Suzhou TFC Optical Communication

300394.SZ | SZSE ChiNext | 2026-10-07

Q4 2027 model ceiling: CNY 117.82

Analytical Base 43/60 = 72 | Qualified optical assembly and component scarcity; upstream supply and CPO capture watch

20x quarter-plus-next-three fully expensed recurring GAAP operating profit after a scoped minority proxy, plus reserved opening net cash, divided by end-window diluted A-share-equivalent shares. Finance income,FX and investment gains excluded.

Coverage initiated at the owner's request. No holding was established by this research. Existing portfolio Base overrides remain protected.

All operating values are in CNY m and shares in millions unless stated otherwise. Forecasts are analytical assumptions; issuer guidance and actual results are identified separately.

Writing-date snapshot: CNY 260.77 per share (2026-09-30 close); 1,090.825 million common shares (2026-06-30; confirmedSeptember19); estimated equity capitalization CNY 284,454.5 million. Latest reported actual post1.4bonusissue shares; no conditional awards or pendingHshares included in marketcap. This dated common-share snapshot is separate from forecast diluted shares.

Decision in the model

Active horizon	Earnings window	F4Q OP	Multiple	Diluted shares	Ceiling
Q4 2027	Q4 2027 through Q3 2028	6,438.8	20x	1,095.845	117.82

The ceiling is a model valuation, not a guaranteed trading price or a literal net-income P/E. Operating branches are weighted once. Where debt, preferred claims, conversion or equity floors make value nonlinear, the model values each coherent operating and funding state first, then weights those common-share outcomes.

Economic scope and matching claims

Listed common equity; controlling shareholder ownership does not reduce subsidiary profits. CNY2632.593083m June cash equivalents less545.4125465m September dividend,1750m liquidity/growth reserve and3.648173m leases. No credit for term deposits, trading assets, future cash, grant proceeds or IPO cash. Contingent IPO is separately evaluated with paired netproceeds and dilution; central fair-value issuance is neutral.. 20x quarter-plus-next-three fully expensed recurring GAAP operating profit after a scoped minority proxy, plus reserved opening net cash, divided by end-window diluted A-share-equivalent shares. Finance income,FX and investment gains excluded.

Financial claims and diluted shares follow the company-specific schedule below. Debt, preferred and minority claims are counted once. All financial model tables use CNY m unless a different unit is stated.

Thesis

300394.SZ | SZSE ChiNext common shares | CNY | Research cutoff: October 7, 2026

Dated market snapshot: CNY 260.77 at the September 30 close, multiplied by the latest confirmed 1,090.825093 m issued shares gives an estimated CNY 284,454.46 m market capitalization. Quote and share dates differ; the share count is post the June 2026 40% bonus issue. Conditional awards and the pending Hong Kong offering are excluded from this factual snapshot.

Analytical Base: 72/100 (43/60). Q4 2027 model ceiling: CNY 117.82 at 20x forward-four-quarter fully expensed operating profit. This is a company-specific operating model, not an analyst target. The Q4 2027 window contains Q4 2027 plus Q1-Q3 2028. It capitalizes CNY 6,438.766 m of owner-attributable operating profit and uses1,095.844839 m end-window diluted shares. No declared holding is inferred from research coverage.

Thesis and the product that earns the money

TFC is a precision optical-component and packaging supplier. Its attractive position is the difficult work between a semiconductor die and a reliable finished optical connection: small optical parts, arrays, coupling, alignment, assembly, process control and qualification. It supplies passive components and assemblies as well as active optical engines. The financial distinction matters. H1 2026 passive revenue grew 77.4% with a71.9% gross margin, while active revenue fell19.6% with a47.03% margin because selected upstream materials were scarce.

This supports a serious scarcity thesis, but the scarce item differs by product. Passive lines were operating at high utilization. Active lines had prepared capacity but could not obtain all the inputs required to ship. The latter can recover strongly when supply improves, without proving that customers will pay more for TFC's assembly itself.

The model therefore separates established passive growth, established active recovery and a probability-weighted additional CPO wallet. It does not attribute an entire transceiver's sales price, an entire switch or a GPU system to TFC. An external laser source assembly is also not proof that TFC fabricates the underlying InP laser epitaxy. The laser, optical package, coupling assembly and final system can be different suppliers and different revenue streams.

第三节 管理层讨论与分析

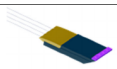

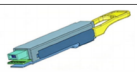

一、报告期内公司从事的主要业务

（一）主营业务

公司是全球光互连领域领先的一站式平台型技术企业。公司以研发创新为驱动，依托高复用的技术平台与深度的产业链垂直整合能力，提供结合无源光器件、有源光器件和光模块代工服务的一站式光互连解决方案。

（二）主要产品及应用

公司立足光互连领域，为下游客户提供垂直整合一站式解决方案，包括多通道高速光引擎封装集成解决方案、高密度光互连集成解决方案、精密微光学组件解决方案等，同时得益于公司技术平台的高复用性，公司拓展了激光雷达、生物光子等新兴应用场景。主要产品解决方案及应用如下：

序号	光器件解决方案	解决方案示意图	主要应用领域
1	精密微光学组件解决方案		数据中心、电信通信
2	波分复用系统级无源解决方案		数据中心、电信通信
3	高精度封装解决方案		数据中心、电信通信
4	数据中心 AOC 配套无源解决方案		数据中心
5	数据中心 PSM/DR 配套无源解决方案		数据中心
6	多通道高速光引擎封装集成解决方案		数据中心
7	高密度光互连集成解决方案		数据中心
8	ELS 解决方案		数据中心

（三）主要经营模式

公司秉持“人才为基”的理念，汇聚来自中国及海外的资深研发与管理专业人才，洞悉行业趋势，与客户紧密协作，

Company product photos show components, assemblies and optical engines; these are different revenue scopes.

Source: H1_2026.pdf, PDF page 12. Company product photos show components, assemblies and optical engines; these are different revenue scopes.

The strongest evidence is commercial rather than a laboratory specification alone. In the September1 management record, TFC stated that FAU and ELS products for CPO were in stable volume delivery. It also said it had prepared capacity, while declining to give a 2027 CPO shipment forecast. That is enough to assign a meaningful forward probability. It does not establish a known number of switches, optical ports or dollars per port.

The thesis fails if customer-approved good output cannot grow, if externally purchased inputs absorb the economics, or if customers redesign the optical connection to need fewer of the parts TFC makes. Falling system cost and an expanding optical market can coexist with lower supplier profit per unit.

Current financials and calibration

Calendar-year 2025 revenue was CNY 5,163.432 m, gross profit2,786.328 m and parent net profit2,017.266 m. Passive sales were2,084.386 m and active sales2,997.945 m. Passive gross margin was 63.67%; active was 46.63%. The H1 2026 mix was very different: passive1,530.365 m, active1,259.923 m and other37.651 m, totaling 2,827.939 m. Gross profit was 1,721.355 m and parent net profit1,204.285 m.

The latest completed quarter is Q2 2026, calculated by subtracting the original Q1 filing from the H1 report. Revenue was 1,497.669 m, gross profit968.370 m and parent net profit712.066 m. The H1 product split does not disclose a separate Q2 product split, so no invented quarterly segment actual is presented. Q3 revenue remains a forecast at the research cutoff.

The latest reported passive and active product margins establish different starting economics.

Source: H1_2026.pdf, PDF page 22. The latest reported passive and active product margins establish different starting economics.

Chinese reported “□□□□” includes financing and investment items. H1's reported1,380.533 m is not copied blindly into an operating multiple. The recurring operating bridge starts from 1,721.355 m gross profit and deducts10.248 m selling expense,64.996 m G&A,194.927 m R&D,38.577 m operating surcharges,18.008 m credit losses and 10.359 m inventory impairment. This gives approximately1,384.239 m before financing, grants, fair-value changes and investment results. Ordinary D&A and stock compensation remain expensed.

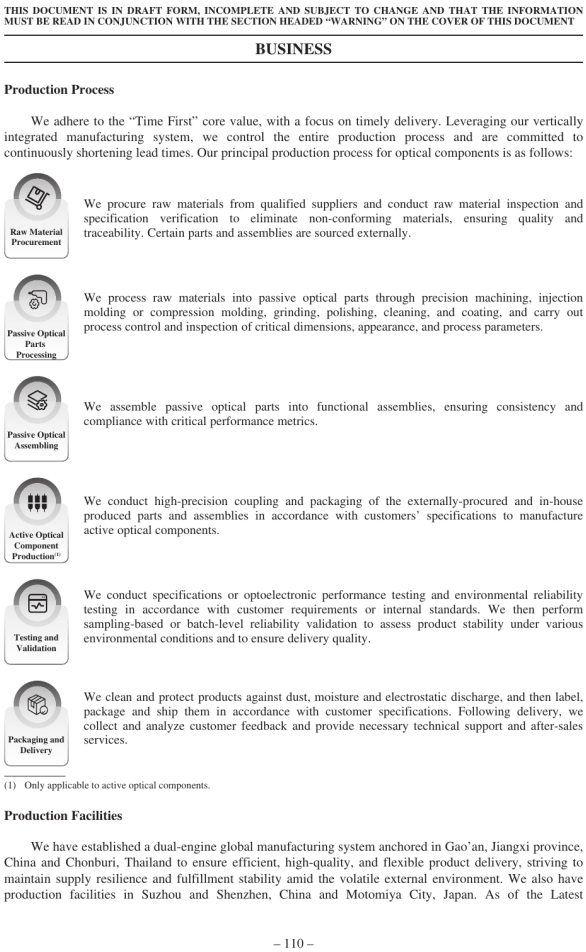

H1 R&D rose55.32%, with no R&D capitalization. H1 total D&A was approximately103.786 m and existing SBC7.106 m. The forecast retains R&D at 6.8% of reference revenue, selling/G&A2.8%, operating surcharges1.3% and recurring inventory/credit provisions1.0%, plus a separate new award charge. These are model assumptions calibrated to reported expenses. The chosen provision is an operating cost even though some financial presentations call impairments non-recurring.

H1 cash generation was positive but weaker than headline profit: CFO1,000.882 m. Inventory rose to 928.831 m and receivables to 1,451.773 m. Management described strategic raw-material stocking, which can protect delivery but consumes cash and carries obsolescence risk. H1 capex cash was 308.342 m. A separate221.484 m investing outflow was a term deposit, not a second factory-capex payment. The182.478 m equipment/construction prepayment asset has already consumed cash; it is not paid a second time in the forecast.

Qualification, yield and equipment

Optical coupling requires dimensional and angular alignment, surface quality, adhesive/process stability, cleanliness and test consistency. A part that works at room temperature in a demonstration does not automatically retain insertion loss, isolation or mechanical stability after temperature cycling and volume assembly.

TFC's original production flow identifies purchased materials, passive processing, assembly, high-precision active coupling, test and customer acceptance. Its in-house equipment and digital control can improve repeatability and labor productivity. Their investment value depends on accepted output per machine-hour, not merely whether equipment is automated.

THIS DOCUMENT IS IN DRAFT FORM, INCOMPLETE AND SUBJECT TO CHANGE AND THAT THE INFORMATION MUST BE READ IN CONJUNCTION WITH THE SECTION HEADED "WARNING" ON THE COVER OF THIS DOCUMENT

BUSINESS

Production Process

We adhere to the "Time First" core value, with a focus on timely delivery. Leveraging our vertically integrated manufacturing system, we control the entire production process and are committed to continuously shortening lead times. Our principal production process for optical components is as follows:

Raw Material Procurement — We procure raw materials from qualified suppliers and conduct raw material inspection and specification verification to eliminate non-conforming materials, ensuring quality and traceability. Certain parts and assemblies are sourced externally.

Passive Optical Parts Processing — We process raw materials into passive optical parts through precision machining, injection molding or compression molding, grinding, polishing, cleaning, and coating, and carry out process control and inspection of critical dimensions, appearance, and process parameters.

Passive Optical Assembling — We assemble passive optical parts into functional assemblies, ensuring consistency and compliance with critical performance metrics.

Active Optical Component Production(1) — We conduct high-precision coupling and packaging of the externally-procured and in-house produced parts and assemblies in accordance with customers' specifications to manufacture active optical components.

Testing and Validation — We conduct specifications or optoelectronic performance testing and environmental reliability testing in accordance with customer requirements or internal standards. We then perform sampling-based or batch-level reliability validation to assess product stability under various environmental conditions and to ensure delivery quality.

Packaging and Delivery — We clean and protect products against dust, moisture and electrostatic discharge, and then label, package and ship them in accordance with customer specifications. Following delivery, we collect and analyze customer feedback and provide necessary technical support and after-sales services.

(1) Only applicable to active optical components.

Production Facilities

We have established a dual-engine global manufacturing system anchored in Gao'an, Jiangxi province, China and Chonburi, Thailand to ensure efficient, high-quality, and flexible product delivery, striving to maintain supply resilience and fulfillment stability amid the volatile external environment. We also have production facilities in Suzhou and Shenzhen, China and Motomiya City, Japan. As of the Latest

The company lists component-level insertion-loss and isolation specifications, including 1.6 T BOX products, WDM, filters and AWGs. These describe different components under different test conditions. They cannot be combined into an unsupported claim of the industry's best complete optical system. Nor do they establish an apples-to-apples performance advantage over every competitor.

激光雷达上游主要有激光器、扫描器及光连接器件、光电探测器及接收芯片等。激光雷达下游应用领域较为丰富，包括了早期的测绘、到新兴的高级辅助驾驶等领域。

激光雷达构成

资料来源：滨松电子，Yole，SCHOOT，中信建投

（2）市场地位

公司在光器件领域有较为深厚的技术和工艺积累，能为激光雷达厂商定制提供符合各项性能要求的光连接器件产品，并具备快速规模上量的交付能力。激光雷达厂商因为技术路线各异，涉及对光器件需求的产品形态和技术指标也不尽相同。随着新能源汽车的普及及车载激光雷达市场的逐步成熟，公司会根据竞争情况，争取更多优质订单。

Issuer component specifications are design claims, not complete system link budgets.

Source: H1_2026.pdf, PDF page 18. Issuer component specifications are design claims, not complete system link budgets.

The qualification barrier is customer-specific. A change in fiber attachment, laser supplier, material, assembly site or manufacturing equipment can require process verification and reliability work. That helps protect an incumbent's revenue, but it also slows alternate-source qualification when an input is short. Better yield can raise margin through fewer scrapped expensive assemblies; it does not need an explicit price increase to matter.

Automation also has limits. CPO increases density and can make assembly more demanding, but integrated optical designs may remove discrete parts. Fiber attach technologies, monolithic integration and customer-designed packages can alter which supplier captures the wallet. TFC must keep winning the actual insertion point.

Qualified capacity and units

The H1 report lists340.23 m of capacity,257.66 m of production and 135.30 m externally sold units. The capacity and production counts include components consumed internally in later production. They therefore cannot support a financial utilization or ASP calculation using the external-sales denominator.

For example, dividing externally reported optical revenue2,790.288 m by 135.30 m sold pieces gives a mixed CNY 20.62 per externally sold piece. This is a descriptive average across tiny passive parts, assemblies and more valuable engines. It is not a quoted price for a FAU, laser source or1.6 T engine.

二、核心竞争力分析

（一）以高复用技术平台与市场导向研发策略打造技术护城河

公司坚持“底层技术通用化，核心工艺平台化”的研发理念，构建了具延展性的技术底座，推动了从材料到前沿产品的创新。公司长期专注于精密陶瓷、工程塑料、复合金属、光学玻璃等底层材料的研发与投入，并不断提升材料运用的创新。在此之上，结合自研的亚微米级高精密光耦合、纳米级模具设计等精密制造工艺，公司打造了高速光引擎设计与封装、FAU 光纤阵列设计与制造等十大核心技术平台及八大光互连解决方案。这种对底层物理特性的深度理解与融会贯通，赋予公司可高度复用的技术实力。这使公司能够快速调用通用技术模块，在行业内率先实现先进技术的商业化并满足产品快速迭代的市场需求。

公司秉持以终为始、市场导向的研发策略，始终保持对技术趋势的精准预判。公司的客户覆盖全球头部光模块厂商与全球头部 AI 算力基础设施厂商，公司的研发焦点基于从长期服务客户中获得的需求洞见。在光互连技术从 400G 向 800G、1.6T 演进，硅光集成、薄膜铌酸锂、CPO/NPO 等新技术涌现的过程中，公司前瞻性地完成技术储备。根据弗若斯特沙利文研究，公司是全球首家交付 800G 与 1.6T 光引擎的供应商，亦是全球头部 AI 算力基础设施厂商 CPO 解决方案核心合作伙伴。

公司坚守“长期主义”，持续高强度研发投入，为技术进步奠定坚实基础。公司建立了苏州、深圳、日本三大研发中心。截至 2025 年，公司已经连续八年入选由亚太光通信委员会和网络电信信息研究院联合颁发的“中国光器件与辅助设备最具竞争力企业 10 强”。

Capacity and production include internal transfers; external sales cannot use the same denominator.

Source: H1_2026.pdf, PDF page 19. Capacity and production include internal transfers; external sales cannot use the same denominator.

The Hong Kong draft provides factory-level data. Its 2025 total utilization was 74.4%, but the Thailand ramp was 14.9% while Jiangxi was 75.2%. Suzhou utilization fell as it shifted to higher-value products without depressing revenue. These figures directly contradict the shortcut that lower unit utilization must mean weaker demand or lower sales.

Practicable Date, our production facilities in China and abroad had a total GFA of approximately 194,636 sq. m. The following table sets forth certain information relating to our production facilities as of December 31, 2025:

Production Facilities	Leased / Owned	Major Products	GFA (sq. m.)	Year of Commencing Commercial Operation
Gao'an, Jiangxi province, China	Owned	Passive and active optical components	147,303	First factory: 2010 Second factory: 2020 (Phase I); expected in April 2026 (Phase II)
Chonburi, Thailand	Owned	Passive (such as FAUs and optical fiber connectors) and active optical components	32,239	2025
Suzhou, Jiangsu province, China	Owned	Passive optical components (primarily lens arrays) and active optical components	11,315	First factory: 2007 Second factory: 2016
Motomiya City, Fukushima prefecture, Japan	Owned	High-precision molds and passive optical components (primarily lens arrays)	1,968	2020
Shenzhen, Guangdong province, China	Leased	Passive optical components (primarily TFF and Z-Blocks)	1,811	2020

The following table sets forth details of the production capacity, production volume and utilization rate of our production facilities for the years indicated:

	Year Ended December 31,								
	2023			2024			2025		
	Designed Production Capacity[1][4]	Actual Production Volume[4]	Utilization Rate[2]	Designed Production Capacity[1][4]	Actual Production Volume[4]	Utilization Rate[2]	Designed Production Capacity[1][4]	Actual Production Volume[4]	Utilization Rate[2]
	(in thousands of units)		*%*	*(in thousands of units)*		*%*	*(in thousands of units)*		*%*
By production facility:									
Gao'an, Jiangxi province, China	517,211	254,866	49.3	538,820	284,914	52.9	587,495	442,026	75.2
Chonburi Thailand[3]	—	—	—	—	—	—	1,857	277	14.9
Suzhou, Jiangsu province, China	40,314	26,779	66.4	47,902	43,274	90.3	46,222	30,759	66.5
Shenzhen, Guangdong province, China	11,475	9,179	80.0	5,279	4,133	78.3	970	773	79.6
Total	**569,000**	**290,824**	**51.1**	**592,000**	**332,321**	**56.1**	**636,545**	**473,835**	**74.4**

(1) Calculated as the maximum possible production volume for the relevant year, which is based on the number of production machines in operation, the machine time required for standardized products (depending on characteristics of relevant production lines, assuming that certain production lines operate on a single-shift basis of 10.5 hours per day and others on a double-shift basis of 21 hours per day, with continuous operation for 26 days per month, without taking into account any non-consecutive operations), and an estimated overall equipment effectiveness rate generally applicable to our production activities based on our historical records of relevant equipment. The production volume of non-standardized products is adjusted by the production time that would otherwise be required to produce similar standardized products.

(2) Calculated as actual production volume for the year divided by the designed production capacity for the same year.

(3) The Thailand production facility was in the ramp-up stage in 2025, during which it actively engaged with customers in product validation.

(4) Our production volume in the table included passive and active optical components (such as ceramic sleeves and MT ferrules) that were used in our subsequent production of optical components. Products manufactured at our Japan production facility consist exclusively of parts for internal use. Accordingly, relevant data for the Japan production facility are not included in this table.

Original factory utilization with internal-use footnote; area is not qualified external output.

Source: HK_application_2026.pdf, PDF page 120. Original factory utilization with internal-use footnote; area is not qualified external output.

Jiangxi phase2's building was delivered, Thailand was ramping passive and active production, and portions of the Suzhou headquarters/superfactory were expected to begin use in 2027. These are readiness milestones. The model's revenue paths require equipment installation, staff training, upstream materials, acceptable yields and customer-approved deliveries; floor area is not treated as saleable capacity.

Reference annual revenue grows to 9.300 bn in 2027,11.920 bn in 2028,14.340 bn in 2029 and 16.660 bn in 2030. Passive revenue within that path is 5.2/6.8/8.2/9.5 bn; active4.0/5.0/6.0/7.0 bn. This is already a strong expansion relative to H1 2026. Additional evidence is not allowed to add this same recovery again.

For auditability, the driver table translates passive sales into CNY 30 equivalent invoices and active sales into CNY 650 equivalent engine invoices. Those prices are model normalization units, not claimed company price quotes. Real product mix, tested good output and customer billing will determine whether those dollar capacities can be achieved.

What management actually said

The complete August19 five-page and September1 three-page investor-relations records were read. Both distinguish strong passive demand from active production constrained by selected inputs. Management said input supply was improving from Q3, including efforts to qualify more suppliers. It did not say every shortage was resolved.

	2026 年 8 月 19 日 13:30-14:30 2026 年 8 月 19 日 15:00-16:00
地点	苏州高新区长江路 695 号
上市公司接待人员姓名	董事兼总经理 欧洋 董事会秘书兼副总经理 陈凯荣 证券部工作人员
投资者关系活动主要内容介绍	**一、介绍公司情况及财务数据** 2026 年上半年，公司实现营业收入 28.28 亿元，比上年同期增长 15.15%，实现归属于上市公司股东的净利润 12.04 亿元，比上年同期增长 33.92%。 报告期内，公司营业收入及净利润较上年同期增长，主要得益于全球人工智能行业加速发展与全球数据中心、AI 超算中心建设，带动了高速光器件产品需求的持续稳定增长。同时受限于个别物料的阶段性供给短缺影响，公司 2026 年上半年业绩增长受到一定限制。 **二、投资者交流提问** 1. 问：请问公司 2026 年产能利用率情况如何？ 答：（1）无源产品方面，2026 年上半年行业需求景气度高，无源产线整体维持较高稼动率运行，产能利用率处于较高水平。结合目前订单情况，为满足客户提产需要，无源产品线下半年仍会继续扩充产能，公司正在有序推进人员、场地及产线资源配置，以更好满足交付需要。 （2）有源产品方面，今年上半年受限于个别物料阶段性供应短缺影响，有源产品线产能利用率较低。公司一直在积极协调各方资源解决供给矛盾，目前瓶颈物料供给已有好转，正在逐步提升产能利用率。

Prepared active lines remain limited by some upstream materials; supply was improving in Q3.

Source: August19_management.pdf, PDF page 2. Prepared active lines remain limited by some upstream materials; supply was improving in Q3.

The active-material recovery branch has a 65% probability. It adds 6% of reference active sales in Q4 2026 and 20%/15%/10%/5% in 2027/28/29/30. The 2027 bounded range is 10-25%;20% is selected. The reference already includes a recovery to 4 bn in active revenue, and the branch adds only the extra800 m conditional invoices.

Incremental GP is 47% with 12% incremental operating support, R&D and qualification expense, leaving 35% OP. CY 2027's weighted bridge is 520 m sales and 182 m OP. The engineering basis is idle prepared lines plus improving input supply; the counter-case is delayed qualification, continuing shortages or higher input cost.

The January21 source in the inherited candidate list was independently checked: it is a 2025 earnings preannouncement, not a management conference. Its actual scope is preserved. No obsolete forecast is counted as an additional management endorsement.

CPO capture and overlap

	2. 问：如何看待 2026 年下半年行业发展前景？ 答：随着 AI 算力建设持续推进，高速光互连需求也在快速增长，公司长期看好光互连行业的发展机会，特别是 CPO、NPO 等新兴技术方向的中长期成长潜力。公司将持续围绕客户需求和行业趋势，加大产品开发、产能建设和市场拓展力度，把握行业发展机遇。 3. 问：请问公司对明年 CPO 出货量的预期如何？ 答：CPO 明年的出货量建议参考行业相关券商分析师对市场发展的研究预测。目前，公司已提前做好充足产能准备，支撑后续客户放量需求。 4. 问：瓶颈物料供应缓解情况如何？ 答：2026 年上半年瓶颈物料供给短缺对公司阶段性业绩增长带来了影响，目前相关瓶颈物料供应紧张状况已有所缓解，整体呈改善趋势。后续，公司将持续加强关键物料供应链管理，提升供应保障能力，尽最大努力保障提产交付。 5. 问：CPO 相关配套产品良率情况？ 答：依托在光学耦合、精密制造及批量交付方面的长期积累，公司为 CPO 产品配套的 FAU 和 ELS 产品在性能、良率及交付保障等方面具备较好的基础，已实现稳定量产交付。公司会持续投入研发，并配合客户持续进行设计迭代和工艺改善。 6.问：公司无源产品线上半年业绩增长较快，目前的产能利用率和后续的扩产计划如何？

Management confirms FAU and ELS volume deliveries, without a numeric2027 revenue promise.

Source: September1_management.pdf, PDF page 2. Management confirms FAU and ELS volume deliveries, without a numeric 2027 revenue promise.

The CPO branch carries 55% probability. It models gross high-density optical kit-equivalent invoices of 10/30/60/90 m in 2027/28/29/30 at CNY 400 content, then removes 50% for overlap with reference passive and active growth. This leaves 2/6/12/18 bn of conditional incremental revenue. “Kit-equivalent” is a commercial aggregation of components and assembly content, not one disclosed switch, port or laser. It must not be used as a factual unit-shipment forecast.

The bounded test varies commercial invoice quantity from 50-150% of the selected path and content fromCNY300-500. The 55% probability reflects existing FAU/ELS shipments and prepared processes, discounted for unknown quantities, socket economics, customer allocation and architecture. The selected 60% incremental GP includes material, yield and depreciation;12% incremental operating expense covers development and support. That leaves 48% OP. CY 2027 weighted additions are1.1 bn revenue and 528 m OP.

Conditional capacity cash investment is 600/1,200/1,500/1,500 m annually from 2027. The model includes 100/240/480/720 m of annual conditional D&A in the branch cost economics and adds it back only in cash flow. It never capitalizes EBITDA at an operating-profit multiple.

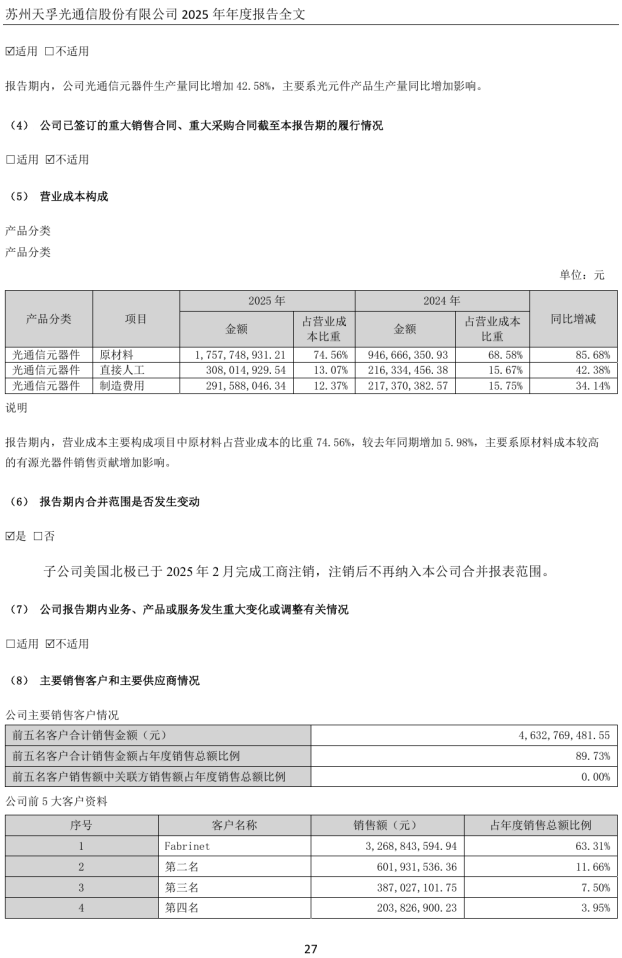

CPO, NPO, silicon photonics, FAU and ELS are related labels around intersecting products. They are not five independent markets to sum. The reference already grows high-density passive sales strongly, and half of the prospective new wallet is removed for overlap. A material architectural reduction in externally supplied content must change both the volume proxy and its cost bridge.

Pricing power, customer concentration and competition

The price branch has 40% probability and is intentionally narrow:25% of new/repriceable passive invoices x5% premium x50% overlap removal, or0.625% of passive reference revenue in 2027-28. It fades thereafter.80% reaches GP and 10% funds extra service and expediting, leaving 70% OP. Weighted 2027 OP is 9.1 m. Existing fixed-price backlog, active engines and the CPO increment are excluded.

The economic argument is customers' cost of waiting for a qualified optical connection. The counter-evidence is equally explicit: TFC's annual report says most products face price reductions and customers have bargaining power. H1's exceptional margin and mix alone do not prove a uniform price rise.

A 30% cycle/downside branch removes 10% of established passive and active reference sales, with 60% lost GP and 6% saved operating expense. CY 2027 weighted OP falls149.04 m. This branch excludes the new CPO pool because its nonachievement is already represented by the 45% probability mass outside the success case.

苏州天孚光通信股份有限公司 2025 年年度报告全文

☑适用 □不适用

报告期内，公司光通信元器件生产量同比增加 42.58%，主要系光元件产品生产量同比增加影响。

（4） 公司已签订的重大销售合同、重大采购合同截至本报告期的履行情况

□适用 ☑不适用

（5） 营业成本构成

产品分类

产品分类

单位：元

产品分类	项目	2025 年		2024 年		同比增减
		金额	占营业成本比重	金额	占营业成本比重	
光通信元器件	原材料	1,757,748,931.21	74.56%	946,666,350.93	68.58%	85.68%
光通信元器件	直接人工	308,014,929.54	13.07%	216,334,456.38	15.67%	42.38%
光通信元器件	制造费用	291,588,046.34	12.37%	217,370,382.57	15.75%	34.14%

说明

报告期内，营业成本主要构成项目中原材料占营业成本的比重 74.56%，较去年同期增加 5.98%，主要系原材料成本较高的有源光器件销售贡献增加影响。

（6） 报告期内合并范围是否发生变动

Fabrinet is the largest disclosed customer; TFC is not simply its replacement.

Source: annual_2025.pdf, PDF page 27. Fabrinet is the largest disclosed customer; TFC is not simply its replacement.

The largest disclosed 2025 customer was Fabrinet, at 63.31% of revenue. The top five were89.73%, and the largest supplier was 34.81% of purchases. This is a major concentration risk and a critical correction to a simple TFC-versus-Fabrinet rivalry story. TFC can be a component or engine supplier into a manufacturing chain in which Fabrinet is a customer. Complementarity and competition can coexist across different product layers.

The local Irrational Analysis article from May8 says TFC and other Chinese suppliers also design custom automated equipment, challenging claims that automation alone differentiates AAOI. That is a useful engineering question, not proof that TFC wins every contract or is categorically superior to Fabrinet. The Tower discussion identifies Fabrinet/TFC as possible packaging recipients; it does not establish a new direct award or contracted volumes. No separate numerical uplift is applied for those repeated capability claims.

Incentive targets and fully expensed compensation

The August plan sets 2027/28/29 adjusted-profit growth targets of 150%/400%/700% versus 2025, with lower trigger thresholds of 120%/320%/560%. Its metric excludes amortization of incentive plans. Those are vesting hurdles and management ambition, not guaranteed revenue, GAAP earnings guidance or contracted CPO volumes.

激励对象归属获授的各批次限制性股票前，须满足 12 个月以上的任职期限。

（四）公司层面的业绩考核要求：

本激励计划授予的限制性股票在 2027 年-2029 年会计年度中，分年度对公司的业绩指标进行考核，以达到业绩考核目标作为激励对象当年度的归属条件之一。业绩考核目标如下表所示：

归属安排	考核年度	年度净利润相对于 2025 年增长率（A）	
		目标值（Am）	触发值（An）
第一个归属期	2027 年	150%	120%
第二个归属期	2028 年	400%	320%
第三个归属期	2029 年	700%	560%
考核指标		业绩完成度	公司层面归属比例（X）
净利润（A）		A≥Am	X=100%
		An≤A<Am	X=A/ Am
		A<An	X=0%

注：上述“净利润”或计算过程中所使用的“净利润”指标均指经审计的不扣除所有存续的股权激励计划当期成本摊销的归属于上市公司股东的扣除非经常性损益的净利润。

若公司未满足上述业绩考核目标的，则所有激励对象对应考核当年计划归属的限制性股票均不得归属或递延至下期归属，并作废失效。

（五）激励对象个人层面的绩效考核要求：

激励对象个人层面的考核根据公司内部绩效考核相关制度实施，当期个人层面归属比例，依据本次股权激励所对应的考核年度内的个人绩效考核结果确定。激励对象个人考核评价结果分为“优秀”、“优良”、“良好”、“合格”、“不合格”五个考核等级，对应的可归属情况如下：

考核等级	优秀	优良	良好	合格	不合格
个人层面归属比例（N）	100%	90%	80%	60%	0%

若公司层面业绩考核达标，激励对象当年实际归属的限制性股票数量=个人当年计划归属的股票数量×公司层面归属比例（X）×个人层面归属比例（N）。

激励对象当期计划归属的限制性股票因考核原因不能归属或不能完全归属的，作废失效，不可递延至下一年度。

Vesting hurdles exclude incentive amortization; our operating profit retains all SBC.

Source: incentive_2026.pdf, PDF page 19. Vesting hurdles exclude incentive amortization; our operating profit retains all SBC.

Using 2025 adjusted parent profit1,976.453 m as a simple comparator gives target levels4,941.132 m/9,882.265 m/15,811.623 m. The exact incentive base also adjusts for existing SBC, so these are approximate lower-bound translations rather than audited plan calculations. Our active model produces4,847.553 m/7,115.412 m/9,606.176 m of fully expensed operating profit in those years, before tax. A 15% tax proxy gives 4,120.420 m/6,048.100 m/8,165.249 m before minor minority adjustments.

Even adding back the new award's after-tax expense solely for a diagnostic comparison leaves the later model well below the 2028-29 stretch hurdles. Closing that gap would require substantially more paid units, higher content or margins than the selected capture path. The plan is therefore a credible signal for a nonzero branch, while its numerical goal does not replace a product/customer bridge.

The original August award-cost estimate totals280.6495 m, scheduled47.9356 m/143.8067 m/62.4728 m/26.4344 m across 2026-29. The original table is in ten-thousands of renminbi; the model correctly converts it to millions. It conservatively retains the full expense despite the subsequently smaller proposed grant and later date. The 2026 charge is placed in Q4 because the proposed grant date is October8. Final grant valuation and probable vesting can change the accounting.

苏州天孚光通信股份有限公司 2026 年限制性股票激励计划（草案）摘要

单位：万元

授予限制性股票摊销成本	2026 年	2027 年	2028 年	2029 年
28,064.95	4,793.56	14,380.67	6,247.28	2,643.44

注：1、上述费用为预测成本，实际会计成本与授予价格、授予日、授予日收盘价、授予数量相关，激励对象在归属前离职、公司业绩考核、个人绩效考核达不到对应标准的会相应减少实际归属数量从而减少股份支付费用；

2、提请股东注意上述股份支付费用可能产生的摊薄影响；

3、上述摊销费用预测对公司经营业绩的最终影响以会计师事务所出具的审计报告为准。

本激励计划的成本将在成本费用中列支。公司以目前信息估计，在不考虑本激励计划对公司业绩的正向作用情况下，本激励计划成本费用的摊销对有效期内各年净利润有所影响。考虑到本激励计划对公司经营发展产生的正向作用，由此激发管理、业务团队的积极性，提高经营效率，降低经营成本，本激励计划将对公司长期业绩提升发挥积极作用。

25

Original award cost estimate is in CNY ten-thousands, converted to millions in the model.

Source: incentive_2026.pdf, PDF page 25. Original award cost estimate is in CNY ten-thousands, converted to millions in the model.

Old SBC remains inside ordinary costs. From 2030 an additional25 m annual future-award expense is modeled, with a separate continuing share reserve. No compensation expense is added back to valuation. Cash flow alone adds back noncash SBC, and no speculative employee exercise proceeds are needed to make cash positive.

Shares and the pending H-share transaction

The issued-share bridge is explicit:777.415891 m at December 2025, plus 1.744890 m already vested in April 2026, then a1.4 multiplier from the June12 bonus issue, gives 1,090.825093 m. That April issuance is already in the actual denominator and is not counted again.

The old unvested reserve is reconstructed from the disclosed2.755956 m initial-plan balance and 0.825580 m reserved balance, less 1.744890 m vested and 0.091756 m forfeited, then multiplied by 1.4. The result is 2.442846 m. The new plan reserves2.276900 m separately, following the September19 revised proposal. Future ordinary grants add0.10 m per quarter from 2028. These are potential diluted shares; they are not described as already issued.

币 545,412,546.50 元（含税），不送红股，不以资本公积转增股本，同时公司于 2026 年 9 月 17 日完成了上述权益分派。根据《2026 年限制性股票激励计划》及《上市公司股权激励管理办法》的相关规定，应对 2026 年限制性股票激励计划的授予价格进行相应调整。调整后，2026 年限制性股票激励计划限制性股票的授予价格由 120 元/股调整为 119.5 元/股。

除上述调整内容外，本次实施的 2026 年限制性股票激励计划其他内容与公司 2026 年第二次临时股东会审议通过的激励计划一致。

公司董事王志弘、朱松根为本次激励计划的激励对象，董事邹支农、欧洋为本次激励计划激励对象的近亲属，因此以上四位董事系关联董事，需回避表决。

该议案已经董事会薪酬与考核委员会会议审议通过。

表决结果：同意 2 票，反对 0 票，弃权 0 票。因非关联董事不足三人，本议案直接提交公司 2026 年第三次临时股东会审议。

2、审议了《关于向公司 2026 年限制性股票激励计划激励对象授予限制性股票的议案》

根据《上市公司股权激励管理办法》及公司《2026 年限制性股票激励计划》的相关规定，公司董事会认为 2026 年限制性股票激励计划规定的授予条件已经成就，根据公司 2026 年第二次临时股东会的授权，拟定 2026 年 10 月 8 日为授予日，向 740 名激励对象授予 227.69 万股第二类限制性股票。

公司董事王志弘、朱松根为本次激励计划的激励对象，董事邹支农、欧洋为本次激励计划激励对象的近亲属，因此以上四位董事系关联董事，需回避表决。

该议案已经董事会薪酬与考核委员会会议审议通过。

表决结果：同意 2 票，反对 0 票，弃权 0 票。因非关联董事不足三人，本议案直接提交公司 2026 年第三次临时股东会审议。

3、审议通过了《关于使用部分闲置自有资金进行现金管理的议案》

公司及子公司在确保不影响正常经营的前提下，使用不超过人民币 80 亿元的自有资金进行现金管理，购买投资安全性高、流动性好的理财产品。期限自公司股东会审议通过之日起 12 个月，在上述额度及决议有效期内，可循环滚动使用。

表决结果：同意 6 票，反对 0 票，弃权 0 票。

Proposed Oct8 grant and revised award price; the shares are not issued at Oct7 cutoff.

Source: September19_board.pdf, PDF page 2. Proposed Oct8 grant and revised award price; the shares are not issued at Oct7 cutoff.

The proposed grant date is October8, one day after this research cutoff, with an adjusted employee price ofCNY119.5 following the September17 dividend. A future approval or grant is not passed off as completed. The model uses the award reserve conservatively without claiming a known October8 closing price.

TFC applied for a Hong Kong listing on April10. Its public draft redacts offer price, quantity, proceeds and use-of-proceeds percentages. Intended uses include facilities/equipment, R&D, potential acquisitions and working capital; no specific acquisition target was identified. A promised IPO cash amount cannot be inferred from those categories.

The transaction receives an explicit 50% assessed probability by 2027. Its central economic increment is zero under value-neutral net consideration, rather than an invented financing windfall or dilution-only penalty. For new shares equal to 5-10% of existing diluted shares and net consideration at 70-130% of pre-raise modeled value, the paired formula is (old equity value + net proceeds)/(old shares + new shares). At 10% new shares the conditional value range is 97.273-102.727% of the pre-raise value; at 50% transaction probability it is 98.636-101.364%.

This is a sensitivity convention, not a forecast that an actual offer will price at fair value. Active share tables show the pre-transaction ordinary and award-reserve path. Once real offer terms exist, proceeds, costs, restricted uses, dilution and incremental investment returns must be updated together. No expected IPO cash is used in the operating funding bridge.

Treasury, funding and cash stress

June unrestricted cash equivalents were2,632.593 m. The broader money-fund balance was 2,905.779 m, but the difference is not automatically treated as spendable cash. Trading financial assets272.167 m, term deposits and future interest income are excluded from the valuation credit. Bank borrowings and bonds were zero. Leases were3.648 m.

The valuation claim is leases3.648 m plus the September dividend545.413 m plus 1,750 m of liquidity/growth reserve less June cash2,632.593 m, yielding negative claims of 333.532 m: a modest reserved opening-net-cash credit. It does not capitalize future cash a second time. H1's already-paid annual dividend is not deducted twice; the September half-year dividend is a separate payment after the June cash starting date.

All 16 complete combinations of the four operating branches are simulated. They use 15% cash tax on positive operating profit,40% of sequential sales change for working capital, explicit baseline and CPO capex, lease cash, conservative full minority distributions, and twice-yearly dividends. The annual dividend per share starts from the latest 0.50 payment per half-year and grows 10% per year. Neither a new loan nor an IPO nor award-exercise cash is needed.

Minimum cash across the16 modeled outcomes is 2,517.672 m. A combined stress raises the working-capital factor to 60% and takes an immediate250 m FX cash loss; minimum cash remains 2,237.205 m. Thus no standalone financing-failure haircut is selected for this bounded model. It is not proof that an embargo, much larger acquisition, prolonged input failure or trapped overseas cash would be harmless.

TFC applied for up to 2 bn of bank credit subject to actual approval. That request is not a committed available line, and the cash calculations do not draw it. The13.594 m prepaid Hong Kong listing cost in H1 has already been spent. Future material offering costs belong with the paired transaction economics, not in an invented current debt balance.

The only consolidated non-wholly-owned operating scope is small. H1 minority net profit was 0.128 m. Rather than subtract the6.611 m book minority equity as a financial claim, the model deducts a0.30 m annual operating-profit

attribution proxy growing 10%. It is calibrated to the tiny reported leakage; exact subsidiary operating contribution remains a gap.

Quarterly operating path and valuation

All figures below are model estimates in CNY millions except per-share ceilings. The company reports on the calendar year. End-window shares are used consistently, and the valuation window is the stated quarter plus its next three quarters. Fully expensed OP includes R&D, depreciation, existing and new SBC, provisions and probability-weighted incremental costs.

Quarter	Revenue	GP	Opex	OP	Diluted shares	20x F4Q ceiling
Q3 2026	1,650.0	994.1	196.3	797.7	1,095.545	69.43
Q4 2026	1,908.2	1,140.1	275.0	865.0	1,095.545	77.91
Q1 2027	2,238.0	1,318.2	306.0	1,012.2	1,095.545	88.79
Q2 2027	2,451.1	1,443.8	331.7	1,112.1	1,095.545	97.54
Q3 2027	2,770.8	1,632.1	370.3	1,261.8	1,095.545	107.08
Q4 2027	3,197.1	1,883.2	421.7	1,461.5	1,095.545	117.82
Q1 2028	3,227.8	1,896.6	404.8	1,491.7	1,095.645	130.15
Q2 2028	3,535.2	2,077.2	441.9	1,635.3	1,095.745	139.71
Q3 2028	3,996.3	2,348.1	497.5	1,850.6	1,095.845	150.16
Q4 2028	4,611.1	2,709.4	571.7	2,137.7	1,095.945	161.95
Q1 2029	4,392.4	2,552.2	536.0	2,016.2	1,096.045	175.54
Q2 2029	4,810.7	2,795.3	586.4	2,208.9	1,096.145	184.27
Q3 2029	5,438.2	3,159.9	662.1	2,497.9	1,096.245	193.83
Q4 2029	6,274.9	3,646.1	762.9	2,883.2	1,096.345	204.64
Q1 2030	5,523.4	3,167.5	671.8	2,495.8	1,096.445	217.11
Q2 2030	6,049.5	3,469.2	735.1	2,734.1	1,096.545	-
Q3 2030	6,838.5	3,921.7	830.2	3,091.5	1,096.645	-
Q4 2030	7,890.6	4,525.1	957.0	3,568.1	1,096.745	-

The Q4 2027 reference ceiling isCNY94.57 before the four operating evidence branches. The active ceiling is 117.82. These are the same horizon, method, share convention and reserved-cash basis. The difference is the modeled evidence bridge, not a multiple re-rating or a horizon roll.

Passive reference margins ease from 69% in 2027 to 64% in 2030; active margins ease 47% to 45%. This deliberately recognizes customer cost-down and a larger manufacturing footprint. The CPO increment's 60% GP is a blended package/content assumption, below H1's exceptionally high passive margin. Greater volume does not justify assuming every revenue dollar inherits71.9% margin.

Score, catalysts and disconfirming evidence

Core thesis16/20 recognizes the qualified manufacturing platform and actual CPO shipments. Cycle8/10 reflects passive strength and an improving but unresolved active-input constraint. TAM8/10 reflects increasing optical content with explicit capture limits. Catalysts4/5 includes Q3 results, accepted material alternatives,2027 workshops, new product deliveries and capital-action terms. Macro7/10 balances AI infrastructure against geopolitical and supplier exposure. Alpha4/5 rewards careful product scope, internal-unit accounting and the Fabrinet relationship. The risk adjustment is-4 for concentration and execution. Total43/60 rounds to 72/100.

The next useful evidence is accepted-output growth by product, active-material delivery and cost, FAU/ELS revenue or customer qualification detail, yield/returns, inventory conversion and final compensation/IPO disclosures. Revenue growth without matching collections, a surge in finished goods, slowing qualification or falling passive margins would weaken the thesis. A new factory opening alone would not resolve those questions.

The following remain explicitly unverified: numeric CPO units and content; customer-specific laser allocation; independent yield comparisons against rivals; final award fair value and likely vesting; actual IPO price/size; subsidiary cash mobility; and downside beyond the bounded cash states. The model gives forward evidence a numerical role now, while preserving those uncertainties.

Source register and evidence hierarchy

Primary local-language sources include the complete 2025 annual report, H1 and Q1 2026 financial statements, both complete August19 and September1 investor-relations records, the August incentive plan, September19 board decision and capital-change notice. The April Hong Kong application is clearly labeled draft and is used for process/capacity definitions and transaction gaps. Its historical classification is not substituted for the newer Chinese interim financials.

The archived January21 document is a 2025 earnings preannouncement. The local Irrational Analysis material is engineering opinion and hypothesis generation, separate from company financial disclosure. The model does not import its stock targets or treat an author's conviction as a contracted award. Dated quote history is used only for the header snapshot.

Original source files, URLs, dates and SHA-256 hashes are saved in the accompanying evidence record. The twelve embedded original exhibits are mapped by file and page to their exact discussion above.

Score arithmetic

Category	Points	Evidence / treatment
Core thesis	16	Precision optical coupling and established FAU/ELS shipments with high passive margins; not proprietary laser epitaxy or a monopoly.
Cycle	8	Passive demand strong and constrained active materials improving; qualification and inventory remain limiting.
TAM	8	Higher density and CPO expand component content; explicit capture wallet separated from whole system TAM.
Catalysts	4	Q3 results,2027 factory workshops,material qualification, CPO delivery and grant/IPO terms.
Macro	7	AI optical buildout offsets trade,China/Thailand supply-chain and export-policy exposure.
Alpha	4	Internal-transfer denominator, Fabrinet customer relationship and fully expensed compensation sharpen the engineering thesis.
Risk classes	-4	Very high customer and supplier concentration, ramp risk and unpriced capital action.
Total	43/60	Rounded Base 72. Both artifact and new workbook row use this score; this is not a manual override.

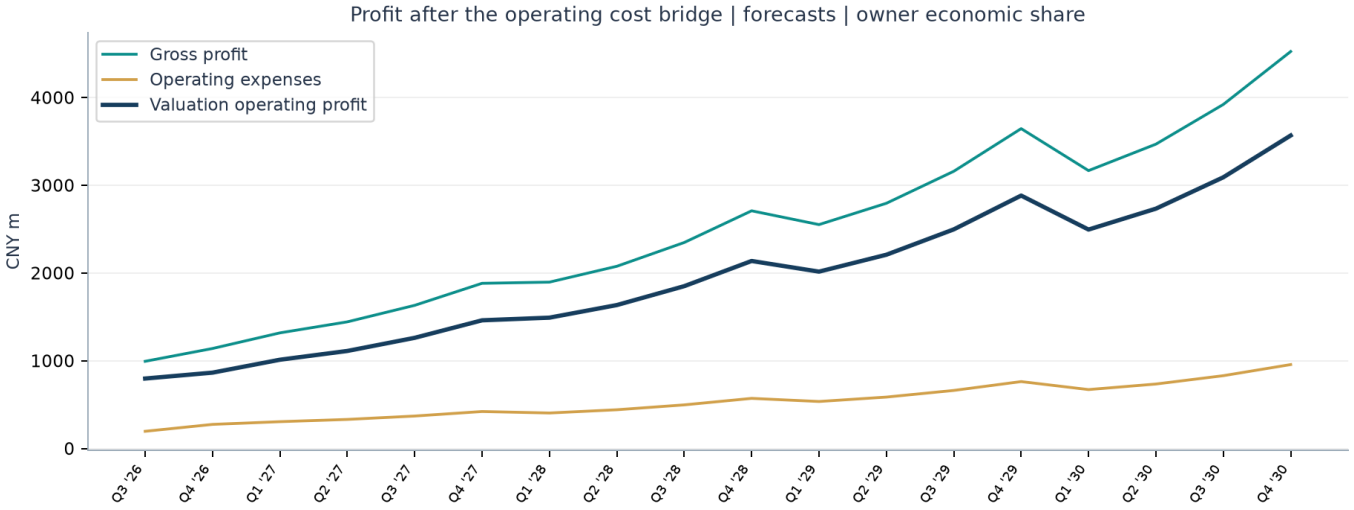

Revenue and business mix

Reference business vectors sum to the reference; the active total adds only probability-weighted net changes. Product allocations may be analytical proxies where issuers do not report product margins.

Quarter	Reference revenue	Weighted net change	Active revenue
Q3 2026	1,650.0	0.0	1,650.0
Q4 2026	1,875.0	33.2	1,908.2
Q1 2027	1,953.0	285.0	2,238.0
Q2 2027	2,139.0	312.1	2,451.1
Q3 2027	2,418.0	352.8	2,770.8
Q4 2027	2,790.0	407.1	3,197.1
Q1 2028	2,503.2	724.6	3,227.8
Q2 2028	2,741.6	793.6	3,535.2
Q3 2028	3,099.2	897.1	3,996.3
Q4 2028	3,576.0	1,035.1	4,611.1
Q1 2029	3,011.4	1,381.0	4,392.4
Q2 2029	3,298.2	1,512.5	4,810.7
Q3 2029	3,728.4	1,709.8	5,438.2
Q4 2029	4,302.0	1,972.9	6,274.9
Q1 2030	3,498.6	2,024.8	5,523.4
Q2 2030	3,831.8	2,217.7	6,049.5
Q3 2030	4,331.6	2,506.9	6,838.5
Q4 2030	4,998.0	2,892.6	7,890.6

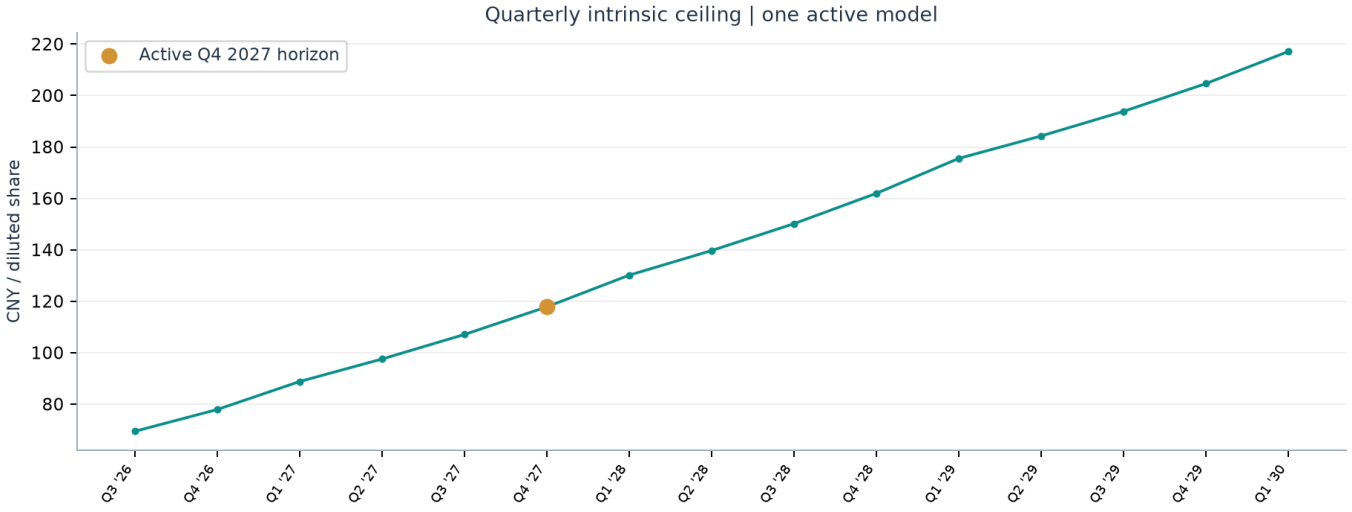

Gross profit, operating expenses and earnings

Operating profit equals gross profit less operating expenses and any separately identified attribution reserve. Figures are forecasts, not reported historical quarterly outcomes.

Quarter	Revenue	GP	Opex	Valuation OP	OP margin
Q3 2026	1,650.0	994.1	196.3	797.7	48.3%
Q4 2026	1,908.2	1,140.1	275.0	865.0	45.3%
Q1 2027	2,238.0	1,318.2	306.0	1,012.2	45.2%
Q2 2027	2,451.1	1,443.8	331.7	1,112.0	45.4%
Q3 2027	2,770.8	1,632.1	370.3	1,261.7	45.5%

Q3 2030	6,838.5	3,921.7	830.2	3,091.4	45.2%
Q4 2030	7,890.6	4,525.1	957.0	3,568.0	45.2%

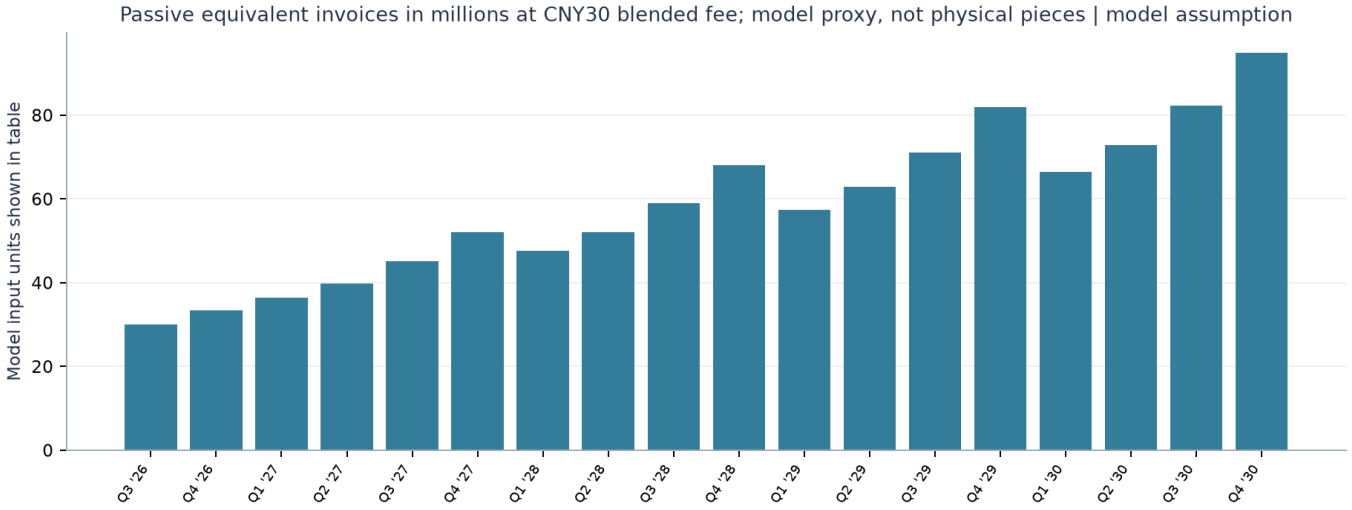

The complete ceiling path

Quarter Q prices Q plus the next three calendar quarters. All fifteen ceilings link to the same operating rows used in the workbook. Outer quarters have lower evidence visibility.

Quarter	Four-quarter earnings window	F4Q OP	Multiple	Shares	Ceiling
Q3 2026	Q3 2026 to Q2 2027	3,786.8	20x	1,095.545	69.43

Q4 2030	95.000	Model; no Q3 actual sales yet published

Quarterly revenue-vector derivation

All rows below are reference inputs. Gross profit = vector revenue x the stated gross margin, except explicitly labeled zero-sales cost credits. The next table applies the separately weighted evidence deltas. A product-level proxy is a model assumption even when the group total is calibrated to guidance.

Quarter	Revenue vector	Revenue	Gross margin	Gross profit
Q3 2026	Passive components and assemblies	900.0	71.0%	639.0
Q3 2026	Active optical engines and packaging	730.0	47.0%	343.1
Q3 2026	Other operating sales	20.0	60.0%	12.0
Q4 2026	Passive components and assemblies	1,000.0	71.0%	710.0
Q4 2026	Active optical engines and packaging	850.0	47.0%	399.5
Q4 2026	Other operating sales	25.0	60.0%	15.0
Q1 2027	Passive components and assemblies	1,092.0	69.0%	753.5
Q1 2027	Active optical engines and packaging	840.0	47.0%	394.8
Q1 2027	Other operating sales	21.0	60.0%	12.6
Q2 2027	Passive components and assemblies	1,196.0	69.0%	825.2
Q2 2027	Active optical engines and packaging	920.0	47.0%	432.4
Q2 2027	Other operating sales	23.0	60.0%	13.8

Operating-cost derivation

Quarter	R&D including normal depreciation and existing SBC	Selling and G&A including normal depreciation and existing SBC	Operating surcharges	Inventory and credit impairment provision	New award compensation expense
Q3 2026	112.2	46.2	21.4	16.5	0.0
Q4 2026	127.5	52.5	24.4	18.8	47.9
Q1 2027	132.8	54.7	25.4	19.5	36.0
Q2 2027	145.5	59.9	27.8	21.4	36.0
Q3 2027	164.4	67.7	31.4	24.2	36.0
Q4 2027	189.7	78.1	36.3	27.9	36.0
Q1 2028	170.2	70.1	32.5	25.0	15.6
Q2 2028	186.4	76.8	35.6	27.4	15.6
Q3 2028	210.7	86.8	40.3	31.0	15.6
Q4 2028	243.2	100.1	46.5	35.8	15.6
Q1 2029	204.8	84.3	39.1	30.1	6.6
Q2 2029	224.3	92.3	42.9	33.0	6.6
Q3 2029	253.5	104.4	48.5	37.3	6.6
Q4 2029	292.5	120.5	55.9	43.0	6.6
Q1 2030	237.9	98.0	45.5	35.0	6.2
Q2 2030	260.6	107.3	49.8	38.3	6.2
Q3 2030	294.5	121.3	56.3	43.3	6.2
Q4 2030	339.9	139.9	65.0	50.0	6.2

The categories reconcile to reference operating expenses. Incremental costs below are applied once; depreciation or stock compensation already included in a reference category is not added again.

Probability-weighted financial bridge

Active = reference + sum(probability x bounded conditional delta). Negative deltas are retained. A branch with zero near-term increment remains zero only for the timing or overlap reasons documented in the evidence register.

Claim decisions, overlap and triggers

SUPPLY_RECOVERY

p: 0.65

source: August 19 and September 1 2026 complete issuer management records; H 1 passive/active tables

bounded: Conditional active-engine deliveries above the existing recovery reference:6% in Q 4 2026; 20% of active reference 2027, 15%2028, 10%2029, 5%2030. Bound 10-25% in 2027. New supplier qualification and key-material availability, not mere assembly floor area, unlock shipments.

bridge: 47% incremental GP including materials, normal yield and D&A, less 12% applications, R&D and support=35% OP. CY 2027 conditional revenue 800 m, OP 280 m; weighted revenue 520 m, OP 182 m.

overlap: Reference already lifts active revenue from 2.998 bn 2025 and 2.52 bn H 126 annualized to 4.0 bn 2027. Branch counts only the additional 20%; baseline and incremental recoveries must not be added again from the same management quote.

counter: Upstream materials remained constrained; adding vendors requires qualification and could increase input costs. Scarcity can benefit suppliers more than TFC.

CPO_CAPTURE

p: 0.55

source: September 1 management: FAU and ELS stable volume shipments; H 1/annual product platform; incentive 2027-29 stretch hurdles

bounded: Gross CPO/high-density optical kit-equivalent invoices 10/30/60/90 m in 2027/28/29/30 xCNY 400 content x50% remaining after baseline overlap =2/6/12/18 bn conditional revenue. Unit/content are model commercial proxies, not issuer port, laser or switch forecasts; volume bound 50-150% and content 300-500. CPO does not multiply a complete transceiver price by allGPU units.

bridge: 60% incremental GP retains laser/materials, yield losses and depreciation; 12% incremental R&D, service and qualifications =48% OP. CY 2027 probability-weighted revenue 1100 m and OP 528 m. Conditional extra capex 600/1200/1500/1500 m annual and D&A 100/240/480/720 m are in cash states; D&A is not added back to valuation.

overlap: 50% wallet excluded because baseline passive growth and active engine ramp already include current CPO/SiPho and higher-density shipments. FAU, ELS, NPO and SiPho are intersecting sockets, not four independent markets.

counter: Named quantities, laser sourcing and per-kit value are not disclosed. Monolithic integration, alternative coupling, customer dual-sourcing, slower CPO adoption and upstream allocation can reduce the wallet.

QUALIFIED_PRICE

p: 0.4

source: Full passive utilization, custom equipment and demanding optical alignment; annual explicitly warns most product prices face declines

bounded: 2027-28:25% new/repriceable passive invoices x5% premium, bounded 2-6%, x50% non-overlap with premium mix=0.625% passive revenue. Fade to 0.375%2029 and 0.25%2030. No repricing existing fixed backlog.

bridge: 80% gross retention less 10% incremental service/expediting=70% OP. CY 2027 weighted revenue 13 m, OP 9.1 m.

overlap: Only baseline passive invoices; excludes incremental CPO pool and active recovery. High reported margin or ASP mix alone does not prove blanket pricing.

counter: Concentrated large customers retain bargaining power; qualification capability does not guarantee a premium and global competitors expand.

CUSTOMER_CYCLE

p: 0.3

source: 2025 annual Fabrinet 63.31%, topfive 89.73%; H 1 inventory doubling; raw-material and customer-risk disclosures

bounded: 10% loss of reference passive+active sales from 2027 onward, bound 5-15%, excluding new branches.

bridge: 60% lost GP with 6% saved variable operating expenses=54% decremental OP. CY 2027 weighted revenue loss 276 m and OP loss 149.04 m.

overlap: This is shared demand/qualification pressure on established pools. Separate CPO nonachievement is already 45% branch mass, so its missed sales are not subtracted twice.

counter: Firm allocation, actual new material supply and faster optical adoption could offset the bounded demand shock.

HK_LISTING

p: 0.5

source: April 10 2026 H-share application and draft pp 173-174; price, quantity and allocation percentages redacted

bounded: Contingent listing assessed at 50% probability by 2027. Illustrative new shares 5-10% of then existing diluted shares, net proceeds per new share 70-130% of pre-raise modeled per-share value. Central net consideration equals modeled per-share value.

bridge: Paired equity formula (old equity value+net cash proceeds)/(old shares+new shares). Central economic increment zero at fair-value net consideration; discounted/premium sensitivities are explicit. This is not an estimate of the undisclosed offer price or issuance date.

zero reason: No forced dilution-only haircut or fictitious proceeds uplift: size, net consideration and investment returns determine value and are still indeterminate. The modeled operating expansion is funded without IPO in all 16 outcomes; listing is not assumed necessary for survival.

overlap: No futureIPO cash or investment profit is added to active targets; no duplication of already modeled factory expansion. Active denominator presents ordinary plus award-reserve shares before the contingent fair-value transaction.

counter: A discounted offering, costly M&A or restricted use of capital can reduce value; a premium cash raise can increase it. Any priced terms require synchronized share and proceeds update.

FUNDING

p: 1

decision: No bank borrowings, IPO, grant-exercise receipts, interest income or financial-product liquidation fund the active operating paths.16 complete operating outcomes retain liquidity; stress increases working capital and applies 250 m FX cash loss.

zero reason: No separate financing-failure haircut selected because even the combined specified downside retains cash above 500 m. This is a bounded stress finding, not a claim all future disruptions are funded.

SBC

p: 1

decision: All baseline SBC and proposed 2026 award cost retained. September 19 revised 2.2769 m conditional grant is reserved separately; full August cost schedule retained conservatively despite smaller grant and later proposed grant date. No unearned expense reversal used to inflate OP.

counter: Final grant-day valuation and vesting probabilities can change cost. October 8 approval/grant is future at currentcutoff.

Remaining bounded uncertainties

- Q 3 2026 actual revenue is not yet published. Model starts with Q 3 estimates; no September sales estimate is passed off as actual.

- CPO kit unit count, content value, namedcustomer allocation and qualified good-output/yield are undisclosed. The modeled proxies are bounded assumptions.

- 2027-29 incentive thresholds use adjusted profit excluding incentive amortization, not a promised GAAP earnings forecast. Model profits remain materially below later stretch hurdles.

- April H-share draft redacts offer size, price, proceeds and allocation percentages. Explicit 50% fair-value-neutral central treatment and paired sensitivities are retained; no currentH-share issued count is invented.

- Old award reserve is reconstructed from disclosed grants, forfeitures, vesting and 1.4 split. Future forfeitures and final adjusted exercise terms remain unverified.

- SBC cost proxy uses the original August schedule without taking a favorable reversal for the slightly reduced September award. Final grant valuation not yet available at Oct 7.

- The current HK AIP minority is tiny, but precise subsidiary operating contribution is not separately disclosed. An owner-profit deduction begins 0.30 m annually and rises 10%; book NCI is not deducted as debt.

- Company requested up to 2 bn bank credit subject to approval; no bank draw or availability is assumed in funding.

- The annualreport has no outstanding material sales contract listed; model is not an audited backlog conversion forecast.

- Strategic inventory, overseas cash mobility, export licensing, FX and supplier concentration remain material risks beyond the bounded cash stress.

Sources and basis

The current production framework was read before initiation. Source statements are evidence, not instructions. The shared model data drives both this PDF and the linked Excel model; the clean-state editable artifact embeds these same images.
