础设施的重要“基石”，在 AI 等产业发展中发挥关键作用。

公司专注数据中心企业级 SSD 产品，产品代际覆盖 PCIe 3.0 到 5.0，充分满足各类型客户的产品需求。公司始终坚持技术和创新驱动，把握存储技术发展趋势，先发推出具有国际竞争力的产品及方案。公司 PCIe SSD 系列产品具备出色的读写速度、耐用性、低延时以及远低于 JEDEC（固态技术协会）标准的平均故障率，产品性能处于国际先进水平。同时，公司持续发力前沿存储发展方向，是全球首批量产企业级 PCIe 5.0 SSD 和大容量 QLC SSD 的存储厂商。公司拥有一支具备前沿存储技术和丰富行业经验的数据中心企业级 SSD 主控芯片和模组研发团队，持续投入研发资源，为产品保持市场竞争力提供了保障。截至 2026 年 6 月 30 日，公司已取得国内外发明专利 223 项。报告期内，公司凭借在存储核心技术领域的持续创新与专利成果转化能力，成功获评“深圳市 2025 知识产权领军企业”，并连续第三年荣获“高价值专利培育布局奖励”。

公司产品以其卓越性能及可靠性在下游互联网、云计算、通信运营商、AI 模型训练&推理、金融和电力等领域的数据安全、高效、可靠存储中发挥关键作用，获得了各领域主流客户的认可并实现批量供货。公司作为国内企业级 SSD 核心供应商，开发的系列产品有力提升了国内企业级 SSD 产业链的韧性和安全水平，目前已覆盖的下游客户和最终使用方包括：Google、字节跳动、腾讯、阿里巴巴、京东、百度、美团、快手、DeepSeek、小红书、滴滴等互联网、云计算和 AI 企业，新华三、超聚变、中兴、华鲲振宇、联想等服务器厂商，中国电信、中国移动、中国联通等通信运营商，金融、电力及其他行业知名企业。

未来，公司将继续深耕半导体企业级存储领域，根据数据中心存储技术发展趋势，继续投入研发资源，丰富产品矩阵。同时，公司围绕 AI 全面布局通用场景 TLC SSD、大容量 QLC SSD、高性能 SCM SSD、可计算存储 SSD 等存储产品，加快 PCIe 6.0、PCIe 7.0 等新代际的企业级 SSD 产品演进以契合 AI 快速发展的需求，并向智能网卡、RAID 卡等网络互联领域延伸，打造具备行业竞争力的平台型存储产品与网络互联方案提供商。

（三）主要经营模式

1、盈利模式

12

Source exhibit: August 25,2026 H1 report p 12. Enterprise SSD market and business scope.

2. China Data Packet and actual financial anchor

Issuer and exchange filings supply the financial statements, product stages, contract terms and capital facts. The official investor-relations platform supplies full written company answers. Issuer technical articles supply engineering descriptions and measured demonstrations with their original test conditions.

Demand drivers are cloud investment, storage workloads, customer qualification and deployment. Margin drivers are NAND purchase costs, customer repricing, product mix, inventory timing, support and final-test

costs. Timing drivers include the 6-18 month qualification period and each contract's effectiveness, delivery and acceptance terms.

The H1 billing-geography table includes domestic downstream customers selecting offshore USD settlement. Revenue by billing geography therefore requires separate end-demand attribution.

Evidence: CUSTOMER_SCOPE, OVERSEAS, NAND_TERMS, QUALIFY, H1_2026_SEGMENTS. Exact source locations and dated URLs appear in the source register.

China source conversion packet			
Driver	**Source scope**	**Company-model transmission**	**Confidence**

Q3 recurring fully expensed operating profit is CNY 1.173484506 bn. It deducts selling, administration, R&D, tax levies and credit impairment from gross profit. Statutory operating profit is CNY 1.195929691 bn. Historical finance expense, other income, investment returns and impairment items retain their statement presentation.

Cash flow quarter values are cumulative differences. Cash beginning and ending balances are endpoints. The retained R3 actuals packet supplies exact source row IDs, CNY values and derivation strings.

3. Unit economics, materials and manufacturing

FY2025 SSD revenue was CNY 2,265,288,472.50, representing 98.98% of revenue, with CNY 2,195,790,998.54 of associated cost and a reported 3.07% gross margin. H1 2026 SSD revenue and cost were CNY 4,721,763,882.19 and CNY 3,073,724,955.82, with a reported 34.90% margin.

Direct materials represented 96.96% of FY2025 industry cost. This pool includes NAND, DRAM, controllers and other components. NAND-specific cost requires a separately justified BOM allocation.

NAND prices and volumes are negotiated quarterly. Strategic inventory creates a delay between purchase prices and costs recognized in revenue. Selling-price adjustments, product mix, inventory layers and new purchase terms must be modeled on consistent timing.

Evidence: ANNUAL_MIX, BOM_ANCHOR, NAND_TERMS, CONTROLLER_COST, MATERIAL_COST_AND_RECOGNITION. Exact source locations and dated URLs appear in the source register.

Assembly uses Kaifa and BYD. DapuStor owns final-test equipment located at manufacturing partners, arranges production on weekly and monthly schedules, and tests products before delivery. Controller wafer fabrication and packaging/test use external providers.

FY2025 reported sales were 748,300 drives, production 810,000 drives and ending inventory 21,400 drives. FY2024 ending inventory was 32,500 drives. A simple opening-plus-production-minus-sales calculation yields 94,200 drives, leaving an unexplained 72,800-drive difference against the reported endpoint. Source scope and rounding remain unresolved.

The monetary inventory balance includes components and work in process. Enterprise SSD output also depends on NAND allocation, controller availability, firmware maturity, final-test capacity, customer qualification and acceptance.

Evidence: OUTSOURCE, EMS_SUPPLY, CONTROLLER_COST, UNITS, PHYSICAL_CALIBRATION, CASH_RESTRICTIONS_AND_WORKING_CAPITAL. Exact source locations and dated URLs appear in the source register.

BOM assumption with source/estimate boundary		
Cost category	**Q3 calibrated COGS share**	**Basis**
controller	5.8176%	Issuer total-material/assembly shares; Modeled within-material allocation
other_material	1.9392%	Issuer total-material/assembly shares; Modeled within-material allocation
assembly	2.9900%	Issuer total-material/assembly shares; Modeled within-material allocation
other_business	0.0500%	Issuer total-material/assembly shares; Modeled within-material allocation

I allocate materials as 85% NAND,7% DRAM,6% controller and 2% other. Applied to the reported 96.96% direct-material pool, these become 82.416%,6.7872%,5.8176% and 1.9392% of total COGS. Assembly is 2.99%, and other business 0.05%. The final 0.05% remains its reported category.

Realized NAND cost uses 60% of the preceding purchase index and 40% of the current purchase index. This quarterly approximation represents inventory timing; reported accounting uses monthly weighted-average issue costs. DRAM cost moves by 25% of the realized NAND-index change. Controller unit cost improves 3% annually, while assembly/test unit cost rises 2% annually. Exact Q3 COGS calibrates the anchor.

4. Customer qualification and the large order

Enterprise qualification takes 6-18 months and includes performance, compatibility, firmware and support. Some end users designate the SSD supplier through server manufacturers or negotiate pricing directly.

The August 25 Customer A contract covers USD 514.574 million of tax-included enterprise PCIe SSD orders. The filing translates this to about CNY 3.491 billion and 152.70% of FY2025 principal-business revenue. The 18-week delivery obligation starts when the contract becomes effective under its written-confirmation terms.

The source withholds customer identity, units, ASP and payment detail. The latest filing and written answers do not identify accepted shipments or recognized revenue attributable to this exact contract. The operating model must reconcile the order with revenue and inventory already reported.

The May written interaction reports testing and admission at two customers named in the investor question. The company’s answer provides no quantified sales. The latest October company answers describe overseas qualification and scale shipments with unnamed amounts and customers.

Evidence: QUALIFY, CUSTOMER_SCOPE, ORDER, ORDER_GAPS, ORDER_TIMING, ORDER_FULFILMENT, NVIDIA_XAI_QUALIFICATION, LATEST_QA_GUARD, MATERIAL_COST_AND_RECOGNITION. Exact source locations and dated URLs appear in the source register.

证券代码：301666　　证券简称：大普微　　公告编号：2026-044

深圳大普微电子股份有限公司
关于签订日常经营重大合同的公告

本公司及董事会全体成员保证信息披露的内容真实、准确、完整，没有虚假记载、误导性陈述或重大遗漏。

特别提示：

1、深圳大普微电子股份有限公司（以下简称“公司”）与客户 A 于 2026 年 8 月 25 日签订了关于公司主营业务产品企业级 PCIe SSD 的销售订单，订单含税总金额 51,457.40 万美元（折合人民币约 34.91 亿元）。订单经双方书面确认起生效，交付期限为订单生效后 18 周内。

2、公司将积极克服 2026 年以来半导体产业整体面临的原材料供应紧张及成本上涨的共性挑战，争取及时完成上述订单交付。若订单顺利履行，预计将对公司履约年度的经营成果产生积极影响，具体影响金额及影响的报告期将视订单履行的具体情况而定，以公司经审计确认的收入为准。

3、风险提示：本次交易以美元结算，美元兑人民币汇率波动将对公司实际确认的人民币收入产生影响；同时，国际贸易环境、关税及出口政策的变化亦可能对订单履行产生不利影响。交易双方虽均具有较好的履约能力，但订单在履行过程中如遇宏观经济、市场环境、政策变化等不可预见的或其他不可抗力等因素影响，可能存在合同无法如期或全面履行的风险。敬请广大投资者理性投资，注意投资风险。

一、合同签署概况

2026 年 8 月 25 日，公司与客户 A 签订了关于公司主营业务产品企业级 PCIe SSD 的销售订单，订单含税总金额 51,457.40 万美元（折合人民币约 34.91 亿元），占公司 2025 年经审计主营业务收入的 152.70%。该订单的交付

Source exhibit: August 26,2026 Customer A announcement p 1. USD 514.574 m tax-included order; the complete five-page contract announcement is retained.

I assign 90% probability to on-time conversion. The timing proxy assumes 50% of the indicative CNY 3.491 bn face amount remains, with a 13% tax adjustment:3.491/1.13×50%=CNY 1.544690265 bn. It resides inside the core wallet. The 10% delayed state shifts that amount from Q4 2026 to Q1 2027. Remaining balance, tax and effectiveness date are explicit model assumptions.

In demand stresses, the delayed Customer A transfer is capped at the nonnegative Q4 reference wallet. It shifts the core-wallet demand budget into Q1. Qualified supply and funding limit accepted Q1 deliveries; unaccepted demand receives no automatic revenue credit in later quarters.

5. Engineering, adjacencies and operating costs

R&D expense was CNY 385,087,093.28 in FY2025 and CNY 178,034,610.24 in H1 2026, with zero capitalization in both periods. Controller development, firmware, product qualification and customer support require explicit operating-cost treatment.

Test drives are carried as long-term prepaid costs and amortized over two years through selling expense. H1 2025 added 4,096 test drives at a cost of CNY 21.2789 million, and recorded CNY 8.7592 million of related amortization.

The source packet preserves recognized share-based compensation and a CNY 551,679.81 difference between two H1 R&D staff-allocation presentations. The selected model retains embedded compensation expense and leaves the allocation residual unassigned.

Evidence: R_AND_D_EXPENSING, SBC_CURRENT, TEST_DRIVES_ACCOUNTING. Exact source locations and dated URLs appear in the source register.

KV-cache offload can extend persistent storage demand when inference software moves reusable state between compute memory and SSDs. DapuStor describes a vLLM/LMCache implementation with asynchronous I/O. A physical model needs token retention, layers, KV heads, hidden dimensions, bytes per element, compression, replication and deployment scope.

The stored-data stock requires a purchase schedule, replacement life, incremental TB and company capture before it becomes annual SSD revenue. The DB6 storage baseline and persistent-agent demand must share an explicit overlap adjustment.

QLC mixed-mode firmware, flexible data placement, higher-capacity SSDs and PCIe generations provide distinct engineering levers. The manufacturer’s benchmark results retain their test environments and configurations. The model must connect these levers to accepted output, ASP, cost or customer adoption.

RAID, network-interface and combined products appear in the prospectus. Their small current revenue and development scope provide a dated baseline for bounded adjacent-market analysis. Physical-AI, edge and other application opportunities require product suitability and a credible commercialization path.

Evidence: KV_TECH, MIXEDMODE_STAGE, FDP_TEST, OCP512_STAGE, ECOSYSTEM, ADJACENCIES. Exact source locations and dated URLs appear in the source register.

Source exhibit: April 29,2026 FY2025 report p 29. Supplier concentration and R&D context.

Opex and cash-cost laws; CNY bn		
Cost law	**Selected quarterly formula**	**Economic scope**
Selling	0.040×1.08^years +0.0085×R +0.015	Fixed organization, revenue support and customer samples
Administration	0.020×1.08^years +0.001×R	Fixed organization and variable administration
R&D	0.130×1.20^years +0.003×R +0.015 +0.0075 +0.010×adjacent state	Fully expensed engineering, KV and adjacent execution

Opex and cash-cost laws; CNY bn		
Cost law	**Selected quarterly formula**	**Economic scope**
Tax levies / credit loss	0.00066×R /0.002×R	Included in recurring OP
D&A / SBC cash-flow items	0.0015×R /0.0092×1.15^years	Cash reconciliation; source SBC remains expensed
Recurring cash tax	15%×max(OP−interest,0)	Existing tax assets provide no forecast benefit

KV engineering and customer samples each receive CNY 15 m quarterly, and adjacent exploration receives CNY 7.5 m. Realized adjacency adds CNY 10 m quarterly implementation R&D. These costs are present in the selected coherent outcomes. The source H1 R&D share-compensation allocation residual of CNY 551,679.81 remains unallocated.

The consolidated cash-tax assumption is 15% of positive pretax income. It assumes renewal of the parent's preferential status after its current 2027 expiry. Source regional statutory rates include Hong Kong 16.5%, Singapore 17% and other jurisdictions up to 25%; the future regional profit mix remains undisclosed. Higher tax cases must flow through cash and funding. Existing tax-loss assets provide no forecast benefit.

Phase 1 enterprise storage and KV reuse drive the selected active model. Phase 2 edge and storage adjacencies retain bounded product/capture assumptions. Phase 3 space, defense and quantum applications have zero selected incremental revenue because a company-specific commercialization bridge remains unavailable in the retained evidence.

6. Demand calibration and physical output

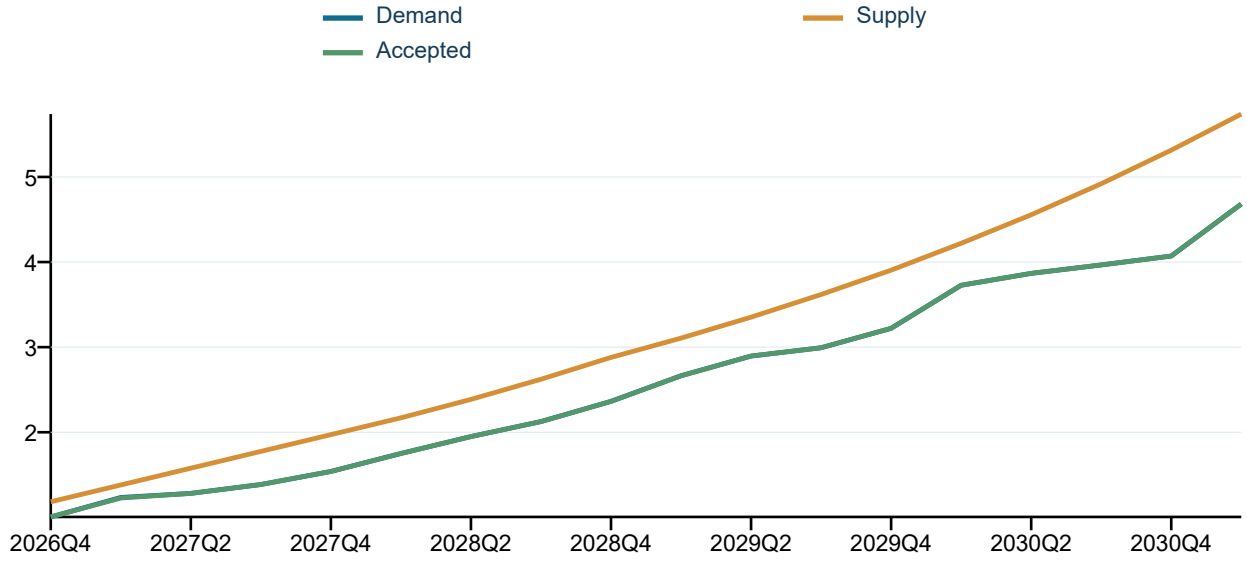

Q3 accepted revenue exactly calibrates the nominal customer-capex flow-through index. Eligibility, storage-wallet share and supplier capture are combined at the anchor because current customer revenue/bit volumes are undisclosed. This is a PlanB proxy, with no claimed measured market share. Nominal capex divided by price produces demanded units.

The demand anchor is Q3 2026 revenue divided by the quarter's USD 239.25 bn capex proxy. I use USD 1.5 T for 2027 as the lower boundary of the issuer-cited forecast. Later annual growth assumptions are 30%,20%,15% and 12% through 2031. Quarterly demand seasonality, prices and supply are selected model controls.

Capex demand spine and quarterly weights			
Year	**CSP capex USD bn**	**Q1/Q2/Q3/Q4 weights**	**Status**
2026	957.00	20.0%/27.0%/25.0%/28.0%	Issuer cited 2026/27; Later model proxy
2027	1,500.00	22.0%/24.0%/26.0%/28.0%	Issuer cited 2026/27; Later model proxy
2028	1,950.00	23.0%/24.5%/25.5%/27.0%	Issuer cited 2026/27; Later model proxy
2029	2,340.00	24.0%/25.0%/25.0%/26.0%	Issuer cited 2026/27; Later model proxy
2030	2,691.00	25.0%/25.0%/25.0%/25.0%	Issuer cited 2026/27; Later model proxy
2031	3,013.92	25.0%/25.0%/25.0%/25.0%	Issuer cited 2026/27; Later model proxy

2029Q1	2.663624	3.105900	2.663624	0.968640	1.012536
2029Q2	2.895244	3.352400	2.895244	0.928280	0.971376
2029Q3	2.992836	3.618620	2.992836	0.898010	0.930216
2029Q4	3.221127	3.904560	3.221127	0.867740	0.889056
2030Q1	3.727108	4.220080	3.727108	0.837470	0.847896
2030Q2	3.866875	4.555320	3.866875	0.807200	0.806736
2030Q3	3.966025	4.920140	3.966025	0.787020	0.769692
2030Q4	4.070394	5.314540	4.070394	0.766840	0.738822
2031Q1	4.682054	5.738520	4.682054	0.746660	0.712068

Nominal capex demand divided by the selling-price index produces constant-configuration demand units. Accepted output is constrained by physical supply and cash funding. The resulting index represents a comparable configuration; actual current TB, SKU mix and accepted drive counts remain undisclosed.

7. Rule16b probabilities and joint execution

The active operating case weights 18 coherent operating and financing outcomes. Six execution states carry overseas qualification, KV adoption, adjacency, H issuance and Customer A timing together; three NAND cost states are crossed with them. Positive execution/adoption/financing correlation is an explicit Model assumption. NAND cost states are independent of that selected joint execution distribution.

E1 Customer A signed order USD 514.574 M tax-inclusive;18 weeks from written effectiveness

Selected probability: 90.0%.

Probability rationale: The signed contract supports a high conversion weight; effective-date, acceptance and remaining-balance gaps retain delay risk.

Conditional: On time: remaining 50% of indicative 3.491 B/1.13 assumed net invoice resides within Q4 core wallet. Delay: move that amount to Q1 2027. Tax 13%,remaining 50%,confirmation date are Model assumptions; sensitivities 0-100% remaining and 0-13% tax.

Reference overlap: Full order excluded from incremental additions; it is inside accepted core wallet.

Economics: Costs follow accepted units; cash/AR/inventory and financing recomputed; no deposit invented.

Trigger: Accepted/recognized balance, confirmation date, customer call-off and cash receipts

E2 Several overseas customers qualified and scale-shipping; named current volumes undisclosed

Selected probability: 65.0%.

Probability rationale: Company answers establish qualification and scale shipments; undisclosed customer amounts retain capture uncertainty.

Conditional: Additional capture+10% 2027,+12% 2028,+14% 2029,+15% 2030; quarterly 2027 ramp 25/50/75/100%;0% 2026Q4.

Economics: 75% of conditional capture is incremental to reference wallet; normal product COGS, selling/support/R&D and WC all follow.

Trigger: Issuer customer acceptance and realized selling/receivable data

Overlap removed: 25.0%.

E3 QLC/SCM/KV reuse increases qualified storage opportunity

Selected probability: 60.0%.

Probability rationale: Engineering demonstrations and product qualification provide a commercial path; workload adoption and billable incremental demand remain uncertain.

Conditional: Eligible wallet+4% 2027,+8% 2028,+10% 2029,+12% 2030; ramp 2027 as E2.

Economics: 50% incremental, with 0.015 B quarterly RD and 0.015 B sample support already included; from 2027Q3 NAND content efficiency 3% if realized. No claim that all shipped SSD revenue is controller IP.

Trigger: Production validation, product gross profit and billable incremental workloads

Overlap removed: 50.0%.

E4 RAID/NIC/computational-storage adjacency

Selected probability: 25.0%.

Probability rationale: The prospectus and small current adjacent-product baseline support a bounded early commercial opportunity.

Conditional: Revenue 0.05 B2027,0.20 B2028,0.50 B2029,0.80 B2030,1.0 B2031 annually at 40% GM.

Economics: 25% wallet overlap removed;0.0075 B quarterly exploration RD in every branch plus 0.01 B implementation if realized. No new space/HBM revenue.

Trigger: Qualified billable product/customer and economics

Overlap removed: 25.0%.

E5 NAND price pass-through and supply allocation

Probability rationale: Purchased-memory exposure, quarterly terms and inventory timing support explicit ordinary, squeeze and relief states.

Selected probabilities: ordinary 50.0%, squeeze 30.0%, relief 20.0%.

Reference overlap: Cost states replace core cost/price/output assumptions; never add sector NAND revenue to complete SSD revenue.

Trigger: Quarterly purchase contracts, reported gross margin, inventory write-downs and allocation

E6 Approved H-share issuance scheme

Selected probability: 65.0%.

Probability rationale: Board and shareholder approvals establish the scheme; regulatory completion, price, timing and final issuance remain open.

Conditional: I model H issuance in Q3 2027, with a base issue equal to A/9 economic shares. The frozen offer-price proxy is CNY 221.732, equal to 70% of the dated header reference, with 3% fees. The conditional greenshoe probability is 50%, with extra shares equal to 15% of the base H issue.

Reference overlap: Existing IPO cash already included. H proceeds added exactly once in issuance quarter; full cash-and-share branches evaluated before weighting.

Trigger: Regulatory approvals, prospectus, pricing and issuance notice

E7 Effective charter conditional minimum cash-dividend policy

Selected probability: 65.0%.

Probability rationale: The effective charter is verified. A 65% normal implementation state reflects a forecast of behavior under financial, audit and approved-investment conditions; annual eligibility is calculated separately.

Verified source authenticity: 100.0%. Normal implementation and annual eligibility remain separate model quantities.

Conditional: Normal implementation state uses 10% of the lower annual group/standalone-parent distributable-profit pool after loss coverage and statutory appropriation. Prior-earned-year audit/70% liability/CFO/netcash gates and cumulative-profit eligibility apply; nextQ2 cash payment is a Root timing assumption.

Reference overlap: Payments reduce company cash and may affect funding; price ceilings use operating profit and economic shares.

Economics: Retained-profit and reserve schedules, cash-dividend budget/payment, purpose-cash protection and a calibrated balance sheet are evaluated within each coherent branch before weighting.

Trigger: Annual audited group/parent results, distribution or exception resolutions, cash records and final payment/record dates.

Overlap removed: 0.0%.

Selected execution distribution; H0 none/H1 base/H2 greenshoe							
State	Probability	Overseas	KV	Adjacent	H mode	On time	Normal cash policy
J1	25.00%	1	1	1	2	1	1
J2	7.50%	1	1	0	2	1	1

E5 retains each conditional cost-state endpoint relative to the all-ordinary comparator. The cost-state probabilities weight the active marginal above.

Conditional ordinary cost state, probability 50.0%.

The tables show probability-weighted coherent outcomes. Gross and operating margins are ratios of weighted GP/OP to weighted revenue. All R&D remains expensed. Forecast other income, investment returns and FX are zero; source statutory statements retain those items.

9. Working capital, cash and funding

Q1, Q2 and Q3 operating cash flows were CNY 298,956,477.11, negative CNY 1,169,826,439.84 and positive CNY 250,476,512.62. Revenue growth and reported profit therefore require a separately reconciled working-capital and cash model.

At September 30, inventory was CNY 4,985,757,824.86, receivables CNY 2,544,218,571.69, prepayments CNY 497,531,207.70 and payables CNY 3,578,747,363.00. Cash equivalents were CNY 2,393,754,148.22; monetary funds exceeded that amount by CNY 501, whose classification remains unallocated.

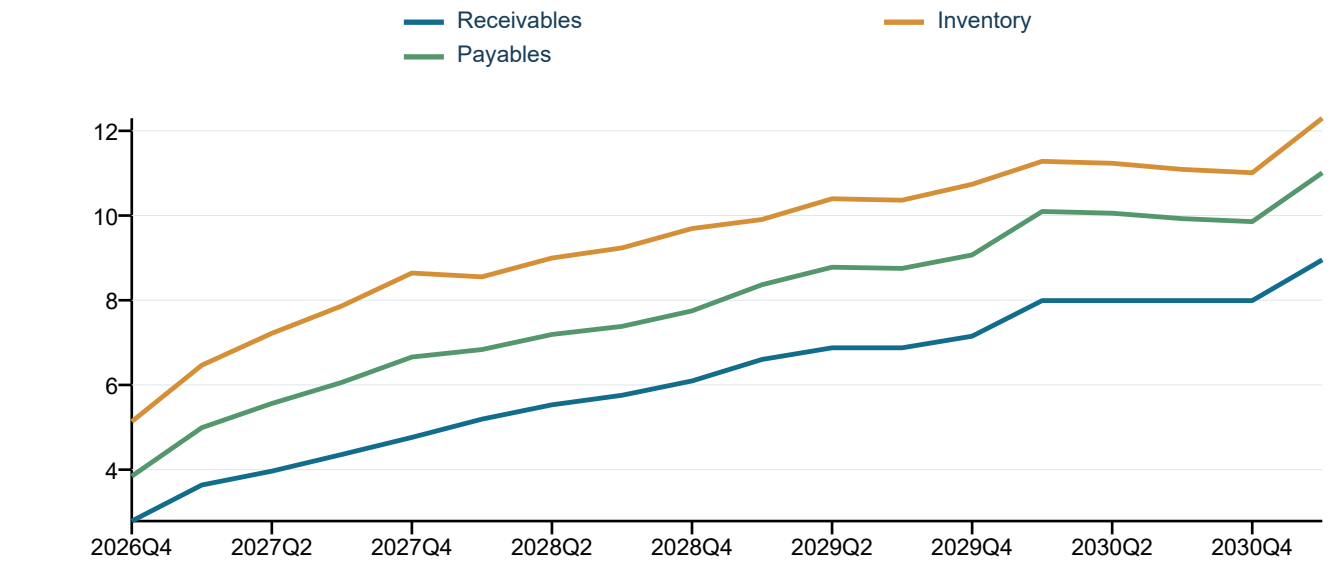

Credit and guarantee approvals carry specific limits and validity dates. Actual borrowing, unrestricted liquidity, consolidated guarantees, customer advances and IPO proceeds require separate balances and cash-flow treatment.

Evidence: CASH_RESTRICTIONS_AND_WORKING_CAPITAL, CREDIT_AUTHORIZATION, GROUP_GUARANTEES, IPO_CAPITAL, TAX_AND_FX. Exact source locations and dated URLs appear in the source register.

Cash rules and funding scope	
Assumption	Selected rule
AR_days	45

Debt availability is a selected CNY 6 bn cash-borrowing assumption. The source CNY 11 bn application authority includes financing and guarantees and expires on May 18,2027. Continued or renewed banking access after that date is a forecast assumption; signed future facilities remain undisclosed. Minimum cash also protects the remaining IPO-purpose buffer, alongside CNY 0.250 bn plus quarterly opex. The same funding law draws within the modeled cap, repays debt with excess cash and reduces accepted output when funding is insufficient.

10. Capital structure, H shares and shareholder cash

The IPO increased ordinary shares to 436,216,360 and brought net proceeds of CNY 1,878,789,942.19. These proceeds were received in April and are included in subsequent balance sheets. The October lockup release affects available float while total ordinary shares remain unchanged.

The approved H-share scheme permits new shares up to 10% of post-offer total before the greenshoe, with a greenshoe up to 15% of the H issue. Final timing, offer price, issued amount and proceeds remain open.

Special voting shares carry ten votes per share. Voting control, economic ownership, diluted forecast shares and cash funding retain their own source bases.

An October 29 board proposal permits up to CNY 800 million of idle IPO funds in cash management, subject to the November 19 shareholder vote. The existing cash is designated by source and use.

Evidence: IPO_CAPITAL, IPO_LOCKUPS, H_SHARE_APPROVED_SCHEME, VOTING_CLASSES, IDLE_IPO_CASH_MANAGEMENT, H1_IPO_USE. Exact source locations and dated URLs appear in the source register.

表决情况：同意 11 票，反对 0 票，弃权 0 票。

2.5 发行规模

在符合香港联交所要求的最低发行比例、最低公众持股比例、最低自由流通量比例等监管规定（或获豁免）的前提下，由公司根据自身资金需求与未来业务发展的资本需求确定发行规模，本次拟发行的 H 股股数不超过本次发行后公司总股本的 10%（超额配售权行使前），并根据市场情况授权整体协调人行使不超过前述发行的 H 股股数 15%的超额配售权，最终发行规模、超额配售事宜及发行比例由股东会授权董事会及其授权人士（授权人士亦可转授权）单独或共同代表公司根据法律法规规定、境内外监管机构批准或备案及市场情况确定，以公司根据与有关承销商分别签署的国际承销协议及香港承销协议发行完成后实际发行的 H 股数量为准。公司因此而增加的注册资本亦须以发行完成后实际发行的新股数目为准，并须在得到境内外监管部门、香港联交所和其他有关机构批准或备案后方可执行。

表决情况：同意 11 票，反对 0 票，弃权 0 票。

2.6 定价方式

本次 H 股发行价格将充分考虑公司现有股东利益和境内外资本市场的情况，按照国际惯例，根据市场认购情况、订单需求和簿记结果，采用市场化定价方式，最终由公司股东会授权董事会及其授权人士（授权人士亦可转授权）单独或共同代表公司和整体协调人根据法律法规规定、境内外监管机构批准或备案情况等共同协商确定发行价格。

表决情况：同意 11 票，反对 0 票，弃权 0 票。

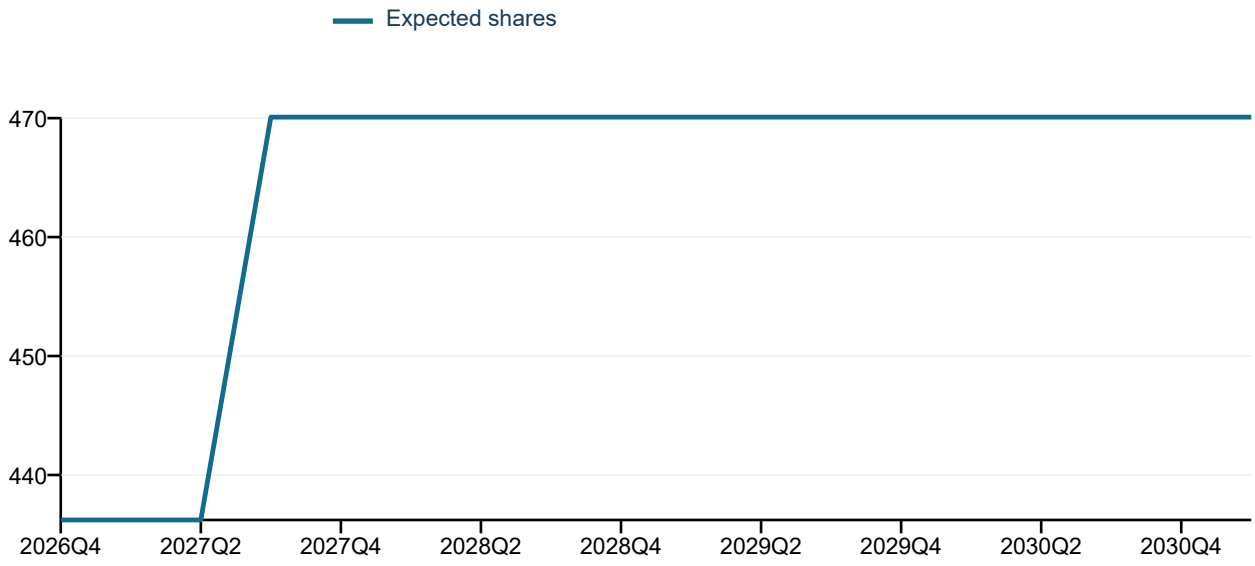

2.7 发行对象

本次发行拟在全球范围内进行发售，发行的对象包括符合相关条件的中国境外（为本方案之目的，含中国香港特别行政区、中国澳门特别行政区、中国台湾省及外国）机构投资者、企业和自然人以及依据中国相关法律法规有权进行境外证券投资的境内合格投资者，包括参与香港公开发售的香港公众投资者，以及参与国际配售的国际投资者、中国境内的合格境内机构投资者（QDII）、中国境内经监管机构批准的其他可以进行境外证券投资的投资者。具体发行对象将由公司

Source exhibit: August 25,2026 board scheme p 3. Proposed H-share issue-size and greenshoe limits; final price/date/share count remain open.

I assign 65% probability to H-share issuance in Q3 2027. The base issue is A/9 shares, consistent with 10% of post-offer total before the greenshoe. A 50% conditional greenshoe probability is represented inside the joint states at 15% of the base H issue. The issue-price proxy is CNY 221.732, frozen at 70% of the dated header reference, with 3% fees. The model evaluates shares and proceeds within each coherent path before weighting.

Million economic ordinary shares

Current charter, distributable profit and company cash distributions

The current charter became effective on September 9, 2026. A profitable year with positive cumulative undistributed profit carries an annual cash-distribution minimum of 10% of the lower consolidated and standalone-parent distributable-profit pool, subject to the charter's financial and investment exceptions.

（二） 公司现金分红的具体条件和比例

除特殊情况外，公司在当年盈利且累计未分配利润为正的情况下，采取现金方式分配股利，每年以现金方式分配的利润不少于当年实现的可分配利润（合并报表可分配利润和母公司可分配利润孰低）的 10%。特殊情况是指公司进行达到以下条件之一、需经股东会审议通过的重大投资计划或者重大现金支出：

1、涉及的资产总额占公司最近一期经审计总资产的 50%以上；

2、标的（如股权）在最近一个会计年度相关的营业收入占公司最近一个会计年度经审计营业收入的 50%以上，且绝对金额超过 5,000 万元；

3、标的（如股权）在最近一个会计年度相关的净利润占公司最近一个会计年度经审计净利润的 50%以上，且绝对金额超过 500 万元；

4、成交金额（包括承担的债务和费用）占公司最近一期经审计净资产的 50%以上，且绝对金额超过 5,000 万元；

5、产生的利润占公司最近一个会计年度经审计净利润的 50%以上，且绝对金额超过 500 万元。

（三） 公司发放股票股利的具体条件

采用股票股利进行利润分配的，应当具有公司成长性、每股净资产的摊薄等真实合理因素。公司在经营情况良好，并且董事会认为公司股票价格与公司股本规模不匹配、发放股票股利有利于公司全体股东整体利益时，可以在满足上述现金分红的条件下，提出股票股利分配预案。

（四） 公司董事会综合考虑公司所处行业特点、发展阶段、自身经营模式、盈利水平、债务偿还能力、是否有重大资金支出安排和投资者回报等因素，区分下列情形，并按照公司章程规定的程序，提出差异化的现金分红政策：

1、公司发展阶段属成熟期且无重大资金支出安排的，进行利润分配时，现金分红在本

Source exhibit: Current charter filedAugust 25,2026, effectiveSeptember 9; PDFp 52/printedp 50. Annual 10% lower distributable-profit condition and shareholder-approved major-investment exception tests.

Annual profit first covers brought-forward losses. Reserve appropriation is calculated from standalone-parent profit and deducted from both retained-profit presentations; the same equity transfer appears in consolidation. The model applies the statutory 10% reserve and selects the permitted stopping rule at 50% of registered

capital. Each distributable pool is bounded by positive remaining cumulative retained profit. The later dividend payment reduces cash.

证券交易所报送并披露年度报告，在每一会计年度上半年结束之日起两个月内向中国证监会派出机构和证券交易所报送并披露中期报告。

上述年度报告、中期报告按照有关法律、行政法规、中国证监会及证券交易所的规定进行编制。

第一百五十四条 公司除法定的会计账簿外，不另立会计账簿。公司的资金，不以任何个人名义开立账户存储。

第一百五十五条 公司分配当年税后利润时，应当提取利润的 10%列入公司法定公积金。公司法定公积金累计额为公司注册资本的 50%以上的，可以不再提取。

公司的法定公积金不足以弥补以前年度亏损的，在依照前款规定提取法定公积金之前，应当先用当年利润弥补亏损。

公司从税后利润中提取法定公积金后，经股东会决议，还可以从税后利润中提取任意公积金。

公司弥补亏损和提取公积金后所余税后利润，按照股东持有的股份比例分配。

股东会违反前款规定，在公司弥补亏损和提取法定公积金之前向股东分配利润的，股东必须将违反规定分配的利润退还公司。给公司造成损失的，股东及负有责任的董事、高级管理人员应当承担赔偿责任。

公司持有的本公司股份不参与分配利润。

第一百五十六条 公司的公积金用于弥补公司的亏损、扩大公司生产经营或者转增为公司资本。

公积金弥补公司亏损，先使用任意公积金和法定公积金；仍不能弥补的，可以按照规定使用资本公积金。

法定公积金转为资本时，所留存的该项公积金不得少于转增前公司注册资本的 25%。

Source exhibit: Current charter PDFp 50/printedp 48. Loss coverage,10% statutory reserve and permitted 50% registered-capital stopping threshold.

The charter’s 80%, 40% and 20% tiers measure cash as a share of the total distribution under different maturity and investment conditions. The selected forecast makes cash-only distributions at the conditional 10% minimum. Stock distributions and buybacks are zero.

次利润分配中所占比例最低应达到 80%；

2、公司发展阶段属成熟期且有重大资金支出安排的，进行利润分配时，现金分红在本次利润分配中所占比例最低应达到 40%；

3、公司发展阶段属成长期且有重大资金支出安排的，进行利润分配时，现金分红在本次利润分配中所占比例最低应达到 20%；

公司发展阶段不易区分但有重大资金支出安排的，可以按照前项规定处理。

（五） 公司利润分配方案的审议程序

1、公司的利润分配方案由管理层拟定后提交公司董事会审议。董事会应就利润分配方案的合理性进行充分讨论。股东会对利润分配方案进行审议前，公司应当通过多种渠道主动与股东特别是中小股东进行沟通和交流，充分听取中小股东的意见和诉求，及时答复中小股东关心的问题。

2、公司因前述规定的特殊情况而不进行现金分红时，董事会就不进行现金分红的具体原因、公司留存收益的确切用途及预计投资收益等事项进行专项说明，经独立董事发表意见后提交股东会审议，并在公司指定媒体上予以披露。

（六） 公司利润分配方案的实施

公司股东会对利润分配方案作出决议后，或公司董事会根据年度股东会审议通过的下一年中期分红条件和上限制定具体方案后，须在 2 个月内完成股利（或股份）的派发事项。

（七） 公司利润分配政策的变更

如遇到战争、自然灾害等不可抗力，或者公司外部经营环境变化并对公司生产经营造成重大影响，或公司自身经营状况发生较大变化时，公司可对利润分配政策进行调整。公司调整利润分配政策应由董事会做出专题论述，详细论证调整理由，形成书面论证报告并经董事会审议通过后提交股东会特别决议通过审议利润分配政策变更事项时，公司为股东提供网络投票方式，充分听取中小股东的意见。公司调整后的利润分配政策不得违反中国

Source exhibit: Current charter PDFp 53/printedp 51. Cash-share-of-distribution tiers 80/40/20 and implementation within two months after the relevant resolution.

I assign 65% probability to the normal implementation state and correlate it with stronger execution and financing. The source charter is verified. The 35% remaining state allows approved major-investment or policy exceptions. Future clean audits are assumed inside the normal state; realized annual financial gates further condition payment eligibility.

For the earned fiscal year, the model exercises permitted withholding when operating cash flow or net cash flow is negative, or year-end liabilities exceed 70% of assets. It also requires positive annual group and parent profit, positive cumulative retained profit, and the assumed clean audit. A qualifying shareholder-approved major

investment or cash expenditure can provide a separate exception under the charter's specified transaction tests.

第一百五十七条 公司召开年度股东会审议年度利润分配方案时，可审议批准下一年中期现金分红的条件、比例上限、金额上限等。年度股东会审议的下一年中期分红上限不应超过相应期间归属于公司股东的净利润。董事会根据股东会决议在符合利润分配的条件下制定具体的中期分红方案。

公司股东会对利润分配方案作出决议后，或者公司董事会根据年度股东会审议通过的下一年中期分红条件和上限制定具体方案后，须在两个月内完成股利（或股份）的派发事项。

公司可采取现金、股票或股票与现金相结合的方式分配股利。公司在符合利润分配的条件下，应当每年度进行利润分配。公司董事会可以根据公司的资金需求状况提议公司进行中期现金分配。公司将保持股利分配政策的连续性、稳定性，如果变更股利分配政策，必须经过董事会、股东会表决通过。

当公司出现以下特殊情形的，可以不进行利润分配：

1、最近一年审计报告为非无保留意见或带与持续经营相关的重大不确定性段落的无保留意见；

2、当年末资产负债率高于 70%；

3、当年经营性现金流量净额或者现金流量净额为负数；

4、法律法规及本章程规定的其他情形。

第一百五十八条 公司的利润分配政策为：

（一） 利润分配的形式

公司采用现金、股票或者现金与股票相结合的方式分配股利，在具备现金分红条件时，应当优先采用现金分红的方式，公司现金股利政策目标为固定股利支付率。在有条件的情况下，公司可以进行中期利润分配；

Source exhibit: Current charter PDFp 51/printedp 49. Annual audit/going-concern, liabilities/assets>70% and negative CFO/net-cashflow exceptions.

An eligible earned-year budget pays in the next Q2 under the selected timing assumption. Actual shareholder resolutions and record/payment dates remain open. The first three-year return plan is reviewed thereafter; the forecast assumes continuing charter terms.

The charter requires implementation within two months after the relevant resolution. The modeled next-Q2 schedule is a timing selection; actual future declaration, record and payment dates remain undisclosed.

H1 standalone-parent net profit was CNY 1.3357010129 B, compared with consolidated owner-attributable profit of CNY 1.33397884292 B. Their 1.001291002469 ratio calibrates the Q3-and-later parent-profit proxy. The H1 reported values stay fixed. Q3 standalone-parent statements are unavailable, so later parent profit and retained profit remain explicitly modeled alongside consolidated figures.

The opening CNY 0.800 B IPO-purpose buffer is a model proxy anchored to the October 29 cash-management authority cap. Exact remaining designated IPO cash at September 30 is undisclosed; H1's CNY 1.0695516 B balance is an older observation. The buffer releases against modeled cash test/PP&E spending and 50% of controller-R&D cash, with 75% of share-compensation allocated to R&D for this cash proxy. Future H-proceeds restrictions remain open.

The balance proxy starts from the exact September 30 assets, liabilities and equity. Other assets roll by cash capital spending less depreciation, other liabilities stay constant, and opening contract liabilities run off through working capital. Dividends reduce company cash, distributable retained profit and equity within each coherent branch. This same balance supplies the 70% eligibility test.

Cash dividends flow through company cash, debt, financing costs and net income. The quarterly price ceilings retain the fully expensed operating-profit and economic-share valuation law.

Current parent/consolidated source calibration

Source anchor	CNY bn	Identity/scope
H1 standalone-parent NI	1.335701013	Reported standalone parent
H1 owner-attributable NI	1.333978843	Consolidated owner-attributable
H1 parent retained profit	0.682958102	Reported standalone parent
M9 group retained profit	1.396025491	Reported consolidated owner retained profit
M9 statutory reserve	0.075884234	Reported equity reserve
Parent-profit proxy ratio	1.001291002469	Applies from Q3 onward; H1 anchors retained

Annual financial gates are evaluated within each coherent outcome; CNY bn except ratios						
Earned FY	Annual owner-attributable NI	Parent NI proxy	Annual CFO	Net cashflow	Liabilities/assets	Effective eligibility p
2026	3.529828	3.534385	0.409335	1.448583	44.6209%	45.50%
2027	4.863681	4.869960	1.905882	8.594763	31.0697%	63.50%

Annual financial gates are evaluated within each coherent outcome; CNY bn except ratios						
Earned FY	Annual owner-attributable NI	Parent NI proxy	Annual CFO	Net cashflow	Liabilities/assets	Effective eligibility p
2028	7.056338	7.065448	5.677849	4.831587	26.7277%	65.00%
2029	9.248032	9.259971	8.427886	7.492136	23.4396%	65.00%
2030	11.479189	11.494008	11.207769	10.075562	19.8442%	65.00%

The 65% normal implementation marginal is separate from actual annual financial eligibility. Probability-weighted eligibility is 45.5% forFY2026,63.5% forFY2027 and 65% fromFY2028 in the selected model. Each branch applies the legal pool and financial gates before weighting; multiplying aggregate profit by an average probability would lose that dependence.

Model figure M9. Conditional annual cash budgets and modeled payments. Numerical table follows; all values use the model.

Total probability-weighted modeled dividend cash inside the 18-quarter grid is CNY 1.573393909176 B. TheFY2030 earned-year budget of CNY 0.811120204435 B would fall in Q2 2031 under the timing convention,

beyond the displayed quarter grid. Actual payment depends on the future approved plan and record/payment dates.

IPO cash is already included in opening balances. H proceeds enter once in their modeled issue quarter. The selected forecast has cash distributions under the current charter, zero stock distributions and zero buybacks.

Owning model DAPUSTOR_model.xlsx, sheet 301666_SZ_Q_Model: capital controls C759:J769, source actuals C819:J829, weighted capital view C865:U885. Coherent retained/reserve/dividend/purpose-cash/balance fields occupy branch rows 400:723.

12. Forward operating-profit valuation and every ceiling

I use 20x fully expensed recurring forward operating profit. Enterprise qualification, firmware and rapid demand expansion support the selected valuation; purchased memory, integrated competitors and working-capital requirements limit capture. At 15% recurring tax,20x OP corresponds to 23.5294118x pre-interest after-tax earnings. Sensitivities at 15x and 25x retain the same operating case.

Each inclusive window prices ceiling quarter Q through Q+3. For every coherent outcome, the four-quarter OP sum is divided by the economic share count at that ceiling quarter. These per-share outcomes are probability-weighted and multiplied by 20. Expected shares and effective valuation shares are disclosed separately.

CNY per economic ordinary share

Model figure M10. Selected quarterly ceiling path. Numerical table follows; all values use the model.

13. Annual operating cross-check

Annual sums of selected quarterly model; CNY bn					
Year	**Revenue**	**GP**	**Recurring OP**	**CFO**	**FCF**
2027	33.443201	7.261664	5.727155	1.905882	1.505882
2028	45.148770	10.156272	8.301618	5.677849	5.157849
2029	55.014898	13.053023	10.880037	8.427886	7.987886
2030	63.934731	16.012989	13.504928	11.207769	10.727769

14. Summing Base, risks and catalysts

Analytical score that sums			
Category	**Points**	**Maximum**	**Evidence**
Core thesis	13	20	Controller/firmware IP, enterprise qualification and engineering support support switching costs. Integrated NAND suppliers and qualified rivals constrain pricing power.
Cycle stage	8	10	Enterprise AI SSD adoption and the 2026 revenue inflection support an early expansion stage; quarterly cost pass-through remains volatile.
TAM expansion	6	10	Phase 1 enterprise SSD and KV reuse; weighted Phase 2 edge/storage engineering; limited evidence for Phase 3. Existing NAND and SSD wallets overlap.
Catalysts	4	5	Customer A delivery window, 2027 qualification ramps, H-share financing, next product and testing-base milestones.
Macro	8	10	AI datacenter investment and domestic supply-chain localization; export restrictions, customer concentration and NAND allocation remain constraints.
Alpha	4	5	Mandarin filings and detailed cost/working-capital interpretation; no claim of an undisclosed exclusive customer award.
Risks	-5	0	Five classes: purchased-memory cost/supply; customer concentration; qualification/product execution; working-capital/dilution; trade/governance.
Total	38	60	63% under the integer lattice; Fail band

Five scored risk classes		
Risk class	**Points**	**Evidence and test**
Purchased-memory cost/supply	-1	Quarterly repricing, inventory layers, allocation and pass-through

Five scored risk classes		
Risk class	**Points**	**Evidence and test**
Customer concentration	-1	Top-five 67.25%; largest 37.51% FY2025; acceptance and collections
Qualification/product execution	-1	6–18 month process; new products and output/firmware qualification
Working capital/dilution	-1	Inventory and AR funding, debt availability, potential H shares
Trade/governance	-1	Cross-border sourcing/customer rules and special voting control

The product comparison includes Samsung, SK hynix/Solidigm, Micron, Kioxia, SanDisk and independent enterprise SSD designers, including UnionMemory and Memblaze. Controller alternatives include Marvell and Microchip.

Purchased NAND creates both supplier exposure and margin pressure. Customer qualification, firmware, field support and accepted enterprise SSD output determine whether industry growth creates durable company capture.

DapuStor connects the covered memory suppliers to qualified enterprise-storage deployment. Supplier sales, downstream SSD revenue and sector TAM require consistent value-chain scopes.

Evidence: COMPETITORS, CONTROLLER_COST, NAND_TERMS, CONCENTRATION. Exact source locations and dated URLs appear in the source register.

Upstream NAND suppliers include Micron, SK hynix/Solidigm, Samsung, Kioxia and SanDisk. Higher NAND realizations can raise their upstream economics while compressing DapuStor’s margin until customer prices and inventory costs adjust. These integrated suppliers also compete in enterprise SSDs. Common data-center investment can support volume throughout the chain; the model allocates each company’s captured revenue at its own value-chain layer.

Dated catalysts include Customer A effectiveness and accepted delivery,2027 qualification ramps, any H-share regulatory/pricing/issuance notice, new-product validation and funded testing-base execution. The IPO project readiness dates are May 12,2029 for the next-generation programme and April 16,2028 for the testing base; accepted product output requires its own deployment evidence.

15. Management completeness, source gaps and update tests

The latest full formal investor-relations record recovered is the May 21 event: twelve pages and fifty-one questions with company answers. Its fifth answer identifies the event as remote written Q&A.

The latest two complete written company-answer cohorts on the official platform are October 9 and September 2. All sixteen company answers across those cohorts are retained. Seven newer investor questions are unanswered in the retrieved records.

Issuer summaries cover an October CEO forum and a September executive panel. Full verbatim speeches, full spoken earnings-call transcripts and audio replays remain unrecovered. These format and coverage gaps limit the available management evidence.

Evidence: LATEST_QA_GUARD, NVIDIA_XAI_QUALIFICATION. Exact source locations and dated URLs appear in the source register.

On October 30, the official Yahoo analysis page for 301666.SZ was inaccessible through the supported web tool. Search results provided dated quote pages without revenue-estimate tables. The AH12 Yahoo HIGH

revenue-estimate floor remains unavailable and unverified. The selected model uses no analyst estimate or analyst price target. Attempted source: https://finance.yahoo.com/quote/301666.SZ/analysis/.

Open source item: CustomerA remaining/confirmation/units/tax/payment terms.

Open source item: Current NAND versus DRAM/controller BOM and actual TB/SKU gross margins.

Open source item: Current per-customer revenue/overseas ultimate geography.

Open source item: Full newest two spoken management replays/transcripts unavailable;latest two written cohorts complete.

Open source item: H offer price/date/final shares.

Open source item: 72,800 FY2025 physical unit balance residual.

Open source item: H1 R&D SBC allocation 551,679.81 CNY bridge.

Open source item: Exact quarterly weighted EPS shares and 9 M501 CNY cash balance classification.

Open source item: Future standalone-parent distributable profit, audit outcomes and exact cash-dividend declaration/payment dates.

Open source item: Exact M9 remaining designated IPO cash;0.800 B purpose buffer and qualified-spending release are Root proxies.

Open source item: Future approved major-investment exceptions and future H-proceeds use restrictions.

The probability ledger pre-registers customer acceptance, actual order balance, input contracts, gross profit, inventory losses, cash receipts, product qualification and capital notices as revision tests. Weaker evidence, delivery slippage or cash pressure reduces the relevant outcome probabilities or economics when the affected model is reviewed.
