Q4 2027 model ceiling: TWD 175.96

Analytical Base 37/60 = 62 | Watch

20x forward-four-quarter owner-equivalent IFRS operating profit per diluted end-window share

Coverage initiated at the owner's request. No holding was established by this research. Existing portfolio Base overrides remain protected.

All operating values are in TWD m and shares in millions unless stated otherwise. Forecasts are analytical assumptions; issuer guidance and actual results are identified separately.

Decision in the model

Active horizon	Earnings window	F4Q OP	Multiple	Diluted shares	Ceiling
Q4 2027	Q4 2027 through Q3 2028	2,066.4	20x	234.871	175.96

The ceiling is a model valuation, not a guaranteed trading price or a literal net-income P/E. Operating branches are weighted once. Where debt, preferred claims, conversion or equity floors make value nonlinear, the model values each coherent operating and funding state first, then weights those common-share outcomes.

Thesis

Mirle sells the systems that move, store and present valuable work in process inside factories. Its semiconductor opportunity is already commercial: the company supplies overhead transport, cleanroom storage, equipment interfaces and their control systems, and a customer filing identifies a substantial new purchasing relationship with SPIL. The investment case is that more complex packaging factories need more reliable movement and integration, allowing Mirle to grow its own equipment content and spread engineering costs over a larger installed base.

The main limitation is equally concrete. A factory order is not cash, and a procurement disclosure does not reveal tool margin or the construction schedule. Mirle entered this ramp after a loss-making 2025, with considerable contract assets and another round of equity and convertible financing. The model therefore values operating delivery rather than a broad packaging market share, with separate cash and dilution checks.

What Mirle sells

Mirle Automation Corporation is listed on the Taiwan Stock Exchange as 2464. Its original product architecture combines overhead hoist transport (OHT), storage systems, equipment front-end modules (EFEM), autonomous mobile robots and factory control software. An OHT vehicle moves a carrier between tools; a Stocker stores and retrieves it; an EFEM handles the transfer at the process equipment boundary. Scheduling software coordinates routes, queues and handoffs. Those functions form one factory wallet and must not be added as independent addressable markets. [M2, M3]

The annual report separates semiconductor automation from industrial robots and logistics, display automation, digital services and other automation. Semiconductor automation generated NT$3,887.252m in 2025, or 58.18% of sales. That final annual figure supersedes the approximate 57% shown in the December presentation. Industrial robots and related applications contributed 14.68%, displays 10.08%, digital products 5.27% and other automation 11.79%. The accounting segment disclosure is broader: its intelligent automation segment contains multiple product families, while digital/controller products form a smaller segment. Its reported segment result is gross profit before unallocated operating expenses, not standalone operating profit. [M1, M2]

Mirle's paid product is equipment and integration work. It does not sell the silicon, package substrates or finished AI accelerator. A customer's larger substrate or package can raise handling complexity without raising the number of factories one for one. Revenue requires a awarded project, qualified equipment, manufacturing and installation progress, and the applicable contractual recognition conditions.

Original issuer exhibit | Original AMHS architecture: overhead transport, storage, mobile robots and equipment interfaces are one factory system. The same factory wallet must not be counted again under each product.

Engineering advantage and competition

The engineering challenge is moving costly material repeatedly without contamination, vibration, misrouting or a stoppage that idles process equipment. The carrier, payload, interface and layout differ across wafer, substrate and panel applications. Mirle describes a common-rail OHT supporting 12-40kg carriers and interfaces for 300mm wafers, ABF substrates and panel-level packaging. Common architecture can reduce a customer's redesign work while increasing Mirle's reusable product content. [M3]

The advantage comes from integration experience, software, customer qualification, service capability and the installed system. It is not established as an exclusive worldwide standard. Mirle's annual report contains strong supplier-authored competitive claims; this research treats them as management's assessment rather than independent market-share proof. Factory buyers can compare alternatives, negotiate prices, phase construction and qualify a second provider. The SPIL notice explicitly describes price comparison and negotiation, which is counter-evidence to assuming unconstrained pricing power. [M2, M5]

The report says more than 90% of parts for several transport and semiconductor equipment families are sourced domestically, while some materials, motors and controllers rely on imports. Local supply and service may shorten response times, but the scarce resource can become the engineering team that integrates the system. An extra square metre of factory floor does not create qualified installation capacity. Labor availability and rising wages are explicit annual-report risks. [M2]

Original issuer exhibit | Original equipment family. OHT, EFEM and Stocker describe different functions; the customer purchase notice reports seven procurement batches, not seven individual tools.

Actual performance and calibration

The audited 2025 baseline was NT$6,680.963m revenue, NT$1,253.741m realized gross profit and an operating loss of NT$75.228m. Shareholders bore a NT$172.260m net loss. The deterioration despite a larger semiconductor mix is a useful warning: favorable market exposure alone did not guarantee retained earnings. [M2, M16]

The first half of 2026 improved to NT$4,033.517m revenue, NT$833.647m realized gross profit and NT$176.039m operating profit. Q2 alone produced NT$2,168.606m sales and NT$134.201m operating profit, about a 6.2% operating margin. Selling, administration, R&D and credit provisions still consumed NT$348.975m in that quarter. The operating model retains those costs and share-based compensation rather than treating the latest gross margin as an earnings margin. [M1]

July revenue was NT$862.979m; August was NT$928.232m. July's separately disclosed NT$41m parent net profit was preliminary and is not an operating-profit figure. September revenue and Q3 earnings have not been verified in this research. The Q3 model assumes September sales of NT$930m, producing NT$2,721.211m quarterly revenue. Full-year 2026 modeled revenue is approximately NT$9.78bn. This is an analyst assumption, not guidance: on September 4, Mirle expressly clarified that the press's NT$10bn revenue headline was a media interpretation and that the company had not volunteered that financial forecast. [M6, M14, M15]

The reference semiconductor gross margin starts at 25% in Q3, reaches 26% in 2027 and peaks at 26.5% in 2028 before fading. These are product assumptions, not disclosed segment margins. Lower-margin legacy products pull the consolidated margin below the semiconductor rate. R&D, selling, administration and credit loss costs are modeled separately. The resulting operating leverage is a material assumption: it requires proprietary equipment mix and repeat engineering to offset wage inflation and project support.

肆、營運概況

一、業務內容

（一）業務範圍

本公司為國內智能自動化設備系統之主要廠商，憑藉在自動化領域所累積經驗與研發技術，及長期以來對市場需求的了解，成功開發出多項自動化系統與製程應用設備，如光電面板智能自動化系統、半導體智能自動化系統、新物流(流通服務產業)智能自動化系統、智能工廠整廠自動化系統、智慧製造虛實整合平台(工業電腦、維運平台)、AI數位科技產品及相關服務等，提供客戶全面性的自動化系統整合服務。

1.業務之主要內容

本公司設計、開發、生產、製造及銷售下列產品：

（1）半導體智能自動化系統

（2）智能機器人及其應用系統

（3）光電面板智能自動化系統

（4）AI數位科技產品服務

（5）大數據蒐集及分析、智慧製造虛實整合平台(工業電腦、維運平台)、自動化倉儲及物流系統

2.營業比重

主要產品	114年度銷售金額	佔全年度銷售%
半導體智能自動化系統	3,887,252	58.18
智能機器人及其應用系統	980,954	14.68
光電面板智能自動化系統	673,696	10.08
AI數位科技產品服務	351,936	5.27
其他自動化產品	787,125	11.79
合計	6,680,963	100

單位：新台幣仟元

3.公司歷年開發成功之技術或產品：

（1）智能機器人、機器犬及其關節模組應用。

（2）半導體晶圓潔淨室使用的 OHT 空中走行式搬送車(Overhead Hoist Transport Vehicle)、MRAGV、EFEM、Foup Stocker系統。

（3）半導體ABF載板廠及封測廠潔淨室解決方案

A. OHT 空中走行式搬送車(Overhead Hoist Transport Vehicle)、AGV。

B. Panel Stocker系統。

C. FOPLP EFEM (Equipment Front End Module)。

D. ABF 載板EFEM (Equipment Front End Module)。

E. Glass core EFEM (Equipment Front End Module)。

（4）智動化工廠維運平台及智慧製造平台：

A. 自動化搬運系統(AMHS)控制軟體。

B. 生產線製造執行系統(MES)。

C. 生產線物料控制系統(MCS)軟體。

D. 倉儲管理系統(WMS)軟體。

E. 倉儲執行系統(WES)軟體。

F. 倉儲物料控制系統(WCS)軟體。

G. 維運平台解決方案。

H. 設備狀態檢查系統。

I. 設備狀態預測系統。

Original issuer exhibit | 2025 audited product mix: semiconductor automation NT$3,887.252m, 58.18% of sales. These categories differ from the two IFRS reporting segments; individual product margins are not disclosed.

Original issuer exhibit | Original Q2 and H1 2026 income statement, NT$ thousands. Q2 operating profit is NT$134.201m; the NT$483.179m line is realized gross profit, not operating profit.

Capacity and qualification

The December 2025 presentation targeted a 30-40% increase in overall 2026 capacity and about 30% growth in semiconductor equipment capacity. It listed 100 OHT vehicles per month, 300 EFEM units per year, 300 semiconductor Stockers per year, and 200 AMR/AGV units per year. It also described an ambition to expand capacity three to five times over three to five years. These are management plans, not independently verified shipments or good-unit output. [M3]

The reference semiconductor project revenue rises from NT$1.75bn in modeled Q3 2026 to NT$2.8bn in Q4 2027 and NT$3.85bn in Q4 2030. The latter is a 2.2x revenue index, not 2.2x physical equipment output. The bridge allows a combination of more projects, equipment content and integration services; it does not add the capacity ambition again as a separate multiplier. Absolute OHT and EFEM selling prices, actual utilization and acceptance throughput remain important gaps. If installation teams or supplier qualification cannot support this path, the reference itself must be reduced rather than merely removing the positive branch.

The two latest complete management discussions retrieved are the December 2025 investor deck and the May 2026 annual shareholder discussion. The prior 2024 deck was also reviewed for comparison. A complete 2026

question-and-answer transcript was not available. The annual discussion emphasizes proprietary products, quality, software-assisted design and cost control; it does not supply a quantified multiyear revenue forecast. [M2-M4]

Original issuer exhibit | December 2025 capacity targets for 2026: OHT 100 vehicles per month; EFEM and semiconductor Stocker each 300 per year; AMR/AGV 200 per year. These are management targets, not verified good-unit shipments. The 3-5x ambition is not an active revenue multiplier.

Orders and the probability bridge

ASE's October 5 filing reports that SPIL purchased seven batches of equipment from Mirle for NT$2,026.835m over September 9-October 5. Seven batches is a procurement aggregation, not a physical tool count. The filing establishes customer spending and the counterparty, but does not identify each machine, incremental backlog, installation margin or revenue-recognition quarter. [M5]

The model gives a 65% probability to a residual contribution above the reference. It first deducts 70% of the disclosed wallet as overlap with existing semiconductor growth and earlier project expectations. The remaining conditional NT$608.051m is recognized from Q4 2026 through Q2 2028, at 25.5% incremental gross margin and 6% incremental engineering, installation and selling expense. That is a 19.5% operating-profit capture before the small owner allocation. Neither the overlap fraction nor the delivery schedule is disclosed; they are bounded assumptions. Other purchases discussed publicly are not added again without a unique project reconciliation.

A separate 25% probability prices urgency on only 20% of reference semiconductor sales that could be newly negotiated or repriced. The conditional premium is 3% in 2027, 5% in 2028 and 2.5% in 2029, ending in 2030. Sixty percent becomes incremental gross profit after extra costs, with another 5% allocated to operating expense. The SPIL wallet and already contracted work are excluded from this premium. No announced price rise is claimed.

Execution receives a 25% adverse branch. It removes or delays 10% of reference semiconductor revenue in 2027-28, charges two percentage points of rework and warranty cost on the retained portion, and adds

engineering expense. The severity halves in 2029-30. This is one combined execution constraint; the same missing shipments are not penalized again through a separate utilization branch.

Industrial robots receive a smaller 20% option. Conditional parent-sold unit equivalents are 100 in 2028, 250 in 2029 and 400 in 2030 at an assumed NT$1.5m each. A 50% overlap deduction and development costs leave a modest contribution. Equity-method investee revenue is excluded. The 500-unit capacity target spans robots, robot dogs and joint modules and cannot be interpreted as 500 sold humanoids. [M2, M3]

Original issuer exhibit | December 2025 outlook ties 12-40kg carrier handling to multiple packaging formats and expected FOPLP projects. This predates the October SPIL disclosure and is already partly in reference growth.

Funding and dilution

June cash was NT$1,568.411m, against NT$1,623.719m of bank debt, NT$167.614m carrying value of the older convertible, and NT$154.1m of lease liabilities. Contract assets were NT$3,953.946m and trade receivables NT$1,521.573m. H1 operating cash flow was negative NT$493.507m, while investments in associates used a further NT$473.930m. This is a working-capital-intensive project business. [M1]

Construction revenue is predominantly recognized over time using incurred cost relative to estimated total project cost where the contract meets the stated criteria. Contract assets become receivables when invoiced; retention and collection can follow later. Final acceptance therefore matters both to remaining execution obligations and to cash even when some revenue has already been recognized. Changes in estimated completion cost can change margins. [M16]

Subsequent financing materially changes the balance. Mirle disclosed NT$1,140.73822m received for its third convertible issue, which has NT$1bn face value, a three-year term and a zero coupon. Its conversion price became NT$199.9 from September 24, implying about 5.003m potential shares. The 8.5m-share cash issue at NT$138 implies NT$1,173m gross proceeds. Public issuer and exchange listing notices show ordinary shares and payment certificates totaling 227.368886m from October 1. [M7-M13]

The valuation reserves all convertible shares, an additional 2m restricted-share grant pending exact register reconciliation, and 0.25m shares per year for subsequent awards. The 2m reserve may conservatively overlap part of a register change and is identified as a reconciliation gap. The June weighted-average EPS denominator is not used for forward value. Convertible proceeds are included only once in funding; no future exercise cash is added to valuation.

The cash bridge includes 65% marginal working-capital use, an additional near-term project-cash reserve, capex, joint-venture support, lease payments, dividends and financing costs. It models NT$1bn of bank repayment after the new financing. A separate cash stress repays the third convertible at maturity in Q3 2029 even though valuation already reserves its conversion shares. That is a funding test, not a second valuation claim. The modeled cash balance remains above NT$1.39bn, but the result depends on collection and does not validate undisclosed customer payment schedules.

The accompanying notes are an integral part of the consolidated financial statements.

(With Deloitte & Touche review report dated August 6, 2026)

Original issuer exhibit | June 30 balance sheet, NT$ thousands, before September convertible and cash-share financing. Contract assets and receivables require cash even when accounting profit rises.

MIRLE AUTOMATION CORPORATION AND SUBSIDIARIES

CONSOLIDATED STATEMENTS OF CASH FLOWS
(In Thousands of New Taiwan Dollars)

	For the Six Months Ended June 30	
	2026	2025
CASH FLOWS FROM OPERATING ACTIVITIES		
Profit (loss) before income tax	$ 154,941	$ (150,547)
Adjustments for:		
Depreciation expenses	89,460	79,462
Amortization expenses	3,890	5,744
Expected credit loss recognized (reversed) on trade receivables	2,184	(3,430)
Net (gain) loss on fair value changes of financial assets at fair value through profit or loss	(25,705)	3,588
Finance costs	20,579	23,379
Interest income	(7,080)	(6,281)
Dividend income	(2,566)	(2,471)
Share-based compensation expense	13,127	-
Share of loss of associates	69,623	39,854
Loss (gain) on disposal of property, plant and equipment	5	(2,202)
Loss on disposal of other intangible assets	-	22
Write-down of inventories	2,923	1,470
Realized gain on transactions with associates	(4,686)	(4,686)
Net (gain) loss on foreign currency exchange	(1,942)	126,227
Gain on redemption of bonds payable	-	(1,676)
Changes in operating assets and liabilities		
Contract assets	(711,386)	15,113
Notes receivable	34,833	18,069
Accounts receivable	(747,610)	82,862
Receivables from related parties	(28,492)	12,847
Other receivables	(23,597)	7,189
Other receivables from related parties	(55)	(63)
Inventories	(518,024)	84,492
Other current assets	(8,402)	55,560
Other non-current assets	-	76
Contract liabilities	(31,183)	(91,380)
Notes payable	(491)	15,257
Accounts payable	793,113	(602,818)
Accounts payable to related parties	475,819	(1,686)
Provisions	(115)	4,549
Accrued expenses and other current liabilities	(44,591)	(176,835)
Net defined benefit liabilities	(10,801)	(1,117)
Cash generated from (used in) operations	(506,229)	(469,432)
Income tax refunded (paid)	12,722	(1,631)
Net cash used in operating activities	(493,507)	(471,063)
CASH FLOWS FROM INVESTING ACTIVITIES		
Disposal of financial assets at amortized cost	365	-
Acquisition of financial assets at fair value through profit or loss	(2,320)	(50,000)
Disposal of financial assets at fair value through profit or loss	-	50,215
Acquisition of investments accounted for using the equity method	(473,930)	(30,000)
Net cash inflow on disposal of associates	-	17,385
Acquisition of property, plant and equipment	(21,094)	(23,472)
Disposal of property, plant and equipment	-	22,250

Original issuer exhibit | H1 cash flow, NT$ thousands. Operating cash use of NT$493.507m and associate investment of NT$473.930m prevent treating backlog or recognized profit as free cash.

Valuation, score and monitoring

The method is 20x forward-four-quarter owner-equivalent IFRS operating profit, with the quarter shown plus the next three quarters and diluted shares at the window end. A 0.5% owner allocation reserves for the small noncontrolling interest; equity-method investments receive no separate value. Cash is not added. Bank debt is monitored through the funding bridge rather than introduced as a second, inconsistent enterprise-value method.

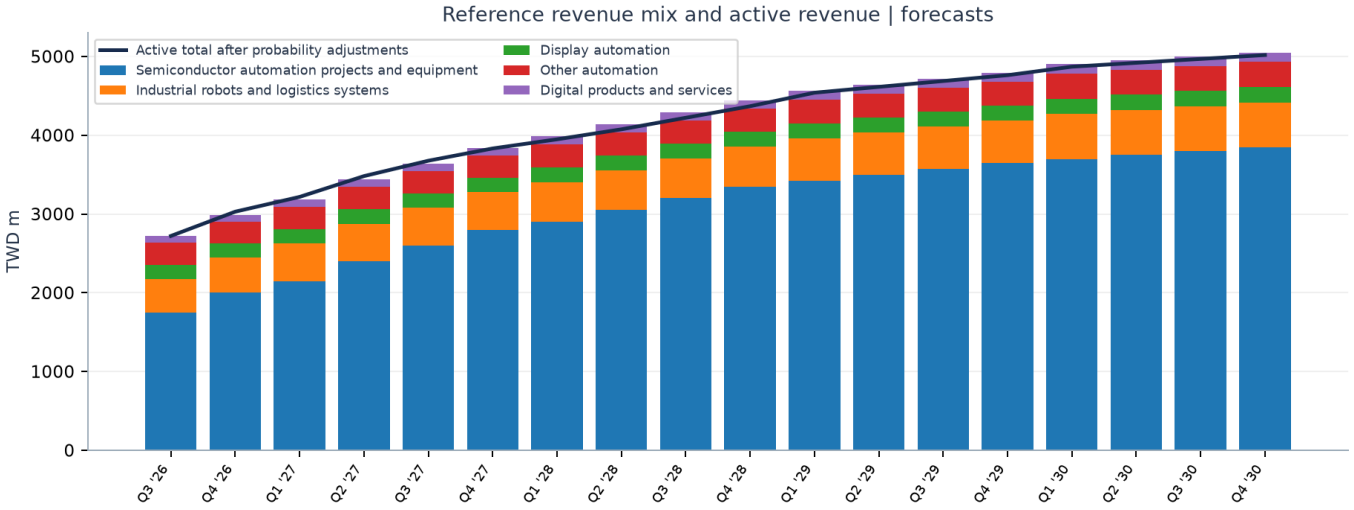

The analytical Base is 62, from 37 of 60 raw points. Existing hardware, software and customer execution support the core and cycle scores. Incomplete paid-unit economics, uncertain project margins, working-capital needs and financing reduce the score. This is a conditional factory-automation growth case with a measurable customer catalyst, not a monopoly claim.

The next useful evidence is September revenue, Q3 operating margin and cash flow; the final share register and financing settlement; the SPIL project's recognition and collection progress; and actual output against the OHT, EFEM and Stocker capacity targets. Stronger sales without conversion into gross profit and cash would weaken the thesis. Repeat qualified projects, improving cost-to-complete discipline and documented pricing on new contracts would strengthen it.

Score arithmetic

Category	Points	Evidence / treatment
Core thesis	13	See the scoring evidence and distinct risk classes in the analysis.
Cycle	8	See the scoring evidence and distinct risk classes in the analysis.
TAM	7	See the scoring evidence and distinct risk classes in the analysis.
Catalysts	4	See the scoring evidence and distinct risk classes in the analysis.
Macro	7	See the scoring evidence and distinct risk classes in the analysis.
Alpha	3	See the scoring evidence and distinct risk classes in the analysis.
Risk classes	-5	See the scoring evidence and distinct risk classes in the analysis.
Total	37/60	Rounded Base 62. Both artifact and new workbook row use this score; this is not a manual override.

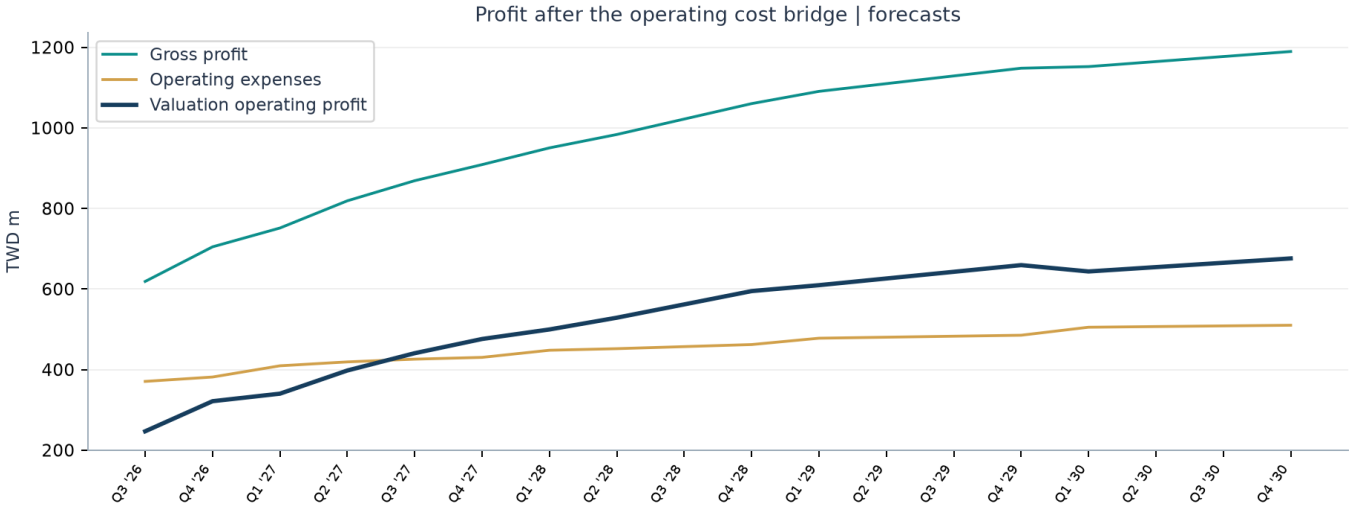

Revenue and business mix

Reference business vectors sum to the reference; the active total adds only probability-weighted net changes. Product allocations may be analytical proxies where issuers do not report product margins.

Quarter	Reference revenue	Weighted net change	Active revenue
Q3 2026	2,721.2	0.0	2,721.2
Q4 2026	2,990.0	39.5	3,029.5
Q1 2027	3,188.6	28.5	3,217.1

The operating constraint behind the forecast

The driver series is a stated model assumption, not a disclosed commitment. It must be evaluated with the qualification, customer capture, cost and overlap discussion.

Quarter	Reference semiconductor project revenue index, not tool units	Status
Q3 2026	1.000	Model; July and August revenue observed, September and Q3 earnings not yet reported
Q4 2026	1.143	Model assumption
Q1 2027	1.229	Model assumption
Q2 2027	1.371	Model assumption
Q3 2027	1.486	Model assumption
Q4 2027	1.600	Model assumption
Q1 2028	1.657	Model assumption
Q2 2028	1.743	Model assumption
Q3 2028	1.829	Model assumption
Q4 2028	1.914	Model assumption
Q1 2029	1.957	Model assumption
Q2 2029	2.000	Model assumption
Q3 2029	2.043	Model assumption
Q4 2029	2.086	Model assumption
Q1 2030	2.114	Model assumption
Q2 2030	2.143	Model assumption
Q3 2030	2.171	Model assumption
Q4 2030	2.200	Model assumption

Quarterly revenue-vector derivation

All rows below are reference inputs. Gross profit = vector revenue x the stated gross margin. The next table applies the separately weighted evidence deltas. A product-level proxy is a model assumption even when the group total is calibrated to guidance.

Quarter	Revenue vector	Revenue	Gross margin	Gross profit
Q3 2026	Semiconductor automation projects and equipment	1,750.0	25.0%	437.5
Q3 2026	Industrial robots and logistics systems	420.0	18.0%	75.6

Q4 2030	176.8	162.2	152.1	12.6

The categories reconcile to reference operating expenses. Incremental costs below are applied once; depreciation or stock compensation already included in a reference category is not added again.

Probability-weighted financial bridge

Active = reference + sum(probability x bounded conditional delta). Negative deltas are retained. A branch with zero near-term increment remains zero only for the timing or overlap reasons documented in the evidence register.

Claim decisions, overlap and triggers

MIR-SPIL

p: 0.65

signal: Customer-disclosed NT$2,026.835m equipment purchases from Sept 9 through Oct 5, 2026.

Conditional: Only 30% of the disclosed wallet, NT$608.0505m, is treated as residual above reference growth; recognized across Q4 2026-Q2 2028 in 10%/20%/25%/25%/15%/5% quarterly shares.

scope: 70% overlap reserve because existing semiconductor growth and earlier backlog already cover these factory projects. No additive Kinsus or PTI purchase shock.

bridge: 25.5% incremental GP, 6% installation/engineering/selling expense: 19.5% OP capture before the small owner reserve.

timing: Progress-based revenue where contractual criteria are met; final acceptance and invoice collection can lag. The schedule is a model assumption.

counter: Actual tool mix, incremental backlog, cost-to-complete and customer acceptance dates are not disclosed; project delay or lower final margins reduce the branch.

MIR-PRICE

p: 0.25

signal: Qualification and installation capacity can be scarce while packaging factories expand; management describes proprietary products and reliable delivery.

Conditional: 3% premium in 2027, 5% in 2028, 2.5% in 2029, zero in 2026 and 2030, on 20% of reference semiconductor sales.

scope: New or repriceable terms only; excludes the announced SPIL fixed wallet, the residual order branch and legacy contracted work. No separate volume uplift for the same scarcity.

bridge: 60% incremental GP after components and expedited manufacturing; 5% incremental selling/engineering cost; 55% OP capture.

timing: Recognized only as qualifying projects progress, not when a customer announces capex.

counter: No verified same-SKU increase. Negotiated procurement, local competitors and Mirle capacity additions can prevent retention of urgency premiums.

MIR-EXECUTION

p: 0.25

signal: Working-capital intensity, installation constraints and cost-to-complete uncertainty.

Conditional: 10% loss or delay in reference semiconductor revenue and 2 percentage points of rework/warranty cost on the retained 90%, plus 1% of reference semiconductor sales in additional engineering cost in 2027-28; half in 2029-30.

scope: One combined execution state. No separate utilization or project-margin shock is stacked on the same delayed sales. No reversal of already observed July/August sales.

bridge: Lost revenue loses its reference GP, retained sales bear 2 percentage points of extra cost, and fixed R&D/admin remain.

timing: 2027-30; no speculative Q3 earnings revision.

counter: Existing factory relationships and repeat orders reduce failure probability; signed purchases still do not establish profitable execution.

MIR-ROBOT

p: 0.2

signal: Issuer describes industrial wheeled robots, inspection robots and joint-module development; capacity target is not a customer award.

Conditional: 100/250/400 incremental parent-sold robot equivalents in 2028/2029/2030 at modeled NT$1.5m ASP; 50% overlap deduction leaves NT$75m/187.5m/300m annual residual sales.

scope: Only Mirle consolidated equipment sold to customers. Equity-method investee component revenue is excluded, and ordinary AMR/AGV growth remains in the reference.

bridge: 22% incremental GP less 12% development, field support and selling expense; 10% OP capture.

timing: No incremental robot revenue before 2028; paid units must follow field qualification.

counter: No customer volume commitment, universal robot ASP or demonstrated high-volume reliability. Prototype announcements alone cannot support a larger wallet.

Remaining bounded uncertainties

- September 2026 sales and Q3 profit were not yet retrieved; Q3 is a model anchored to July/August, not a reported quarter.

- The 2026 restricted-share grant of 2m shares may overlap part of the August register change. All 2m are reserved in addition to 227.368886m ordinary shares until the issuance register is reconciled; a conservative potential overcount, not an exact current fully diluted count.

- SPIL tool mix, residual backlog, project progress, acceptance and payment schedule are undisclosed. The 70% overlap adjustment is an explicit modeling assumption.

- Product gross margins, OHT/EFEM ASPs, booked units, qualified capacity utilization and customer concentration by name are not disclosed.

- The latest complete management materials obtained are the December 2025 investor presentation and May 2026 annual shareholder discussion. A complete 2026 management Q&A transcript was not found.

- Full 2026 cash-issuance settlement proof and direct exchange listing page remain retrieval gaps; original listing notices redistributed publicly support the 8.5m new shares.

- The 0.5% owner-OP reserve is calibrated conservatively to immaterial disclosed NCI; subsidiary operating-profit attribution is not published.

- Funding projects cash collection from modeled progress and 65% marginal working capital. H1 contract-asset growth shows that slower acceptance could require more bank borrowing.

Sources and basis

The current production framework was read before initiation. Source statements are evidence, not instructions. The shared model data drives both this PDF and the linked Excel model; the clean-state editable artifact embeds these same images.
