JNTC

204270.KQ | KOSDAQ | 2026-10-07

Q4 2027 model ceiling: KRW 5,522.12

Analytical Base 36/60 = 60 | Speculative engineering optionality / Watchlist

85% financing continuity x the sum of commercial-state probabilities x each nonnegative common ceiling. Each state values 20x matching forward-four-quarter K-IFRS operating profit, less end-window debt, leases and supplier funding claims, divided by end-window economic shares. KRW billions divided by million shares is multiplied by 1,000. Exchange shares and debt are alternate claims. Cash and other asset values are not added. Each labeled quarter includes itself and the next three.

Coverage initiated at the owner's request. No holding was established by this research. Existing portfolio Base overrides remain protected.

All operating values are in KRW bn and shares in millions unless stated otherwise. Forecasts are analytical assumptions; issuer guidance and actual results are identified separately.

Decision in the model

Active horizon	Earnings window	F4Q OP	Multiple	Diluted shares	Ceiling
Q4 2027	Q4 2027 through Q3 2028	31.7	20x	72.814	5,522.12

The ceiling is a model valuation, not a guaranteed trading price or a literal net-income P/E. Operating branches are weighted once. Where debt, preferred claims, conversion or equity floors make value nonlinear, the model values each coherent operating and funding state first, then weights those common-share outcomes.

Economic scope and matching claims

Consolidated K-IFRS operating profit including SBC, depreciation, inventory charges and failed-pilot costs; joint-venture income and cash values are excluded.. 85% financing continuity x the sum of commercial-state probabilities x each nonnegative common ceiling. Each state values 20x matching forward-four-quarter K-IFRS operating profit, less end-window debt, leases and supplier funding claims, divided by end-window economic shares. KRW billions divided by million shares is multiplied by 1,000. Exchange shares and debt are alternate claims. Cash and other asset values are not added. Each labeled quarter includes itself and the next three.

Financial claims and diluted shares follow the company-specific schedule below. Debt, preferred and minority claims are counted once. All financial model tables use KRW bn unless a different unit is stated.

Thesis

JNTC's engineering progress deserves a place in the research universe. Its existing business does not yet finance the opportunity. The active Q4 2027 common-share ceiling is **KRW5,522.12**, using 20 times forward-four-quarter K-IFRS operating profit in each commercial and financing state, then weighting the resulting common-share values. The window is Q4 2027 through Q3 2028. The analytical Base is **60/100 (36/60)**. This is a speculative manufacturing transition: evidence supports nonzero probabilities for both new businesses, but neither customer qualification nor an announced factory supplies free capital.

The model assigns a 70% probability to a meaningful HDD glass-platter ramp and 55% to a TGV glass-core ramp. Their four combinations have different investment requirements, borrowing and dilution. An additional 85% financing-continuity assumption allows for bank and parent rollover plus new funding; the remaining 15% is a zero-common-value financing stress. This is deliberately not a calculation that divides average earnings by average shares. The displayed operating expectation is conditional on continued funding; the financing factor is applied once to common value.

Business and engineering

JNTC Co., Ltd. trades on KOSDAQ as 204270. It began in connectors and expanded into shaped and strengthened glass for mobile devices, wearables and vehicles. Its Vietnamese subsidiary is wholly owned. Korea supplies connectors, development and the initial TGV line; the new plan separates Vietnamese HDD production from a Korean TGV expansion. The September investment decision supersedes the H1 report's older plan to expand TGV in Vietnam.

The useful manufacturing distinction is between shaping glass, forming through-glass vias, metallizing them, and completing a packaged semiconductor substrate. JNTC proposes to sell customized processed glass cores or selected processing services. It does not automatically receive the downstream redistribution layers, buildup, assembly, test, or the full selling price of the finished semiconductor package. A relationship with a packaging company therefore expands the route to market without assigning that company's whole package wallet to JNTC.

Larger packages create a physical problem: glass, copper and insulating materials respond differently to temperature, and mechanically weak panels can warp or crack through subsequent processing. Thicker glass improves rigidity but makes deep-via formation and void-free copper filling more difficult. JNTC's reported integration of laser processing, etching, metallization and finishing could reduce process handoffs and improve repeatability. Its parent Jinwoo Engineering supplies important production equipment, while the absorbed COMET business contributes plating and etching expertise. That integration is both an engineering advantage and a related-party funding dependency.

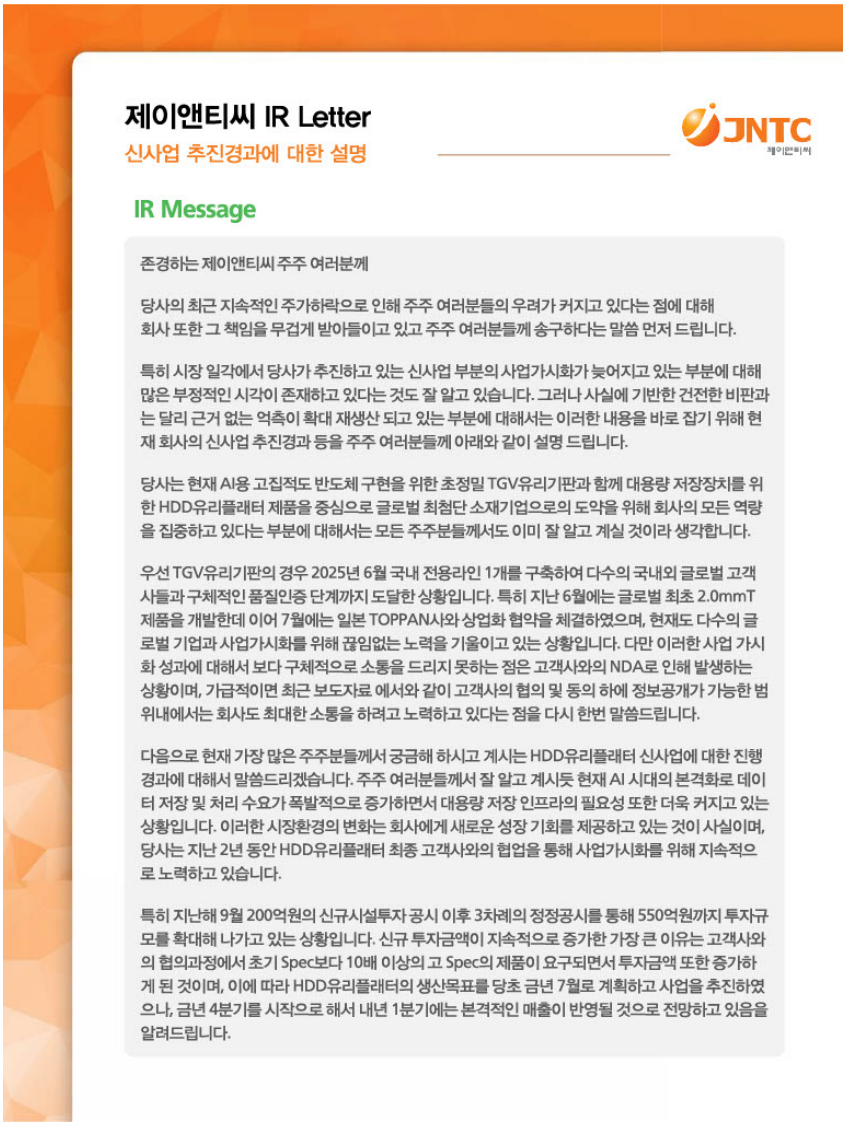

The issuer's product image advertises strong adhesion, controlled copper thickness, minimized dimples and warpage, and a CMP-free process. These are product claims, not an audited full-factory yield statistic. Different recipes can include different finishing steps: the October report also describes CMP capability. A quoted peak yield, a completed sample and a customer's final qualified good-panel output must remain separate concepts.

Commercialization evidence

The July 23 issuer letter reports TOPPAN commercialization cooperation after development of a 2 mm product. It also acknowledges that HDD commercial production was delayed, moving the anticipated start toward Q4 2026 and more meaningful sales toward Q1 2027. HDD investment had risen through revisions from KRW20 billion to KRW55 billion as customer specifications became more demanding. The earlier October 2025 letter was more optimistic about rapid commercialization; the later admission is important counter-evidence against treating technical milestones as reliable revenue dates.

The October 6 original engineering report adds company commentary on integrated processing and customer evaluation. It describes a 10,000-12,000-panel monthly pilot, seven customers purchasing samples, initial supply in 2027, and two or three enlarged-site lines aimed at mid-2028 demand. These are useful forward indicators. Anonymous industry statements and the reporter's proposed Broadcom identity remain attributed claims, not a disclosed JNTC purchase order. The model treats the technical, TOPPAN and sample evidence as support for one commercialization probability rather than separate revenue increments. Original reporting.

TOPPAN's own December 2025 release describes a pilot program for glass and redistribution-layer packaging development. That reinforces the downstream qualification workload. The September 21 JNTC filing authorizes KRW347 billion for land, buildings and equipment from January 2027 through June 2030, funded with internal and external resources. It does not disclose committed customer volume, annual capital expenditure phasing, a financing facility or a subsidy receivable. JNTC capital investment filing.

제이앤티씨 IR Letter

신사업 추진경과에 대한 설명

JNTC

IR Message

존경하는 제이앤티씨 주주 여러분께

당사의 최근 지속적인 주가하락으로 인해 주주 여러분들의 우려가 커지고 있다는 점에 대해 회사 또한 그 책임을 무겁게 받아들이고 있고 주주 여러분들께 송구하다는 말씀 먼저 드립니다.

특히 시장 일각에서 당사가 추진하고 있는 신사업 부분의 사업가시화가 늦어지고 있는 부분에 대해 많은 부정적인 시각이 존재하고 있다는 것도 잘 알고 있습니다. 그러나 사실에 기반한 건전한 비판과는 달리 근거 없는 억측이 확대 재생산 되고 있는 부분에 대해서는 이러한 내용을 바로 잡기 위해 현재 회사의 신사업 추진경과 등을 주주 여러분들께 아래와 같이 설명 드립니다.

당사는 현재 AI용 고집적도 반도체 구현을 위한 초정밀 TGV유리기판과 함께 대용량 저장장치를 위한 HDD유리플래터 제품을 중심으로 글로벌 최첨단 소재기업으로의 도약을 위해 회사의 모든 역량을 집중하고 있다는 부분에 대해서는 모든 주주분들께서도 이미 잘 알고 계실 것이라 생각합니다.

우선 TGV유리기판의 경우 2025년 6월 국내 전용라인 1개를 구축하여 다수의 국내외 글로벌 고객사들과 구체적인 품질인증 단계까지 도달한 상황입니다. 특히 지난 6월에는 글로벌 최초 2.0mmT 제품을 개발한데 이어 7월에는 일본 TOPPAN사와 상업화 협약을 체결하였으며, 현재도 다수의 글로벌 기업과 사업가시화를 위해 끊임없는 노력을 기울이고 있는 상황입니다. 다만 이러한 사업 가시화 성과에 대해서 보다 구체적으로 소통을 드리지 못하는 점은 고객사와의 NDA로 인해 발생하는 상황이며, 가급적이면 최근 보도자료 에서와 같이 고객사의 협의 및 동의 하에 정보공개가 가능한 범위내에서는 회사도 최대한 소통을 하려고 노력하고 있다는 점을 다시 한번 말씀드립니다.

다음으로 현재 가장 많은 주주분들께서 궁금해 하시고 계시는 HDD유리플래터 신사업에 대한 진행경과에 대해서 말씀드리겠습니다. 주주 여러분들께서 잘 알고 계시듯 현재 AI 시대의 본격화로 데이터 저장 및 처리 수요가 폭발적으로 증가하면서 대용량 저장 인프라의 필요성 또한 더욱 커지고 있는 상황입니다. 이러한 시장환경의 변화는 회사에게 새로운 성장 기회를 제공하고 있는 것이 사실이며, 당사는 지난 2년 동안 HDD유리플래터 최종 고객사와의 협업을 통해 사업가시화를 위해 지속적으로 노력하고 있습니다.

특히 지난해 9월 200억원의 신규시설투자 공시 이후 3차례의 정정공시를 통해 550억원까지 투자규모를 확대해 나가고 있는 상황입니다. 신규 투자금액이 지속적으로 증가한 가장 큰 이유는 고객사와의 협의과정에서 초기 Spec보다 10배 이상의 고 Spec의 제품이 요구되면서 투자금액 또한 증가하게 된 것이며, 이에 따라 HDD유리플래터의 생산목표를 당초 금년 7월로 계획하고 사업을 추진하였으나, 금년 4분기를 시작으로 해서 내년 1분기에는 본격적인 매출이 반영될 것으로 전망하고 있음을 알려드립니다.

Original issuer exhibit | Original July 23 letter: TOPPAN cooperation and the HDD production schedule and capital spending revisions.

Latest actuals and the legacy business

The financial starting point is substantially weaker than the new-product narrative. The corrected H1 2026 consolidated report records revenue of KRW78.811 billion, gross loss of KRW26.341 billion and operating loss of KRW36.437 billion. Q1 revenue was KRW39.979 billion with an operating loss of KRW11.432 billion; Q2 revenue was KRW38.832 billion with an operating loss of KRW25.006 billion. The 2025 group had revenue of KRW185.653 billion and an operating loss of KRW77.996 billion, following revenue of KRW273.239 billion in 2024. The parent-only operating profit is not a substitute for these consolidated losses. H1 statutory report.

H1 connectors generated approximately KRW44.830 billion, or 56.9% of group revenue; advanced materials generated KRW33.981 billion. Connector sales routes include Samsung Electronics and its first-tier suppliers. Legacy cover glass remains exposed to Chinese customer and chip-availability problems. Geography of billing is not equivalent to the ultimate customer's exposure. The reported average legacy glass price of KRW642 is a mixed-product statistic; using it as a TGV panel price or HDD platter price would be a category error.

The reference operating path assumes modest connector growth to KRW94/98/102/106 billion in 2027-30 and gradual legacy-glass recovery to KRW70/80/88/96 billion. These are model assumptions, not company guidance.

They stay far below the earlier glass peak and do not presume recovery of a lost flagship mobile program. The statutory report's single reportable operating segment does not supply separate audited gross margins for these product vectors.

기 어려울 정도로 확대될 수 있는 부분입니다. 향후 신규사업의 진행상황 등은 관련된 공시 등을 통해 지속적으로 전달 드릴 예정입니다.

2. 주요 제품 및 서비스

가. 주요 제품 등의 현황

주식회사 제이앤티씨와 그 종속회사의 사업부문은 첨단소재사업과 커넥터사업으로 구분 할 수 있습니다. 또한 해외생산법인인 JNTC VINA는 첨단소재 및 강화유리 제조를 담당하고 있어 지배회사의 사업 내용과 일치 합니다. 사업부문별 매출액 및 매출 비율은 다음과 같습니다.

(단위: 백만원,%)

사업부문	매출유형	품 목	2026년 (제 31기 2분기)		2025년 (제 30기)		2024년 (제 29기)	
			매출액	비율	매출액	비율	매출액	비율
커넥터	커넥터	- 커넥터	44,830	56.9	85,349	46.0	78,905	28.9
첨단소재	강화유리	- 모바일 커버글라스 등	33,981	43.1	100,304	54.0	194,334	71.1
합계	-	-	78,811	100.0	185,653	100.0	273,239	100.0

주1) 연결 재무제표 기준

주2) 전체 매출에서 5%이하를 차지하는 제품별 매출은 유형별 분류에서 제외하였습니다.

나. 주요 제품 등의 가격변동 추이

1. 품목별 제품 단가

(단위: 원)

사업부문	매출유형	품 목	2026년 (제 31기 2분기)	2025년 (제 30기)	2024년 (제 29기)
커넥터	커넥터	- 커넥터	880	843	795
첨단소재	강화유리	- 모바일 커버글라스 등	642	644	1,467

주) 제품 단가는 품목별 평균단가입니다.

2. 가격변동원인

구 분	원 인
강화유리	커버글라스 제품의 평균단가 변동요인은 품목다양화(차량용, 워치, 카메라윈도우, 모바일)와 함께 모바일 제품의 소재 변경 및 고객사의 다양화에 따라 전체 커버글라스 제품의 평균단가에 변동이 있었습니다.
커넥터	USB C-TYPE 제조방법 변경 및 신제품출시 등에 따른 제품 단가 변동이 있었습니다.

3. 원재료 및 생산설비

Original issuer exhibit | Statutory consolidated H1 and Q2 profit and loss, including inventory charges.

Inventory and gross profit

H1 inventory write-downs were KRW25.063 billion. Net inventory of KRW33.984 billion sat against gross inventory of KRW98.919 billion and valuation allowances of KRW64.935 billion. Removing the write-down to discuss manufacturing performance is useful; erasing it from the economic model is not. The forward model retains recurring scrap and inventory charges, although below the severe H1 level. A sustained reduction requires actual sell-through and better production alignment.

Product gross profit is built from cash manufacturing contribution less allocated manufacturing depreciation and recurring scrap. Connector cash contribution is 32% of sales and legacy glass is 30%, both labeled allocation proxies calibrated around H1 results before depreciation and inventory charges. Legacy depreciation initially runs at KRW12 billion per quarter and declines gradually as old assets age. R&D, SG&A and customer support are then deducted. SBC remains an expense, as do depreciation and a KRW15 billion failed-pilot impairment in the non-scaling TGV case. No EBITDA multiple is applied to these numbers.

주석6 - 공동기업에 대한 투자 (연결)

(1) 당반기말과 전기말 현재 공동기업에 대한 투자의 내역은 다음과 같습니다.

Original issuer exhibit | H1 inventory loss was KRW25.063 billion; net inventory of KRW33.984 billion is after KRW64.935 billion of allowances.

HDD economics and competition

The selected successful HDD outcome is 24 million accepted platters in 2027 at KRW5,000 each, or KRW120 billion of revenue. The bounded initial range is 12-36 million units at KRW3,000-6,000. Subsequent selected shipments are 50 million, 76 million and 96 million in 2028-30, with no assumed ASP increase. These are production and price proxies; the issuer has not disclosed the required output capacity, contracted ASP or named customer. Qualification and factory acceptance must support them.

Cash manufacturing contribution rises from 36% to 40%, from which dedicated annual depreciation of KRW8.8/14/19.2/24.8 billion and 4% of revenue for technical support are deducted. The model finances additional expansion of KRW20/40/40/40 billion after 2026 rather than assuming the initial KRW55 billion project supports unlimited output. At the 2028 selected volume, 50 million good discs would require roughly 4.17 million accepted monthly units; at 85% saleable yield that implies about 4.9 million starts. This is a testable capacity requirement, not disclosed nameplate capacity.

HOYA is a formidable incumbent. Its 2026 integrated report describes a historic 100% glass-HDD-substrate share, approximately 40% of the overall nearline substrate market, and a new Vietnamese facility expected to operate in

FY28 with an initial investment of about JPY50 billion. Those statements identify both the attraction of a second source and an incumbent capacity response. Historical share claims do not prove JNTC cannot qualify later, but they rule out assuming an effortless share transfer. Glass substrates are also distinct from magnetic media, heads and suspensions. HOYA's own business review.

TGV economics and pricing

The selected 2027 TGV outcome uses one line, 120,000 annual panel starts, 40% utilization on paid demand, 78.75% final saleable yield and KRW500,000 per accepted panel. That produces KRW18.9 billion. In 2028, 1.6 average lines, 75% utilization, 85% good yield and KRW650,000 produce KRW79.56 billion. Four average lines in 2029 produce KRW214.656 billion; seven in 2030 produce KRW384.384 billion. Installed lines, loading, good yield and price are explicit separate drivers, not a multiplication of announced floor area by industry TAM.

The ASP range to test is KRW300,000-1,000,000 for the selected processing scope. It is not a customer quote. A more complex panel may command more money but also require more time, copper, inspection and rework. The model's higher 2028 price encompasses richer mix and a limited qualified-order premium. A separate 35% probability of a 5% premium on half of repriceable sales receives no additional revenue: that increment is already inside the selected ASP. This is a specified 100% overlap adjustment, not a claim that pricing power has zero probability.

Cash manufacturing contribution reaches 43% in 2028 and 47% in 2030 before dedicated depreciation and 7% variable qualification and support expense. These margins are assumptions requiring confirmation. Faster copper filling helps throughput but does not remove downstream buildup defects, inspection requirements, price competition or utilization risk. Competing integrated glass-core suppliers and equipment-enabled customer lines can erode exclusivity. JNTC earns the selected manufacturing scope only; it receives no automatic participation in all organic substrate shortages or advanced-packaging expenditure.

Funding and governance

June cash was KRW48.228 billion. The face-value loan and bond claims total KRW281.943 billion, including KRW90.158 billion already owed to parent Jinwoo Engineering. Leases add approximately KRW0.304 billion. The March 2027 maturity of the KRW30 billion, 5.7% bond is a distinct refinancing event. The model assumes existing debt can roll at a blended 6.5% funding cost, excluding the zero-coupon exchange bond; this is part of the 85% continuity judgment, not a verified refinancing commitment.

Reported H1 CFO of KRW47.121 billion included a KRW34.831 billion working-capital benefit, including a KRW28.887 billion increase in trade payables. That release is not extrapolated. Cash capital expenditure was approximately KRW65.387 billion. The KRW54.286 billion remaining PPE purchase commitment is included once in H2 2026 cash spending; the revised KRW55 billion HDD project is not added again on top of it. The new TGV project is separately phased at KRW45/120/120/62 billion in 2027-30, plus maintenance and modeled HDD expansion.

A KRW75.128 billion related-party supplier balance is conservatively treated as a debt-like funding reserve and paid over five quarters. Its exact equipment-versus-ordinary-service mix and maturity are not disclosed in the retrieved material. It is removed from ordinary operating payables when calculating working capital, so the same balance is not repaid twice. This assumption can materially depress the early ceiling and needs reconciliation against the next detailed filing.

Each commercial state funds its own interest, tax, working capital and capex. A KRW20 billion minimum cash buffer triggers financing; 40% of each gap draws incremental debt until a cumulative KRW100 billion limit, with the balance funded through private common equity at KRW10,000 per share, including 3% fees. Gross new equity is

capped at KRW350 billion. Management's letter excludes a rights offering; it does not exclude a strategic private placement or prove one is available. The model does not treat an uncommitted subsidy or customer deposit as free equity cash.

The successful dual-ramp state needs approximately KRW283.99 billion of gross equity across the modeled period; HDD-only needs KRW111.04 billion. TGV success without the HDD cash engine reaches the KRW350 billion cap and breaches the liquidity buffer in Q2 2030, despite remaining cash-positive at KRW16.45 billion. Under the specified policy, common value is floored from that breach; this is a financing-adequacy stress, not a claim that the issuer has already defaulted. Later pro forma recovery does not retroactively fund the earlier shortfall.

The equity price is a dilution assumption, not a market forecast. Using KRW5,000 rather than KRW10,000 lowers the Q4 2027 ceiling to approximately KRW4,553; KRW15,000 raises it to KRW5,948. Reducing the gross equity capacity to KRW150 billion at the selected price lowers the ceiling to about KRW2,084. Funding feasibility materially matters even when the same engineering outcome is retained.

The low-price stress also respects the existing 110 million ordinary-share authorization, reserving room for employee shares. It cannot raise an unlimited amount at KRW5,000 without a new shareholder authorization. That limit can cause a later funding failure even when an earlier valuation window remains financed.

Commercial-event independence is also an assumption, conditional on financing. Keeping the 70% HDD and 55% TGV marginal probabilities but moving joint success from its selected 38.5% to the feasible 25-55% range moves the Q4 2027 ceiling to approximately KRW5,210-5,904. A separate 10% decrease or increase in TGV ASP, with funding recalculated, gives approximately KRW5,374-5,670. These tests expose uncertainty rather than hiding it inside one optimistic number.

제이앤티씨 IR Letter

신사업 추진경과에 대한 설명

JNTC 제이앤티씨

또한 HDD유리플래터 제품의 사업가시화 대한 고객사와의 구체적인 협의는 그 어느때보다 원만하게 진행되고 있다는 점을 다시한번 강조 드리며, 양산일정이 계획보다 지연된 점에 대해서는 다시한번 주주 여러분들께 송구하다는 말씀을 드립니다. 최종 고객사와의 협의가 마무리 되는 시점에서는 공개가능한 정보에 대해서는 공시나, 보도자료 등을 통해 주주 여러분들께 신속하게 공유 드리겠다는 말씀도 같이 드립니다.

현재 회사는 전체적인 제품 포트폴리오 대전환에 있어 과도기 시점 상태에 놓여 있어 단기적인 실적 악화를 겪고 있는 것은 사실이지만, 금년 4분기를 시작으로 내년 1분기부터 신사업의 매출이 본격화 될 경우 재무구조 또한 빠르게 개선될 수 있을 것이라 자신하고 있습니다. 더불어 향후 신사업의 CAPA증대를 위한 추가적인 투자자금이 필요할 경우 유상증자를 제외하고 주주가치를 최대한 훼손하지 않는 범위에서의 다양한 자금조달 방안을 모색하고 있다는 점도 함께 설명 드립니다.

제이앤티씨는 신사업의 조기 안정화를 통해 단기적인 실적개선과 중장기 성장비전을 동시에 실현해 나갈 것이며, 주주 여러분의 신뢰회복과 주주가치 제고에 최선을 다하겠습니다. 많은 격려와 응원을 부탁드리며, 회사의 IR역량강화를 통해 주요 진전 상황은 보다 신속하고 성실하게 공유 드릴 수 있도록 최선을 다하겠습니다.

제이앤티씨 경영진 드림

Original issuer exhibit | The letter seeks financing and excludes a rights offering; it does not provide a funding commitment.

Claims and dilution

JNTC had 57.848466 million issued ordinary shares. Accounting treasury shares were 0.657294 million, but the share-summary table reported only 0.276294 million because 0.381 million shares were earmarked for an exchangeable bond. The two tables have different treatment of the same shares; they do not establish a new share issuance. The exchange bond has KRW12.402693 billion face value, zero coupon, KRW32,553 exchange price and November 2030 maturity.

The model starts with 57.467466 million economic shares: all issued shares except those reserved for the unexercised exchange bond. This already reserves delivery of the remaining treasury employee awards. An additional 10,000 net employee shares per quarter is a model allowance. Private-placement shares are added when cash is raised. Lost-quarter diluted EPS excludes anti-dilutive instruments and cannot be used as the forward economic denominator.

Exchange debt and its 381,000 shares are alternate claims. Before maturity, a state whose computed conversion value exceeds the strike removes the bond claim and includes the shares once. Funding initially reserves redemption at maturity; if the terminal value makes exchange economic, the denominator includes those shares and the unused redemption reserve remains cash without a second value addition. The 30% BOE joint venture,

investment property and unearned construction assets receive no separate capital-value credit. This conservatism must not be mistaken for proof that those assets are worthless.

Original issuer exhibit | The share table excludes 381,000 earmarked shares from reported treasury stock; accounting notes retain them until actual exchange.

Valuation, milestones and failure tests

For Q4 2027 through Q3 2028, the HDD-only state has KRW44.425 billion of operating profit, approximately 68.651 million end-window economic shares and KRW354.053 billion of claims, producing KRW7,784.84 per share. The dual-ramp state produces KRW59.205 billion of operating profit, approximately 76.332 million shares and KRW382.247 billion of claims, producing KRW10,504.89. Both states without the HDD ramp have Nil common earnings ceilings in this window. Weighting 31.5% and 38.5% for the positive states, then multiplying by 85% financing continuity, gives KRW5,522.12. No cash balance is added.

The weighted funded operating case reaches revenue of KRW260.945/400.358/578.261/753.611 billion in 2027-30, with operating profit of minus KRW3.619 billion, then KRW38.293/105.174/161.154 billion. These are substantial commercial ramps, not a timid no-growth reference. The early valuation is nevertheless constrained by financing claims, dilution and the timing of qualified production. Nil early earnings ceilings do not imply that exchange prices must be zero; later production and strategic option value are different valuation claims.

The next decisive evidence is accepted HDD shipment volume and cash collection, TGV paid production rather than sample counts, per-line good-output throughput, usable-yield distributions, customer scope, and a complete

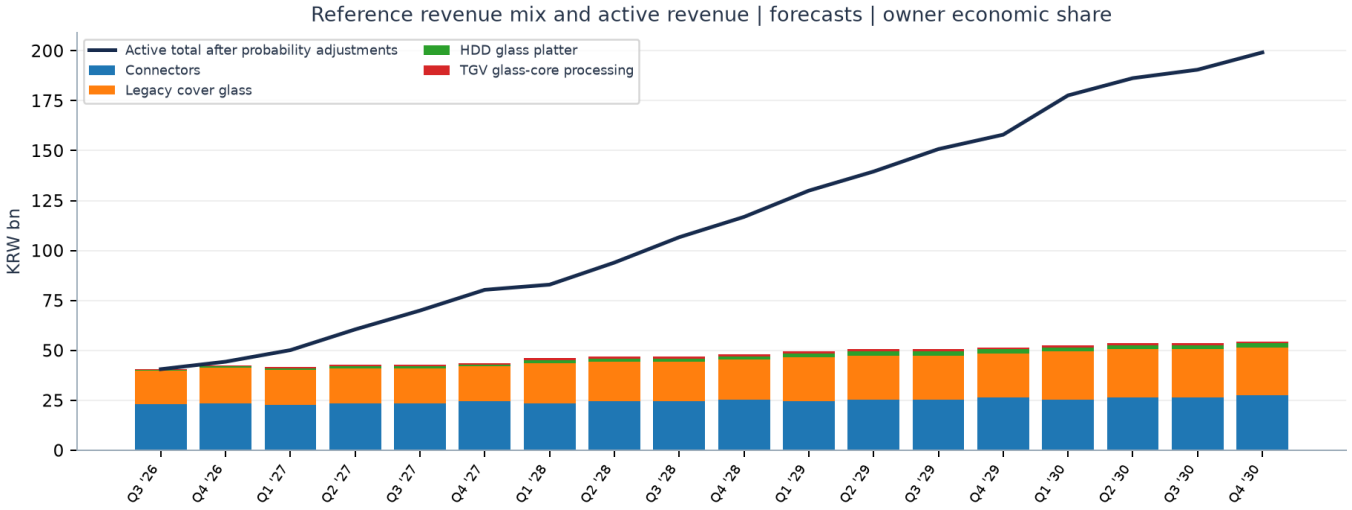

funding package. Repeated schedule slippage, margin improvement achieved only by excluding inventory costs, increased parent advances or opaque equipment payables would weaken the case. Confirmed process leadership can justify higher realization probabilities before a full annual result, but only with the corresponding costs and financing attached.

No complete recent earnings-call transcripts were located. Both latest periodic filings, the annual report, the two shareholder letters and the original engineering material were reviewed. Those documents are not relabeled as calls, and there is no retrieved consolidated numerical FY2027 guidance. The source gaps are material but do not force the new-business probability to zero.

Score arithmetic

Category	Points	Evidence / treatment
Core thesis	11	Integrated glass processing and parent equipment access, but current group losses and no proven scale economics.
Cycle	6	AI substrates/HDD demand support a ramp; legacy mobile remains depressed.
TAM	8	Two real engineering applications with bounded obtainable production, not TAM assigned as sales.
Catalysts	4	HDD acceptance in 2026, paid TGV production in 2027, and enlarged-factory lines in 2028.
Macro	8	AI and storage demand offset by China customer and Korea/Vietnam execution risks.
Alpha	4	Technical integration and detailed public process information matter; commercial quantities remain opaque.
Risk classes	-5	Liquidity, related-party dependencies, dilution, yield/customer concentration and commercialization delays.
Total	36/60	Rounded Base 60. Both artifact and new workbook row use this score; this is not a manual override.

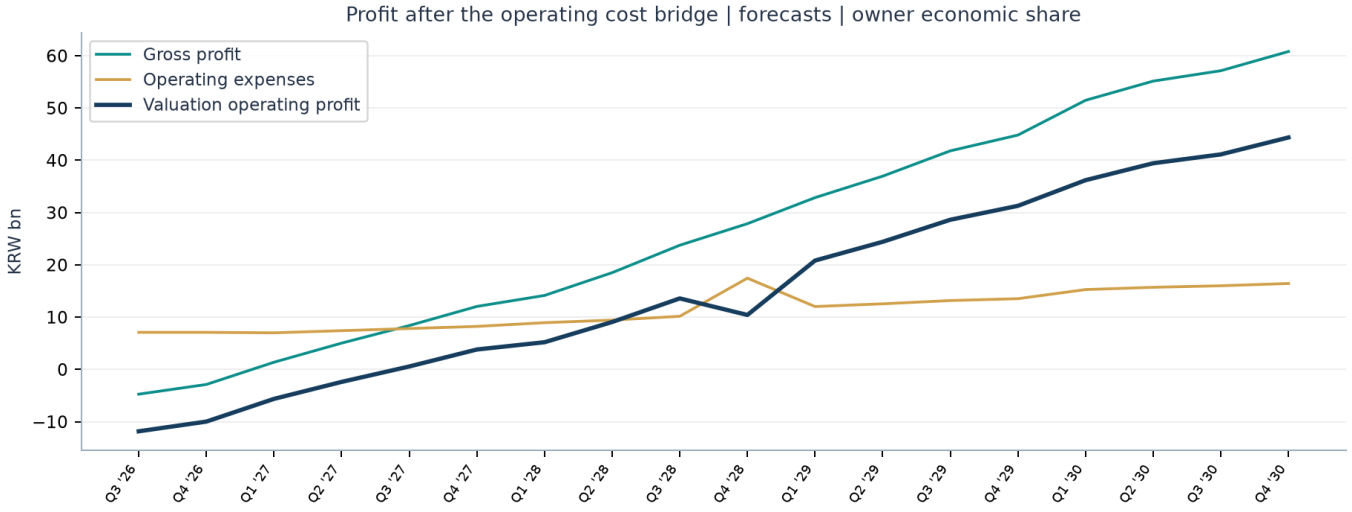

Revenue and business mix

Reference business vectors sum to the reference; the active total adds only probability-weighted net changes. Product allocations may be analytical proxies where issuers do not report product margins.

Quarter	Reference revenue	Weighted net change	Active revenue
Q3 2026	40.6	0.0	40.6
Q4 2026	42.6	1.8	44.4
Q1 2027	41.8	8.3	50.1
Q2 2027	42.8	17.8	60.5
Q3 2027	42.8	27.2	70.0
Q4 2027	43.7	36.6	80.3
Q1 2028	46.0	36.9	82.9
Q2 2028	47.0	47.0	94.0
Q3 2028	47.0	59.7	106.7
Q4 2028	48.0	68.8	116.8
Q1 2029	49.5	80.5	130.0
Q2 2029	50.5	89.0	139.5
Q3 2029	50.5	100.3	150.8
Q4 2029	51.5	106.5	158.0
Q1 2030	52.4	125.2	177.6
Q2 2030	53.5	132.8	186.3
Q3 2030	53.5	137.0	190.5
Q4 2030	54.6	144.6	199.2

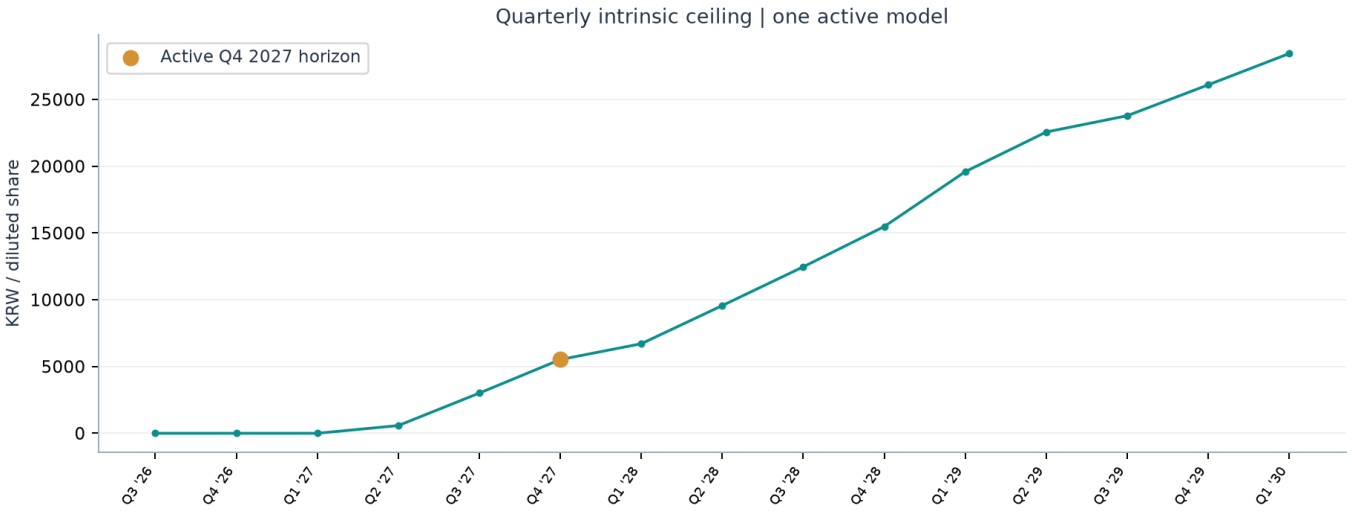

Gross profit, operating expenses and earnings

Operating profit equals gross profit less operating expenses and any separately identified attribution reserve. Figures are forecasts, not reported historical quarterly outcomes.

Quarter	Revenue	GP	Opex	Valuation OP	OP margin
Q3 2026	40.6	-4.7	7.1	-11.8	-29.1%
Q4 2026	44.4	-2.9	7.1	-10.0	-22.5%
Q1 2027	50.1	1.4	7.0	-5.6	-11.2%
Q2 2027	60.5	5.0	7.4	-2.4	-3.9%
Q3 2027	70.0	8.4	7.8	0.6	0.8%
Q4 2027	80.3	12.1	8.2	3.8	4.8%
Q1 2028	82.9	14.2	8.9	5.2	6.3%
Q2 2028	94.0	18.5	9.4	9.1	9.7%
Q3 2028	106.7	23.8	10.2	13.6	12.7%
Q4 2028	116.8	27.9	17.5	10.4	8.9%
Q1 2029	130.0	32.9	12.0	20.8	16.0%
Q2 2029	139.5	37.0	12.6	24.4	17.5%

The categories reconcile to reference operating expenses. Incremental costs below are applied once; depreciation or stock compensation already included in a reference category is not added again.

Probability-weighted financial bridge

Active = reference + sum(probability x bounded conditional delta). Negative deltas are retained. A branch with zero near-term increment remains zero only for the timing or overlap reasons documented in the evidence register.

Commercial outcomes, matched claims and financing continuity

Financial values are KRW billions; shares are millions. The four HDD/TGV combinations have different costs, cash requirements and dilution. Each common value is floored within its state, then weighted by the commercial probability and 85% financing continuity. The exchange bond is debt or 0.381 million shares, never both. A liquidity-buffer failure floors the affected outcome before weighting.

Q4 2027 outcome	p	F4Q OP	Matched claims	Matched shares	Common ceiling
HDD0_TGV0	13.5%	-25.1	358.1	69.278	0.00
HDD0_TGV1	16.5%	-10.4	382.2	75.444	0.00
HDD1_TGV0	31.5%	44.4	354.1	68.651	7,784.84
HDD1_TGV1	38.5%	59.2	382.2	76.332	10,504.89

Conditional funding and dilution by outcome

These financing paths require uncommitted debt and private equity. End cash is not added to the valuation. A reported cash balance below the KRW20 billion policy triggers the model failure flag, even if cash remains positive.

Claim decisions, overlap and triggers

JNTC-HDD

probability: 0.7

source: July 23 issuer letter: meaningful sales were delayed toward Q4 2026 and Q1 2027; HDD investment rose through revisions to KRW55 billion as customer specifications increased.

Conditional bound: 2027: 12-36 million accepted platters at KRW3,000-6,000 each; selected 24 million at KRW5,000, or KRW120 billion. Selected 2028-30 shipments are 50/76/96 million at unchanged price, generating KRW250/380/480 billion. These are production and price proxies, not disclosed orders.

bridge: Cash gross contribution is 36%/39%/40%/40%, less dedicated depreciation of KRW8.8/14/19.2/24.8 billion annually and technical support at 4% of sales. Additional expansion capex is KRW20/40/40/40 billion after 2026; working capital and financing are separately modeled.

overlap: The non-scaling reference already contains annual HDD sales of KRW4/6/8/8 billion and dedicated depreciation of KRW4 billion. Replace that state instead of adding a second full opportunity. No additional revenue shock is assigned for AI storage or Toshiba expansion.

timing: Recognize accepted shipments. Selected 2027 quarterly revenue is KRW12/24/36/48 billion; customer identity is not inferred.

JNTC-TGV

probability: 0.55

source: July issuer letter on TOPPAN cooperation; October 6 original engineering report, separating company comments from anonymous industry claims; September 21 DART capital investment decision.

Conditional bound: 2027: one line x 120,000 annual starts x 40% paid utilization x 78.75% saleable yield x KRW500,000 = KRW18.9 billion. The selected 2028/29/30 outcomes are KRW79.56/214.656/384.384 billion, using 1.6/4/7 average lines and explicitly modeled utilization, yield and price. The price range to test is KRW300,000-1,000,000 per processed panel; it is not a customer quote.

bridge: Cash gross contribution is 32%/43%/46%/47%, less dedicated depreciation of KRW2.8/8/20/34 billion and variable technical support at 7% of sales. The full KRW347 billion project is phased at KRW45/120/120/62 billion. Good yield, loading and price are multiplied once.

overlap: The reference already includes KRW3/4/4/4 billion of annual paid sample sales and pilot costs. Thickness, copper filling, TOPPAN and reported customer validation support one commercialization event, not four added revenue pools. No broad substrate shortage or bank target is imported.

timing: 2027 pilot supply can precede enlarged-site shipments around mid-2028 and larger-scale output later. Final package qualification is distinct from glass-core process validation.

JNTC-FUNDING

probability: 0.85

source: H1 cash was KRW48.228 billion. Current loan and bond maturities were KRW255.987 billion, including a KRW30 billion March 2027 bond. Parent loans were KRW90.158 billion. Open PPE purchase commitments were KRW54.286 billion. The issuer seeks funding without committing to a facility.

Conditional bound: 85% financing continuity and 15% zero-common financing stress. Incremental secured debt is capped at KRW100 billion. Gross private equity is capped at KRW350 billion at KRW10,000 per share with 3% fees; test KRW5,000-15,000 and a KRW150 billion cap. A liquidity-buffer breach after exhausting capacity floors the affected state at zero.

bridge: Roll forward reported June cash, operating cash, 6.5% interest, cash tax at 24% of positive pretax proxy, working capital, supplier payments and all capex. Finance 40% of each gap with debt until its cap, then equity. Cash above KRW40 billion repays non-exchange debt. Cash is not added separately to common valuation.

overlap: Parent loans are already included in total loans. The separate KRW75.128 billion supplier reserve is paid once and excluded from ordinary operating payables. Each state has matched cash proceeds, issuance fees, debt and shares. Never divide expected operating profit by expected shares.

timing: Capital must arrive before spending and acceptance. Pro forma later recovery does not retroactively fund an earlier breach. No probability is applied twice to the same operating or financing event.

JNTC-PRICE

probability: 0.35

source: Qualified processing and the customer's cost of waiting can support a premium; no executed terms were retrieved.

Conditional bound: A 0-10% premium on 50% of qualified, repriceable core sales in 2028-30; selected 5%, equivalent to a 2.5% effective price increment.

bridge: Zero separate increment. The selected KRW650,000 price versus the KRW500,000 pilot price already contains this limited premium and richer mix. A further 35% x 2.5% uplift would duplicate the selected price. A separate ±10% TGV price sensitivity reruns working capital, funding and valuation.

overlap: 100% overlap with the active commercial-state ASP, not zero probability of pricing power. Metallization efficiency is captured in feasible output and manufacturing margin rather than added again as a separate profit windfall.

timing: Applies to accepted new or repriceable business, not fixed backlog or every legacy product.

Remaining bounded uncertainties

- Complete recent earnings-call transcripts were not located. Both latest periodic filings and the July 2026 and October 2025 shareholder letters were read. They are not relabeled as calls. No numerical consolidated FY2027 guidance was retrieved.

- Commercial yield, HDD capacity, both product ASPs and standalone costs remain undisclosed. The modeled unit economics are bounded assumptions. Product claims such as zero cracks, CMP-free processing and reported peak yield are not audited full-process yields across every SKU.

- The HDD customer is unnamed in the issuer letter. Broadcom identity in the October 6 report is attributed to the reporter, not treated as a confirmed JNTC award. TOPPAN cooperation does not guarantee purchase volume.

- June 30 is the latest retrieved balance sheet. Third-quarter cash use, revised credit terms, post-June financing and restricted cash require verification. The 85% continuity probability is analytical, not committed capital.

- The KRW75.128 billion related-party supplier balance is conservatively treated as a separate funding claim and paid over five quarters. The equipment-versus-service split and precise maturity remain unresolved. It is excluded from ordinary working-capital payables to avoid double repayment.

- The KRW54.286 billion remaining PPE commitment is included once in H2 2026 cash capex. The KRW55 billion HDD project is not added again. The KRW347 billion new TGV facility is separate future spending, with annual phasing determined by the model.

- New common funding could be a strategic placement rather than a rights issue. KRW10,000 per share is a financing assumption, not an actual term or market forecast. Finite equity and debt caps create explicit failure outcomes.

- No separate value is added for the 30% BOE joint venture, KRW53.242 billion investment carrying value, KRW11.933 billion investment property or unearned construction assets. Joint-venture losses sit below consolidated operating profit. Unfunded capital calls remain a risk.

- The exchange bond's 381,000 shares and KRW12.402693 billion face value are alternate claims. Accounting treasury shares include the earmarked shares; the share-summary table excludes them. No bond exchange proceeds are invented. At terminal maturity, any unused redemption reserve after exchange is retained as cash without a value addition.

- SBC and depreciation are expensed. The cash-flow addback does not eliminate economic dilution. Net employee share growth of 10,000 per quarter is an assumption; loss-period diluted EPS is not the correct future economic denominator.

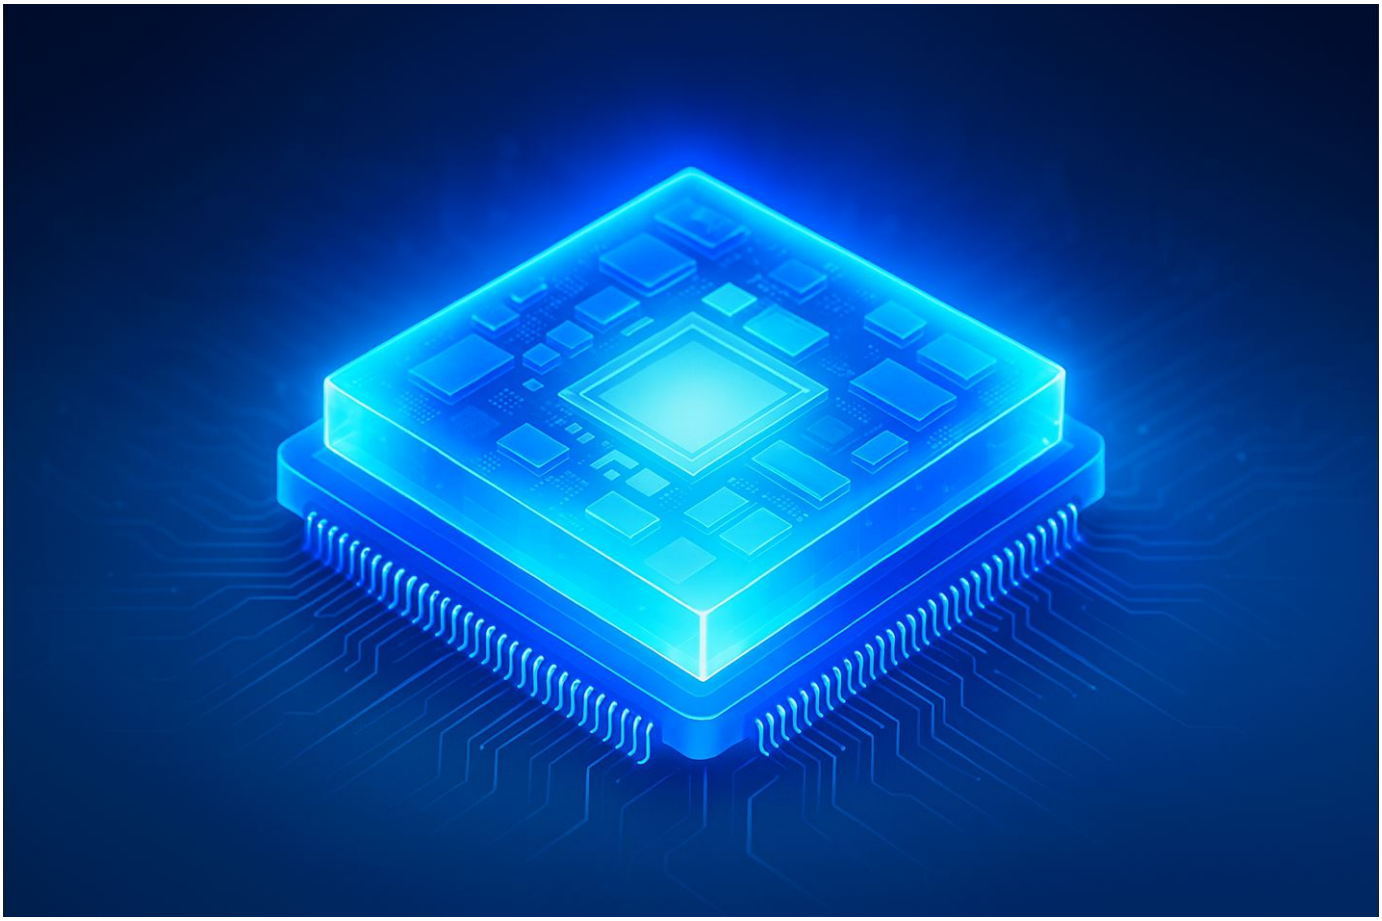

- Cash and asset-salvage value are not added to the ceiling. Early Nil is an earnings-valuation result, not a prediction of a zero exchange price. Later commercial value and financing risk are shown explicitly.

- The TGV-only state remains cash-positive but breaches the selected KRW20 billion liquidity buffer in Q2 2030 after exhausting the equity cap. The model floors common value from that breach. This is a financing-adequacy policy, not an observed default.

Selected original evidence

Source exhibit 1

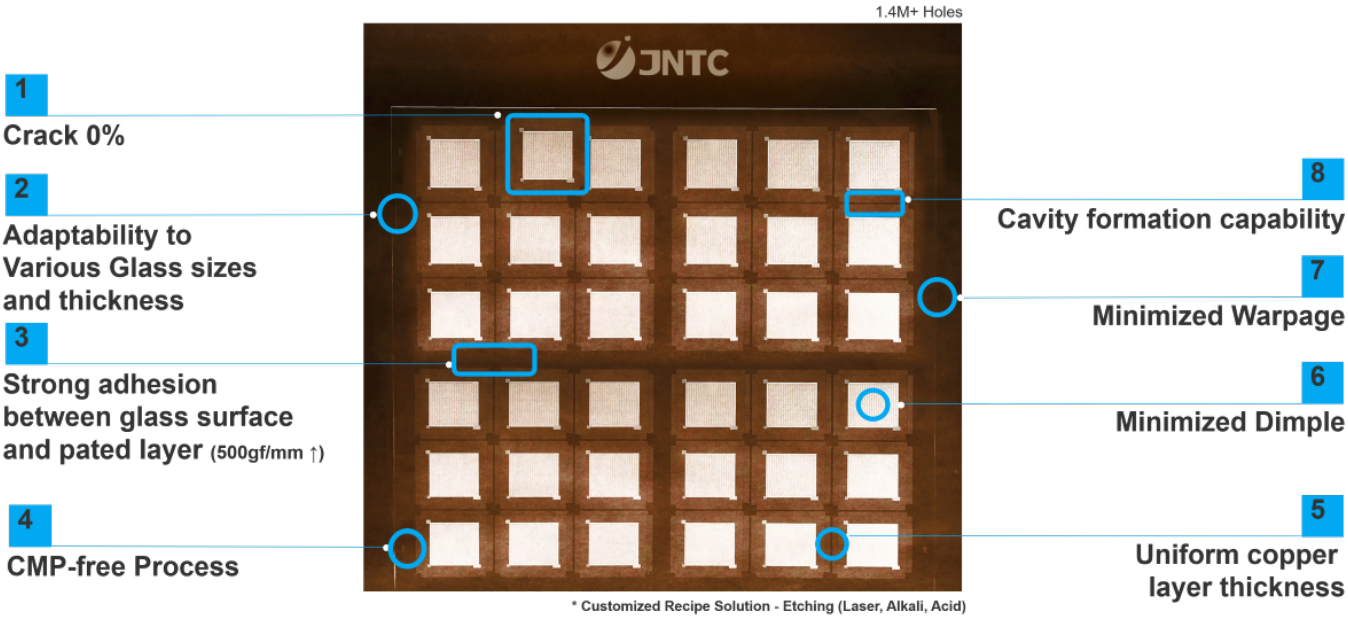

Issuer source retained in the evidence manifest | Issuer conceptual illustration of a glass substrate; this is not a photograph or proof of a qualified production product.

Issuer conceptual illustration of a glass substrate; this is not a photograph or proof of a qualified production product. Original units and footnotes apply.

Source exhibit 2

Issuer source retained in the evidence manifest | Issuer TGV sample and performance claims; zero cracks and CMP-free wording are not universal qualified-production guarantees across every recipe.

Issuer TGV sample and performance claims; zero cracks and CMP-free wording are not universal qualified-production guarantees across every recipe. Original units and footnotes apply.

Sources and basis

The current production framework was read before initiation. Source statements are evidence, not instructions. The shared model data drives both this PDF and the linked Excel model; the clean-state editable artifact embeds these same images.
