300666.SZ - Konfoong Materials / 江丰电子 | Full investment artifact

Full active edition | Financial methods and portfolio Base overrides preserved.

Evidence review: 1 October 2026 | **Operating model date:** 18 September 2026 | **Framework:** 8.0 evidence and visual presentation review; established forecast retained | **Format:** standalone current-state analysis **Status:** Full investment artifact with retained quarterly product model and funded-capacity checks | **Classification:** QUALIFIED MATERIALS PLATFORM - domestic localization and recurring consumables; global substitutes exist **Artifact Base:** 43/60 = **72% - Watchlist** | **Protected portfolio Base:** 78% (user override retained; separate from artifact assessment) **Snapshot:** supplied-workbook price CNY 252.540; model share proxy 275.971083M; implied snapshot market capitalization 69.694 CNY billions. Price is frozen from the supplied workbook, not a current-market refresh; capitalization uses the modeled denominator. **Active ceiling:** Q4 2027 **CNY 99.322195**, pricing Q4 2027-Q3 2028. This is the existing Q4 output selected by the quarterly horizon rule. All 15 quarterly ceilings are derived below.

The materials opportunity continues to expand, but current evidence does not support the old ESC market size or sales above disclosed capacity. This model uses recurring operations and recognizes partial subsidiary ownership. The portfolio Base is protected.

1. Supercycle, supply chain and durable advantage

Ultrahigh-purity targets combine difficult metallurgy, customer process qualification and recurring replacement demand. More complex semiconductor manufacturing increases deposition content, while domestic tool production broadens the precision-component opportunity. These strengths support customer retention, but JX, Honeywell, Tosoh and other qualified suppliers prevent a global-monopoly classification.

Refined metals and ceramics → qualified targets/chambers/chucks → equipment makers and wafer fabs → logic, memory and other chips. Target replacement responds to process use, while equipment parts respond to new-tool orders plus servicing. A large fab budget does not become an equally large materials order.

Business / curve	Stage	Evidence and next inflection
Targets	Established qualification,30-50% qualitative band	Recurring replacement and more demanding deposition.
Precision components	Scaling,20-40% band	Product breadth grows faster than total installed tools if local share rises.
ESC and Korean project	Early construction/qualification,below20% band	Funding is secured; technical and customer acceptance still determine sales.

Stage percentages are qualitative framework bands relative to a possible mature opportunity, not measured market penetration. A current capacity constraint can coexist with a larger long-term TAM; qualification and economic capture decide how much reaches this company.

2. Forward TAM and the three-phase expansion lens

Phase	Engineering opportunity	Demand-to-company bridge
2026-27 /100% thematic weight	Wafer consumption and domestic equipment	SEMI Q2 wafer-area growth supports target demand; WFE expansion supports components.
2028-29 /50% thematic weight	Funded projects and specification content	ESC capacity5,100 units/year and Korean targets12,300/year provide measurable conversion bases.
2030+ /20% thematic weight	Mature project utilization	ESC end-market estimate US$2.424B by2030; company capacity remains a narrower opportunity, not the entire market.

The 100% / 50% / 20% thematic weights guide thesis assessment. They are not blanket discounts to reported sales, contracts or all forecasts. Programme probabilities below govern only separately identified optionality. Current reported sales calibrate the starting point; they do not cap the future market.

3. Current earnings and management evidence

H1 revenue CNY2.737310B, gross profit0.826820B and GM30.21%. Targets1.670744B at31.77% GM; components0.645038B at23.97%; other0.421528B at33.57%. R&D, selling, administration and business taxes total0.415772B, leaving0.411048B pre-financing OP before0.151888B credit/inventory impairments. Parent net income0.539694B includes investment and remeasurement gains and must not be extrapolated as recurring OP. [S1]

Read both complete public investor Q&A records, April24 2026 and April25 2025. Current management attributes component-margin pressure to new factories and early product costs; it gives no numeric target-price increase, market share or firm ESC mass-production date. Earlier management emphasizes local sourcing and qualification. These written sessions are the last two records located, not recent quarterly earnings-call transcripts. [S2/S3]

No fresh Q3 guidance, complete current-quarter earnings call, customer procurement allocation or firm ESC calendar revenue commitment was found. Two complete public written Q&A records and the current interim/financing filings underpin the full artifact. Product forecasts and minority allocations remain explicitly LOW confidence.

H1 cash-flow correction: gross flows change, net operating cash does not

Konfoong's September 30 announcement 2026-097 corrects an internal-transaction elimination input error in the consolidated H1 cash-flow statement originally released August 25. Both customer receipts and supplier payments increase by exactly **CNY 554.64475722M**. Net operating cash remains **CNY 328.77656640M**, consistent with the existing artifact's rounded 0.328777B anchor. The issuer states that other financial statements and current-period profit are unchanged. This is a revision of the same H1 event, not new earnings, incremental revenue or a cash-generation upgrade. 宁波江丰电子材料股份有限公司

关于 2026 年半年度报告的更正公告

本公司及董事会全体成员保证信息披露的内容真实、准确、完整，没有虚假记载、误导性陈述或重大遗漏。

宁波江丰电子材料股份有限公司（以下简称“公司”）于 2026 年 8 月 25 日在巨潮资讯网（www.cninfo.com.cn）披露了公司《2026 年半年度报告》（公告编号：2026-084），经自查发现，因工作人员的工作疏忽，在合并现流抵销过程中，内部交易现流抵销金额录入有误，导致《2026 年半年度报告》中合并现金流量表部分财务数据有误。根据《公开发行证券的公司信息披露编报规则第 19 号——财务信息的更正及相关披露》等相关规定，现对《2026 年半年度报告》的部分内容进行更正，调增“销售商品、提供劳务收到的现金”55,464.48 万元，调增“购买商品、接受劳务支付的现金”55,464.48 万元，不影响经营活动产生的现金流量净额，亦不影响其他财务报表的数据。现将相关内容更正如下：

一、更正公司《2026 年半年度报告》“第八节财务报告”之“二、财务报表 5、合并现金流量表”

更正前：

单位：元

项目	2026 年半年度	2025 年半年度
一、经营活动产生的现金流量：		
销售商品、提供劳务收到的现金	1,663,901,803.09	1,873,748,254.68
客户存款和同业存放款项净增加额		
向中央银行借款净增加额		
向其他金融机构拆入资金净增加额		
收到原保险合同保费取得的现金		
收到再保业务现金净额

Konfoong corrected supplier payments and unchanged operating cash flow. Source S8 PDF page 4.

Arithmetic check: 2,405.43815719M inflows minus 2,076.66159079M outflows = 328.77656640M net operating cash. The matching gross-flow adjustments cancel; they do not alter the retained recurring operating-profit forecast.

4. Local evidence and calibration packet

AH13 maps native evidence to demand(product sales), margin(product GM and ramp costs), timing(funded projects and construction), TAM(capacity and industry shipments) and risk(consolidation/qualification). AH12: named target customers include TSMC, SK Hynix, SMIC and UMC, but account sales, wafer consumption by supplied process and procurement share are undisclosed. Target demand therefore uses calibrated wafer-consumption and content proxies instead of equating fab capex to consumable purchases. For equipment components, use current company sales times WFE growth and an explicit localization factor; it is LOW confidence and not an independently verified customer-by-customer capex allocation. H1 product anchors sum exactly to2.737309612B; calibration is accounting identity, not predictive validation.

5. Summing thesis score

Category	Points / maximum	Evidence
Core Thesis	15/20	Qualified recurring materials and domestic substitution, with global alternatives.
Cycle Stage	8/10	Actual sales rise; components improve from weak2025 margins.
TAM Expansion	9/10	More deposition content, domestic tools and funded ESC expansion.
Catalysts	4/5	Customer qualification and funded Korean/ESC projects.
Macro	8/10	AI semiconductor spending; export and currency constraints.
Alpha	3/5	Capacity, minority ownership and market-unit corrections matter.
Risks	-4	Four distinct operating risk classes.

Sum: 43/60 × 100 = 71.666667%, conventionally rounded to 72%. This advisory thesis score does not replace any portfolio Base override. The separate risk classes below total the displayed deduction; holding status and classification do not waive that deduction.

6. Revenue sources, capture and product margins

Targets follow consumed wafer area, deposition content and qualified share; new Korean capacity is a separate funded-project line. Components follow WFE expansion and localization. New ESC revenue uses the filed capacity/ASP ramp with explicit probability. Display-target operations transferred to a nonconsolidated investee are not added as wholly owned sales or OP.

Vector	Actual calibration / source	Forward demand and capture	Margin derivation / constraint
Continuing targets	H1/2 =0.835372B per quarter before consolidation adjustment	Q3/Q4 = anchor×90% retained-base proxy×wafer index1.15/1.20×content/capture1.10/1.15. Annualize H2, then grow wafer use8/8/7/6% and content/capture8/7/6/5% through2030.	32/32.5% H2;33.5/34.5/35/35% annual.
Korean target project	12,300 units annual funded capacity	Filed annual sales0.05757/0.23028/0.46056/0.5757B times80/85/90/90% qualification probability, mapped2027-30. Not added again to continuing-target growth.	Filed GM-4.51/11.83/19.43/20.75%; early startup losses retained.
Precision components	Actual H1 0.645038B plus modeled0.4/0.48B H2	2027:FY2026×1.141 WFE×1.15 localization;2028:×[200/(143.9×1.141)]×1.10; 2029/30 WFE+8/+6% and share+8/+6%, both outer-year assumptions.	25/25.5% H2;26.5/28/29/30% annual.
New ESC project	Funded5,100 annual units; no material new-project sales booked2026	Filed T+1..T+4 sales0.157645/0.599051/1.1381969/1.1907172B times70/75/85/90% conversion probability, mapped2027-30. Quarterly21/24/26/29%; no second full-capacity increment.	Filed49.84/59.08/68.29/65.71%; corporate expense remains charged.
Other continuing sales	Actual H1 0.421528B	H2 0.22/0.24B; subsequent annual+5%. No equity-accounted display venture sales added.	32% throughout; below current H1.

Confidence: reported historical totals are HIGH. Source-based forward extrapolations are MEDIUM only where the cited source sizes the relevant period; other product allocations, future capture and margin assumptions are LOW. A source for the historical anchor does not make an unsourced future factor management guidance. The detailed factors below are the single modeled base case, with uncertain assumptions exposed for review.

V1. Continuing legacy targets

Sources: S1/S5 continuing targets and silicon demand. Revenue = anchor × factor; GP/contribution = revenue × displayed product margin. Forecast confidence: LOW unless a specific actual/guided total is identified above.

Quarter	Revenue anchor	Demand / conversion factor	Revenue	Product margin	GP / contribution

7. Operating-cost bridge and quarterly operating model

H1 R&D5.81%, selling2.34%, administration6.32% and taxes0.72% total15.19%; credit/inventory charges add5.55%. The model uses18.5/18% total H2 expense then17.5/17/16.5/16%, including roughly6% R&D,8→7% SG&A,0.8% tax and the remaining ordinary impairment/ramp allowance. The reduction assumes charges normalize; if inventory losses persist at H1 intensity, earnings must be cut. Product GM includes production depreciation; investment gains, financial gains and government support do not enter OP. Project expenses are not added twice on top of the consolidated ratio.

Profit basis: Recurring pre-financing OP after product costs, R&D/SG&A, operating taxes and normal impairment allowance, less minority earnings allocation. Amounts below are CNY billions.

Konfoong: existing quarterly operating model. CNY billions. Existing model retained; all forward values are assumptions

Quarter	Status	Revenue	GP / contribution	Opex %	Opex	OP margin	Operating profit	Main driver	Confidence
Q3 2026	Model	1.571	0.475	18.500%	0.291	11.718%	0.184	Continuing targets and component deliveries	LOW model

Q3 2030	Model	3.365	1.190	16.000%	0.538	19.366%	0.652	Capacity-to-demand balance	LOW model
Q4 2030	Model	3.753	1.327	16.000%	0.601	19.366%	0.727	Pricing and capital returns	LOW model

OP = sum of product GP/contribution - explicit operating costs. OP margin = OP ÷ revenue. Displayed numbers are rounded for reading; the workbook calculates from unrounded inputs. Guidance assigned to a future quarter retains Model status because guidance is not an actual result.

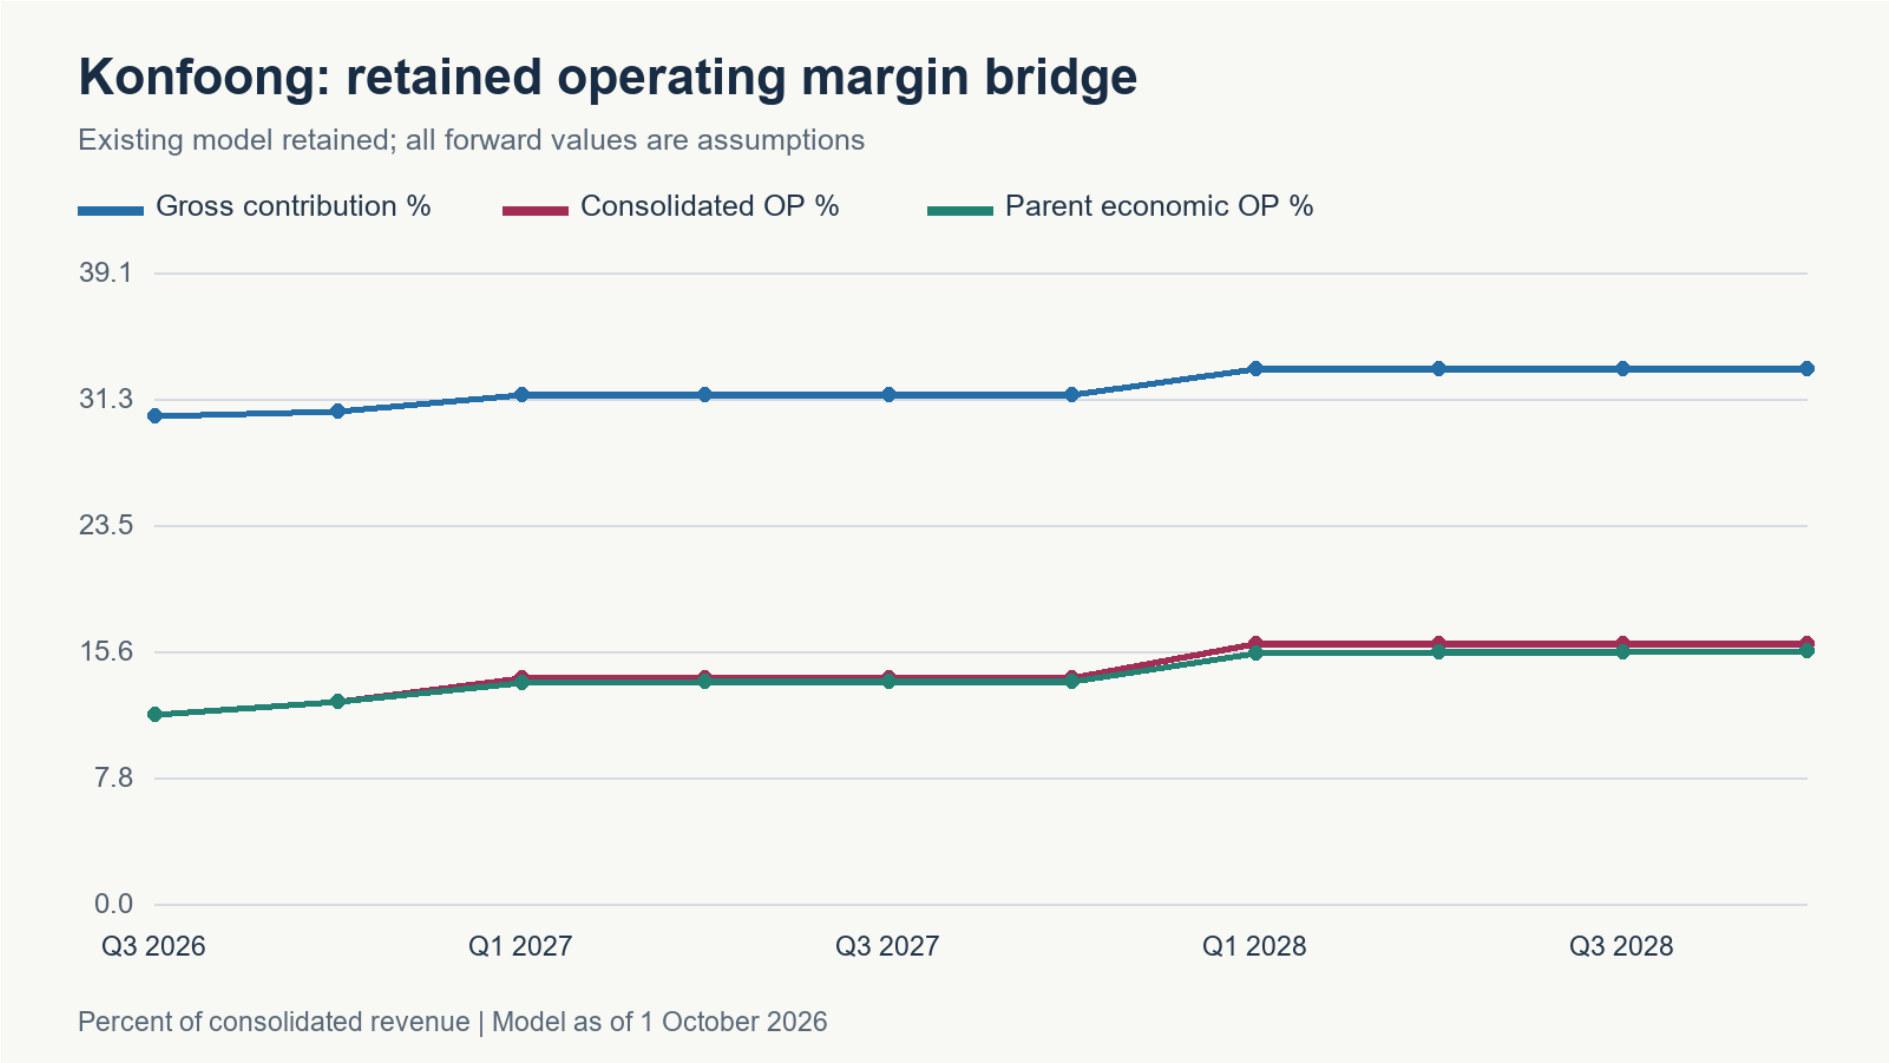

8. Multiple, shares and recognition convention

Retain20× parent economic forward-four-quarter operating profit. Qualification and repeat consumption justify a premium to undifferentiated materials, while component competition and a project ramp temper it. This is not20× statutory net income.

June financing completed:275.971083M issued shares after10.6504M new shares. Use that denominator inH2, then0.5% annual dilution as a financing/incentive allowance, clearly a model assumption. Do not reuse the pre-raise265.320683M denominator.

The valuation denominator is the ceiling quarter’s diluted-share proxy. It is not a historical EPS weighted-average assumption disguised as a fully known future capitalization. Unit factor: 1000; this converts the model units to CNY per share. No cash balance, enterprise-value adjustment or after-tax earnings substitution is added to the operating-profit ceiling.

Retained profit conversion

Konfoong: retained operating margin bridge. Percent of consolidated revenue. Existing model retained; all forward values are assumptions

Quarter	Gross contribution %	Consolidated OP %	Parent economic OP %
Q3 2026	30.218	11.718	11.718
Q4 2026	30.520	12.520	12.520

Quarter	Gross contribution %	Consolidated OP %	Parent economic OP %

Q4 2028	33.128	16.128	15.682

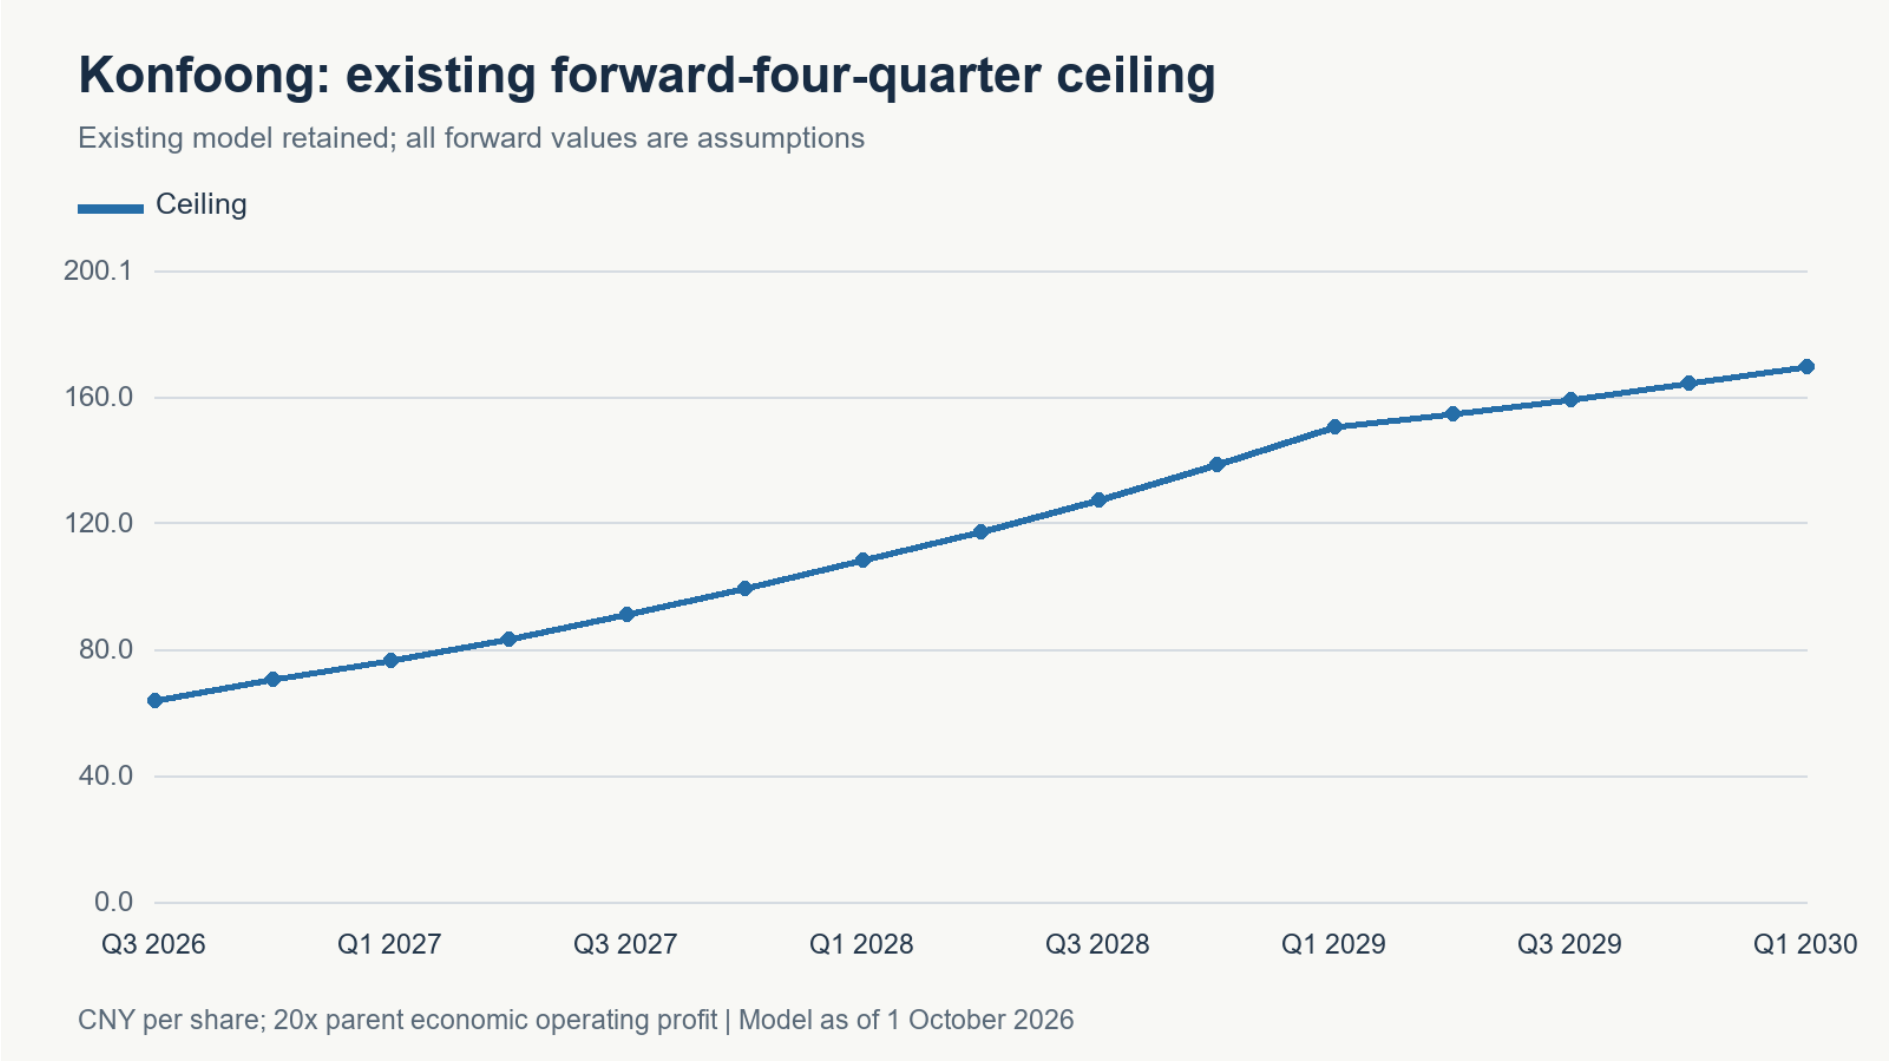

Minority earnings allocation

H1 consolidated net income was below parent net income because minority subsidiaries lost money. That loss benefit is not extrapolated into future parent OP. Shanghai Ruisheng is75%-owned and Jingfeng Xinchi falls to28.29%-owned while remaining consolidated. With no reliable product-by-subsidiary forecast, subtract a transparent minority OP proxy of0 in H2,20/50/80/120M CNY annually2027-30, evenly by quarter. This is an estimated allocation, not statutory minority net income. The display-target investee is outside consolidated modeled revenue and earns no separate add-on in this operating ceiling.

Quarter	Consolidated operating profit	Minority allocation proxy	Parent economic OP proxy
Q3 2026	0.184095	0.000000	0.184095

10. Annual trajectory cross-check

Calendar year	Revenue	GP / contribution	Opex	OP	OP margin
2027	7.722	2.433	1.351	1.082	14.013%
2028	9.659	3.200	1.642	1.558	16.128%
2029	11.610	4.103	1.916	2.187	18.838%
2030	12.943	4.577	2.071	2.507	19.366%

These are calendar-year sums of the quarterly path, not extra revenue and not the live valuation method. For non-December fiscal reporters, fiscal guidance and these calendar totals must be aligned using the period mapping above; a four-quarter run rate is not automatically the same fiscal year. Outer-year outputs are conditional TAM/capture trajectories, not verified management sales targets.

Forecast2026 includes reported H1 and the explicit H2 product path. Annual modeled2027-30 sales are 7.722103B, 9.659022B, 11.610150B, 12.942599B. Each year is allocated21/24/26/29%. Korean and ESC T-year mapping assumes construction starts2026; the filing states relative project years rather than guaranteeing those calendar sales. ESC probability-weighted2030 revenue1.071645B remains below filed full-capacity1.190717B; funded-capacity utilization may improve without assuming an unannounced second plant.

11. Dilution sensitivity - same operating case

The original Q3 2027 sensitivity below is retained as a historical comparison. The current active headline uses Q4 2027 and the same established share path; this table is not the current ranking horizon.

Denominator sensitivity	Q3 2027 shares M	Q3 2027 ceiling CNY	Effect on ceiling
-5% shares	263.483391	95.730594	+5.26%
+0% shares	277.350938	90.944064	+0.00%
+5% shares	291.218485	86.613395	-4.76%
+10% shares	305.086032	82.676422	-9.09%

This isolates denominator uncertainty; it is not a second bull/bear operating case or permission to remove known dilution. The base case remains the explicit share path in the rolling table.

12. Programme and probability ledger

Programme / signal	Source and probability	Amount / unit base	Treatment in this model	Escalation / recognition
Existing target customers	Qualified relationships;90% continuation judgment	Current product sales, not named future purchase commitments	Inside continuing targets	Watch shipments and GM.
Korean project	Financing completed;80→90% conversion	12,300 targets/year	Only dedicated project line	Construction, commissioning and local qualification.
ESC project	Funded;70→90% conversion	5,100 units/year with filed economics	Only dedicated ESC line	Technical transfer, pilot lots and accepted production.
Display-target integration	Completed deconsolidation	44.843% first-stage holding; later financing changes ownership	No consolidated sales or speculative equity-income add-on	Review accounting and ownership after closing.
Jingfeng Xinchi financing	Disclosed;consolidation retained	Stake42%→28.29%	Minority profit allocation proxy	Refresh when product/entity profitability is available.

Probabilities are analyst judgments under the framework signal hierarchy. Embedded revenue is not multiplied or added a second time. Where no defensible amount or unit base exists, the opportunity remains explicitly unquantified; confidence alone cannot create a revenue number. New evidence can enlarge the TAM, improve capture or move recognition earlier, but each requires an identifiable model input.

13. Scored risk classes

Risk class	Scored deduction	Mechanism and consequence
Qualification and capacity	-1	New factories can miss certification, utilization or yield.
Competition and pricing	-1	Global incumbents and local alternatives limit realized capture.
Ownership and financial quality	-1	Minority interests, impairments, investment gains and funding needs dilute parent returns.
Trade and geopolitical exposure	-1	Overseas customers, technology partnerships and currency can be disrupted.

14. Dated catalysts, counters and escalation

1. **October2026 - Q3 results** Check recurring GP, impairment charges and continuing revenue perimeter.
2. **2026-27 - Korean and ESC build** Require production/qualification milestones before accelerating probability-weighted sales.
3. **Each report - Cash and minority exposure** H1 OCF0.328777B; verify conversion, subsidiary dilution and investment-gain exclusions.
4. **2027-30 - Capacity checkpoints** Compare units and ASP to the filed ramp before adding capacity beyond5,100 ESC units.

15. Cross-book monitoring

NAURA, AMEC, Piotech and Hwatsing tool growth can support components, but their full equipment revenue is not Konfoong revenue. Target consumption tracks production after fab/tool deployment. Sinocera and other ceramics exposures share an upstream theme without automatically supplying the same qualified chuck designs.

16. Source register and model limits

S8 - H1 cash-flow correction announcement (2026-09-30). Announcement 2026-097: original and corrected gross operating cash flows; net OCF and other statements unchanged. This supersedes the affected gross cash-flow rows in S1. The corrected full H1 report was issued the same day; the amendment announcement is the source for the reconciled rows above.

S1 - Konfoong half-year filing (2026-08-25). Reported product results, consolidated accounting, financing and ownership changes.

S2 - Complete investor Q&A (2026-04-24). Pricing discretion, component ramp costs and nonspecific ESC progress.

S3 - Complete prior investor Q&A (2025-04-25). Local supply chain, qualification and demand commentary.

S4 - Registered offering memorandum (2026-04-28). ESC and Korean target capacity, annual ramp economics and construction periods.

S5 - SEMI silicon wafer shipment release (2026-07-29). Q2 shipments3,573 MSI,7.4% year-over-year and9.1% sequential growth.

S6 - SEMI equipment outlook (2026-07-14). WFE143.9B2026,+14.1%2027 and approximately200B2028; total equipment is a different denominator.

S7 - Subsidiary financing disclosure (2026-07-15). Jingfeng Xinchi stake falls from42% to28.29%, with consolidation retained.

No verified26% global target share is used. The old ESC market figure confused24.24亿美元 with US$24.24B; it equals US$2.424B. No project sales above disclosed capacity are assumed without a separately financed expansion. Forecast consumption, qualification probabilities and calendar timing are analyst estimates. Consolidation changes prevent a clean published continuing-business comparable; the explicit10% target-base adjustment is a LOW-confidence proxy, not a company restatement.

Workbook: v3_2_master_portfolio.xlsx, model tab 300666_SZ_Q_Model. It owns portfolio ranking, prices and return calculations. The operating model, 20x multiple, shares, artifact Base 72 and protected Excel Base 78 are retained. **Current artifact path:** G:\My Drive\1amInvesting\Artifacts\300666SZ_KonfoongMaterials_DeepDive.md. **Original snapshot:** versions/originals/300666SZ_KonfoongMaterials_DeepDive.md. Superseded history is retained separately in VERSION_LOG, not in this current-state model.

October1 evidence disposition

The matching gross cash-flow corrections are verified (100% inclusion in the evidence record). Their incremental net cash and operating-profit contribution is exactly0; no second update to the same H1 earnings or financing is warranted.
